Perl is not installed by default on Windows platforms. There are several different Perl packages you can download and install on your Windows system:

- [ActivePerl](https://www.activestate.com/activeperl/) by Activestate is a commercially-supported version of Perl for Windows platforms.
- [Strawberry Perl](https://www.strawberryperl.com/) is an open-source port of Perl for Windows.

The Perl Driver Modules (DBI and DBD::ODBC)

Before you can connect to Vertica using Perl, your Perl installation needs to have the Perl Database Interface module (DBI) and the Database Driver for ODBC (DBD::ODBC). These modules communicate with iODBC/unixODBC driver on UNIX operating systems or the ODBC Driver Manager for Windows operating systems.

Vertica supports the following Perl modules:
DBI version 1.609 (DBI-1.609.tar.gz)
DBD::ODBC version 1.22 (DBD-ODBC-1.22.tar.gz)

Later versions of DBI and DBD::ODBC may also work.

DBI is installed by default with many Perl installations. You can test whether it is installed by executing the following command on the Linux or Windows command line:

```
# perl -e "use DBI;"
```

If the command exits without printing anything, then DBI is installed. If it prints an error, such as:

```
BEGIN--compilation aborted at -e line 1.
```

then DBI is not installed.

Similarly, you can see if DBD::ODBC is installed by executing the command:

```
# perl -e "use DBD::ODBC;"
```

You can also run the following Perl script to determine if DBI and DBD::ODBC are installed. If they are, the script lists any available DSNs.

```perl
#!/usr/bin/perl
use strict;
# Attempt to load the DBI module in an eval using require. Prevents
# script from erroring out if DBI is not installed.
if (eval {
  require DBI;
  DBI->import();
})
{
  # The eval failed, so DBI must not be installed
  print "DBI module is not installed\n";
} else {
  # Eval was successful, so DBI is installed
  print "DBI Module is installed\n"
  # List the drivers that DBI knows about.
  my @drivers = DBI->available_drivers;
  print "Available Drivers: \n";
  foreach my $driver (@drivers) {
    print "$driver\n";
  }
  # See if DBD::ODBC is installed by searching driver array.
  if (grep (/ODBC/1) @drivers) {
    print "\nDBD::ODBC is installed.\n";
    # List the ODBC data sources (DSNs) defined on the system
  }

```
The exact output of the above code will depend on the configuration of your system. The following is an example of running the code on a Windows computer:

```
DBI Module is installed
Available Drivers:
    ADO
    DBM
    ExampleP
    File
    Gofer
    ODBC
    Pg
    Proxy
    SQLite
    Sponge
    mysql
DBD::ODBC is installed.
Defined ODBC Data Sources:
    dbi:ODBC:dBASE Files
    dbi:ODBC:Excel Files
    dbi:ODBC:MS Access Database
    dbi:ODBC:VerticaDSN
```

**Installing Missing Perl Modules**

If Perl's DBI or DBD::ODBC modules are not installed on your client system, you must install them before your Perl scripts can connect to Vertica. How you install modules depends on your Perl configuration:

- For most Perl installations, you use the `cpan` command to install modules. If the `cpan` command alias isn't installed on your system, you can try to start CPAN by using the command:

```
perl -MCPAN -e shell
```

- Some Linux distributions provide Perl modules as packages that can be installed with the system package manager (such as `yum` or `apt`). See your Linux distribution's documentation for details.
On ActiveState Perl for Windows, you use the Perl Package Manager (PPM) program to install Perl modules. See the Activestate's PPM documentation for details.

**Note:**
Installing Perl modules usually requires administrator or root privileges. If you do not have these permissions on your client system, you need to ask your system administrator to install these modules for you.

## Connecting to Vertica Using Perl

You use the Perl DBI module's `connect` function to connect to Vertica. This function takes a required data source string argument and optional arguments for the username, password, and connection attributes.

The data source string must start with "dbi:ODBC:", which tells the DBI module to use the DBD::ODBC driver to connect to Vertica. The remainder of the string is interpreted by the DBD::ODBC driver. It usually contains the name of a DSN that contains the connection information needed to connect to your Vertica database. For example, to tell the DBD::ODBC driver to use the DSN named VerticaDSN, you use the data source string:

```
"dbi:ODBC:VerticaDSN"
```

The username and password parameters are optional. However, if you do not supply them (or just the username for a passwordless account) and they are not set in the DSN, attempting to connect always fails.

The `connect` function returns a database handle if it connects to Vertica. If it does not, it returns `undef`. In that case, you can access the DBI module's error string property (`$DBI::errstr`) to get the error message.

**Note:**
By default, the DBI module prints an error message to STDERR whenever it encounters an error. If you prefer to display your own error messages or handle errors in some other manner, you may want to disable these automatic messages by setting DBI's PrintError connection attribute to `false`. See Setting Perl DBI Connection Attributes for details. Otherwise, users may see two error messages: the one that DBI prints automatically, and the one that your script prints on its own.
The following example demonstrates connecting to Vertica using a DSN named VerticaDSN. The call to `connect` supplies a username and password. After connecting, it calls the database handle's `disconnect` function, which closes the connection.

```perl
#!/usr/bin/perl -w
use strict;
use DBI;
# Open a connection using a DSN. Supply the username and password.
my $dbh = DBI->connect("dbi:ODBC:VerticaDSN","ExampleUser","password123");
unless (defined $dbh) {
    # Connection failed.
    die "Failed to connect: $DBI::errstr";
}
print "Connected!\n";
$dbh->disconnect();
```

### Setting ODBC Connection Parameters in Perl

To set ODBC connection parameters, replace the DSN name with a semicolon delimited list of parameter name and value pairs in the source data string. Use the DSN parameter to tell DBD::ODBC which DSN to use, then add in other the other ODBC parameters you want to set. For example, the following code connects using a DSN named VerticaDSN and sets the connection's locale to en_GB.

```perl
#!/usr/bin/perl -w
use strict;
use DBI;
# Instead of just using the DSN name, use name and value pairs.
my $dbh = DBI->connect("dbi:ODBC:DSN=VerticaDSN;Locale=en_GB@collation=binary","ExampleUser","password123");
unless (defined $dbh) {
    # Connection failed.
    die "Failed to connect: $DBI::errstr";
}
print "Connected!\n";
$dbh->disconnect();
```

See [Data Source Name (DSN) Connection Properties](#) for a list of the connection parameters you can set in the source data string.

### Setting Perl DBI Connection Attributes

The Perl DBI module has attributes that you can use to control the behavior of its database connection. These attributes are similar to the ODBC connection parameters (in several cases, they duplicate each other's functionality). The DBI connection attributes are a cross-platform way of controlling the behavior of the database connection.
You can set the DBI connection attributes when establishing a connection by passing the DBI connect function a hash containing attribute and value pairs. For example, to set the DBI connection attribute AutoCommit to false, you would use:

```perl
# Create a hash that holds attributes for the connection
my $attr = {AutoCommit => 0};
# Open a connection using a DSN. Supply the username and password.
my $dbh = DBI->connect("dbi:ODBC:VerticaDSN","ExampleUser","password123", $attr);
```

See the DBI documentation's Database Handle Attributes section for a full description of the attributes you can set on the database connection.

After your script has connected, it can access and modify the connection attributes through the database handle by using it as a hash reference. For example:

```perl
print "The AutoCommit attribute is: " . $dbh->{AutoCommit} . "\n";
```

The following example demonstrates setting two connection attributes:

- **RaiseError** controls whether the DBI driver generates a Perl error if it encounters a database error. Usually, you set this to true (1) if you want your Perl script to exit if there is a database error.
- **AutoCommit** controls whether statements automatically commit their transactions when they complete. DBI defaults to Vertica's default AutoCommit value of true. Always set AutoCommit to false (0) when bulk loading data to increase database efficiency.

```perl
#!/usr/bin/perl
use strict;
use DBI;

# Create a hash that holds attributes for the connection
my $attr = {
    RaiseError => 1, # Make database errors fatal to script
    AutoCommit => 0, # Prevent statements from committing
    # their transactions.
};
# Open a connection using a DSN. Supply the username and password.
my $dbh = DBI->connect("dbi:ODBC:VerticaDSN","ExampleUser","password123", $attr);

if (defined $dbh->err) {
    # Connection failed.
    die "Failed to connect: $DBI::errstr";
}

print "Connected!\n";
# The database handle lets you access the connection attributes directly:
print "The AutoCommit attribute is: " . $dbh->{AutoCommit} . "\n";
print "The RaiseError attribute is: " . $dbh->{RaiseError} . "\n";
# And you can change values, too...
$dbh->{AutoCommit} = 1;
print "The AutoCommit attribute is now: " . $dbh->{AutoCommit} . "\n";
```
$dbh->disconnect();

The example outputs the following when run:

```
Connected!The AutoCommit attribute is: 0
The RaiseError attribute is: 1
The AutoCommit attribute is now: 1
```

**Connecting From Perl Without a DSN**

If you do not want to set up a Data Source Name (DSN) for your database, you can supply all of the information Perl's DBD::ODBC driver requires to connect to your Vertica database in the data source string. This source string must the DRIVER= parameter that tells DBD::ODBC which driver library to use in order to connect. The value for this parameter is the name assigned to the driver by the client system's driver manager:

- On Windows, the name assigned to the Vertica ODBC driver by the driver manager is Vertica.
- On Linux and other UNIX-like operating systems, the Vertica ODBC driver's name is assigned in the system's odbcinst.ini file. For example, if your `/etc/odbcinst.ini` contains the following:

  ```
  [Vertica]
  Description = Vertica ODBC Driver
  Driver = /opt/vertica/lib64/libverticaodbc.so
  ```

  you would use the name Vertica. See [Creating an ODBC DSN for Linux](#) for more information about the `odbcinst.ini` file.

You can take advantage of Perl's variable expansion within strings to use variables for most of the connection properties as the following example demonstrates.

```perl
#!/usr/bin/perl
use strict;
use DBI;
my $server='VerticaHost';
my $port = '5433';
my $database = 'VMart';
my $user = 'ExampleUser';
my $password = 'password123';
# Connect without a DSN by supplying all of the information for the connection.
# The DRIVER value on UNIX platforms depends on the entry in the odbcinst.ini file.
my $dbh = DBI->connect("dbi:ODBC:DRIVER={Vertica};Server=$server;".
                    "Port=$port;Database=$database;UID=$user;PWD=$password")
                 or die "Could not connect to database: ". DBI::errstr;
```
print "Connected!\n";
$dbh->disconnect();

Note:
Surrounding the driver name with braces ({ and }) in the source string is optional.

Executing Statements Using Perl

Once your Perl script has connected to Vertica (see Connecting to Vertica Using Perl), it can execute simple statements that return a value rather than a result set by using the Perl DBI module's do function. You usually use this function to execute DDL statements or data loading statements such as COPY (see Using COPY LOCAL to Load Data in Perl).

#!/usr/bin/perl
use strict;
use DBI;

# Disable autocommit
my $attr = {AutoCommit => 0};
# Open a connection using a DSN.
my $dbh = DBI->connect("dbi:ODBC:VerticaDSN","ExampleUser","password123",
   $attr);
unless (defined $dbh) {
   # Connection failed.
   die "Failed to connect: $DBI::errstr";
}
# You can use the do function to perform DDL commands.
# Drop any existing table.
$dbh->do("DROP TABLE IF EXISTS TEST CASCADE;");
# Create a table to hold data.
$dbh->do("CREATE TABLE TEST ( 
   C_ID INT, 
   C_FP FLOAT, 
   C_VARCHAR VARCHAR(100), 
   C_DATE DATE, C_TIME TIME, 
   C_TS TIMESTAMP, 
   C_BOOL BOOL 
);"
);
# Commit changes and exit.
$dbh->commit();
$dbh->disconnect();

Note:
The do function returns the number of rows that were affected by the statement (or -1 if the count of rows doesn't apply or is unavailable). Usually, the only time you need to consult this value is after you deleted a number of rows or if you used a bulk load command such as COPY. You use other DBI functions instead of do to perform batch inserts and selects (see
Batch Loading Data Using Perl

To load large batches of data into Vertica using Perl:

1. Set DBI's AutoCommit connection attribute to false to improve the batch load speed. See Setting Perl DBI Connection Attributes for an example of disabling AutoCommit.
2. Call the database handle's prepare function to prepare a SQL INSERT statement that contains placeholders for the data values you want to insert. For example:

   ```perl
   # Prepare an INSERT statement for the test table
   $sth = $dbh->prepare("INSERT into test values(?,?,?,?,?,?,?)");
   ```

   The prepare function returns a statement handle that you will use to insert the data.

3. Assign data to the placeholders. There are several ways to do this. The easiest is to populate an array with a value for each placeholder in your INSERT statement.
4. Call the statement handle's execute function to insert a row of data into Vertica. The return value of this function call lets you know whether Vertica accepted or rejected the row.
5. Repeat steps 3 and 4 until you have loaded all of the data you need to load.
6. Call the database handle's commit function to commit the data you inserted.

The following example demonstrates inserting a small batch of data by populating an array of arrays with data, then looping through it and inserting each row.

```perl
#!/usr/bin/perl
use strict;
use DBI;

# Create a hash reference that holds a hash of parameters for the connection.
my $attr = {AutoCommit => 0, # Turn off Autocommit
            PrintError => 0, # Turn off automatic error printing.
            # This is handled manually.
          };

# Open a connection using a DSN. Supply the username and password.
my $dbh = DBI->connect("dbi:ODBC:VerticaDSN","ExampleUser","password123",
            $attr);
if (defined DBI::err) {
    # Connection failed.
    die "Failed to connect: $DBI::errstr"
}
print "Connection AutoCommit state is: " . $dbh->{AutoCommit} . "\n";

# Create table to hold inserted data
$dbh->do("DROP TABLE IF EXISTS TEST CASCADE;") or die "Could not drop table"
$dbh->do("CREATE TABLE TEST(
            C_ID INT, \
            ...
```
C_FP FLOAT,\nCVARCHAR VARCHAR(100),\nC_DATE DATE, C_TIME TIME,\nC_TS TIMESTAMP,\nC_BOOL BOOL") or die "Could not create table";
#
Populate an array of arrays with values. One of these rows contains
# data that will not be successfully inserted. Another contains an
# undef value, which gets inserted into the database as a NULL.
my @data = (
[1,1.111,'Hello World!','2001-01-01','01:01:01','2001-01-01 01:01:01','t'],
[2,2.2222,'How are you?','2002-02-02','02:02:02','2002-02-02 02:02:02','f'],
['bad value',2.22222,'How are you?','2002-02-02','02:02:02','2002-02-02 02:02:02','f'],
[4,4.22222,undef,'2002-02-02','02:02:02','2002-02-02 02:02:02','f'],
);
#
Create a prepared statement to use parameters for inserting values.
my $sth = $dbh->prepare_cach("INSERT into test values (? , ? , ? , ? , ? , ? , ?)" );
my $rowcount = 0; # Count # of rows
# Loop through the arrays to insert values
foreach my $tuple (@data) {
    $rowcount++;
    # Insert the row
    my $retval = $sth->execute(@$tuple);
    # See if the row was successfully inserted.
    if ($retval == 1) {
        # Value of 1 means the row was inserted (1 row was affected by insert)
        print "Row $rowcount successfully inserted\n";
    } else {
        print "Inserting row $rowcount failed";
        # Error message is not set on some platforms/versions of DBUI. Check to
        # ensure a message exists to avoid getting an uninitialized var warning.
        if ($sth->err()) {
            print "": ". $sth->errstr();
        }
        print "\n";
    }
}
#
Commit changes. With AutoCommit off, you need to use commit for batched
# data to actually be committed into the database. If your Perl script exits
# without committing its data, Vertica rolls back the transaction and the
# data is not committed.
$dbh->commit();
$dbh->disconnect();

The previous example displays the following when successfully run:

Connection AutoCommit state is: 0
Row 1 successfully inserted
Row 2 successfully inserted
Inserting row 3 failed with error 01000 [Vertica][VerticaDSII] (20) An
error occurred during query execution: Row rejected by server; see
server log for details (SQL-01000)
Row 4 successfully inserted
Note that one of the rows was not inserted because it contained a string value that could not be stored in an integer column. See Conversions Between Perl and Vertica Data Types for details of data type handling in Perl scripts that communicate with Vertica.

### Using COPY LOCAL to Load Data in Perl

You can use COPY LOCAL to load delimited files on your client system—for example, a file with comma-separated values—into Vertica. Rather than use Perl to read, parse, and then batch insert the file data, COPY LOCAL directly loads the file data from the local file system into Vertica. When execution completes, COPY LOCAL returns the number of rows that it successfully inserted.

**Note:**
COPY LOCAL must be the first statement in a query, otherwise Vertica returns an error.

The following example uses COPY LOCAL to load into Vertica local file `data.txt`, which is located in the same directory as the Perl file.

```perl
#!/usr/bin/perl
use strict;
use DBI;

# Filesystem path handling module
use File::Spec;

# Create a hash reference that holds a hash of parameters for the connection.
my $attr = {AutoCommit => 0}; # Turn off AutoCommit

# Open a connection using a DSN. Supply the username and password.
my $dbh = DBI->connect("dbi:ODBC:VerticaDSN","ExampleUser","password123",
    $attr) or die "Failed to connect: $DBI::errstr";

print "Connected!\n";

# Drop any existing table.
$dbh->do("DROP TABLE IF EXISTS Customers CASCADE;");

# Create a table to hold data.
$dbh->do("CREATE TABLE Customers( 
    ID INT, 
    FirstName VARCHAR(100),
    LastName VARCHAR(100),
    Email VARCHAR(100),
    Birthday DATE)");

# Find the absolute path to the data file located in the current working directory and named data.txt
my $currDir = File::Spec->rel2abs(File::Spec->curdir());

my $dataFile = File::Spec->catfile($currDir, 'data.txt');
print "Loading file $dataFile\n";

# Load local file using copy local. Return value is the # of rows affected # which equates to the number of rows inserted.
my $rows = $dbh->do("COPY Customers FROM LOCAL '$dataFile' DIRECT")
or die $dbh->errstr;
```
print "Copied $rows rows into database.\n";
$dbh->commit();
# Prepare a query to get the first 15 rows of the results
my $sth = $dbh->prepare("SELECT * FROM Customers WHERE ID < 15 \ ORDER BY ID");

$sth->execute() or die "Error querying table: ", $dbh->errstr;
my @row; # Pre-declare variable to hold result row used in format statement.
# Use Perl formats to pretty print the output. Declare the heading for the
# form.
format STDOUT_TOP =
ID First Last EMail Birthday
== ===== ==== ========
.
# The Perl write statement will output a formatted line with values from the
# @row array. See http://perldoc.perl.org/perlform.html for details.
format STDOUT =
@>(<([^|]+)+>)<([^|]+)+> <([^|]+)+> <([^|]+)+> <([^|]+)+> <([^|]+)+> @row
.
# Loop through result rows while we have them
while (@row = $sth->fetchrow_array()) {
    write; # Format command does the work of extracting the columns from
    # the @row array and writing them out to STDOUT.
}
# Call commit to prevent Perl from complaining about uncommitted transactions
# when disconnecting
$dbh->commit();
$dbh->disconnect();

data.txt is a text file with a row of data on each line. The columns are delimited by pipe (|) characters. This is the default COPY delimiter for command accepts, which simplifies the COPY LOCAL statement.

Here is an example of the file content:

1|Georgia|Gomez|Rhiannon@magna.us|1937-10-03
2|Abdul|Alexander|Kathleen@ipsum.gov|1941-03-10
3|Nigel|Contreras|Tanner@et.com|1955-06-01
4|Gray|Holt|Thomas@Integer.us|1945-12-06
5|Candace|Bullock|Scott@vitae.gov|1932-05-27
6|Matthew|Dotson|Keith@Cras.com|1956-09-30
7|Haviva|Hopper|Morgan@porttitor.edu|1975-05-10
8|Stewart|Sweeney|Rhonda@lectus.us|2003-06-20
9|Allen|Rogers|Alexander@enim.gov|2006-06-17
10|Trevor|Dillon|Eagan@id.org|1988-11-27
11|Leroy|Ashley|Carter@turpis.edu|1958-07-25
12|Elmo|Malone|Carla@enim.edu|1978-08-29
13|Laurel|Ball|Zelenia@Integer.us|1989-09-20
14|Zeus|Phillips|Branden@blandit.gov|1996-08-08
15|Alexis|Mclean|Flavia@Suspendisse.org|2008-01-07

The example code produces the following output when run on a large sample file:

Connected!
Loading file /home/dbadmin/Perl/data.txt
Copied 1000000 rows into database.

| ID | First  | Last    | EMail            | Birthday       |
|----|--------|---------|------------------|----------------|----------------|
| 1  | Georgia| Gomez   | Rhiannon@magna.us| 1937-10-03     |
| 2  | Abdul  | Alexander| Kathleen@ipsum.gov| 1941-03-10    |
| 3  | Nigel  | Contreras| Tanner@et.com     | 1955-06-01     |
| 4  | Gray   | Holt    | Thomas@Integer.us | 1945-12-06    |
| 5  | Candace| Bullock | Scott@vitae.gov   | 1932-05-27     |
| 6  | Matthew| Dotson  | Keith@Cras.com    | 1956-09-30     |
| 7  | Haviva | Hopper  | Morgan@porttitor.edu| 1975-05-10    |
| 8  | Stewart| Sweeney | Rhonda@lectus.us  | 2003-06-20     |
| 9  | Allen  | Rogers  | Alexander@enim.gov| 2006-06-17    |
| 10 | Trevor | Dillon  | Eagan@id.org      | 1988-11-27     |
| 11 | Leroy  | Ashley  | Carter@turpis.edu | 1958-07-25     |
| 12 | Elmo   | Malone  | Carla@enim.edu   | 1978-08-29     |
| 13 | Laurel | Ball    | Zelenia@Integer.us| 1989-09-20    |
| 14 | Zeus   | Phillips| Branden@blandit.gov| 1996-08-08    |

**Note:**
Loading a single, large data file into Vertica through a single data connection is less efficient than loading a number of smaller files onto multiple nodes in parallel. Loading onto multiple nodes prevents any one node from becoming a bottleneck.

**Querying Using Perl**

To query Vertica using Perl:

1. Prepare a query statement using the Perl DBI module's `prepare` function. This function returns a statement handle that you use to execute the query and get the result set.
2. Execute the prepared statement by calling the `execute` function on the statement handle.
3. Retrieve the results of the query from the statement handle using one of several methods, such as calling the statement handle's `fetchrow_array` function to retrieve a row of data, or `fetchall_array` to get an array of arrays containing the entire result set (not a good idea if your result set may be very large!).

The following example demonstrates querying the table created by the example shown in Batch Loading Data Using Perl. It executes a query to retrieve all of the content of the table, then repeatedly calls the statement handle's `fetchrow_array` function to get rows of data in an array. It repeats this process until `fetchrow_array` returns `undef`, which means that there are no more rows to be read.

```perl
#!/usr/bin/perl
```
use strict;
use DBI;
my $attr = {RaiseError => 1}; # Make errors fatal to the Perl script.
# Open a connection using a DSN. Supply the username and password.
my $dbh = DBI->connect("dbi:ODBC:VerticaDSN","ExampleUser","password123", $attr);
# Prepare a query to get the content of the table
my $sth = $dbh->prepare("SELECT * FROM TEST ORDER BY C_ID ASC");
# Execute the query by calling execute on the statement handle
$sth->execute();
# Loop through result rows while we have them, getting each row as an array
while (my @row = $sth->fetchrow_array()) {
    # The @row array contains the column values for this row of data
    # Loop through the column values
    foreach my $column (@row) {
        if (!defined $column) {
            # NULLs are signaled by undefs. Set to NULL for clarity
            $column = "NULL";
        }
        print "$column\t"; # Output the column separated by a tab
    }
    print "\n";
}
$dbh->disconnect();

The example prints the following when run:

1 1.111 Hello World! 2001-01-01 01:01:01 2001-01-01 01:01:01 1
2 2.22222 How are you? 2002-02-02 02:02:02 2002-02-02 02:02:02 0
4 4.22222 NULL 2002-02-02 02:02:02 2002-02-02 02:02:02 0

Binding Variables to Column Values

Another method of retrieving the query results is to bind variables to columns in the result set using the statement handle's bind_columns function. You may find this method convenient if you need to perform extensive processing on the returned data, since your code can use variables rather than array references to access the data. The following example demonstrates binding variables to the result set, rather than looping through the row and column values.

#!/usr/bin/perl
use strict;
use DBI;
my $attr = {RaiseError => 1}; # Make SQL errors fatal to the Perl script.
# Open a connection using a DSN. Supply the username and password.
my $dbh = DBI->connect("dbi:ODBC:VerticaDSN32","ExampleUser","password123", $attr);
# Prepare a query to get the content of the table
my $sth = $dbh->prepare("SELECT * FROM TEST ORDER BY C_ID ASC");
$sth->execute();
# Create a set of variables to bind to the column values.
my ($C_ID, $C_FP, $C VARCHAR, $C_DATE, $C TIME, $C TS, $C BOOL);
# Bind the variable references to the columns in the result set.
$sth->bind_columns($C_ID, $C_FP, $C VARCHAR, $C_DATE, $C TIME, $C TS, $C BOOL);

# Now, calling fetch() to get a row of data updates the values of the bound
# variables. Continue calling fetch until it returns undefined.
while ($sth->fetch()) {
    # Note, you should always check that values are defined before using them,
    # since NULL values are translated into Perl as undefined. For this
    # example, just check the VARCHAR column for undefined values.
    if (!defined $C VARCHAR) {
        $C VARCHAR = "NULL";
    }
    # Just print values separated by tabs.
    print "$C_ID	$C_FP	$C VARCHAR	$C_DATE	$C TIME	$C TS	$C BOOL
";
}
$dbh->disconnect();

The output of this example is identical to the output of the previous example.

**Preparing, Querying, and Returning a Single Row**

If you expect a single row as the result of a query (for example, when you execute a **COUNT** (*) query), you can use the DBI module's `selectrow_array` function to combine executing a statement and retrieving an array as a result.

The following example shows using `selectrow_array` to execute and get the results of the **SHOW LOCALE** statement. It also demonstrates changing the locale using the **do** function.

```perl
#!/usr/bin/perl
use strict;
use DBI;
my $attr = {RaiseError => 1}; # Make SQL errors fatal to the Perl script.
# Open a connection using a DSN. Supply the username and password.
my $dbh = DBI->connect("dbi:ODBC:VerticaDSN","ExampleUser","password123", $attr);
# Demonstrate setting/getting locale.
# Use selectrow_array to combine preparing a statement, executing it, and
# getting an array as a result.
my @localerv = $dbh->selectrow_array("SHOW LOCALE;");
# The locale name is the 2nd column (array index 1) in the result set.
print "Locale: $localerv[1]\n";
# Use do() to execute a SQL statement to set the locale.
$dbh->do("SET LOCALE TO en_GB");
# Get the locale again.
@localerv = $dbh->selectrow_array("SHOW LOCALE;");
print "Locale is now: $localerv[1]\n";
$dbh->disconnect();
```

The result of running the example is:
Executing Queries and ResultBufferSize Settings

When you call the execute() function on a prepared statement, the client library retrieves results up to the size of the result buffer. The result buffer size is set using ODBC's ResultBufferSize setting.

Vertica does not allow multiple active queries per connection. However, you can simulate multiple active queries by setting the result buffer to be large enough to accommodate the entire results from the first query. To ensure that the ODBC client driver's buffer is large enough to store result set for first query you can set ResultBufferSize to 0. Setting this parameter to 0 makes the result buffer size unlimited. The ODBC driver allocates enough memory to read the entire result set. With the entire result set from the first query stored in the result set buffer, the database connection is free to perform another query. Your client can execute this second query even though it has not processed the entire result set from the first query.

However, if you set the ResultBufferSize to 0, you may find that your calls to execute() result in the operating system killing your Perl client script. The operating system may terminate your script if the ODBC driver allocates too much memory to store a large result set.

A workaround for this behavior is limit the number of rows returned by your query. Then you can set the ResultBufferSize to a value that accommodates this limited result set. For example, you can estimate the amount of memory needed to store a single row of your query result. Then use the LIMIT and OFFSET clauses to get a specific number of rows that will fit into the space you allocated using ResultBufferSize. If the results of your query is able to fit within the limited result set buffer, you can then perform additional queries with the same database connection. This solution makes your code more complex as you will need to perform multiple queries to get the entire result set. Also, it is not appropriate in cases where you need to operate on an entire result set at once, rather than just a portion of it at a time.

A better solution is to use separate database connections for each query you want to perform. The overhead of the additional database connection is small compared to the resources needed to process large data sets.
Conversions Between Perl and Vertica Data Types

Perl is a loosely-typed programming language that does not assign specific data types to values. It converts between string and numeric values based on the operations being performed on the values. For this reason, Perl has little problem extracting most string and numeric data types from Vertica. All interval data types (DATE, TIMESTAMP, etc.) are converted to strings. You can use several different date and time handling Perl modules to manipulate these values in your scripts.

Vertica NULL values translate to Perl's undefined (undef) value. When reading data from columns that can contain NULL values, you should always test whether a value is defined before using it.

When inserting data into Vertica, Perl's DBI module attempts to coerce the data into the correct format. By default, it assumes column values are VARCHAR unless it can determine that they are some other data type. If given a string value to insert into a column that has an integer or numeric data type, DBI attempts to convert the string's contents to the correct data type. If the entire string can be converted to a value of the appropriate data type, it inserts the value into the column. If not, inserting the row of data fails.

DBI transparently converts integer values into numeric or float values when inserting into column of FLOAT, NUMERIC, or similar data types. It converts numeric or floating values to integers only when there would be no loss of precision (the value to the right of the decimal point is 0). For example, it can insert the value 3.0 into an INTEGER column since there is no loss of precision when converting the value to an integer. It cannot insert 3.1 into an INTEGER column, since that would result in a loss of precision. It returns an error instead of truncating the value to 3.

The following example demonstrates some of the conversions that the DBI module performs when inserting data into Vertica.

```perl
#!/usr/bin/perl
use strict;
use DBI;
# Create a hash reference that holds a hash of parameters for the # connection.
my $attr = {AutoCommit => 0, # Turn off autocommit PrintError => 0 # Turn off print error. Manually handled};
# Open a connection using a DSN. Supply the username and password.
my $dbh = DBI->connect("dbi:ODBC:VerticaDSN","ExampleUser","password123", $attr);
if (defined DBI::err) {
  # Connection failed.
```

die "Failed to connect: $DBI::errstr"
}
print "Connection AutoCommit state is: " . $dbh->{AutoCommit} . "\n";
# Create table to hold inserted data
$dbh->do("DROP TABLE IF EXISTS TEST CASCADE;")
$dbh->do("CREATE TABLE TEST(
    C_ID INT, \
    C_FP FLOAT, \
    C_VARCHAR VARCHAR(100),\n    C_DATE DATE, C_TIME TIME,\n    C_TS TIMESTAMP,\n    C_BOOL BOOL)");

# Populate an array of arrays with values.
my @data = (
    # Start with matching data types
    [1,1.111,'Matching datatypes','2001-01-01','01:01:01',
     '2001-01-01 01:01:01','t'],
    # Force floats -> int and int -> float.
    [2.0,2,'Ints <-> floats','2002-02-02','02:02:02',
     '2002-02-02 02:02:02',1],
    # Float -> int *only* works when there is no loss of precision.
    [3.1,3,'float > int with trunc?','2003-03-03','03:03:03',
     '2003-03-03 03:03:03',1],
    # String values are converted into numbers
    ['4','4.4','Strings -> numbers', '2004-04-04','04:04:04',
     '2004-04-04 04:04:04',0],
    # String -> numbers only works if the entire string can be
    # converted into a number
    ["5 and a half","5.5","Strings -> numbers", '2005-05-05',
     '05:05:05', '2005-05-05 05:05:05',0],
    # Number are converted into string values automatically,
    # assuming they fit into the column width.
    [6,6.6,3.14159, '2006-06-06', '06:06:06',
     '2006-06-06 06:06:06',0],
    # There are some variations in the accepted date strings
    [7,7.7,'Date/time formats', '07/07/2007','07:07:07',
     '07-07-2007 07:07:07',1],
)

my $sth = $dbh->prepare_cacheds("
    INSERT into test values($1,$2,$3,$4,$5,$6,$7)");
my $rowcount = 0; # Count # of rows
# Loop through the arrays to insert values
foreach my $tuple (@data) {
    $rowcount++;
    # Insert the row
    my $retval = $sth->execute($tuple);
    # See if the row was successfully inserted.
    if ($retval == 1) {
        # Value of 1 means the row was inserted (1 row was affected by insert)
        print "Row $rowcount successfully inserted\n";
    } else {
        print "Inserting row $rowcount failed with error ".
        $sth->state . " . $sth->errstr . "\n";
    }
}
# Commit the data
$dbh->commit();
# Prepare a query to get the content of the table
Perl Unicode Support

Perl supports Unicode data with some caveats. See the perlunicode and the perlunitut (Perl Unicode tutorial) manual pages for details. (Be sure to see the copies of these manual pages included with the version of Perl installed on your client system, as the support for Unicode has changed in recent versions of Perl.) Perl DBI and DBD::ODBC also support Unicode, however DBD::ODBC must be compiled with Unicode support. See the DBD::ODBC documentation for details. You can check the DBD::ODBC-specific connection attribute named odbc_has_unicode to see if Unicode support is enabled in the driver.
The following example Perl script demonstrates directly inserting UTF-8 strings into Vertica and then reading them back. The example writes a text file with the output, since there are may problems displaying Unicode characters in terminal windows or consoles.

```perl
#!/usr/bin/perl
use strict;
use DBI;

my $dbh = DBI->connect("dbi:ODBC:VerticaDSN","ExampleUser","password123");
unless (defined $dbh) {
  # Connection failed.
  die "Failed to connect: $DBI::errstr"
}

# Output to a file. Displaying Unicode characters to a console or terminal
# window has many problems. This outputs a UTF-8 text file that can
# be handled by many Unicode-aware text editors:
open OUTFILE, '>|utf8', "unicodeout.txt";
# See if the DBD::ODBC driver was compiled with Unicode support. If this returns
# 1, your Perl script will get get strings from the driver with the UTF-8
# flag set on them, ensuring that Perl handles them correctly.
print OUTFILE "Was DBD::ODBC compiled with Unicode support? ".
$dbh->{odbc_has_unicode}. "\n"

# Create a table to hold VARCHARs
$dbh->do("DROP TABLE IF EXISTS TEST CASCADE; ");

# Create a table to hold data. Remember that the width of the VARCHAR column
# is the number of bytes set aside to store strings, which often does not equal
# the number of characters it can hold when it comes to Unicode!
$dbh->do("CREATE TABLE test (C_VARCHAR VARCHAR(100) )");
print OUTFILE "Inserting data...\n";
# Use Do to perform simple inserts
$dbh->do("INSERT INTO test VALUES('Hello')");
# This string contains several non-latin accented characters and symbols, encoded
# with Unicode escape notation. They are converted by Perl into UTF-8 characters
$dbh->do("INSERT INTO test VALUES('My favorite band is ",

  "\N{u+00b0C}\N{u+00e4}\N{u+00f6}t \N{u+00d6}v\N{u+00e6}r\N{u+00e7}l\N{u+00e8}f}\r\N{u+00e9}l" .
  " \N{u+263a})')");
# Some Chinese (Simplified) characters. This again uses escape sequence
# that Perl translates into UTF-8 characters.
$dbh->do("INSERT INTO test VALUES(('x\x{f680}'\x{597d})')");
print OUTFILE "Getting data...\n";
# Prepare a query to get the content of the table
my $sth = $dbh->prepare cached("SELECT * FROM test");
# Execute the query by calling execute on the statement handle
$sth->execute();
# Loop through result rows while we have them
while (my @row = $sth->fetchrow_array()) {
  # Loop through the column values
  foreach my $column (@row) {
    print OUTFILE "$column\t";
  }
  print OUTFILE "\n";
}
close OUTFILE;
$dbh->disconnect();
```

Viewing the unicodeout.txt file in a UTF-8-capable text editor or viewer displays:
Was DBD::ODBC compiled with Unicode support?
Inserting data...
Getting data...
My favorite band is Ümläüt Övërkïll ☺
你好
Hello

**Note:**
Terminal windows and consoles often have problems properly displaying Unicode characters. That is why the example writes the output to a text file. With some text editors, you may need to manually set the encoding of the text file to UTF-8 in order for the characters to properly appear (and the font used to display text must have a full Unicode character set). If the character still do not show up, it may be that your version of DBD::ODBC was not compiled with UTF-8 support.

Programming PHP Client Applications

You can connect to Vertica through PHP-ODBC using the Unix ODBC or iODBC library.

In order to use PHP with Vertica, you must install the following packages (and their dependencies):

- `php`
- `php-odbc`
- `php-pdo`
- `UnixODBC` (if you are using the Unix ODBC driver)
- `libiodbc` (if you are using the iODBC driver)

PHP on Linux

PHP is available with most Linux operating systems as a module for the Apache web server. Check your particular Linux repository for PHP RPMs or Debian packages. You can also build PHP from source. See the PHP web site for documentation and source downloads.

PHP on Windows

PHP is available for windows for both the Apache and IIS web servers. You can download PHP for Windows and view installation instructions at the PHP web site.

The PHP ODBC Drivers

PHP supports both the UnixODBC drivers and iODBC drivers. Both drivers use PHP’s ODBC database abstraction layer.

Setup

You must read Programming ODBC Client Applications before connecting to Vertica through PHP. The following example ODBC configuration entries detail the typical settings.
required for PHP ODBC connections. The driver location assumes you have copied the Vertica drivers to /usr/lib64.

**Example odbc.ini**

```
[ODBC Data Sources]
VerticaDSNunixodbc = exampledb
VerticaDNSiodbc = exampledb2
[VerticaDSNunixodbc]
Description = VerticaDSN Unix ODBC driver
Driver = /usr/lib64/libverticaodbc.so
Database = Telecom
Servername = localhost
UserName = dbadmin
Password =
Port = 5433
[VerticaDNSiodbc]
Description = VerticaDSN iODBC driver
Driver = /usr/lib64/libverticaodbc.so
Database = Telecom
Servername = localhost
UserName = dbadmin
Password =
Port = 5433
```

**Example odbcinst.ini**

```
# Vertica
[VerticaDSNunixodbc]
Description = VerticaDSN Unix ODBC driver
Driver = /usr/lib64/libverticaodbc.so
[VerticaDNSiodbc]
Description = VerticaDSN iODBC driver
Driver = /usr/lib64/libverticaodbc.so
[ODBC]
Threading = 1
```

**Verify the Vertica UnixODBC or iODBC Library**

Verify the Vertica UnixODBC library can load all dependant libraries with the following command (assuming you have copies the libraries to /usr/lib64):

For example:

```
ldd /usr/lib64/libverticaodbc.so
```
You must resolve any "not found" libraries before continuing.

**Test Your ODBC Connection**

Test your ODBC connection with the following.

```
isql -v VerticaDSN
```

**PHP Unicode Support**

PHP does not offer native Unicode support. PHP only supports a 256-character set. However, PHP provides the UTF-8 functions `utf8_encode()` and `utf8_decode()` to provide some basic Unicode functionality.

**Querying the Database Using PHP**

The example script below details the use of PHP ODBC functions to connect to the Vertica Analytics Platform.

```php
<?php
# Turn on error reporting
error_reporting(E_ERROR | E_WARNING | E_PARSE | E_NOTICE);
# A simple function to trap errors from queries
function errortrap_odbc($conn, $sql) {
    if (!$rs = odbc_exec($conn, $sql)) {
        echo "Failed to execute SQL: $sql<br/>" . odbc_errormsg($conn);
    } else {
        echo "Success: ". $sql;
    }
    return $rs;
}
# Connect to the Database
$dsn = "VerticaDSNunixodbc";
$conn = odbc_connect($dsn, '', '') or die("<br/>CONNECTION ERROR");
echo "<p>Connected with DSN: $dsn</p>";
# Create a table
$sql = "CREATE TABLE TEST (";
    C_ID INT,
    C_FP FLOAT,
    C VARCHAR VARCHAR(100),
    C_DATE DATE, C_TIME TIME,
    C_TS TIMESTAMP,
    );
```
```php
C_BOOL BOOL);}$result = errortrap_odbc($conn, $sql);
# Insert data into the table with a standard SQL statement
$sql = "INSERT INTO test values(1,1.1,'abcdefg1234567890','1901-01-01','23:12:34','1901-01-01 09:00:09','t');";$result = errortrap_odbc($conn, $sql);
# Insert data into the table with odbc_prepare and odbc_execute
$values = array(2,2.28,'abcdefg1234567890','1901-01-01','23:12:34','1901-01-01 09:00:09','t');$statement = odbc_prepare($conn,"INSERT INTO test values(?,?,?,?,?,?,?)");if(!$result = odbc_execute($statement, $values)) {
    echo "<br/>odbc_execute Failed!";
} else {
    echo "<br/>Success: odbc_execute.";
}
# Get the data from the table and display it
$sql = "SELECT * FROM TEST";if($result = errortrap_odbc($conn, $sql)) {
    echo "<pre>";
    while($row = odbc_fetch_array($result) ) {
        print_r($row);
    }
    echo "</pre>";
}
# Drop the table and projection
$sql = "DROP TABLE TEST CASCADE";$result = errortrap_odbc($conn, $sql);
# Close the ODBC connection
odbc_close($conn);
?>

Example Output

The following is the example output from the script.

Success: CREATE TABLE TEST( C_ID INT, C_FP FLOAT, CVARCHAR VARCHAR(100), C_DATE DATE, C_TIME TIME, C_TS TIMESTAMP, C_BOOL BOOL)
Success: INSERT INTO test values(1,1.1,'abcdefg1234567890','1901-01-01','23:12:34','1901-01-01 09:00:09','t')
Success: odbc_execute.
Success: SELECT * FROM TEST
Array
( [C_ID] => 1
[C_FP] => 1.1
[CVARCHAR] => abcdefg1234567890
[C_DATE] => 1901-01-01
[C_TIME] => 23:12:34
[C_TS] => 1901-01-01 09:00:09
[C_BOOL] => 1
)
Array
( [C_ID] => 2
[C_FP] => 2.28
[CVARCHAR] => abcdefg1234567890
```
Managing Query Execution Between the Client and Vertica

The following topics describe techniques that help you manage query execution between your client and your Vertica database.

ResultBufferSize

By default, Vertica uses the ResultBufferSize parameter to determine the maximum size (in bytes) of a result set that a client can retrieve from a server. When ResultBufferSize is enabled, Vertica sends rows of data directly to the client making the query. The number of rows returned to the client at each fetch of data depends on the size (in bytes) of the ResultBufferSize parameter.

Sometimes, the size of the result set requested by the client is greater than what the ResultBufferSize parameter allows. In such cases, Vertica retrieves only a portion of the result set at a time. Each fetch of data returns the amount of data equal to the size set by the ResultBufferSize parameter. Ultimately, as the client iterates over the individual fetches of data, the entire result set is returned.

Benefits of ResultBufferSize

If you are concerned with the effect of your queries on network latency, ResultBufferSize may provide an advantage over MARS. MARS requires that the client wait until all rows of data are written to the server before the client can retrieve the data. This delay may cause latency issues for your network while waiting for the results to be stored.

In addition, MARS requires that you send two separate requests to return rows of data. The first request performs the query execution which stores the result set on the server. The second request retrieves the data rows that are stored on the server. With ResultBufferSize,
you only need to send one request. This request both executes and retrieves the data rows of interest.

**Query Execution with ResultBufferSize**

The following graphic shows how Vertica returns rows of data from a database to the client with ResultBufferSize enabled:
The query execution performs the following steps:

1. The client sends a query, such as a \texttt{SELECT} statement, to the server. In the preceding graphic, the first query is named Query 1.
2. The server receives the client's request and begins to send both a description of the result set and the requested rows of data back to the client.
3. After all possible rows are returned to the client, the execution is complete. The size of the data set returned equals either that of the data that was requested or the maximum amount of data that ResultBufferSize parameter can retrieve. If the ResultBufferSize maximum size is not yet reached, Vertica can execute Query 2.

The server can accept Query 2 and perform the same steps that it did for Query 1. If the results for Query 1 had reached the maximum ResultBufferSize allowable, Vertica could not execute Query 2 until the client freed the results from Query 1.

After Query 2 runs, you cannot view the results you retrieved for Query 1, unless you execute Query 1 again.

**Setting an Unlimited Buffer Size**

Setting ResultBufferSize to 0 tells the client driver to use an unlimited result set buffer. With this setting, the client library allocates as much memory as it needs to read the entire result set of a query. You may choose to set ResultBufferSize to 0 if you want to simulate having multiple active queries over a single database connection at the same time. With an unlimited buffer size, your client can run a query and have its entire result set stored in memory. This ends the first query, so your client can execute a second query before it fully processes the results of the first query.

A drawback of this method is that your query may consume too much memory if your queries return large result sets. This over-allocation of memory can result in the operating system terminating your client. Due to this risk, consider using multiple database connections instead of trying to reuse a single connection for multiple queries. The overhead of multiple database connections is small compared to the overall amount of resources required to process a large data set.

**Multiple Active Result Sets (MARS)**

You can only enable MARS when you connect to Vertica using a JDBC client connection. MARS allows the execution of multiple queries on a single connection. While ResultBufferSize sends the results of a query directly to the client, MARS stores the results first on the server. Once query execution has finished and all of the results have been stored, you can make a retrieval request to the server to have rows returned to the client.
MARS is set at the session level and must be enabled for every new session. When MARS is enabled, ResultBufferSize is disabled. No error is returned, however the ResultBufferSize parameter is ignored.

**Benefits of MARS**

In comparison with ResultBufferSize, MARS enables you to store multiple result sets from different queries at the same time. You can also send new queries before all of the results of a previous result set have been returned to the client. This allows applications to decouple query execution from result retrieval so that, on a single connection, you can process different results at the same time.

When you enable ResultBufferSize, you must wait until all result sets have been returned to the client before a new query can be executed.

Another benefit of MARS is that it allows you to free up query resources faster than ResultBufferSize allows. While a query is running, resources are held by that query session. When ResultBufferSize is enabled, a client that is performing slowly might read a single row of a result set and then have to stop to retrieve the next row. This prevents the query from finishing quickly and, therefore, prevents the resources used from being freed up for other applications. With MARS, the speed of the client is irrelevant to the reading of rows. As soon as the results are written to the MARS storage, the resources are freed and the speed at which the client retrieves rows no longer matters.

**Query Execution with MARS**

The following graphic demonstrates how multiple queries to the server are handled when MARS is enabled:
Query 1:

1. Query 1 is sent to the server.
2. Query 1's row description and the status of its result set are returned to the client. However, no results are returned to the client at this time.
3. Query 1 completes and its results are saved on the server.
   1. You can now send commands to retrieve the rows of Query 1's result set. These rows are stored on the server. Retrieved rows are sent to the client along with the status of the result set. By keeping track of the status of the result set,
Vertica is able to keep track of which rows have been retrieved from the server.

4. Now that Query 1 has successfully completed, and its result sets are being stored on the server, Query 2 can be executed.

**Query 2:**

1. Query 2 is sent to the server.
2. Query 2's row description and the status of its result set are returned to the client. However, no results are returned to the client at this time.
3. Query 2 completes and its results are stored on the server. Both Query 1 and Query 2 now have result sets stored on the server.
4. You can now send retrieval requests to both Query 1 and Query 2's result sets that are stored on the server. Whenever a retrieval request is made for rows from Query 1, the request is sent and rows and the result set status are sent to the client. The same occurs for Query 2.

Once all rows have been read by the client, the MARS storage on the server closes the active results session. The MARS storage on the server is then freed to store more data. The MARS storage also closes and frees once your session is finished.

**Enabling and Disabling MARS**

You can enable and disable MARS in two different ways:

1. To enable MARS using the JDBC client connection properties, see JDBC Connection Properties.
2. To enable MARS using the SET SESSION command, see SET SESSION MULTIPLEACTIVERESULTSETS.

**See Also**

- SESSION_MARS_STORE
- CLOSE_RESULTSET
- CLOSE_ALL_RESULTSETS

**Management API**

The Management API is a REST API that you can use to view and manage Vertica databases with scripts or applications that accept REST and JSON. The response format for all requests is JSON.
**cURL**

cURL is a command-line tool and application library used to transfer data to or from a server. It uses URL syntax, such as HTTP and HTTPS. All API requests sent to a Vertica server must be made using HTTPS. A request made using HTTP will fail.

There are four HTTP requests that can be passed using cURL to call API methods:

<table>
<thead>
<tr>
<th>Request</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>GET</td>
<td>Retrieves data.</td>
</tr>
<tr>
<td>PUT</td>
<td>Updates data.</td>
</tr>
<tr>
<td>POST</td>
<td>Creates new data.</td>
</tr>
<tr>
<td>DELETE</td>
<td>Deletes data.</td>
</tr>
</tbody>
</table>

**Syntax**

curl https://<NODE>:5444/

**Options**

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>-h --help</td>
<td>Lists all available command-line options.</td>
</tr>
<tr>
<td>-H --header</td>
<td>Allows you to use custom headers in your command. This is useful for sending a request that requires a VerticaAPIKEY.</td>
</tr>
<tr>
<td></td>
<td>curl -H &quot;VerticaApiKey: ValidAPIKey&quot; https://&lt;NODE&gt;:5444/</td>
</tr>
<tr>
<td>-k --insecure</td>
<td>Allows SSL connections without certificate validation.</td>
</tr>
<tr>
<td></td>
<td>curl -k https://&lt;NODE&gt;:5444/</td>
</tr>
<tr>
<td>-X --request</td>
<td>Specifies the custom request used when communicating with a server.</td>
</tr>
</tbody>
</table>
curl -X REQUEST https://<NODE>:5444/

Can be one of the following values:

- GET
- PUT
- POST
- DELETE

**Note:**
If no request is specified, cURL automatically defaults to the GET request.

There are many more options available to add to your cURL query. For a comprehensive list with descriptions, visit the [cURL Documentation Website](https://curl.haxx.se/docs/).  

**General API Information**

These API calls can interact with either standard Vertica nodes or Management Console nodes.

<table>
<thead>
<tr>
<th>GET /</th>
<th>Returns the agent-specific information useful for version checking and service discovery.</th>
</tr>
</thead>
<tbody>
<tr>
<td>GET api</td>
<td>Returns a list of api objects and properties.</td>
</tr>
</tbody>
</table>
GET /

Returns API version information and a list of links to child resources for the Management API.

Resource URL

https://<NODE>:5444/

Authentication

Not required.

Parameters

None.

Example Request

<table>
<thead>
<tr>
<th>GET</th>
<th>https://&lt;NODE&gt;:5444/</th>
</tr>
</thead>
</table>

Response:

```json
{

Rest APIs for the Agent

These API calls interact with standard Vertica nodes.

Backup and Restore

<table>
<thead>
<tr>
<th>Method</th>
<th>Endpoint</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>GET</td>
<td>backups</td>
<td>Returns all the backups that have been created for all vbr configuration files (*.ini) that are located in the /opt/vertica/config directory.</td>
</tr>
<tr>
<td>POST</td>
<td>backups/:config_script_base</td>
<td>Creates a new backup as defined by the given vbr configuration script base (filename without the .ini extension).</td>
</tr>
<tr>
<td>GET</td>
<td>backups/:config_script_base/:archive_id</td>
<td>Returns details for a specific backup archive.</td>
</tr>
<tr>
<td>POST</td>
<td>restore/:archive_id</td>
<td>Restores a backup.</td>
</tr>
</tbody>
</table>

Databases

<table>
<thead>
<tr>
<th>Method</th>
<th>Endpoint</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>GET</td>

</tr>
<tr>
<td>GET</td>
<td>databases/:database_name/hosts</td>
<td>Returns hosts details for a specific database.</td>
</tr>
<tr>
<td>POST</td>
<td>databases/:database_name/hosts</td>
<td>Adds a new host to the database.</td>
</tr>
<tr>
<td>DELETE</td>
<td>databases/:database_name/hosts/:host_id</td>
<td>Removes a host from the database.</td>
</tr>
<tr>
<td>POST</td>
<td>databases/:database_name/hosts/:host_id/process</td>
<td>Starts the database process on a specific host.</td>
</tr>
<tr>
<td>DELETE</td>
<td>databases/:database_name/hosts/:host_id/process</td>
<td>Stops the database on a specific host.</td>
</tr>
<tr>
<td>POST</td>
<td>databases/:database_name/hosts/:host_id/replace_with/:host_id_new</td>
<td>Replaces a host with a standby host in the database.</td>
</tr>
<tr>
<td>GET</td>
<td>databases/:database_name/license</td>
<td>Returns the Vertica license that the specified database is using.</td>
</tr>
<tr>
<td>PUT</td>
<td>databases/:database_name/license</td>
<td>Upgrades the license in the database.</td>
</tr>
<tr>
<td>GET</td>
<td>databases/:database_name/licenses</td>
<td>Returns all the feature licenses that the specified database is using.</td>
</tr>
<tr>
<td>GET</td>
<td>databases/:database_name/nodes</td>
<td>Returns a list of nodes for the specified database.</td>
</tr>
<tr>
<td>GET</td>
<td>databases/:database_name/nodes/:node_id</td>
<td>Returns details on a specific node for the specified database.</td>
</tr>
<tr>
<td>POST</td>
<td>databases/:database_name/process</td>
<td>Starts the specified database.</td>
</tr>
<tr>
<td>GET</td>
<td>databases/:database_name/process</td>
<td>Returns the state of the database as either UP or DOWN.</td>
</tr>
<tr>
<td>DELETE</td>
<td>databases/:database_name/process</td>
<td>Stops the specified database on all hosts.</td>
</tr>
</tbody>
</table>
POST databases/:database_name/rebalance/process  Rebalances the specified database. This option can have a long run time.

POST databases/:database_name/Workload Analyzer/process  Runs the analyze workload action against the specified database. This option can have a long run time.

**Hosts**

<table>
<thead>
<tr>
<th>GET hosts</th>
<th>Returns a list of hosts in this cluster.</th>
</tr>
</thead>
<tbody>
<tr>
<td>GET hosts/:hostid</td>
<td>Returns details for a specific host in this cluster.</td>
</tr>
</tbody>
</table>

**Jobs**

<table>
<thead>
<tr>
<th>GET jobs</th>
<th>Returns a list of jobs the agent is tracking, along with their current status and exit codes.</th>
</tr>
</thead>
<tbody>
<tr>
<td>GET jobs/:id</td>
<td>Returns the details (the saved output) for a specific job.</td>
</tr>
</tbody>
</table>

**Licenses**

<table>
<thead>
<tr>
<th>POST licenses</th>
<th>Uploads and applies a new license to this cluster.</th>
</tr>
</thead>
<tbody>
<tr>
<td>GET licenses</td>
<td>Returns the license field that databases created on this cluster use.</td>
</tr>
</tbody>
</table>

**Nodes**

<table>
<thead>
<tr>
<th>GET nodes</th>
<th>Returns a list of nodes in this cluster.</th>
</tr>
</thead>
<tbody>
<tr>
<td>GET nodes/:nodeid</td>
<td>Returns details for a specific node in this cluster.</td>
</tr>
</tbody>
</table>
## Webhooks

<table>
<thead>
<tr>
<th>Method</th>
<th>Endpoint</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>GET</td>
<td>webhooks</td>
<td>Returns a list of active webhooks.</td>
</tr>
<tr>
<td>POST</td>
<td>webhooks/subscribe</td>
<td>Creates a new webhook.</td>
</tr>
<tr>
<td>DELETE</td>
<td>webhooks/:subscriber_id</td>
<td>Deletes an existing webhook.</td>
</tr>
</tbody>
</table>
VerticaAPIKey

The Management API requires an authentication key, named VerticaAPIKEY, to access some API resources. You can manage API keys by using the `apikeymgr` command-line tool.

**Example Request**

To create a new VerticaAPIKEY for the `dbadmin` user with `admin` access, enter the following:

```
$ apikeymgr --user dbadmin --app vertica --create --secure admin
```

**Response:**

```
Requestor : dbadmin
Application: vertica
API Key    : ValidAPIKey
Synchronizing cluster...
```

**Backup and Restore**

You can use these API calls to perform backup and restore tasks for your database.

```
| GET backups | Returns all the backups that have been created for all vbr configuration files ( *.ini ) that are located in the |
```
<table>
<thead>
<tr>
<th>Method</th>
<th>Route</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>POST</td>
<td>/opt/vertica/config directory.</td>
<td>Creates a new backup as defined by the given vbr configuration script base (filename without the .ini extension).</td>
</tr>
<tr>
<td>GET</td>
<td>backups/:config_script_base/:archive_id</td>
<td>Returns details for a specific backup archive.</td>
</tr>
<tr>
<td>POST</td>
<td>restore/:archive_id</td>
<td>Restores a backup.</td>
</tr>
</tbody>
</table>
**GET backups**

Returns a list of all backups created for vbr configuration (*.ini) files that reside in /opt/vertica/config and provides details about each backup.

**Resource URL**

https://<NODE>:5444/backups

**Authentication**

Requires a VerticaAPIKey in the request header.

The API key must have restricted level security or higher.

**Parameters**

None.

**Example Request**

<table>
<thead>
<tr>
<th>GET</th>
<th>https://&lt;NODE&gt;:5444/backups</th>
</tr>
</thead>
</table>

**Response:**

```json
[
  {
    "backups": [
      {
        "backup": "backup3_20140707_114852",
        "epoch": "61",
        "hosts": "v_vmart_node0001(10.20.100.247)",
        "objects": ""
      }
    ],
  }
]
```
"config_file": "/opt/vertica/config/backup3.ini",
"num_backups": 1
},
{
  "backups": [                                    
    {                                              
      "backup": "backup_20140707_113737",
      "epoch": "61",
      "hosts": "v_vmart_node0001(10.20.100.247)",
      "objects": ""
    },                                              
    {                                              
      "backup": "backup_archive20140707_113645",
      "epoch": "60",
      "hosts": "v_vmart_node0001(10.20.100.247)",
      "objects": ""
    }                                               
  ]                                                  
},
"config_file": "/opt/vertica/config/backup.ini",
"num_backups": 2
}
**POST backups/:config_script_base**

Creates a new backup job for the backup defined in the vbr configuration script `:config_script_base`. The vbr configuration script must reside in `/opt/vertica/configuration`. The `:config_script_base` value does not include the `.ini` filename extension.

To determine valid `:config_script_base` values, see [GET backups](#). Returns a job ID that you can use to determine the status of the job.

**Resource URL**

```
https://<NODE>:5444/backups/:config_script_base
```

**Authentication**

Requires a VerticaAPIKey in the request header.

The API key must have **restricted** level security or higher.

**Parameters**

None.

**Example Request**

```
POST https://<NODE>:5444/backups/:config_script_base
```

**Response:**

```
{
  "id": "CreateBackup-VMart-1404750602.03",
}
```
"url": "/jobs/CreateBackup-VMart-1404750602.03"}
GET `backups/:config_script_base/:archive_id`

Returns details on a specific backup. You must provide the :config_script_base. This value is the name of a vbr config file (without the .ini filename extension) that resides in /opt/vertica/config. The :archive_id is the value of the backup field that the GET `backups` command returns.

**Resource URL**

https://<NODE>:5444/backups/:config_script_base/:archive_id

**Authentication**

Requires a VerticaAPIKey in the request header.

The API key must have restricted level security or higher.

**Parameters**

None.

**Example Request**

<table>
<thead>
<tr>
<th>GET</th>
<th>https://&lt;NODE&gt;:5444/backups/back up3/backup3_20140707_123254</th>
</tr>
</thead>
</table>

**Response:**

```
{
    "backup": "backup3_20140707_123254",
    "config_file": "/opt/vertica/config/backup3.ini",
    "epoch": "62",
    "hosts": "v_vmart_node0001(10.20.100.247)",
    "objects": ""
}"
```
}
**POST restore/:archive_id**

Creates a new restore job to restore the database from the backup archive identified by :archive_id. The :archive_id is the value of a backup field that the GET backups command returns.

Returns a job ID that you can use to determine the status of the job. See GET jobs.

**Resource URL**

https://<NODE>:5444/restore/:archive_id

**Authentication**

Requires a VerticaAPIKey in the request header.

The API key must have restricted level security or higher.

**Parameters**

None.

**Example Request**

| POST |  https://<NODE>:5444/restore /backup3_20140707_132904 |

**Response:**

```json
{
   "id": "RestoreBackup-VMart-1404760113.71",
   "url": "/jobs/RestoreBackup-VMart-1404760113.71"
}
```
# Databases

You can use these API calls to interact with your database.

<table>
<thead>
<tr>
<th>Method</th>
<th>Endpoint</th>
<th>Description</th>
</tr>

<td>Rebalances the specified database. This option can have a long run time.</td>
</tr>
<tr>
<td>POST</td>
<td>databases/:database_name/Workload Analyzer/process</td>
<td>Runs the analyze workload action against the specified database. This option can have a long run time.</td>
</tr>
</tbody>
</table>
**GET databases**

Returns a list of databases, their current status, and database properties.

**Resource URL**

https://<NODE>:5444/databases

**Authentication**

Requires a VerticaAPIKey in the request header.

The API key must have restricted level security or higher.

**Parameters**

None.

**Example Request**

```
GET
https://<NODE>:5444/databases
```

An example of the full request using cURL:

```
curl -H "VerticaApiKey: ValidAPIKey" https://<NODE>:5444/databases
```

**Response:**

```
{
  "body": []
  {
    "href": "/databases/VMart",
    "mime-type": [
      "application/vertica.database.json-v2"
    ]
  }
```

{
  "href": "/databases",
  "links": [
    "/:database_name"
  ],
  "mime-type": "application/vertica.databases.json-v2"
}
{
  "href": "/databases/testDB",
  "mime-type": [
    "application/vertica.database.json-v2"
  ],
  "name": "testDB",
  "port": "5433",
  "status": "DOWN"
}
{
  "name": "VMart",
  "port": "5433",
  "status": "UP"
}
**POST databases**

Creates a job to create a new database with the provided parameters.

**Important:**
You must stop any running databases on the nodes on which you want to create the new database. If you do not, database creation fails.

Returns a job ID that can be used to determine the status of the job. See [GET jobs](#).

**Resource URL**

https://<NODE>:5444/database

**Authentication**

Requires a [VerticaAPIKey](#) in the request header.

The API key must have **admin** level security.

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>Name of the database to create.</td>
</tr>
<tr>
<td>passwd</td>
<td>Password for the new database.</td>
</tr>
<tr>
<td>only</td>
<td>Optional list of hostnames to include in the database. By default, all nodes in the cluster are added to the database.</td>
</tr>
<tr>
<td>exclude</td>
<td>Optional list of hostnames to exclude from the database.</td>
</tr>
<tr>
<td>catalog</td>
<td>Path of the catalog directory.</td>
</tr>
<tr>
<td>data</td>
<td>Path of the data directory.</td>
</tr>
<tr>
<td>port</td>
<td>Port where the database listens for client connections. Default is 5433.</td>
</tr>
</tbody>
</table>
Example Request

POST

https://<NODE>:5444/databases?passwd=db_password&name=db_name&catalog=%2Fpath%2Fto%2Fcatalog&data=%2Fpath%2Fto%2Fdata_directory

Response:

```json
{
  "userid": "dbadmin"
}
```
**GET databases/:database_name**

Returns details about a specific database. The :database_name is the value of the name field that the GET databases command returns.

**Resource URL**

https://<NODE>:5444/databases/:database_name

**Authentication**

Requires a VerticaAPIKey in the request header.

The API key must have restricted level security or higher.

**Parameters**

None.

**Example Request**

```
GET https://<NODE>:5444/databases/VMart
```

**Response:**

```
{
    "body": {
        "database_id": "VMart",
        "id": "VMart",
        "nodes": "v_vmart_node0001,v_vmart_node0002,v_vmart_node0003",
        "nodes_new": [
            {
                "catalog_base": "/home/dbadmin",
                "data_base": "/home/dbadmin",
```
"host": "10.20.100.247",
"id": "v_vmart_node0001"
},
{
  "catalog_base": "/home/dbadmin",
  "data_base": "/home/dbadmin",
  "host": "10.20.100.248",
  "id": "v_vmart_node0002"
},
{
  "catalog_base": "/home/dbadmin",
  "data_base": "/home/dbadmin",
  "host": "10.20.100.249",
  "id": "v_vmart_node0003"
}
],
"path": "/home/dbadmin/VMart",
"port": "5433",
"restartpolicy": "ksafe",
"status": "UP"
},
"href": "/databases/VMart",
"links": [
  "/configuration",
  "/hosts",
  "/license",
  "/nodes",
  "/process",
  "/rebalance/process",
  "/status",
  "/Workload Analyzer/process"
],
"mime-type": "application/vertica.database.json-v2"}
**PUT databases/:database_name**

Creates a job to run the action specified by the *action* parameter against the database identified by `:database_name`. The `:database_name` is the value of the `name` field that the `GET databases` command returns.

Returns a job ID that you can use to determine the status of the job. See `GET jobs`.

**Resource URL**

`https://<NODE>:5444/databases/:database_name`

**Authentication**

Requires a [VerticaAPIKey](#) in the request header.

The API key must have `normal` level security or higher.

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>user_id</td>
<td>A database username.</td>
</tr>
<tr>
<td>passwd</td>
<td>A password for the username.</td>
</tr>
<tr>
<td>action</td>
<td>Can be one of the following values:</td>
</tr>
<tr>
<td></td>
<td>• start — Start the database.</td>
</tr>
<tr>
<td></td>
<td>• stop — Stop the database.</td>
</tr>
<tr>
<td></td>
<td>• rebalance — Rebalance the database.</td>
</tr>
<tr>
<td></td>
<td>• Workload Analyzer — Run Work Load Analyzer against the database.</td>
</tr>
</tbody>
</table>
Example Request

**PUT**

```
```

**Response:**

```
{
    "id": "StopDatabase-testDB-2014-07-20 13:28:49.321744",
    "url": "/jobs/StopDatabase-testDB-2014-07-20 13:28:49.321744"
}
```
**DELETE databases/:database_name**

Creates a job to delete (drop) an existing database on the cluster. To perform this operation, you must first stop the database. The :database_name is the value of the name field that the GET databases command returns.

Returns a job ID that you can use to determine the status of the job. See GET jobs.

**Resource URL**

https://<NODE>:5444/databases/:database_name

**Authentication**

Requires a VerticaAPIKey in the request header.

The API key must have admin level security.

**Parameters**

None.

**Example Request**

```
DELETE databases/TestDB
```

**Response:**

```
{
    "id": "DropDatabase-TestDB-2014-07-18 12:50:33.332383",
    "url": "/jobs/DropDatabase-TestDB-2014-07-18 12:50:33.332383"
}
```
**GET databases/:database_name/configuration**

Returns a list of configuration parameters for the database identified by :database_name. The :database_name is the value of the name field that the GET databases command returns.

**Resource URL**

https://<NODE>:5444/databases/:database_name/configuration

**Authentication**

Requires a VerticaAPIKey in the request header.

The API key must have **restricted** level security or higher.

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>user_id</td>
<td>A database username.</td>
</tr>
<tr>
<td>passwd</td>
<td>The password for the username.</td>
</tr>
</tbody>
</table>

**Example Request**

```
GET https://<NODE>:5444/databases/testDB/configuration?user_id=username&passwd=username_password
```

**Response:**

This API call returns over 100 configuration parameters. The following response is a small subset of the total amount returned.

**PUT databases/:database_name/configuration**

Sets one or more configuration parameters for the database identified by `:database_name`. The `:database_name` is the value of the `name` field that the `GET databases` command returns.

Returns the parameter name, the requested value, and the result of the attempted change (Success or Failed).

**Resource URL**

```
https://<NODE>:5444/databases/:database_name/configuration
```

**Authentication**

Requires a VerticaAPIKey in the request header.

The API key must have admin level security.

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>user_id</td>
<td>A database username.</td>
</tr>
<tr>
<td>passwd</td>
<td>The password for the username.</td>
</tr>
<tr>
<td>parameter_name</td>
<td>A parameter name and value combination for the parameter to be changed. Values must be URL encoded. You can include multiple name/value pairs to set multiple parameters with a single API call.</td>
</tr>
</tbody>
</table>

**Example Request**

```
PUT https://<NODE>:5444/databases/t
```
Response:

```json
[
  {
    "key": "JavaBinaryForUDx",
    "result": "Success",
    "value": "/usr/bin/java"
  },
  {
    "key": "TransactionIsolationLevel",
    "result": "Success",
    "value": "SERIALIZABLE"
  }
]
```
**GET databases/:database_name.hosts**

Returns the hostname/IP address, node name, and UP/DOWN status of each host associated with the database identified by :database_name. The :database_name is the value of the name field that the GET databases command returns.

**Resource URL**

https://<NODE>:5444/databases/:database_name/hosts

**Authentication**

Requires a VerticaAPIKey in the request header.

The API key must have restricted level security or higher.

**Parameters**

None.

**Example Request**

```plaintext
GET https://<NODE>:5444/databases/VMart/hosts
```

**Response:**

```json
{
  "body": [
    {
      "hostname": "10.20.100.247",
      "nodename": "v_vmart_node0001",
      "status": "UP",
    }
  ]
}
```
{  
  "hostname": "10.20.100.248",
  "nodename": "v_vmart_node0002",
  "status": "UP",
  "ts": "2014-07-18T13:12:31.904209"
},
{  
  "hostname": "10.20.100.249",
  "nodename": "v_vmart_node0003",
  "status": "UP",
}  
"href": "/databases/VMart/hosts",
"links": [],
"mime-type": "application/vertica.hosts.json-v2"  
}
**POST databases/:database_name/hosts**

Creates a job to add a host to the database identified by :database_name. This host must already be part of the cluster. The :database_name is the value of the name field that the GET databases command returns.

Returns a job ID that you can use to determine the status of the job. See GET jobs.

**Resource URL**

https://<NODE>:5444/:database_name/hosts

**Authentication**

Requires a VerticaAPIKey in the request header.

The API key must have admin level security.

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>user_id</td>
<td>A database username.</td>
</tr>
<tr>
<td>passwd</td>
<td>The password for the username.</td>
</tr>
<tr>
<td>hostname</td>
<td>The hostname to add to the database. This host must already be part of the cluster.</td>
</tr>
</tbody>
</table>

**Example Request**

```
```
Response:

```json
{
   "id": "AddHostToDatabase-testDB-2014-07-20 12:24:04.088812",
   "url": "/jobs/AddHostToDatabase-testDB-2014-07-20 12:24:04.088812"
}
```
**DELETE databases/:database_name/hosts/:host_id**

Creates a job to remove the host identified by :host_id from the database identified by :database_name. The :database_name is the value of the name field that the GET databases command returns. The :host_id is the value of the host field returned by GET databases/:database_name.

Returns a job ID that you can use to determine the status of the job. See GET jobs.

**Resource URL**

```plaintext
https://<NODE>:5444/databases/:database_name/hosts/:host_id
```

**Authentication**

Requires a VerticaAPIKey in the request header.

The API key must have admin level security.

**Parameters**

<table>
<thead>
<tr>
<th>parameter</th>
<th>description</th>
</tr>
</thead>
<tbody>
<tr>
<td>user_id</td>
<td>A database username.</td>
</tr>
<tr>
<td>passwd</td>
<td>A password for the username.</td>
</tr>
</tbody>
</table>

**Example Request**

```plaintext
DELETE

&password
```
Response:

```json
{
    "id": "RemoveHostFromDatabase-testDB-2014-07-20 13:41:15.646235",
    "url": "/jobs/RemoveHostFromDatabase-testDB-2014-07-20 13:41:15.646235"
}
```
**POST databases/:database_name/hosts/:host_id/process**

Creates a job to start the vertica process for the database identified by :database_name on the host identified by :host_id. The :database_name is the value of the `name` field that the GET databases command returns. The :host_id is the value of the `host` field returned by GET databases/:database_name.

Returns a job ID that you can use to determine the status of the job. See GET jobs.

**Resource URL**

```
https://<NODE>:5444/:database_name/hosts/:host_id/process
```

**Authentication**

Requires a VerticaAPIKey in the request header.

The API key must have restricted level security or higher.

**Parameters**

None.

**Example Request**

Response:

```
{
    "id": "StartDatabase-testDB-2014-07-20 13:14:03.968340",
    "url": "/jobs/StartDatabase-testDB-2014-07-20 13:14:03.968340"
}
```
Vertica Documentation
Connecting to Vertica

}
**GET databases/:database_name/license**

Returns details about the database license being used by the database identified by :database_name. The :database_name is the value of the name field that the GET databases command returns.

**Resource URL**

https://<NODE>:5444/:database_name/license

**Authentication**

Requires a VerticaAPIKey in the request header.

The API key must have restricted level security or higher.

**Parameters**

<table>
<thead>
<tr>
<th>parameter</th>
<th>description</th>
</tr>
</thead>
<tbody>
<tr>
<td>user_id</td>
<td>A database username.</td>
</tr>
<tr>
<td>passwd</td>
<td>The password for the username.</td>
</tr>
</tbody>
</table>

**Example Request**

```
GET https://<NODE>:5444/VMart/license?user_id=username&passwd=username_password
```

**Response:**

```
{
  "body": {
```

**DELETE databases/:database_name/hosts/:host_id/process**

Creates a job to stop the vertica process for the database identified by :database_name on the host identified by :host_id. The :database_name is the value of the name field that the GET databases command returns. The :host_id is the value of the host field returned by GET databases/:database_name.

Returns a job ID that can be used to determine the status of the job. See GET jobs.

**Note:**
If stopping the database on the hosts causes the database to no longer be k-safe, then the all database nodes may shut down.

**Resource URL**

https://<NODE>:5444/databases/:database_name/hosts/:host_id/process

**Authentication**

Requires a VerticaAPIKey in the request header.

The API key must have restricted level security or higher.

**Parameters**

None.

**Example Request**

```
DELETE
```

**Response:**
**POST databases/:database_name主持人/:host_id/replace_with/:host_id_new**

Creates a job to replace the host identified by hosts/:host_id with the host identified by replace_with/:host_id. Vertica performs these operations for the database identified by :database_name. The :database_name is the value of the name field that the GET databases command returns. The :host_id is the value of the host field as returned by GET databases/:database_name. You can find valid replacement hosts using GET hosts. The replacement host cannot already be part of the database. You must stop the vertica process on the host being replaced.

Returns a job ID that you can use to determine the status of the job. See GET jobs.

**Resource URL**

https://<NODE>:5444/databases/:database_name主持人/:host_id/replace_with/:host_id_new

**Authentication**

Requires a VerticaAPIKey in the request header.

The API key must have admin level security.

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>user_id</td>
<td>A database username.</td>
</tr>
<tr>
<td>passwd</td>
<td>A password for the username.</td>
</tr>
</tbody>
</table>
Example Request

Response:

```json
{
}
```
**GET databases/:database_name/nodes**

Returns a comma-separated list of node IDs for the database identified by :database_name. The :database_name is the value of the *name* field that the GET databases command returns.

**Resource URL**

https://<NODE>:5444/:database_name/nodes

**Authentication**

Requires a VerticaAPIKey in the request header.

The API key must have restricted level security or higher.

**Parameters**

None.

**Example Request**

```
GET https://<NODE>:5444/VMart/nodes
```

**Response:**

```
[
  {
    "database_id": "VMart",
    "node_id": "v_vmart_node0001,v_vmart_node0002,v_vmart_node0003",
    "status": "Unknown"
  }
]
```
**GET databases/:database_name/nodes/:node_id**

Returns details about the node identified by :node_id. The :node_id is one of the node IDs returned by GET databases/:database_name/nodes.

**Resource URL**

https://<NODE>:5444/:database_name/nodes/:node_id

**Authentication**

Requires a VerticaAPIKey in the request header.

The API key must have restricted level security or higher.

**Parameters**

None.

**Example Request**

```
GET

https://<NODE>:5444/databases/VMart/nodes/v_vmart_node0001
```

**Response:**

```
{
  "db": "VMart",
  "host": "10.20.100.247",
  "name": "v_vmart_node0001",
  "state": "UP"
}
```
**POST databases/:database_name/process**

Creates a job to start the database identified by :database_name. The :database_name is the value of the name field that the GET databases command returns.

Returns a job ID that can be used to determine the status of the job. See GET jobs.

**Resource URL**

https://<NODE>:5444/databases/:database_name/process

**Authentication**

Requires a VerticaAPIKey in the request header.

The API key must have restricted level security or higher.

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>epoch</td>
<td>Start the database from this epoch.</td>
</tr>
<tr>
<td>include</td>
<td>Include only these hosts when starting the database. Use a comma-separated list of hostnames.</td>
</tr>
</tbody>
</table>

**Example Request**

An example of the full request using cURL:

curl -d "epoch=epoch_number&include=host1,host2" -X POST -H "VerticaApiKey: ValidAPIKey" https://<NODE>:5444/:testDB/process
Response:

```json
{
   "id": "StartDatabase-testDB-2014-07-20 12:41:46.061408",
   "url": "/jobs/StartDatabase-testDB-2014-07-20 12:41:46.061408"
}
```
**GET databases/:database_name/process**

Returns a state of UP or DOWN for the database identified by :database_name. The :database_name is the value of the name field that the GET databases command returns.

**Resource URL**

https://<NODE>:5444/databases/:database_name/process

**Authentication**

Requires a VerticaAPIKey in the request header.

The API key must have restricted level security or higher.

**Parameters**

None.

**Example Request**

```
GET https://<NODE>:5444/databases/VM/art/process
```

**Response:**

```
{
  "state": "UP"
}
```
DELETE databases/:database_name/process

Creates a job to stop the database identified by :database_name. The :database_name is the value of the name field that the GET databases command returns.

Returns a job ID that you can use to determine the status of the job. See GET jobs.

Resource URL

https://<NODE>:5444/databases/:database_name/process

Authentication

Requires a VerticaAPIKey in the request header.

The API key must have restricted level security or higher.

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>user_id</td>
<td>A database username.</td>
</tr>
<tr>
<td>passwd</td>
<td>The password for the username.</td>
</tr>
</tbody>
</table>

Example Request

```
DELETE https://<NODE>:5444/databases/testDB/process
?user_id=username
&passwd=username_password
```

An example of the full request using cURL:
curl -X DELETE -H "VerticaApiKey: ValidAPIKey" https://<NODE>:5444/:testDB/process?user_id=dbadmin"&"passwd=vertica

Response:

```
{
    "id": "StopDatabase-testDB-2014-07-20 12:46:04.406637",
    "url": "/jobs/StopDatabase-testDB-2014-07-20 12:46:04.406637"
}
```
**POST databases/:database_name/rebalance/process**

Creates a job to run a rebalance on the database identified by host identified by :database_name. The :database_name is the value of the name field that the GET databases command returns.

Returns a job ID that you can use to determine the status of the job. See GET jobs.

**Resource URL**

https://<NODE>:5444/databases/:database_name/rebalance/process

**Authentication**

Requires a VerticaAPIKey in the request header.

The API key must have restricted level security or higher.

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>user_id</td>
<td>A database username.</td>
</tr>
<tr>
<td>passwd</td>
<td>A password for the username.</td>
</tr>
</tbody>
</table>

**Example Request**

```
POST https://<NODE>:5444/databases/testDB/rebalance/process
?user_id=username&passwd=username_password
```

**Response:**
POST databases/:database_name/Workload Analyzer/process

Creates a job to run Workload Analyzer on the database identified by host identified by :database_name. The :database_name is the value of the name field that the GET databases command returns.

Returns a job ID that you can use to determine the status of the job. See GET jobs.

Resource URL

https://<NODE>:5444/databases/:database_name/Workload Analyzer/process

Authentication

Requires a VerticaAPIKey in the request header.

The API key must have restricted level security or higher.

Parameters

<table>
<thead>
<tr>
<th>parameter</th>
<th>description</th>
</tr>
</thead>
<tbody>
<tr>
<td>user_id</td>
<td>A database username.</td>
</tr>
<tr>
<td>passwd</td>
<td>A password for the username.</td>
</tr>
</tbody>
</table>

Example Request

| POST | https://<NODE>:5444/databases/testDB/Workload Analyzer/process?user_id=username&passwd=username_password |
Response:

```
{
}
```

**Hosts**

You can use these API calls to get information on the hosts in your cluster.

<table>
<thead>
<tr>
<th>GET hosts</th>
<th>Returns a list of hosts in this cluster.</th>
</tr>
</thead>
<tbody>
<tr>
<td>GET hosts/:hostid</td>
<td>Returns details for a specific host in this cluster.</td>
</tr>
</tbody>
</table>
**GET hosts**

Returns a list of the hosts in the cluster and the hardware, software, and network details about each host.

**Resource URL**

https://<NODE>:5444/hosts

**Authentication**

Requires a VerticaAPIKey in the request header.

The API key must have restricted level security or higher.

**Parameters**

None.

**Example Request**

```
GET https://<NODE>:5444/hosts
```

**Response:**

```
{
  "body": [
    {
      "cpu_info": {
        "cpu_type": "Intel(R) Xeon(R) CPU E5-2695 v2 @ 2.40GHz",

}
```

**GET hosts/:hostid**

Returns hardware, software, and network details about the host identified by :host_id. You can find :host_id for each host using GET hosts.

**Resource URL**

https://<NODE>:5444/hosts/:hostid

**Authentication**

Requires a VerticaAPIKey in the request header.

The API key must have restricted level security or higher.

**Parameters**

None.

**Example Request**

| GET | https://<NODE>:5444/hosts/:10.20.100.247 |

**Response:**

```json
{
    "body": {
        "cpu_info": {
            "cpu_type": "Intel(R) Xeon(R) CPU E5-2695 v2 @ 2.40GHz",
            "number_of_cpus": 2
        },
        "hostname": "v_vmart_node0001.example.com",
        "max_user_proc": "3833",
        "nics": [
```
Jobs

You can use these API calls to get information on your database's jobs.

<table>
<thead>
<tr>
<th>GET jobs</th>
<th>Returns a list of jobs the agent is tracking, along with their current status and exit codes.</th>
</tr>
</thead>
<tbody>
<tr>
<td>GET jobs/:id</td>
<td>Returns the details (the saved output) for a specific job.</td>
</tr>
</tbody>
</table>
**GET jobs**

Returns a list of jobs being tracked by the agent and job details.

Jobs always start immediately. The is_running field is a Boolean value. If is_running is false, then the job is complete.

The exit_code details the status of the job. The exit_code is different for certain types of jobs:

- For Backup jobs:
  - 0 indicates success.
  - Any other number indicates a failure.
- For all other jobs:
  - -9 indicates success.
  - Any other number indicates a failure.

You can see details about failures in /opt/vertica/log/agentStdMsg.log.

**Resource URL**

https://<NODE>:5444/jobs

**Authentication**

Requires a VerticaAPIKey in the request header.

The API key must have restricted level security or higher.

**Parameters**

None.
Example Request

**GET**

https://<NODE>:5444/jobs

**Response:**

```json
{
    "body": [
        {
            "exit_code": 0,
            "id": "CreateBackup-VMart-1405012447.75",
            "is_running": false,
            "status": "unused",
            "ts": "1405012461.18"
        },
        {
            "exit_code": 1,
            "id": "CreateBackup-VMart-1405012454.88",
            "is_running": false,
            "status": "unused",
            "ts": "1405012455.18"
        }
    ],
    "href": "/jobs",
    "links": [
        {"rel": "/:jobid"
        },
        "mime-type": "application/vertica.jobs.json-v2"
    ]
```
**GET jobs/:id**

Gets the details for a specific job with the provided :id. You can determine the list of job :ids using **GET jobs**.

Details for a specific job are the same as the details provided for all jobs by **GET jobs**.

**Note:**
You must URL encode the :id as some IDs may contain spaces or other special characters.

**Resource URL**

https://<NODE>:5444/jobs/:id

**Authentication**

Requires a **VerticaAPIKey** in the request header.

The API key must have **restricted** level security or higher.

**Parameters**

None.

**Example Request**

```
GET https://<NODE>:5444/jobs/:id
```
Licenses

You can use these API calls to manage licenses for your database.

<table>
<thead>
<tr>
<th>POST licenses</th>
<th>Uploads and applies a new license to this cluster.</th>
</tr>
</thead>
<tbody>
<tr>
<td>GET licenses</td>
<td>Returns the license field that databases created on this cluster use.</td>
</tr>
</tbody>
</table>
**POST licenses**

Uploads and applies a license file to this cluster.

You must provide the license file as an HTTP POST form upload, identified by the name `license`. For example, you can use cURL:

```bash
curl -k --request POST -H "VerticaApiKey:ValidAPIKey" 
https://v_vmart_node0001:5444/licenses --form "license=@vlicense.dat"
```

**Resource URL**

https://<NODE>:5444/licenses

**Authentication**

Requires a `VerticaAPIKey` in the request header.

The API key must have `admin` level security.

**Parameters**

None.

**Example Request**

| POST | https://<NODE>:5444/licenses |

**Response:**

There is no HTTP body response for successful uploads. A successful upload returns an HTTP 200/OK header.
**GET licenses**

Returns any license files that are used by this cluster when creating databases. License files must reside in /opt/vertica/config/share.

**Resource URL**

https://<NODE>:5444/licenses

**Authentication**

Requires a VerticaAPIKey in the request header.

The API key must have restricted level security or higher.

**Parameters**

None.

**Example Request**

| GET | https://<NODE>:5444/licenses |

**Response:**

```
{
  "body": [
    {
      "comment": "Vertica license is valid",
      "end": "Perpetual",
      "grace": "0",
      "size": "1TB CE Nodes 3",
      "start": "2011-11-22",
      "status": true,
      "vendor": "Vertica Community Edition"
    }
  ]
}
```
Nodes

You can use these API calls to retrieve information on the nodes in your cluster.

<table>
<thead>
<tr>
<th>GET nodes</th>
<th>Returns a list of nodes in this cluster.</th>
</tr>
</thead>
<tbody>
<tr>
<td>GET nodes/:nodeid</td>
<td>Returns details for a specific node in this cluster.</td>
</tr>
</tbody>
</table>
**GET nodes**

Returns a list of nodes associated with this cluster.

**Resource URL**

https://<NODE>:5444/nodes

**Authentication**

Requires a VerticaAPIKey in the request header.

The API key must have restricted level security or higher.

**Parameters**

None.

**Example Request**

```
GET https://<NODE>:5444/nodes
```

**Response:**

```
{
   "body": [
      "node0001",
      "node0002",
      "node0003",
      "v_testdb_node0001",
      "v_testdb_node0002",
      "v_testdb_node0003",
      "v_vmart_node0001",
      "v_vmart_node0002",
      "v_vmart_node0003"
   ]
}
```
"href": "/nodes",
"links": [
   "/:nodeid"
],
"mime-type": "application/vertica.nodes.json-v2"
}
**GET nodes/:nodeid**

Returns details about the node identified by :node_id. You can find the :node_id for each node using GET nodes.

In the body field, the following information is detailed in comma-separated format:

- Node Name
- Host Address
- Catalog Directory
- Data Directory

**Resource URL**

https://<NODE>:5444/nodes/:node_id

**Authentication**

Requires a VerticaAPIKey in the request header.

The API key must have restricted level security or higher.

**Parameters**

None.

**Example Request**

```
GET https://<NODE>:5444/nodes/v_vmart_node0001
```

**Response:**

```
{
```
Webhooks

You can use these API calls to obtain information on, create, or delete webhooks.

<table>
<thead>
<tr>
<th>API Method</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>GET webhooks</td>
<td>Returns a list of active webhooks.</td>
</tr>
<tr>
<td>POST webhooks/subscribe</td>
<td>Creates a new webhook.</td>
</tr>
<tr>
<td>DELETE webhooks/:subscriber_id</td>
<td>Deletes an existing webhook.</td>
</tr>
</tbody>
</table>
**GET webhooks**

Returns a list of active webhooks for this cluster.

**Resource URL**

https://<NODE>:5444/webhooks

**Authentication**

Requires a VerticaAPIKey in the request header.

The API key must have restricted level security or higher.

**Parameters**

None.

**Example Request**

```plaintext
GET https://<NODE>:5444/webhooks
```

**Response:**

```json
{
  "body": [
    {
      "host": "192.168.232.1",
      "id": "79c1c8a18be02804b3d2f48ea6462909",
      "port": 80,
      "timestamp": "2014-07-20 22:54:09.829642",
      "url": "/gettest.htm"
    },
    {
      "host": "192.168.232.1",
      "id": "9c32cb0f3d2f9a7cb10835f1732fd4a7"
    }
  ]
}
```
"port": 80,
"timestamp": "2014-07-20 22:54:09.829707",
"url": "/getwebhook.php"
]
],
"href": "/webhooks",
"links": [
  "/subscribe",
  "/:subscriber_id"
],
"mime-type": "application/vertica.webhooks.json-v2"
}
**POST webhooks/subscribe**

Creates a subscription for a webhook.

**Resource URL**

https://<NODE>:5444/webhooks/subscribe

**Authentication**

Requires a VerticaAPIKey in the request header.

The API key must have **restricted** level security or higher.

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>url</td>
<td>A URL to an application that accepts JSON messages from this cluster.</td>
</tr>
</tbody>
</table>

**Example Request**

```
POST
```

**Response:**

The response is not JSON encoded. The only text response is the ID of the webhook subscription. Additionally, an HTTP 200/OK header indicates success.

79c1c8a18be02804b3d2f48ea6462909
**DELETE webhooks/:subscriber_id**

Deletes the webhook identified by `:subscriber_id`. The `:subscriber_id` is the value of the `id` field that the GET `webhooks` command returns.

**Resource URL**

https://<NODE>:5444/webhooks/:subscriber_id

**Authentication**

Requires a VerticaAPIKey in the request header.

The API key must have restricted level security or higher.

**Parameters**

None.

**Example Request**

```
DELETE
https://<NODE>:5444/webhooks/79c1c8a18be02804b3d2f48ea6462909
```

**Response:**

There is no HTTP body response for successful deletes. A successful delete returns an HTTP 200/OK header.
Rest APIs for the Management Console

These API calls interact with Management Console nodes.

Alerts

| GET alerts | Returns alerts for the current user. |

Time Information

| GET mcTimeInfo | Returns the current time for the MC server and the timezone of the location where the MC server is located. |

MC-User-ApiKey

The MC-User-ApiKey is a user-specific key used with Management Console. Users must have an MC-User-ApiKey to interact with MC using the Rest API. All users with roles other than None automatically receive an MC-User-ApiKey.

This key grants users the same rights through the API that they have available through their MC roles. To interact with the MC, users pass the key in the request header for the API.

View the MC-User-ApiKey

If you are the database administrator, you can view the MC-User-ApiKey for all users. Individual users can view their own keys.

1. Connect to MC and go to MC Settings > User Management.
2. Select the user to view and click Edit. The user’s key appears in the User API Key field.
GET alerts

Returns a list of MC alerts, their current status, and database properties.

Resource URL

https://<MC_NODE>:5450/webui/api/alerts

Authentication

Requires an MC-User-Apikey in the request header.

Filter Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>types</td>
<td>The type of alert to retrieve. Valid values are:</td>
</tr>
<tr>
<td></td>
<td>- info</td>
</tr>
<tr>
<td></td>
<td>- notice</td>
</tr>
<tr>
<td></td>
<td>- warning</td>
</tr>
<tr>
<td></td>
<td>- error</td>
</tr>
<tr>
<td></td>
<td>- critical</td>
</tr>
<tr>
<td></td>
<td>- alert</td>
</tr>
<tr>
<td></td>
<td>- emergency</td>
</tr>
<tr>
<td>category</td>
<td>For information, see Thresholds Category Filter.</td>
</tr>
<tr>
<td>db_name</td>
<td>For information, see Database Name Category Filter.</td>
</tr>
<tr>
<td>limit</td>
<td>The maximum number of alerts to retrieve. If the limit is lower than the number of existing alerts, Vertica retrieves the most recent alerts. Used with the type parameter, Vertica retrieves up to the limit for each type. For example, for a limit of five and types of critical and emergency, you could receive up to ten total alerts.</td>
</tr>
<tr>
<td>time_from</td>
<td>The timestamp start point from which to retrieve alerts. You can use this parameter in combination with the time_to parameter to retrieve alerts for a specific time range. Values must be passed in the following format: yyyy-</td>
</tr>
<tr>
<td>Parameter</td>
<td>Description</td>
</tr>
<tr>
<td>-------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>time_from</td>
<td>The timestamp end point from which to retrieve alerts. You can use this parameter in combination with the time_from parameter to retrieve alerts for a specific time range. Values must be passed in the following format: yyyy-MM-ddTHH:mm.</td>
</tr>
<tr>
<td>time_to</td>
<td>If you provide only the time_to parameter, and omit the time_from parameter, the response contains all alerts generated from the earliest possible time to the time passed in time_to.</td>
</tr>
</tbody>
</table>

### Example Request

**GET**

https://<MC_NODE>:5450/webui/api/alerts?type=critical

### Request Alerts Using cURL

This example shows how you can request alerts using cURL. In this example, the limit parameter is set to '2' and the types parameters is set to info and notice:

```
```

### Response:

```
[
  {
    "alerts": [
      {
        "id": 5502,
        "markedRead": false,
        "eventTypeCode": 0,
        "create_time": "2016-02-02 05:12:10.0",
        "updated_time": "2016-02-02 15:50:20.511",
        "severity": "warning",
        "status": 1,
        "nodeName": "v_vmart_node0001",
        "databaseName": "VMart"
      }
    ]
  }
]
```
Request Alerts Within a Time Range

These examples show various ways in which you can request the same alert as in the preceding example, but within specified time ranges.

Request the alert within a specific time range, using the time_from and time_to parameters:

```
```

Request the alert from a specific start time to the present using the time_from parameter:

```
```

Request the alert to a specific end point using the time_to parameter. When you use the time_to parameter without the time_from parameter, the time_from parameter defaults to the oldest alerts your MC contains:
GET mcTimeInfo

Returns the current time for the MC server and the timezone where the MC server is located.

Resource URL

https://<MC_NODE>:5450/webui/api/mcTimeInfo

Authentication

Requires an MC-User-Apkey in the request header.

Parameters

None.

Example Request

This example shows how you can request MC time information using cURL:

Response:

{"mc_current_time":"Tue, 2000-01-01 01:02:03 -0500","mc_timezone":"US/Eastern"}
Thresholds Category Filter

Returns a list of alerts related to threshold settings in MC.

Resource URL

https://<MC_NODE>:5450/webui/api/alerts?category=thresholds

Authentication

Requires an MC-User-Apikey in the request header.

Example Request

GET https://<MC_NODE>:5450/webui/api/alerts?category=thresholds
This example shows how you can request alerts on thresholds using cURL:

Response:

```json
[
    {"alerts":[]
    }
]
```

```

- Combining Sub-Category Filters with Category Filters

Database Name Category Filter

Returns a list of MC alerts for a specific database.

Resource URL

https://<MC_NODE>:5450/webui/api/alerts?db_name=<database_name>

Authentication

Requires an MC-User-Apikey in the request header.

Example Request

GET

https://<MC_NODE>:5450/webui/api/alerts?db_name=<database_name>
This example shows how you can view alerts on a specific database using cURL:

```bash
```

**Response:**

```
[
  {
    "alerts": [
      {
        "id": 9,
        "markedRead": false,
        "eventTypeCode": 2,
        "create_time": "2015-11-05 15:10:53.391",
        "updated_time": "2015-11-05 15:10:53.391",
      }
    ]
  ]
```
Combining Sub-Category Filters with Category Filters

You can combine category filters with sub-category filters, to obtain alert messages for specific thresholds you set in MC. You can also use sub-category filters to obtain information about alerts on specific resource pools in your database.

Sub-Category Filters

You can use the following sub-category filters with the category filters. Sub-category filters are case sensitive and must be lowercase.

<table>
<thead>
<tr>
<th>Sub-Category Filter</th>
<th>Alerts Related to Threshold Value Set For:</th>
</tr>
</thead>
<tbody>
<tr>
<td>threshold_node_cpu</td>
<td>Node CPU</td>
</tr>
<tr>
<td>threshold_node_memory</td>
<td>Node Memory</td>
</tr>
<tr>
<td>Sub-Category Filter</td>
<td>Alerts Related to Threshold Value Set For:</td>
</tr>
<tr>
<td>----------------------------</td>
<td>------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>threshold_rp_query_max_time</td>
<td>Queries reaching the maximum allowed execution time.</td>
</tr>
<tr>
<td>threshold_rp_query_resource_reject</td>
<td>The number of queries with resource rejections.</td>
</tr>
<tr>
<td>threshold_rp_query_queue_time</td>
<td>The number of queries that ended because of queue time exceeding a limit.</td>
</tr>
<tr>
<td>threshold_rp_query_runtime</td>
<td>The number of queries that ended because of run time exceeding a limit.</td>
</tr>
<tr>
<td>threshold_rp_memory</td>
<td>The minimum allowed resource pool size.</td>
</tr>
<tr>
<td>--------------------------</td>
<td>-----------------------------------------</td>
</tr>
<tr>
<td>threshold_rp_max_memory</td>
<td>The maximum allowed resource pool size.</td>
</tr>
</tbody>
</table>

**Authentication**

Requires an [MC-User-Apikey](#) in the request header.

**Example Request**

```
GET https://<MC_NODE>:5450/webui/api/alert
```
Combine the Thresholds Category Filter with a Sub-Category Filter

This example shows how you can request alerts using cURL with the thresholds category filter and a sub-category filter. You apply the following filters:

- `thresholds`
- `threshold_node_cpu`

```
```

Response:

```
[
  {
    "alerts": [
      {
        "id": 11749,
        "markedRead": false,
        "eventTypeCode": 2,
        "create_time": "2015-11-05 11:04:43.997",
        "updated_time": "2015-11-05 11:04:43.997",
        "severity": "warning",
        "status": 1,
        "databaseName": "mydb",
        "databaseId": 105,
        "clusterName": "1443122180317_cluster",
        "description": "Database: mydb Lower than threshold Node CPU 10 % v_mydb_node0002 ;1.03% v_mydb_node0003 ;0.9% v_mydb_node0001 ;1.36% ",
        "summary": "Threshold : Node CPU < 10 %",
        "internal": false,
        "count": 1
      },
      {
        "id": 11744,
        "markedRead": false,
        "eventTypeCode": 2,
        "create_time": "2015-11-05 10:59:46.107",
        "updated_time": "2015-11-05 10:59:46.107",
        "severity": "warning",
        "status": 1,
        "databaseName": "mydb2",
        "databaseId": 106,
        "clusterName": "1443552354071_cluster",
        "description": "Database: mydb2 Lower than threshold Node CPU 10 % v_mydb2_node0002 ;0.83% v_mydb2_node0001 ;1.14% ",
        "summary": "Threshold : Node CPU < 10 %",
        "internal": false,
        "count": 1
      }
    ]
  }
]
Request an Alert On a Specific Resource Pool

This example shows how you can request alerts using cURL on a specific resource pool. The name of the resource pool is resourcepool1. You apply the following filters:

- thresholds
- rp_name
- threshold_rp_query_run_time

```bash
```

Response:

```
[。
  "total_alerts":2,
  "request_query":"category=thresholds&subcategory=threshold_node_cpu",
  "request_time":"2015-11-05 11:05:28.116"
}
]}
```
Vertica Documentation
Connecting to Vertica
Using Eon Mode

You can operate your Vertica database in Eon Mode instead of in Enterprise Mode. The two modes differ primarily in how they store data:

- Eon Mode databases use communal storage for their data.
- Enterprise Mode databases store data locally in the file system of nodes that make up the database.

These different storage methods lead to a number of important differences between the two modes. In Enterprise Mode, each database node stores a portion of the data and performs a portion of the computation. In Eon Mode, computational processes are separated from a communal (shared) storage layer, which enables rapid scaling of computational resources as demand changes.

For more on how these two modes compare, see Vertica Architecture: Eon Versus Enterprise Mode.

Creating a Database in Eon Mode

Creating an Eon Mode Database in a Cloud Environment

The easiest way to create an Eon Mode database in the cloud is to use the MC. The MC can create your database and provision the nodes to run the database at the same time. See Creating a Database using MC for details. For specific instructions for your cloud environment, see:

- Creating an Eon Mode Database in AWS with MC
- Deploying an Eon Mode Database On GCP

On AWS, you can also create a database using admintools:

1. Provision nodes for the new database manually. See Deploy AWS Instances for your Vertica Database Cluster for instructions.
2. Create your database using admintools. See Create an Eon Mode Database for steps.
Creating an On-Premises Eon Mode Database

If you have an on-premises install, you create an Eon Mode database using admintools. For more information see the Create Database step in the installation instructions for your communal storage backend:

- Installing an Eon Mode Database on Premises with FlashBlade
- Installing Eon Mode On-Premises with Communal Storage on MinIO
- Installing Eon Mode On-Premises with Communal Storage on HDFS

Configuring Your Vertica Cluster for Eon Mode

Running Vertica in Eon Mode decouples the cluster size from the data volume and lets you configure for your compute needs independently from your storage needs. There are a number of factors you must consider when deciding what sorts of instances to use and how large your Eon Mode cluster will be.

Before You Begin

Vertica Eon Mode works both in the cloud and on-premises. As a Vertica administrator setting up your production cluster running in Eon Mode, you must make decisions about the virtual or physical hardware you will use to meet your needs. This topic provides guidelines and best practices for selecting server types and cluster sizes for a Vertica database running in Eon Mode. It assumes that you have a basic understanding of the Eon Mode architecture and concepts such as communal storage, depot, and shards. If you need to refresh your understanding, see Eon Mode Architecture.

Cluster Size Overview

Because Eon Mode separates data storage from the computing power of your nodes, choosing a cluster size is more complex than for an Enterprise Mode database. Usually, you choose a base number of nodes that will form one or more primary subclusters. These
subclusters contain nodes that are always running in your database. You usually use them for workloads such as data loading and executing DDL statements. You rarely alter the size of these subclusters dynamically. As you need additional compute resources to execute queries, you add one or more subclusters (usually secondary subclusters) of nodes to your database.

When choosing your instances and sizing your cluster for Eon Mode, consider the working data size that your database will be dealing with. This is the amount of data that most of your queries operate on. For example, suppose your database stores sales data. If most of the queries running on your database analyze the last month or two of sales to create reports on sales trends, then your working data size is the amount of data you typically load over a few months.

### Choosing Instances or Physical Hardware

Depending on the complexity of your workload and expected concurrency, choose physical or virtual hardware that has sufficient CPU and memory. For production clusters Vertica recommends the following minimum configuration for either virtual or physical nodes in an Eon Mode database:

- 16 cores
- 128 GB RAM
- 2 TB of local storage

**Note:**

The above specifications are just a minimum recommendation. You should consider increasing these specifications based on your workloads and the amount of data you are processing.

You must have a minimum of 3 nodes in the an Eon Mode database cluster.

For specific recommendations of instances for cloud-based Eon Mode database, see:

- Choosing AWS Eon Mode Instance Types
- GCP Eon Mode Instance Recommendations
Determining Local Storage Requirements

For both virtual and physical hardware, you must decide how much local storage your nodes need. In Eon Mode, the definitive copy of your database's data resides in the communal storage. This storage is provided by either a cloud-based object store such as AWS S3, or by an on-premises object store, such as a Pure Storage FlashBlade appliance.

Even though your database's data is stored in communal storage, your nodes still need some local storage. A node in an Eon Mode database uses local storage for three purposes:

- **Depot storage**: To get the fastest response time for frequently executed queries, provision a depot large enough to hold your working data set after data compression. Divide the working data size by the number of nodes you will have in your subcluster to estimate the size of the depot you need for each node in a subcluster. See Choosing the Number of Shards and the Initial Node Count below to get an idea of how many nodes you want in your initial database subcluster. In cases where you expect to dynamically scale your cluster up, estimate the depot size based on the minimum number of nodes you anticipate having in the subcluster.

  Also consider how much data you will load at once when sizing your depot. When loading data, Vertica defaults to writing uncommitted ROS files into the depot before uploading the files to communal storage. If the free space in the depot is not sufficient, Vertica evicts files from the depot to make space for new files.

  Your data load fails if the amount of data you try to load in a single transaction is larger than the total sizes of all the depots in the subcluster. To load more data than there is space in the subcluster's combined depots, set UseDepotForWrites to 0. This configuration parameter tells Vertica to load the data directly into communal storage.

- **Data storage**: The data storage location holds files that belong to temporary tables and temporary data from sort operators that spill to disk. When loading data into Vertica, the sort operator may spill to disk. Depending on the size of the load, Vertica may perform the sort in multiple merge phases. The amount of data concurrently loaded into Vertica cannot be larger than the sum of temporary storage location sizes across all nodes divided by 2.

- **Catalog storage**: The catalog size depends on the number of database objects per shard and the number of shard subscriptions per node.

Vertica recommends a minimum local storage capacity of 2 TB per node, out of which 60% is reserved for the depot and the other 40% is shared between the catalog and data
location. If you determine that you need a depot larger than 1.2TB per node (which is 60% of 2TB) then add more storage than this minimum recommendation. You can calculate the space you need using this equation:

\[
\text{Disk Space Per Node} = \frac{\text{Compressed Working Data}}{\text{# of Nodes in Subcluster}} \times 1.67
\]

For example, suppose you have a compressed working data size of 24TB, and you want to have a initial primary subcluster of 3 nodes. Using these values in the equation results in 13.33TB:

\[
\frac{24\text{TB}}{3 \text{ Nodes}} \times 1.67 = 13.33\text{TB}
\]

**Choosing the Number of Shards and the Initial Node Count**

Shards are how Vertica divides the responsibility for the data in communal storage among nodes. Each node in a subcluster subscribes to at least one shard in communal storage. During queries, data loads, and other database tasks, each node is responsible for the data in the shards it subscribes to. See [Shards and Subscriptions](#) for more information.

The relation between shards and nodes means that when picking the number of shards for your database, you must consider the number of nodes you will have in your database, and how you expect to expand your database in the future.

You set the number of shards when you create your database. Once created, you cannot change the number of shards. Therefore, choose a shard count that will allow your database to grow over time.

The following table shows the recommended shard count and initial node count base on the working data size. The initial node count is the number of nodes you will have in your core primary subcluster. Note that the number of shards is always a multiple of the node count. This ensures that the shards are evenly divided between the nodes. For best performance, always make the number of shards a multiple or even divisor of the number of nodes in a subcluster.

<table>
<thead>
<tr>
<th>Cluster Type</th>
<th>Working Data Size</th>
<th>Number of Shards</th>
<th>Initial Node Count</th>
</tr>
</thead>
<tbody>
<tr>
<td>Small</td>
<td>Up to 24 TB</td>
<td>6</td>
<td>3</td>
</tr>
<tr>
<td>Cluster Type</td>
<td>Working Data Size</td>
<td>Number of Shards</td>
<td>Initial Node Count</td>
</tr>
<tr>
<td>--------------</td>
<td>-------------------</td>
<td>------------------</td>
<td>-------------------</td>
</tr>
<tr>
<td>Medium</td>
<td>Up to 48 TB</td>
<td>12</td>
<td>6</td>
</tr>
<tr>
<td>Large</td>
<td>Up to 96 TB</td>
<td>24</td>
<td>12</td>
</tr>
<tr>
<td>Extra large</td>
<td>Up to 192 TB</td>
<td>48</td>
<td>24</td>
</tr>
</tbody>
</table>

**Important:**
A 2:1 ratio for shards to nodes is a performance recommendation, rather than a hard limit. If you attempt to go higher than 3:1, MC offers a warning to make sure you have taken all aspects of shard count into consideration because, once set, the shard count cannot be changed.

---

**How Shard Count Affects Scaling Your Cluster**

The number of shards you choose for your database impacts your ability to scale your database in the future. If you have too few shards, your ability to efficiently scale your database can be limited. If you have too many shards, your database performance can suffer. A larger number of shards increases inter-node communication and catalog complexity.

One key factor in deciding your shard count is determining how you want to scale your database. There are two strategies you can use when adding nodes to your database. Each of these strategies let you improve different types of database performance:

- **To increase the performance of complex, long-running queries**, add nodes to an existing subcluster. These additional nodes improve the overall performance of these complex queries by splitting the load across more compute nodes. You can add more nodes to a subcluster than you have shards in the database. In this case, nodes in the subcluster that subscribe to the same shard will split up the data in the shard when performing a query. See **Elasticity** for more information.

- **To increase the throughput of multiple short-term queries** (often called "dashboard queries"), improve your cluster’s parallelism by adding additional **subclusters**. Subclusters work independently and in parallel on these shorter queries. See **Subclusters** for more information.

These two approaches have an impact on the number of shards you choose to start your database with. Complex analytic queries perform better on subclusters with more nodes, which means that 6 nodes with 6 shards perform better than 3 nodes and 6 shards. Having
more nodes than shards can increase performance further, but the performance gain is not linear. For example, a subcluster containing 12 nodes in a 6-shard database is not quite as efficient as a 12-node subcluster in a 12-shard database. Dashboard-type queries operating on smaller data sets may not see much difference between a 3-node subcluster in a 6-shard database and 6-node subcluster in a 6-shard database.

In general, choose a shard count that matches your expected working data size 6–12 months in the future. For more information about scaling your database, see Elasticity.

Use Cases

Let’s look at some use cases to learn how to size your Eon Mode cluster to meet your own particular requirements.

Use Case 1: Save Compute by Provisioning When Needed, Rather than for Peak Times

This use case highlights increasing query throughput in Eon Mode by scaling a cluster from 6 to 18 nodes with 3 subclusters of 6 nodes each. In this use case, you need to support a high concurrent, short query workload on a 24 TB or less working data set. You create an initial database with 6 nodes and 6 shards. You scale your database for concurrent throughput on demand by adding one or more subclusters during certain days of the week or for specific date ranges when you are expecting a peak load. You can then shut down or terminate the additional subclusters when your database experiences lower demand. With Vertica in Eon Mode, you save money by provisioning on demand, rather than provisioning for the peak times.

Use Case 2: Complex Analytic Workload Requires More Compute Nodes

This use case showcases the idea that complex analytic workloads on large working data sets benefit from high shard count and node count. You create an initial subcluster with 24 nodes and 24 shards. As needed, you can add an additional 24 nodes to your initial subcluster. These additional nodes enable the subcluster to use elastic crunch scaling to reduce the time it takes to complete complex analytic queries.

Use Case 3: Workload Isolation

This use case showcases the idea of having separate subclusters to isolate ETL and report workloads. You create an initial primary subcluster with 6 nodes and 6 shards for servicing ETL workloads. Then add another 6-node secondary subcluster for executing query workloads. To separate the two workloads, you can configure a network load balancer or create connection load balancing policies in Vertica to direct clients to the correct subcluster based on the type of workloads they need to execute.
Migrating an Enterprise Database to Eon Mode

Vertica meta-function MIGRATE_ENTERPRISE_TO_EON migrates an Enterprise database to Eon Mode. The migration process includes the following stages:

1. **Check migration prerequisites**
2. **Verify compliance**
3. **Execute the migration**
4. **Check migration results**
5. **Activate the Eon database**

Migration Prerequisites

The following conditions must be true; otherwise, MIGRATE_ENTERPRISE_TO_EON returns with an error:

- The source Enterprise database version must be ≥10.0.
- All nodes in the source database must be in an UP state and of type PERMANENT or EPHEMERAL. Verify by querying system table NODES:

  ```sql
  => SELECT node_name, node_type, node_state FROM nodes;
  +----------+--------+--------+
  | node_name | node_type | node_state |
  | v_vmart_node0001 | PERMANENT | UP |
  | v_vmart_node0002 | PERMANENT | UP |
  | v_vmart_node0003 | PERMANENT | UP |
  +----------+--------+--------+
  (3 rows)
  ```

**Tip:**
When planning how to provision the target Eon database, consider that MIGRATE_ENTERPRISE_TO_EON creates the same number of nodes as on the original Enterprise database, and an equal number of segmented shards. Choose the appropriate instance type accordingly.

- The source database must be configured as an elastic cluster. By default, any database created since Vertica release 9.2.1 is configured as an elastic cluster. To verify whether an Enterprise database is configured as an elastic cluster, query...
system table `ELASTIC_CLUSTERS`:

```sql
=> SELECT is_enabled FROM elastic_cluster;
  is_enabled
----------
  t
(1 row)
```

If the query returns false, call meta-function `ENABLE_ELASTIC_CLUSTER` on the Enterprise database.

- The source Enterprise database must configure Eon parameters as required by the target Eon object store (see Configuration Requirements below).
- The database must not contain projections that are unsupported by Eon.

Unsupported Projections

Eon databases do not support four types of projections, as described below. If MIGRATE_ENTERPRISE_TO_EON finds any of these projection types in the Enterprise database, it rolls back the migration and reports the offending projections or their anchor tables in the migration error log. For example:

The following projections are inconsistent with cluster segmentation. Rebalance them with `REBALANCE_CLUSTER()` or `REBALANCE_TABLE()`:

**Projection(Anchor Table):** public.incon1_p1_b0(public.incon1)

<table>
<thead>
<tr>
<th>Why projection is invalid</th>
<th>Notes</th>
<th>Resolution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Inconsistent with cluster segmentation.</td>
<td>For example, nodes were added to the cluster, so current distribution of projection data is inconsistent with new cluster segmentation requirements.</td>
<td><strong>Rebalance</strong> cluster or table. The error log file lists the names of all tables with problematic projections. You can use these names as arguments to meta-function <code>REBALANCE_TABLE</code>. You can also rebalance all projections by calling <code>REBALANCE_CLUSTER</code>.</td>
</tr>
<tr>
<td>Does not support elastic segmentation.</td>
<td>Projection was created with the NODES option, or in a database where elastic segmentation was disabled.</td>
<td><strong>Drop projection, recreate</strong> with ALL NODES.</td>
</tr>
<tr>
<td>Defined with a <strong>GROUPED clause</strong>.</td>
<td>Consolidates multiple columns in a single ROS</td>
<td><strong>Drop projection</strong>, recreate without GROUPED clause.</td>
</tr>
<tr>
<td>Why projection is invalid</td>
<td>Notes</td>
<td>Resolution</td>
</tr>
<tr>
<td>---------------------------</td>
<td>-------</td>
<td>------------</td>
</tr>
<tr>
<td>Data stored in unbundled storage containers.</td>
<td>Found only in Vertica databases that were created before storage container bundling was introduced in version 7.2.</td>
<td>Bundle storage containers in database with meta-function COMPACT_STORAGE. The error log names all tables with projections that store data in unbundled storage containers. You can use these names as arguments to meta-function COMPACT_STORAGE.</td>
</tr>
</tbody>
</table>

**Configuration Requirements**

Before migration, set the following configuration parameters on the source database.

**Important:**

All parameters must be set at the database level.

<table>
<thead>
<tr>
<th>Target Eon environment</th>
<th>Configuration requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>S3: AWS, Pure Storage, MinIO</td>
<td>The following requirements apply to all supported cloud and non-cloud (on-premises) environments: AWS, Pure Storage, and MinIO. One exception applies: migration from an Enterprise Mode database on AWS.</td>
</tr>
</tbody>
</table>
| | • AWSEndpoint (Pure Storage, MinIO only)  
• AWSRegion (AWS only)  
• AWSAuth / IAM role  
• AWSEnableHttps |

**Important:**

If migrating to on-premises communal storage with Pure Storage and MinIO, set configuration parameter AWSEnableHttps to be compatible with the database TLS encryption setup: AWSEnableHttps=1 if using TLS, otherwise 0. If settings are incompatible, the migration returns with an error.
<table>
<thead>
<tr>
<th>Target Eon environment</th>
<th>Configuration requirements</th>
</tr>
</thead>
</table>
| Azure                  | - You must use an azb:// schema URI to set the Azure Blob Storage location for communal data storage. See Azure Blob Storage Object Store for the format of this URI.  
- Select one of the following authentication methods to grant Vertica access to the storage location:  
  - Configure managed identities to grant your Azure VMs access to the storage location. This option does not require any configuration within Vertica.  
  - Set the AzureStorageCredentials and AzureStorageConfig configuration parameters at the database level to have Vertica authenticate with the storage location.  

See Azure Blob Storage Object Store for more about the two authentication methods. |
| GCP                    | - GCSEndpoint  
- GCSAuth  
- GCSEnableHttp |
| HDFS                   | The following requirements apply:  
- The source database must be configured to access HDFS, including (as applicable) high-availability (HA) and Kerberos authentication settings.  

**Tip:** If using Kerberos authentication, record settings for the following Kerberos configuration parameters. You will need to apply these settings to the migrated Eon database:  
KerberosServiceName  
KerberosRealm  
KerberosKeytabFile  

**Important:** The following restrictions apply to Kerberos authentication:  
- Migration only supports Vertica authentication. User authentication through
### Compliance Verification

Before running migration, check whether the Enterprise source database complies with all migration requirements. You do so by setting the last Boolean argument of `MIGRATE_ENTERPRISE_TO_EON` to true. This optional argument—by default set to false—specifies whether the meta-function only performs a compliance check. For example:

```sql
=> SELECT migrate_enterprise_to_eon('s3://verticadbbucket', '/vertica/depot', true);
```

If the meta-function discovers any compliance issues, it writes these to the migration error log `migrate_enterprise_to_eon_error.log` in the database directory.

### Migration Execution

`MIGRATE_ENTERPRISE_TO_EON` migrates an Enterprise database to an Eon Mode database. For example:

```sql
=> SELECT migrate_enterprise_to_eon('s3://verticadbbucket', '/vertica/depot', false);
```

If the meta-function’s last Boolean argument is omitted or set to false, it executes the migration. `MIGRATE_ENTERPRISE_TO_EON` runs in the foreground, and until it returns—either with success or an error—it blocks all operations in the same session on the source Enterprise database. If successful, `MIGRATE_ENTERPRISE_TO_EON` returns with a list of nodes in the migrated database. You can then proceed to revive the migrated Eon database.

Handling Interrupted Migration
If migration is interrupted before the meta-function returns—for example, the client disconnects, or a network outage occurs—the migration errors out. In this case, call MIGRATE_ENTERPRISE_TO_EON to restart migration.

Communal storage of the target database retains data that was already copied before the error occurred. When you call MIGRATE_ENTERPRISE_TO_EON to resume migration, the meta-function first checks the data on communal storage and only copies unprocessed data from the source database.

**Important:**

When migrating to an Eon database with HDFS communal storage, migration interruptions are liable to leave files in an incomplete state that is visible to users. When you call MIGRATE_ENTERPRISE_TO_EON to resume migration, the meta-function first compares source and target file sizes. If it finds inconsistent sizes for a given file, it truncates the target cluster file and repeats the entire transfer.

Repeating Migration

You can repeat migration multiple times to the same communal storage location. This can be useful for backfilling changes that occurred in the source database during the previous migration.

The following constraints apply:

- You can migrate from only one database to the same communal storage location.
- After reviving the newly migrated Eon database, you cannot migrate again to its communal storage, unless you first drop the database and then clean up storage.

Monitoring Migration

System table DATABASE_MIGRATION_STATUS displays the progress of a migration in real time, and also stores data from previous migrations. The following example shows data of a migration that is in progress:

```sql
=> SELECT node_name, phase, status, bytes_to_transfer, bytes_transferred, communal_storage_location FROM database_migration_status ORDER BY node_name, start_time;
node_name | phase | status | bytes_to_transfer | bytes_transferred | communal_storage_location
v_vmart_node0001 | Catalog Conversion | COMPLETED | 0 | 0 | s3://verticabucket/
v_vmart_node0001 | Data Transfer | COMPLETED | 1134 | 1134 | s3://verticabucket/
v_vmart_node0001 | Catalog Transfer | COMPLETED | 3765 | 3765 | s3://verticabucket/
```
Error Logging

MIGRATE_ENTERPRISE_TO_EON logs migration-related warnings, errors, and hints in migrate_enterprise_to_eon_error.log in the database directory. During execution, the meta-function also prints messages to standard output, together with the error log’s pathname.

Conversion Results

The following table shows how migration handles visible objects in the source Enterprise database:

<table>
<thead>
<tr>
<th>From source Enterprise database...</th>
<th>To new Eon Mode database...</th>
</tr>
</thead>
<tbody>
<tr>
<td>Global catalog objects</td>
<td>Synced to communal storage</td>
</tr>
<tr>
<td>Multiple segmented projections in identical buddy projection group</td>
<td>One projection in the group</td>
</tr>
<tr>
<td>Unsegmented projection replicated on only one node</td>
<td>Distributed across all nodes</td>
</tr>
<tr>
<td>Number of nodes</td>
<td>Same number of nodes, and an equal number of segmented shards</td>
</tr>
<tr>
<td>Depot location</td>
<td>As specified in MIGRATE_ENTERPRISE_TO_EON. Default depot size is set to 80% of local file system after revive.</td>
</tr>
<tr>
<td>USER and TEMP storage locations</td>
<td>Migrated</td>
</tr>
</tbody>
</table>

Tip: Consider evaluating all migrated
<table>
<thead>
<tr>
<th>From source Enterprise database...</th>
<th>To new Eon Mode database...</th>
</tr>
</thead>
<tbody>
<tr>
<td>storage locations for their relevance in an Eon Mode database. For details, see S3 Storage of Temporary Data.</td>
<td>storage locations for their relevance in an Eon Mode database. For details, see S3 Storage of Temporary Data.</td>
</tr>
<tr>
<td>DATA and TEMP,DATA storage locations</td>
<td>Not migrated. New default DATA and TEMP,DATA storage locations are on the same path as the depot.</td>
</tr>

</tbody>
</table>

**Eon Database Activation**

After migration is complete and the Eon database is ready for use, perform these steps:

1. If migrating to an Eon database with HDFS communal storage, create a bootstrapping file to use when you revive the new Eon database. The bootstrapping file must be on the same node where the revive operation is launched, and readable by the user who launches the revive operation.

   A bootstrapping file is required only if the new Eon database uses one or both of the following:

   - **High Availability (HA) NameNodes**
     Set HadoopConfDir to the location of configuration file hdfs-site.xml—typically, /etc/hadoop/conf. This file defines parameter hdfs.nameservices and individual NameNodes, and must be distributed across all cluster nodes. For details, see Configuring HDFS Access.
   - **Kerberos authentication**
     Set the following Kerberos configuration parameters:

     ```
     KerberosServiceName
     KerberosRealm
     KerberosKeytabFile
     ```
For example, the bootstrapping file for an Eon database with HA and Kerberos authentication must have the following settings:

<table>
<thead>
<tr>
<th>Setting</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>HadoopConfDir</td>
<td>config-path</td>
</tr>
<tr>
<td>KerberosServiceName</td>
<td>principal-name</td>
</tr>
<tr>
<td>KerberosRealm</td>
<td>realm-name</td>
</tr>
<tr>
<td>KerberosKeytabFile</td>
<td>keytab-path</td>
</tr>
</tbody>
</table>

2. Revive the database from communal storage on S3 or GCP with Management Console, or with admintools. In the following example, the admintools revive_db command revives a three-node database that uses S3 communal storage:

```bash
admintools -t revive_db
  -x auth_params.conf \  
  --communal-storage-location=s3://verticadb\bucket \  
  -d VMart \  
  -s 172.16.116.27,172.16.116.28,172.16.116.29 \  
  --force
```

In the next example, revive_db revives an three-node database that uses HDFS communal storage:

```bash
admintools -t revive_db
  -x bootstrap_params.conf \  
  --communal-storage-location=webhdfs://mycluster/verticadb \  
  -d verticadb \  
  -s vnode01,vnode02,vnode03
```

3. Check the controlmode setting in /opt/vertica/config/admintools.conf. This setting must be compatible with the network messaging requirements of your Eon implementation. For example, S3/AWS (Amazon Cloud) relies on unicast messaging, which is compatible with a controlmode setting of point-to-point (pt2pt). If the source database controlmode setting was broadcast and you migrate to S3/AWS communal storage, you must change controlmode with admintools:

```bash
$ admintools -t re_ip -d dbname -T
```

**Important:**

If controlmode is set incorrectly, attempts to start the migrated Eon database will fail.

4. Start the Eon Mode database.
5. Call `CLEAN_COMMUNAL_STORAGE` to remove unneeded data files that might be left over from the migration.
6. If migrating to S3 on-premises communal storage—Pure Storage or MinIO—set configuration parameter AWSStreamingConnectionPercentage to 0 with ALTER DATABASE...SET PARAMETER.

7. Review the depot storage location size and adjust as needed.

Managing Subclusters

Subclusters help you organize the nodes in your clusters to isolate workloads and make elastic scaling easier. See Subclusters for an overview of how subclusters can help you.

See Also

Creating Subclusters

By default, new Eon Mode databases contain a single primary subcluster named default_subcluster. This subcluster contains all of the nodes that are part of your database when you create it. You will often want to create subclusters to separate and manage workloads. You have three options to create new subclusters in your database:

- Use the admintools command line to add a new subcluster from nodes in your database cluster
- Use admintools to create a duplicate of an existing subcluster
- Use the Management Console to provision and create a new subcluster

Create a Subcluster Using admintools

To create a new subcluster, use the admintools db_add_subcluster tool:

```
$ admintools -t db_add_subcluster --help
Usage: db_add_subcluster [options]

Options:
  -h, --help             show this help message and exit
  -d DB, --database=DB   Name of database to be modified
  -s HOSTS, --hosts=HOSTS Comma separated list of hosts to add to the subcluster
  -p DBPASSWORD, --password=DBPASSWORD
```
Database password in single quotes
-c SCNAME, --subcluster=SCNAME
   Name of the new subcluster for the new node
--is-primary
   Create primary subcluster
--is-secondary
   Create secondary subcluster
--control-set-size=CONTROLSETSIZE
   Set the number of nodes that will run spread within the subcluster
--like=CLONESUBCLUSTER
   Name of an existing subcluster from which to clone properties for the new subcluster
--timeout=NONINTERACTIVE_TIMEOUT
   set a timeout (in seconds) to wait for actions to complete ('never') will wait forever (implicitly sets -i)
-i, --noprompts
   do not stop and wait for user input(default false). Setting this implies a timeout of 20 min.

The simplest command adds an empty subcluster. It requires the database name, password, and name for the new subcluster. This example adds a subcluster named analytics_cluster to the database named verticadb:

```
$ adminTools -t db_add_subcluster -d verticadb -p 'password' -c analytics_cluster
Creating new subcluster 'analytics_cluster'
Subcluster added to verticadb successfully.
```

By default, admintools creates the new subcluster as a secondary subcluster. You can have it create a primary subcluster instead by supplying the -is-primary argument.

### Adding Nodes While Creating a Subcluster

You can also specify one or more hosts for admintools to add to the subcluster as new nodes. These hosts must be part of the cluster but not already part of the database. For example, you can use hosts that you added to the cluster using the MC or admintools, or hosts that remain part of the cluster after you dropped nodes from the database. This example creates a subcluster named analytics_cluster and uses the -s option to specify the available hosts in the cluster:

```
$ adminTools -t db_add_subcluster -c analytics_cluster -d verticadb -p 'password' -s 10.0.33.77,10.0.33.181,10.0.33.85
```

View the subscription status of all nodes in your database with the following query that joins the V_CATALOG.NODES and V_CATALOG.NODE_SUBSCRIPTIONS system tables:

```
=> SELECT subcluster_name, n.node_name, shard_name, subscription_state FROM v_catalog.nodes n LEFT JOIN v_catalog.node_subscriptions ns ON (n.node_name = ns.node_name) ORDER BY 1,2,3;
```
If you do not include hosts when you create the subcluster, you must manually rebalance the shards in the subcluster when you add nodes at a later time. For more information, see Updating Shard Subscriptions After Adding Nodes

Subclusters and Large Cluster

Vertica has a feature named large cluster that helps manage broadcast messages as the database cluster grows. It has several impacts on adding new subclusters:

- If you create a new subcluster with 16 or more nodes, Vertica automatically enables the large cluster feature. It sets the number of **control nodes** to the square root of the number of nodes in your subcluster. See Planning a Large Cluster.
- You can set the number of control nodes in a subcluster by using the **--control-set-size** option in the admintools command line.
- If your database cluster has 120 control nodes, Vertica returns an error if you try to add a new subcluster. Every subcluster must have at least one control node. Your database cannot have more than 120 control nodes. When your database reaches this limit, you must reduce the number of control nodes in other subclusters before you can add a new subcluster. See Changing the Number of Control Nodes and Realigning for more information.
- If you attempt to create a subcluster with a number of control nodes that would exceed the 120 control node limit, Vertica warns you and creates the subcluster with fewer control nodes. It adds as many control nodes as it can to the subcluster, which is 120 minus the current count of control nodes in the cluster. For example, suppose...
you create a 16-node subcluster in a database cluster that already has 118 control nodes. In this case, Vertica warns you and creates your subcluster with just 2 control nodes rather than the default 4.

See Large Cluster for more information about the large cluster feature.

**Duplicating a Subcluster**

Subclusters have many settings you can tune to get them to work just the way you want. After you have tuned a subcluster, you may want additional subclusters that are configured the same way. For example, suppose you have a subcluster that you have tuned to perform analytics workloads. To improve query throughput, you can create several more subclusters configured exactly like it. Instead of creating the new subclusters and then manually configuring them from scratch, you can duplicate the existing subcluster (called the source subcluster) to a new subcluster (the target subcluster).

When you create a new subcluster based on another subcluster, Vertica copies most of the source subcluster’s settings. See below for a list of the settings that Vertica copies. These settings are both on the node level and the subcluster level.

**Note:**

After you duplicate a subcluster, the target is not connected to the source in any way. Any changes you make to the source subcluster’s settings after duplication are not copied to the target. The subclusters are completely independent after duplication.

**Requirements for the Target Subcluster**

You must have a set of hosts in your database cluster that you will use as the target of the subcluster duplication. Vertica forms these hosts into a target subcluster that receives most of the settings of the source subcluster. The hosts for the target subcluster must meet the following requirements:

- They must be part of your database cluster but not part of your database. For example, you can use hosts you have dropped from a subcluster or whose subcluster you have removed. Vertica returns an error if you attempt to duplicate a subcluster onto one or more nodes that are currently participating in the database.
Tip:
If you want to duplicate the settings of a subcluster to another subcluster, remove the target subcluster (see Removing Subclusters). Then duplicate the source subcluster onto the hosts of the now-removed target subcluster.

- The number of nodes you supply for the target subcluster must equal the number of nodes in the source subcluster. When duplicating the subcluster, Vertica performs a 1:1 copy of some node-level settings from each node in the source subcluster to a corresponding node in the target.
- The RAM and disk allocation for the hosts in the target subcluster should be at least the same as the source nodes. Technically, your target nodes can have less RAM or disk space than the source nodes. However, you will usually see performance issues in the new subcluster because the settings of the original subcluster will not be tuned for the resources of the target subcluster.

You can duplicate a subcluster even if some of the nodes in the source subcluster or hosts in the target are down. If nodes in the target are down, they use the catalog Vertica copied from the source node when they recover.

**Duplication of Subcluster-level Settings**

The following table lists the subcluster-level settings that Vertica copies from the source subcluster to the target.

<table>
<thead>
<tr>
<th>Setting Type</th>
<th>Setting Details</th>
</tr>
</thead>
<tbody>
<tr>
<td>Basic subcluster settings</td>
<td>Whether the subcluster is a <strong>primary</strong> or <strong>secondary subcluster</strong>.</td>
</tr>
<tr>
<td>Large cluster settings</td>
<td>The number of <strong>control nodes</strong> in the subcluster.</td>
</tr>
<tr>
<td>Resource pool settings</td>
<td>- Vertica creates a new resource pool for every subcluster-specific resource pool in the source subcluster.</td>
</tr>
</tbody>
</table>
### Setting Type | Setting Details
---|---
**Note:**
Duplicating a subcluster can fail due to subcluster-specific resource pools. If creating the subcluster-specific resource pools leave less than 25% of the total memory free for the general pool, Vertica stops the duplication and reports an error.

- Subcluster-specific resource pool cascade settings are copied from the source subcluster and are applied to the newly-created resource pool for the target subcluster.
- Subcluster-level overrides on global resource pools settings such as MEMORYSIZE. See Managing Workload Resources in an Eon Mode Database for more information.
- Grants on resource pools are copied from the source subcluster.

<table>
<thead>
<tr>
<th>Connection load balancing settings</th>
</tr>
</thead>
<tbody>
<tr>
<td>If the source subcluster is part of a subcluster-based load balancing group (you created the load balancing group using CREATE LOAD BALANCE GROUP...WITH SUBCLUSTER) the new subcluster is added to the group. See Creating Connection Load Balance Groups</td>
</tr>
</tbody>
</table>

**Important:**
Vertica adds the new subcluster to the subcluster-based load balancing group. However, it does not create network addresses for the nodes in the target subcluster. Load balancing policies cannot direct connections to the new subcluster until you create network addresses for the nodes in the target subcluster. See Creating Network Addresses for the steps you must take.

<table>
<thead>
<tr>
<th>Storage policy settings</th>
</tr>
</thead>
<tbody>
<tr>
<td>Table and table partition pinning policies are copied from the source to the target subcluster. See Pinning Depot Objects for more information. Any existing storage policies on the target subcluster are dropped before the policies are copied from the source.</td>
</tr>
</tbody>
</table>

Vertica does not copy the following subcluster settings:

### Setting Type | Setting Details
---|---
**Basic** |
- Subcluster name (you must provide a new name for the target
### Duplication of Node-level Settings

When Vertica duplicates a subcluster, it maps each node in the source subcluster to a node in the destination subcluster. Then it copies relevant node-level settings from each individual source node to the corresponding target node.

For example, suppose you have a three-node subcluster consisting of nodes named node01, node02, and node03. The target subcluster has nodes named node04, node05, and node06. In this case, Vertica copies the settings from node01 to node04, from node02 to node05, and from node03 to node06.

The node-level settings that Vertica copies from the source nodes to the target nodes are:

<table>
<thead>
<tr>
<th>Setting Type</th>
<th>Setting Details</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Configuration parameters</strong></td>
<td>Vertica copies the value of configuration parameters that you have set at the node level in the source node to the target node. For example, suppose you set <code>CompressCatalogOnDisk</code> on the source node using the statement:</td>
</tr>
<tr>
<td></td>
<td><code>ALTER NODE node01 SET CompressCatalogOnDisk = 0;</code></td>
</tr>
<tr>
<td>Setting Type</td>
<td>Setting Details</td>
</tr>
<tr>
<td>-------------------</td>
<td>-----------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td><strong>If</strong> you then duplicated the subcluster containing node01, the setting is copied to the target node.</td>
<td></td>
</tr>
</tbody>
</table>
| Eon Mode settings | • Shard subscriptions are copied from the source node to the target.  
• Whether the node is the participating primary node for the shard. |
| Storage location settings | The DATA, TEMP, DEPOT, and USER storage location paths on the source node are duplicated on the target node. When duplicating node-specific paths (such as DATA or DEPOT) the path names are adjusted for the new node name. For example, suppose node 1 has a depot path of `/vertica/depot/vmart/v_vmart_node0001_depot`. If Vertica duplicates node 1 to node 4, it adjusts the path to `/vertica/depot/vmart/v_vmart_node0004_depot`. |
| **Important:** | The directories for these storage locations on the target node must be empty. They must also have the correct file permissions to allow Vertica to read and write to them. |
|                   | Vertica does not duplicate a storage location if it cannot access its directory on the target node or if the directory is not empty. In this case, the target node will not have the location defined after the duplication process finishes. Admintools does not warn you if any locations were not duplicated. |
|                   | If you find that storage locations have not been duplicated on one or more target nodes, you must fix the issues with the directories on the target nodes. Then re-run the duplication command. |
| Large cluster settings | **Control node** assignments are copied from the source node to the target node:  
• If the source node is a control node, then the target node is made into a control node.  
• If the source node depends on a control node, then the target node becomes a dependent of the corresponding control node in the new subcluster. |
<p>|                   | Vertica <strong>does not</strong> copy the following node-level settings: |</p>
<table>
<thead>
<tr>
<th>Setting Type</th>
<th>Setting Details</th>
</tr>
</thead>
<tbody>
<tr>
<td>Connection load balancing settings</td>
<td>Network Addresses are not copied. The destination node's network addresses do not depend on the settings of the source node. Therefore, Vertica cannot determine what the target node's addresses should be.</td>
</tr>
<tr>
<td>Depot settings</td>
<td>Depot-related configuration parameters that can be set on a node level (such as FileDeletionServiceInterval) are not copied from the source node to the target node.</td>
</tr>
</tbody>
</table>

**Using admintools to Duplicate a Subcluster**

To duplicate a subcluster, you use the same admintools `db_add_subcluster` tool that you use to create a new subcluster (see Creating Subclusters). In addition to the required options to create a subcluster (the list of hosts, name for the new subcluster, database name, and so on), you also pass the `--like` option with the name of the source subcluster you want to duplicate.

**Important:**

When you use the `--like` option, you cannot use the `--is-secondary` or `--control-set-size` options. Vertica determines whether the new subcluster is secondary and the number of control nodes it contains based on the source subcluster. If you supply these options along with the `--like` option, admintools returns an error.

The following examples demonstrate duplicating a three-node subcluster named analytics_1. The first example examines some of the settings in the analytics_1 subcluster:

- An override of the global TM resource pool's memory size.
- Its own resource pool named analytics
- Its membership in a subcluster-based load balancing group named analytics

```sql
=> SELECT name, subcluster_name, memorysize FROM SUBCLUSTER_RESOURCE_POOL_OVERRIDES;
name | subcluster_name | memorysize
---- |---------------- |-----------
tm   | analytics_1    | 0%
(1 row)
```

=> SELECT name, subcluster_name, memorysize, plannedconcurrency FROM resource_pools WHERE subcluster_name IS NOT NULL;
The following example calls admintool's `db_add_subcluster` tool to duplicate the analytics_1 subcluster onto a set of three hosts to create a subcluster named analytics_2.

```bash
$ admintools -t db_add_subcluster -d verticadb \   
-s 10.11.12.13,10.11.12.14,10.11.12.15 \   
-p mypassword --like=analytics_1 -c analytics_2

Creating depot locations for 1 nodes
  Warning when creating depot location for node: v_verticadb_node0009
  WARNING: Target node v_verticadb_node0009 is down, so depot size has been
            estimated from depot location on initiator. As soon as the node comes
            up, its depot size might be altered depending on its disk size
Cloning subcluster properties
NOTICE: Nodes in subcluster analytics_1 have network addresses, you
might need to configure network addresses for nodes in subcluster
analytics_2 in order to get load balance groups to work correctly.

Replicating configuration to all nodes
Generating new configuration information and reloading spread
Starting nodes:
  v_verticadb_node0007 (10.11.12.81)
  v_verticadb_node0008 (10.11.12.209)
  v_verticadb_node0009 (10.11.12.186)
Starting Vertica on all nodes. Please wait, databases with a large catalog
may take a while to initialize.
Checking database state for newly added nodes
Node Status: v_verticadb_node0007: (DOWN) v_verticadb_node0008:
            (DOWN) v_verticadb_node0009: (DOWN)
Node Status: v_verticadb_node0007: (INITIALIZING) v_verticadb_node0008:
            (INITIALIZING) v_verticadb_node0009: (INITIALIZING)
Node Status: v_verticadb_node0007: (UP) v_verticadb_node0008:
            (UP) v_verticadb_node0009: (UP)
```
Syncing catalog on verticadb with 2000 attempts.
Multi-node DB add completed
Nodes added to subcluster analytics_2 successfully.
Subcluster added to verticadb successfully.

Re-running the queries in the first part of the example shows that the settings from analytics_1 have been duplicated in analytics_2:

```sql
=> SELECT name, subcluster_name, memorysize FROM SUBCLUSTER_RESOURCE_POOL_OVERRIDES;
name | subcluster_name | memorysize
----------------------------------
tm    | analytics_1     | 0%
tm    | analytics_2     | 0%
(2 rows)
```

```sql
=> SELECT name, subcluster_name, memorysize, plannedconcurrency
FROM resource_pools WHERE subcluster_name IS NOT NULL;
name | subcluster_name | memorysize | plannedconcurrency
----------------------------------
analytics_pool | analytics_1  | 70% | 8
analytics_pool | analytics_2  | 70% | 8
(2 rows)
```

```sql
=> SELECT * FROM LOAD_BALANCE_GROUPS;
name | policy | filter | type | object_name
----------------------------------
analytics | ROUNDROBIN | 0.0.0.0/0 | Subcluster | analytics_2
analytics | ROUNDROBIN | 0.0.0.0/0 | Subcluster | analytics_1
(2 rows)
```

As noted earlier, even though analytics_2 subcluster is part of the analytics load balancing group, its nodes do not have network addresses defined for them. Until you define network addresses for the nodes, Vertica cannot redirect client connections to them.

## Adding and Removing Nodes From Subclusters

You will often want to add new nodes to and remove existing nodes from a subcluster. This ability lets you scale your database to respond to changing analytic needs. For more information on how adding nodes to a subcluster affects your database’s performance, see [Scaling Your Eon Mode Database](#).

## Adding New Nodes to a Subcluster

You can add nodes to a subcluster to meet additional workloads. The nodes that you add to the subcluster must already be part of your cluster. These can be:
- Nodes that you removed from other subclusters.
- Nodes you added following the steps in Add Nodes to a Running Cluster on the Cloud.
- Nodes you created using your cloud provider's interface, such as the AWS EC2 "Launch more like this" feature.

To add new nodes to a subcluster, use the `db_add_node` command of admintools:

```
$ adminTools -t db_add_node -h
Usage: db_add_node [options]

Options:
  -h, --help              show this help message and exit
  -d DB, --database=DB    Name of the database
  -s HOSTS, --hosts=HOSTS Comma separated list of hosts to add to database
  -p DBPASSWORD, --password=DBPASSWORD Database password in single quotes
  -a AHOSTS, --add=AHOSTS Comma separated list of hosts to add to database
  -c SCNAME, --subcluster=SCNAME Name of subcluster for the new node
  --timeout=NONINTERACTIVE_TIMEOUT set a timeout (in seconds) to wait for actions to complete ('never') will wait forever (implicitly sets -i)
  -i, --noprompts         do not stop and wait for user input (default false). Setting this implies a timeout of 20 min.
  --compat21              (deprecated) Use Vertica 2.1 method using node names instead of hostnames
```

If you do not use the `-c` option, Vertica adds new nodes to the default subcluster (set to default_subcluster in new databases). This example adds a new node without specifying the subcluster:

```
$ adminTools -t db_add_node -p 'password' -d verticadb -s 10.11.12.117
Subcluster not specified, validating default subcluster
Nodes will be added to subcluster 'default_subcluster'
Verifying database connectivity...10.11.12.10

Communal storage detected: syncing catalog
Multi-node DB add completed
Nodes added to verticadb successfully.
You will need to redesign your schema to take advantage of the new nodes.
```

## Updating Shard Subscriptions After Adding Nodes

After you add nodes to a subcluster they do not yet subscribe to shards. You can view the
subscription status of all nodes in your database using the following query that joins the **V_**
**CATALOG.NODES** and **V_CATALOG.NODE_SUBSCRIPTIONS** system tables:

```
=> SELECT subcluster_name, n.node_name, shard_name, subscription_state FROM
  v_catalog.nodes n LEFT JOIN v_catalog.node_subscriptions ns ON (n.node_name
  = ns.node_name) ORDER BY 1,2,3;
```

```sql
<table>
<thead>
<tr>
<th>subcluster_name</th>
<th>node_name</th>
<th>shard_name</th>
<th>subscription_state</th>
</tr>
</thead>
<tbody>
<tr>
<td>analytics_subcluster</td>
<td>v_verticadb_node0004</td>
<td></td>
<td></td>
</tr>
<tr>
<td>analytics_subcluster</td>
<td>v_verticadb_node0005</td>
<td></td>
<td></td>
</tr>
<tr>
<td>analytics_subcluster</td>
<td>v_verticadb_node0006</td>
<td></td>
<td></td>
</tr>
<tr>
<td>default_subcluster</td>
<td>v_verticadb_node0001</td>
<td>replica</td>
<td>ACTIVE</td>
</tr>
<tr>
<td>default_subcluster</td>
<td>v_verticadb_node0001</td>
<td>segment0001</td>
<td>ACTIVE</td>
</tr>
<tr>
<td>default_subcluster</td>
<td>v_verticadb_node0001</td>
<td>segment0003</td>
<td>ACTIVE</td>
</tr>
<tr>
<td>default_subcluster</td>
<td>v_verticadb_node0002</td>
<td>replica</td>
<td>ACTIVE</td>
</tr>
</tbody>
</table>
| default_subcluster  | v_verticadb_node0002 | segment0001| ACTIVE             |```
You can see that none of the nodes in the newly-added analytics_subcluster have subscriptions.

To update the subscriptions for new nodes, call the `REBALANCE_SHARDS` function. You can limit the rebalance to the subcluster containing the new nodes by passing its name to the `REBALANCE_SHARDS` function call. The following example runs rebalance shards to update the analytics_subcluster's subscriptions:

```sql
=> SELECT REBALANCE_SHARDS('analytics_subcluster');
REBALANCE_SHARDS
-----------------------
REBALANCED SHARDS

### Removing Nodes

Your database must meet these requirements before you can remove a node from a subcluster:
To remove a node from a **primary subcluster**, all of the **primary nodes** in the subcluster must be up, and the database must be able to maintain quorum after the primary node is removed (see Data Integrity and High Availability in an Eon Mode Database). These requirements are necessary because Vertica calls REBALANCE_SHARDS to redistribute shard subscriptions among the remaining nodes in the subcluster. If you attempt to remove a primary node when the database does not meet the requirements, the rebalance shards process waits until either the down nodes recover or a timeout elapses. While it waits, you periodically see a message "Rebalance shards polling iteration number [nn]" indicating that the rebalance process is waiting to complete.

You can remove nodes from a **secondary subcluster** even when nodes in the subcluster are down.

- If your database has the large cluster feature enabled, you cannot remove a node if it is the subcluster's last control node and there are nodes that depend on it. See Large Cluster for more information.

If there are other control nodes in the subcluster, you can drop a control node. Vertica reassigns the nodes that depend on the node being dropped to other control nodes.

To remove one or more nodes, use admintools's db_remove_node tool:

```
$ adminTools -t db_remove_node -p 'password' -d verticadb -s 10.11.12.117
connecting to 10.11.12.10
Waiting for rebalance shards. We will wait for at most 36000 seconds.
Rebalance shards polling iteration number [0], started at [14:56:41], time out at [00:56:41]
Attempting to drop node v_verticadb_node0004 ( 10.11.12.117 )
  Shutting down node v_verticadb_node0004
  Sending node shutdown command to ['v_verticadb_node0004', '10.11.12.117', '/vertica/data', '/vertica/data']
  Deleting catalog and data directories
  Update admintools metadata for v_verticadb_node0004
  Eon mode detected. The node v_verticadb_node0004 has been removed from host 10.11.12.117.
To remove the node metadata completely, please clean up the files corresponding to this node, at the communal location: s3://eonbucket/metadata/verticadb/nodes/v_verticadb_node0004
  Reload spread configuration
  Replicating configuration to all nodes
  Checking database state
  Node Status: v_verticadb_node0001: (UP) v_verticadb_node0002: (UP) v_verticadb_node0003:
(UP)
Communal storage detected: syncing catalog
```

When you remove one or more nodes from a subcluster, Vertica automatically rebalances shards in the subcluster. You do not need to manually rebalance shards after removing nodes.
Moving Nodes Between Subclusters

To move a node from one subcluster to another:

1. Remove the node or nodes from the subcluster it is currently a part of.
2. Add the node to the subcluster you want to move it to.

Managing Workloads with Subclusters

By default, queries are limited to executing on the nodes in the subcluster that contains the initiator node (the node the client is connected to). This example demonstrates executing an explain plan for a query when connected to node 4 of a cluster. Node 4 is part of a subcluster containing nodes 4 through 6. You can see that only the nodes in the subcluster will participate in a query:

```sql
=> EXPLAIN SELECT customer_name, customer_state FROM customer_dimension LIMIT 10;

QUERY PLAN

-----------------------------

QUERY PLAN DESCRIPTION:
-----------------------------

EXPLAIN SELECT customer_name, customer_state FROM customer_dimension LIMIT 10;

Access Path:
+----SELECT LIMIT 10 [Cost: 442, Rows: 10 (NO STATISTICS)] (PATH ID: 0)
|    Output Only: 10 tuples
|    Execute on: Query Initiator
|    +----> STORAGE ACCESS for customer_dimension [Cost: 442, Rows: 10K (NO STATISTICS)] (PATH ID: 1)
|    |    Projection: public.customer_dimension_b0
|    |    Materialize: customer_dimension.customer_name,
|    |    customer_dimension.customer_state
|    |    Output Only: 10 tuples
|    |    Execute on: v_verticadb_node0004, v_verticadb_node0005,
|    |    v_verticadb_node0006
|    |    . . .

In Eon Mode, you can override the MEMORYSIZE, MAXMEMORYSIZE, and MAXQUERYMEMORYSIZE settings for built-in global resource pools to fine-tune workloads within a subcluster. See Managing Workload Resources in an Eon Mode Database for more information.
What Happens When a Subcluster Cannot Run a Query

In order to process queries, each subcluster's nodes must have full coverage of all shards in the database. If the nodes do not have full coverage (which can happen if nodes are down), the subcluster can no longer process queries. This state does not cause the subcluster to shut down. Instead, if you attempt to run a query on a subcluster in this state, you receive error messages telling you that not enough nodes are available to complete the query.

```
=> SELECT node_name, node_state FROM nodes
    WHERE subcluster_name = 'analytics_cluster';
  node_name | node_state
--------------+----------
  v_verticadb_node0004 | DOWN
  v_verticadb_node0005 | UP
  v_verticadb_node0006 | DOWN
(3 rows)
```

Once the down nodes have recovered and the subcluster has full shard coverage, it will be able to process queries.

Controlling Where a Query Runs

You can control where specific types of queries run by controlling which subcluster the clients connect to. The best way to enforce restrictions is to create a set of connection load balancing policies to steer clients from specific IP address ranges to clients in the correct subcluster.

For example, suppose you have the following database with two subclusters: one for performing data loading, and one for performing analytics.
The data load tasks come from a set of ETL systems in the IP 10.20.0.0/16 address range. Analytics tasks can come from any other IP address. In this case, you can create set of connection load balance policies that ensure that the ETL systems connect to the data load subcluster, and all other connections go to the analytics subcluster.

```sql
=> SELECT node_name, node_address, node_address_family, subcluster_name
    FROM v_catalog.nodes;
          node_name | node_address | node_address_family | subcluster_name
---+------------+--------------+---------------------+---------------------
v_verticadb_node0001 | 10.11.12.10 | ipv4             | load_subcluster
v_verticadb_node0002 | 10.11.12.20 | ipv4             | load_subcluster
v_verticadb_node0003 | 10.11.12.30 | ipv4             | load_subcluster
v_verticadb_node0004 | 10.11.12.40 | ipv4             | analytics_subcluster
v_verticadb_node0005 | 10.11.12.50 | ipv4             | analytics_subcluster
v_verticadb_node0006 | 10.11.12.60 | ipv4             | analytics_subcluster
(6 rows)

=> CREATE NETWORK ADDRESS node01 ON v_verticadb_node0001 WITH '10.11.12.10';
CREATE NETWORK ADDRESS
=> CREATE NETWORK ADDRESS node02 ON v_verticadb_node0002 WITH '10.11.12.20';
CREATE NETWORK ADDRESS
=> CREATE NETWORK ADDRESS node03 ON v_verticadb_node0003 WITH '10.11.12.30';
CREATE NETWORK ADDRESS
=> CREATE NETWORK ADDRESS node04 ON v_verticadb_node0004 WITH '10.11.12.40';
CREATE NETWORK ADDRESS
=> CREATE NETWORK ADDRESS node05 ON v_verticadb_node0005 WITH '10.11.12.50';
CREATE NETWORK ADDRESS
=> CREATE NETWORK ADDRESS node06 ON v_verticadb_node0006 WITH '10.11.12.60';
CREATE NETWORK ADDRESS

=> CREATE LOAD BALANCE GROUP load_subcluster WITH SUBCLUSTER load_subcluster
    FILTER '0.0.0.0/0';
CREATE LOAD BALANCE GROUP
=> CREATE LOAD BALANCE GROUP analytics_subcluster WITH SUBCLUSTER
```
Once you have created the load balance policies, you can test them using the `DESCRIBE_LOAD_BALANCE_DECISION` function.

```sql
=> SELECT describe_load_balance_decision('192.168.1.1');
```

```
describe_load_balance_decision
-------------------------------
Describing load balance decision for address [192.168.1.1]
Load balance cache internal version id (node-local): [1]
Considered rule [etl_systems] source ip filter [10.20.0.0/16]...
  input address does not match source ip filter for this rule.
Considered rule [analytic_clients] source ip filter [0.0.0.0/0]...
  input address matches this rule
Matched to load balance group [analytics_cluster] the group has
  policy [ROUNDROBIN] number of addresses [3]
(0) LB Address: [10.11.12.181]:5433
(1) LB Address: [10.11.12.205]:5433
(2) LB Address: [10.11.12.192]:5433
Chose address at position [1]
Routing table decision: Success. Load balance redirect to: [10.11.12.205]
  port [5433]
```

```sql
(1 row)
```  

```sql
=> SELECT describe_load_balance_decision('10.20.1.1');
```

```
describe_load_balance_decision
-------------------------------
Describing load balance decision for address [10.20.1.1]
Load balance cache internal version id (node-local): [1]
Considered rule [etl_systems] source ip filter [10.20.0.0/16]...
  input address matches this rule
Matched to load balance group [default_cluster] the group has policy
  [ROUNDROBIN] number of addresses [3]
(0) LB Address: [10.11.12.10]:5433
(1) LB Address: [10.11.12.20]:5433
(2) LB Address: [10.11.12.30]:5433
Chose address at position [1]
Routing table decision: Success. Load balance redirect to: [10.11.12.20]
  port [5433]
```

```sql
(1 row)
```  

Normally, with these policies, all queries run by the ETL system will run on the load subcluster. All other queries will run on the analytics subcluster. There are some cases (especially if a subcluster is down) where a client may connect to a node in another subcluster. For this reason, clients should always verify they are connected to the correct
subcluster. See Connection Load Balancing Policies for more information about load balancing policies.

## Starting and Stopping Subclusters

Subclusters make it convenient to start and stop a group of nodes as needed. You start and stop them using the admintools command line.

### Starting a Subcluster

To start a subcluster, use the `restart_subcluster` tool:

```bash
$ adminTools -t restart_subcluster -h
Usage: restart_subcluster [options]

Options:
- -h, --help     show this help message and exit
- -d DB, --database=DB Name of database whose subcluster is to be restarted
- -c SCNAME, --subcluster=SCNAME Name of subcluster to be restarted
- -p DBPASSWORD, --password=DBPASSWORD Database password in single quotes
- --timeout=NONINTERACTIVE_TIMEOUT set a timeout (in seconds) to wait for actions to complete ('never') will wait forever (implicitly sets -i)
- -i, --noprimarys do not stop and wait for user input (default false).
- -F, --force    Force the nodes in the subcluster to start and auto recover if necessary
```

This example starts the subcluster named analytics_cluster:

```bash
$ adminTools -t restart_subcluster -c analytics_cluster \   -d verticadb -p password
*** Restarting subcluster for database verticadb ***
    Restarting host [10.11.12.192] with catalog [v_verticadb_node0006_catalog]
    Restarting host [10.11.12.181] with catalog [v_verticadb_node0004_catalog]
    Restarting host [10.11.12.205] with catalog [v_verticadb_node0005_catalog]
    Issuing multi-node restart
    Starting nodes:
        v_verticadb_node0004 (10.11.12.181)
        v_verticadb_node0005 (10.11.12.205)
        v_verticadb_node0006 (10.11.12.192)
    Starting Vertica on all nodes. Please wait, databases with a large catalog may take a while to initialize.
    Node Status: v_verticadb_node0002: (UP) v_verticadb_node0004: (DOWN)
                  v_verticadb_node0005: (DOWN) v_verticadb_node0006: (DOWN)
```
Node Status: v_verticadb_node0002: (UP) v_verticadb_node0004: (DOWN)
  v_verticadb_node0005: (DOWN) v_verticadb_node0006: (DOWN)
Node Status: v_verticadb_node0002: (UP) v_verticadb_node0004: (DOWN)
  v_verticadb_node0005: (DOWN) v_verticadb_node0006: (DOWN)
Node Status: v_verticadb_node0002: (UP) v_verticadb_node0004: (DOWN)
  v_verticadb_node0005: (DOWN) v_verticadb_node0006: (DOWN)
Node Status: v_verticadb_node0002: (UP) v_verticadb_node0004: (UP)
  v_verticadb_node0005: (UP) v_verticadb_node0006: (UP)

Communal storage detected: syncing catalog

Restart Subcluster result: 1

Stopping a Subcluster

Important:
Stopping a subcluster does not warn you if there are active user sessions connected to the subcluster. This behavior is same as stopping an individual node. Before stopping a subcluster, verify that no users are connected to it.

To stop a subcluster, use the stop_subcluster tool:

$ adminTools -t stop_subcluster -h
Usage: stop_subcluster [options]

Options:
  -h, --help          show this help message and exit
  -d DB, --database=DB Name of database whose subcluster is to be stopped
  -c SCNAME, --subcluster=SCNAME Name of subcluster to be stopped
  -p DBPASSWORD, --password=DBPASSWORD Database password in single quotes
  --timeout=NONINTERACTIVE_TIMEOUT set a timeout (in seconds) to wait for actions to complete ('never') will wait forever (implicitly sets -i)
  -i, --noprompts     do not stop and wait for user input (default false). Setting this implies a timeout of 20 min.

This example stops the subcluster named analytics_cluster:

$ adminTools -t stop_subcluster -c analytics_cluster -d verticadb -p password
*** Forcing subcluster shutdown ***
Verifying subcluster 'analytics_cluster'
Node 'v_verticadb_node0004' will shutdown
Node 'v_verticadb_node0005' will shutdown
Node 'v_verticadb_node0006' will shutdown
Shutdown subcluster command sent to the database
You can also use the SHUTDOWN_SUBCLUSTER function to stop a subcluster. See SHUTDOWN_SUBCLUSTER for details.

**Altering Subcluster Settings**

There are several settings you can alter on a subcluster using the ALTER SUBCLUSTER statement. You can also switch a subcluster from a primary to a secondary subcluster, or from a secondary to a primary.

**Renaming a Subcluster**

To rename an existing subcluster, use the ALTER SUBCLUSTER statement's RENAME TO clause:

```sql
=> ALTER SUBCLUSTER default_subcluster RENAME TO load_subcluster;
ALTER SUBCLUSTER

=> SELECT DISTINCT subcluster_name FROM subclusters;
  subcluster_name
-------------
  load_subcluster
  analytics_cluster
(2 rows)
```

**Changing the Default Subcluster**

The default subcluster designates which subcluster Vertica adds nodes to if you do not explicitly specify a subcluster when adding nodes to the database. When you create a new database (or when a database is upgraded from a version prior to 9.3.0) the default_subcluster is the default. You can find the current default subcluster by querying the is_default column of the SUBCLUSTERS system table.

The following example demonstrates finding the default subcluster, and then changing it to the subcluster named analytics_cluster:

```sql
=> SELECT DISTINCT subcluster_name FROM SUBCLUSTERS WHERE is_default = true;
  subcluster_name
-------------
  default_subcluster
(1 row)
```
Converting a Subcluster from Primary to Secondary, or Secondary to Primary

You usually choose whether a subcluster is primary or secondary when creating it (see Creating Subclusters for more information). However, you can switch a subcluster between the two settings after you have created it. You may want to change whether a subcluster is primary or secondary to impact the **K-Safety** of your database. For example, if you have a single primary subcluster that has down nodes that you cannot easily replace, you can promote a secondary subcluster to primary to ensure losing another primary node will not cause your database to shut down. On the other hand, you may choose to convert a primary subcluster to a secondary before eventually shutting it down. This conversion can prevent the database from losing K-Safety if the subcluster you are shutting down contains half or more of the total number of primary nodes in the database.

**Note:**

You cannot promote or demote a subcluster containing the **initiator node**. You must be connected to a node in a subcluster other than the one you want to promote or demote.

To make a secondary subcluster into a primary subcluster, use the `PROMOTE_SUBCLUSTER_TO_PRIMARY` function:

```
=> SELECT DISTINCT subcluster_name, is_primary from subclusters;
   subcluster_name  | is_primary
-------------------|----------------
 analytics_cluster | f
 load_subcluster   | t
(2 rows)

=> SELECT PROMOTE_SUBCLUSTER_TO_PRIMARY('analytics_cluster');
 PROMOTE_SUBCLUSTER_TO_PRIMARY
-----------------------------
 PROMOTE_SUBCLUSTER TO PRIMARY
(1 row)
```
Making a primary subcluster into a secondary subcluster is similar. Unlike converting a secondary subcluster to a primary, there are several issues that may prevent you from making a primary into a secondary. Vertica prevents you from making a primary into a secondary if any of the following is true:

- The subcluster contains a critical node.
- The subcluster is the only primary subcluster in the database. You must have at least one primary subcluster.
- The initiator node is a member of the subcluster you are trying to demote. You must call DEMOTE_SUBCLUSTER_TO_SECONDARY from another subcluster.

To convert a primary subcluster to secondary, use the DEMOTE_SUBCLUSTER_TO_SECONDARY function:

```sql
=> SELECT DISTINCT subcluster_name, is_primary from subclusters;
  subcluster_name   | is_primary
-------------------+----------------
analytics_cluster  | t
load_subcluster    | t
(2 rows)
```

```sql
=> SELECT DEMOTE_SUBCLUSTER_TO_SECONDARY('analytics_cluster');
DEMOTE_SUBCLUSTER_TO_SECONDARY
-----------------------------
 DEMOTE SUBCLUSTER TO SECONDARY
(1 row)
```

```sql
=> SELECT DISTINCT subcluster_name, is_primary from subclusters;
  subcluster_name   | is_primary
-------------------+----------------
analytics_cluster  | f
load_subcluster    | t
(2 rows)
```

Removing Subclusters

Removing a subcluster from the database deletes the subcluster from the Vertica catalog. During the removal, Vertica removes any nodes in the subcluster from the database. These nodes are still part of the database cluster, but are no longer part of the database. If you
view your cluster in the MC, you will see these nodes with the status STANDBY. They can be added back to the database by adding them to another subcluster. See Creating Subclusters and Adding New Nodes to a Subcluster.

Vertica places several restrictions on removing a subcluster:

- You cannot remove the default subcluster. If you want to remove the subcluster that is set as the default, you must make another subcluster the default. See Changing the Default Subcluster for details.
- You cannot remove the last primary subcluster in the database. Your database must always have at least one primary subcluster.

**Note:**
Removing a subcluster can fail if the database is repartitioning. If this happens, you will see the error message "Transaction commit aborted because session subscriptions do not match catalog." Wait until the repartitioning is done before removing a subcluster.

To remove a subcluster, use the admintools command line db_remove_subcluster tool:

```
$ adminTools -t db_remove_subcluster -h
Usage: db_remove_subcluster [options]

Options:
  -h, --help       show this help message and exit
  -d DB, --database=DB Name of database to be modified
  -c SCNAME, --subcluster=SCNAME Name of subcluster to be removed
  -p DBPASSWORD, --password=DBPASSWORD Database password in single quotes
  --timeout=NONINTERACTIVE_TIMEOUT set a timeout (in seconds) to wait for actions to complete ('never') will wait forever (implicitly sets -i)
  -i, --noprprompts do not stop and wait for user input (default false). Setting this implies a timeout of 20 min.
  --skip-directory-cleanup Caution: this option will force you to do a manual cleanup. This option skips directory deletion during remove subcluster. This is best used in a cloud environment where the hosts being removed will be subsequently discarded.
```

This example removes the subcluster named analytics_cluster:

```
$ adminTools -t db_remove_subcluster -d verticadb -c analytics_cluster -p 'password'
Found node v_verticadb_node0004 in subcluster analytics_cluster
Found node v_verticadb_node0005 in subcluster analytics_cluster
Found node v_verticadb_node0006 in subcluster analytics_cluster
Found node v_verticadb_node0007 in subcluster analytics_cluster
Waiting for rebalance shards. We will wait for at most 36000 seconds.
```
Depot Management

The nodes of an Eon Mode database fetch data from communal storage as needed to process queries, and cache that data locally on disk. The cached data of all nodes within a subcluster comprise that cluster's depot. Vertica uses depots to facilitate query execution: when processing a query, Vertica first checks the current depot for the required data. If the
data is unavailable, Vertica fetches it from communal storage and saves a copy in the depot to expedite future queries. Vertica also uses the depot for load operations, caching newly-loaded data in the depot before uploading it to communal storage.

Managing Depot Caching

You can control depot caching in several ways:

- Configure gateway parameters so a depot caches only queried data or loaded data.
- Control fetching of queried data from communal storage.
- Manage eviction of cached data.
- Enable depot warming on new and restarted nodes.

You can monitor depot activity and settings with several V_MONITOR system tables, or with the Management Console.

Note:
Depot caching is supported only on primary shard subscriber nodes.

Depot Gateway Parameters

Vertica depots can cache two types of data:

- Queried data: The depot facilitates query execution by fetching queried data from communal storage and caching it in the depot. The cached data remains available until it is evicted to make room for fresher data, or for data that is fetched for more recent queries.
- Loaded data: The depot expedites load operations such as COPY by temporarily caching data until it is uploaded to communal storage.

By default, depots are configured to cache both types of data.

Two configuration parameters determine whether a depot caches queried or loaded data:

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Settings</th>
</tr>
</thead>
<tbody>
<tr>
<td>UseDepotForReads</td>
<td>Boolean</td>
</tr>
<tr>
<td></td>
<td>- 1 (default): Search the depot for the queried data; if not found, fetch the data from communal storage.</td>
</tr>
</tbody>
</table>
Parameter | Settings
--- | ---
| | • 0: Bypass the depot and get queried data from communal storage.

UseDepotForWrites  
Boolean:  
• 1 (default): Write loaded data to the depot, then upload files to communal storage.  
• 0: Bypass the depot and write directly to communal storage.

Both parameters can be set at session, user and database levels.

If set on the session or user levels, these parameters can be used to segregate read and write activity on the depots of different subclusters. For example, parameters UseDepotForReads and UseDepotForWrites might be set as follows for users joe and rhonda:

```
=> SHOW USER joe ALL;

 name | setting  
------|---------
 UseDepotForReads | 1  
 UseDepotForWrites | 0  
(2 rows)

=> SHOW USER rhonda ALL;

 name | setting  
------|---------
 UseDepotForReads | 0  
 UseDepotForWrites | 1  
(2 rows)
```

Given these user settings, when joe connects to a Vertica subcluster, his session only uses the current depot to process queries; all load operations are uploaded to communal storage. Conversely, rhonda's sessions only use the depot to process load operations; all queries must fetch their data from communal storage.

**Depot Fetching**

If a depot is enabled to cache queried data (UseDepotForReads = 1), you can configure how it fetches data from communal storage with configuration parameter DepotOperationsForQuery. This parameter has three settings:

• ALL (default): Fetch file data from communal storage, if necessary displace existing files by evicting them from the depot.
- FETCHESE: Fetch file data from communal storage only if space is available; otherwise, read the queried data directly from communal storage.
- NONE: Do not fetch file data to the depot, read the queried data directly from communal storage.

You can set fetching behavior at four levels, in ascending levels of precedence:

- Database: `ALTER DATABASE...SET PARAMETER`
- Per user: `ALTER USER...SET PARAMETER`
- Per session: `ALTER SESSION...SET PARAMETER`
- Per query: `DEPOT_FETCH` hint

For example, you can set DepotOperationsForQuery at the database level as follows:

```
=> ALTER DATABASE default SET PARAMETER DepotOperationsForQuery = FETCHES;
```

This setting applies to all database depots unless overridden at other levels. For example, the following ALTER USER statement specifies fetching behavior for a depot when it processes queries from user `joe`:

```
=> ALTER USER joe SET PARAMETER DepotOperationsForQuery = ALL;
```

Finally, `joe` can override his own DepotOperationsForQuery setting by including the `DEPOT_FETCH` hint in individual queries:

```
SELECT /*+DEPOT_FETCH(NONE)/ count(*) FROM bar;
```

**Evicting Depot Data**

In general, Vertica evicts data from the depot as needed to provide room for new data, and expedite request processing. Before writing new data to the depot, Vertica evaluates it as follows:

- Data fetched from communal storage: Vertica sizes the download and evicts data from the depot accordingly.
- Data uploaded from a DML operation such as COPY: Vertica cannot estimate the total size of the upload before it is complete, so it sizes individual buffers and evicts data from the depot as needed.

In both cases, Vertica assesses existing depot data and determines which objects to evict from the depot as follows, in descending order of precedence (most to least vulnerable):
1. Least recently used unpinned object evicted for any new object, pinned or unpinned.
2. Least recently used pinned object evicted for a new pinned object.

Pinning Depot Objects

You can set depot pinning policies on database objects to reduce their exposure to eviction. Pinning policies can be set on individual subclusters, or on the entire database, and at different levels of granularity—table, projection, and partitions:

<table>
<thead>
<tr>
<th>Pinning of...</th>
<th>Supported by...</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tables</td>
<td>SET_DEPOT_PIN_POLICY_TABLE</td>
</tr>
<tr>
<td>Projections</td>
<td>SET_DEPOT_PIN_POLICY_PROJECTION</td>
</tr>
<tr>
<td>Partitions</td>
<td>SET_DEPOT_PIN_POLICY_PARTITION</td>
</tr>
</tbody>
</table>

Usage Guidelines

Pinning one or more objects on a depot affects its retention of fetched (queried) data and uploaded (newly loaded) data. If too much depot space is claimed by pinned objects, the depot might be unable to handle load operations on unpinned objects. In this case, set configuration parameter UseDepotForWrites to 0, so load operations are routed directly to communal storage for processing. Otherwise, load operations are liable to return with an error.

To minimize contention over depot usage, consider the following guidelines:

- Pin only those objects that are most active in DML operations and queries.
- Minimize the size of pinned data by setting policies at the smallest effective level—for example, pin only the data of a table's active partition.

Depot Warming

On startup, the depots of new nodes are empty, while the depots of restarted nodes often contain stale data that must be refreshed. When depot warming is enabled, a node that is undergoing startup preemptively loads its depot with frequently queried and pinned data. When the node completes startup and begins to execute queries, its depot already contains...
much of the data it needs to process those queries. This reduces the need to fetch data from communal storage, and expedites query performance accordingly.

**Note:**
Fetching data to a warming depot can delay node startup.

By default, depot warming is enabled (EnableDepotWarmingFromPeers = 1). A node executes depot warming as follows:

1. The node checks configuration parameter PreFetchPinnedObjectsToDepotAtStartup. If enabled (set to 1), the node:
   - Gets from the database catalog a list of all objects that are pinned on this node's subcluster.
   - Queues the pinned objects for fetching and calculates their total size.
2. The node checks configuration parameter EnableDepotWarmingFromPeers. If enabled (set to 1, default), the node:
   - Identifies a peer node in the same subcluster whose depot contents it can copy.
   - After taking into account all pinned objects, calculates how much space remains available in the warming depot.
   - Gets from the peer node a list of the most recently used objects that can fit in the depot.
   - Queues the objects for fetching.
3. If BackgroundDepotWarming is enabled (set to 1, default), the node loads queued objects into its depot while it is warming, and continues to do so in the background after the node becomes active and starts executing queries. Otherwise (BackgroundDepotWarming = 0), node activation is deferred until the depot fetches and loads all queued objects.

**Monitoring the Depot**

You can monitor depot activity and settings with several V_MONITOR system tables.

**Tip:**
You can also use the Management Console to monitor depot activity. For details, see Monitoring Depot Activity in MC

<table>

**Resizing Depot Caching Capacity**

Each node in an Eon database caches depot data in a predefined storage location. The storage location path depends on your Vertica installation's filesystem. By default, each node in a cluster can use up to 60 percent of disk space on the storage location's filesystem to cache depot data. You can change caching capacity with `ALTER_LOCATION_SIZE`, by specifying to a fixed size or a percentage of total disk space. The function can specify a single node, a subcluster, or all nodes in the database cluster. You can increase depot caching capacity for each node up to 80 percent.

In the following example, `ALTER_LOCATION_SIZE` increases depot caching capacity to 80 percent of disk space on the storage location's filesystem. The function supplies an empty string as the second `(node-name)` argument, so the change applies to all nodes:

> Important: By default, depot caching capacity cannot exceed 80 percent of disk space on the store location file system; attempts to set it to a higher value return an error. Vertica requires at least 20 percent of disk space for the catalog, Data Collector tables, and temp files.

```sql
=> SELECT node_name, location_label, location_path, max_size, disk_percent FROM storage_locations
WHERE location_usage = 'DEPOT' ORDER BY node_name;
```

![Table displaying storage locations](image-url)

 Vertica Documentation
Rescaling Depot Capacity

When a database is revived on an instance with greater or lesser disk space than it had previously, Vertica evaluates the depot size settings that were previously in effect. If depot size was specified as a percentage of available disk space, Vertica proportionately rescales depot capacity. For example, if depot caching capacity for a given node was set to 70 percent, the revived node applies that setting to the new disk space and adjusts depot caching capacity accordingly. If depot capacity was set to a fixed size, Vertica applies that setting, unless doing so will consume more than 80 percent of available disk space. In that case, Vertica automatically adjusts depot size as needed.

Scaling Your Eon Mode Database

One of the strengths of an Eon Mode database is its ability to grow or shrink to meet your workload demands. You can add nodes to and remove nodes from your database to meet changing workload demands. For an overview of why you would scale your database and how it affects queries, see Elasticity.

Scaling Up Your Database by Starting Stopped Nodes

The easiest way to scale up your database is to start any stopped nodes:
To start individual nodes, see Stopping and Starting Nodes on MC.
To start an entire subcluster that has been stopped, see Starting and Stopping Subclusters.

Scaling Up Your Database by Adding Nodes

If you do not have stopped nodes in your database, or the stopped nodes are not in the subclusters where you want to add new nodes, then you can add new nodes to the database. In supported environments, you can use the MC to provision and add new nodes to your database in a single step. See Viewing and Managing Your Cluster for more information.

You can also manually add new nodes:

- For databases running on AWS, see Add Nodes to a Running Cluster on the Cloud
- For databases running on-premises, or in other environments:
  1. Provision the hardware for your new nodes. Be sure to follow the steps in Before You Install Vertica to verify your hardware is configured correctly.
  2. Follow the steps in Adding Hosts to a Cluster to add the new nodes to the database cluster.
  3. Add the node to your database by following the steps in Adding New Nodes to a Subcluster.

Controlling How Vertica Uses Your New Nodes

New nodes can improve your database's performance in one of two ways:

- Increase the query throughput (the number of queries your database processes at the same time).
- Increase individual query performance (how fast each query runs).

See Elasticity for details on these performance improvements. You control how the new nodes improve your database's performance by choosing what subclusters you add them to. The following topics explain how to use scaling to improve throughput and query performance.
Improving Query Throughput Using Subclusters

Improving query throughput increases the number of queries your Eon Mode database processes at the same time. You are usually concerned about your database's throughput when your workload consists of many short-running queries. They are often referred to as "dashboard queries." This term describes type of workload you see when a large number of users have web-based dashboard pages open to monitor some sort of status. These dashboards tend to update frequently, using simpler, short-running queries instead of analytics-heavy long running queries.

The best way to improve your database's throughput is to add new subclusters to the database or start any stopped subclusters. Then distribute the client connections among these subclusters using connection load balancing policies. Subclusters independently process queries. By adding more subclusters, you improve your database's parallelism.

For the best performance, make the number of nodes in your subcluster the same as the number of shards in your database. If you choose to have less nodes than the number of shards, make the number of nodes an even divisor of the number of shards. When the number of shards is divisible by the number of nodes, the data in your database is equally divided among the nodes in the subcluster.

The easiest way of adding subclusters is to use the MC:

1. From the MC home page, click the database you want to add subclusters to.
2. Click Manage.
3. Click Add Subcluster.
4. Follow the steps in the wizard to add the subcluster. Normally, the only items you need to fill in are the subcluster name and the number of instances to add to it.

**Note:**
The MC currently does not support creating instances on all platforms. For those platforms where the MC does not support instances, you can manually add subclusters. See Creating Subclusters for more information.
Distributing Clients Among the Throughput Subclusters

To gain benefits from the added subclusters, you must have clients that will execute short-running queries connect to the nodes that the subclusters contain. Queries run only on the subcluster that contains the initiator node (the node that the client is connected to). Use connection load balancing policies to spread the connections across all of the subclusters you created to increase query throughput. See Connection Load Balancing Policies for details.

The following example creates a load balancing policy that spreads client connections across two three-node subclusters named query_pool_a and query_pool_b. This example:

- Creates network addresses on the six nodes that are in the two subclusters.
- Creates a load balance group from all the nodes in the two subclusters.
- Creates the routing rule to redirect all incoming connections to the two subclusters.

```sql
=> CREATE NETWORK ADDRESS node04 ON v_verticadb_node0004 WITH '203.0.113.1';
CREATE NETWORK ADDRESS
=> CREATE NETWORK ADDRESS node05 ON v_verticadb_node0005 WITH '203.0.113.2';
CREATE NETWORK ADDRESS
=> CREATE NETWORK ADDRESS node06 ON v_verticadb_node0006 WITH '203.0.113.3';
CREATE NETWORK ADDRESS
=> CREATE NETWORK ADDRESS node07 ON v_verticadb_node0007 WITH '203.0.113.4';
CREATE NETWORK ADDRESS
=> CREATE NETWORK ADDRESS node08 ON v_verticadb_node0008 WITH '203.0.113.5';
CREATE NETWORK ADDRESS
=> CREATE NETWORK ADDRESS node09 ON v_verticadb_node0009 WITH '203.0.113.6';
CREATE NETWORK ADDRESS

=> CREATE LOAD BALANCE GROUP query_subclusters WITH SUBCLUSTER query_pool_a,
   query_pool_b FILTER '0.0.0/0';
CREATE LOAD BALANCE GROUP
=> CREATE ROUTING RULE query_clients ROUTE '0.0.0.0/0' TO query_subclusters;
CREATE ROUTING RULE
```

**Important:**

In cloud environments where clients will be connecting from outside the private network, use the external IP address for each node when creating the network addresses. Otherwise, external clients will not be able to connect to the nodes.

If you have a mix of internal and external clients, set up two network addresses for each node and add them to two separate load balancing groups: one for internal clients and another for external. Then create two routing rules: one that routes the internal clients to the internal group, and
another that routes the external clients to the external group. Make the routing rule for internal clients only apply to the virtual private networks where your internal clients will connect from (for example, 10.0.0.0/8). The routing rule for the external clients can use the 0.0.0.0/0 CIDR range (all IP addresses) as the incoming connection address range. The rules will work correctly together because the more-specific internal client routing rule takes precedence over the less-restrictive external client rule.

After creating the policy, any client that opts into load balancing is redirected to one of the nodes in the two subclusters. For example, when you connect to node 1 in the cluster (with the IP address 203.0.113.1) using vsq1 with the -C flag, you see output similar to this:

```
$ vsq1 -h 203.0.113.1 -U dbadmin -w mypassword -C
Welcome to vsq1, the Vertica Analytic Database interactive terminal.
Type: \h or \? for help with vsq1 commands
     \g or terminate with semicolon to execute query
     \q to quit

INFO: Connected using a load-balanced connection.
INFO: Connected to 203.0.113.7 at port 5433.
=>
```

Connection load balancing policies take into account nodes that are stopped when picking a node to handle a client connection. If you shut down one or more subclusters to save money during low-demand periods, you do not need to adjust your load balancing policy as long as some of the nodes are still up.

### Using Elastic Crunch Scaling to Improve Query Performance

You can choose to add nodes to your database to improve the performance of complex long-running analytic queries. Adding nodes helps these queries run faster.

When you have more nodes in a subcluster than you have shards in your database, multiple nodes subscribe to each shard. To involve all of the nodes in the subcluster in queries, the Vertica query optimizer automatically uses a feature called Elastic Crunch Scaling (ECS). This feature splits the responsibility for processing the data in each shard among the nodes.
that subscribe to it. During a query, each node has less data to process and usually finishes the query faster.

For example, suppose you have a six-node subcluster in a three-shard database. In this subcluster, two nodes subscribe to each shard. When you execute a query, Vertica assigns each node roughly half of the data in the shard it subscribes to. Because all nodes in the subcluster participate in the query, the query usually finishes faster than if only half the nodes had participated.

ECS lets a subcluster that has more nodes than shards act as if the shard count in the database were higher. In a three-shard database, a six-node subcluster acts as if the database has six shards by splitting each shard in half. However, using ECS isn't as efficient as having a higher shard count. In practice, you will see slightly slower query performance on a six-node subcluster in a three shard database than you would see from a six-node subcluster in a six-shard database.

You can determine when the optimizer will use ECS in a subcluster by querying the `V_CATALOG.SESSION_SUBSCRIPTIONS` system table and look for nodes whose `is_collaborating` column is TRUE. Subclusters whose node count is less than or equal to the number of shards in the database only have participating nodes. Subclusters that have more nodes than the database's shard count assign the "extra" nodes the role of collaborators. The differences between the two types of nodes are not important for when you are executing queries. The two types just relate to how Vertica organizes the nodes to execute ECS-enabled queries.

This example shows how to get the list of nodes that are participating or collaborating in resolving queries for the current session:

```sql
=> SELECT node_name, shard_name, is_collaborating, is_participating
   FROM V_CATALOG.SESSION_SUBSCRIPTIONS
   WHERE is_participating = TRUE OR is_collaborating = TRUE
   ORDER BY shard_name, node_name;
```

<table>
<thead>
<tr>
<th>node_name</th>
<th>shard_name</th>
<th>is_collaborating</th>
<th>is_participating</th>
</tr>
</thead>
<tbody>
<tr>
<td>v_verticadb_node004</td>
<td>replica</td>
<td>f</td>
<td>t</td>
</tr>
<tr>
<td>v_verticadb_node005</td>
<td>replica</td>
<td>f</td>
<td>t</td>
</tr>
<tr>
<td>v_verticadb_node006</td>
<td>replica</td>
<td>t</td>
<td>f</td>
</tr>
<tr>
<td>v_verticadb_node007</td>
<td>replica</td>
<td>f</td>
<td>t</td>
</tr>
<tr>
<td>v_verticadb_node008</td>
<td>replica</td>
<td>t</td>
<td>f</td>
</tr>
<tr>
<td>v_verticadb_node009</td>
<td>replica</td>
<td>t</td>
<td>f</td>
</tr>
<tr>
<td>v_verticadb_node010</td>
<td>segment001</td>
<td>f</td>
<td>t</td>
</tr>
<tr>
<td>v_verticadb_node011</td>
<td>segment001</td>
<td>t</td>
<td>f</td>
</tr>
<tr>
<td>v_verticadb_node012</td>
<td>segment002</td>
<td>f</td>
<td>t</td>
</tr>
<tr>
<td>v_verticadb_node013</td>
<td>segment002</td>
<td>t</td>
<td>f</td>
</tr>
<tr>
<td>v_verticadb_node014</td>
<td>segment003</td>
<td>f</td>
<td>t</td>
</tr>
<tr>
<td>v_verticadb_node015</td>
<td>segment003</td>
<td>t</td>
<td>f</td>
</tr>
</tbody>
</table>

(12 rows)

You can see that nodes 4, 5, and 7 are participating, and nodes 6, 8, and 9 are collaborating.
You can also see that ECS is enabled by looking at an `EXPLAIN` plan for a query. At the top of the plan for an ECS-enabled query is the statement "this query involves non-participating nodes." These non-participating nodes are the collaborating nodes that are splitting the data in the shard with the participating nodes. The plan also lists the nodes taking part in the query.

This example shows an explain plan for an ECS-enabled query in a six-node subcluster in a three-shard database:

```sql
=> EXPLAIN SELECT sales_quantity, sales_dollar_amount, transaction_type, cc_name
    FROM online_sales.online_sales_fact
INNER JOIN online_sales.call_center_dimension
ON (online_sales.online_sales_fact.call_center_key
    = online_sales.call_center_dimension.call_center_key
    AND sale_date_key = 156)
ORDER BY sales_dollar_amount DESC;

---

QUERY PLAN

---

QUERY PLAN DESCRIPTION:
The execution of this query involves non-participating nodes. Crunch scaling strategy preserves data segmentation

---

EXPLAIN SELECT sales_quantity, sales_dollar_amount, transaction_type, cc_name
FROM online_sales.online_sales_fact
INNER JOIN online_sales.call_center_dimension
ON (online_sales.online_sales_fact.call_center_key
    = online_sales.call_center_dimension.call_center_key
    AND sale_date_key = 156)
ORDER BY sales_dollar_amount DESC;

```
Taking Advantage of ECS

To take advantage of ECS, create a secondary subcluster where the number of nodes is a multiple of the number of shards in your database. For example, in a 12-shard database, create a subcluster that contains a multiple of 12 nodes such as 24 or 36. The number of nodes must be a multiple of the number of shards to evenly distribute the data across the nodes in the subcluster. You create a secondary subcluster because secondary subclusters are better at performing queries. See Subclusters for more information.

Note:
Instead of creating a new subcluster, you can add more nodes to an existing secondary subcluster. Just be sure that the number of nodes in the subcluster is a multiple of the shard count.

Once you have created the subcluster, have users connect to it and run their analytic queries. Vertica automatically enables ECS in the subcluster because it has more nodes than there are shards in the database.

How the Optimizer Assigns Data Responsibilities to Nodes

The optimizer has two strategies to choose from when dividing the data in a shard among its subscribing nodes. One strategy is optimized for queries that use data segmentation. Queries that contain a JOIN or GROUP BY clause rely on data segmentation. The other strategy is for queries that do not need segmentation.

By default, the optimizer automatically chooses the strategy to use. For most queries, the automatically-chosen strategy results in faster query performance. For some queries, you may want to manually override the strategy using hints. In a small number of queries, ECS does not help performance. In these cases, you can disable ECS. See Manually Choosing an ECS Strategy for details.
Manually Choosing an ECS Strategy

When the number of nodes in a subcluster is greater than the number of database shards, the Vertica query optimizer uses elastic crunch scaling (ECS) to involve all nodes in processing queries. For each shard, the optimizer divides responsibility for processing shard data among its subscribing nodes, using one of the following strategies:

<table>
<thead>
<tr>
<th>Strategy</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>I/O-optimized</td>
<td>Optimizer divides the list of ROS containers in the shard among the subscribing nodes. Use this strategy when nodes must fetch the data for the query from communal storage, rather than the depot. Nodes only fetch the ROS containers they need to resolve the query from communal storage, reducing the amount of data each needs to transfer from communal storage. Due to the arbitrary division of data among the nodes, this strategy does not support query optimizations that rely on data segmentation.</td>
</tr>
<tr>
<td>Compute-optimized</td>
<td>Optimizer uses data segmentation to assign portions to each subscribing node. The nodes scan the entire shard, but use sub-segment filtering to find their assigned segments of the data. Use this strategy when most data for the query is in the depot, because nodes must scan the entire contents of the shard. Because this strategy uses data segmentation, it supports optimizations such as local joins that the I/O-optimized strategy cannot.</td>
</tr>
</tbody>
</table>

Optimizer chooses one of these two strategies according to the query's use of JOIN and GROUP BY clauses:

1. If the query does not contain a JOIN or a GROUP BY clause, the optimizer chooses the I/O-optimized strategy because the query does not use segmentation.
2. If the query does not contain a JOIN or GROUP BY, the optimizer begins planning the query with the assumption that it will use the compute-optimized strategy.
3. If the optimizer does not use a LOCAL JOIN or LOCAL GROUP BY in the final query plan, it chooses the I/O optimized strategy. This strategy is the best option because the plan does not need to use segmentation.
4. If the final query plan contains a LOCAL JOIN or GROUP BY, it will benefit from using segmentation. Therefore, the optimizer picks the compute-optimized strategy.
The optimizer automatically chooses a strategy based on whether the query can take advantage of data segmentation. You can tell which strategy the optimizer chooses for a query by using `EXPLAIN`. The top of the plan explanation states whether ECS is preserving segmentation. For example, this simple query on a single table does not need to use segmentation, so it uses the I/O-optimized strategy:

```sql
=> EXPLAIN SELECT employee_last_name,
   employee_first_name,employee_age
FROM employee_dimension
ORDER BY employee_age DESC;
```

```
QUERY PLAN
-----------------------------------------------------------
QUERY PLAN DESCRIPTION:
The execution of this query involves non-participating nodes.
Crunch scaling strategy does not preserve data segmentation
-----------------------------------------------------------
```  

A more complex query using a JOIN results in ECS preserving data segmentation by using the compute-optimized strategy. The query plan tells you that segmentation is preserved:

```sql
=> EXPLAIN SELECT sales_quantity, sales_dollar_amount, transaction_type, cc_name
FROM online_sales.online_sales_fact
INNER JOIN online_sales.call_center_dimension
ON (online_sales.online_sales_fact.call_center_key
   = online_sales.call_center_dimension.call_center_key
   AND sale_date_key = 156)
ORDER BY sales_dollar_amount DESC;
```

```
QUERY PLAN
-----------------------------------------------------------
QUERY PLAN DESCRIPTION:
The execution of this query involves non-participating nodes.
Crunch scaling strategy preserves data segmentation
-----------------------------------------------------------
```  

In most cases, the optimizer chooses the best strategy to use to split the data among the nodes subscribing to the same shard. However, you might occasionally find that some queries perform poorly. In these cases, the query can embed the `ECSMODE` hint to specify which strategy to use, or even disable ECS.

### Setting the ECS Strategy for Individual Queries

You can use the `ECSMODE` hint in a query to force the optimizer to use a specific ECS strategy (or disable ECS entirely). The ECSMODE hint takes one of the following
arguments:

- **AUTO**: The optimizer chooses the strategy to use, useful only if ECS mode is set at the session level (see Setting the ECS Strategy for the Session or Database).
- **IO_OPTIMIZED**: Use I/O-optimized strategy.
- **COMPUTE_OPTIMIZED**: Use compute-optimized strategy.
- **NONE**: Disable use of ECS for this query. Only participating nodes are involved in query execution; collaborating nodes are not.

The following example shows the query plan for a simple single-table query that is forced to use the compute-optimized strategy:

```sql
=> EXPLAIN SELECT /*+ECSMode(COMPUTE_OPTIMIZED)*/ employee_last_name,
    employee_first_name, employee_age
FROM employee_dimension
ORDER BY employee_age DESC;
```

**QUERY PLAN**

```
--------------------------------------------------------------------------------------------------------------------------
| QUERY PLAN |
--------------------------------------------------------------------------------------------------------------------------
| QUERY PLAN DESCRIPTION: |
| The execution of this query involves non-participating nodes. |
| Crunch scaling strategy preserves data segmentation |
```

This example disable ECS in a six-node cluster in a three-shard database:

```sql
=> EXPLAIN SELECT /*+ECSMode(NONE)*/ employee_last_name,
    employee_first_name, employee_age
FROM employee_dimension
ORDER BY employee_age DESC;
```

**QUERY PLAN**

```
--------------------------------------------------------------------------------------------------------------------------
| QUERY PLAN |
--------------------------------------------------------------------------------------------------------------------------
| QUERY PLAN SELECT |
| EXPLAIN SELECT /*+ECSMode(NONE)*/ employee_last_name, |
| employee_first_name, employee_age |
| FROM employee_dimension |
| ORDER BY employee_age DESC |
```

**Access Path:**

```
+SORT [Cost: 243, Rows: 10K] (PATH ID: 1)
| Order: employee_dimension.employee_age DESC |
| Execute on: v_verticadb_node0007, v_verticadb_node0004, v_verticadb_node0005 |
| +----> STORAGE ACCESS for employee_dimension [Cost: 71, Rows: 10K] (PATH ID: 2) |
| | Projection: public.employee_dimension_DB0_B_seg_vmart_b0 |
| | Materialize: employee_dimension.employee_first_name, |
| | employee_dimension.employee_last_name, employee_dimension.employee_age |
| | Execute on: v_verticadb_node0007, v_verticadb_node0004, |
| | v_verticadb_node0005 |
```
Note that this query plan lacks the "this query involves non-participating nodes" statement, indicating that it does not use ECS. It also lists just three participating nodes. These nodes are marked as participating in the $\text{V\_CATALOG\_SESSION\_SUBSCRIPTIONS}$ system table.

### Setting the ECS Strategy for the Session or Database

You can use the ECSMode configuration parameter to set the ECS strategy for the current session. This parameter accepts the same values as the ECSMODE hint except NONE, which is valid only for individual queries.

The following example demonstrates using the configuration parameter to force a simple query to use the COMPUTE_OPTIMIZED strategy. It then sets the parameter back to its default value of AUTO:

```sql
=> EXPLAIN SELECT employee_first_name, employee_age
   FROM employee_dimension ORDER BY employee_age DESC;

QUERY PLAN

--------------------------------------------------------------
QUERY PLAN DESCRIPTION:
The execution of this query involves non-participating nodes.
Crunch scaling strategy does not preserve data segmentation
--------------------------------------------------------------
...

=> ALTER SESSION SET ECSMode = 'COMPUTE_OPTIMIZED';
ALTER SESSION

=> EXPLAIN SELECT employee_first_name, employee_age
   FROM employee_dimension ORDER BY employee_age DESC;

QUERY PLAN

--------------------------------------------------------------
QUERY PLAN DESCRIPTION:
The execution of this query involves non-participating nodes.
Crunch scaling strategy preserves data segmentation
--------------------------------------------------------------
...

=> ALTER SESSION SET ECSMode = 'AUTO';
ALTER SESSION
```

Individual query hints override the session-level settings. This example sets the session default to use COMPUTE_OPTIMIZED, then restores the default behavior for a query by using the ECSMode hint with the value AUTO:

```sql
=> ALTER SESSION SET ECSMode = 'COMPUTE_OPTIMIZED';
ALTER SESSION
```
Note that setting the ECSMode hint to AUTO let the optimizer pick the I/O-optimized strategy (which does not preserve segmentation) instead of using the compute-optimized strategy set at the session level.

You can also set the ECS strategy at the database level using ALTER DATABASE. However, doing so overrides the Vertica optimizer's settings for all users in all subclusters that use ECS. Before setting the ECS strategy at the database level, verify that the majority of the queries run by all users of the ECS-enabled subclusters must have the optimizer's default behavior overridden. If not, then use the session or query-level settings to override the optimizer for just the queries that benefit from a specific strategy.

Local Caching of Storage Containers

Vertica's Execution Engine uses the StorageMerge operator to read data from storage containers in cases where it is important to read container data in its projection-specified sort order. This is particularly useful for operations that must preserve the sort order of the data that is read from multiple storage containers, before merging it into a single storage container. Common operations that enforce sort order include mergeout, and some queries with ORDER BY clauses—for example CREATE TABLE...AS query, where query includes an ORDER BY clause.

The Execution Engine typically allocates multiple threads to the StorageMerge operator. Each thread is assigned a single Scan operator to open and read container contents. If the number of containers to read is greater than the number of available threads, the Execution Engine is likely to assign individual Scan operators to multiple containers. In this case, Scan operators might need to switch among different containers and reopen them multiple times before all required data is fetched and assembled. Doing so is especially problematic when reading storage containers on remote filesystems such as S3. The extra overhead incurred by reopening and reading remote storage containers can significantly impact performance and usage costs.

You can configure your database so the Execution Engine caches on local disk the data of S3 storage containers that require multiple opens. The size of temp space allocated per query...
to the StorageMerge operator for caching is set by configuration parameter
StorageMergeMaxTempCacheMB. By default, this configuration parameter is set to -1
(unlimited). If caching requests exceed temp space limits or available disk space, Vertica
caches as much container data as it can, and then reads from S3.

Note:
The actual temp space that is allocated is the lesser of two settings:

- StorageMergeMaxTempCacheMB
- A user's TEMPSPACECAP setting
- The session tempspacecap setting

To turn off caching, set StorageMergeMaxTempCacheMB to 0.

Managing an Eon Mode Database in MC

Vertica Management Console (MC), a database health and activity monitoring tool,
provides in-browser wizards you can follow to deploy Vertica cluster instances and create
an Eon Mode database on them. You can also use MC to manage and monitor resources
that are specific to Eon Mode:

- Node and shard subscriptions
- Depot storage and activity

- Using Management Console
- Fast Tasks
Stopping and Starting an Eon Mode Cluster

Stopping Your Eon Mode Database and Cluster Using the MC

When running an Eon Mode database in the cloud, you usually want to stop the nodes running your database when you stop the database. Stopping your nodes avoids wasting money. The nodes aren't needed while the database is down.

**Note:**
Instead of shutting down your entire database, you can still save money by shutting down subclusters that aren't being used. This technique lets your database continue to run and load data, while reducing the hourly cost. See Starting and Stopping Subclusters for more information.

The easiest way to stop both your database and the nodes that run it is to use the MC:

1. From the MC home page, click View Your Infrastructure.
2. In row labeled Databases, click the database you want to stop.
3. In the popup, click Stop.
4. Click OK to confirm you want to stop the database.
5. Once your database has stopped, in the row labeled Clusters, click the entry for the cluster running the database you just stopped.
6. In the popup, click Manage.
7. In the ribbon at the top of the cluster view, click Stop Cluster.
8. In the dialog box, check the **I would like to stop all instances in the cluster** box and click Stop Cluster.

Manually Stopping the Database and Cluster

To manually stop your database and cluster, first stop your database using one of the following methods:
Use admintools to stop the database. See Stopping the Database.
Use the SHUTDOWN function to stop the database.

Once you have stopped the database, you can stop your nodes. If you are in a cloud environment, see your cloud provider's documentation for instruction on stopping nodes.

Starting Your Cluster and Database Using the MC

To start your database cluster and database:

1. From the MC home, click View Infrastructure.
2. In the Clusters row, click the cluster that runs the database you want to start.
3. In the pop-up, click Manage.
4. In the ribbon at the top of the cluster's page, click Start Cluster.
5. Check the I would like to start all instances in the cluster box and click Start Cluster.

Starting the cluster automatically starts the database.

Manually Starting Your Cluster and Database

To manually start your cluster and database:

1. Start the nodes in your database cluster. If you are running in the cloud, see your cloud provider's documentation on how to start instances.
2. Connect to one of the nodes in the cluster and use the admintools menus or command line to start your database. See Starting the Database for instructions.

Terminating an Eon Mode Database Cluster

When you terminate an Eon Mode database's cluster, you free its resources. In a cloud environment, terminating the cluster deletes the instances that ran the database's nodes. In an on-premises database, terminating the cluster usually means repurposing physical
hardware for other uses. See Stopping, Starting, Terminating, and Reviving Eon Mode Database Clusters for more information.

Terminating an Eon Mode database's cluster does not affect the data it stores. The data remains stored in the communal storage location. As long as you do not delete the communal storage location, you can revive the database onto a new Eon Mode cluster. See Reviving an Eon Mode Database Cluster for more information.

**Important:**
Vertica persists catalog data in communal storage, updating it every few minutes. Nonetheless, before shutting down your database you should make sure your metadata is up to date on communal storage. To do so, see Synchronizing Metadata.

**Terminating an Eon Mode Cluster Using Management Console**

Management Console provides the easiest way to terminate an Eon Mode cluster. You must follow a two-step process: first stop the database, then terminate the cluster:

1. If you have not yet synchronized the database's catalog, follow the steps in Synchronizing Metadata.
2. From the Management Console home page, click View Your Infrastructure.
3. In the row labeled Databases, click the database whose cluster you want to terminate.
4. In the popup, click Stop.
5. Click OK to confirm you want to stop the database.
6. After the database stops, in the row labeled Clusters, click the entry for the cluster you want to terminate.
7. In the popup, click Manage.
8. In the ribbon at the top of the cluster view, click Advanced and then select Terminate Cluster.
9. In the dialog box:
   - Check I understand that terminating a cluster will terminate all instances in the cluster
   - Click Terminate Cluster.
Manually Terminating an Eon Mode Cluster

To manually terminate your Eon Mode cluster:

1. If you have not yet synchronized the database's catalog, follow the steps in *Synchronizing Metadata*.
2. Stop the database using one of the following methods:
   - Use *admintools*.
   - Use the *SHUTDOWN* meta-function.
3. Terminate the database node instances. If you are in a cloud environment, see your cloud provider's documentation for instructions on terminating instances. For on-premises database clusters, you can repurpose the systems that were a part of the cluster.

See Also

Reviving an Eon Mode Database Cluster

If you have terminated your Eon Mode database's cluster, but have not deleted the database's communal storage, you can revive your database. Reviving the database restores it to its pre-shutdown state. The revival process requires creating a new database cluster and configuring it to use the database's communal storage location. See *Stopping, Starting, Terminating, and Reviving Eon Mode Database Clusters* for more information.

You can also use the revive process to restart a database when its nodes do not have persistent local storage. You may choose to configure your node's instances in your cloud-based Eon Mode cluster with non-persistent local storage to reduce cost. Cloud providers such as AWS and GCP charge less for instances when they are not required to retain data when you shut them down.

You revive a database using either the Management Console or admintools. The MC and admintools offer different revival methods:

- The MC always revives onto a newly-provision cluster that it creates itself. It cannot revive onto an existing cluster. Use the MC to revive a database when you do not
have a cluster already provisioned for your database.

- admintools only revives onto an existing database cluster. You can manually create a cluster to revive your database. See Installing Manually.

You can also revive a database whose hosts use instance storage where data is not persistently stored between shutdowns. In this case, admintools treats the existing database cluster as a new cluster, because the hosts do not contain the database's catalog data.

- Currently, only admintools lets you revive just the primary subclusters in a database cluster. This option is useful if you want to revive the minimum number of nodes necessary to start your database. See Reviving Only Primary Subclusters below.

The MC always revives the entire database cluster.

**Note:**

You cannot revive a database from a communal storage location that is currently running on another cluster. The revive process fails if it detects that there is a cluster already running the database. Having two instances of a database running on separate clusters using the same communal storage location leads to data corruption.

### Reviving Using the Management Console

You can use a wizard in the Management Console to provision a new cluster and revive a database onto it from a browser. For details, see:

- Reviving an Eon Mode Database on AWS in MC
- Reviving an Eon Mode Database on GCP in MC

### Revive Using admintools

You can use admintools to revive your Eon Mode database on an existing cluster.

**Cluster Requirements**

This existing cluster must:
- Have the same version (or later version) of Vertica installed on it. You can repurpose an existing Vertica cluster whose database you have shut down. Another option is to create a cluster from scratch by manually installing Vertica (see Installing Manually).
- Contain a number of hosts in the cluster that is equal to or greater than either:
  - The total number of nodes that the database cluster had when it shut down.
  - The total number of **primary nodes** the database cluster had when it shut down. When you supply a cluster that matches the number of primary nodes in the database, admintools revives just the primary nodes.

When reviving, you supply admintools with a list of the hosts in the cluster to revive the database onto. The number of hosts in this list must match either the total number of nodes or the number of primary nodes in the database when it shut down. If the number of nodes you supply does not match either of these values, admintools returns an error.

You do not need to use all of the hosts in the cluster to revive the database. You can revive a database onto a subset of the hosts in the cluster. But you must have at least enough hosts to revive all of the primary nodes.

For example, suppose you want to revive a database that had 16 nodes when it was shut down, with four of those nodes being primary nodes. In that case, you can revive:

- Just the primary nodes onto a cluster that contains at least four nodes.
- All of the 16 nodes onto a cluster that contains at least 16 nodes.

You may choose to revive your database onto a cluster with more nodes that is necessary in cases where you want to quickly add new nodes. You may also want to revive just the primary nodes in a database onto a larger cluster. In this case, you can use the extra nodes in the cluster to start one or more secondary subclusters.

**Required Database Information**

To revive the database, you must know:

- The name of the database to revive (note that the database name is case sensitive)
- The version of Vertica that created the database, so you can use the same or later version
- The total number of all nodes or the number of primary nodes in the database when it shut down
- The URL and credentials for the database's communal storage location
- The user name and password of the database administrator
- The IP addresses of all hosts in the cluster you want to revive onto

If you do not know what version of Vertica created the database or are unsure how many nodes it had, see Getting Database Details From a Communal Storage Location below.

**Required Database Settings**
Before starting the revive process, verify the following conditions are true for your Eon Mode environment:

<table>
<thead>
<tr>
<th>Eon environment</th>
<th>Revived database requirements</th>
</tr>
</thead>
</table>
| All             | • The uppermost directories of the catalog, data, and depot directories on all nodes exist and are owned by the database dbadmin  
|                 | • The cluster has no other database running on it |

| Azure           | If your database does not use Azure managed identities to authenticate with the communal storage blob container, the following values must be set:  
|                 | • AzureStorageCredentials  
|                 | • AzureStorageEndpointConfig |

See [Azure Blob Storage Object Store](#) for details.

| S3: AWS, on-premises | The following configuration parameters are set:  
|----------------------|------------------------------------------|
|                      | • [AWSEndpoint](#)  
|                      | • [AWSRegion](#) (AWS only)  
|                      | • [AWSAuth] / IAM role  
|                      | • [AWSEnableHttps](#) |

**Important:**
If migrating to an on-premises database, set configuration parameter `AWSEnableHttps` to be compatible with the database TLS setup: `AWSEnableHttps=1` if using TLS, otherwise 0. If settings are incompatible, the migration returns with an error.

| GCP               | The following configuration parameters are set:  
|-------------------|------------------------------------------|
|                   | • [GCSAuth](#)  
|                   | • [GCSEnableHttps](#) (if not using the default value)  
|                   | • [GCSEndpoint](#) (if not using the default value) |

Getting Database Details From a Communal Storage Location

To revive a database, you must know:

- The version of Vertica that created it (so you can use the same or a later version)
- The total number of nodes (when reviving both primary and secondary nodes) or primary nodes (when just reviving the primary nodes) in the database's cluster when it shut down.

If you do not know these details, you can determine them based on the contents of the communal storage location.

If you are not sure which version of Vertica created the database stored in a communal storage location, examine the `cluster_config.json` file. This file is stored in the communal storage location in the folder named `metadata/databasename`. For example, suppose you have a database named `mydb` stored in the communal storage location `s3://mybucket/mydb`. Then you can download and examine the file `s3://mybucket/mydb/metadata/mydb/cluster_config.json`.

In the `cluster_config.json`, the Vertica version that created the database is stored with the JSON key named `DatabaseVersion` near the top of the file:

```json
{
    "CatalogTruncationVersion": 804,
    "ClusterLeaseExpiration": "2020-12-21 21:52:31.005936",
    "Database": {
        "branch": "",
        "name": "verticadb"
    },
    "DatabaseVersion": "v10.1.0",
    "GlobalSettings": {
        "TupleMoverServices": -33,
        "appliedUpgrades": [

    }
```

In this example, you can revive the storage location using Vertica version 10.1.0 or later.

If you do not know how many nodes or primary nodes the cluster had when it shut down, use the `--display-only` option of the `admintools revive_db` tool. Adding this option prevents `admintools` from reviving the database. Instead, it validates the files in the communal storage and reports details about the nodes that made up the database cluster. Parts of this report show the total number of nodes in the cluster and the number of primary nodes:

```
$ admintools -t revive_db --display-only --communal-storage-location \
  s3://mybucket/verticadb -d verticadb
Attempting to retrieve file: [s3://mybucket/verticadb/metadata/verticadb/cluster_config.json]

Validated 6-node database verticadb defined at communal storage s3://mybucket/verticadb.

Expected layout of database after reviving from communal storage: s3://mybucket/verticadb

== Communal location details: ==
```
"communal_storage_url": "s3://mybucket/verticadb",
"num_shards": "3",
"depot_path": "/vertica/data",
...
]
Number of primary nodes: 3

You can use `grep` to find just the relevant lines in the report:

```
$ admintools -t revive_db --display-only --communal-storage-location \
  s3://mybucket/verticadb -d verticadb | grep 'Validated\|primary nodes'
Validated 6-node database verticadb defined at communal storage s3://mybucket/verticadb.
Number of primary nodes: 3
```

Creating a Parameter File

For Eon Mode deployments that are not on AWS, you must create a configuration file to pass the parameters listed in the table in the previous section to admintools. Traditionally this file is named `auth_params.conf` although you can choose any file name you want.

For on-premises Eon Mode databases, this parameter file is the same one you used when initially installing the database. See the following links for instructions on creating a parameter file for the communal storage solution you are using for your database:

- [Pure Storage FlashBlade](#)
- [HDFS](#)
- [MinIO](#)

For databases running on Microsoft Azure, the parameter file is only necessary if your database does not use managed identities. This file is the same format that you use to manually install an Eon Mode database. See [Manually Creating an Eon Mode Database on Azure](#) for more information.

To revive an Eon Mode database on GCP manually, create a configuration file to hold the GCSAuth parameter and optionally, the GCSEnableHttp parameter.

You must supply the GCSAuth parameter to enable Vertica to read from the communal storage location stored in GCS. The value for this parameter is the HMAC access key and secret:

```
GCSAuth = HMAC_access_key:HMAC_secret_key
```

See [Creating an HMAC Key](#) for more information about HMAC keys.

If your Eon Mode database does not use encryption when accessing communal storage on GCS, then disable HTTPS access by adding the following line to `auth_params.conf`: 
Running the revive_db Tool

Use the admintools revive_db tool to revive the database:

1. Use SSH to access a cluster host as an administrator.
2. Depending on your environment, run one of the following admintools command lines:
   - AWS:
     ```
     $ admintools -t revive_db \
     --communal-storage-location=s3://communal_store_path \ 
     -s host1,... -d database_name
     ```
   - For on premises and other environments, run the command:
     ```
     $ admintools -t revive_db -x auth_params.conf \ 
     --communal-storage-location=storage-schema://communal_store_path \ 
     -s host1_ip,... -d database_name
     ```

This example revives a six-node on-premises database:

```
$ admintools -t revive_db -x auth_params.conf \ 
--communal-storage-location=s3://mybucket/mydir \ 
172.16.116.31,172.16.116.32 -d VMart
```

The following example demonstrates reviving a three-node database hosted on GCP:

```
$ admintools -t revive_db -x auth_params.conf \ 
--communal-storage-location gs://mybucket/verticadb \ 
-s 10.142.0.35,10.142.0.38,10.142.0.39 -d VerticaDB
```

Attempting to retrieve file:
```
[gs://mybucket/verticadb/metadata/VerticaDB/cluster_config.json]
```

Validated 3-node database VerticaDB defined at communal storage
```
gs://mybucket/verticadb .
```

Cluster lease has expired.

Preparation succeeded all hosts Calculated necessary addresses for all nodes.

Starting to bootstrap nodes. Please wait, databases with a large
catalog may take a while to initialize.
```
>>Calling bootstrap on node v_verticadb_node0002 (10.142.0.38)
>>Calling bootstrap on node v_verticadb_node0003 (10.142.0.39)
```

Load Remote Catalog succeeded on all hosts

Database revived successfully.

Reviving Only Primary Subclusters

You can revive just the primary subclusters in an Eon Mode database. Make the list of hosts
you pass to the admintools revive_db tool's --hosts (or -s) argument match the number
of primary nodes that were in the database when it shut down. For example, if you have a
six-node Eon Mode database that had three primary nodes, you can revive just the primary nodes by supplying three hosts in the --hosts argument:

```bash
$ admintools -t revive_db --communal-storage-location=s3://verticadb -d verticadb \   -x auth_params.conf --hosts node01,node02,node03
```

Attempting to retrieve file: [s3://verticadb/metadata/verticadb/cluster_config.json]
Consider reviving to only primary nodes: communal storage indicates 6 nodes, while 3 nodes were specified

Validated 3-node database verticadb defined at communal storage s3://verticadb.
Cluster lease has expired.
Preparation succeeded all hosts

Calculated necessary addresses for all nodes.
Starting to bootstrap nodes. Please wait, databases with a large catalog may take a while to initialize.

>>Calling bootstrap on node v_verticadb_node0002 (192.168.56.103)
>>Calling bootstrap on node v_verticadb_node0003 (192.168.56.104)

Load Remote Catalog succeeded on all hosts

Database revived successfully.

In a database where you have revived only the primary nodes, the secondary nodes are down. Their IP address is set to 0.0.0.0 so they are not part of the database. For example, querying the `NODES` system table in the database revived in the previous example shows the secondary nodes are all down:

```
=> SELECT node_name,node_state,node_address,subcluster_name FROM NODES;
```

<table>
<thead>
<tr>
<th>node_name</th>
<th>node_state</th>
<th>node_address</th>
<th>subcluster_name</th>
</tr>
</thead>
<tbody>
<tr>
<td>v_verticadb_node0001</td>
<td>UP</td>
<td>192.168.56.102</td>
<td>default_subcluster</td>
</tr>
<tr>
<td>v_verticadb_node0002</td>
<td>UP</td>
<td>192.168.56.103</td>
<td>default_subcluster</td>
</tr>
<tr>
<td>v_verticadb_node0003</td>
<td>UP</td>
<td>192.168.56.104</td>
<td>default_subcluster</td>
</tr>
<tr>
<td>v_verticadb_node0004</td>
<td>DOWN</td>
<td>0.0.0.0</td>
<td>analytics</td>
</tr>
<tr>
<td>v_verticadb_node0005</td>
<td>DOWN</td>
<td>0.0.0.0</td>
<td>analytics</td>
</tr>
<tr>
<td>v_verticadb_node0006</td>
<td>DOWN</td>
<td>0.0.0.0</td>
<td>analytics</td>
</tr>
</tbody>
</table>

**Note:**
Secondary nodes that have not been revived may cause error messages if your database has the large cluster feature enabled. (See Large Cluster for more information about the large cluster feature.)

For example, adding a node to a secondary subcluster can fail if the new node would be assigned a control node that has not been revived. In this case, Vertica reports that adding the node failed because the control node has an invalid IP address.

If you encounter errors involving control nodes with invalid IP addresses, consider reviving the unrevived secondary subcluster, as explained below.
Because Vertica considers these unrevived nodes to be down, it may not allow you to remove them or remove their subcluster while they are in their unrevived state. The best way to remove the nodes or the secondary subcluster is to revive them first.

Reviving Unrevived Secondary Subclusters

If you revived just the primary subclusters in your database, you can later choose to revive some or all of the secondary subclusters. Your cluster must have hosts that are not nodes in the database that Vertica can use to revive the unrevived nodes. If your cluster does not have enough of these non-node hosts, you can add more hosts. See Adding Hosts to a Cluster.

You revive a secondary subcluster by using the admintools' restart_subcluster tool. You supply it with the list of hosts in the --hosts argument where the nodes will be revived. The number of hosts in this list must match the number of nodes in the subcluster. You must revive all nodes in the subcluster at the same time. If you pass restart_subcluster a list with fewer or more hosts than the number of nodes defined in the subcluster, it returns an error.

The follow example demonstrates reviving the secondary subcluster named analytics shown in the previous examples.

```bash
$ admintools -t restart_subcluster -d verticadb --hosts node04,node05,node06 \
     -p 'password' -c analytics
Updating hostnames of nodes in subcluster analytics.
     Replicating configuration to all nodes
     Generating new configuration information and reloading spread
Hostnames of nodes in subcluster analytics updated successfully.

Synchronizing Metadata

If you revive a database, it uses the catalog maintained in communal storage. The catalog contains your database's metadata.

When an Eon Mode database is running, Vertica automatically syncs the catalog every five minutes by default. It is usually not necessary to intervene in the synchronization process. However, before shutting down it is a good idea to make sure that the persistent copy of the catalog contains all recent changes. You can use the following processes to make sure the database's catalog is up to date when you revive.

- Check when the catalog was [last synchronized].
- Manually sync the catalog.
- Customize the [catalog sync interval].

Check When the Catalog Was Last Synchronized

While the database is running:

The following system tables are only available when the database is up.

Use system table `CATALOG_SYNC_STATE` to see how recently each node synced its catalog to communal storage. Checking this requires the database to still be running.

```sql
=> SELECT * FROM catalog_sync_state;
```

The system table `CATALOG_TRUNCATION_STATUS` also indicates how up to date the catalog is on communal storage. It is completely up to date when the current catalog version is the same as the catalog truncation version. Checking this requires the database to still be running.

```sql
=> SELECT * FROM catalog_truncation_status;
```

When the database is not running:

If your database is not currently running, a JSON file containing additional cluster information is located in communal storage. This file indicates the catalog truncation version and timestamp of the last sync to communal storage:

```
/metadata/database-name/cluster_config.json
```
Manually Sync the Catalog

The sync_catalog function immediately synchronizes the catalog on all nodes or a specific node.

=> SELECT sync_catalog();

Customize Catalog Sync Interval

Use the CatalogSyncInterval parameter to set a time interval for which the metadata is pushed to communal storage:

=> ALTER DATABASE DEFAULT SET CatalogSyncInterval = 10 minutes
Using Vertica on the Cloud

Welcome to the Vertica on the Cloud guide. This section explains how you can create Vertica clusters running on different cloud platforms. It does not cover working with existing data stored in the cloud. For information about loading data, see Getting Data into Vertica.

This document assumes that you are familiar with the cloud environment on which you will create your Vertica cluster.

Vertica on Amazon Web Services

Welcome to the Vertica on Amazon Web Services (AWS) guide. This section explains how to create and manage Vertica clusters on AWS.

When you launch a cluster on AWS resources and are ready to create your database, consider whether to run it in Eon Mode or Enterprise Mode. The differences in these two modes lay in their architecture, deployment, and scalability:
- **Enterprise Mode** stores data locally on the nodes in the database.

- **Eon Mode** stores its data in an S3 bucket.
Eon Mode separates the computational processes from the communal storage layer of your database. This separation lets you elastically vary the number of nodes in your database cluster to adjust to varying workloads.

Vertica provides CloudFormation Templates (CFTs) through the AWS Marketplace. These CFTs also deploy the Management Console.

**Note:**
For detailed information about which CFT to use, see [Creating a Database in Eon Mode](#).

See [Vertica Architecture: Eon Versus Enterprise Mode](#) for more about the differences between the two database modes.

### In This Section

#### Overview of Vertica on Amazon Web Services (AWS)

Vertica clusters on AWS can operate on EC2 instances automatically provisioned using a CloudFormation Template, or manually deployed from Amazon Machine Images (AMIs).

You can create a database in either Eon Mode or Enterprise Mode in a Vertica cluster in AWS.

For more information about Amazon cluster instances and their limitations, see the [Amazon documentation](#).

### In This Section
CloudFormation Templates

Vertica provides Cloud Formation Templates (CFTs) through the AWS Marketplace. After you provide a few parameters to the template, create a stack to automatically provision the AWS resources for your Vertica system.

After creating the stack, in the Management Console (MC) you can create and manage your clusters and databases. See Creating an Eon Mode Database in AWS with MC or Creating an Enterprise Mode Database in AWS with MC.

Vertica Offerings on AWS

Using the license models and CFTs described in CloudFormation Template (CFT) Overview, you can install the following Vertica products:

- Vertica BYOL, Amazon Linux 2.0
- Vertica by the Hour, Amazon Linux 2.0
- Vertica BYOL, Red Hat
- Vertica by the Hour, Red Hat

See Launch MC and AWS Resources with a CloudFormation Template for information on installing these products.

Vertica AMI Operating Systems for AWS

Vertica provides Vertica and Management Console AMIs in the following operating systems.

- Red Hat 7.4 and later
- Amazon Linux 2.0 and later

You can use the AMI to deploy MC hosts or cluster hosts.

**Important:**
When using Amazon Linux 2.0, you must compile C++ UDX libraries with a gcc version 4.8. For more information see Setting Up a Development Environment.
Supported AWS Instance Types

Vertica supports a range of Amazon Web Services instance types, each optimized for different purposes. Choose the instance type that best matches your requirements. The two tables below list the AWS instance types that Vertica supports for Vertica cluster hosts, and for use in MC. For more information, see the Amazon Web Services documentation on instance types and volumes.

**Instance Types for Vertica Cluster Hosts**

Each Amazon EC2 Instance type natively provides one of the following storage options:

- Elastic Block Store (EBS) provides durable storage: Data files stored on instance persist after instance is stopped.
- Instance Store provides temporary storage: Data files stored on instance are lost when instance is stopped.

**Important:**
Instance types that support EBS volumes support encrypting.

<table>
<thead>
<tr>
<th>Optimized Storage</th>
<th>Instance Types Using Only EBS Volumes (Durable)</th>
<th>Instance Types Using Instance Store Volumes (Temporary)</th>
</tr>
</thead>
<tbody>
<tr>
<td>General purpose</td>
<td>m4.4xlarge</td>
<td>m5d.4xlarge</td>
</tr>
<tr>
<td></td>
<td>m4.10xlarge</td>
<td>m5d.8xlarge</td>
</tr>
<tr>
<td></td>
<td>m5.4xlarge</td>
<td>m5d.12xlarge</td>
</tr>
<tr>
<td></td>
<td>m5.8xlarge</td>
<td></td>
</tr>
<tr>
<td></td>
<td>m5.12xlarge</td>
<td></td>
</tr>
</tbody>
</table>
## Instance Types Available for MC Hosts

<table>
<thead>
<tr>
<th>Optimisation</th>
<th>Type</th>
<th>Supports EBS Storage (Durable)</th>
<th>Supports Ephemeral Storage (Temporary)</th>

</thead>
<tbody>
<tr>
<td>Computing</td>
<td>c4.larg</td>
<td>Yes</td>
<td>No</td>
</tr>
</tbody>
</table>
Choosing AWS Eon Mode Instance Types

This topic lists the recommended instance types to use in an Eon Mode database running in AWS.

Choose instance types that support ephemeral instance storage or EBS volumes for your depot, depending on cost and availability. It is not mandatory to have an EBS-backed depot, because in Eon Mode, a copy of the data is safely stored in communal storage. Vertica recommends either r4 or i3 instances for production clusters.

The following table provides information to help you make a decision on how to pick instances with ephemeral instance storage or EBS only storage. Check with AWS for the latest cost per hour.

<table>
<thead>
<tr>
<th>Storage Type</th>
<th>Instance Type</th>
<th>Pros/Cons</th>
</tr>
</thead>
<tbody>
<tr>
<td>Instance storage</td>
<td>i3.8xlarge</td>
<td>Instance storage offers better performance than EBS attached storage through multiple EBS volumes. Instance storage can be striped (RAIDed) together to increase throughput and load balance I/O. Data stored in instance-store volumes is not persistent through instance stops, terminations, or hardware failures.</td>
</tr>
</tbody>
</table>

More Information

For more information about Amazon cluster instances and their limitations, see Manage Clusters in the Amazon Web Services documentation.
<table>
<thead>
<tr>
<th>Storage Type</th>
<th>Instance Type</th>
<th>Pros/Cons</th>
</tr>
</thead>
<tbody>
<tr>
<td>EBS-only storage</td>
<td>r4.8xlarge</td>
<td>Newer instance types from AWS have only the EBS option. In most AWS regions, it's easier to provision a large number of instances. You can terminate an instance but leave the EBS volume around for faster revive. Perserving the EBS will preserve the depot. While some of the cached files might have become stale, they will be ignored and evicted. Much of the cached data will not be stale. It will save time when the node revives and warms its depot. Take advantage of full-volume encryption.</td>
</tr>
<tr>
<td></td>
<td>with 600 GB</td>
<td></td>
</tr>
<tr>
<td></td>
<td>EBS volume</td>
<td></td>
</tr>
<tr>
<td></td>
<td>attached</td>
<td></td>
</tr>
</tbody>
</table>

**Important:**
If you select instances that use instance store, if you then terminate those instances there is the potential for data loss. For Eon mode, MC displays an alert to inform the user of the potential data loss when terminating instances that support instance store.

**Vertica AMI Sleep C-States**

By default, the following instances have their processor C-states set to a value of 1 in the Vertica AMI:

- c4.8xlarge
- d2.8xlarge
- m4.10xlarge

This measure is meant to improve performance by limiting the sleep states that an instance running Vertica uses.

For more information about sleep states, visit the [AWS Documentation](https://aws.amazon.com/documentation/)

**AWS Features Supported by Vertica**

Vertica supports the following AWS features:
Enhanced Networking: Vertica recommends that you use the AWS enhanced networking for optimal performance. For more information, see Enabling Enhanced Networking on Linux Instances in a VPC in the AWS documentation.

Command Line Interface: Use the Amazon command-line Interface (CLI) with your Vertica AMIs. For more information, see What Is the AWS Command Line Interface?

Elastic Load Balancing: Use elastic load balancing (ELB) for queries up to one hour. When enabling ELB, configure the timer to 3600 seconds. For more information see Elastic Load Balancing in the AWS documentation.

AWS Authentication

Amazon defines two ways to control access to AWS resources such as S3: IAM roles and the combination of id, secrets, and (optionally) session tokens. For long-term access to non-communal storage buckets, you should use IAM roles for access control centralization. You do not need to change your application's configuration if you want to change its access settings. You just alter the IAM role applied to your EC2 instances.

However, for one-time tasks like backing up and restoring the database or loading data to and from non-communal storage buckets, you should use an AWS access key.

Vertica uses both of these authentication methods to support different features and use cases:

- An Eon Mode database's access to S3 for communal and catalog storage must always use IAM role authentication. IAM roles are the default access control method for AWS resources. Vertica uses this method if you do not configure the legacy access control session parameters.
- Individual users can read data from S3 storage locations other than the ones Vertica uses for communal storage. For example, users can use COPY to load data into Vertica from an S3 bucket or query an external table stored on S3. If the IAM role assigned to the Vertica nodes does not have access to this external S3 data, the user must set an id, secret, and optionally an access token in session variables to authorize access to it. These session variables override the IAM role set on the server. See S3 Parameters for a list of these session parameters.
- Individual users can export data to S3 using the Vertica Library for AWS. This library cannot use IAM authorization. Users who want to export data to S3 using this library must set id, secret, and optionally access token values in session variables. See Configure the Vertica Library for Amazon Web Services for details.
**Important:**

If the database is running in Eon Mode, using id and secret authentication is more complex. In addition to having access to the external S3 data, any id that a user sets must be authorized to read from and write to the S3 storage locations that Vertica uses to store communal and catalog data. The queries that the user executes uses this id for all storage requests, not just those for accessing external S3 data. If the id does not have access to the catalog and communal storage, the user cannot execute queries.

**Configuring an IAM Role**

To configure an IAM role to grant Vertica to access AWS resources you must:

1. Create an IAM role to allow EC2 instances to access the specific resources.
2. Grant that role permission to access your resources.
3. Attach this IAM role to each EC2 instance in the Vertica cluster.

To see an example of IAM roles for a Vertica cluster, look at the roles defined in one of the Cloud Formation Templates provided by Vertica. You can download these templates from any of the Vertica entries in the Amazon Marketplace. Under each entry's Usage Information section, click the View CloudFormation Template link, then click Download CloudFormation Template.

For more information about IAM roles, see IAM Roles for Amazon EC2 in the AWS documentation.

**Installing Vertica with CloudFormation Templates**

Vertica provides CloudFormation Templates (CFTs) on the AWS Marketplace that allow you to get a cluster up and running quickly. Using the template allows you to automatically provision your AWS resources and launch a Vertica cluster and Management Console, with minimal configuration required.

If you prefer to deploy a VPC, instances, and related resources manually, see Install Vertica with Manually Deployed AWS Resources.
CloudFormation Template (CFT) Overview

With Vertica on AWS, use CloudFormation Templates (CFTs) to easily manage provisioning the AWS resources with a running Vertica system.

To access Vertica CFTs, go to the AWS Marketplace. Licensing models for CFTs are:

- **Bring Your Own License (BYOL):** By default, free CE license is installed with 3 nodes and 1 TB. To extend nodes or size, you can purchase the Vertica BYOL license. Outside of the BYOL license on CFTs, you can also access the Community Edition without a license file:
  - If you are using Management Console, simply leave the license field blank.
  - If you are using a command line (see Installing Vertica with the Installation Script), specify CE in the --license parameter during installation.
- **By the Hour:** A pay-as-you-go model where you pay for only the number of hours you use for each node. One advantage of using the Paid Listing is that all charges appear on your Amazon AWS bill. This offers an alternative to purchasing a full Vertica license. This eliminates the need to compute potential storage needs in advance.

Available Vertica CFTs are:

- **Management Console with 3 Vertica nodes:** The easiest way to deploy Vertica. This CFT deploys an Eon Mode database by default. However, this environment can also be used to create an Enterprise Mode database. For more information, see Creating a Database.

- **Deploy Management Console into new VPC:** This CFT deploys all required AWS resources and installs the Vertica Management Console (MC). After stack creation completes, log in to the MC to provision a Vertica database cluster.

- **Deploy Management Console into existing VPC:** This CFT deploys the Vertica Management Console (MC) in an already-existing VPC and subnet. After stack creation completes, the MC is available. Log in to MC to provision either a Vertica database cluster or an Eon Mode database cluster.

For this CFT, you must first set up the VPC, subnet, and related network resources. For more information about the correct configuration of these resources for Vertica, see the following topics in the AWS documentation:

- Creating a Virtual Private Cloud
- Configuring the Network
For More Information

For supported operating systems for these CFTs, see Vertica AMI Operating Systems for AWS.

For Vertica products available on AWS, see Vertica Offerings on AWS.

Prerequisites for Using CFTs

Before you can install Vertica on AWS using CloudFormation Templates (CFTs), verify that you have:

- AWS account with permissions to create a VPC, subnet, security group, EC2 instances, and IAM roles (For more information about AWS accounts, see the AWS documentation)
- Amazon key pair for SSH access to an EC2 instance. (See the AWS documentation for key pairs.)

Launch MC and AWS Resources with a CloudFormation Template

Launch Management Console (MC) and its associated AWS resources using CloudFormation templates (CFTs) that are available through the AWS Marketplace. For a list of available CFTs, see CloudFormation Template (CFT) Overview.

Starting in the AWS Marketplace, launch the provisioning instance from which you can install Vertica:

1. Log in to the AWS Marketplace with an AWS account (see the Prerequisites section above).
2. Search for "Vertica" in the AWS Marketplace.
3. Select a Vertica CFT. Each CFT leads you to a product overview page, with pricing estimates. (Also see CloudFormation Template (CFT) Overview for an overview of available templates and products).
4. Click Continue to Subscribe.
5. On the next page, select your launch settings based on your requirements for deployment.
6. If you have not agreed to Vertica EULA terms on the AWS Marketplace before, click Accept Software Terms to subscribe.

7. Click Launch with CloudFormation Console. The CloudFormation Console opens.

8. The CloudFormation Console automatically supplies the URL in the Specify an Amazon S3 template URL field. Click Next.

9. Follow the CloudFormation workflow and enter the parameters (collectively called a stack).

   **Important:** Take note of the username and password you set for Management Console during this step. You cannot recover or reset these credentials after you create the stack.

10. After confirming the details you have provided for your new stack, click Create. The AWS console brings you to the Stacks page, where you can view the progress of the creation process. The process takes several minutes.

11. The Outputs tab displays information about accessing your environment after the process completes.

Next, access the Management Console (MC) to deploy your cluster instances and create a database, as described in Access Management Console.

**Access Management Console**

You use MC to deploy Vertica cluster instances and create a database. You can also use MC to manage and monitor your databases. You will use Management Console to provision a Vertica cluster and database on the AWS resources you just launched.

1. On the AWS CloudFormation Stacks page, select your new stack and view the Outputs tab. This tab provides information about accessing your environment, as well as documentation and licensing resources.

2. Click the Access Management Console URL. This link takes you to the MC login page.

   ![Table showing ManagementConsole, EULA, Documentation, and MCSSH keys and values]

3. To log in, enter the MC username and password that you created using the CloudFormation Console.
After login, MC displays the home page, with options to provision a new cluster or database or import existing ones. If you chose a CFT that also creates a database, your new database is also displayed on the home page.

This page also provides a Resources section with links to online training, blogs, community, and help resources.

You have successfully launched Management Console on AWS resources.

If you have not yet provisioned a Vertica cluster and database, complete the steps in one of the following:

- Creating an Eon Mode Database in AWS with MC
- Creating an Enterprise Mode Database in AWS with MC

Creating an Eon Mode Database in AWS with MC

After you deploy Management Console on Amazon Web Services (AWS) with a CloudFormation Template, you can provision a cluster and database. Vertica clusters are provisioned in the same Virtual Private Cloud (VPC) as the Verica Management Console. You can create an initial cluster of up to 60 hosts.

**Note:**

See Creating a Cluster Using MC in the Installation Guide if you installed Management Console with an RPM, or to provision an on-premises database and cluster.

**Prerequisites**

Before you begin, complete or obtain the following:

- Launch MC and AWS Resources with a CloudFormation Template
- AWS credentials and environment details
- S3 communal storage URL
- Vertica credentials
- **Vertica Management Console Credentials**

Choose one of the following setup options:

- **Quick Setup:** Select your cluster size based on your estimated compressed working data size. The Management Console calculates the volume size per node,
reserves part of the disk for catalog and temp storage.
- **Advanced Setup**: This option provides more granular control over configuration settings related to subnet, Node IP, and depot, temp, and catalog volume sizes.

**Quick Setup**

1. Log in to the Vertica Management Console.
2. On the Management Console home page under **Provision**, click **Create new database**.
3. On **Database Storage Mode**, click **Eon Mode**.
4. Click **Next**. On **Vertica License**, select one of the following license mode options:
   - **Community Edition**: A free Vertica license to preview Vertica functionality. This license provides limited features. If you use a Community Edition license for your deployment, you can upgrade the license later to expand your cluster load. See **Managing Licenses** for more information.
   - **Premium Edition**: Use your Vertica license. After you select this option, click **Browse** to locate and upload your Vertica license key file, or manually enter it in the field.
5. Click **Next**. On **Setup Path**, select **Quick Setup**.
6. Click **Next**. In the **Vertica Settings** section, select the desired Vertica database version. You can select from the latest hotfix of recent Vertica releases. For each database version, you can also select the operating system. See **Vertica AMI Operating Systems for AWS** for available OS and major version options.
7. In the **AWS EC2 Instance Type** section, select from one of the following instance types:
   - Ephemeral Depot
   - EBS Depot
8. In the **Cluster Size** section, select the number of instances to deploy with your cluster based on your working data size. For details about working data size, see **Configuring Your Vertica Cluster for Eon Mode**.

   If you are using a Community Edition license, your cluster size selections are limited to **Small**, **Medium**, and **Large**.

9. In the **Database Parameters** section, supply the following information:
   - **Database Name**: The name for your new database. See **Creating a Database Name and Password** for database name requirements.
   - **Administrator Username**: The name of the database superuser.
   - **Administrator Password**: The password for the database administrator user account. For details, see **Password Guidelines**.
- **Confirm Password**: Reenter the Administrator Password.
- **Load Sample Data**: Optional. Click the slider to the right to preload your database with example clickstream data. This option is useful if you are testing features and want some preloaded data in the database to query.

10. In the **AWS Environment** section, supply the following information:

- **AWS Key Pair**: Your Amazon key pair for SSH access to EC2 instances.
- **IP Access**: The cluster IP address range for SSH and client access to cluster hosts.
- **S3 Communal Storage URL**: The path to a new subfolder in your existing AWS S3 bucket for Communal Storage of your Eon Mode database. Vertica creates the subfolder in the existing S3 bucket.

  Use an existing S3 bucket in the same region as your Management Console instance.

- **Tag EC2 Instances**: Optional. Assign distinct, searchable metadata tags to the instances in this cluster. Many organizations use labels to organize, track responsibility, and assign costs for instances. To add a tag, click the slider to the right to display the Tag Name and Tag Value fields. Click Add to create the tag. Added tags are displayed below the fields.

11. Click **Create Database Cluster** to create a Eon Mode cluster on AWS.

**Advanced Setup**

1. Log in to the Vertica Management Console.
2. On the Management Console home page under **Provision**, click **Create new database**.
3. On **Database Storage Mode**, click **Eon Mode**.
4. Click **Next**. On **Vertica License**, select one of the following license mode options:
   - **Community Edition**: A free Vertica license to preview Vertica functionality. This license provides limited features. If you use a Community Edition license for your deployment, you can upgrade the license later to expand your cluster load. See **Managing Licenses** for more information.
   - **Premium Edition**: Use your Vertica license. After you select this option, click **Browse** to locate and upload your Vertica license key file, or manually enter it in the field.
5. Click Next. On Setup Path, select Advanced Setup.
6. Click Next. On AWS Environment, supply the following information:
   - **AWS Key Pair**: Your Amazon key pair for SSH access to EC2 instances.
   - **AWS Subnet**: The subnet for your cluster. By default, Vertica creates your cluster in the same subnet as your MC instance.

   | **i** | Use security groups and network access control lists (ACLs) to secure your subnet. For details, see the Amazon documentation. |

   - **IP Access**: The cluster IP address range for SSH and client access to cluster hosts.
   - **Node IP Setting**: Select Private, Public, or Elastic. For details about each option, see the Amazon documentation.
   - **S3 Communal Storage URL**: The path to a new subfolder in your existing AWS S3 bucket for Communal Storage of your Eon Mode database. Vertica creates the subfolder in the existing S3 bucket.

   | **鹈** | Use an existing S3 bucket in the same region as your Management Console instance. |

   - **Tag EC2 Instances**: Optional. Assign distinct, searchable metadata tags to the instances in this cluster. Many organizations use labels to organize, track responsibility, and assign costs for instances.
     
     To add a tag, click the slider to the right to display the Tag Name and Tag Value fields. Click Add to create the tag. Added tags are displayed below the fields.

7. Click Next. Database Parameters accepts information about your Vertica license. Supply the following information:
   - **Database Name**: The name for your new database. See Creating a Database Name and Password for database name requirements.
   - **Administrator Username**: The name of the database superuser.
   - **Administrator Password**: The password for the database administrator user account. For details, see Password Guidelines.
   - **Confirm Password**: Reenter the Administrator Password.
   - **Vertica Version**: Select the desired Vertica database version. You can select from the latest hotfix of recent Vertica releases. For each database version, you can also select the operating system. See Vertica AMI Operating Systems for AWS for available OS and major version options.
   - **Load Sample Data**: Optional. Click the slider to the right to preload your database with example clickstream data. This option is useful if you are testing features and want some preloaded data in the database to query.
8. Click Next. On **AWS Configuration**, supply the following information:
   - **Number of Nodes**: The initial number of nodes for your database.
   - **Number of Vertica Database Shards**: Sets the number of shards in your database. Vertica suggests a number of shards automatically, based on your node count. After you set this value, you cannot change it later. The shard count must be greater than or equal to the maximum subcluster count. Be sure to allow for node growth. See Configuring Your Vertica Cluster for Eon Mode for recommendations.
   - **EC2 Instance Type**: The instance types used for the nodes. See Choosing AWS Eon Mode Instance Types for a list of recommended AWS instances. For details about each instance type, see the Amazon EC2 Instance Types documentation.
   - **Local Storage**: Customize your cluster according to your storage needs. For guidance, see Eon Mode Volume Configuration Defaults for AWS for the Vertica default settings for each supported instance.

9. Click Next. On **Review**, confirm your selections. Click Edit to return to a previous section and make changes.

10. When you are satisfied with your selections, click the **I accept the terms and conditions** checkbox.

11. Click **Create Cluster** to create a Eon Mode cluster on AWS.

### After Creating the Database

After you create the database, click **Get Started** to view the Fast Tasks page. To view your database, select **Manage and View Your Vertica Database** to go to the database Overview.

You can also view your database from the **Recent Databases** section of the MC home page.

For additional information about managing your cluster, instances, and database using Management Console, see Managing Database Clusters.

### Creating an Enterprise Mode Database in AWS with MC

After you deploy Management Console on Amazon Web Services (AWS) with a CloudFormation Template, you can provision a cluster and database. Vertica clusters are provisioned in the same Virtual Private Cloud (VPC) as the Vertica Management Console. You can create an initial cluster of up to 60 hosts.
Prerequisites

Before you begin, complete or obtain the following:

- Launch MC and AWS Resources with a CloudFormation Template
- AWS credentials and environment details
- S3 communal storage URL
- Vertica credentials
- Vertica Management Console Credentials

Provisioning a Cluster and Database

1. Log in to the Vertica Management Console.
2. On the Management Console home page under **Provision**, click **Create New Database**.
3. On **Database Storage Mode**, click **Enterprise Mode**.
4. Click **Next**. **Create a New Vertica Cluster | mode: Enterprise** provides you with two workflow options for creating your database. Select one of the following:
   - **Quick Create**: Vertica configures your EC2 instances with default settings.
   - **Custom Create**: You can specify EC2 instance types and other database settings.
5. Click **Next**. On **Enter AWS Credentials and preferences**, **AWS Region** is filled with the region of the Management Console host. Supply the following information:
   - **AWS Subnet**: Under **Show Advanced Options**. Select the subnet used to create your cluster.
   - **AWS Access Key ID**: Displayed if MC was configured to use the AWS Access Keys authentication method. Enter your access key.
   - **AWS Secret Access Key**: Displayed if MC was configured to use the AWS Access Keys authentication method. Enter the password associated with the **AWS Access Key ID**.
   - **AWS Key Pair**: Your Amazon key pair for SSH access to EC2 instances.
   - **CIDR Range**: The cluster IP address range for SSH and client access to cluster hosts.
6. Click **Next**. **Enter Vertica database name and login credentials** accepts information about your Vertica license. Supply the following information:
• **Vertica Database Name**: The name for your new database. See Creating a Database Name and Password for database name requirements.

• **Vertica Version**: **Custom Create** mode only. Select the desired Vertica database version. You can select from the latest hotfix of recent Vertica releases. For each database version, you can also select the operating system. See Vertica AMI Operating Systems for AWS for available OS and major version options.

• **Vertica Database User Name**: The name of the database superuser.

• **Password**: The password associated with the database username. For details, see Password Guidelines.

• **Confirm Password**: Reenter the Password.

• **Database Node Count**: The number of nodes that you want to deploy in this cluster. **Quick Create** mode provides options for 1 or 3 database node counts.

• **Vertica License**: **Custom Create** mode only. Click Browse to locate and upload your Vertica license key file. If you do not supply a license key file here, the wizard deploys your database with a Vertica Community Edition license. This license has a three node limit, so the value in the Database Size filed cannot be larger than 3 if you do not supply a license. If you use a Community Edition license for your deployment, you can upgrade the license later to expand your cluster load more than 1TB of data. See Managing Licenses form more information.

• **Load example test data**: Optional. Click the checkbox to preload your database with example clickstream data. This option is useful if you are testing features and want some preloaded data in the database to query.

7. Click Next. Specify cloud instance and main data storage info provides options to let you customize your instance configuration. In Quick Create mode, the options on this screen are pre-selected and read-only.

Database Data Path is filled with the path to your persistent database storage. EBS Volume Type and EBS Volume Size (GB) per Volume per Available Node fields are filled with default values for the selected EC2 Instance Type. See Eon Mode Volume Configuration Defaults for AWS for more information.

In **Custom Create** mode, supply information for the following:

• **EC2 Instance Type**: The instance type your cluster deploys. See Supported AWS Instance Types for more information.

• **EBS Volume Type**: The block-level storage type for each node in your cluster.

• **EBS Volume Size (GB) per Volume per Available Node**: The amount of disk space available on each disk attached to each node in your cluster. This field shows you the total disk space available per node in your cluster.

• **Enable EBS Volume Encryption**: Optional. Select the checkbox if you want server-level encryption on your EC2 instances. With AWS, only 4th and 5th generation instance types (c4/5, r4/5, and m4/5) support encryption.
- **Node IP setting**: Select **Private**, **Public**, or **Elastic**. For details about each option, see the Amazon documentation.

8. Click **Next**. **Specify additional storage and tag info** lets you allocate additional storage for your cluster. In **Quick Create** mode, the options on this screen are pre-selected and read-only.

   - **Database Catalog Path** is the location of the local copy of the database catalog.
   - **Database Temp Path** is the temporary storage space for each node, if the node instance type includes the temporary storage option.
   - In **Custom Create** mode, select or enter a value for **EBS Volume Type**, **EBS Volume Size (GB) per Volume per Available Node**, and **Enable EBS Volume Encryption** under each path. Each field has the same definition as described in the previous step.
   - **Tag EC2 instances**: Optional. Assign distinct, searchable metadata tags to the instances in this cluster. Many organizations use labels to organize, track responsibility, and assign costs for instances.
     After you click the checkbox, the **Tag Name** and **Tag Value** fields are displayed. Click **Add** to create the tag. Added tags are displayed below the fields.

9. Click **Next**. On the **Review** screen, confirm your selections. To edit your selections, click **Back** until you reach the screen containing information that you want to edit.

10. When you are satisfied with your selections, click the **Accept terms and conditions of the "Software Only Terms" for your territory** checkbox.

11. Click **Create** to create an Enterprise Mode cluster on AWS.

After the cluster and database is successfully created, click **Get Started** to view the **Fast Tasks** page. To view your database, select **Manage and View Your Vertica Database** to go to the database **Overview**.

You can also view your database from the **Recent Databases** section of the MC home page.

See **Managing Database Clusters** for further managing your cluster, instances, and database using Management Console.

## Install Vertica with Manually Deployed AWS Resources

Vertica provides an AMI that you can install on AWS resources that you manually deploy. This section will guide you through configuring your network settings on AWS, launching and preparing EC2 instances using the Vertica AMI, and creating a Vertica cluster on those EC2 instances.
Choose this method of installation if you are familiar with configuring AWS and have many specific AWS configuration needs. (To automatically deploy AWS resources and a Vertica cluster instead, see Installing Vertica with CloudFormation Templates.

**Configure Your Network**

Before you create your cluster, you must configure the network on which Vertica will run. Vertica requires a number of specific network configurations to operate on AWS. You may also have specific network configuration needs beyond the default Vertica settings.

The following sections explain which Amazon EC2 features you need to configure for instance creation.

**Create a Placement Group, Key Pair, and VPC**

Part of configuring your network for AWS is to create the following:

- Placement Group
- Key Pair
- Virtual Private Cloud (VPC)

**Create a Placement Group**

A placement group is a logical grouping of instances in a single Availability Zone. Placement Groups are required for clusters and all Vertica nodes must be in the same Placement Group.

Vertica recommends placement groups for applications that benefit from low network latency, high network throughput, or both. To provide the lowest latency, and the highest packet-per-second network performance for your Placement Group, choose an instance type that supports enhanced networking.

For information on creating placement groups, see Placement Groups in the AWS documentation.
Create a Key Pair

You need a key pair to access your instances using SSH. Create the key pair using the AWS interface and store a copy of your key (*.pem) file on your local machine. When you access an instance, you need to know the local path of your key.

Use a key pair to:

- Authenticate your connection as dbadmin to your instances from outside your cluster.
- Install and configure Vertica on your AWS instances.

for information on creating a key pair, see Amazon EC2 Key Pairs in the AWS documentation.

Create a Virtual Private Cloud (VPC)

You create a Virtual Private Cloud (VPC) on Amazon so that you can create a network of your EC2 instances. Your instances in the VPC all share the same network and security settings.

A Vertica cluster on AWS must be logically located in the same network. Create a VPC to ensure the nodes in your cluster can communicate with each other in AWS.

Create a single public subnet VPC with the following configurations:

- Assign a Network Access Control List (ACL) that is appropriate to your situation.
- Enable DNS resolution and enable DNS hostname support for instances launched in this VPC.
- Add the required network inbound and outbound rules to the Network ACL associated to the VPC.

Note:
A Vertica cluster must be operated in a single availability zone.

For information on creating a VPC, see Create a Virtual Private Cloud (VPC) in the AWS documentation.
**Network ACL Settings**

Vertica requires the following basic network access control list (ACL) settings on an AWS instance running the Vertica AMI. Vertica recommends that you secure your network with additional ACL settings that are appropriate to your situation.

### Inbound Rules

<table>
<thead>
<tr>
<th>Type</th>
<th>Protocol</th>
<th>Port Range</th>
<th>Use</th>
<th>Source</th>
<th>Allow/Deny</th>
</tr>
</thead>
<tbody>
<tr>
<td>SSH</td>
<td>TCP (6)</td>
<td>22</td>
<td>SSH (Optional—for access to your cluster from outside your VPC)</td>
<td>User Specific</td>
<td>Allow</td>
</tr>
<tr>
<td>Custom TCP Rule</td>
<td>TCP (6)</td>
<td>5450</td>
<td>MC (Optional—for MC running outside of your VPC)</td>
<td>User Specific</td>
<td>Allow</td>
</tr>
<tr>
<td>Custom TCP Rule</td>
<td>TCP (6)</td>
<td>5433</td>
<td>SQL Clients (Optional—for access to your cluster from SQL clients)</td>
<td>User Specific</td>
<td>Allow</td>
</tr>
<tr>
<td>Custom TCP Rule</td>
<td>TCP (6)</td>
<td>50000</td>
<td>Rsync (Optional—for backup outside of your VPC)</td>
<td>User Specific</td>
<td>Allow</td>
</tr>
<tr>
<td>Custom TCP Rule</td>
<td>TCP (6)</td>
<td>1024-65535</td>
<td>Ephemeral Ports (Needed if you use any of the above)</td>
<td>User Specific</td>
<td>Allow</td>
</tr>
<tr>
<td>ALL Traffic</td>
<td>ALL</td>
<td>ALL</td>
<td>N/A</td>
<td>0.0.0.0/0</td>
<td>Deny</td>
</tr>
</tbody>
</table>

### Outbound Rules

<table>
<thead>
<tr>
<th>Type</th>
<th>Protocol</th>
<th>Port Range</th>
<th>Use</th>
<th>Source</th>
<th>Allow/Deny</th>
</tr>
</thead>
<tbody>
<tr>
<td>Custom TCP Rule</td>
<td>TCP (6)</td>
<td>0–65535</td>
<td>Ephemeral Ports</td>
<td>0.0.0.0/0</td>
<td>Allow</td>
</tr>
</tbody>
</table>

You can use the entire port range specified in the previous table, or find your specific ephemeral ports by entering the following command:

```
$ cat /proc/sys/net/ipv4/ip_local_port_range
```
More Information

For detailed information on network ACLs within AWS, refer to Network ACLs in the Amazon documentation.

For detailed information on ephemeral ports within AWS, refer to Ephemeral Ports in the Amazon documentation.

**Configure TCP keepalive with AWS Network Load Balancer**

AWS supports three types of elastic load balancers (ELBs):

- Classic Load Balancers
- Application Load Balancers
- Network Load Balancers

Vertica strongly recommends the AWS Network Load Balancer (NLB), which provides the best performance with your Vertica database. The Network Load Balancer acts as a proxy between clients (such as JDBC) and Vertica servers. The Classic and Application Load Balancers do not work with Vertica, in Enterprise Mode or Eon Mode.

To avoid timeouts and hangs when connecting to Vertica through the NLB, it is important to understand how AWS NLB handles idle timeouts for connections. For the NLB, AWS sets the idle timeout value to 350 seconds and you cannot change this value. The timeout applies to both connection points.

For a long-running query, if either the client or the server fails to send a timely keepalive, that side of the connection is terminated. This can lead to situations where a JDBC client hangs waiting for results that would never be returned because the server fails to send a keepalive within 350 seconds.

To identify an idle timeout/keepalive issue, run a query like this via a client such as JDBC:

```
=> SELECT SLEEP(355);
```

If there’s a problem, one of the following situations occurs:

- The client connection terminates before 355 seconds. In this case, lower the JDBC keepalive setting so that keepalives are sent less than 350 seconds apart.
The client connection doesn’t return a result after 355 seconds. In this case, you need to adjust the server keepalive settings (tcp_keepalive_time and tcp_keepalive_intvl) so that keepalives are sent less than 350 seconds apart.

For detailed information about AWS Network Load Balancers, see What is a Network Load Balancer? in the AWS documentation.

Create and Assign an Internet Gateway

When you create a VPC, an Internet gateway is automatically assigned to it. You can use that gateway, or you can assign your own. If you are using the default Internet gateway, continue with the procedure described in Create a Security Group.

Otherwise, create an Internet gateway specific to your needs. Associate that internet gateway with your VPC and subnet.

For information about how to create an Internet Gateway, see Internet Gateways in the AWS documentation.

Assign an Elastic IP Address

An elastic IP address is an unchanging IP address that you can use to connect to your cluster externally. Vertica recommends you assign a single elastic IP to a node in your cluster. You can then connect to other nodes in your cluster from your primary node using their internal IP addresses dictated by your VPC settings.

Create an elastic IP address. For information, see Elastic IP Addresses in the AWS documentation.

Create a Security Group

The Vertica AMI has specific security group requirements. When you create a Virtual Private Cloud (VPC), AWS automatically creates a default security group and assigns it to the VPC. You can use the default security group, or you can name and assign your own.

Create and name your own security group using the following basic security group settings. You may make additional modifications based on your specific needs.
## Inbound

For information about what a security group is, as well as how to create one, see Amazon EC2 Security Groups for Linux Instances in the AWS documentation.

Deploy AWS Instances for your Vertica Database Cluster

Once you have configured your network, you are ready to create your AWS instances and install Vertica. Follow these procedures to install and run Vertica on AWS.
Configure and Launch an Instance

After you configure your network settings on AWS, configure and launch the instances onto which you will install Vertica. An Elastic Compute Cloud (EC2) instance without a Vertica AMI is similar to a traditional host. Just like with an on-premises cluster, you must prepare and configure your cluster and network at the hardware level before you can install Vertica.

When you create an EC2 instance on AWS using a Vertica AMI, the instance includes the Vertica software and the recommended configuration. The Vertica AMI acts as a template, requiring fewer configuration steps. Vertica recommends that you use the Vertica AMI as is—without modification.

Configure EC2 Instances in AWS

1. Select the Vertica AMI from the AWS marketplace.
2. Select the desired fulfillment method.
3. Configure the following:
   - A supported instance type
   - The number of instances you want to launch. A Vertica cluster usually uses identically configured instances of the same type.
   - A VPC
   - Placement Group

Add Storage to Your Instances

Consider the following issues when you add storage to your instances:

- Add a number of drives equal to the number of physical cores in your instance. For example, for a c3.8xlarge instance, 16 drives. For an r3.4xlarge, add 8 drives.
- Do not store your information on the root volume.
- Amazon EBS provides durable, block-level storage volumes that you can attach to running instances. For guidance on selecting and configuring an Amazon EBS volume type, see Amazon EBS Volume Types in the Amazon Web Services documentation.
## Decide Whether to Configure EBS Volumes as a RAID Array

You can choose to configure your EBS volumes into a RAID 0 array to improve disk performance. Before doing so, use the `vioperf` utility to determine whether the performance of the EBS volumes is fast enough without using them in a RAID array. Pass `vioperf` the path to a mount point for an EBS volume. In this example, an EBS volume is mounted on a directory named `/vertica/data`:

```
$ /opt/vertica/bin/vioperf /vertica/data
```

The minimum required I/O is 20 MB/s read and write per physical processor core on each node, in full duplex i.e. reading and writing at this rate simultaneously, concurrently on all nodes of the cluster. The recommended I/O is 40 MB/s per physical core on each node. For example, the I/O rate for a server node with 2 hyper-threaded six-core CPUs is 240 MB/s required minimum, 480 MB/s recommended.

Using `direct_io` (buffer size=1048576, alignment=512) for directory `/vertica/data`

</tbody>
</table>
If the EBS volume read and write performance (the entries with Read and Write in column 1 of the output) is greater than 20MB/s per physical processor core (columns 6 and 7), you do not need to configure the EBS volumes as a RAID array to meet the minimum requirements to run Vertica. You may still consider configuring your EBS volumes as a RAID array if the performance is less than the optimal 40MB/s per physical core (as is the case in this example).

Note:
If your EC2 instance has hyper-threading enabled, vioperf may incorrectly count the number of cores in your system. The 20MB/s throughput per core requirement only applies to physical cores, rather than virtual cores. If your EC2 instance has hyper-threading enabled, divide the counter value (column 4 in the output) by the number of physical cores. See CPU Cores and Threads Per CPU Core Per Instance Type section in the
AWS documentation topic Optimizing CPU Options for a list of physical cores in each instance type.

If you determine you need to configure your EBS volumes as a RAID 0 array, see the AWS documentation topic RAID Configuration on Linux the steps you need to take.

Security Group and Access

1. Choose between your previously configured security group or the default security group.
2. Configure S3 access for your nodes by creating and assigning an IAM role to your EC2 instance. See AWS Authentication for more information.

Launch Instances

Verify that your instances are running.

Connect to an Instance

Using your private key, take these steps to connect to your cluster through the instance to which you attached an elastic IP address:

1. As the dbadmin user, type the following command, substituting your ssh key:

   `$ ssh --ssh-identity <ssh key> dbadmin@elasticipaddress`

2. Select Instances from the Navigation panel.
3. Select the instance that is attached to the Elastic IP.
4. Click Connect.
5. On Connect to Your Instance, choose one of the following options:

   - **A Java SSH Client directly from my browser**—Add the path to your private key in the field Private key path, and click Launch SSH Client.
   - **Connect with a standalone SSH client**—Follow the steps required by your standalone SSH client.
Connect to an Instance from Windows Using Putty

If you connect to the instance from the Windows operating system, and plan to use Putty:

1. Convert your key file using PuTTYgen.
2. Connect with Putty or WinSCP (connect via the elastic IP), using your converted key (i.e., the *ppk file).
3. Move your key file (the *pem file) to the root dir using Putty or WinSCP.

Prepare Instances for Cluster Formation

After you create your instances, you need to prepare them for cluster formation. Prepare your instances by adding your AWS .pem key and your Vertica license.

By default, each AMI includes a Community Edition license. Once Vertica is installed, you can find the license at this location:

```
/opt/vertica/config/licensing/vertica_community_edition.license.key
```

1. As the dbadmin user, copy your *pem file (from where you saved it locally) onto your primary instance.

   Depending upon the procedure you use to copy the file, the permissions on the file may change. If permissions change, the install_vertica script fails with a message similar to the following:

   ```
   FATAL (19): Failed Login Validation 10.0.3.158, cannot resolve or connect to host as root.
   ```

   If you receive a failure message, enter the following command to correct permissions on your *pem file:

   ```
   $ chmod 600 /<name-of-pem>.pem
   ```

2. Copy your Vertica license over to your primary instance, placing it in your home directory or other known location.
Change Instances on AWS

You can change instance types on AWS. For example, you can downgrade a c3.8xlarge instance to c3.4xlarge. See Supported AWS Instance Types for a list of valid AWS instances.

When you change AWS instances you may need to:

- Reconfigure memory settings
- Reset memory size in a resource pool
- Reset number of CPUs in a resource pool

Reconfigure memory settings

If you change to an AWS instance type that requires a different amount of memory, you may need to recompute the following and then reset the values:

- \texttt{min\_free\_kbytes Setting}
- \texttt{max\_map\_count}

\textbf{Note:}
You may need root user permissions to reset these values.

Reset memory size in a resource pool

If you used absolute memory in a resource pool, you may need to reconfigure the memory using the MEMORYSIZE parameter in \texttt{ALTER RESOURCE POOL}.

\textbf{Note:}
If you set memory size as a percentage when you created the original resource pool, you do not need to change it here.

Reset number of CPUs in a resource pool

If your new instance requires a different number of CPUs, you may need to reset the CPUAFFINITYSET parameter in \texttt{ALTER RESOURCE POOL}. 
**Configure Storage**

Vertica recommends that you store information — especially your data and catalog directories — on dedicated Amazon EBS volumes formatted with a supported file system. The `/opt/vertica/sbin/configure_software_raid.sh` script automates the storage configuration process.

**Caution:**
Do not store information on the root volume because it might result in data loss.

Vertica performance tests Eon Mode with a per-node EBS volume of up to 2TB. For best performance, combine multiple EBS volumes into a RAID 0 array.

For more information about RAID 0 arrays and EBS volumes, see [RAID configuration on Linux](https://vertica.com/docs/Deployment/01-Operating-System-Environments/Linux/index.html).

**Determining Volume Names**

Because the storage configuration script requires the volume names that you want to configure, you must identify the volumes on your machine. The following command lists the contents of the `/dev` directory. Search for the volumes that begin with `xvd`:

```
$ ls /dev
```

**Important:**
Ignore the root volume. Do not include any of your root volumes in the RAID creation process.

**Combining Volumes for Storage**

The `configure_software_raid.sh` shell script combines your EBS volumes into a RAID 0 array.

**Caution:**
Run `configure_software_raid.sh` in the default setting only if you
have a fresh configuration with no existing RAID settings.

If you have existing RAID settings, open the script in a text editor and manually edit the `raid_dev` value to reflect your current RAID settings. If you have existing RAID settings and you do not edit the script, the script deletes important operating system device files.

Alternately, use the Management Console (MC) console to add storage nodes without unwanted changes to operating system device files. For more information, see Managing Database Clusters.

The following steps combine your EBS volumes into RAID 0 with the `configure_software_raid.sh` script:

1. Edit the `/opt/vertica/sbin/configure_software_raid.sh` shell file as follows:
   a. Comment out the safety exit command at the beginning.
   b. Change the sample volume names to your own volume names, which you noted previously. Add more volumes, if necessary.
2. Run the `/opt/vertica/sbin/configure_software_raid.sh` shell file. Running this file creates a RAID 0 volume and mounts it to `/vertica/data`.
3. Change the owner of the newly created volume to dbadmin with `chown`.
4. Repeat steps 1-3 for each node on your cluster.

**Create a Cluster**

On AWS, use the `install_vertica` script to combine instances and create a cluster. Check your My Instances page on AWS for a list of current instances and their associated IP addresses. You need these IP addresses when you run `install_vertica`.

Create a cluster as follows:

1. While connected to your primary instance, enter the following command to combine your instances into a cluster. Substitute the IP addresses for your instances and include your root *pem file name.

   ```bash
   $ sudo /opt/vertica/sbin/install_vertica --hosts 10.0.11.164,10.0.11.165,10.0.11.166 --dba-user-password-disabled --point-to-point --data-dir /vertica/data --ssh-identity ~/<name-of-pem>.pem --license <license.file>
   ```

**Note:** If you are using Vertica Community Edition, which limits you to three
instances, you can specify -L CE with no license file.

When you issue install_vertica or update_vertica on a Vertica AMI script, --point-to-point is the default. This parameter configures Spread to use direct point-to-point communication between all Vertica nodes, which is a requirement for clusters on AWS.

2. After combining your instances, Vertica recommends deleting your *pem key from your cluster to reduce security risks. The example below uses the shred command to delete the file:

$ shred examplekey.pem

3. After creating one or more clusters, create your database.

For complete information on the install_vertica script and its parameters, see Installing Vertica with the Installation Script.

Important:

Stopping or rebooting an instance or cluster without first shutting down the database down, may result in disk or database corruption. To safely shut down and restart your cluster, see Operating the Database.

Check Open Ports Manually Using the Netcat Utility

Once your cluster is up and running, you can check ports manually through the command line using the netcat (nc) utility. What follows is an example using the utility to check ports.

Before performing the procedure, choose the private IP addresses of two nodes in your cluster.

The examples given below use nodes with the private IPs:

10.0.11.60 10.0.11.61

Install the nc utility on your nodes. Once installed, you can issue commands to check the ports on one node from another node.
1. To check a TCP port:
   
a. Put one node in listen mode and specify the port. The following sample shows how to put IP 10.0.11.60 into listen mode for port 4804.
   
   ```bash
   [root@ip-10-0-11-60 ~]# nc -l 4804
   ```
   
b. From the other node, run `nc` specifying the IP address of the node you just put in listen mode, and the same port number.
   
   ```bash
   [root@ip-10-0-11-61 ~]# nc 10.0.11.60 4804
   ```
   
c. Enter sample text from either node and it should show up on the other node. To cancel after you have checked a port, enter Ctrl+C.
   
   ![Note: To check a UDP port, use the same `nc` commands with the `–u` option.](image)
   
   ```bash
   [root@ip-10-0-11-60 ~]# nc -u -l 4804
   [root@ip-10-0-11-61 ~]# nc -u 10.0.11.60 4804
   ```

### Use Management Console (MC) on AWS

Management Console (MC) is a database management tool that allows you to view and manage aspects of your cluster. Vertica provides an MC AMI, which you can use with AWS. The MC AMI allows you to create an instance, dedicated to running MC, that you can attach to a new or existing Vertica cluster on AWS. You can create and attach an MC instance to your Vertica on AWS cluster at any time.

For information on requirements and installing MC, see [Installing and Configuring Management Console](Vertica Documentation/Using Vertica on the Cloud/Installing and Configuring Management Console).

### See Also

- [Network ACL Settings](Vertica Documentation/Using Vertica on the Cloud/Network ACL Settings)
Log in to MC and Managing Your Cluster

After you launch your MC instance and configure your security group settings, log in to your database. To do so, use the elastic IP you specified during instance creation.

From this elastic IP, you can manage your Verticadatabase on AWS using standard MC procedures.

Considerations When Using MC on AWS

- Because MC is already installed on the MC AMI, the MC installation process does not apply.
- To uninstall MC on AWS, follow the procedures provided in Uninstalling Management Console before terminating the MC Instance.

Export Data to Amazon S3 Using the AWS Library

⚠️ Deprecated:
The AWS library is deprecated. To export delimited data to S3 or any other destination, use EXPORT TO DELIMITED.

The Vertica library for Amazon Web Services (AWS) is a set of functions and configurable session parameters. These parameters allow you to export delimited data from Vertica to Amazon S3 storage without any third-party scripts or programs.

To use the AWS library, you must have access to an Amazon S3 storage account.
Configure the Vertica Library for Amazon Web Services

You use the Vertica library for Amazon Web Services (AWS) to export data from Vertica to S3. This library does not support IAM authentication. You must configure it to authenticate with S3 by using session parameters containing your AWS access key credentials. You can set your session parameters directly, or you can store your credentials in a table and set them with the AWS_SET_CONFIG function.

Because the AWS library uses session parameters, you must reconfigure the library with each new session.

Important: Your AWS access key ID and secret access key are different from your account access credentials. For more information about AWS access keys, visit the Managing Access Keys for IAM Users in the AWS documentation.

Set AWS Authentication Parameters

The following AWS authentication parameters allow you to access AWS and work with the data in your Vertica database:

- **aws_id**: The 20-character AWS access key used to authenticate your account.
- **aws_secret**: The 40-character AWS secret access key used to authenticate your account.
- **aws_session_token**: The AWS temporary security token generated by running the AWS STS command `get-session-token`. This AWS STS command generates temporary credentials you can use to implement multi-factor authentication for security purposes. See Implement Multi-factor Authentication.

Implement Multi-factor Authentication

Implement multi-factor authentication as follows:

1. Run the AWS STS command `get-session-token`, this returns the following:

   ```
   $ Credentials": {
   "SecretAccessKey": "bQid6jNuSWrUzkIjCFG7c71gDHZY3h7aDSW2DU6",
   "SessionToken":
   "FQoDYXdzEBcaDKM1m4peu88nD7TFICsAba1IDTwe4BTh33tnUvo9F/8mZicKLLy7W1cpT4FLfr61t1m242/U2CI9G/
   ```
For more information on get-session-token, see the [AWS documentation](https://aws.amazon.com/documentation).

2. Using the SecretAccessKey returned from get-session-token, set your temporary aws_secret:

```sql
=> ALTER SESSION SET UDPARAMETER FOR awslib aws_secret='bQid6jNuSWRqUzkIJCFG7c71gDHZY3h7aDSW2DU6';
```

3. Using the SessionToken returned from get-session-token, set your temporary aws_session_token:

```sql
=> ALTER SESSION SET UDPARAMETER FOR awslib aws_session_token='FQoDYXdzEBcaDKM1mWpeu88nD7FICksAbaiIDTwe4B

Th33tnUvo9F/8mZicKLLy7Wi cosmetic error in the second line of the code.

c4U411WyEng3S1shdiqVlk1It2Mk0i6EQXKtx
F9VgfncDQ8xjZUckYizseZw5pULa9YQCJ0z1+Q23rdUCWu0IfspSU3Ph0guH+wTqim2XdxHL5hcUcomqm41gU=';
```

4. Using the AccessKeyId returned from get-session-token, set your temporary aws_id:

```sql
=> ALTER SESSION SET UDPARAMETER FOR awslib aws_id='ASIAJ4ZYGTOSVSLUIN7Q';
```

The Expiration value returned indicates when the temporary credentials expire. In this example, expiration occurs April 12, 2018 at 01:58:50.

These examples show how to implement multifactor authentication using session parameters. You can use either of the following methods to securely set and store your AWS account credentials:

- **Configure Session Parameters Directly**
- **Configure Session Parameters Using Credentials Stored in a Table**

**Note:** To increase security, avoid directly setting the plain text value of your key directly in the aws_set_config parameter. Instead, store the value in a table protected with a access policy as described in Configure Session Parameters Using Credentials Stored in a Table.
**AWS Access Key Requirements**

To communicate with AWS, your access key must have the following permissions:

- s3:GetObject
- s3:PutObject
- s3:ListBucket

For security purposes, Vertica recommends that you create a separate access key with limited permissions specifically for use with the Vertica Library for AWS.

**Configure Session Parameters Directly**

These examples show how to set the session parameters for AWS using your own credentials. Parameter values are case sensitive:

- **aws_id**: This value is your AWS access key ID.
  
  ```
  => ALTER SESSION SET UDPARAMETER FOR awslib aws_id='AKABCOEXAMPLEPKPXYZQ';
  ```

- **aws_secret**: This value is your AWS secret access key.
  
  ```
  => ALTER SESSION SET UDPARAMETER FOR awslib aws_secret='CEXAMPLE3tEXAMPLE1wEXAMPLEFrFEXAMPLE6+Yz';
  ```

- **aws_region**: This value is the AWS region associated with the S3 bucket you intend to access. Left unconfigured, aws_region will default to us-east-1. It identifies the default server used by Amazon S3.
  
  ```
  => ALTER SESSION SET UDPARAMETER FOR awslib aws_region='us-east-1';
  ```

When using **ALTER SESSION**:

- Using ALTER SESSION to change the values of **S3 Parameters** also changes the values of corresponding UDParameters.
- Setting a UDParameter changes only the UDParameter.
- Setting a configuration parameter changes both the AWS parameter and UDParameter.
Configure Session Parameters Using Credentials Stored in a Table

You can place your credentials in a table and secure them with a row-level access policy. You can then call your credentials with the AWS_SET_CONFIG scalar meta-function. This approach allows you to store your credentials on your cluster for future session parameter configuration. You must have dbadmin access to create access policies.

1. Create a table with rows or columns corresponding with your credentials:

```sql
=> CREATE TABLE keychain(accesskey varchar, secretaccesskey varchar);
```

2. Store your credentials in the corresponding columns:

```sql
=> COPY keychain FROM STDIN;
Enter data to be copied followed by a newline.
End with a backslash and a period on a line by itself.
>> AEXAMPLEI5EXAMPLEYXQ|CCEXAMPLEtFjTEXAMPLEiEXAMPLE6+Yz
>> .
```

3. Set a row-level access policy appropriate to your security situation.

4. With each new session, configure your session parameters by calling the AWS_SET_CONFIG parameter in a SELECT statement:

```sql
=> SELECT AWS_SET_CONFIG('aws_id', accesskey), AWS_SET_CONFIG('aws_secret', secretaccesskey)
   FROM keychain;
```

5. After you have configured your session parameters, verify them:

```sql
=> SHOW SESSION UDPARAMETER ALL;
```

- AWS_GET_CONFIG
Export Data to Amazon S3 From Vertica

After you configure the library for Amazon Web Services (AWS), you can export Vertica data to Amazon S3 by calling the S3EXPORT() transform function. S3EXPORT() writes data to files, based on the URL you provide. Vertica performs all communication over HTTPS, regardless of the URL type you use. Vertica does not support virtual host style URLs. If you use HTTPS URL constructions, you must use path style URLs.

Note:
If your S3 bucket contains a period in its path, set the prepend_hash parameter to True.

You can control the output of S3EXPORT() in the following ways:

- Adjust the base query provided to S3EXPORT
- Adjust the partition of your result set with the OVER() clause

Adjust the Query Provided to S3EXPORT

By adjusting the query given to S3EXPORT(), you can export anything from tables to reporting queries.

This example exports a whole table:

```
=> SELECT S3EXPORT( * USING PARAMETERS url='s3://exampleBucket/object') OVER(PARTITION BEST) FROM exampleTable;
rows | url
---------------------
 606 | https://exampleBucket/object
(1 row)
```

This example exports the results of a query:

```
=> SELECT S3EXPORT(customer_name, annual_income USING PARAMETERS url='s3://exampleBucket/object') OVER()
FROM public.customer_dimension
WHERE (customer_gender, annual_income) IN
(SELECT customer_gender, MAX(annual_income)
FROM public.customer_dimension
GROUP BY customer_gender);
rows | url
---------------------
```
Adjust the Partition of Your Result Set with the OVER Clause

Use the OVER clause to control your export partitions. Using the OVER() clause without qualification results in a single partition processed by the initiator for all of the query data. This example shows how to call the function with an unqualified OVER() clause:

```
=> SELECT S3EXPORT(name, company USING PARAMETERS url='s3://exampleBucket/object',
                   delimiter=',') OVER()
FROM exampleTable WHERE company='Vertica';
```

```plaintext
<table>
<thead>
<tr>
<th>rows</th>
<th>url</th>
</tr>
</thead>
<tbody>
<tr>
<td>10</td>
<td><a href="https://exampleBucket/object">https://exampleBucket/object</a></td>
</tr>
</tbody>
</table>
```

You can also use window clauses, such as window partition clauses and window order clauses, to manage exported objects.

This example shows how you can use a window partition clause to partition S3 objects based on company values:

```
=> SELECT S3EXPORT(name, company USING PARAMETERS url='s3://exampleBucket/object',
                   delimiter=',') OVER(PARTITION BY company) AS MEDIAN
FROM exampleTable;
```

Adjusting the Export Chunk Size for Wide Tables

You may encounter the following error when exporting extremely wide tables or tables with long data types such as LONG VARCHAR or LONG VARBINARY:

```
=> SELECT S3EXPORT( * USING PARAMETERS url='s3://exampleBucket/object') OVER(PARTITION BEST)
FROM veryWideTable;
ERROR 5861: Error calling setup() in User Function s3export at [/data/.../S3.cpp:787],
error code: 0, message: The specified buffer of 10485760 bytesRead is too small,
it should be at least 11279701 bytesRead.
```

Vertica returns this error if the data for a single row overflows the buffer storing the data before export. By default, this buffer is 10MB. You can increase the size of this buffer using the chunksize parameter, which sets the size of the buffer in bytes. This example sets it to around 60MB:

Add Nodes to a Running Cluster on the Cloud

There are two ways to add nodes to an AWS cluster:

- Using Management Console
- Using admintools

When you use MC to add nodes to a cluster in the cloud, MC provisions the instances, adds the new instances to the existing Vertica cluster, and then adds those hosts to the database. However, when you add nodes to a cluster using admintools, you need to execute those steps yourself, as explained in Adding Nodes Using admintools.

Adding Nodes Using Management Console

In the Vertica Management Console, you can add nodes in several ways, depending on your database mode.

For Eon Mode databases, MC supports actions for subcluster and node management:

- In the cloud: On AWS and GCP.
- On-premises: For Pure Storage FlashBlade.

For Enterprise Mode databases, MC supports these actions:

- In the cloud on AWS: Add Node action, Add Instance action.
- On-premises: Add Node action.
**Note:**
In the cloud on GCP, Enterprise Mode databases are not supported.

**Adding Nodes in an Eon Mode Database**

In an Eon Mode database, every node must belong to a subcluster. To add nodes, you always add them to one of the subclusters in the database:

- By [scaling up an existing subcluster](#) by one or more nodes.
- By [adding a new subcluster](#) of one or more nodes.

**Adding Nodes in an Enterprise Mode Database on AWS**

In an Enterprise Mode database on AWS, to add an instance to your cluster:

1. On the MC Home page, click [View Infrastructure](#) to go to the [Infrastructure page](#). This page lists all the clusters the MC is monitoring.
2. Click any cluster shown on the Infrastructure page.

3. Select [View](#) or [Manage](#) from the dialog that displays, to view its Cluster page. (In a cloud environment, if MC was deployed from a cloud template the button says "Manage". Otherwise, the button says "View".)

**Note:**
You can click the pencil icon beside the cluster name to rename the cluster. Enter a name that is unique within MC.

4. Click the Add (+) icon on the [Instance List](#) on the [Cluster Management](#) page.

   MC adds a node to the selected cluster.
Adding Nodes Using admintools

This section gives an overview on how to add nodes if you are managing your cluster using admintools. Each main step points to another topic with the complete instructions.

Step 1: Before You Start

Before you add nodes to a cluster, verify that you have an AWS cluster up and running and that you have:

- Created a database.
- Defined a database schema.
- Loaded data.
- Run the Database Designer.
- Connected to your database.

Step 2: Launch New Instances to Add to an Existing Cluster

Perform the procedure in Configure and Launch an Instance to create new instances (hosts) that you then will add to your existing cluster. Be sure to choose the same details you chose when you created the original instances (VPC, placement group, subnet, and security group).

Step 3: Include New Instances as Cluster Nodes

You need the IP addresses when you run the install_vertica script to include new instances as cluster nodes.

If you are configuring Amazon Elastic Block Store (EBS) volumes, be sure to configure the volumes on the node before you add the node to your cluster.

To add the new instances as nodes to your existing cluster:

1. Configure and launch your new instances.
2. Connect to the instance that is assigned to the Elastic IP. See Connect to an Instance if you need more information.
3. Run the Vertica installation script to add the new instances as nodes to your cluster. Specify the internal IP addresses for your instances and your *pem file name.
Step 4: Add the Nodes

After you have added the new instances to your existing cluster, add them as nodes to your cluster, as described in Adding Nodes to a Database.

Step 5: Rebalance the Database

After you add nodes to a database, always rebalance the database.

Remove Nodes From a Running AWS Cluster

Use the following procedures to remove instances/nodes from an AWS cluster.

To avoid data loss, Vertica strongly recommends that you back up your database before removing a node. For details, see Backing Up and Restoring the Database.

In This Section

Remove Hosts From the Database

Before you remove hosts from the database. Verify that you have:

- Backed up the database.
- Lowered the K-safety of the database.

Note:
Do not stop the database.

To remove a host from the database:
1. While logged on as dbadmin, launch Administration Tools.

   $ /opt/vertica/bin/admintools

   **Note:**
   Do not remove the host that is attached to your elastic IP address.

2. From the **Main Menu**, select **Advanced Menu**.
3. From **Advanced Menu**, select **Cluster Management**. Click **OK**.
4. From **Cluster Management**, select **Remove Host(s)**. Click **OK**.
5. From **Select Database**, choose the database from which you plan to remove hosts. Click **OK**.
6. Select the host(s) to remove. Click **OK**.
7. Click **Yes** to confirm removal of the hosts.

   **Note:**
   Enter a password if necessary. Leave blank if there is no password.

8. Click **OK**. The system displays a message telling you that the hosts have been removed. Automatic rebalancing also occurs.
9. Click **OK** to confirm. Administration Tools brings you back to the **Cluster Management** menu.

---

**Remove Nodes From the Cluster**

To remove nodes from a cluster, run the `install_vertica` script and specify:

- The option **--remove-hosts**, followed by the IP addresses of the nodes you are removing.
- The option **--ssh-identity**, followed by the location and name of your *.pem* file.
- The option **--dba-user-password-disabled**.

The following example removes one node from the cluster:

```bash
sudo /opt/vertica/sbin/install_vertica --remove-hosts 10.0.11.165 --point-to-point --ssh-identity ~/<name-of-pem>.pem --dba-user-password-disabled
```
Stop the AWS Instances (Optional)

After you have removed one or more nodes from your cluster, to save costs associated with running instances, you can choose to stop the AWS instances that were previously part of your cluster.

To stop an instance in AWS:

1. On AWS, navigate to your **Instances** page.
2. Right-click the instance, and choose **Stop**.

This step is optional because, after you have removed the node from your Vertica cluster, Vertica no longer sees the node as part of the cluster, even though it is still running within AWS.

Upgrade Vertica on AWS

Before you upgrade to the latest Vertica version, do the following:

1. Back up your existing database.
2. Download the Vertica install packages described in [Download and Install the Vertica Install Package](#).

Upgrade to the Latest Version of Vertica on AWS

To upgrade to the latest version of Vertica on AWS, follow the instructions in [Upgrading Vertica](#).

If you are setting up a Vertica cluster on AWS for the first time, follow the [procedure for installing and running on AWS](#).

Upgrade Vertica Running on AWS

Vertica supports upgrades of Vertica server running on AWS instances created from the Vertica AMI. To upgrade Vertica, follow the instructions provided in [Upgrading Vertica](#).

Make sure to add the following arguments to the upgrade script:
- --dba-user-password-disabled
- --point-to-point

Copying and Exporting Data on AWS: What You Need to Know

There are common issues that occur when exporting or copying on AWS clusters, as described below. Except for these specific issues as they relate to AWS, copying and exporting data works as documented in Importing and Exporting Data Across Databases.

1. **Verify that all nodes in source and destination clusters have their own elastic IPs (or public IPs) assigned.**
   If your destination cluster is located within the same VPC as your source cluster, proceed to step 3. Each node in one cluster must be able to communicate with each node in the other cluster. Thus, each source and destination node needs an elastic IP (or public IP) assigned.

2. **Set the DontCheckNetworkAddress parameter to true.**
   When you create a network interface on AWS, Vertica returns an error if you try to assign the elastic IP to an AWS node. For example:

   ```
   => CREATE NETWORK INTERFACE eipinterface ON v_tpch_node0001 with '107.23.151.10'
   ERROR 4125: No valid address found for [107.23.151.10] on this node
   ```

   This error occurs because the elastic IP is the public IP and not the private IP of the target node. To resolve this issue, set configuration parameter DontCheckNetworkAddress to true with `ALTER DATABASE...SET PARAMETER`:

   ```
   => ALTER DATABASE DEFAULT SET PARAMETER DontCheckNetworkAddress = 1;
   ```

3. **Verify that your security group allows the AWS clusters to communicate.**
   Check your security groups for both your source and destination AWS clusters. Verify that ports 5433 and 5434 are open. If one of your AWS clusters is on a separate VPC, verify that your network access control list (ACL) allows communication on port 5434.

   **Note:**
   This communication method exports and copies (imports) data across the Internet. You can alternatively use non-public IPs and gateways, or VPN to connect the source and destination clusters.
4. If there is one or more elastic load balancers (ELBs) between the clusters, verify that port 5433 is open between the ELBs and clusters.

5. If you use the Vertica client to connect to one or more ELBs, the ELBs only distribute incoming connections. The data transmission path occurs between clusters.

**Vertica on Microsoft Azure**

You can deploy a Vertica database on the Microsoft Azure Cloud running in either **Enterprise Mode** or **Eon Mode**. In Eon Mode, Vertica stores its data communally using Azure block blob storage.

This section explains how to deploy a Vertica database to Microsoft Azure.

For more information about Azure, see the [Azure documentation](#).

**Deploying Vertica from the Azure Marketplace**

Deploy Vertica in the Microsoft Azure Cloud using the **Vertica Analytics Platform** entry in the Azure Marketplace. Vertica provides the following deployment options:

- **Eon Mode**: Deploy a Management Console (MC) instance, and then provision and create an Eon Mode database from the MC. For cluster and storage requirements, see [Eon Mode on Azure Prerequisites](#).
- **Enterprise Mode**: Deploy a four-node Enterprise Mode database comprised of one MC instance and three database nodes. This requires an [Azure subscription](#) with a minimum of 12 cores for the Vertica Marketplace solution.

The Enterprise Mode deployment uses the MC primarily as a monitoring tool. For example, you cannot provision and create a database with an Enterprise Mode MC. For information about creating and managing an Enterprise Mode database, see [Create a Database Using Administration Tools](#)

**Creating a Deployment**

Eon Mode and Enterprise Mode require much of the same information for deployment. Any information that is not required for both deployment types is clearly marked.
1. Selecting the Deployment Type

1. Sign in to your Microsoft Azure account. From the Home screen, select Create a resource under Azure services.
2. Search for Vertica Analytics Platform and select it from the search results.
3. On the Vertica Analytics Platform page, select one of the following:
   - To deploy an MC instance that can manage an Eon Mode database, select Vertica Data Warehouse, Eon BYOL.
   - To deploy an Enterprise Mode database, select Vertica Analytics Platform.
4. On the next screen, select Create.

After you select your deployment type, the Basics tab on the Create Vertica Analytics Platform page displays.

2. Adding Project and Instance Details on the Basics Tab

Provide the following information in the Project details and Instance details sections:

1. Subscription: Azure bills this subscription for the cluster resources.
2. Resource group: The location to save all of the Azure resources. Create a new resource group or choose an existing one from the dropdown list.
3. Region: The location where the virtual machine running your MC instance is deployed.
4. Vertica Management Console User: Eon Mode only. The administrator username for the MC.
5. SSH public key for OS Access: Provide the SSH public key associated with the Vertica User, for command line access to the virtual machine.
6. Password for MC Access: Enter a password to log in to Management Console. Note that Management Console requires that you change your password after the initial login.
7. Confirm password: Reenter the value you entered in Password for MC Access.

3. Selecting Virtual Machine Settings

Provide the following information on the Virtual Machine Settings tab:

1. Management Console VM size: Select Change size to customize the VM settings or select the default. For a list of VM types recommended by use case, see
Recommended Azure VM Types.

2. **Storage account of Eon DB**: Eon Mode only. The storage account associated with the database deployment.

3. **Number of Vertica Cluster nodes**: Enterprise Mode only. The number of nodes to deploy in the cluster, in addition to the MC instance. The Community Edition (CE) license is automatically applied to the cluster. This license is limited to 1 TB of RAW data 3 Vertica nodes. If you select more than 3 nodes with a CE license, the initial database is created on the first 3 nodes. For information about upgrading your license, see Managing Licenses.

4. **Vertica Node VM size**: Enterprise Mode only. Select the VM type to deploy in your cluster. Use the default or select Change size to customize the VM settings. For a list of VM types recommended by use case, see Recommended Azure VM Types.

5. **Total RAW storage per node**: Enterprise Mode only. Select the amount of storage per node from the dropdown list. Each VM has a set of premium data disks that are configured and presented as a single storage location.

6. Select **Next: Network Settings >**.

### 4. Selecting Network Settings

Provide the following information on the **Network Settings** tab:

1. **Virtual Network**: The virtual network that hosts the Vertica cluster. Create a new virtual network or select an existing one from the dropdown list.
   
   If you select an existing virtual network, Vertica recommends that you already created a subnet to use for the deployment.

2. **First subnet**: The subnet for the associated Virtual Network. Create a new subnet or select an existing one from the dropdown list.

3. **Public IP Address Resource Name**: Each VM is configured with a publicly accessible IP address. This field allows you to specify the resource name for those IP addresses, and whether they are static or dynamic. The first public IP address resource is created exactly as entered, and associated with the Vertica Management Console. Azure appends a number from 1 to 16 to the resource name for each additional Vertica cluster node created. This number associates each VM with a resource.

4. **Domain Name Label for Management Console**: Because each VM has a public IP address, each node requires a DNS name. Enter a prefix for the name. The first DNS name is created exactly as entered, and associated with the Vertica Management Console. Azure appends a number from 1 to 16 to the DNS name for each Vertica cluster node created. That number associates each VM with a resource. Azure adds the remaining part of the fully qualified domain name based on the location where
you created the cluster.

5. Select **Next: Review + create >**.

5. **Verifying on Review + create**

As the **Review + create** page loads, Azure validates your settings. After it passes validation, review your settings. When you are satisfied with your selections, select **Create**.

**Accessing the MC After Deployment**

After your resources are successfully deployed, you are brought to the **Overview** page on **Home > resources-name > Deployments**. You must retrieve your Management Console IP address and username to log in.

1. From the **Overview** page, select **Outputs** in the left navigation.
2. Copy the vertica management console URL and vertica management console user name.
3. Paste the vertica management console URL in the browser address bar and press **Enter**.
4. Depending on your browser, you might receive a warning of a security risk. If you receive the warning, select the **Advanced** button and follow the browsers instructions to proceed to the Management Console.
5. On the VerticaManagement Console log in page, paste the vertica management console user name, and enter the **Password for MC Access** that you entered on **Basics > Project details** when you were deploying your MC instance.

**Deleting a Resource Group**

For details about the Azure Resource Manager and deleting a resource group, see the [Azure documentation](#).

**Manually Deploy Vertica on Microsoft Azure**

Manually creating a database cluster for your Vertica deployment lets you customize your VMs to meet your specific needs. You often want to manually configure your VMs when
deploying a Vertica cluster to host an Eon Mode database.

To start creating your Vertica cluster in Azure using manual steps, you first need to create a VM. During the VM creation process, you create and configure the other resources required for your cluster, which are then available for any additional VMs that you create.

The topics in this section explain how to manually deploy Vertica on Azure.

**Recommended Azure VM Types**

Vertica supports a range of Microsoft Azure virtual machine (VM) types, each optimized for different purposes. Choose the VM type that best matches your performance and price needs as a user.

**Note:**
The GS VMs are not available in all regions, or from the Azure Marketplace.

You can use them by following the manual deployment steps described in Manually Deploy Vertica on Microsoft Azure.

For the best performance in most common scenarios, use one of the following VMs:

<table>
<thead>
<tr>
<th>Virtual Machine Types</th>
<th>Virtual Machine Size</th>
</tr>
</thead>
<tbody>
<tr>
<td>Memory optimized</td>
<td>DS13_v2</td>
</tr>
<tr>
<td></td>
<td>DS14_v2</td>
</tr>
<tr>
<td></td>
<td>DS15_v2</td>
</tr>
<tr>
<td></td>
<td>D8s_v3</td>
</tr>
<tr>
<td></td>
<td>D16s_v3</td>
</tr>
<tr>
<td></td>
<td>D32s_v3</td>
</tr>
<tr>
<td>High memory and I/O throughput</td>
<td>GS3</td>
</tr>
<tr>
<td></td>
<td>GS4</td>
</tr>
<tr>
<td></td>
<td>GS5</td>
</tr>
<tr>
<td></td>
<td>E8s_v3</td>
</tr>
</tbody>
</table>
Virtual Machine Types | Virtual Machine Size
---|---
E16s_v3
E32s_v3
L8s
L16s
L32s

**Supported Azure Operating Systems**

For best performance, use one of the following operating systems when deploying Vertica on Azure:

- Red Hat 7.3 or later
- CentOS 7.3 or later. The Azure Marketplace solution as of this writing (June 2017) is based on CentOS 7.3.1611.

For more information, see Vertica 11.0.x Supported Platforms.

**Configuring and Launching a New Instance**

An Azure VM is similar to a traditional host. Just as with an on-premises cluster, you must prepare and configure the hardware settings for your cluster and network before you install Vertica.

The first steps are:

1. From the Azure marketplace, select an operating system that Vertica supports.
2. Select a VM type. See Recommended Azure VM Types.
3. Choose a deployment model. For best results, choose the resource manager deployment model.

**Configure Network Security Group**

Vertica has specific network security group requirements, as described in Network Security Group Configurations.
Create and name your own network security group, following these guidelines.

You must configure SSH as:

- Protocol: TCP
- Source port range: Any
- Destination port range: 22
- Source: Any
- Destination: Any

You can make additional modifications, based on your specific requirements.

**Add Disk Containers**

Create an Azure storage account, which later contains your cluster storage disk containers.

For optimal throughput, select Premium storage and align the storage to your chosen VM type.

For more information about what a storage account is, and how to create one, refer to [About Azure storage accounts](#).

For an Enterprise Mode database deployment, provision enough space

**Configure Credentials**

Create a password or assign an SSH key pair to use with Vertica.

For information about how to use key pairs in Azure, see [How to create and use an SSH public and private key pair for Linux VMs in Azure](#).

**Assign a Public IP Address**

A public IP is an IP address that you can use to connect to your cluster externally. For best results, assign a single static public IP to a node in your cluster. You can then connect to other nodes in your cluster from your primary node using the internal IP addresses that Azure generated when you specified your virtual network settings.

By default, a public IP address is dynamic; it changes every time you shut down the server. You can choose a static IP address, but doing so can add cost to your deployment.
During a VM installation, you cannot set a DNS name. If you use dynamic public IPs, set the DNS name in the public IP resource for each VM after deployment.

For information about public IP addresses, refer to [IP address types and allocation methods in Azure](#).

---

**Create Additional VMs**

If needed, to create additional VMs, repeat the previous instructions in this document.

---

**Connect to a Virtual Machine**

Before you can connect to any of the VMs you created, you must first make your virtual network externally accessible. To do so, you must attach the public IP address you created during network configuration to one of your VMs.

---

**Connect to Your VM**

To connect to your VM, complete the following tasks:

1. Connect to your VM using SSH with the public IP address you created in the configuration steps.
2. Authenticate using the credentials and authentication method you specified during the VM creation process.

**Connect to Other VMs**

Connect to other virtual machines in your virtual network by first using SSH to connect to your publicly connected VM. Then, use SSH again from that VM to connect through the private IP addresses of your other VMs.

If you are using private key authentication, you may need to move your key file to the root directory of your publicly connected VM. Then, use PuTTY or WinSCP to connect to other VMs in your virtual network.

**Prepare the Virtual Machines**

After you create your VMs, you need to prepare them for cluster formation.
Add the Vertica License and Private Key

Prepare your nodes by adding your private key (if you are using one) to each node and to your Vertica license. These steps assume that the initial user you configured is the DBADMIN user.

1. As the DBADMIN user, copy your private key file from where you saved it locally onto your primary node.

   Depending upon the procedure you use to copy the file, the permissions on the file may change. If permissions change, the install_vertica script fails with a message similar to the following:

   ```
   Failed Login Validation 10.0.2.158, cannot resolve or connect to host as root.
   ```

   If you receive a failure message, enter the following command to correct permissions on your private key file:

   ```
   $ chmod 600 /<name-of-key>.pem
   ```

2. Copy your Vertica license to your primary VM. Save it in your home directory or other known location.

Install Software Dependencies for Vertica on Azure

In addition to the Vertica standard Package Dependencies, as the root user, you must install the following packages before you install Vertica on Azure:

- `pstack`
- `mcelog`
- `sysstat`
- `dialog`

Configure Storage

Use a dedicated Azure storage account for node storage.
Caution: Do not store your information on the root volume, especially your data and catalog directories. Storing information on the root volume may result in data loss.

When configuring your storage, make sure to use a supported file system. For details, see Recommended Storage Format Types.

**Attach Disk Containers to Virtual Machines (VMs)**

Using your previously created storage account, attach disk containers to your VMs that are appropriate to your needs.

For best performance, combine multiple storage volumes into RAID-0. For most RAID-0 implementations, attach 6 storage disk containers per VM.

**Combine Disk Containers for Storage**

If you are using RAID, follow these steps to create a RAID-0 drive on your VMs. The following example shows how you can create a RAID-0 volume named md10 from 6 individual volumes named:

- sdc
- sdd
- sde
- sdf
- sdg
- sdh

1. Form a RAID-0 volume using the mdadm utility:

   ```
   $ mdadm --create /dev/md10 --level 0 --raid-devices=6 /dev/sdc /dev/sdd /dev/sde /dev/sdf /dev/sdg /dev/sdh
   ```

2. Format the file system to be one that Vertica supports:

   ```
   $ mkfs.ext4 /dev/md10
   ```

3. Find the UUID on the newly-formed RAID volume using the blkid command. In the output, look for the device you assigned to the RAID volume:

   ```
   $ blkid
   ```
4. The RAID device can be renamed after a reboot. To ensure the filesystem is mounted in a predictable location on your VM, create a directory to use as the mount point to mount the filesystem. For example, you can choose to create a mount point named /data that you will use to store your database's catalog and data (or depot, if you are running Vertica in Eon Mode).

```bash
$ mkdir /data
```

5. Using a text editor, add an entry to the /etc/fstab file for the UUID of the filesystem and your mount point so it is mounted when the system boots:

```
UUID=RAID_UUID mountpoint ext4 defaults,nofail,nobarrier  0  2
```

For example, if you have the UUID shown in the previous example and the mount point /data, add the following line to the /etc/fstab file:

```
UUID=e7510a6f-2922-4413-b5fa-9dcd725967fd /data ext4 defaults,nofail,nobarrier 0 2
```

6. Mount the RAID filesystem you added to the fstab file. For example, to mount a mount point named /data use the command:

```bash
$ mount /data
```

7. Create folders for your Vertica data and catalog under your mount point.

```bash
$ mkdir /data/vertica
$ mkdir /data/vertica/data
```

If you are planning to run Vertica in Eon Mode, create a directory for the depot instead of data:

```bash
$ mkdir /data/vertica/depot
```

---

**Create a Swap File**

In addition to storage volumes to store your data, Vertica requires a swap volume or swap file to operate.
Create a swap file or swap volume of at least 2 GB. The following steps show how to create a swap file within Vertica on Azure:

1. Install devnull and swapfile:

   ```
   $ install -o root -g root -m 0600 /dev/null /swapfile
   ```

2. Create the swap file:

   ```
   $ dd if=/dev/zero of=/swapfile bs=1024 count=2048k
   ```

3. Prepare the swap file using mkswap:

   ```
   $ mkswap /swapfile
   ```

4. Use swapon to instruct Linux to swap on the swap file:

   ```
   $ swapon /swapfile
   ```

5. Persist the swapfile in FSTAB:

   ```
   $ echo "/swapfile        swap      swap      auto     0      0" >> /etc/fstab
   ```

Repeat the volume attachment, combination, and swap file creation procedures for each VM in your cluster.

**For More Information**

- [About Azure storage accounts](#)
- [Prepare Disk Storage Locations](#)

**Download Vertica**

To download the Vertica server appropriate for your operating system and license type, go to [www.vertica.com/download/vertica](http://www.vertica.com/download/vertica).

Run the rpm to extract the files.

After you complete the download and extraction, the next section describes how to use the `install vertica` script to form a cluster and install the Vertica database software.
Form a Cluster and Install Vertica

Use the `install_vertica` script to combine two or more individual VMs to form a cluster and install the Vertica database.

Before You Start

Before you run the `install_vertica` script:

- Check the Virtual Network page for a list of current VMs and their associated private IP addresses.
- Identify your storage location. The installer assumes that you have mounted your storage to `/vertica/data`. To specify another location, use the `--data-dir` argument.
- Identify your storage location. To create your database's data directory on mounted RAID drive, when you run the `install_vertica` script, provide `/vertica/data` as the value of the `--data-dir` option.

⚠️ **Caution:** Do not store your data on the root drive.

Combine Virtual Machines (VMs)

The following example shows how to combine VMs using the `install_vertica` script.

1. While connected to your primary node, construct the following command to combine your nodes into a cluster.

   ```bash
   $ sudo /opt/vertica/sbin/install_vertica --hosts 10.2.0.164,10.2.0.165,10.2.0.166 --db-user-password-disabled --point-to-point --data-dir /vertica/data --ssh-identity ~/<name-of-private-key>.pem --license <(license.file)
   ```

2. Substitute the IP addresses for your VMs and include your root key file name, if applicable.

3. Include the `--point-to-point` parameter to configure spread to use direct point-to-point communication between all Vertica nodes, as required for clusters on Azure when installing or updating Vertica.

4. If you are using Vertica Community Edition, which limits you to three nodes, specify `-L CE` with no license file.

5. After you combine your nodes, to reduce security risks, keep your key file in a secure
place—separate from your cluster—and delete your on-cluster key with the **shred** command:

```bash
$ shred examplekey.pem
```

**Important:**
You need your key file to perform future Vertica updates.

6. Reboot your cluster to complete the cluster formation and Vertica installation.

For complete information on the `install_vertica` script and its parameters, see Installing Vertica with the Installation Script.

**After Your Cluster is Up and Running**

Now that your cluster is configured and running, take these steps:

1. Log into one of the database nodes using the database administrator account (named `dbadmin` by default).
2. Create and start a database:
   - To create an **Enterprise Mode** database, see Create a Database Using Administration Tools.
   - To create an **Eon Mode** database, see Manually Creating an Eon Mode Database on Azure.
3. Configure your database. See Configuring the Database.

**Eon Mode Databases on Azure**

You can create an **Eon Mode** database on a cluster that is hosted on Azure. In this configuration, your database stores its data communally in Azure Blob storage. See Using Eon Mode to learn more about this database mode.

Eon Mode databases on Azure support some of the encryption features built into Azure Storage. You can use its encryption at rest feature transparently—you do not need to configure Vertica to take advantage of it. You can use Microsoft-managed or customer-managed keys for storage encryption. Vertica does not support Azure Storage's client-side
encryption and encryption using customer-provided keys. See the Azure Data Encryption at rest page in the Azure documentation for more information about the encryption at rest features in Azure Storage.

**Note:**
If you have an existing Enterprise Mode database, you can migrate it to an Eon Mode database running on Azure. See Migrating an Enterprise Database to Eon Mode.

This section explains how you create an Eon Mode database running on Azure cloud.

**Eon Mode on Azure Prerequisites**

Before you can create an Eon Mode database on Azure, you must have a database cluster and an Azure blob storage container to store your database's data.

**Cluster Requirements**

Before you can create an Eon Mode database on Azure, you must provision a cluster to host it. See Configuring Your Vertica Cluster for Eon Mode for suggestions on choosing VM configurations and the number of nodes your cluster should start with.

The Azure marketplace entry for Vertica currently does not support deploying a database in Eon Mode. Instead, manually deploy a cluster that can host your Eon Mode database. See Manually Deploy Vertica on Microsoft Azure for instructions on manually deploying a cluster on Azure.

**Storage Requirements**

An Eon Mode database on Azure stores its data communally in Azure blob storage. Vertica only supports block blob storage for communal data storage, not append or page blob storage.

You must create a storage path for Vertica to use exclusively. This path can be a blob container or a folder within a blob container. This path must not contain any files. If you attempt to create an Eon Mode database with a container or folder that contains files, admintools returns an error.
You pass Vertica a URI for the storage path using the azb:// schema. See Azure Blob Storage Object Store for the format of this URI.

You must also configure the storage container so Vertica is authorized to access it. Depending on authentication method you use, you may need to supply Vertica the with credentials to access the container. Vertica can use one of following methods to authenticate with the blob storage container:

- Using Azure managed identities. This authentication method is transparent—you do not need to add any authentication configuration information to Vertica. Vertica automatically uses the managed identity bound to the VMs it runs on to authenticate with the blob storage container. See the Azure AD-managed identities for Azure resources documentation page in the Azure documentation for more information.

If you provide credentials for either of the other two supported authentication methods, Vertica uses them instead of authenticating using a managed identity bound to your VM.

**Note:**
If your Azure VMs have more than one managed identity bound to them, you must tell Vertica which identity to use when authenticating with the blob storage container. Vertica gets the identity to use from a tag set on the VMs that it is running on.

On your VMs, create a tag with its key named VerticaManagedIdentityClientId and its value to the name of a managed identity bound to your VMs. See the Use tags to organize your Azure resources and management hierarchy page in the Azure documentation for more information.

- Using an account name and access key credentials for a service account that has full access to the blob storage container. In this case, you provide Vertica with the credentials when you create the Eon Mode database. See Creating an Authentication File for details.

- Using a shared access signature (SAS) that grants Vertica access to the storage container. See Grant limited access to Azure Storage resources using shared access signatures (SAS) in the Azure documentation. See Creating an Authentication File for details.

For details on how Vertica accesses Azure blob storage, see Azure Blob Storage Object Store.
Manually Creating an Eon Mode Database on Azure

Once you have met the cluster and storage requirements for using an Eon Mode database on Azure, you are ready to create an Eon Mode database. Use the admintools create_db tool to create your Eon Mode database.

Creating an Authentication File

If your database will use a managed identity to authenticate with the Azure storage container, you do not need to supply any additional configuration information to the create_db tool.

If your database will not use a managed identity, you must supply create_db with authentication information in a configuration file. It must contain at least the AzureStorageCredentials parameter that defines one or more account names and keys Vertica will use to access blob storage. It can also contain an AzureStorageEnpointConfig parameter that defines an alternate endpoint to use instead of the the default Azure host name. This option is useful if you are creating a test environment using an Azure storage emulator such as Azurite.

Important:
Vertica does not officially support the use of Azure storage emulators as a communal storage location.

The following table defines the values that can be set in these two parameters.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AzureStorageCredentials</td>
<td>Collection of JSON objects, each of which specifies connection credentials for one endpoint. This parameter takes precedence over Azure managed identities.</td>
</tr>
<tr>
<td></td>
<td>The collection must contain at least one object and may contain more. Each object must specify at least one of accountName or blobEndpoint and at least one of accountKey or sharedAccessSignature.</td>
</tr>
<tr>
<td></td>
<td>- accountName: if not specified, uses the label of blobEndpoint.</td>
</tr>
<tr>
<td>Parameter</td>
<td>Description</td>
</tr>
<tr>
<td>-----------</td>
<td>-------------</td>
</tr>
</tbody>
</table>
|   | - blobEndpoint: host name with optional port (host:port). If not specified, uses `account.blob.core.windows.net`.
|   | - accountKey: access key for the account or endpoint.
|   | - sharedAccessSignature: access token for finer-grained access control, if being used by the Azure endpoint. |
| AzureStorageEndpointConfig | Collection of JSON objects, each of which specifies configuration elements for one endpoint. Each object must specify at least one of accountName or blobEndpoint. |
|   | - accountName: if not specified, uses the label of blobEndpoint.
|   | - blobEndpoint: host name with optional port (host:port). If not specified, uses `account.blob.core.windows.net`.
|   | - protocol: HTTPS (default) or HTTP.
|   | - isMultiAccountEndpoint: true if the endpoint supports multiple accounts, false otherwise (default is false). To use multiple-account access, you must include the account name in the URI. If a URI path contains an account, this value is assumed to be true unless set to false explicitly. |

The authentication configuration file is a text file containing the configuration parameter names and their values. The values are in a JSON format. The name of this file is not important. The following examples use the file name `auth_params.conf`.

The following example is a configuration file for a storage account hosted on Azure. The storage account name is mystore, and the key value is a placeholder. In your own configuration file, you must provide the storage account's access key. You can find this value by right-clicking the storage account in the Azure Storage Explorer and selecting **Copy Primary Key**.

```
AzureStorageCredentials=[{"accountName": "mystore", "accountKey": "access-key"}]
```

The following example shows a configuration file that defines an account for a storage container hosted on the local system using the Azurite storage system. The user account and key are the "well-known" account provided by Azurite by default. Because this configuration uses an alternate storage endpoint, it also defines the
AzureStorageEndpointConfig parameter. In addition to reiterating the account name and endpoint definition, this example sets the protocol to the non-encrypted HTTP.

**Important:**
This example wraps the contents of the JSON values for clarity. In an actual configuration file, you **cannot wrap these values**. They must be on a single line.

```json
AzureStorageCredentials=[{"accountName": "devstoreaccount1", "blobEndpoint": "127.0.0.1:10000", "accountKey": "Eby8vdM02xNOcqFlqUwJPLlmEtlCDXJ1OUzFT50uSRZ6IFsuFq2UVErCz4I6tq/K1S2FP0tTr/KBHeksoGMyw==" }]
AzureStorageEndpointConfig=[{"accountName": "devstoreaccount1", "blobEndpoint": "127.0.0.1:10000", "protocol": "http"}]
```

**Creating the Eon Mode Database**

Use the admintools `create_db` tool to create your Eon Mode database. The required arguments you pass to this tool are:

<table>
<thead>
<tr>
<th>Argument</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>--communal-storage-location</td>
<td>The URI for the storage container Vertica will use for communal storage. This URI must use the <code>azb://</code> schema. See Azure Blob Storage Object Store for the format of this URI.</td>
</tr>
<tr>
<td>-x</td>
<td>The path to the file containing the authentication parameters Vertica needs to access the communal storage location. This argument is only required if your database will use a storage account name and key to authenticate with the storage container. If it is using a managed identity, you do not need to specify this argument.</td>
</tr>
<tr>
<td>--depot-path</td>
<td>The absolute path to store the depot on the nodes in the cluster.</td>
</tr>
<tr>
<td>--shard-count</td>
<td>The number of shards for the database. This is an integer number that is usually either a multiple of the number of nodes in your cluster, or an even</td>
</tr>
</tbody>
</table>
Some other common optional arguments for create_db are:

<table>
<thead>
<tr>
<th>Argument</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>-l</td>
<td>The absolute path to the Vertica license file to apply to the new database.</td>
</tr>
<tr>
<td>-p</td>
<td>The password for the new database.</td>
</tr>
<tr>
<td>--depot-size</td>
<td>The maximum size for the depot. Defaults to 60% of the filesystem containing the depot path.</td>
</tr>
</tbody>
</table>

You can specify the size in two ways:

- integer%: Percentage of filesystem's disk space to allocate.
- integer{K|M|G|T}: Amount of disk space to allocate for the depot in kilobytes, megabytes, gigabytes, or terabytes.

However you specify this value, the depot size cannot be more than 80 percent of disk space of the file system where the depot is stored.

To view all arguments for the create_db tool, run the command:

```
admintools -t create_db --help
```

The following example demonstrates creating an Eon Mode database with the following settings:

- Vertica will use a storage account named mystore.
- The communal data will be stored in a directory named verticadb located in a storage container named db_blobs.
- The authentication information Vertica needs to access the storage container is in the file named auth_params.conf in the current directory. The contents of this file are shown in the first example under Creating an Authentication File.
- The hostnames of the nodes in the cluster are node01 through node03.

```
$ admintools -t create_db \
--communal-storage-location=azb://mystore/db_blobs/verticadb \
```
Vertica on Google Cloud Platform

Welcome to the Vertica on Google Cloud Platform guide.

Vertica provides two templates to help you deploy a Vertica database running in either Enterprise Mode or Eon Mode. See Vertica Architecture: Eon Versus Enterprise Mode for more information about these modes.

The following topics describe several deployment methods to run Vertica on Google Cloud Platform.

Supported GCP Machine Types

Vertica Analytic Database supports a range of machine types, each optimized for different workloads. When you deploy your Vertica Analytic Database cluster to the Google Cloud Platform (GCP), different machine types are available depending on how you provision your database.

Note:
Some machine types are not available across all regions.

The sections below list the GCP machine types that Vertica supports for Vertica cluster hosts, and for use in Management Console. For details on the configuration of the machine type options, see the Google Cloud documentation's Machine types page.

Machine Types Available for MC Hosts

Vertica supports all N1, N2, E2, M1, M2, and C2 machine types to deploy an instance for running the Vertica Management Console.

Tip:
In most cases, 8 vCPUs are sufficient when selecting a machine type for running the Management Console.
Machine Types Available for Vertica Database Cluster Hosts

Vertica supports all N1, N2, E2, M1, M2, and C2 machine types to deploy cluster hosts.

Machine Types for Vertica Database Cluster Hosts Provisioned from MC

The table below lists the GCP machine types that Vertica supports when you provision your cluster from Management Console.

<table>
<thead>
<tr>
<th>Machine Type</th>
<th>Machine Name</th>
</tr>
</thead>
<tbody>
<tr>
<td>N1 standard</td>
<td>n1-standard-16</td>
</tr>
<tr>
<td></td>
<td>n1-standard-32</td>
</tr>
<tr>
<td></td>
<td>n1-standard-64</td>
</tr>
<tr>
<td>N1 high-memory</td>
<td>n1-highmem-16</td>
</tr>
<tr>
<td></td>
<td>n1-highmem-32</td>
</tr>
<tr>
<td></td>
<td>n1-highmem-64</td>
</tr>
<tr>
<td>N2 standard</td>
<td>n2-standard-16</td>
</tr>
<tr>
<td></td>
<td>n2-standard-32</td>
</tr>
<tr>
<td></td>
<td>n2-standard-48</td>
</tr>
<tr>
<td></td>
<td>n2-standard-64</td>
</tr>
<tr>
<td>N2 high-memory</td>
<td>n2-highmem-16</td>
</tr>
<tr>
<td></td>
<td>n2-highmem-32</td>
</tr>
<tr>
<td></td>
<td>n2-highmem-48</td>
</tr>
<tr>
<td></td>
<td>n2-highmem-64</td>
</tr>
</tbody>
</table>
Deploy Vertica from the Google Cloud Marketplace

The Vertica entries in the Google Cloud Launcher Marketplace let you quickly deploy a Vertica cluster in the Google Cloud Platform (GCP). Currently, there are three entries that let you select the database mode and the license you want to use:

- The Enterprise Mode launcher deploys a Vertica database with 3 or more nodes, plus an additional VM running the Management Console (MC). See Deploying an Enterprise Mode Database in GCP from the Marketplace for more information.
- The Eon Mode BYOL (bring your own license) launcher deploys a single instance running the MC. You use this MC instance to deploy a Vertica database running on Eon Mode. This database has a community license applied to it initially. You can later upgrade it to a license you have obtained from Vertica. See Deploying an Eon Mode Database On GCP for more information.
- The Eon Mode BTH (by the hour) launcher also deploys a single instance running the MC that you use to deploy a database. This database has a by-the-hour license applied to it. Instead of paying for a license up front, you pay an hourly fee that covers both Vertica and running your instances. The BTH license is automatically applied to all clusters you create using a BTH MC instance. See Deploying an Eon Mode Database On GCP for more information. If you choose, you can upgrade this hourly license to a longer-term license you purchase from Vertica. To move a BTH cluster to a BYOL license, follow the instructions in Moving a Cloud Installation from By the Hour (BTH) to Bring Your Own License (BYOL) for more information.

Deploying an Enterprise Mode Database in GCP from the Marketplace

The Vertica Cloud Launcher solution creates a Vertica Enterprise Mode database. The solution includes the Vertica Management Console (MC) as the primary UI for you to get started.

The launcher automatically creates a database named vdb using the Community Edition (CE) license. The CE license is limited to a maximum of 3 nodes. You can tell the launcher to add more than 3 nodes to your deployment. In this case, it uses the first three nodes in the cluster to create the database. The remaining nodes are not part of the database, but
are added to your cluster. To add these nodes to your database, you must replace the Community Edition license with a license key you receive from the Software Entitlement support site. See Managing Licenses for more information.

After the launcher creates the initial database, it configures the MC to attach to that database automatically.

**Configure the Vertica Cloud Launcher Solution**

To get started with a deployment of Vertica from the Google Cloud Launcher, search for the Vertica Data Warehouse, Enterprise Mode entry.

Follow these steps:

1. From the listing page, click **LAUNCH**.
2. On the New Vertica Analytics Platform deployment page, enter the following information:

   - **Deployment name**—Each deployment must have a unique name. That name is used as the prefix for the names of all VMs created during the deployment. The deployment name can only contain lowercase characters, numbers, and dashes. The name must start with a lowercase letter and cannot end with a dash.

   - **Zone**—GCP breaks its cloud data centers into regions and zones. *Regions* are a collection of zones in the same geographical location. *Zones* are collections of compute resources, which vary from zone to zone.

   For best results, pick the zone in your designated region that supports the latest Intel CPUs. For a complete listing of regions and zones, including supported processors, see **Regions and Zones**.

   - **Under Vertica Management Console**, choose the configuration for the virtual machine that will run the Management Console. The Vertica Analytics Platform in Cloud Launcher always deploys the Vertica Management Console (MC) as part of the solution.

   The default machine type for MC is sufficient for most deployments. You can choose another machine type that better suits any additional purposes, such serving as a target node for backups, data transformation, or additional management tools.

   - **Node count for Vertica Cluster**—The total number of VMs you want to deploy in the Vertica Cluster. The default is 3.
Note:
As mentioned above, the Cloud Launcher automatically deploys the Vertica Community Edition license, which limits the database to 3 nodes and up to 1 TB in raw data. Any additional nodes will be part of your database cluster, but will not be part of your database.

If you intend to use the Community Edition license for your database, leave the setting at 3. Otherwise, you would add nodes that will sit idle and cost you money without being part of your database.

- **Machine type for Vertica Cluster nodes**—The Cloud Launcher builds each node in the cluster using the same machine type. Modify the machine type for your nodes based on the workloads you expect your database to handle. See [Supported GCP Machine Types](#) for more information.

- **Data disk type**—GCP offers two types of persistent disk storage: Standard and SSD. The costs associated with Standard are less, but the performance of SSD storage is much better. Vertica recommends you use SSD storage. For more information on Standard and SSD persistent disks, see [Storage Options](#).

- **Disk size in GB**—Disk performance is directly tied to the disk size in GCP. The default value of 2000 GBs (2 TB) is the minimum disk size for SSD persistent disks that allows maximum throughput.

  If you select a smaller disk size, the throughput performance decreases. If you select a large disk size, the performance remains the same as the 2 TB option.

- **Network**—VMs in GCP must exist on a virtual private cloud (VPC). When you created your GCP account, a default VPC was created. Create additional VPCs to isolate solutions or projects from one another. The Vertica Analytics Platform creates all the nodes in the same VPC.

- **Subnetwork**—Just as a GCP account may have multiple VPCs, each VPC may also have multiple subnets. Use additional subnets to group or isolate solutions within the same VPC.

- **Firewall**—If you want your MC to be accessible via the internet, check the Allow access to the Management Console from the Internet box. Vertica recommends you protect your MC using a firewall that restricts access to just the IP addresses of users that need to access it. You can enter one or more comma-separated CIDR address ranges.
After you have entered all the required information, click **Deploy** to begin the deployment process.

**Monitor the Deployment**

After the deployment begins, Google Cloud Launcher automatically opens the Deployment Manager page that displays the status of the deployment. Items that are still being processed have a spinning circle to the left of them and the text is a light gray color. Items that have been created are dark gray in color, with an icon designating that resource type on the left.

After the deployment completes, a green check mark appears next to the deployment name in the upper left-hand section of the screen.

**Accessing the Cluster After Deployment**

After the deployment completes, the right-hand section of the screen displays the following information:

- **dbadmin password**—A randomly generated password for the dbadmin account on the nodes. For security reasons, change the dbadmin password when you first log in to one of the Vertica cluster nodes.
- **mcadmin password**—A randomly generated password for the mcadmin account for accessing the Management Console. For security reasons, change the mcadmin password after you first log in to the MC.
- **Vertica Node 1 IP address**—The external IP address for the first node in the Vertica cluster is exposed here so that you can connect to the VM using a standard SSH client. To access the MC, press the **Access Vertica MC** button in the **Get Started** section of the dialog box. Copy the mcadmin password and paste it when asked.

For more information on using the MC, see [Using Management Console](#).

**Access the Cluster Nodes**

There are two ways to access the cluster nodes directly:

- Use GCP’s integrated SSH shell by selecting the SSH button in the **Get Started** section. This shell opens a pop-up in your browser that runs GCP’s web-based SSH client. You
are automatically logged on as the user you authenticated as in the GCP environment.

After you have access to the first Vertica cluster node, execute the `su dbadmin` command, and authenticate using the dbadmin password.

- In addition, use other standard SSH clients to connect directly to the first Vertica cluster node. Use the Vertica Node 1 IP address listed on the screen as the dbadmin user, and authenticate with the dbadmin password.

Follow the on-screen directions to log in using the mcadmin account and accept the EULA. After you've been authenticated, access the initial database by clicking the vdb icon (looks like a green cylinder) in the Recent Databases section.

### Eon Mode Databases on GCP

You deploy an Eon Mode database to GCP using Google Cloud Platform Launcher to deploy a Management Console (MC) instance. You then use the MC instance to provision and deploy an Eon Mode database.

### GCP Eon Mode Instance Recommendations

When you use the MC to deploy an Eon Mode database to the Google Cloud Platform (GCP), you choose the instance type to deploy as the database's nodes. The default instance settings in the MC are the more conservative option (currently, n1-standard-16). They are sufficient for most workloads. However, you may choose instances with more memory (such as n1-highmem-16) if your queries perform complex joins that may otherwise spill to disk. You can also choose instances with more cores (such as n1-standard-32), if you perform highly-complex compute-intensive analysis. The following links provide additional information about GCP machine type instances and Vertica:

- **Machine types**: Google Cloud's documentation that describes configuration details for each instance option.
- **Supported GCP Machine Types**: Available machine types when deploying Vertica to GCP.
- **Eon Mode Volume Configuration Defaults for GCP**: Details about Vertica's default volume configurations.

The more powerful instance you choose, the higher the cost per hour. You need to balance whether you want to use fewer, higher-powered but more expensive instances vs. relying
on more lower-powered instances that cost less. Thanks to Eon Mode’s elasticity, if you choose to use the less-powerful instances, you can always add more nodes to meet peak demands. When you reduce the number of instances to a minimum during off-peak times, you'll spend less than if you had a similar number of more-powerful instances.

Storage Options

The MC's deployment wizard also asks you to select the type of local storage for your instances. You can select different options for each type of local storage that Vertica uses: the catalog, the depot, and temporary space. For all of these storage locations, you choose the type of disks to use (standard vs. SSD). You will see the best performance with SSD disks. However, SSD disks cost more.

For the depot, you also choose whether to use local or persistent disks. The local option is faster, as it resides directly on the virtual machine host. However, whenever you shut down the node, this storage is wiped clean. The persistent storage is slower than the local option, as it is not stored directly on the machine hosting the instance. However, it is not wiped out whenever you shut down the instance. See the Google Cloud documentation's Storage options page for more information.

Which of these options you choose depends on how much depot warming the nodes must perform when starting. If the content of your node's depots change little over time (or you tend to frequently start and stop instances), using persistent storage makes sense. In this case, the depot's warming period will be shorter because most of the data the node needs to participate in queries may still be in its depot when it starts. It will perform fewer fetches of data from communal storage while participating in queries.

If your working data set is rapidly changing or you tend to leave nodes stopped for extended periods of time, your best choice is usually to use local storage. In this scenario, the data in the node's depot when it restarts is usually stale. To participate in queries, the node must fetch much of the data it needs from communal storage, resulting in slower performance until it has warmed its depot. Using local ephemeral storage makes sense here, because you will get the benefit of having faster depot storage. Because your nodes have to warm their depots anyhow, there is less of a downside of having the depot on ephemeral storage.

For general guidelines on scaling your cluster for Eon Mode database, see Configuring Your Vertica Cluster for Eon Mode.

Eon Mode on GCP Prerequisites

Before deploying an Eon Mode database on GCP, you must take several steps:
Review the default service account's permissions for your GCP project.
Create an HMAC key to use when creating your cluster.
Create a communal storage location.

Checking the Service Account Permissions

Service accounts allow automated processes to authenticate with GCP. The Eon Mode database deployment process uses the project's service account for your GCP project to deploy instances. When you create a new project, GCP automatically creates the service account for the project and grants it the IAM roles/editor role. See the Google Cloud documentation's Understanding roles for details about this role. This role lets the account create resources from the Marketplace. When you create an instance of the Management Console (MC), the MC is able to use the account to deploy further resources, such as provisioning instances for an Eon Mode database.

GCP lets you change the role of your project's service account. You might choose to change its role to a less privileged one to mitigate the risk of security abuses. However, if you reduce the privileges of the service account, provisioning an Eon Mode database or additional nodes via the MC may fail. Be sure that the service account associated with the project you will use to deploy your Eon Mode database has at least editor privileges.

For more information, see the Google Cloud documentation's Understanding service accounts page.

Creating an HMAC Key

Vertica uses a hash-based message authentication code (HMAC) key to authenticate requests to access the communal storage location. This key has two parts: an access ID and a secret. When you create an Eon Mode database in GCP, you provide both parts of an HMAC key for the nodes to use to access communal storage.

To create an HMAC key:

1. Log in to your Google Cloud account.
2. If the name of the project you will use to create your database does not appear in the top banner, click the dropdown and select the correct project.
3. In the navigation menu in the upper-left corner, under the Storage heading, click Storage and select Settings.
4. In the Settings page, click Interoperability.
5. Scroll to the bottom of the page and find the User account HMAC heading.
6. Unless you have already set a default project, you will see the message stating you haven’t set a default project for your user account yet. Click the **Set project-id as default project** button to choose the current project as your default for interoperability.

![User account HMAC](image)

**User account HMAC**

You can authenticate yourself when making requests to Cloud Storage using access keys tied to your user account instead of your organization’s service accounts. With this option, members of your organization maintain their own access keys and set their own default projects.

**Default project for interoperable access**

The Interoperability API uses your default project for all create bucket and list bucket requests made from your user account.

![Message](image)

You haven't set a default project for your user account yet

![Button](image)

**Set myproject-1338 as default project**

---

**Note:**

The project ID appears in the button label, not the project name.

---

7. Under Access keys for your user account, click **Create a key**.
8. Your new access key and secret appear in the HMAC key list. You will need them when you create your Eon Mode database. You can copy them to a handy location (such as a text editor) or leave a browser tab open to this page while you use another tab or window to create your database. These keys remain available on this page, so you do not need to worry about saving them elsewhere.

---

**Caution:**

It is vital that you protect the security of your HMAC key. It can grant others access to your Eon Mode database's communal storage location. This means they could access all of the data in your database. Do not write the HMAC key anyplace where it may be exposed, such as email, shared folders, or similar insecure locations.
Creating a Communal Storage Location

Your Eon Mode database needs a storage location for its communal storage. Eon Mode databases running on GCP use Google Cloud Storage (GCS) for their communal storage location. When you create your new Eon Mode database, you will supply the MC's wizard with a GCS URL for the storage location.

This location needs to meet the following criteria:

- The URL must include at least a bucket name. You can use one or more levels of folders, as well. For example, the following GCS URLs are valid:
  - gs://verticabucket/mydatabase
  - gs://verticabucket/databases/mydatabase
  - gs://verticabucket
  Multiple databases can share the same bucket, as long as each has its own folder.

- If provided, the lowest-level folder in the URL must not already exist. For example, in the GCS URL gs://verticabucket/databases/mydatabase, the bucket named verticabucket and the directory named databases must exist. The subdirectory named mydatabase must not exist. The Vertica install process expects to create the final folder itself. If the folder already exists, the installation process fails.

  **Note:**
  If you have a communal storage location that already contains data from a previous Eon Mode database that you want to access, use the revive process, rather than installing a new database. See [Stopping, Starting, Terminating, and Reviving Eon Mode Database Clusters](#) for details.

- The permissions on the bucket must be set to allow the service account read, write, and delete privileges on the bucket. The best role to assign to the user to gain these permissions is [Storage Object Admin](#).
- To prevent performance issues, the bucket must be in the same region as all of the nodes running the Eon Mode database.
- If you create the database through the admintools UI, you must set gcsauth as a bootstrap parameter in admintools.conf. For more information on this and other GCP parameters, see [Google Cloud Storage Parameters](#).

```ini
[BootstrapParameters]
gcsauth = ID:secret
```
**Deploying an Eon Mode Database On GCP**

Once you have taken the steps listed in [Eon Mode on GCP Prerequisites](#), you are ready to deploy an Eon Mode database in GCP. This process has two steps: deploy a single-node MC instance, then use the MC to provision and deploy a database. The following topics explain these steps.

### Deploying an MC Instance to GCP for Eon Mode

To deploy an MC instance that is able to deploy Eon Mode databases to GCP:

1. Log into your GCP account, if you are not currently logged in.
2. Verify that the name of the GCP project you want to use for the deployment appears in the top banner. If it does not, click the down arrow next to the project name and select the correct project.
3. Click the navigation menu icon in the top left of the page and select **Marketplace**.
4. In the **Search for solutions** box, type Vertica Eon Mode and press enter.
5. Click the search result for **Vertica Data Warehouse, Eon Mode**. There are two license options: by the hour (BTH) and bring your own license (BYOL). See [Deploy Vertica from the Google Cloud Marketplace](#) for more information on this license choice.
6. Click **Launch** on the license option you prefer.
7. On the following page, fill in the fields to configure your MC instance:

   - **Deployment name** identifies your MC deployment in the GCP Deployments page.
   - **Zone** is the location where the virtual machine running your MC instance will be deployed. Make this the same location where your communal storage bucket is located.
   - **Machine Type** is the virtual hardware configuration of the instance that will run the MC. The default values here are "middle of the road" settings which are sufficient for most use cases. If you are doing a small proof-of-concept deployment, you can choose a less powerful instance to save some money. If you are planning on deploying multiple large databases, consider increasing the count of virtual CPUs and RAM.

For details about Vertica's default volume configurations, see [Eon Mode Volume Configuration Defaults for GCP](#).
- **User Name for Access to MC** is the administrator username for the MC. You can customize this if you want.
- **Network** and **Subnetwork** are the virtual private cloud (VPC) network and subnet within that network you want your MC instance and your Vertica nodes to use. This setting does not affect your MC's external network address. If you want to isolate your Vertica cluster from other GCP instances in your project, create a custom VPC network and optionally a subnet in your GCP project and select them in these fields. See the Google Cloud documentation's [VPC network overview](#) page for more information.
- **Firewall** enables access to the MC from the internet by opening port 5450 in the firewall. You can choose to not open this port by clearing the [I accept opening a port in the firewall (5450) for Vertica](#) box. However, if you do not open the port in the firewall, your MC instance will only be accessible from within the VPC network. Not opening the port will make accessing your MC instance much harder.
- **Source IP ranges for MC traffic**: If you choose to open the MC for external access, add one or more or more CIDR address ranges to this box for network addresses that you want to be able to access to the MC.

  ![](Caution: Make the address ranges as limited as possible to reduce the chances of unauthorized access to your MC instance.

8. Click the **Deploy** button to start the deployment of your MC instance.

The deployment process will take several minutes.

## Connect and Log Into the MC Instance

After the deployment process is finished, the Deployment Manager page for your MC instance contains links to connect to the MC via your browser or ssh.
To connect to the MC instance:

1. The MC administrator user has a randomly-generated password that you need to log into the MC. Copy the password in the **MC Admin Password** field to the clipboard.
2. Click **Access Management Console**.
3. A new browser tab or window opens, showing you a page titled Redirection Notice. Click the link for the MC URL to continue to the MC login page.
4. Your browser will likely show you a security warning. The MC instance uses a self-signed security certificate. Most browsers treat these certificates as a security hazard because they cannot verify their origin. You can safely ignore this warning and continue. In most browsers, click the **Advanced** button on the warning page, and select the option to proceed. In Chrome, this is a link titled **Proceed to xxx.xxx.xxx.xxx (unsafe)**. In Firefox, it is a button labeled **Accept the Risk and Continue**.
5. At the login screen, enter the MC administrator user name into the **Username** box. This user name is mcadmin, unless you changed the user name in the MC deployment form.
6. Paste the automatically-generated password you copied from the MC Admin Password field earlier into the **Password** box.
7. Click **Log In**.

Once you have logged into the MC, change the MC administrator account's password.

**Caution:**
The automatically-generated password appears on the MC instance's deployment page and can be revealed in several locations in the deployment logs. Failure to change this password can lead to unauthorized access to your MC instance.
To change the password:

1. On the home page of the MC, under the MC Tools section, click **MC Settings**.
2. In the left-hand menu, click **User Management**.
3. Select the entry for the MC administrator account and click **Edit**.
4. Click either the **Generate new** or **Edit password** button to change the password. If you click the **Generate new** button, be sure to save the automatically-generated password in a safe location. If you click **Edit password**, you are prompted to enter a new password twice.
5. Click **Save** to update the password.

Now that you have created your MC instance, you are ready to deploy a Vertica Eon Mode cluster. See Using the MC to Provision and Create an Eon Mode Database in GCP.

**Using the MC to Provision and Create an Eon Mode Database in GCP**

After you deploy an MC instance to GCP, use it to deploy an Eon Mode database.

**Note:**
Currently, the admintools menu-based interface does not support creating an Eon Mode database on GCP.

To use the MC to provision and deploy a new Eon Mode database on GCP:

1. From the MC home screen, click **Create new database** to launch the Create a Vertica Cluster on Google Cloud wizard.
2. On the first page of the wizard enter the following information:

   - **Google Cloud Storage HMAC Access Key** and **HMAC Secret Key**: Copy and paste the HMAC access key and secret you created earlier. You find these values on the Interoperability tab of the of the Storage Settings page. See Eon Mode on GCP Prerequisites for details.
   - **Zone**: This value defaults to the zone containing your MC instance. Make this value the same as the zone containing the Google Cloud Storage bucket that your database will use for communal storage.

   **Caution:**
   - You will see significant performance issues if you choose different zones for cluster instances, storage, or the MC.
CIDR Range: The IP address range for clients to whom you want to grant access to your database. Make this range as restrictive as possible to limit access to your database.

3. Click Next, and supply the following information:

- **Vertica Database Name**: the name for your new database. See [Creating a Database Name and Password](#) for database name requirements.
- **Vertica Version**: select the desired Vertica database version. You can select from the latest hotfix of recent Vertica releases. For each database version, you can also select the operating system.
- **Vertica Database User Name**: the name of the database superuser. This name defaults to dbadmin, but you can enter another user name here.
- **Password** and **Confirm Password**: Enter a password for the database superuser account.
- **Database Size**: The number of nodes in your initial database. If you specify more than three nodes here, you must supply a valid Vertica license file in the Vertica License field (below).
- **Vertica License**: Click Browse to locate and upload your Vertica license key file. If you do not supply a license key file here, the wizard deploys your database with a Vertica Community Edition license. This license has a three node limit, so the value in the Database Size filed cannot be larger than 3 if you do not supply a license. If you use a Community Edition license for your deployment, you can upgrade the license later to expand your cluster load more than 1TB of data. See [Managing Licenses](#) for more information.

**Note:**
This field does not appear if you created your MC instance using a by-the-hour (BTH) launcher. The BTH license is automatically applied to all clusters you create using a BTH MC instance. For a by-the-hour license, cloud vendors charge the customer for licensed Vertica usage along with their cloud infrastructure charges.

- **Load example data**: Check this box if you want your deployed database to load some example clickstream data. This option is useful if you are testing features and just want some preloaded data in the database to query.

4. Click **Next** and supply the following information:

- **Instance Type**: the specifications of the virtual machine instances the MC will use to deploy your database nodes. See the Google Cloud documentation's
Machine types page for details of each instance type. Also see GCP Eon Mode Instance Recommendations.

- **Database Depot Path and Disk Type**: the local mount point for the depot, and the type and number of local disks dedicated to the depot for each node. You cannot change the mount path for the depot. The disks you select in the Disk Type field are only used to store the depot. On the next page of the wizard, you will configure disks for the catalog and temporary disk space. You will see the best performance when using SSD disks, although at a higher cost. You can choose to use faster local storage for your depot. However, local storage is ephemeral—GCP wipes the disk clean whenever you stop the instance. This means each time you start a node, it will have to warm its depot from scratch, rather than taking advantage of any still-current data in its depot. See the Google Cloud documentation's Storage options page for more information about the local disk options.

- **Volume Size**: the amount of disk space available on each disk attached to each node in your cluster. This field shows you the total disk space available per node in your cluster. For the best practices on choosing the amount of disk space for your nodes, see Configuring Your Vertica Cluster for Eon Mode.

- **Data Segmentation Shards**: sets the number of shards in your database. After you set this value, you cannot change it later. See Configuring Your Vertica Cluster for Eon Mode for recommendations. The default value is based on the number of nodes you entered in the Database size you specified earlier. It is usually sufficient, unless you anticipate greatly expanding your cluster beyond your initial node count.

- **Communal Location**: a Google Cloud Storage URL that specifies where to store your database's communal data. See Eon Mode on GCP Prerequisites for requirements.

- **Instance IP settings**: specify whether the nodes in your database will have static or ephemeral network addresses that are accessible from the internet, or addresses that are only accessible from within the internal virtual network.

5. Click Next. The wizard validates your communal storage location URL. If there is a problem with the URL you entered, it displays an error message and prompts you to fix the URL.

After your communal storage URL passes validation, fill in the following information:

- **Database Catalog Path, Disk Type, and Size (GB) per Available Node**: the mount point disk type, and disk size for the local copy of the database catalog on each node. You cannot edit the mount point. You choose the type of local disk to use for the catalog, and its size. You can only choose persistent disk storage for the catalog. SSD drives are faster, but more expensive than standard disks. The default setting for the disk size is adequate for most
medium size databases. Increase the size if you anticipate maintaining a large database.

- **Database Temp Path, Disk Type, and Size (GB) per Available Node**: the mount point disk type, and disk size for the temporary storage space on each node. You cannot edit the mount point. You choose the type of local disk to use, and its size. You can only choose persistent disk storage for the temporary disk space. SSD drives are faster, but more expensive than standard disks. The default setting is adequate for most databases. Consider increasing the temporary space if you perform many complex merges that spill to disk.

- **Label Instances**: check this box to enable adding labels to your node's instances. Many organizations use labels to organize, track responsibility, and assign costs for instances. See the Google Cloud documentation's [Labeling resources](https://cloud.google.com/) page for more information. If you choose to add labels, enter the label name and value, and click **Add**.

6. Click **Next**. Review the summary of all your database settings. If you need to make a correction, use the Back button to step back to previous pages of the wizard.

7. When you are satisfied with the database settings, check **Accept terms and conditions** and click **Create**.

The process of provisioning and creating the database takes several minutes. After it completes successfully, the MC displays a **Get Started** button. This button leads to a page of useful links for getting started with your new database.

- Stopping and Starting an Eon Mode Cluster
- Reviving an Eon Mode Database Cluster

**Manually Deploying an Enterprise Mode Database on GCP**

Before you create your Vertica cluster in Google Cloud Platform (GCP) using manual steps, you must create a virtual machine (VM) instance from the Compute Engine section of GCP.
Configure and Launch a New Instance

All VM instances that you create should be launched in the same virtual public cloud (VPC).

To configure and launch a new VM instance, follow these instructions:

1. From within the Compute Engine section of GCP, from the menu on the left-hand side of the screen, select **VM Instances**.
   
   GCP displays all the VM instances that you have created so far.

2. Select the **CREATE INSTANCE** link.
3. Enter a name for the new instance.
4. Select the zone where you plan to deploy the instance.
   
   GCP breaks its cloud data centers down by regions and zones. **Regions** are a collection of zones that are all in the same geographical location. Zones are collections of compute resources, which vary from zone to zone. Always pick the zone in your designated region that supports the latest Intel CPUs.
   
   For a complete listing of regions and zones, including supported processors, see **Regions and Zones**.

5. Select a machine type.
   
   GCE offers many different types of VM instances. For best results, only deploy Vertica on VM instances with 8 vCPUs or more and at least 30 GB of RAM.

6. Select the boot disk (image).
   
   You create VM instances from a public or custom image. If you are starting with Vertica in GCP for the first time, select either the CentOS 7 or RHEL 7 public image. Those images have been tested thoroughly with Vertica.
   
   For more information about deploying a VM instance, see **Creating and Starting an Instance**.

After you have configured the VM instance to be used as a Vertica cluster node, GCP allows you to convert that instance into a custom image. Doing so allows you to deploy multiple versions of that VM instance; each VM instance is identical except for the node name and IP address.

For more information about creating a custom image, see **Creating, Deleting, and Deprecating Custom Images**.
Connect to a Virtual Machine

Before you can connect to any of the VMs you created, you must first identify the external IP address. The VM instance section of GCP contains a list of all currently deployed VMs and their associated external IP addresses.

Connect to Your VM

To connect to your VM, complete the following tasks:

1. Connect to your VM using SSH with the external IP address you created in the configuration steps.
2. Authenticate using the credentials and SSH key that you provided to your GCP account upon creation.

Connect to Other VMs

To connect to other virtual machines in your virtual network:

1. Use SSH to connect to your publicly connected VM.
2. Use SSH again from that VM to connect through the private IP addresses of your other VMs.

Because GCP forces the use of private key authentication, you may need to move your key file to the root directory of your publicly connected VM. Then, use SSH to connect to other VMs in your virtual network.

Prepare the Virtual Machines

After you create your VMs, you need to prepare them for cluster formation.

Add the Vertica License and Private Key

Prepare your nodes by adding your private key (if you are using one) to each node and to your Vertica license. The following steps assume that the initial user you configured is the
DBADMIN user:

1. As the DBADMIN user, copy your private key file from where you saved it locally onto your primary node.

   Depending upon the procedure you use to copy the file, the permissions on the file may change. If permissions change, the install_vertica script fails with a message similar to the following:

   ```
   Failed Login Validation 10.0.2.158, cannot resolve or connect to host as root.
   ```

   If you see the previous failure message, enter the following command to correct permissions on your private key file:

   ```
   $ chmod 600 /<name-of-key>.pem
   ```

2. Copy your Vertica license to your primary VM. Save it in your home directory or other known location.

Install Software Dependencies for Vertica on GCP

In addition to the Vertica standard package dependencies, as the root user, you must install the following packages before you install Vertica:

- `pstack`
- `mcelog`
- `sysstat`
- `dialog`

Configure Storage

For best disk performance in GCP, Vertica recommends customers use SSD persistent storage, configured to at least 2TB (2000 GB) in size. Disk performance is directly tied to the disk size in GCP. 2000 GBs (2TB) is the minimum disk size for SSD persistent disks that allows maximum throughput.

⚠️ Caution:
Do not store your information on the root volume, especially in your data and catalog directories. Storing information on the root volume may result in data loss.
When configuring your storage, make sure to use a supported file system. See Recommended Storage Format Types for details.

Create a Swap File

In addition to storage volumes to store your data, Vertica requires a swap volume or swap file for the setup script to complete.

Create a swap file or swap volume of at least 2 GB. The following steps show how to create a swap file within Vertica on GCP:

1. Install the devnull and swapfile files:

   ```
   $ install -o root -g root -m 0600 /dev/null /swapfile
   ```

2. Create the swap file:

   ```
   $ dd if=/dev/zero of=/swapfile bs=1024 count=2048k
   ```

3. Prepare the swap file using mkswap:

   ```
   $ mkswap /swapfile
   ```

4. Use swapon to instruct Linux to swap on the swap file:

   ```
   $ swapon /swapfile
   ```

5. Persist the swapfile in FSTAB:

   ```
   $ echo "/swapfile swap swap auto 0 0" >> /etc/fstab
   ```

6. Repeat the volume attachment, combination, and swap file creation procedures for each VM in your cluster.

Download Vertica

To download the Vertica server appropriate for your operating system and license type, follow the steps in described in Download and Install the Vertica Server Package.

After you complete the download and extraction, use the install_vertica script to form a cluster and install the Vertica database software, as described in the next section.
Form a Cluster and Install Vertica

Use the install_vertica script to combine two or more individual VMs to form a cluster and install your Vertica database.

Before you run the install_vertica script, follow these steps:

1. Check the VM Instances page of the Compute Engine section on GCP to locate a list of current VMs and their associated internal IP addresses.
2. Identify your storage location on your VMs. The installer assumes that you have mounted your storage to /home/dbadmin. To specify another location, use the --data-dir argument.

**Caution:**
Do not store your data on the root drive.

The following steps show how to combine virtual machines (VMs) into a cluster using the install_vertica script:

1. While connected to your primary node, construct the following command to combine your nodes into a cluster.

   ```
   $ sudo /opt/vertica/sbin/install_vertica --hosts 10.2.0.164,10.2.0.165,10.2.0.166 --dba-user-password-disabled --point-to-point --data-dir /vertica/data --ssh-identity ~/name-of-private-key.pem --license <license.file>
   ```

2. Substitute the IP addresses for your VMs, and include your root key file name, if applicable.
3. Include the --point-to-point parameter to configure spread to use direct point-to-point communication among all Vertica nodes, as required for clusters on GCP when installing or updating Vertica.
4. If you are using Vertica Community Edition, which limits you to three nodes, specify -L CE with no license file.
5. After you combine your nodes, to reduce security risks, keep your key file in a secure place—separate from your cluster—and delete your on-cluster key with the shred command:

   ```
   $ shred examplekey.pem
   ```

**Important:**
You need your key file to perform future Vertica updates.
For complete information about the install_vertica script and its parameters, see Installing Vertica with the Installation Script.

After Your Cluster is Up and Running

Now that your cluster is configured and running, and Vertica is running, take these steps:

1. Create a database. See Creating a Database for details.
2. When you installed Vertica, a database administrator user was created with the DBADMIN role (usually named dbadmin). Use this account to create and start a database.
3. See Configuring the Database for important database configuration steps.

Moving a Cloud Installation from By the Hour (BTH) to Bring Your Own License (BYOL)

Vertica offers two licensing options for some of the entries in the Amazon Web Services Marketplace and Google Cloud Marketplace:

- **Bring Your Own License (BYOL)**: a long-term license that you obtain through an online licensing portal. These deployments also work with a free Community Edition license. Vertica uses a community license automatically if you do not install a license that you purchased. (For more about Vertica licenses, see Managing Licenses and Understanding Vertica Licenses.)

- **Vertica by the Hour (BTH)**: a pay-as-you-go environment where you are charged an hourly fee for both the use of Vertica and the cost of the instances it runs on. The Vertica by the hour deployment offers an alternative to purchasing a term license. If you want to crunch large volumes of data within a short period of time, this option might work better for you. The BTH license is automatically applied to all clusters you create using a BTH MC instance.

If you start out with an hourly license, you can later decide to use a long-term license for your database. The support for an hourly versus a long-term license is built into the instances running your database. To move your database from an hourly license to a long-term license, you must create a new database cluster with a new set of instances.

To move from an hourly to a long-term license, follow these steps:
1. Purchase a BYOL license. Follow the process described in Obtaining a License Key File.
2. Apply the new license to your database.
3. Shut down your database.
5. Revive your database onto the new cluster.

The exact steps you must take depend on your database mode and your preferred tool for managing your database:

- **Eon Mode databases**: Use either the command line or Management Console.
- **Enterprise Mode databases**: Use the command line to switch licenses.

## Moving an Eon Mode Database from BTH to BYOL Using the Command Line

Follow these steps to move an Eon Mode database from an hourly to a long-term license.

1. Obtain a long-term BYOL license from the online licensing portal, described in Obtaining a License Key File.
2. Upload the license file to a node in your database. Note the absolute path in the node's filesystem, as you will need this later when installing the license.
3. Connect to the node you uploaded the license file to in the previous step.
4. Connect to your database using `vsql` and view the licenses table:

   ```sql
   => SELECT * FROM licenses;
   ```

   Note the name of the hourly license listed in the NAME column, so you can check if it is still present later.

5. Install the license in the database using the `INSTALL_LICENSE` function with the absolute path to the license file you uploaded in step 2:

   ```sql
   => SELECT install_license('absolute path to BYOL license');
   ```

6. View the licenses table again:

   ```sql
   => SELECT * FROM licenses;
   ```
If only the new BYOL license appears in the table, skip to step 8. If the hourly license whose name you noted in step 4 is still in the table, copy the name and proceed to step 7.

7. Call the DROP_LICENSE function to drop the hourly license:

```sql
=> SELECT drop_license('hourly license name');
```

8. You will need the path for your cluster's communal storage in a later step. If you do not already know the path, you can find this information by executing this query:

```sql
=> SELECT location_path FROM V_CATALOG.STORAGE_LOCATIONS WHERE sharing_type = 'COMMUNAL';
```

10. Shut down the database by calling the SHUTDOWN function:

```sql
=> SELECT SHUTDOWN();
```

11. You now need to create a new BYOL cluster onto which you will revive your database. Deploy a new cluster including a new MC instance using a BYOL entry in the marketplace of your chosen cloud platform. See:

- Launch MC and AWS Resources with a CloudFormation Template
- Deploying an Eon Mode Database On GCP

**Important:**
Your new BYOL cluster must have the same number of primary nodes as your existing hourly license cluster.

12. Revive your database onto the new cluster. For instructions, see Reviving an Eon Mode Database Cluster. Because you created the new cluster using a BYOL entry in the marketplace, the database uses the BYOL you applied earlier.

13. After reviving the database on your new BYOL cluster, terminate the instances for your hourly license cluster and MC. For instructions, see your cloud provider’s documentation.

**Moving an Eon Mode Database from BTH to BYOL Using the MC**

Follow this procedure to move to BYOL and revive your database using MC:
1. Purchase a long-term BYOL license from the online licensing portal, following the steps detailed in Obtaining a License Key File. Save the file to a location on your computer.
2. You now need to install the new license on your database. Log into MC and click your database in the Recent Databases list.
3. At the bottom of your database's Overview page, click the License tab.
4. Under the Installed Licenses list, note the name of the BTH license in the License Name column. You will need this later to check whether it is still present after installing the new long-term license.
5. In the ribbon at the top of the License History page, click the Install New License button. The Settings: License page opens.
6. Click the Browse button next to the Upload a new license box.
7. Locate the license file you obtained in step 1, and click Open.
8. Click the Apply button on the top right of the page.
9. Select the checkbox to agree to the EULA terms and click OK.
10. After Vertica installs the license, click the Close button.
11. Click the License tab at the bottom of the page.
12. If only the new long-term license appears in the Installed Licenses list, skip to Step 16. If the by-the-hour license also appears in the list, copy down its name from the License Name column.
13. You must drop the by-the-hour license before you can proceed. At the bottom of the page, click the Query Execution tab.
14. In the query editor, enter the following statement:

   ```
   SELECT DROP_LICENSE('hourly license name');
   ```
15. Click Execute Query. The query should complete indicating that the license has been dropped.
16. You will need the path for your cluster's communal storage in a later step. If you do not already know the path, you can find this information by executing this query in the Query Execution tab:

   ```
   SELECT location_path FROM V_CATALOG.STORAGE_LOCATIONS
   WHERE sharing_type = 'COMMUNAL';
   ```
18. You must now stop your by-the-hour database cluster. At the bottom of the page, click the Manage tab.
19. In the banner at the top of the page, click Stop Database and then click OK to confirm.
20. From the Amazon Web Services Marketplace or the Google Cloud Marketplace, deploy a new Vertica Management Console using a BYOL entry. Do not deploy a full cluster. You just need an MC deployment.
21. Log into your new MC instance and revive the database. See Reviving an Eon Mode Database on AWS in MC for detailed instructions.
22. After reviving the database on your new environment, terminate the instances for your hourly license environment. To do so, on the AWS CloudFormation Stacks page, select the hourly environment's stack (its collection of AWS resources) and click Actions > Delete Stack.

**Moving an Enterprise Mode Database from Hourly to BYOL Using Backup and Restore**

**Note:**
Currently, AWS is the only platform supported for Enterprise Mode databases using hourly licenses.

In an Enterprise Mode database, follow this procedure to move to BYOL, and then back up and restore your database:

1. Obtain a long-term BYOL license from the online licensing portal, described in Obtaining a License Key File.
2. Upload the license file to a node in your database. Note the absolute path in the node's filesystem, as you will need this later when installing the license.
3. Connect to the node you uploaded the license file to in the previous step.
4. Connect to your database using `vsql` and view the licenses table:

```plaintext
=> SELECT * FROM licenses;
```

Note the name of the hourly license listed in the NAME column, so you can check if it is still present later.

5. Install the license in the database using the `INSTALL_LICENSE` function with the absolute path to the license file you uploaded in step 2:

```plaintext
=> SELECT install_license('absolute path to BYOL license');
```

6. View the licenses table again:

```plaintext
=> SELECT * FROM licenses;
```
If only the new BYOL license appears in the table, skip to step 8. If the hourly license whose name you noted in step 4 is still in the table, copy the name and proceed to step 7.

7. Call the \texttt{DROP\_LICENSE} function to drop the hourly license:

\begin{verbatim}
=> SELECT drop_license('hourly License name');
\end{verbatim}

8. Back up the database. See Backing Up and Restoring the Database.

9. Deploy a new cluster for your database using one of the BYOL entries in the Amazon Web Services Marketplace.

10. Restore the database from the backup you created earlier. See Backing Up and Restoring the Database. When you restore the database, it will use the BYOL you loaded earlier.

11. After restoring the database on your new environment, terminate the instances for your hourly license environment. To do so, on the AWS CloudFormation Stacks page, select the hourly environment's stack (its collection of AWS resources) and click \texttt{Actions > Delete Stack}.

After completing one of these procedures, see Viewing Your License Status to confirm the license drop and install were successful.

\section*{Adjusting Spread Daemon Timeouts For Virtual Environments}

You may see Vertica nodes leave the database even though they are still running. This issue can happen on networks that are prone to spikes in latency or in virtual environments where a node's VM may be paused for a short period of time. You can adjust a setting in Vertica to help prevent this issue from occurring.

Vertica relies on \texttt{spread} daemons to pass messages between database nodes. When a node fails to respond to a spread message after a timeout period, Vertica assumes the node is down and starts to remove it from the database.

The default Spread timeout depends on the number of configured Spread segments:

\begin{center}
\begin{tabular}{|c|c|}
\hline
\textbf{Configured Spread segments} & \textbf{Default timeout} \\
\hline
1 & 8 seconds \\
> 1 & 25 seconds \\
\hline
\end{tabular}
\end{center}
If network delays or temporary pauses of a VM last longer than the spread timeout period, you may see UP nodes leave the database. In these cases, you can increase the spread timeout to reduce or eliminate instances where UP nodes leave the database.

**Azure's Memory-Preserving Updates and Spread Timeouts**

In Azure, you might see running nodes leave the database due to scheduled maintenance. Azure's maintenance down time is usually well-defined. For example, Azure's memory-preserving updates can pause a VM for up to 30 seconds while performing maintenance on the system hosting the VM. This pause does not disrupt the node. It continues normal operation once Azure resumes it. See the Azure documentation's topic on Maintenance for virtual machines in Azure for more information about updates. If Azure pauses a node for longer than the spread timeout period, Vertica interprets the node's inability to respond to a spread message as the node going down, even though it will resume running normally.

**Note:**
If you deploy your Vertica cluster using the Azure Marketplace, the spread timeout defaults to 35 seconds. If you manually create your cluster in Azure, the spread timeout defaults to 8 or 25 seconds, as described earlier.

**Setting the Spread Timeout**

When you know your network or nodes may be unable to respond for a specific amount of time, you can increase the spread timeout period to longer than this time. Adjust the timeout to the period of time the node may be unable to respond, plus an additional 5 seconds as a safety margin.

For example, if you know Azure's memory-preserving maintenance can pause your VMs for up to 30 seconds, set the spread timeout to 35 seconds.

If you do not know exactly how long network or node disruptions can last, you can try increasing the spread timeout gradually, until you see reduced instances of UP nodes leaving the database. Be as conservative with this setting as you can.
**Important:**
Vertica cannot react to a node going down or being shut down improperly before the timeout period has elapsed. Changing spread’s timeout to a value too high can result in longer query restarts if a node goes down.

You can see the current setting of the spread timeout by querying system table `SPREAD_STATE`:

```
=> SELECT * FROM V_MONITOR.SPREAD_STATE;
```

```
+-----------------+-------+
| node_name       | token_timeout |
|-----------------+-------+
| v_vmart_node0003 | 8000  |
| v_vmart_node0001 | 8000  |
| v_vmart_node0002 | 8000  |
+-----------------+-------+
```

(3 rows)

You change the spread timeout calling the meta-function `SET_SPREAD_OPTION` to set the token timeout to a new value. This value is a string, and sets the timeout in milliseconds.

**Important:**
Changing spread settings with `SET_SPREAD_OPTION` has minor impact on your cluster as it pauses while the new settings are propagated across the entire cluster.

This example sets the timeout to 35 seconds (35000ms):

```
=> SELECT SET_SPREAD_OPTION('TokenTimeout', '35000');
```

```
NOTICE 9003: Spread has been notified about the change
SET_SPREAD_OPTION
-----------------------------
Spread option 'TokenTimeout' has been set to '35000'.
```

(1 row)

```
=> SELECT * FROM V_MONITOR.SPREAD_STATE;
```

```
+-----------------+-------+
| node_name       | token_timeout |
|-----------------+-------+
| v_vmart_node0001 | 35000 |
| v_vmart_node0002 | 35000 |
| v_vmart_node0003 | 35000 |
+-----------------+-------+
```

(3 rows)

**Note:**
The changes you make to the spread timeout might not take effect immediately. It might take some time before you see the settings change in system table `V_MONITOR.SPREAD_STATE` table.

Containerized Vertica

Vertica Eon Mode leverages container technology to meet the needs of modern application development and operations workflows that must deliver software quickly and efficiently across a variety of infrastructures. Containerized Vertica supports Kubernetes with automation tools to help maintain the state of your environment with minimal disruptions and manual intervention.

Containerized Vertica provides the following benefits:

- **Performance**: Eon Mode separates compute from storage, which provides the optimal architecture for stateful, containerized applications. Eon Mode subclusters can target specific workloads and scale elastically according to the current computational needs.

- **High availability**: Vertica containers provide a consistent, repeatable environment that you can deploy quickly. If a database host or service fails, you can easily replace the resource.

- **Resource utilization**: A container is a runtime environment that packages an application and its dependencies in an isolated process. This provides granular resource control and cost savings, because processes can run alongside other applications on the same hardware without interference.

- **Flexibility**: Kubernetes is the de facto container orchestration platform. It is supported by a large ecosystem of public and private cloud providers.

Vertica Images

The following table describes images that Vertica provides for server and automation tools:

<table>
<thead>
<tr>

**Creating a Custom Vertica Image**

**Containerized Vertica on Kubernetes**

Kubernetes is an open-source container orchestration platform that automates deployment, manages services, and monitors tasks for containerized applications at scale. The user declares the desired configuration, and Kubernetes allocates predefined resources and handles their utilization to maintain the desired state.

Vertica supports only the Eon Mode database in a Kubernetes StatefulSet.
Vertica Eon Mode on Kubernetes Architecture

Vertica provides **Helm charts** to deploy an Eon Mode database as a **StatefulSet** on a Kubernetes cluster. **Helm** is a package manager that helps you define and maintain your Kubernetes workload resources. **StatefulSets** are a type of Kubernetes workload resource that provides each pod a unique identity and state. When a pod fails or is rescheduled, the replacement pod is assigned the identity and state of the predecessor pod.

The following diagram describes the Vertica StatefulSet architecture:

![Vertica StatefulSet Architecture Diagram]

Vertica Pod

A **pod** consists of one or more logically grouped containers that consume the resources of their host node. It is easiest to think of a pod as a wrapper around the Vertica process and its environment.

Generally, pods have more than one container when the containers contribute to the same environment or process. For example, each Vertica pod has a server container that runs the
Vertica process. If the custom resource provides a sidecar to retrieve logs from the server `vertica.log`, the sidecar container and server container share a pod.

When a pod fails or is rescheduled, the StatefulSet uses DNS names to replace the pod. Pods are assigned ordered and stable DNS names that are unique within the StatefulSet. When a pod containing a Vertica environment goes down, the pod is rescheduled using the same DNS name as the previous pod.

When pods are rescheduled, they require information about the environment to become part of the cluster. This information is provided by the Downward API. Environment information, including the superuser password `Secret`, is mounted in the `/etc/podinfo` directory.

**Persistent Storage**

A StatefulSet provides each pod with a PersistentVolumeClaim (PVC), which requests storage from the PersistentVolume (PV). As a best practice, the StatefulSet does not create the PV because it requires access privileges.

StorageClass Requirements

You must set the `local.storageClassName` configuration parameter to ensure that the PVC gets mapped to the correct StorageClass. When you are selecting the StorageClass, consider the following:

- If you do not configure `local.storageClassName`, the default StorageClass is used. If you do not have a default StorageClass configured in Kubernetes, the pods in the StatefulSet do not advance past the Pending phase.
- When you are configuring your StorageClass, select a recommended storage format type.
- The operator requires on-demand volume provisioning to automate tasks, which requires a StorageClass with a dynamic volume provisioner.

Local Container Storage

Each pod uses a PersistentVolume (PV) to store local data. The PV is mounted at `/home/dbadmin/local-data`. Set permissions on this mount to 0775 to prevent a Permissions Denied error. If the PV was dynamically provisioned, you might need to change permissions manually with the `chmod` command after it is created.

Each pod mounts a PVC in the `/home/dbadmin/local-data` directory. The `/local-data` directory includes the following subdirectories, each of which begin with the unique ID (`uid`) that Kubernetes assigns to the custom resource:
- **uid/data**: Stores the catalog and any temporary files. There is a symlink to this path for the `local.dataPath` parameter.
- **uid/depot**: This directory is persisted to help depot warming after a pod rescheduling. There is a symlink to this path for the `local.depotPath` parameter.
- **uid/config**: A symbolic link to the `/opt/vertica/config` directory. This directory persists the contents of the configuration directory between restarts.
- **uid/opt/vertica/log**: A symbolic link to the `opt/vertica/log` directory. This directory persists log files between pod restarts.

For additional details about PersistentVolumes, PersistentVolumeClaims, and StorageClasses, see the [official Kubernetes documentation](https://kubernetes.io/docs/concepts/storage/persistent-volumes/).

## Operator

The **operator** is a namespace-scoped state maintenance and task automation tool that runs within its own pod. It periodically observes the Kubernetes objects and compares their current state to the desired state defined in the custom resource (CR). When the current state does not match the CR, the operator acts to restore the objects to the desired state.

The operator automates the following administrative tasks:

- Installing Vertica
- Creating and reviving a Vertica database
- Restarting and rescheduling DOWN pods to maintain quorum
- Subcluster scaling
- Service management and health monitoring for pods
- Load balancing for internal and external traffic

For details about installing the operator and custom resources, see [Installing the CRD, Operator, and Admission Controller](https://kubernetes.io/docs/concepts/extend-kubernetes/objects/admission-controller/) and [Creating a Custom Resource](https://kubernetes.io/docs/concepts/extend-kubernetes/objects/custom-resources/custom-resource-definitions/).

## Service Objects

The Vertica Helm chart provides two service objects: a headless service that maintains DNS records and ordered names for each pod, and a load balancing service that manages internal traffic and external client requests for the pods in your cluster.

**Load Balancing Services**
Each subcluster has its own load balancing service object. To configure the service object, use the `subclusters[i].serviceType` parameter in the custom resource to define a Kubernetes service type. Vertica supports the following service types:

- **ClusterIP**: The default service type. This service provides internal load balancing, and sets a stable IP and port that is accessible from within the subcluster only.
- **NodePort**: Provides external client access. You can specify a port number for each host node in the subcluster to open for client connections.
- **LoadBalancer**: Uses a cloud provider load balancer to create NodePort and ClusterIP services as needed. For details about implementation, see the Kubernetes documentation and your cloud provider documentation.

**Important:**
To prevent performance issues during heavy network traffic, Vertica recommends that you set `--proxy-mode` to `iptables` for your Kubernetes cluster.

Because native Vertica load balancing interferes with the Kubernetes service object, Vertica recommends that you allow the Kubernetes services to manage load balancing for the subcluster. You can configure the native Vertica load balancer within the Kubernetes cluster, but you receive unexpected results. For example, if you set the Vertica load balancing policy to `ROUNDROBIN`, the load balancing appears random.

For additional details about Kubernetes services, see the official Kubernetes documentation.

**Security Considerations**

As a best practice, make system configurations on the host node so that pods can inherit those settings from the node. This means that you do not have to provide each pod a privileged security context to make system configurations on the host.

Vertica is installed in each pod with the `--no-system-configuration` option to prevent pods from making configuration changes. To run Vertica optimally, manually configure host nodes using the settings found in the following sections:

- General Operating System Configuration - Automatically Configured by the Installer
- General Operating System Configuration - Manual Configuration

Vertica on Kubernetes supports both TLS and mTLS for internal communications between pods in your cluster. You must manually configure TLS in your environment. For details, see TLS Protocol.
The dbadmin account must use one of the authentication techniques described in DBADMIN Authentication Access.

**Operator for Lifecycle Automation**

Maintaining and updating the state of Vertica on Kubernetes requires a variety of monitoring and administrative tasks that are error-prone and time-consuming to perform manually. The Vertica operator automates these tasks to ensure your Eon Mode database is running optimally with minimal manual intervention.

The operator automates the following administrative tasks:

- Installing Vertica
- Creating and reviving a Vertica database
- Restarting and rescheduling DOWN pods to maintain quorum
- Subcluster scaling
- Service management and health monitoring for pods
- Load balancing for internal and external traffic

The Vertica operator is a Go binary that uses the [SDK operator framework](https://github.com/verticadb/vertica-operator). It runs in its own pod, and is namespace-scoped to limit any failures to the objects in its namespace.

To install the operator, see [Installing the CRD, Operator, and Admission Controller](https://github.com/verticadb/vertica-operator).

**State Monitoring**

Each namespace is allowed one operator pod that acts as a custom controller and monitors the state of the custom resource objects within that namespace. The operator uses the control loop mechanism to reconcile state changes by investigating state change notifications from the custom resource instance, and periodically comparing the current state with the desired state.

If the operator detects a change in the desired state, it determines what change occurred and reconciles the current state with the new desired state. For example, if the user deletes a subcluster from the custom resource instance and successfully saves the changes, the operator deletes the corresponding subcluster objects in Kubernetes.
Admission Controller to Validate State

The admission controller is a cluster-scoped webhook that prevents invalid state changes to the custom resource instance. When you save a change to a custom resource instance, the admission controller webhook queries a REST endpoint that provides rules for mutable states in a custom resource. If a change violates the state rules, the admission controller prevents the change and returns an error. For example, it returns an error if you try to save a change that violates **K-Safety**.

Note: The admission controller is optional. Vertica strongly recommends that you install the admission controller to maintain the integrity of your environment.

Log Monitoring

The idiomatic way to log messages with Kubernetes is to use `stdout` and `stderr` on each host node. By default, Vertica writes log messages to a file named `vertica.log`, located in `catalog-path/database-name/node-name_catalog/vertica.log`. The operator can use a **sidecar** to retrieve logs from `vertica.log` and send them to `stdout` and `stderr` on the host node for external access.

Vertica does not provide a sidecar image, but supports adding a custom image to your CR nested under the `spec` element:

```
apiVersion: vertica.com/v1beta1
type: VerticaDB
metadata:
  name: verticadb-sample
spec:
  ...
  sidecars:
    - name: vertica-logger
      image: <custom-image>:<tag>
      resources: <resource-definitions>
      subclusters:
  ...
```

To view the contents of the sidecar, use the `kubectl logs` command:
$ kubectl logs verticadb-<db-name>-<subcluster-name>-0 -c vlogger

For more information about logging in Kubernetes, see [Logging Architecture](#) in the Kubernetes documentation.

## Limitations

The operator has the following limitations:

- You must manually configure TLS. For details, see [Containerized Vertica](#).
- Vertica recommends that you do not use the [Large Cluster](#) feature. If a control node fails, it might cause more than half of the database nodes to fail. This results in the database losing quorum.
- Backup and Restore is a manual process.
- [Autoscaling](#) is not supported.
- [Importing and exporting](#) data between a cluster outside of Kubernetes requires that you expose the service with the [NodePort or LoadBalancer service type](#) and properly configure the network.

### Important:

When configuring the network to import or export data, you must assign each node a static IP export address. When pods are rescheduled to different nodes, you must update the static IP address to reflect the new node.

See [Configuring the Network to Import and Export Data](#) for more information.

## Installing the CRD, Operator, and Admission Controller

The [custom resource definition (CRD)](#), [operator](#), and [admission controller](#) work together to maintain the state of your environment and provide task automation:

- The CRD extends the Kubernetes API to provide custom objects. It serves as a blueprint that you can use to create custom resource (CR) instances that specify the desired state of your environment.
- The operator is a namespace-scoped custom controller that monitors custom resource instances to maintain the desired state of the custom resource objects within its namespace.
- The admission controller is a webhook that queries a REST endpoint to verify changes to mutable states in a custom resource instance. The admission controller is cluster-scoped and can verify changes by all operator instances.

**Note:**
The admission controller is optional. Vertica strongly recommends that you install the admission controller to maintain the integrity of your environment.

**Prerequisites**

- Kubernetes 1.19.13 and higher
- **Helm 3.5** and higher
- **kubect1** command line tool

**Installing the CRD**

You must have cluster administrator privileges to install the CRD. Use kubect1 to install the CustomResourceDefinition as a YAML manifest:

```bash
$ kubectl apply -f https://github.com/vertica/vertica-kubernetes/releases/download/v1.0.0/verticadbs.vertica.com-crd.yaml
```

**Installing the Operator**

The operator is available in a Helm chart. Vertica on Kubernetes allows one operator instance per namespace.

1. Install the CRD chart before you install the operator chart:

   ```bash
   $ helm repo add vertica-charts https://vertica.github.io/charts
   ```

2. Update your Helm repository:
3. Install the operator Helm chart, providing a name for the operator. In the following example, vdb-op is the operator name:

```
$ helm install vdb-op vertica-charts/verticadb-operator
```

## Installing the Admission Controller

The admission controller is available in a Helm chart. Before you run the Helm commands, you must configure the webhook to accept TLS certificates to satisfy Kubernetes requirements. Vertica recommends cert-manager to manage certificates for your Kubernetes resources.

1. Use kubectl to install cert-manager:

```
$ kubectl apply -f https://github.com/jetstack/cert-manager/releases/download/v1.3.1/cert-manager.yaml
```

Installation might take a few minutes.

2. Verify the cert-manager installation:

```
$ kubectl get pods --namespace cert-manager
```

<table>
<thead>
<tr>
<th>NAME</th>
<th>READY</th>
<th>STATUS</th>
<th>RESTARTS</th>
<th>AGE</th>
</tr>
</thead>
<tbody>
<tr>
<td>cert-manager-7dd5854bb4-skks7</td>
<td>1/1</td>
<td>Running</td>
<td>5</td>
<td>12d</td>
</tr>
<tr>
<td>cert-manager-cainjector-64c949654c-9nm2z</td>
<td>1/1</td>
<td>Running</td>
<td>5</td>
<td>12d</td>
</tr>
<tr>
<td>cert-manager-webhook-6bdfc7c9d-b7r2p</td>
<td>1/1</td>
<td>Running</td>
<td>5</td>
<td>12d</td>
</tr>
</tbody>
</table>

3. If you do not have the Vertica Helm repository, add it with the following command:

```
$ helm repo add vertica-charts https://vertica.github.io/charts
```

4. Update your Helm repository:

```
$ helm repo update
```

5. Install the webhook chart, and provide a name for the webhook. In the following example, vdb-webhook is the webhook name:

```
$ helm install vdb-webhook vertica-charts/vericadb-webhook
```
Creating a Custom Resource

The custom resource definition (CRD) is a shared global object that extends the Kubernetes API beyond the standard resource types. The CRD serves as a blueprint for custom resource (CR) instances. You create CRs that specify the desired state of your environment, and the operator monitors the CR to maintain state for the objects within its namespace.

This tutorial uses only some custom resources. For details about all available custom resource parameters, see Custom Resource Definition Parameters.

Use a YAML-formatted file with the .yaml file extension.

Prerequisites

- Complete Installing the CRD, Operator, and Admission Controller.
- Configure a dynamic volume provisioner.
- Confirm that you have the resources to deploy objects you plan to create.
- Acquire a Vertica license. By default, the Helm chart deploys the free Community Edition license.
- Configure a running S3 endpoint that contains an empty communal path bucket.

Creating Secrets

Create Secrets to store sensitive information in your custom resource definition without exposing the values they represent.

1. Create a secret for your Vertica license, S3 credentials, and database superuser password.
   a. The following command conceals a license file in a secret named vertica-license:

   ```bash
   $ kubectl create secret generic vertica-license --from-file=license.dat=/path/to/license.dat
   
   By default, the Helm chart uses the free Community Edition license. This license is limited to 3 nodes and 1 TB of data.
b. The following command conceals your S3 communal access and secret key credentials in a secret named `s3-creds`:

```bash
kubectl create secret generic s3-creds --from-literal=accesskey=accesskey --from-literal=secretkey=secretkey
```

c. The following command conceals the superuser password in a secret named `su-passwd`:

```bash
kubectl create secret generic su-passwd --from-literal=password=secret-password
```

## Required Fields

The beginning of each Vertica CRD contains fields that describe the version, object, and metadata:

1. On the first line, enter the `apiVersion`. This value specifies the API group and the Kubernetes API version in `api-group/version` format:

```yaml
apiVersion: vertica.com/v1beta1
```

2. Next, specify the `kind`. This is the name of the CRD object that you want to create:

```yaml
kind: VerticaDB
```

3. The `metadata` field enables you to associate data to identify objects. The following example uses the `name` field to identify the custom resource object. Nest each `metadata` field on its own line under `metadata`, two spaces from the left margin:

```yaml
metadata:
  name: verticadb-sample
```

## Defining the spec

The `spec` field defines the desired state of the custom resource. The operator uses the values defined in the `spec` during the control loop. Each subsequent section nests under the top-level `spec` element using two spaces from the left margin.
Image Management

Include information about which image you want to use in your custom resource, and how to access the image.

1. The image field specifies which Vertica image you want to pull from Dockerhub and use in the Vertica environments running on your pods:

```yaml
spec:
  image: verticadocker/vertica-k8s:11.0.0-0
```

For a full list of the available images, see the Vertica DockerHub repository.

2. You can control when the operator pulls an image from Dockerhub with the imagePullPolicy field. The following setting pulls the Vertica image if it is not present in your local repository:

```yaml
imagePullPolicy: IfNotPresent
```

Cluster Description Values

This section logically groups fields that describe the cluster and how it operates.

1. To initialize a new database, set initPolicy to Create:

```yaml
initPolicy: Create
```

2. **K-Safety** determines the fault tolerance for the subcluster. For a three-pod subcluster, set kSafety to 1:

```yaml
kSafety: "1"
```

3. Use licenseSecret to add the secret containing your Vertica license:

```yaml
licenseSecret: vertica-license
```

This mounts the license within the container in the /home/dbadmin/licensing/mnt directory.

4. Use superuserPasswordSecret to add the secret containing your superuser
password: superuserPasswordSecret: su-passwd

Configuring Communal Storage

The Kubernetes cluster requires the location and credentials for your S3-compatible communal storage.

1. Use credentialSecret to add the secret storing your S3 communal access and secret key credentials previously created:

   ```yaml
   spec:
     ... 
     communal:
       credentialSecret: s3-creds
   
   2. The endpoint key provides the S3 endpoint URL:

   ```yaml
   endpoint: http://path/to/endpoint
   
   3. The path key uses S3 bucket notation to provide the location to the S3 storage bucket. After you create the custom resource instance, you cannot change this value:

   ```yaml
   path: s3://bucket-name/key-name
   
   This bucket must exist before you create a custom resource with this CRD.

Local Container Information

Each container persists catalog, depot, configuration, and log data in a PersistentVolume (PV). You must provide information about the data and depot locations for operations such as pod rescheduling.

You must configure a storageClass to bind the pods to a PersistentVolumeClaim (PVC). For details, see Containerized Vertica on Kubernetes.

1. Use dataPath to define where the /data directory location in the container filesystem. The /data directory stores the local catalogs and temporary files:

   ```yaml
   spec:
   ```
2. Eon Mode databases cache data locally in a depot to reduce the time it takes to fetch data from communal storage to perform operations. Use depotPath to define the depot location in the container filesystem:

```yaml
depotPath: /depot
```

3. You might have a requirement for the amount of memory a pod requires, depending on the subcluster's workload. Use requestSize to specify the minimum size of the local data volume available when selecting a PersistentVolume (PV):

```yaml
requestSize: 500Gi
```

**Note:**
To ensure you do not run out of disk space, verify that the underlying storage is large enough to accommodate this setting.

**Shard Count**

The shardCount setting specifies the number of shards created for the database.

```yaml
spec:
  ...
  shardCount: 12
```

For guidance on selecting the shard count, see Configuring Your Vertica Cluster for Eon Mode.

You cannot change this value after you create the custom resource instance. When you change the number of pods in a subcluster, or add or remove a subcluster, the operator rebalances shards automatically.

**Defining the Subcluster**

The subclusters section is an array of elements, where each element represents a subcluster and its properties. Each custom resource requires a primary subcluster or it returns an error.
1. Because each custom resource requires a primary subcluster, set `isPrimary` to true to add the primary subcluster first:

```yaml
spec:
  ...
subclusters:
  - isPrimary: true
```

2. Add a descriptive name to help identify the subcluster:

```yaml
name: primary-subcluster
```

**Important:**
The default subcluster name, `default_subcluster`, is an invalid value. You must provide a valid name.

3. Choose a size for the subcluster:

```yaml
size: 3
```

4. The `serviceType` setting provides control over the subcluster service object.

   By default, a subcluster uses the `ClusterIP` serviceType, which sets a stable IP and port that is accessible from within Kubernetes only. In many circumstances, external client applications need to connect to a subcluster that is fine-tuned for that specific workload. For external client access, set the `serviceType` to `NodePort` or `LoadBalancer`.

   Each subcluster that uses the `NodePort` service type must also provide a `nodePort` value to assign a unique port number in the 30000 - 32767 range for client access. If you do not provide a port number, Kubernetes assigns a unique port in that range automatically. As a best practice, let Kubernetes assign the port number to avoid potential collisions.

   **Important:**
   You must create a firewall rule that allows TCP connections on the external port assigned with `nodePort`.

   The following example manually sets the port number with `nodePort` for demonstration purposes:

```yaml
serviceType: NodePort
nodePort: 32000
```
To verify the port number, use the `kubectl get svc` command to view the PORT (S) column:

```
$ kubectl get svc
NAME                  TYPE    CLUSTER-IP     EXTERNAL-IP   PORT(S)     AGE
vertica-dashboard     NodePort 10.96.136.13 <none> 5433:32000/TCP,5444:30288/TCP 21d
```

5. Configure the resource request and limit settings for the subcluster.

**Note:**
Select resource settings that your host nodes can accommodate. When a pod is started or rescheduled, Kubernetes searches for host nodes with enough resources available to start the pod. If there is not a host node with enough resources, the pod STATUS stays in Pending until there are enough resources available.

As a best practice, set the resource request and limit to equal values so that they are assigned to the guaranteed QoS class. Equal settings also provide the best safeguard against the Out Of Memory (OOM) Killer in constrained environments.

Each pod requests resources from its host node. The default configuration sets request and limit defaults based on [Recommendations for Sizing Vertica Nodes and Clusters](#) in the Vertica knowledge base. These limits are for testing environments, and are not suitable for production workloads. The following example sets the requests and limits to 96 Gi of RAM and 32 CPUs:

```
resources:
  limits:
    cpu: 32
    memory: 966i
  requests:
    cpu: 32
    memory: 966i
```

**Note:**
When you change the resources settings, Kubernetes restarts each pod with the updated resource configuration.

6. Vertica runs optimally in Kubernetes if there is only one Vertica pod per node. As a best practice, set affinity to ensure that a single node does not serve two Vertica pods:
Complete File Reference

As a reference, below is the completed custom resource definition, after completing each step in the previous sections:

```yaml
apiVersion: vertica.com/v1beta1
kind: VerticaDB
metadata:
  name: verticadb-sample
spec:
  image: verticadocker/vertica-k8s:11.0.0-0
  imagePullPolicy: IfNotPresent
  initPolicy: Create
  kSafety: "1"
  licenseSecret: license
  superuserPasswordSecret: su-passwd
  dbName: vertdb
  communal:
    credentialSecret: s3-auth
    endpoint: http://path/to/endpoint
    path: s3://bucket-name/key-name
  local:
    dataPath: /data
    depotPath: /depot
    requestSize: 500Gi
  shardCount: 12
  subclusters:
    - isPrimary: true
      name: primary-subcluster
      resources:
        limits:
          cpu: 32
          memory: 96Gi
        requests:
          cpu: 32
          memory: 96Gi
    serviceType: NodePort
    nodePort: 32001
    size: 3
    affinity:
      podAntiAffinity:
        requiredDuringSchedulingIgnoredDuringExecution:
          - labelSelector:
              matchExpressions:
                - key: app.kubernetes.io/name
                  operator: In
                  values:
                    - vertica
              topologyKey: "kubernetes.io/hostname"
```

Vertica Analytic Database (11.0.x)
- labelSelector:

</tr>
<tr>
<td>subclusters[i].serviceType</td>
<td>Identifies the <strong>type of Kubernetes</strong> service to use for external client connectivity. The default is type is ClusterIP, which sets a stable IP and port that is accessible only from within Kubernetes itself. Depending on the service type, you might need to set nodePort or externalIPs in addition to this configuration parameter. <strong>Default</strong>: ClusterIP</td>
</tr>
<tr>
<td>subclusters[i].size</td>
<td>The number of pods in the subcluster. This determines the number of Vertica nodes in the subcluster. Changing this number deletes or schedules new pods. The minimum size of a subcluster is 1. The subclusters kSafety setting determines the minimum and maximum size of the cluster.</td>
</tr>
</tbody>
</table>
### Parameter Description

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td><strong>Note:</strong> By default, the Vertica container uses the Vertica Community Edition (CE) license. The CE license limits subclusters to 3 Vertica nodes and a maximum of 1TB of data. Use the licenseSecret parameter to add your Vertica license. For instructions about how to create the license secret, see Creating a Custom Resource.</td>
</tr>
<tr>
<td>subclusters[i].tolerations</td>
<td>Any taints and tolerations used to influence where a pod is scheduled.</td>
</tr>
</tbody>
</table>
| superuserPasswordSecret           | The Secret that contains the database superuser password. Create this secret before deployment. If you do not create this secret before deployment, there is no password authentication for the database. The secret must use a key named password:  

```bash
kubectl create secret generic su-passwd --from-literal=password=secret-password
```

The following text adds this secret to the custom resource:

```yaml
db:
  superuserSecretPassword: su-passwd
```

## Subclusters in Kubernetes

Eon Mode uses subclusters for workload isolation and scaling. The Vertica operator provides tools to direct external client communications to specific subclusters, and automate scaling without stopping your database.

The custom resource definition (CRD) provides parameters that allow you to fine-tune each subcluster for specific workloads. For example, you can increase the subcluster size setting for increased throughput, or adjust the resource requests and limits to manage...
compute power. When you create a custom resource instance, the operator deploys each subcluster as a StatefulSet. Each StatefulSet has its own service object, which allows an external client to connect to a specific subcluster.

Kubernetes uses the subcluster name to derive names for the subcluster StatefulSet, service object, and pods. This naming convention tightly couples the subcluster objects to help Kubernetes effectively manage the cluster. If you want to rename a subcluster, you must delete it from the CRD and redefine it so that the operator can create new objects with a derived name.

**Important:**
The default subcluster name, `default_subcluster`, is an invalid value. You must provide a valid name.

Vertica strongly recommends installing the admission controller to help manage your subclusters. The admission controller prevents invalid changes to your subcluster definition. For example, you cannot change a subcluster from primary to secondary, or vice versa.

## External Client Connections

External clients can target specific subclusters that are fine-tuned to handle their workload. Each subcluster has its own service object that handles external connections. You cannot target multiple subclusters with a single client.

The operator performs health monitoring that checks if the Vertica daemon is running on each pod. If it is, then the operator allows the service object to route traffic to the pod.

The service object derives its name from the custom resource name and the associated subcluster and uses the `customResourceName-subclusterName` format. Vertica supports the following service object types:

- **ClusterIP**: The default service type. This service provides internal load balancing, and sets a stable IP and port that is accessible from within the subcluster only.
- **NodePort**: Provides external client access. You can specify a port number for each host node in the subcluster to open for client connections.
- **LoadBalancer**: Uses a cloud provider load balancer to create NodePort and ClusterIP services as needed. For details about implementation, see the [Kubernetes documentation](https://kubernetes.io/docs/concepts/services-networking/service/#type-loadbalancer) and your cloud provider documentation.

For configuration details, see [Creating a Custom Resource](https://docs.vertica.com/en-us/UsingVerticaontheCloud/CreatingCustomResources.html).
Managing Internal and External Workloads

The Vertica StatefulSet uses only a single external service object. All external client requests are sent through this service object and load balanced among the pods in the cluster.

Import and Export

Importing and exporting data between a cluster outside of Kubernetes requires that you expose the service with the NodePort or LoadBalancer service type and properly configure the network.

Important:

When importing or exporting data, each node must have a static IP address. Rescheduled pods might be on different host nodes, so you must monitor and update the static IP addresses to reflect the new node.

For more information, see Configuring the Network to Import and Export Data.

Scaling Subclusters

The operator enables you to scale the number of subclusters, and the number of pods per subcluster automatically. This allows you to utilize or conserve resources depending on the immediate needs of your workload.

Prerequisites

- Complete Installing the CRD, Operator, and Admission Controller
- Install the kubectl command line tool
- Complete Creating a Custom Resource

Note:

By default, the custom resource uses the free Community Edition (CE) license. This license allows you to deploy up to three nodes with a maximum of 1TB of data. To add resources beyond these limits, you must add your Vertica license to the custom resource as described in Creating a Custom Resource.
Scaling the Number of Subclusters

Adjust the number of subclusters in your custom resource to fine-tune resources for short-running dashboard queries. For example, increase the number of subclusters to increase throughput. For more information, see Improving Query Throughput Using Subclusters.

1. Use kubectl edit to open your default text editor and update the YAML file for the specified custom resource. The following command opens a custom resource named vdb for editing:

```
$ kubectl edit vdb
```

2. In the spec section of the custom resource, locate the subclusters subsection. Begin the isPrimary field to define a new subcluster.

   The isPrimary field accepts a boolean that specifies whether the subcluster is a primary or secondary. Because there is already a primary subcluster in our custom resource, enter false:

```
spec:
  ...
  subclusters:
    ...
    - isPrimary: false
```

3. Follow the steps in Creating a Custom Resource to complete the subcluster definition. The following completed example adds a secondary subcluster for dashboard queries:

```
spec:
  ...
  subclusters:
    - isPrimary: true
      name: primary-subcluster
    ...
    - isPrimary: false
      name: dashboard
      nodePort: 32001
      resources:
        limits:
          cpu: 32
          memory: 9661
        requests:
          cpu: 32
          memory: 9661
      serviceType: NodePort
      size: 3
```

4. Save and close the custom resource file. You receive a message similar to the following when you successfully update the file:
5. Use the `kubectl wait` command to monitor when the new pods are ready:

```
$ kubectl wait --for=condition=Ready pod --selector app.kubernetes.io/name=vertica-db --timeout 180s
```

```
pod/vdb-dashboard-0 condition met
pod/vdb-dashboard-1 condition met
pod/vdb-dashboard-2 condition met
```

### Scaling the Pods in a Subcluster

For long-running, analytic queries, increase the pod count for a subcluster. See [Using Elastic Crunch Scaling to Improve Query Performance](#).

1. Use `kubectl edit` to open your default text editor and update the YAML file for the specified custom resource. The following command opens a custom resource named `vdb` for editing:

```
$ kubectl edit vertica-db
```

2. Update the `subclusters.size` value to 6:

```
subclusters:
  ...  
  subclusters:
    ...  
    - isPrimary: false
    ...  
    size: 6
```

Shards are rebalanced automatically.

3. Save and close the custom resource file. You receive a message similar to the following when you successfully update the file:

```
verticadb.vertica.com/vertica-db edited
```

4. Use the `kubectl wait` command to monitor when the new pods are ready:

```
$ kubectl wait --for=condition=Ready pod --selector app.kubernetes.io/name=vertica-db --timeout 180s
```

```
pod/vdb-subcluster1-3 condition met
pod/vdb-subcluster1-4 condition met
pod/vdb-subcluster1-5 condition met
```
Deleting a Subcluster

Delete a subcluster when it is no longer needed or to preserve resources.

**Important:**
Because each custom resource instance requires a primary subcluster, you cannot remove all subclusters.

1. Use `kubectl edit` to open your default text editor and update the YAML file for the specified custom resource. The following command opens a custom resource named `vdb` for editing:

   ```
   $ kubectl edit vertica-db
   ```

2. In the `subclusters` subsection nested under `spec`, locate the subcluster that you want to delete. Delete the element in the subcluster array represents the subcluster that you want to delete. Each element is identified by a hyphen (-).

3. After you delete the subcluster and save, you receive a message similar to the following:

   ```
   verticadb.vertica.com/vertica-db edited
   ```

Upgrading Vertica with the Operator

The operator monitors custom objects to ensure they are in a consistent and valid state. Because the operator Vertica does not allow pods to run conflicting versions of the Vertica server, you must disable the operator so that it does not interrupt the upgrade process.

**Note:**
Vertica provides the `upgrade-vertica.sh` script in the Github repository to automate version upgrades. The following steps are provided if you require manual control over the upgrade process for customizations or other environment requirements.

1. To prevent Vertica from checking the custom objects during the upgrade, set `autoRestartVertica` to false:
$ kubectl patch verticadb vert-cluster --type=merge --patch '{"spec":
{"autoRestartVertica": false}}'

2. Wait for the operator to acknowledge this state change:

$ kubectl wait --for=condition=AutoRestartVertica=False vdb/vert-cluster --timeout=180s

3. Use the admintools stop_db command to stop the cluster. The following command stops the vertdb database:

$ kubectl exec vert-cluster-sc1-0 -- admintools -t stop_db -F -d vertdb

4. Update the container tag in the custom resource to reflect the version after the upgrade:

$ kubectl patch verticadb vert-cluster --type=merge --patch '{"spec": 
{"image": "verticadocker/vertica-k8s:11.1.1-0"}}'

5. Delete the StatefulSet so that the operator reschedules the pods with the new image when it is enabled:

$ kubectl delete statefulset -l app.kubernetes.io/instance=vert-cluster --cascade=foreground

6. To give control back to the operator and resume monitoring, set autoRestartVertica to true:

$ kubectl patch verticadb vert-cluster --type=merge --patch '{"spec":
{"autoRestartVertica": true}}'

7. Wait for the operator to return the cluster to the desired state:

$ kubectl wait --for=condition=Ready=True pod -l app.kubernetes.io/instance=vert-cluster --timeout=600s

## Generating a Custom Resource from an Existing Eon Mode Database

To simplify operator adoption, Vertica provides the vdb-gen migration tool that allows you to revive an existing Eon Mode database as a StatefulSet in Kubernetes. vdb-gen generates a custom resource (CR) from an existing Eon Mode database by connecting to the database and writing to stdout.
The vdb-gen tool is available as an artifact in the vertica-kubernetes GitHub repository. Use the -h flag to view a full list of available options, including options for debugging and working with environment variables. The following steps generate a CR using basic commands.

1. Execute vdb-gen and redirect the output to a YAML-formatted file:

```bash
$ vdb-gen -password secret -name mydb 10.20.30.40 vertdb > vdb.yaml
```

The previous command uses the following flags and values:

- **password**: The existing database superuser secret password.
- **name**: The name of the new custom resource object.
- **10.20.30.40**: The IP address of the existing database
- **vertdb**: The name of the existing Eon Mode database.
- **vdb.yaml**: The YAML formatted file that contains the custom resource definition generated by the vdb-gen tool.

2. Use the admintools stop_db command to stop the existing database:

```bash
$ /opt/vertica/bin/admintools -t stop_db -d vertdb
```

3. Apply the YAML-formatted manifest that was generated by the vdb-gen tool:

```bash
$ kubectl apply -f vdb.yaml
verticadb.vertica.com/mydb created
```

**Note:**
For performance purposes, do not apply the manifest to resources that already contain a Vertica on Kubernetes install.

4. The operator creates the StatefulSet, installs Vertica on each pod, and runs revive. To view the events generated for the new database, use kubectl describe:

```bash
$ kubectl describe vdb mydb
```

## Troubleshooting Your Kubernetes Cluster

These tips can help you avoid issues related to your Vertica on Kubernetes deployment and troubleshoot any problems that occur.

Download the kubectl command line tool to debug your Kubernetes resources.
Verify Updates to a Custom Resource

Because the operator takes time to perform tasks, updates to the custom resource are not effective immediately. Use the kubectl command line tool to verify that changes are applied.

For example, you must set autoRestartVertica to false when you upgrade your cluster manually. By default, autoRestartVertica is set to true:

```
$ kubectl get vdb -o yaml | grep autoRestartVertica:
autoRestartVertica: true
```

Update the value to false with kubectl patch:

```
$ kubectl patch vdb vertica-crd --type=merge -p '{"spec": {"autoRestartVertica": false, "requeueTime": 5}}'
verticadb.vertica.com/vertica-crd patched
```

To verify that the operator completed the update and you can proceed with the upgrade, use the kubectl wait command:

```
$ kubectl wait --for=condition=AutoRestartVertica=False vdb/vertica-crd --timeout=480s
verticadb.vertica.com/vertica-crd condition met
```

The configuration reflects the updated value:

```
$ kubectl get vdb -o yaml | grep autoRestartVertica:
autoRestartVertica: false
```

Pods are Running but the Database is not Ready

When you check the pods in your cluster, the pods are running but the database is not ready:

```
$ kubectl get pods
NAME                  READY STATUS    RESTARTS AGE
vertica-crd-sc1-0     0/1     Running 0     12m
vertica-crd-sc1-1     0/1     Running 1     12m
```
To find the root cause of the issue, use `kubectl logs` to check the operator manager.

The following example shows that the communal storage bucket does not exist:

```bash
$ kubectl logs -l app.kubernetes.io/name=verticadb-operator -c manager -f
2021-08-04T20:03:00.289Z INFO controllers.VerticaDB ExecInPod entry ("verticadb": "default/vertica-crd", "pod": "{namespace": "default", "name": "vertica-crd-sc1-0"}, "command": "bash -c is -l /opt/vertica/config/admintools.conf & grep '^node\|v_\|'^host' /opt/vertica/config/admintools.conf ")
2021-08-04T20:03:00.369Z INFO controllers.VerticaDB ExecInPod stream ("verticadb": "default/vertica-crd", "pod": "{namespace": "default", "name": "vertica-crd-sc1-0"}, "err": null, "stdout": ":-rw-r--r-- 1 dbadmin verticadb 1243 Aug 4 20:00
"/opt/vertica/config/admintools.conf

2021-08-04T20:03:00.369Z INFO controllers.VerticaDB ExecInPod entry ("verticadb": "default/vertica-crd", "pod": "{namespace": "default", "name": "vertica-crd-sc1-0"}, "command": "/opt/vertica/bin/admintools -t create_db --skip-fs-checks --hosts=10.244.1.5,10.244.2.4,10.244.4.6 --name=verticadb --port=8443 --database=default --username=dbadmin --password=secret --use-ssl --force-clean-up-on-failure --noprompt --password

2021-08-04T20:03:17.051Z DEBUG controller-runtime.manager.events Normal ("kind": "VerticaDB", "namespace": "default", "name": "vertica-crd-sc1-0", "uid": "26100df1-93e5-4e64-b665-533e14abb67c", "apiVersion": "v1beta1", "resourceVersion": "11591"), "reason": "CreateDBFailed", "message": "Creating database verticadb

2021-08-04T20:03:00.369Z DEBUG controller-runtime.manager.events Normal ("kind": "VerticaDB", "namespace": "default", "name": "vertica-crd-sc1-0", "uid": "26100df1-93e5-4e64-b665-533e14abb67c", "apiVersion": "v1beta1", "resourceVersion": "11591"), "reason": "CreateDBFailed", "message": "Creating database verticadb

Create an S3 bucket for the cluster:

```bash
$ S3_BUCKET=newbucket
$ S3_CLUSTER_IP=$(kubectl get svc | grep minio | head -1 | awk '{print $3}')
$ export AWS_ACCESS_KEY_ID=minio
$ export AWS_SECRET_ACCESS_KEY=minio123
```
$ aws s3 mb s3://$S3_BUCKET --endpoint-url http://$S3_CLUSTER_IP
make_bucket: newbucket

Use `kubectl get pods` to verify that the cluster uses the new S3 bucket and the database is ready:

<table>
<thead>
<tr>
<th>NAME</th>
<th>READY</th>
<th>STATUS</th>
<th>RESTARTS</th>
<th>AGE</th>
</tr>
</thead>
<tbody>
<tr>
<td>minio-ss-0-0</td>
<td>1/1</td>
<td>Running</td>
<td>0</td>
<td>18m</td>
</tr>
<tr>
<td>minio-ss-0-1</td>
<td>1/1</td>
<td>Running</td>
<td>0</td>
<td>18m</td>
</tr>
<tr>
<td>minio-ss-0-2</td>
<td>1/1</td>
<td>Running</td>
<td>0</td>
<td>18m</td>
</tr>
<tr>
<td>minio-ss-0-3</td>
<td>1/1</td>
<td>Running</td>
<td>0</td>
<td>18m</td>
</tr>
<tr>
<td>vertica-crd-sc1-0</td>
<td>1/1</td>
<td>Running</td>
<td>0</td>
<td>20m</td>
</tr>
<tr>
<td>vertica-crd-sc1-1</td>
<td>1/1</td>
<td>Running</td>
<td>0</td>
<td>20m</td>
</tr>
<tr>
<td>vertica-crd-sc1-2</td>
<td>1/1</td>
<td>Running</td>
<td>0</td>
<td>20m</td>
</tr>
<tr>
<td>verticadb-operator-controller-manager-5d9cdc9b8-kw9nv</td>
<td>2/2</td>
<td>Running</td>
<td>0</td>
<td>63m</td>
</tr>
</tbody>
</table>

**Database is not Available**

After you create a custom resource instance, the database is not available. The `kubectl get custom-resource` command does not display information:

$ kubectl get vdb

<table>
<thead>
<tr>
<th>NAME</th>
<th>AGE</th>
<th>SUBCLUSTERS</th>
<th>INSTALLED</th>
<th>DBADDED</th>
<th>UP</th>
<th>AUTORESTARTVERTICA</th>
</tr>
</thead>
<tbody>
<tr>
<td>vertica-crd</td>
<td>4s</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Use `kubectl describe custom-resource` to check the events for the pods to identify any issues:

$ kubectl describe vdb

Name: vertica-crd
Namespace: default
Labels: <none>
Annotations: <none>
API Version: vertica.com/v1beta1
Kind: VerticaDB
Metadata: ...

Superuser Password Secret: su-passwd

Events:

```
Warning  SuperuserPasswordSecretNotFound  5s (x12 over 15s)  verticadb-operator  Secret for superuser password ‘su-passwd’ was not found
```

In this circumstance, the custom resource uses a secret named `su-passwd` to store the Superuser Password Secret, but there is no such secret available. Create a secret named `su-passwd` to store the secret:
$ kubectl create secret generic su-passwd --from-literal=password=sup3rs3cr3t
secret/su-passwd created

Use `kubectl get custom-resource` to verify the issue is resolved:

<table>
<thead>
<tr>
<th>NAME</th>
<th>AGE</th>
<th>SUBCLUSTERS</th>
<th>INSTALLED</th>
<th>D8ADDED</th>
<th>UP</th>
<th>AUTORESTARTVERTICA</th>
</tr>
</thead>
<tbody>
<tr>
<td>vertica-crd</td>
<td>89s</td>
<td>1</td>
<td>0</td>
<td>0</td>
<td>0</td>
<td>True</td>
</tr>
</tbody>
</table>

**Image Pull Failure**

You receive an ImagePullBackOff error when you deploy a Vertica cluster with Helm charts, but you do not pre-pull the Vertica image from the local registry server:

```
$ kubectl describe pod pod-name-0
...
Events:
  Type     Reason      Age       From                 Message
  ----     ------      -----     ------                 -------
  Warning  Failed      2m32s    kubelet              Failed to pull image "k8s-rhel7-01:5000/vertica-k8s:default-1": rpc error: code = Unknown desc = context canceled
  Warning  Failed      2m32s    kubelet              Error: ErrImagePull
  Normal   BackOff     2m32s    kubelet              Back-off pulling image "k8s-rhel7-01:5000/vertica-k8s:default-1"
  Warning  Failed      2m32s    kubelet              Error: ImagePullBackOff
  Normal   Pulling     2m18s    kubelet              Pulling image "k8s-rhel7-01:5000/vertica-k8s:default-1"
```

This occurs because the Vertica image size is too big to pull from the registry while deploying the Vertica cluster. Execute the following command on a Kubernetes host:

```
$ docker image list | grep vertica-k8s
k8s-rhel7-01:5000/vertica-k8s:default-1 2d6f5d3d90d6 9 days ago 1.55GB
```

The solve this issue, complete one of the following:

- Pull the Vertica images on each node before creating the Vertica StatefulSet:

  ```
  $ NODES=`kubectl get nodes | grep -v NAME | awk '{print $1}'`
  $ for node in $NODES; do ssh $node docker pull $DOCKER_REGISTRY:5000/vertica-k8s:$K8S_TAG; done
  ```

- Use the reduced-size `vertica/vertica-k8s:11.0.0-0-minimal` image for the Vertica server.
### Pending Pods Due to Insufficient CPU

If your host nodes do not have enough resources to fulfill the resource request from a pod, the pod stays in pending status.

**Note:**
As a best practice, do not request the maximum amount of resources available on a host node to leave resources for other processes on the host node.

In the following example, the pod requests 40 CPUs on the host node, and the pod stays in **Pending**:

```
$ kubectl describe pod cluster-vertica-defaultsubcluster-0
...
Status: Pending
...
Containers:
  server:
    Image: docker.io/library/vertica-k8s:default-1
    Ports: 5433/TCP, 5434/TCP, 22/TCP
    Host Ports: 0/TCP, 0/TCP, 0/TCP
    Command: /opt/vertica/bin/docker-entrypoint.sh
    restart-vertica-node
    Limits: memory: 200Gi
    Requests: cpu: 40
    memory: 200Gi
...
Events:
  Type     Reason        Age           From                     Message
  -----     -------        -----          ----------                 -------
  Warning   FailedScheduling 3h20m default-scheduler 0/5 nodes are available: 5 Insufficient cpu.
```

To confirm the resources available on the host node. The following command confirms that the host node has only 40 allocatable CPUs:

```
$ kubectl describe node host-node-1
...
Conditions:
  Type     Status LastHeartbeatTime LastTransitionTime Reason
  -----     ----- ------------------ -------------------- ---------
  MemoryPressure False Sat, 20 Mar 2021 22:39:10 0000000000 Sat, 20 Mar 2021 13:07:02 0000000000 KubeletHasSufficientMemory kubellet has sufficient memory available
```
To correct this issue, reduce the resource.requests in the subcluster to values lower than the maximum allocatable CPUs. The following example uses a YAML-formatted file named `patch.yaml` to lower the resource requests for the pod:

```
$ cat patch.yaml
spec:
  subclusters:
  - name: defaultsubcluster
    resources:
      requests:
        memory: 238Gi
        cpu: "38"
      limits:
        memory: 238Gi

$ kubectl patch vdb cluster-vertica --type=merge --patch "$(cat patch.yaml)"
verticadb.vertica.com/cluster-vertica patched
Integrating with Apache Hadoop

Apache™ Hadoop™, like Vertica, uses a cluster of nodes for distributed processing. The primary component of interest is HDFS, the Hadoop Distributed File System.

You can use Vertica with HDFS in several ways:

- You can import HDFS data into locally-stored ROS files.
- You can access HDFS data in place using external tables. You can define the tables yourself or get schema information from Hive, a Hadoop component.
- You can use HDFS as a storage location for ROS files.
- You can export data from Vertica to share with other Hadoop components using a Hadoop columnar format. See Exporting Data to Files for more information.

See Hadoop Interfaces for more information about these options.

Hadoop file paths are expressed as URLs in the webhdfs or hdfs URL scheme. For more about using these schemes, see Reading from HDFS.

Hadoop Distributions

Vertica can be used with Hadoop distributions from Hortonworks, Cloudera, and MapR. See Vertica Integrations for Hadoop for the specific versions that are supported.
If you are using Cloudera, you can manage your Vertica cluster using Cloudera Manager. See Integrating With Cloudera Manager.

If you are using MapR, see Integrating Vertica with the MapR Distribution of Hadoop.

**WebHDFS Requirement**

By default, if you use a URL in the `hdfs` scheme, Vertica uses the (deprecated) Libhdfs++ library instead of WebHDFS. However, it falls back to WebHDFS for features not available in Libhdfs++, such as encryption zones, wire encryption, or writes. Even if you always use URLs in the `hdfs` scheme to choose Libhdfs++, you must still have a WebHDFS service available to handle these fallback cases. In addition, for some uses, such as Eon Mode communal storage, you must use WebHDFS directly with the `webhdfs` scheme.

By default, if you use a URL in the `hdfs` scheme, Vertica uses the (deprecated) Libhdfs++ library instead of WebHDFS. However, it falls back to WebHDFS for features not available in Libhdfs++, such as encryption zones, wire encryption, or writes. Even if you always use URLs in the `hdfs` scheme to choose Libhdfs++, you must still have a WebHDFS service available to handle these fallback cases. In addition, for some uses, such as Eon Mode communal storage, you must use WebHDFS directly with the `webhdfs` scheme.

**Deprecated:**
Support for LibHDFS++ is deprecated. In the future, URLs in the `hdfs` scheme will be automatically converted to the `webhdfs` scheme. To make this change in your database, set the `HDFSUseWebHDFS` configuration parameter to 1 (enabled).

**Cluster Layout**

Vertica supports two cluster architectures for Hadoop integration. Which architecture you use affects the decisions you make about integration with HDFS. These options might also be limited by license terms.

- You can co-locate Vertica on some or all of your Hadoop nodes. Vertica can then take advantage of data locality.
- You can build a Vertica cluster that is separate from your Hadoop cluster. In this configuration, Vertica can fully use each of its nodes; it does not share resources with Hadoop.

With either architecture, if you are using the `hdfs` scheme to read ORC or Parquet files, you must do some additional configuration. See Configuring HDFS Access.
Co-Located Clusters

With co-located clusters, Vertica is installed on some or all of your Hadoop nodes. The Vertica nodes use a private network in addition to the public network used by all Hadoop nodes, as the following figure shows:

You might choose to place Vertica on all of your Hadoop nodes or only on some of them. If you are using HDFS Storage Locations you should use at least three Vertica nodes, the minimum number for K-Safety in an Enterprise Mode Database.

Using more Vertica nodes can improve performance because the HDFS data needed by a query is more likely to be local to the node.

You can place Hadoop and Vertica clusters within a single rack, or you can span across many racks and nodes. If you do not co-locate Vertica on every node, you can improve performance by co-locating it on at least one node in each rack. See Configuring Rack Locality.

Normally, both Hadoop and Vertica use the entire node. Because this configuration uses shared nodes, you must address potential resource contention in your configuration on those nodes. See Configuring Hadoop for Co-Located Clusters for more information. No changes are needed on Hadoop-only nodes.

Hardware Recommendations

Hadoop clusters frequently do not have identical provisioning requirements or hardware configurations. However, Vertica nodes should be equivalent in size and capability, per the
best-practice standards recommended in General Hardware and OS Requirements and Recommendations in Installing Vertica.

Because Hadoop cluster specifications do not always meet these standards, Vertica recommends the following specifications for Vertica nodes in your Hadoop cluster.

<table>
<thead>
<tr>
<th>Specifications For...</th>
<th>Recommendation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Processor</td>
<td>For best performance, run:</td>
</tr>
<tr>
<td></td>
<td>- Two-socket servers with 8–14 core CPUs, clocked at or above 2.6 GHz for clusters over 10 TB</td>
</tr>
<tr>
<td></td>
<td>- Single-socket servers with 8–12 cores clocked at or above 2.6 GHz for clusters under 10 TB</td>
</tr>
<tr>
<td>Memory</td>
<td>Distribute the memory appropriately across all memory channels in the server:</td>
</tr>
<tr>
<td></td>
<td>- <strong>Minimum</strong>—8 GB of memory per physical CPU core in the server</td>
</tr>
<tr>
<td></td>
<td>- <strong>High-performance applications</strong>—12–16 GB of memory per physical core</td>
</tr>
<tr>
<td></td>
<td>- <strong>Type</strong>—at least DDR3-1600, preferably DDR3-1866</td>
</tr>
<tr>
<td>Storage</td>
<td>Read/write:</td>
</tr>
<tr>
<td></td>
<td>- <strong>Minimum</strong>—40 MB/s per physical core of the CPU</td>
</tr>
<tr>
<td></td>
<td>- For best performance—60–80 MB/s per physical core</td>

Configuring Hadoop for Co-Located Clusters

If you are co-locating Vertica on any HDFS nodes, there are some additional configuration requirements.

Hadoop Configuration Parameters

For best performance, set the following parameters with the specified minimum values:

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Minimum Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>HDFS block size</td>
<td>512MB</td>
</tr>
<tr>
<td>Namenode Java Heap</td>
<td>1GB</td>
</tr>
<tr>
<td>Datanode Java Heap</td>
<td>2GB</td>
</tr>
</tbody>
</table>

WebHDFS

Hadoop has two services that can provide web access to HDFS:

- WebHDFS
- httpFS

For Vertica, you must use the WebHDFS service.

YARN

The YARN service is available in newer releases of Hadoop. It performs resource management for Hadoop clusters. When co-locating Vertica on YARN-managed Hadoop nodes you must make some changes in YARN.

Vertica recommends reserving at least 16GB of memory for Vertica on shared nodes. Reserving more will improve performance. How you do this depends on your Hadoop distribution:
If you are using Hortonworks, create a "Vertica" node label and assign this to the nodes that are running Vertica.
If you are using Cloudera, enable and configure static service pools.

Consult the documentation for your Hadoop distribution for details. Alternatively, you can disable YARN on the shared nodes.

Hadoop Balancer

The Hadoop Balancer can redistribute data blocks across HDFS. For many Hadoop services, this feature is useful. However, for Vertica this can reduce performance under some conditions.

If you are using HDFS storage locations, the Hadoop load balancer can move data away from the Vertica nodes that are operating on it, degrading performance. This behavior can also occur when reading ORC or Parquet files if Vertica is not running on all Hadoop nodes. (If you are using separate Vertica and Hadoop clusters, all Hadoop access is over the network, and the performance cost is less noticeable.)

To prevent the undesired movement of data blocks across the HDFS cluster, consider excluding Vertica nodes from rebalancing. See the Hadoop documentation to learn how to do this.

Replication Factor

By default, HDFS stores three copies of each data block. Vertica is generally set up to store two copies of each data item through K-Safety. Thus, lowering the replication factor to 2 can save space and still provide data protection.

To lower the number of copies HDFS stores, set HadoopFSReplication, as explained in Troubleshooting HDFS Storage Locations.

Disk Space for Non-HDFS Use

You also need to reserve some disk space for non-HDFS use. To reserve disk space using Ambari, set dfs.datanode.du.reserved to a value in the hdfs-site.xml configuration file.

Setting this parameter preserves space for non-HDFS files that Vertica requires.
Configuring Rack Locality

**Note:** This feature is supported only for reading ORC and Parquet data on co-located clusters. It is only meaningful on Hadoop clusters that span multiple racks.

When possible, when planning a query Vertica automatically uses database nodes that are co-located with the HDFS nodes that contain the data. Moving query execution closer to the data reduces network latency and can improve performance. This behavior, called node locality, requires no additional configuration.

When Vertica is co-located on only a subset of HDFS nodes, sometimes there is no database node that is co-located with the data. However, performance is usually better if a query uses a database node in the same rack. If configured with information about Hadoop rack structure, Vertica attempts to use a database node in the same rack as the data to be queried.

For example, the following diagram illustrates a Hadoop cluster with three racks each containing three data nodes. (Typical production systems have more data nodes per rack.) In each rack, Vertica is co-located on one node.
If you configure rack locality, Vertica uses db01 to query data on dn1, dn2, or dn3, and uses db02 and db03 for data on rack2 and rack3 respectively. Because HDFS replicates data, any given data block can exist in more than one rack. If a data block is replicated on dn2, dn3, and dn6, for example, Vertica uses either db01 or db02 to query it.

Hadoop components are rack-aware, so configuration files describing rack structure already exist in the Hadoop cluster. To use this information in Vertica, configure fault groups that describe this rack structure. Vertica uses fault groups in query planning.

**Configuring Fault Groups**

Vertica uses **Fault Groups** to describe physical cluster layout. Because your database nodes are co-located on HDFS nodes, Vertica can use the information about the physical layout of the HDFS cluster.
Tip:
For best results, ensure that each Hadoop rack contains at least one co-located Vertica node.

Hadoop stores its cluster-layout data in a topology mapping file in HADOOP_CONF_DIR. On HortonWorks the file is typically named topology_mappings.data. On Cloudera it is typically named topology.map. Use the data in this file to create an input file for the fault-group script. For more information about the format of this file, see Creating a Fault Group Input File.

Following is an example topology mapping file for the cluster illustrated previously:

```
[network_topology]
dn1.example.com=/rack1
10.20.41.51=/rack1
dn2.example.com=/rack1
10.20.41.52=/rack1
dn3.example.com=/rack1
10.20.41.53=/rack1
dn4.example.com=/rack1
10.20.41.71=/rack2
dn5.example.com=/rack2
10.20.41.72=/rack2
dn6.example.com=/rack2
10.20.41.73=/rack2
dn7.example.com=/rack3
10.20.41.91=/rack3
dn8.example.com=/rack3
10.20.41.92=/rack3
dn9.example.com=/rack3
10.20.41.93=/rack3
```

From this data, you can create the following input file describing the Vertica subset of this cluster:

```
/rack1 /rack2 /rack3
/rack1 = db01
/rack2 = db02
/rack3 = db03
```

This input file tells Vertica that the database node "db01" is on rack1, "db02" is on rack2, and "db03" is on rack3. In creating this file, ignore Hadoop data nodes that are not also Vertica nodes.

After you create the input file, run the fault-group tool:

```
$ python /opt/vertica/scripts/fault_group_ddl_generator.py dbName input_file > fault_group_ddl.sql
```

The output of this script is a SQL file that creates the fault groups. Execute it following the instructions in Creating Fault Groups.
You can review the new fault groups with the following statement:

```sql
=> SELECT member_name, node_address, parent_name FROM fault_groups
INNER JOIN nodes ON member_name=node_name ORDER BY parent_name;
```

<table>
<thead>
<tr>
<th>member_name</th>
<th>node_address</th>
<th>parent_name</th>
</tr>
</thead>
<tbody>
<tr>
<td>db01</td>
<td>10.20.41.51</td>
<td>/rack1</td>
</tr>
<tr>
<td>db02</td>
<td>10.20.41.71</td>
<td>/rack2</td>
</tr>
<tr>
<td>db03</td>
<td>10.20.41.91</td>
<td>/rack3</td>
</tr>
</tbody>
</table>

(3 rows)

**Working With Multi-Level Racks**

A Hadoop cluster can use multi-level racks. For example, `/west/rack-w1`, `/west/rack-2`, and `/west/rack-w3` might be served from one data center, while `/east/rack-e1`, `/east/rack-e2`, and `/east/rack-e3` are served from another. Use the following format for entries in the input file for the fault-group script:

```
/west /east
/west = /rack-w1 /rack-w2 /rack-w3
/east = /rack-e1 /rack-e2 /rack-e3
/rack-w1 = db01
/rack-w2 = db02
/rack-w3 = db03
/rack-e1 = db04
/rack-e2 = db05
/rack-e3 = db06
```

Do not create entries using the full rack path, such as `/west/rack-w1`.

**Auditing Results**

To see how much data can be loaded with rack locality, use `EXPLAIN` with the query and look for statements like the following in the output:

```
100% of ORC data including co-located data can be loaded with rack locality.
```
Separate Clusters

With separate clusters, a Vertica cluster and a Hadoop cluster share no nodes. You should use a high-bandwidth network connection between the two clusters.

The following figure illustrates the configuration for separate clusters:

![Separate Clusters Diagram]

Network

The network is a key performance component of any well-configured cluster. When Vertica stores data to HDFS it writes and reads data across the network.

The layout shown in the figure calls for two networks, and there are benefits to adding a third:
- Database Private Network: Vertica uses a private network for command and control and moving data between nodes in support of its database functions. In some networks, the command and control and passing of data are split across two networks.
- Database/Hadoop Shared Network: Each Vertica node must be able to connect to each Hadoop data node and the NameNode. Hadoop best practices generally require a dedicated network for the Hadoop cluster. This is not a technical requirement, but a dedicated network improves Hadoop performance. Vertica and Hadoop should share the dedicated Hadoop network.
- Optional Client Network: Outside clients may access the clustered networks through a client network. This is not an absolute requirement, but the use of a third network that supports client connections to either Vertica or Hadoop can improve performance. If the configuration does not support a client network, than client connections should use the shared network.

Hadoop Configuration Parameters

For best performance, set the following parameters with the specified minimum values:

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Minimum Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>HDFS block size</td>
<td>512MB</td>
</tr>
<tr>
<td>Namenode Java Heap</td>
<td>1GB</td>
</tr>
<tr>
<td>Datanode Java Heap</td>
<td>2GB</td>
</tr>
</tbody>
</table>

Hadoop Interfaces

Vertica provides several ways to interact with data stored in HDFS, described below. Decisions about Cluster Layout can affect the decisions you make about which Hadoop interfaces to use.

Querying Data Stored in HDFS

Vertica can query data directly from HDFS without requiring you to copy data. Doing so allows you to explore a large data lake without copying data into Vertica for analysis (and
keeping the copy up to date). Queries against data in columnar formats are optimized to reduce the amount of data that Vertica has to read.

To query data, you define an external table as for any other external data source. (This option does not make use of schema definitions from Hive.) See Working with External Data for more about creating external tables and optimizations specific to these native Hadoop file formats.

Vertica can query the data directly from the HDFS nodes, bypassing the WebHDFS service. To query data directly, Vertica needs access to HDFS configuration files. See Reading from HDFS.

### Querying Data Using the HCatalog Connector

The HCatalog Connector uses Hadoop services (Hive and HCatalog) to query data stored in HDFS. Using the HCatalog Connector, Vertica can use Hive’s schema definitions. However, performance can be poor compared to defining your own external table and querying the data directly. The HCatalog Connector is also sensitive to changes in the Hadoop libraries on which it depends; upgrading your Hadoop cluster might affect your HCatalog connections.

See Using the HCatalog Connector.

### Using ROS Data

Storing data in the Vertica native file format (ROS) delivers better query performance than reading externally-stored data. You can create storage locations on your HDFS cluster to hold ROS data. Even if your data is already stored in HDFS, you might choose to copy that data into an HDFS storage location for better performance. If your Vertica cluster also uses local file storage, you can use HDFS storage locations for lower-priority data.

See Using HDFS Storage Locations for information about creating and managing HDFS storage locations, and Reading from HDFS for information about copying data into them.
Exporting Data

You might want to export data from Vertica, either to share it with other Hadoop-based applications or to move lower-priority data from ROS to less-expensive storage. You can export a table, or part of one, in Hadoop columnar format. After export you can still query the data using an external table, as for any other data.

See Exporting Data to Files.

Accessing Kerberized HDFS Data

If your Hortonworks or Cloudera Hadoop cluster uses Kerberos authentication to restrict access to HDFS, Vertica must be granted access. If you use Kerberos authentication for your Vertica database, and database users have HDFS access, then you can configure Vertica to use the same principals to authenticate. However, not all Hadoop administrators want to grant access to all database users, preferring to manage access in other ways. In addition, not all Vertica databases use Kerberos.

Vertica provides the following options for accessing Kerberized Hadoop clusters:

- Using Vertica Kerberos principals.
- Using Hadoop proxy users combined with Vertica users.
- Using a user-specified delegation token which grants access to HDFS. Delegation tokens are issued by the Hadoop cluster.

Proxy users and delegation tokens both use a session parameter to manage identities. Vertica need not be Kerberized when using either of these methods.

Vertica does not support Kerberos for MapR.

To test your Kerberos configuration, see Verifying HDFS Configuration.

Using Kerbereros with Vertica

If you use Kerberos for your Vertica cluster and your principals have access to HDFS, then you can configure Vertica to use the same credentials for HDFS.

Vertica authenticates with Hadoop in two ways that require different configurations:
- **User Authentication**—On behalf of the user, by passing along the user’s existing Kerberos credentials. This method is also called user impersonation. Actions performed on behalf of particular users, like executing queries, generally use user authentication.

- **Vertica Authentication**—On behalf of system processes that access ROS data or the catalog, by using a special Kerberos credential stored in a keytab file.

**Note:**
Vertica and Hadoop must use the same Kerberos server or servers (KDCs).

Vertica can interact with more than one Kerberos realm. To configure multiple realms, see Multi-realm Support.

Vertica attempts to automatically refresh Hadoop tokens before they expire. See Token Expiration.

**User Authentication**

To use Vertica with Kerberos and Hadoop, the client user first authenticates with one of the Kerberos servers (Key Distribution Center, or KDC) being used by the Hadoop cluster. A user might run kinit or sign in to Active Directory, for example.

A user who authenticates to a Kerberos server receives a Kerberos ticket. At the beginning of a client session, Vertica automatically retrieves this ticket. Vertica then uses this ticket to get a Hadoop token, which Hadoop uses to grant access. Vertica uses this token to access HDFS, such as when executing a query on behalf of the user. When the token expires, Vertica automatically renews it, also renewing the Kerberos ticket if necessary.

The user must have been granted permission to access the relevant files in HDFS. This permission is checked the first time Vertica reads HDFS data.

Vertica can use multiple KDCs serving multiple Kerberos realms, if proper cross-realm trust has been set up between realms.

**Vertica Authentication**

Automatic processes, such as the Tuple Mover or the processes that access Eon Mode communal storage, do not log in the way users do. Instead, Vertica uses a special identity (principal) stored in a keytab file on every database node. (This approach is also used for Vertica clusters that use Kerberos but do not use Hadoop.) After you configure the keytab
file, Vertica uses the principal residing there to automatically obtain and maintain a Kerberos ticket, much as in the client scenario. In this case, the client does not interact with Kerberos.

Each Vertica node uses its own principal; it is common to incorporate the name of the node into the principal name. You can either create one keytab per node, containing only that node's principal, or you can create a single keytab containing all the principals and distribute the file to all nodes. Either way, the node uses its principal to get a Kerberos ticket and then uses that ticket to get a Hadoop token.

When creating HDFS storage locations Vertica uses the principal in the keytab file, not the principal of the user issuing the CREATE LOCATION statement. The HCatalog Connector sometimes uses the principal in the keytab file, depending on how Hive authenticates users.

### Configuring Users and the Keytab File

If you have not already configured Kerberos authentication for Vertica, follow the instructions in [Configure Vertica for Kerberos Authentication](#). Of particular importance for Hadoop integration:

1. Create one Kerberos principal per node.
2. Place the keytab files in the same location on each database node and set configuration parameter `KerberosKeytabFile` to that location.
3. Set `KerberosServiceName` to the name of the principal. (See [Inform Vertica About the Kerberos Principal](#).)

If you are using the HCatalog Connector, follow the additional steps in [Configuring Security](#) in the HCatalog Connector documentation.

If you are using HDFS storage locations, follow the additional steps in [Configuring Kerberos](#) in the HDFS Storage Locations documentation.

### Proxy Users and Delegation Tokens

An alternative to granting HDFS access to individual Vertica users is to use delegation tokens, either directly or with a proxy user. In this configuration, Vertica accesses HDFS on behalf of some other (Hadoop) user. The Hadoop users need not be Vertica users at all.

In Vertica, you can either specify the name of the Hadoop user to act on behalf of (doAs), or you can directly use a Kerberos delegation token that you obtain from HDFS (Bring Your
Own Delegation Token). In the doAs case, Vertica obtains a delegation token for that user, so both approaches ultimately use delegation tokens to access files in HDFS.

Use the HadoopImpersonationConfig session parameter to specify a user or delegation token to use for HDFS access. Each session can use a different user and can use either doAs or a delegation token. The value of HadoopImpersonationConfig is a set of JSON objects.

To use delegation tokens of either type (more specifically, when HadoopImpersonationConfig is set), you must access HDFS through WebHDFS.

**User Impersonation (doAs)**

You can use user impersonation to access data in an HDFS cluster from Vertica. This approach is called "doAs" (for "do as") because Vertica uses a single proxy user on behalf of another (Hadoop) user. The impersonated Hadoop user does not need to also be a Vertica user.

In the following illustration, Alice is a Hadoop user but not a Vertica user. She connects to Vertica as the proxy user, vertica-etl. In her session, Vertica obtains a delegation token (DT) on behalf of the doAs user (Alice), and uses that delegation token to access HDFS.

You can use doAs with or without Kerberos, so long as HDFS and Vertica match. If HDFS uses Kerberos then Vertica must too.
User Configuration

The Hadoop administrator must create a proxy user and allow it to access HDFS on behalf of other users. Set values in core-site.xml as in the following example:

```xml
<name>hadoop.proxyuser.vertica-etl.users</name>
<value>*</value>
<name>hadoop.proxyuser.vertica-etl.hosts</name>
<value>*</value>
```

In Vertica, create a corresponding user.

Session Configuration

To make requests on behalf of a Hadoop user, first set the HadoopImpersonationConfig session parameter to specify the user and HDFS cluster. Vertica will access HDFS as that user until the session ends or you change the parameter.

The value of this session parameter is a collection of JSON objects. Each object specifies an HDFS cluster and a Hadoop user. For the cluster, you can specify either a name service or an individual name node. If you are using HA name node, then you must either use a name service or specify all name nodes. HadoopImpersonationConfig Format describes the full JSON syntax.

The following example shows access on behalf of two different users. The users "stephanie" and "bob" are Hadoop users, not Vertica users. "vertica-etl" is a Vertica user.

```bash
$ vsql -U vertica-etl
=> ALTER SESSION SET
   HadoopImpersonationConfig = '[["nameservice":"hadoopNS", "doAs":"stephanie"]];
=> COPY nation FROM 'webhdfs:///user/stephanie/nation.dat';
=> ALTER SESSION SET
   HadoopImpersonationConfig = '[["nameservice":"hadoopNS", "doAs":"bob"],
   {"authority":"hadoop2:50070", "doAs":"rob"}];
=> COPY nation FROM 'webhdfs:///user/bob/nation.dat';
```

Vertica uses Hadoop delegation tokens, obtained from the name node, to impersonate Hadoop users. In a long-running session, a token could expire. Vertica attempts to renew tokens automatically; see Token Expiration.
**Testing the Configuration**

You can use the `HADOOP_IMPERSONATION_CONFIG_CHECK` function to test your HDFS delegation tokens and `HCATALOGCONNECTOR_CONFIG_CHECK` to test your HCatalog Connector delegation token.

**Bring Your Own Delegation Token**

Instead of creating a proxy user and giving it access to HDFS for use with doAs, you can give Vertica a Hadoop delegation token to use. You must obtain this delegation token from the Hadoop name node. In this model, security is handled entirely on the Hadoop side, with Vertica just passing along a token. Vertica may or may not be Kerberized.

A typical workflow is:

- In an ETL front end, a user submits a query.
- The ETL system uses authentication and authorization services to verify that the user has sufficient permission to run the query.
- The ETL system requests a delegation token for the user from the name node.
- The ETL system makes a client connection to Vertica, sets the delegation token for the session, and runs the query.

When using a delegation token, clients can connect as any Vertica user. No proxy user is required.

In the following illustration, Bob has a Hadoop-issued delegation token. He connects to Vertica and Vertica uses that delegation token to access files in HDFS.
Session Configuration

Set the `HadoopImpersonationConfig` session parameter to specify the delegation token and HDFS cluster. Vertica will access HDFS using that delegation token until the session ends, the token expires, or you change the parameter.

The value of this session parameter is a collection of JSON objects. Each object specifies a delegation token ("token") in WebHDFS format and an HDFS name service or name node. `HadoopImpersonationConfig Format` describes the full JSON syntax.

The following example shows access on behalf of two different users. The users "stephanie" and "bob" are Hadoop users, not Vertica users. "dbuser1" is a Vertica user with no special privileges.

```sql
$ vsql -U dbuser1
=> ALTER SESSION SET HadoopImpersonationConfig = '{"authority":"hadoop1:50070","token":"JAAGZGJ1dGwx8iZXRmMQCKAWDXjGB9igFg-zKfFy4gao48mhSYJx1Xqrh8HbbUn4vScNgS8H1nQxJXRJIREZT1GRIbGvYXRpb24MTAuMjAuMTAwLjU0OjgwMjA"}';
=> COPY nation FROM 'webhdfs:///user/stephanie/nation.dat';

=> ALTER SESSION SET HadoopImpersonationConfig = '{"authority":"hadoop1:50070","token":"HgADdG9tA3RvqBCKAWDXjGaogFg-zKEK1Ir4ga48bbfOu0pc_JpXvhr1ZMSnm0aDg0h1u8hJXRJIREZT1GRIbGvYXRpb24MTAuMjAuMTAwLjU0OjgwMjA"}';
=> COPY nation FROM 'webhdfs:///user/bob/nation.dat';
```

You can use the `WebHDFS REST API` to get delegation tokens:
Vertica does not, and cannot, renew delegation tokens when they expire. You must either keep sessions shorter than token lifetime or implement a renewal scheme.

**Delegation Tokens and the HCatalog Connector**

HiveServer2 uses a different format for delegation tokens. To use the HCatalog Connector, therefore, you must set two delegation tokens, one as usual (authority) and one for HiveServer2 (schema). The HCatalog Connector uses the schema token to access metadata and the authority token to access data. The schema name is the same Hive schema you specified in CREATE HCATALOG SCHEMA. The following example shows how to use these two delegation tokens.

```bash
$ curl -s --noproxy "*" --negotiate -u: -X GET "http://hadoop1:50070/webhdfs/v1/?op=GETDELEGATIONTOKEN"
```

HiveServer2 does not provide a REST API for delegation tokens like WebHDFS does. See Getting a HiveServer2 Delegation Token for some tips.

**Testing the Configuration**

You can use the HADOOP_IMPERSONATION_CONFIG_CHECK function to test your HDFS delegation tokens and HCATALOGCONNECTOR_CONFIG_CHECK to test your HCatalog Connector delegation token.
Getting a HiveServer2 Delegation Token

To access Hive metadata using HiveServer2, you need a special delegation token. (See Bring Your Own Delegation Token.) HiveServer2 does not provide an easy way to get this token, unlike the REST API that grants HDFS (data) delegation tokens.

The following utility code shows a way to get this token. You will need to modify this code for your own cluster; in particular, change the value of the `connectURL` static.

```java
import java.io.FileWriter;
import java.io.PrintStream;
import java.io.PrintWriter;
import java.io.StringWriter;
import java.io.Writer;
import java.security.PrivilegedExceptionAction;
import java.sql.Connection;
import java.sql.DriverManager;
import java.sql.ResultSet;
import java.sql.Statement;
import org.apache.hadoop.conf.Configuration;
import org.apache.hadoop.hive.shims.Utils;
import org.apache.hadoop.security.UserGroupInformation;
import org.apache.hive.jdbc.HiveConnection;
import org.json.simple.JSONArray;
import org.json.simple.JSONObject;

public class JDBCTest {
    public static final String driverName = "org.apache.hive.jdbc.HiveDriver";
    public static String connectURL = "jdbc:hive2://node2.cluster0.example.com:2181,node1.cluster0.example.com:2181,node3.cluster0.example.com:2181/serviceDiscoveryMode=zooKeeper;zooKeeperNamespace=hiveserver2";
    public static String schemaName = "hcat";
    public static String verticaUser = "condor";
    public static String proxyUser = "condor-2";
    public static String krb5conf = "/home/server/kerberos/krb5.conf";
    public static String realm = "EXAMPLE.COM";
    public static String keytab = "/home/server/kerberos/kt.keytab";

    public static void main(String[] args) {
        if (args.length < 7) {
            System.out.println(
                "Usage: JDBCTest <jdbc_url> <hive_schema> <kerberized_user> <proxy_user> <krb5_conf> <krb_realm> <krb_keytab>";
            System.exit(1);
        }
        connectURL = args[0];
        schemaName = args[1];
        verticaUser = args[2];
        proxyUser = args[3];
        krb5conf = args[4];
        realm = args[5];
        keytab = args[6];
    }
}
```
System.out.println("connectURL:" + connectURL);
System.out.println("schemaName:" + schemaName);
System.out.println("verticaUser:" + verticaUser);
System.out.println("proxyUser:" + proxyUser);
System.out.println("krb5conf:" + krb5conf);
System.out.println("realm:" + realm);
System.out.println("keytab:" + keytab);
try {
    Class.forName("org.apache.hive.jdbc.HiveDriver");
    System.out.println("Found HiveServer2 JDBC driver");
} catch (ClassNotFoundException e) {
    System.out.println("Couldn't find HiveServer2 JDBC driver");
}
try {
    Configuration conf = new Configuration();
    System.setProperty("java.security.krb5.conf", krb5conf);
    conf.set("hadoop.security.authentication", "kerberos");
    UserGroupInformation.setConfiguration(conf);
    dtTest();
} catch (Throwable e) {
    Writer stackString = new StringWriter();
    e.printStackTrace(new PrintWriter(stackString));
    System.out.println(e);
    System.out.printf("Error occurred when connecting to HiveServer2 with [%s]: %s\n%s\n", new Object[]{connectURL, e.getMessage(), stackString.toString()});
}
private static void dtTest() throws Exception {
    UserGroupInformation user = UserGroupInformation.loginUserFromKeytabAndReturnUGI(verticaUser + "@" + realm, keytab);
    user.doAs(new PrivilegedExceptionAction() {
        public Void run() throws Exception {
            System.out.println("In doas:" + UserGroupInformation.getLoginUser());
            Connection con = DriverManager.getConnection(JDBCTest.connectURL);
            System.out.println("Connected to HiveServer2");
            JDBCTest.showUser(con);
            System.out.println("Getting delegation token for user");
            String token = ((HiveConnection) con).getDelegationToken(JDBCTest.proxyUser, "hive/_HOST@" + JDBCTest.realm);
            System.out.println("Got token:" + token);
            System.out.println("Closing original connection");
            con.close();
            System.out.println("Setting delegation token in UGI");
            Util.setTokenStr(Util.getUGI(), token, "hiveserver2ClientToken");
            con = DriverManager.getConnection(JDBCTest.connectURL + ";auth=delegationToken");
            System.out.println("Connected to HiveServer2 with delegation token");
            JDBCTest.showUser(con);
            con.close();
            JDBCTest.writeDTJSON(token);
            return null;
        }
    });
}
private static void showUser(Connection con) throws Exception {
    String sql = "select current_user()";
Statement stmt = con.createStatement();
ResultSet res = stmt.executeQuery(sql);
StringBuilder result = new StringBuilder();
while (res.next()) {
    result.append(res.getString(1));
}
System.out.println("\tcurent_user: " + result.toString());

private static void writeDTJSON(String token) {
    JSONArray arr = new JSONArray();
    JSONObject obj = new JSONObject();
    obj.put("schema", schemaName);
    obj.put("token", token);
    arr.add(obj);
    try {
        FileWriter fileWriter = new FileWriter("hcat_delegation.json");
        fileWriter.write(arr.toJSONString());
        fileWriter.flush();
    } catch (Exception e) {
        e.printStackTrace();
    }
}

Following is an example call and its output:

$ java -cp hs2token.jar JDBCTest 'jdbc:hive2://test.example.com:10000/default;principal=hive/_HOST@EXAMPLE.COM' "default" "testuser" "test" "/etc/krb5.conf" "EXAMPLE.COM"

HadoopImpersonationConfig Format

The value of the `HadoopImpersonationConfig` session parameter is a set of one or more JSON objects. Each object describes one doAs user or delegation token for one Hadoop destination. You must use WebHDFS, not LibHDFS++, to use impersonation.

**Syntax**

```
[ { "doAs" | "token": value,
   "nameservice" | "authority" | "schema": value } ,... ]
```

**Properties**

<table>
<thead>
<tr>
<th>Property</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>doAs</td>
<td>The name of a Hadoop user to impersonate.</td>
</tr>
<tr>
<td>token</td>
<td>A delegation token to use for HDFS access.</td>
</tr>
<tr>
<td>nameservice</td>
<td>A Hadoop name service. All access to this name service uses the doAs user or delegation token.</td>
</tr>
<tr>
<td>authority</td>
<td>A name node authority. All access to this authority uses the doAs user or delegation token. If the name node fails over to another name node, the doAs user or delegation token does not automatically apply to the failover name node. If you are using HA name node, use nameservice instead of authority or include objects for every name node.</td>
</tr>
<tr>
<td>schema</td>
<td>A Hive schema, for use with the HCatalog Connector. Vertica uses this object's doAs user or token to access Hive metadata only. For data access you must also specify a name service or authority object, just like for all other data access.</td>
</tr>
</tbody>
</table>

**Examples**

In the following example of doAs, Bob is a Hadoop user and vertica-etl is a Kerberized proxy user.
In the following example, the current Vertica user (it doesn't matter who that is) uses a Hadoop delegation token. This token belongs to Alice, but you never specify the user name here. Instead, you use it to get the delegation token from Hadoop.

$ vsql -U dbuser1
=> ALTER SESSION SET
   HadoopImpersonationConfig = '[["nameservice":"hadoopNS", "doAs":"Stephanie"],
   "schema":"access","token":"UwAHcmVsZwFzQdzyZx1YXYnIAd0tvVJkSal7B2VzGFWjgmsj_'
]';
=> COPY nation FROM 'webhdfs://hadoop1:50070/user/stephanie/nation.dat';

In the following example, "authority" specifies the (single) name node on a Hadoop cluster that does not use high availability.

$ vsql -U dbuser1
=> ALTER SESSION SET
   HadoopImpersonationConfig = '[["authority":"hadoop1:50070", "doAs":"Stephanie"],
   "schema":"access","token":"UwAHcmVsZwFzQdzyZx1YXYnIAd0tvVJkSal7B2VzGFWjgmsj_'
]';
=> COPY nation FROM 'webhdfs://hadoop1:50070/user/stephanie/nation.dat';

To access data in Hive you need to specify two delegation tokens. The first, for a name service or authority, is for data access as usual. The second is for the HiveServer2 metadata for the schema. HiveServer2 requires a delegation token in WebHDFS format. The schema name is the Hive schema you specify with CREATE HCATALOG SCHEMA.

$ vsql -U dbuser1
-- set delegation token for user and HiveServer2
=> ALTER SESSION SET
   HadoopImpersonationConfig='[
   "nameservice":"hadoopNS","token":""IUCIi9b8d6awFTHk5nC-FHB8x8SV0C5ERGy8k0bX12F0awWkEwLjIwLiQyLjEwOTo4MDIw"],
   "schema":"access","token":"UwAHcmVsZwFzQdzyZx1YXYnIAd0tvVJkSal7B2VzGFWjgmsj_'
]';
=> CREATE HCATALOG SCHEMA access WITH hcatalog_schema 'access';
=> SELECT * FROM access.t1;

-- uses both tokens
=> SELECT * FROM hcatalog_tables;

--uses only HiveServer2 token
=> SELECT * FROM hcatalog_tables;
Each object in the HadoopImpersonationConfig collection specifies one connection to one Hadoop cluster. You can add as many connections as you like, including to more than one Hadoop cluster. The following example shows delegation tokens for two different Hadoop clusters. Vertica uses the correct token for each cluster when connecting.

```$ vsql -U dbuser1
=> ALTER SESSION SET
    HadoopImpersonationConfig = '[
        
    ]

=> COPY clicks FROM 'webhdfs://productionNS/data/clickstream.dat';
=> COPY testclicks FROM 'webhdfs://testNS/data/clickstream.dat';
```

### Token Expiration

Vertica uses Hadoop tokens when using Kerberos tickets ([Using Kerberos with Vertica](#)) or doAs ([User Impersonation (doAs)](#)). Vertica attempts to automatically refresh Hadoop tokens before they expire, but you can also set a minimum refresh frequency if you prefer. Use the HadoopFSTokenRefreshFrequency configuration parameter to specify the frequency in seconds:

```=> ALTER DATABASE exampledb SET HadoopFSTokenRefreshFrequency = '86400';
```

If the current age of the token is greater than the value specified in this parameter, Vertica refreshes the token before accessing data stored in HDFS.

Vertica does not refresh delegation tokens ([Bring Your Own Delegation Token](#)).

### Reading from HDFS

You can use the `webhdfs` and `swebhdfs` URL schemes to access data through the WebHDFS service. WebHDFS supports two variations of the URL, depending on whether you specify a name service or use a name node directly.

Vertica also supports the `hdfs` scheme, following the same patterns (name service or name node). By default, the `hdfs` scheme uses the deprecated LibHDFS++ package, falling back on WebHDFS for certain operations. To treat `hdfs` URLs as if they were `webhdfs` URLs, set the `HDFSUseWebHDFS` configuration parameter to 1 (enabled).
You can use LibHDFS++ through the hdfs scheme with COPY and with CREATE EXTERNAL TABLE AS COPY. When using the hdfs scheme with COPY, you do not need to specify ON ANY NODE.

You cannot use LibHDFS++ for communal storage in Eon Mode; you must use webhdfs to access communal storage on HDFS. However, you can use the hdfs scheme for reading data in Eon Mode as well as in Enterprise Mode.

Regardless of how you access HDFS, Vertica requires access to certain configuration files from your HDFS cluster. For details see HDFS File System.

If a data file you want to read resides on an HDFS cluster that uses Kerberos authentication, Vertica uses the current user’s principal, session doAs user, or session delegation token. See Accessing Kerberized HDFS Data for more information about these options.

For additional information, see HDFS File System.

**URL**

You specify the location of a file in HDFS using a URL. With COPY, you can use the webhdfs:/// URL prefix (three slashes), and then specify the file path. Vertica uses your HDFS configuration files to find the name node. With storage locations (including Eon Mode communal storage), always specify a name service or name node explicitly. For a full specification of the format, see HDFS File System.

**Note:**

Do not use the /// shorthand when creating a storage location, because you do not want a storage location to depend on the value of HadoopConfDir, which can change. Use this shorthand only for reading external data.

The following example loads data stored in HDFS using the default name node:

```
=> COPY users FROM 'webhdfs:///data/users.csv';
```

Vertica uses the fs.defaultFS Hadoop configuration parameter to find the name node, which it uses to access the data. You can instead specify a host and port explicitly using the following format: webhdfs:///host:port/. The specified host is the name node, not an individual data node. If you are using High Availability (HA) Name Nodes you should not use an explicit host because high availability is provided through name services instead.
Your HDFS cluster might use High Availability Name Nodes or define name services. If so, you should use the name service instead of the host and port, in the format `webhdfs://nameservice/`. The name service you specify must be defined in `hdfs-site.xml`.

The following example shows how you can use a name service, `hadoopNS`:

```sql
=> CREATE EXTERNAL TABLE users (id INT, name VARCHAR(20))
    AS COPY FROM 'webhdfs://hadoopNS/data/users.csv';
```

If you are using Vertica to access data from more than one HDFS cluster, always use explicit name services or hosts in the URL. Using the `///` shorthand could produce unexpected results because Vertica uses the first value of `fs.defaultFS` that it finds. To access multiple HDFS clusters, you must use host and service names that are globally unique. See Configuring HDFS Access for more information.

Characters may be URL-encoded (`%NN` where NN is a two-digit hexadecimal number) but are not required to be, except that the '%' character must be encoded.

### Configuring HDFS Access

Vertica uses information from the Hadoop cluster configuration to support reading data (COPY or external tables). In Eon Mode, it also uses this information to access communal storage on HDFS. Vertica nodes therefore must have access to certain Hadoop configuration files.

For both co-located and separate clusters that use Kerberos authentication, configure Vertica for Kerberos as explained in Configure Vertica for Kerberos Authentication.

Vertica requires access to the WebHDFS service and ports on all name nodes and data nodes. For more information about WebHDFS ports, see HDFS Ports in the Cloudera documentation.

### Accessing Hadoop Configuration Files

Your Vertica nodes need access to certain Hadoop configuration files:

- If Vertica is co-located on HDFS nodes, then those configuration files are already present.
- If Vertica is running on a separate cluster, you must copy the required files to all
database nodes. A simple way to do so is to configure your Vertica nodes as Hadoop edge nodes. Client applications run on edge nodes; from Hadoop's perspective, Vertica is a client application. You can use Ambari or Cloudera Manager to configure edge nodes. For more information, see the documentation from your Hadoop vendor.

Verify that the value of the HadoopConfDir configuration parameter (see Apache Hadoop Parameters) includes a directory containing the core-site.xml and hdfs-site.xml files. If you do not set a value, Vertica looks for the files in /etc/hadoop/conf. For all Vertica users, the directory is accessed by the Linux user under which the Vertica server process runs.

Vertica uses several properties defined in these configuration files. These properties are listed in HDFS File System.

**Using a Cluster with High Availability NameNodes**

If your Hadoop cluster uses High Availability (HA) Name Nodes, verify that the dfs.nameservices parameter and the individual name nodes are defined in hdfs-site.xml.

**Using More Than One Hadoop Cluster**

In some cases, a Vertica cluster requires access to more than one HDFS cluster. For example, your business might use separate HDFS clusters for separate regions, or you might need data from both test and deployment clusters.

To support multiple clusters, perform the following steps:

1. Copy the configuration files from all HDFS clusters to your database nodes. You can place the copied files in any location readable by Vertica. However, as a best practice, you should place them all in the same directory tree, with one subdirectory per HDFS cluster. The locations must be the same on all database nodes.
2. Set the HadoopConfDir configuration parameter. The value is a colon-separated path containing the directories for all of your HDFS clusters.
3. Use an explicit name node or name service in the URL when creating an external table or copying data. Do not use hdfs:// because it could be ambiguous. For more information about URLs, see HDFS File System.
Vertica connects directly to a name node or name service; it does not otherwise distinguish among HDFS clusters. Therefore, names of HDFS name nodes and name services must be globally unique.

**Verifying the Configuration**

Use the `VERIFY_HADOOP_CONF_DIR` function to verify that Vertica can find configuration files in HadoopConfDir.

Use the `HDFS_CLUSTER_CONFIG_CHECK` function to test access through the hdfs scheme.

For more information about testing your configuration, see [Verifying HDFS Configuration](#).

**Updating Configuration Files**

If you update the configuration files after starting Vertica, use the following statement to refresh them:

```sql
=> SELECT CLEAR_HDFS_CACHES();
```

The `CLEAR_HDFS_CACHES` function also flushes information about which name node is active in a High Availability (HA) Hadoop cluster. Therefore, the first request after calling this function is slow, because the initial connection to the name node can take more than 15 seconds.

**Troubleshooting Reads from HDFS**

You might encounter the following issues when accessing data in HDFS.

**Queries Using [web]hdfs:// Show Unexpected Results**

If you are using the `///` shorthand to query external tables and see unexpected results, such as production data in your test cluster, verify that `HadoopConfDir` is set to the value you expect. The HadoopConfDir configuration parameter defines a path to search for the Hadoop configuration files that Vertica needs to resolve file locations. The HadoopConfDir
parameter can be set at the session level, overriding the permanent value set in the database.

To debug problems with /// URLs, try replacing the URLs with ones that use an explicit nameservice or name node. If the explicit URL works, then the problem is with the resolution of the shorthand. If the explicit URL also does not work as expected, then the problem is elsewhere (such as your nameservice).

Queries Take a Long Time to Run When Using HA

The High Availability Name Node feature in HDFS allows a name node to fail over to a standby name node. The dfs.client.failover.max.attempts configuration parameter (in hdfs-site.xml) specifies how many attempts to make when failing over. Vertica uses a default value of 4 if this parameter is not set. After reaching the maximum number of failover attempts, Vertica concludes that the HDFS cluster is unavailable and aborts the operation. Vertica uses the dfs.client.failover.sleep.base.millis and dfs.client.failover.sleep.max.millis parameters to decide how long to wait between retries. Typical ranges are 500 milliseconds to 15 seconds, with longer waits for successive retries.

A second parameter, ipc.client.connect.retry.interval, specifies the time to wait between attempts, with typical values being 10 to 20 seconds.

Cloudera and Hortonworks both provide tools to automatically generate configuration files. These tools can set the maximum number of failover attempts to a much higher number (50 or 100). If the HDFS cluster is unavailable (all name nodes are unreachable), Vertica can appear to hang for an extended period (minutes to hours) while trying to connect.

Failover attempts are logged in the QUERY_EVENTS system table. The following example shows how to query this table to find these events:

```sql
=> SELECT event_category, event_type, event_description, operator_name, event_details, count(event_type) AS count
  FROM query_events
  WHERE event_type ilike 'WEBHDFS FAILOVER RETRY'
  GROUP BY event_category, event_type, event_description, operator_name, event_details;
```

<table>
<thead>
<tr>
<th>event_category</th>
<th>event_type</th>
<th>event_description</th>
<th>operator_name</th>
<th>event_details</th>
<th>count</th>
</tr>
</thead>
<tbody>
<tr>
<td>EXECUTION</td>
<td>WEBHDFS FAILOVER RETRY</td>
<td>WebHDFS Namenode failover and retry.</td>
<td>WebHDFS FileSystem</td>
<td>WebHDFS request failed on ns</td>
<td>4</td>
</tr>
</tbody>
</table>

You can either wait for Vertica to complete or abort the connection, or set the dfs.client.failover.max.attempts parameter to a lower value.
WebHDFS Error When Using LibHDFS++

When creating an external table or loading data and using the hdfs scheme, you might see errors from WebHDFS failures. Such errors indicate that Vertica was not able to use the hdfs scheme and fell back to webhdfs, but that the WebHDFS configuration is incorrect.

First verify the value of the HadoopConfDir configuration parameter, which can be set at the session level. Then verify that the HDFS configuration files found there have the correct WebHDFS configuration for your Hadoop cluster. See Configuring HDFS Access for information about use of these files. See your Hadoop documentation for information about WebHDFS configuration.

Vertica Places Too Much Load on the Name Node (LibHDFS++)

Large HDFS clusters can sometimes experience heavy load on the name node when clients, including Vertica, need to locate data. If your name node is sensitive to this load and if you are using LibHDFS++, you can instruct Vertica to distribute metadata about block locations to its nodes so that they do not have to contact the name node as often. Distributing this metadata can degrade database performance somewhat in deployments where the name node isn't contended. This performance effect is because the data must be serialized and distributed.

If protecting your name node from load is more important than query performance, set the EnableHDFSBlockInfoCache configuration parameter to 1 (true). Usually this applies to large HDFS clusters where name node contention is already an issue.

This setting applies to access through LibHDFS++ (hdfs scheme). Sometimes LibHDFS++ falls back to WebHDFS, which does not use this setting. If you have enabled this setting and you are still seeing high traffic on your name node from Vertica, check the QUERY EVENTS system table for LibHDFS++ UNSUPPORTED OPERATION events.

Verifying HDFS Configuration

Use the EXTERNAL_CONFIG_CHECK function to test access to HDFS. This function calls several others. If you prefer to test individual components, or if some tests do not apply to your configuration, you can instead call the functions individually. For example, if you are
not using the HCatalog Connector then you do not need to call that function. The functions are:

- **KERBEROS_CONFIG_CHECK**: tests the Vertica keytab and the user's Kerberos credential.
- **HADOOP_INPERSONATION_CONFIG_CHECK**: shows the delegation tokens that are in use. This function does not test them.
- **HDFS_CLUSTER_CONFIG_CHECK**: tests access to the HDFS clusters found in HadoopConfDir, including using Kerberos and impersonation (delegation tokens).
- **HCATALOGCONNECTOR_CONFIG_CHECK**: tests HCatalog Connector access to HiveServer2.

To run all tests, call `EXTERNAL_CONFIG_CHECK` with no arguments:

```sql
=> SELECT EXTERNAL_CONFIG_CHECK();
```

To test only some authorities, nameservices, or Hive schemas, pass a single string argument. The format is a comma-separated list of "key=value" pairs, where keys are "authority", "nameservice", and "schema". The value is passed to all of the sub-functions; see those reference pages for details on how values are interpreted.

The following example tests the configuration of only the nameservice named "ns1":

```sql
=> SELECT EXTERNAL_CONFIG_CHECK('nameservice=ns1');
```

### Using the HCatalog Connector

The Vertica HCatalog Connector lets you access data stored in Apache's Hive data warehouse software the same way you access it within a native Vertica table.

If your files are in the Optimized Columnar Row (ORC) or Parquet format and do not use complex types, the HCatalog Connector creates an external table and uses the ORC or Parquet reader instead of using the Java SerDe. See [ORC (Parser)](PARQUET (Parser)) and [PARQUET (Parser)](PARQUET (Parser)) for more information about these readers.

The HCatalog Connector performs predicate pushdown to improve query performance. Instead of reading all data across the network to evaluate a query, the HCatalog Connector moves the evaluation of predicates closer to the data. Predicate pushdown applies to Hive partition pruning, ORC stripe pruning, and Parquet row-group pruning. The HCatalog Connector supports predicate pushdown for the following predicates: >, >=, =, <>, <=, <.
Overview

There are several Hadoop components that you need to understand to use the HCatalog connector:

- Apache Hive lets you query data stored in a Hadoop Distributed File System (HDFS) the same way you query data stored in a relational database. Behind the scenes, Hive uses a set of serializer and deserializer (SerDe) classes to extract data from files stored in HDFS and break it into columns and rows. Each SerDe handles data files in a specific format. For example, one SerDe extracts data from comma-separated data files while another interprets data stored in JSON format.
- Apache HCatalog is a component of the Hadoop ecosystem that makes Hive's metadata available to other Hadoop components (such as Pig).
- HiveServer2 makes HCatalog and Hive data available via JDBC. Through it, a client can make requests to retrieve data stored in Hive, as well as information about the Hive schema. HiveServer2 can use authorization services (Sentry or Ranger). HiveServer2 can use Hive LLAP (Live Long And Process).

The Vertica HCatalog Connector lets you transparently access data that is available through HiveServer2. You use the connector to define a schema in Vertica that corresponds to a Hive database or schema. When you query data within this schema, the HCatalog Connector transparently extracts and formats the data from Hadoop into tabular data. Vertica supports authorization services and Hive LLAP.

Note:
You can use the WebHCat service instead of HiveServer2, but performance is usually better with HiveServer2. Support for WebHCat is deprecated. To use WebHCat, set the HCatalogConnectorUseHiveServer2 configuration parameter to 0. See Apache Hadoop Parameters. WebHCat does not support authorization services.

HCatalog Connection Features

The HCatalog Connector lets you query data stored in Hive using the Vertica native SQL syntax. Some of its main features are:
- The HCatalog Connector always reflects the current state of data stored in Hive.
- The HCatalog Connector uses the parallel nature of both Vertica and Hadoop to process Hive data. The result is that querying data through the HCatalog Connector is often faster than querying the data directly through Hive.
- Because Vertica performs the extraction and parsing of data, the HCatalog Connector does not significantly increase the load on your Hadoop cluster.
- The data you query through the HCatalog Connector can be used as if it were native Vertica data. For example, you can execute a query that joins data from a table in an HCatalog schema with a native table.

## HCatalog Connector Considerations

There are a few things to keep in mind when using the HCatalog Connector:

- Hive's data is stored in flat files in a distributed file system, requiring it to be read and deserialized each time it is queried. This deserialization causes Hive performance to be much slower than that of Vertica. The HCatalog Connector has to perform the same process as Hive to read the data. Therefore, querying data stored in Hive using the HCatalog Connector is much slower than querying a native Vertica table. If you need to perform extensive analysis on data stored in Hive, you should consider loading it into Vertica. Vertica optimization often makes querying data through the HCatalog Connector faster than directly querying it through Hive.
- If Hive uses Kerberos security, the HCatalog Connector uses the querying user's credentials in queries by default. If Hive uses Sentry or Ranger to enforce security, then you must either disable this behavior in Vertica by setting EnableHCatImpersonation to 0 or grant users access to the underlying data in HDFS. (Sentry supports ACL synchronization to automatically grant access.) Alternatively, you can specify delegation tokens for data and metadata access. See Configuring Security.
- Hive supports complex data types such as lists, maps, and structs that Vertica does not support. Columns containing these data types are converted to a JSON representation of the data type and stored as a VARCHAR. See Data Type Conversions from Hive to Vertica.

**Note:**

The HCatalog Connector is read-only. It cannot insert data into Hive.
How the HCatalog Connector Works

When planning a query that accesses data from a Hive table, the Vertica HCatalog Connector on the initiator node contacts HiveServer2 (or WebHCat) in your Hadoop cluster to determine if the table exists. If it does, the connector retrieves the table's metadata from the metastore database so the query planning can continue. When the query executes, all nodes in the Vertica cluster directly retrieve the data necessary for completing the query from HDFS. They then use the Hive SerDe classes to extract the data so the query can execute. When accessing data in ORC or Parquet format, the HCatalog Connector uses Vertica’s internal readers for these formats instead of the Hive SerDe classes.

This approach takes advantage of the parallel nature of both Vertica and Hadoop. In addition, by performing the retrieval and extraction of data directly, the HCatalog Connector reduces the impact of the query on the Hadoop cluster.

For files in the Optimized Columnar Row (ORC) or Parquet format that do not use complex types, the HCatalog Connector creates an external table and uses the ORC or Parquet reader instead of using the Java SerDe. You can direct these readers to access custom Hive partition locations if Hive used them when writing the data. By default these extra checks are turned off to improve performance.
**HCatalog Connector Requirements**

Before you can use the HCatalog Connector, both your Vertica and Hadoop installations must meet the following requirements.

**Vertica Requirements**

All of the nodes in your cluster must have a Java Virtual Machine (JVM) installed. You must use the same Java version that the Hadoop cluster uses. See Installing the Java Runtime on Your Vertica Cluster.

You must also add certain libraries distributed with Hadoop and Hive to your Vertica installation directory. See Configuring Vertica for HCatalog.

**Hadoop Requirements**

Your Hadoop cluster must meet several requirements to operate correctly with the Vertica Connector for HCatalog:

- It must have Hive, HiveServer2, and HCatalog installed and running. See Apache's HCatalog page for more information.
- The HiveServer2 server and all of the HDFS nodes that store HCatalog data must be directly accessible from all of the hosts in your Vertica database. Verify that any firewall separating the Hadoop cluster and the Vertica cluster will pass HiveServer2, metastore database, and HDFS traffic.
- The data that you want to query must be in an internal or external Hive table.
- If a table you want to query uses a non-standard SerDe, you must install the SerDe's classes on your Vertica cluster before you can query the data. See Using Nonstandard SerDes.
Installing the Java Runtime on Your Vertica Cluster

The HCatalog Connector requires a 64-bit Java Virtual Machine (JVM). The JVM must support Java 6 or later, and must be the same version as the one installed on your Hadoop nodes.

Note:

If your Vertica cluster is configured to execute User Defined Extensions (UDxs) written in Java, it already has a correctly-configured JVM installed. See Developing User-Defined Extensions (UDxs) in Extending Vertica for more information.

Installing Java on your Vertica cluster is a two-step process:

1. Install a Java runtime on all of the hosts in your cluster.
2. Set the JavaBinaryForUDx configuration parameter to tell Vertica the location of the Java executable.

Installing a Java Runtime

For Java-based features, Vertica requires a 64-bit Java 6 (Java version 1.6) or later Java runtime. Vertica supports runtimes from either Oracle or OpenJDK. You can choose to install either the Java Runtime Environment (JRE) or Java Development Kit (JDK), since the JDK also includes the JRE.

Many Linux distributions include a package for the OpenJDK runtime. See your Linux distribution's documentation for information about installing and configuring OpenJDK.

To install the Oracle Java runtime, see the Java Standard Edition (SE) Download Page. You usually run the installation package as root in order to install it. See the download page for instructions.

Once you have installed a JVM on each host, ensure that the java command is in the search path and calls the correct JVM by running the command:

$ java -version
This command should print something similar to:

```
java version "1.8.0_102"
Java(TM) SE Runtime Environment (build 1.8.0_102-b14)
Java HotSpot(TM) 64-Bit Server VM (build 25.102-b14, mixed mode)
```

**Note:**
Any previously installed Java VM on your hosts may interfere with a newly installed Java runtime. See your Linux distribution's documentation for instructions on configuring which JVM is the default. Unless absolutely required, you should uninstall any incompatible version of Java before installing the Java 6 or Java 7 runtime.

### Setting the JavaBinaryForUDx Configuration Parameter

The JavaBinaryForUDx configuration parameter tells Vertica where to look for the JRE to execute Java UDxs. After you have installed the JRE on all of the nodes in your cluster, set this parameter to the absolute path of the Java executable. You can use the symbolic link that some Java installers create (for example `/usr/bin/java`). If the Java executable is in your shell search path, you can get the path of the Java executable by running the following command from the Linux command line shell:

```
$ which java
/usr/bin/java
```

If the `java` command is not in the shell search path, use the path to the Java executable in the directory where you installed the JRE. Suppose you installed the JRE in `/usr/java/default` (which is where the installation package supplied by Oracle installs the Java 1.6 JRE). In this case the Java executable is `/usr/java/default/bin/java`.

You set the configuration parameter by executing the following statement as a database superuser:

```
=> ALTER DATABASE DEFAULT SET PARAMETER JavaBinaryForUDx = '/usr/bin/java';
```

See `ALTER DATABASE` for more information on setting configuration parameters.

To view the current setting of the configuration parameter, query the `CONFIGURATION_PARAMETERS` system table:

```
=> \x
Expanded display is on.
```
Once you have set the configuration parameter, Vertica can find the Java executable on each node in your cluster.

**Note:**
Since the location of the Java executable is set by a single configuration parameter for the entire cluster, you must ensure that the Java executable is installed in the same path on all of the hosts in the cluster.

## Configuring Vertica for HCatalog

Before you can use the HCatalog Connector, you must add certain Hadoop and Hive libraries to your Vertica installation. You must also copy the Hadoop configuration files that specify various connection properties. Vertica uses the values in those configuration files to make its own connections to Hadoop.

You need only make these changes on one node in your cluster. After you do this you can install the HCatalog connector.

## Copy Hadoop Libraries and Configuration Files

Vertica provides a tool, hcatUtil, to collect the required files from Hadoop. This tool copies selected libraries and XML configuration files from your Hadoop cluster to your Vertica cluster. This tool might also need access to additional libraries:

- If you plan to use Hive to query files that use Snappy compression, you need access to the Snappy native libraries, libhadoop*.so and libsnappy*.so.

- If you plan to use Hive to query files that use LZO compression, you need access to the hadoop-lzo-*.jar and libgplcompression.so* libraries.
you must also edit the io.compression.codecs property to include com.hadoop.compression.lzo.LzopCodec.

- If you plan to use a JSON SerDe with a Hive table, you need access to its library. This is the same library that you used to configure Hive; for example:

```
hive> add jar /home/release/json-serde-1.3-jar-with-dependencies.jar;
```
```
hive> create external table nationjson (id int,name string,rank int,text string) ROW FORMAT SERDE 'org.openx.data.jsonserde.JsonSerDe' LOCATION '/user/release/vt/nationjson';
```

- If you are using any other libraries that are not standard across all supported Hadoop versions, you need access to those libraries.

If any of these cases applies to you, do one of the following:

- Include the path(s) in the path you specify as the value of --hcatLibPath, or
- Copy the file(s) to a directory already on that path.

If Vertica is not co-located on a Hadoop node, you should do the following:

1. Copy /opt/vertica/packages/hcat/tools/hcatUtil to a Hadoop node and run it there, specifying a temporary output directory. Your Hadoop, HIVE, and HCatalog lib paths might be different. In newer versions of Hadoop the HCatalog directory is usually a subdirectory under the HIVE directory, and Cloudera creates a new directory for each revision of the configuration files. Use the values from your environment in the following command:

```
hcatUtil --copyJars
--hadoopHiveHome="$HADOOP_HOME/lib;$HIVE_HOME/lib;/hcatalog/dist/share"
--hadoopHiveConfPath="$HADOOP_CONF_DIR;$HIVE_CONF_DIR;$WEBHCAT_CONF_DIR"
--hcatLibPath="/tmp/hadoop-files"
```

If you are using Hive LLAP, specify the hive2 directories.

2. Verify that all necessary files were copied:

```
hcatUtil --verifyJars --hcatLibPath=/tmp/hadoop-files
```

3. Copy that output directory (/tmp/hadoop-files, in this example) to /opt/vertica/packages/hcat/lib on the Vertica node you will connect to when installing the HCatalog connector. If you are updating a Vertica cluster to use a new Hadoop cluster (or a new version of Hadoop), first remove all JAR files in /opt/vertica/packages/hcat/lib except vertica-hcatalogudl.jar.

4. Verify that all necessary files were copied:

```
hcatUtil --verifyJars --hcatLibPath=/opt/vertica/packages/hcat
```
If Vertica is co-located on some or all Hadoop nodes, you can do this in one step on a shared node. Your Hadoop, Hive, and HCatalog lib paths might be different; use the values from your environment in the following command:

```bash
hcatUtil --copyJars
    --hadoopHiveHome="$HADOOP_HOME/lib;$HIVE_HOME/lib;/hcatalog/dist/share"
    --hadoopHiveConfPath="$HADOOP_CONF_DIR;$HIVE_CONF_DIR;$WEBHCAT_CONF_DIR"
    --hcatLibPath="/opt/vertica/packages/hcat/lib"
```

The hcatUtil script has the following arguments:

<table>
<thead>
<tr>
<th>Argument</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>-c</code>, <code>--copyJars</code></td>
<td>Copy the required JAR files from hadoopHiveHome and configuration files from hadoopHiveConfPath.</td>
</tr>
<tr>
<td><code>-v</code>, <code>--verifyJars</code></td>
<td>Verify that the required files are present in hcatLibPath. Check the output of hcatUtil for error and warning messages.</td>
</tr>
<tr>
<td><code>--hadoopHiveHome= &quot;value1;value2;...&quot;</code></td>
<td>Paths to the Hadoop, Hive, and HCatalog home directories. Separate directories by semicolons (;). Enclose paths in double quotes.</td>
</tr>
<tr>
<td><code>--hadoopHiveConfPath= &quot;value1;value2;...&quot;</code></td>
<td>Paths of the following configuration files:</td>
</tr>
<tr>
<td></td>
<td>- hive-site.xml</td>
</tr>
<tr>
<td></td>
<td>- core-site.xml</td>
</tr>
<tr>
<td></td>
<td>- yarn-site.xml</td>
</tr>
<tr>
<td></td>
<td>- webhcat-site.xml (optional with the default configuration; required if you use WebHCat instead of HiveServer2)</td>
</tr>
<tr>
<td></td>
<td>- hdfs-site.xml</td>
</tr>
<tr>
<td></td>
<td>Separate directories by semicolons (;). Enclose paths in double quotes.</td>
</tr>
<tr>
<td></td>
<td>In previous releases of Vertica this parameter was optional under some conditions. It is now required.</td>
</tr>
<tr>
<td><code>--hcatLibPath=&quot;value&quot;</code></td>
<td>Output path for the libraries and configuration files. On a Vertica node, place this on your path.</td>
</tr>
</tbody>
</table>

**Note:**

Always place `$HADOOP_HOME` on the path before `$HIVE_HOME`. In some Hadoop distributions, these two directories contain different versions of the same library.
Vertica node, use /opt/vertica/packages/hcat/lib. If you have previously run hcatUtil with a different version of Hadoop, first remove the old JAR files from the output directory (all except vertica-hcatalogudl.jar).

After you have copied the files and verified them, install the HCatalog connector.

**Install the HCatalog Connector**

On the same node where you copied the files from hcatUtil, install the HCatalog connector by running the install.sql script. This script resides in the ddl/ folder under your HCatalog connector installation path. This script creates the library and VHCatSource and VHCatParser.

**Note:**
The data that was copied using hcatUtil is now stored in the database. If you change any of those values in Hadoop, you need to rerun hcatUtil and install.sql. The following statement returns the names of the libraries and configuration files currently being used:

```sql
=> SELECT dependencies FROM user_libraries WHERE lib_name='VHCatalogLib';
```

Now you can create HCatalog schema parameters, which point to your existing Hadoop services, as described in Defining a Schema Using the HCatalog Connector.

**Upgrading to a New Version of Vertica**

After upgrading to a new version of Vertica, perform the following steps:

1. Uninstall the HCatalog Connector using the uninstall.sql script. This script resides in the ddl/ folder under your HCatalog connector installation path.

2. Delete the contents of the hcatLibPath directory except for vertica-hcatalogudl.jar.

3. Rerun hcatUtil.

4. Reinstall the HCatalog Connector using the install.sql script.

For more information about upgrading Vertica, see Upgrade Vertica.
Additional Options for Hadoop Columnar File Formats

When reading Hadoop columnar file formats (ORC or Parquet), the HCatalog Connector attempts to use the built-in readers. When doing so, it uses the hdfs scheme by default. In order to use the hdfs scheme, you must perform the configuration described in Configuring HDFS Access.

To have the HCatalog Connector use the webhdfs scheme instead, use ALTER DATABASE to set HDFSUseWebHDFS to 1. This setting applies to all HDFS access, not just the HCatalog Connector.

Configuring Security

You can use any of the security options described in Accessing Kerberized HDFS Data to access Hive data. This topic describes additional steps needed specifically for using the HCatalog Connector.

If you use Kerberos from Vertica, the HCatalog Connector can use an authorization service (Sentry or Ranger). If you use delegation tokens, you must manage authorization yourself.

Kerberos

You can use Kerberos from Vertica as described in Using Kerberos with Vertica.

How you configure the HCatalog Connector depends on how Hive manages authorization.

- If Hive uses Sentry to manage authorization, and if Sentry uses ACL synchronization, then the HCatalog Connector must access HDFS as the current user. Verify that the EnableHCatImpersonation configuration parameter is set to 1 (the default). ACL synchronization automatically provides authorized users with read access to the underlying HDFS files.
- If Hive uses Sentry without ACL synchronization, then the HCatalog Connector must access HDFS data as the Vertica principal. (The user still authenticates and accesses metadata normally.) Set the EnableHCatImpersonation configuration parameter to 0. The Vertica principal must have read access to the underlying HDFS files.
- If Hive uses Ranger to manage authorization, and the Vertica users have read access to the underlying HDFS files, then you can use user impersonation. Verify that the
EnableHCatImpersonation configuration parameter is set to 1 (the default). You can, instead, disable user impersonation and give the Vertica principal read access to the HDFS files.

- If Hive uses either Sentry or Ranger, the HCatalog Connector must use HiveServer2 (the default). WebHCat does not support authorization services.
- If Hive does not use an authorization service, or if you are connecting to Hive using WebHCat instead of HiveServer2, then the HCatalog Connector accesses Hive as the current user. Verify that EnableHCatImpersonation is set to 1. All users must have read access to the underlying HDFS files.

In addition, in your Hadoop configuration files (core-site.xml in most distributions), make sure that you enable all Hadoop components to impersonate the Vertica user. The easiest way to do so is to set the proxyuser property using wildcards for all users on all hosts and in all groups. Consult your Hadoop documentation for instructions. Make sure you set this property before running hcatUtil (see Configuring Vertica for HCatalog).

### Delegation Tokens

You can use delegation tokens for a session as described in Bring Your Own Delegation Token. When using the HCatalog Connector you specify two delegation tokens, one for the data and one for the metadata. The metadata token is tied to a Hive schema. See HadoopImpersonationConfig Format for information about how to specify these two delegation tokens.

### Verifying Security Configuration

To verify that the HCatalog Connector can access Hive data, use the HCATALOGCONNECTOR_CONFIG_CHECK function.

For more information about testing your configuration, see Verifying HDFS Configuration.
Defining a Schema Using the HCatalog Connector

After you set up the HCatalog Connector, you can use it to define a schema in your Vertica database to access the tables in a Hive database. You define the schema using the `CREATE HCATALOG SCHEMA` statement.

When creating the schema, you must supply the name of the schema to define in Vertica. Other parameters are optional. If you do not supply a value, Vertica uses default values. Vertica reads some default values from the HDFS configuration files; see Configuration Parameters.

To create the schema, you must have read access to all Hive data. Verify that the user creating the schema has been granted access, either directly or through an authorization service such as Sentry or Ranger. The dbadmin user has no automatic special privileges.

After you create the schema, you can change many parameters using the `ALTER HCATALOG SCHEMA` statement.

After you define the schema, you can query the data in the Hive data warehouse in the same way you query a native Vertica table. The following example demonstrates creating an HCatalog schema and then querying several system tables to examine the contents of the new schema. See Viewing Hive Schema and Table Metadata for more information about these tables.

```sql
=> CREATE HCATALOG SCHEMA hcat WITH HOSTNAME='hcathost' PORT=9083
   HCATALOG_SCHEMA='default' HIVESERVER2_HOSTNAME='hs.example.com'
   SSL_CONFIG='/etc/hadoop/conf/ssl-client.xml' HCATALOG_USER='admin';
CREATE SCHEMA
=> \x
Expanded display is on.

=> SELECT * FROM v_catalog.hcatalog_schemata;
- [ RECORD 1 ]-+------------------------------------------+
  schema_id  | 45035996273748224
  schema_name | hcat
  schema_owner_id | 45035996273704962
  schema_owner | admin
  create_time | 2017-12-05 14:43:03.353404-05
  hostname | hcathost
  port | -1
  hiveserver2_hostname | hs.example.com
  webservice_hostname | |
  webservice_port | 50111
  webhdfs_address | hs.example.com:50070
```
Configuration Parameters

The HCatalog Connector uses the following values from the Hadoop configuration files if you do not override them when creating the schema.
Using Partitioned Data

Hive supports partitioning data, as in the following example:

```sql
hive> create table users (name varchar(64), address string, city varchar(64))
       partitioned by (state varchar(64)) stored as orc;
```

Vertica takes advantage of partitioning information for formats that provide it in metadata (ORC and Parquet). Queries can skip irrelevant partitions entirely (partition pruning), and Vertica does not need to materialize partition columns. For more about use of partitions, see Improving Query Performance and Using Partition Columns.

By default Hive stores partition information under the path for the table definition, which might be local to Hive. However, a Hive user can choose to store partition information elsewhere, such as in a shared location like S3, as in the following example:

```sql
hive> alter table users add partition (state='MA')
```
During query execution, therefore, Vertica must query Hive for the location of a table's partition information.

Because the additional Hive queries can be expensive, Vertica defaults to looking for partition information only in Hive's default location. If your Hive table specified a custom location, use the CUSTOM_PARTITIONS parameter:

```sql
=> CREATE HCATALOG SCHEMA hcat WITH HOSTNAME='hcathost' PORT=9083
   HCATALOG_SCHEMA='default' HIVESERVER2_HOSTNAME='hs.example.com'
   SSL_CONFIG='/etc/hadoop/conf/ssl-client.xml' HCATALOG_USER='admin'
   CUSTOM_PARTITIONS='yes';
```

Vertica can access partition locations in the S3 and S3a schemes, and does not support the S3n scheme.

The HIVE_CUSTOM_PARTITIONS_ACCESSSED system table records all custom partition locations that have been used in queries.

### Using the HCatalog Connector with WebHCat

By default the HCatalog Connector uses HiveServer2 to access Hive data. If you are instead using WebHCat, set the HCatalogConnectorUseHiveServer2 configuration parameter to 0 before creating the schema as in the following example.

```sql
=> ALTER DATABASE DEFAULT SET PARAMETER HCatalogConnectorUseHiveServer2 = 0;
=> CREATE HCATALOG SCHEMA hcat with WEBSERVICE_HOSTNAME='webhcat.example.com';
```

If you have previously used WebHCat, you can switch to using HiveServer2 by setting the configuration parameter to 1 and using ALTER HCATALOG SCHEMA to set HIVESERVER2_HOSTNAME. You do not need to remove the WebHCat values; the HCatalog Connector uses the value of HCatalogConnectorUseHiveServer2 to determine which parameters to use.

### Querying Hive Tables Using HCatalog Connector

Once you have defined the HCatalog schema, you can query data from the Hive database by using the schema name in your query.
Since the tables you access through the HCatalog Connector act like Vertica tables, you can perform operations that use both Hive data and native Vertica data, such as a join:

```sql
=> SELECT u.FirstName, u.LastName, d.time, d.Message FROM UserData u
JOIN hcat.messages d ON u.UserID = d.UserID LIMIT 10;
```

<table>
<thead>
<tr>
<th>FirstName</th>
<th>LastName</th>
<th>time</th>
<th>Message</th>
</tr>
</thead>
<tbody>
<tr>
<td>Whitney</td>
<td>Kerr</td>
<td>2013-10-29 08:10:43</td>
<td>hymenaeos cursus lorem Suspendis</td>
</tr>
<tr>

<td>Malone</td>
<td>2013-10-29 02:08:47</td>
<td>pede tempor dignissim Sed luctus</td>
</tr>
</tbody>
</table>
```

### Viewing Hive Schema and Table Metadata

When using Hive, you access metadata about schemas and tables by executing statements written in HiveQL (Hive's version of SQL) such as `SHOW TABLES`. When using the HCatalog Connector, you can get metadata about the tables in the Hive database through several Vertica system tables.

There are four system tables that contain metadata about the tables accessible through the HCatalog Connector:

- **HCATALOG_SCHEMATA** lists all of the schemas that have been defined using the HCatalog Connector.
- **HCATALOG_TABLE_LIST** contains an overview of all of the tables available from all schemas defined using the HCatalog Connector. This table only shows the tables that the user querying the table can access. The information in this table is retrieved using
a single call to HiveServer2 for each schema defined using the HCatalog Connector, which means there is a little overhead when querying this table.

- **HCATALOG_TABLES** contains more in-depth information than HCATALOG_TABLE_LIST.
- **HCATALOG_COLUMNS** lists metadata about all of the columns in all of the tables available through the HCatalog Connector. As for HCATALOG_TABLES, querying this table results in one call to HiveServer2 per table, and therefore can take a while to complete.

The following example demonstrates querying the system tables containing metadata for the tables available through the HCatalog Connector.

```sql
=> CREATE HCATALOG SCHEMA hcat WITH hostname='hcathost'
-> HCATALOG_SCHEMA='default' HCATALOG_DB='default' HCATALOG_USER='hcatuser';
CREATE SCHEMA
=> SELECT * FROM HCATALOG_SCHEMATA;
-[ RECORD 1 ]-----------------------------------------------
schema_id | 45035996273864536
schema_name | hcat
schema_owner_id | 45035996273704962

</table>
Synchronizing an HCatalog Schema or Table With a Local Schema or Table

Querying data from an HCatalog schema can be slow due to Hive performance issues. This slow performance can be especially annoying when you want to examine the structure of the tables in the Hive database. Getting this information from Hive requires you to query the HCatalog schema's metadata using the HCatalog Connector.

To avoid this performance problem you can use the `SYNC_WITH_HCATALOG_SCHEMA` function to create a snapshot of the HCatalog schema's metadata within a Vertica schema. You supply this function with the name of a pre-existing Vertica schema, typically the one created through `CREATE HCATALOG SCHEMA`, and a Hive schema available through the HCatalog Connector. You must have permission both in Vertica to write the data and in Hive and HDFS to read it.

**Note:**
To synchronize a schema, you must have read permission for the underlying files in HDFS. If Hive uses Sentry to manage authorization, then you can use ACL synchronization to manage HDFS access. Otherwise, the user of this function must have read access in HDFS.

The function creates a set of external tables within the Vertica schema that you can then use to examine the structure of the tables in the Hive database. Because the metadata in the Vertica schema is local, query planning is much faster. You can also use standard Vertica statements and system-table queries to examine the structure of Hive tables in the HCatalog schema.

**Caution:**
The `SYNC_WITH_HCATALOG_SCHEMA` function overwrites tables in the Vertica schema whose names match a table in the HCatalog schema. Do not use the Vertica schema to store other data.

When `SYNC_WITH_HCATALOG_SCHEMA` creates tables in Vertica, it matches Hive's STRING and BINARY types to Vertica's VARCHAR(65000) and VARBINARY(65000) types. You might want to change these lengths, using `ALTER TABLE SET DATA TYPE`, in two cases:

- If the value in Hive is larger than 65000 bytes, increase the size and use LONG VARCHAR or LONG VARBINARY to avoid data truncation. If a Hive string uses
multi-byte encodings, you must increase the size in Vertica to avoid data truncation. This step is needed because Hive counts string length in characters while Vertica counts it in bytes.
- If the value in Hive is much smaller than 65000 bytes, reduce the size to conserve memory in Vertica.

The Vertica schema is just a snapshot of the HCatalog schema’s metadata. Vertica does not synchronize later changes to the HCatalog schema with the local schema after you call SYNC_WITH_HCATALOG_SCHEMA. You can call the function again to re-synchronize the local schema to the HCatalog schema. If you altered column data types, you will need to repeat those changes because the function creates new external tables.

By default, SYNC_WITH_HCATALOG_SCHEMA does not drop tables that appear in the local schema that do not appear in the HCatalog schema. Thus, after the function call the local schema does not reflect tables that have been dropped in the Hive database since the previous call. You can change this behavior by supplying the optional third Boolean argument that tells the function to drop any table in the local schema that does not correspond to a table in the HCatalog schema.

Instead of synchronizing the entire schema, you can synchronize individual tables by using SYNC_WITH_HCATALOG_SCHEMA_TABLE. If the table already exists in Vertica the function overwrites it. If the table is not found in the HCatalog schema, this function returns an error. In all other respects this function behaves in the same way as SYNC_WITH_HCATALOG_SCHEMA.

If you change the settings of any HCatalog Connector configuration parameters (Apache Hadoop Parameters), you must call this function again.

**Examples**

The following example demonstrates calling SYNC_WITH_HCATALOG_SCHEMA to synchronize the HCatalog schema in Vertica with the metadata in Hive. Because it synchronizes the HCatalog schema directly, instead of synchronizing another schema with the HCatalog schema, both arguments are the same.

```sql
=> CREATE HCATALOG SCHEMA hcat WITH hostname='hcathost' HCATALOG_SCHEMA='default'
    HCATALOG_USER='hcatuser';
CREATE SCHEMA
=> SELECT sync_with_hcatalog_schema('hcat', 'hcat');
sync_with_hcatalog_schema
---------------------------------------------
Schema hcat synchronized with hcat
tables in hcat = 56
```
tables altered in hcat = 0
Tables created in hcat = 56
Stale tables in hcat = 0
Table changes errored in hcat = 0
(1 row)

-> -- Use vsql's \d command to describe a table in the synced schema

-> \d hcat.messages

List of Fields by Tables

</tbody>
</table>

(4 rows)

This example shows synchronizing with a schema created using
CREATE HCATALOG SCHEMA. Synchronizing with a schema created using CREATE SCHEMA
is also supported.

You can query tables in the local schema that you synchronized with an HCatalog schema.
However, querying tables in a synchronized schema isn't much faster than directly querying
the HCatalog schema, because SYNC_WITH_HCATALOG_SCHEMA only duplicates the
HCatalog schema's metadata. The data in the table is still retrieved using the HCatalog
Connector.

Data Type Conversions from Hive to Vertica

The data types recognized by Hive differ from the data types recognized by Vertica. The
following table lists how the HCatalog Connector converts Hive data types into data types
compatible with Vertica.

<table>
<thead>
<tr>
<th>Hive Data Type</th>
<th>Vertica Data Type</th>

<td>VARCHAR (65000) containing a JSON-format representation of the struct.</td>
</tr>
</tbody>
</table>

**Data-Width Handling Differences Between Hive and Vertica**

The HCatalog Connector relies on Hive SerDe classes to extract data from files on HDFS. Therefore, the data read from these files are subject to Hive's data width restrictions. For example, suppose the SerDe parses a value for an INT column into a value that is greater than $2^{32}-1$ (the maximum value for a 32-bit integer). In this case, the value is rejected even if it would fit into a Vertica's 64-bit INTEGER column because it cannot fit into Hive's 32-bit INT.
Hive measures CHAR and VARCHAR length in characters and Vertica measures them in bytes. Therefore, if multi-byte encodings are being used (like Unicode), text might be truncated in Vertica.

Once the value has been parsed and converted to a Vertica data type, it is treated as native data. This treatment can result in some confusion when comparing the results of an identical query run in Hive and in Vertica. For example, if your query adds two INT values that result in a value that is larger than $2^{32}-1$, the value overflows its 32-bit INT data type, causing Hive to return an error. When running the same query with the same data in Vertica using the HCatalog Connector, the value will probably still fit within Vertica’s 64-int value. Thus the addition is successful and returns a value.

### Using Nonstandard SerDes

Hive stores its data in unstructured flat files located in the Hadoop Distributed File System (HDFS). When you execute a Hive query, it uses a set of serializer and deserializer (SerDe) classes to extract data from these flat files and organize it into a relational database table. For Hive to be able to extract data from a file, it must have a SerDe that can parse the data the file contains. When you create a table in Hive, you can select the SerDe to be used for the table’s data.

Hive has a set of standard SerDes that handle data in several formats such as delimited data and data extracted using regular expressions. You can also use third-party or custom-defined SerDes that allow Hive to process data stored in other file formats. For example, some commonly-used third-party SerDes handle data stored in JSON format.

The HCatalog Connector directly fetches file segments from HDFS and uses Hive's SerDes classes to extract data from them. The Connector includes all Hive's standard SerDes classes, so it can process data stored in any file that Hive natively supports. If you want to query data from a Hive table that uses a custom SerDe, you must first install the SerDe classes on the Vertica cluster.

### Determining Which SerDe You Need

If you have access to the Hive command line, you can determine which SerDe a table uses by using Hive's SHOW CREATE TABLE statement. This statement shows the HiveQL statement needed to recreate the table. For example:

```
hive> SHOW CREATE TABLE msgjson;
```
OK
CREATE EXTERNAL TABLE msgjson(
messageid int COMMENT 'from deserializer',
userid string COMMENT 'from deserializer',
time string COMMENT 'from deserializer',
message string COMMENT 'from deserializer')
ROW FORMAT SERDE
'org.apache.hadoop.hive.contrib.serde2.JsonSerde'
STORED AS INPUTFORMAT
'org.apache.hadoop.mapred.TextInputFormat'
OUTPUTFORMAT
'org.apache.hadoop.hive.ql.io.HiveIgnoreKeyTextOutputFormat'
LOCATION
'hdfs://hivehost.example.com:8020/user/exampleuser/msgjson'
TBLPROPERTIES (
'transient_lastDdlTime'='1384194521')

Time taken: 0.167 seconds

In the example, ROW FORMAT SERDE indicates that a special SerDe is used to parse the data files. The next row shows that the class for the SerDe is named org.apache.hadoop.hive.contrib.serde2.JsonSerde. You must provide the HCatalog Connector with a copy of this SerDe class so that it can read the data from this table.

You can also find out which SerDe class you need by querying the table that uses the custom SerDe. The query will fail with an error message that contains the class name of the SerDe needed to parse the data in the table. In the following example, the portion of the error message that names the missing SerDe class is in bold.

```
=> SELECT * FROM hcat.jsontable;
ERROR 3399: Failure in U Dx RPC call InvokePlanUDL(): Error in User Defined Object [VHCatSource], error code: 0
com.vertica.sdk.UdfException: Error message is [
org.apache.hcatalog.common.HCatException : 2004 : HCatOutputFormat not initialized, setOutput has to be called. Cause : java.io.IOException: java.lang.RuntimeException:
java.lang.RuntimeException: MetaException(message:org.apache.hadoop.hive.serde2.SerDeException
SerDe com.cloudera.hive.serde.JSONSerDe does not exist) ] HINT If error message is not descriptive or local, may be we cannot read metadata from hive metastore service thrift://hcathost:9083 or HDFS namnode (check UdXLogs/UDxFencedProcessesJava.log in the catalog directory for more information)
at com.vertica.hcatalogudl.HCatalogSplitsNoOpSourceFactory .plan(HCatalogSplitsNoOpSourceFactory.java:98)
at com.vertica.udxfence.UDxExecContext.planUDSource(UDxExecContext.java:898)
...
```

**Installing the SerDe on the Vertica Cluster**

You usually have two options to getting the SerDe class file the HCatalog Connector needs:
Find the installation files for the SerDe, then copy those over to your Vertica cluster. For example, there are several third-party JSON SerDes available from sites like Google Code and GitHub. You may find the one that matches the file installed on your Hive cluster. If so, then download the package and copy it to your Vertica cluster.

- Directly copy the JAR files from a Hive server onto your Vertica cluster. The location for the SerDe JAR files depends on your Hive installation. On some systems, they may be located in /usr/lib/hive/lib.

Wherever you get the files, copy them into the /opt/vertica/packages/hcat/lib directory on every node in your Vertica cluster.

**Important:**
If you add a new host to your Vertica cluster, remember to copy every custom SerDer JAR file to it.

## Troubleshooting HCatalog Connector Problems

You may encounter the following issues when using the HCatalog Connector.

### Connection Errors

The HCatalog Connector can encounter errors both when you define a schema and when you query it. The types of errors you get depend on which `CREATE HCATALOG SCHEMA` parameters are incorrect. Suppose you have incorrect parameters for the metastore database, but correct parameters for HiveServer2. In this case, HCatalog-related system table queries succeed, while queries on the HCatalog schema fail. The following example demonstrates creating an HCatalog schema with the correct default HiveServer2 information. However, the port number for the metastore database is incorrect.

```sql
=> CREATE HCATALOG SCHEMA hcat2 WITH hostname='hcathost'
-> HCATALOG_SCHEMA='default' HCATALOG_USER='hive' PORT=1234;
CREATE SCHEMA
=> SELECT * FROM HCATALOG_TABLE_LIST;
- RECORD 1 ]-----------------------
table_schema_id | 45035996273864536
table_schema     | hcat2
hcatalog_schema  | default
table_name       | test
```
hcatalog_user_name | hive

```sql
SELECT *
FROM hcat2.test;
```

ERROR 3399: Failure in UDx RPC call InvokePlanUDL(): Error in User Defined Object [VHCatSource], error code: 0

To resolve these issues, you must drop and recreate the schema or alter the schema to correct the parameters. If you still have issues, determine whether there are connectivity issues between your Vertica cluster and your Hadoop cluster. Such issues can include a firewall that prevents one or more Vertica hosts from contacting the HiveServer2, metastore, or HDFS hosts.

**UDx Failure When Querying Data: Error 3399**

You might see an error message when querying data (as opposed to metadata like schema information). This might be accompanied by a ClassNotFoundException in the log. This can happen for the following reasons:

- You are not using the same version of Java on your Hadoop and Vertica nodes. In this case you need to change one of them to match the other.
- You have not used hcatUtil to copy all Hadoop and Hive libraries and configuration files to Vertica, or you ran hcatutil and then changed your version of Hadoop or Hive.
- You upgraded Vertica to a new version and did not rerun hcatutil and reinstall the HCatalog Connector.
- The version of Hadoop you are using relies on a third-party library that you must copy manually.
- You are reading files with LZO compression and have not copied the libraries or set the `io.compression.codecs` property in `core-site.xml`.
- You are reading Parquet data from Hive, and columns were added to the table after some data was already present in the table. Adding columns does not update existing data, and the ParquetSerDe provided by Hive and used by the HCatalog Connector does not handle this case. This error is due to a limitation in Hive and there is no workaround.
The query is taking too long and is timing out. If this is a frequent problem, you can increase the value of the UDxFencedBlockTimeout configuration parameter. See General Parameters.

If you did not copy the libraries or configure LZO compression, follow the instructions in Configuring Vertica for HCatalog.

If the Hive jars that you copied from Hadoop are out of date, you might see an error message like the following:

```
ERROR 3399: Failure in UDx RPC call InvokePlanUDL(): Error in User Defined Object [VHCatSource],
error code: 0 Error message is [ Found interface org.apache.hadoop.mapreduce.JobContext, but
class was expected ]
HINT hive metastore service is thrift://localhost:13433 (check UDxLogs/UDxFencedProcessesJava.log
in the catalog directory for more information)
```

This error usually signals a problem with hive-hcatalog-core jar. Make sure you have an up-to-date copy of this file. Remember that if you rerun hcatUtil you also need to re-create the HCatalog schema.

You might also see a different form of this error:

```
ERROR 3399: Failure in UDx RPC call InvokePlanUDL(): Error in User Defined Object [VHCatSource],
error code: 0 Error message is [ java/servlet/Filter ]
```

This error can be reported even if hcatUtil reports that your libraries are up to date. The javax.servlet.Filter class is in a library that some versions of Hadoop use but that is not usually part of the Hadoop installation directly. If you see an error mentioning this class, locate servlet-api-*.jar on a Hadoop node and copy it to the hcat/lib directory on all database nodes. If you cannot locate it on a Hadoop node, locate and download it from the Internet. (This case is rare.) The library version must be 2.3 or higher.

After you have copied the jar to the hcat/lib directory, reinstall the HCatalog connector as explained in Configuring Vertica for HCatalog.

**Authentication Error When Querying Data**

You might have successfully created a schema using CREATE HCATALOG SCHEMA but get errors at query time such as the following:

```
=> SELECT * FROM hcat.clickdata;
ERROR 6776: Failed to glob [hdfs:///user/hive/warehouse/click-*.parquet]
because of error: hdfs:///user/hive/warehouse/click-12214.parquet: statAll failed;
error: AuthenticationFailed
```
You might see this error if Hive uses an authorization service. If the permissions on the underlying files in HDFS match those in the authorization service, then Vertica must use user impersonation when accessing that data. To enable user impersonation, set the EnableHCatImpersonation configuration parameter to 1.

Vertica uses the database principal to access HDFS. Therefore, if EnableHCatImpersonation is 0, the Vertica database principal must have access to the data inside the hive warehouse on HDFS. If it does not, you might see the following error:

```sql
=> SELECT * FROM hcat.salesdata;
ERROR 6776: Failed to glob [vertica-hdfs:///hive/warehouse/sales/*/*]
because of error: vertica-hdfs:///hive/warehouse/sales/: listStat failed;
error: Permission denied: user=vertica, access=EXECUTE, inode="/hive/warehouse/sales":hdfs:hdfs:d--
--
```

The URL scheme in this error message has been changed from hdfs to vertica-hdfs. This is an internal scheme and is not valid in URLs outside of Vertica. You cannot use this scheme when specifying paths in HDFS.

### Differing Results Between Hive and Vertica Queries

Sometimes, running the same query on Hive and on Vertica through the HCatalog Connector can return different results. There are a few common causes of this problem.

This discrepancy is often caused by the differences between the data types supported by Hive and Vertica. See Data Type Conversions from Hive to Vertica for more information about supported data types.

If Hive string values are being truncated in Vertica, this might be caused by multi-byte character encodings in Hive. Hive reports string length in characters, while Vertica records it in bytes. For a two-byte encoding such as Unicode, you need to double the column size in Vertica to avoid truncation.

Discrepancies can also occur if the Hive table uses partition columns of types other than string.

If the Hive table stores partition data in custom locations instead of the default, you will see different query results if you do not specify the CUSTOM_PARTITIONS parameter when creating the Vertica schema. See Using Partitioned Data. Further, even when using custom partitions, there are differences between Vertica and Hive:

- If a custom partition is unavailable at query time, Hive ignores it and returns the rest of the results. Vertica reports an error.
• If a partition is altered in Hive to use a custom location after table creation, Hive reads data from only the new location while Vertica reads data from both the default and the new locations.
• If a partition value and its corresponding directory name disagree, Hive uses the value in its metadata while Vertica uses the value in the directory name.

The following example illustrates these differences. A table in Hive, partitioned on the state column, starts with the following data:

```sql
hive> select * from inventory;
```

```
+------------+-------------+-------------+
<table>
<thead>
<tr>
<th>inventory.ID</th>
<th>inventory.quant</th>
<th>inventory.state</th>
</tr>
</thead>
<tbody>
<tr>
<td>2</td>
<td>300</td>
<td>CA</td>
</tr>
<tr>
<td>4</td>
<td>400</td>
<td>CA</td>
</tr>
<tr>
<td>5</td>
<td>500</td>
<td>DC</td>
</tr>
<tr>
<td>1</td>
<td>100</td>
<td>PA</td>
</tr>
<tr>
<td>2</td>
<td>200</td>
<td>PA</td>
</tr>
</tbody>
</table>
+------------+-------------+-------------+
```

The partition for one state, CA, is then moved. This directory contains some data already. Note that the query now returns different results for the CA partitions.

```sql
hive> ALTER TABLE inventory PARTITION (state='CA') SET LOCATION 'hdfs:///partitions/inventory/state=MD';
hive> select * from inventory;
```

```
+------------+-------------+-------------+
<table>
<thead>
<tr>
<th>inventory.ID</th>
<th>inventory.quant</th>
<th>inventory.state</th>
</tr>
</thead>
<tbody>
<tr>
<td>20</td>
<td>30000</td>
<td>CA</td>
</tr>
<tr>
<td>40</td>
<td>40000</td>
<td>CA</td>
</tr>
<tr>
<td>5</td>
<td>500</td>
<td>DC</td>
</tr>
<tr>
<td>1</td>
<td>100</td>
<td>PA</td>
</tr>
<tr>
<td>2</td>
<td>200</td>
<td>PA</td>
</tr>
</tbody>
</table>
+------------+-------------+-------------+

5 rows selected (0.399 seconds)
```

The CA partitions were moved to a directory named state=MD. Vertica reports the state for the first two rows, the ones in the new partition location, as MD because of the directory name. It also reports the CA values from the original location in addition to the new one:

```sql
=> SELECT * FROM hcat.inventory;
```

```
ID | quant | state
---+-------+------
20 | 30000 | MD
40 | 40000 | MD
2  | 300   | CA
4  | 400   | CA
1  | 100   | PA
2  | 200   | PA
5  | 500   | DC
(7 rows)
```
**HCatalog Connector Installation Fails on MapR**

If you mount a MapR file system as an NFS mount point and then install the HCatalog Connector, it could fail with a message like the following:

```
ROLLBACK 2929: Couldn't create new UDx side process,
failed to get UDx side process info from zygote: Broken pipe
```

This might be accompanied by an error like the following in dbLog:

```
java.io.IOException: Couldn't get lock for /home/dbadmin/node02_
catalog/UDxLogs/UDxFencedProcessesJava.log
    at java.util.logging.FileHandler.openFiles(FileHandler.java:389)
    at java.util.logging.FileHandler.<init>(FileHandler.java:287)
    at com.vertica.udxfence.UDxLogger.setup(UDxLogger.java:78)
    at com.vertica.udxfence.UDxSideProcess.go(UDxSideProcess.java:75)
    ...
```

This error occurs if you locked your NFS mount point when creating it. Locking is the default. If you use the HCatalog Connector with MapR mounted as an NFS mount point, you must create the mount point with the `-o noLock` option. For example:

```
sudo mount -o noLock -t nfs MaprCLDBserviceHostname:/mapr/ClusterName/vertica/${hostname -f}/vertica
```

You can use the HCatalog Connector with MapR without mounting the MapR file system. If you mount the MapR file system, you must do so without a lock.

**Excessive Query Delays**

Network issues or high system loads on the HiveServer2 server can cause long delays while querying a Hive database using the HCatalog Connector. While Vertica cannot resolve these issues, you can set parameters that limit how long Vertica waits before canceling a query on an HCatalog schema. You can set these parameters globally using Vertica configuration parameters. You can also set them for specific HCatalog schemas in the `CREATE HCATALOG SCHEMA` statement. These specific settings override the settings in the configuration parameters.

The `HCatConnectionTimeout` configuration parameter and the `CREATE HCATALOG SCHEMA` statement's `HCATALOG_CONNECTION_TIMEOUT` parameter control how many seconds the HCatalog Connector waits for a connection to the HiveServer2 server. A value of 0 (the default setting for the configuration parameter) means to wait indefinitely. If the server
does not respond by the time this timeout elapses, the HCatalog Connector breaks the connection and cancels the query. If you find that some queries on an HCatalog schema pause excessively, try setting this parameter to a timeout value, so the query does not hang indefinitely.

The HCatSlowTransferTime configuration parameter and the CREATE HCATALOG SCHEMA statement's HCATALOG_SLOW_TRANSFER_TIME parameter specify how long the HCatlog Connector waits for data after making a successful connection to the server. After the specified time has elapsed, the HCatalog Connector determines whether the data transfer rate from the server is at least the value set in the HCatSlowTransferLimit configuration parameter (or by the CREATE HCATALOG SCHEMA statement's HCATALOG_SLOW_TRANSFER_LIMIT parameter). If it is not, then the HCatalog Connector terminates the connection and cancels the query.

You can set these parameters to cancel queries that run very slowly but do eventually complete. However, query delays are usually caused by a slow connection rather than a problem establishing the connection. Therefore, try adjusting the slow transfer rate settings first. If you find the cause of the issue is connections that never complete, you can alternately adjust the Linux TCP socket timeouts to a suitable value instead of relying solely on the HCatConnectionTimeout parameter.

### SerDe Errors

Errors can occur if you attempt to query a Hive table that uses a nonstandard SerDe. If you have not installed the SerDe JAR files on your Vertica cluster, you receive an error similar to the one in the following example:

```sql
=> SELECT * FROM hcat.jsontable;
ERROR 3399: Failure in UDx RPC call InvokePlanUDL(): Error in User Defined Object [VHCatSource], error code: 0
com.apache.veratica.sdk.udfException: Error message is [org.apache.hadoop.hive.serde2.SerDeException SerDe com.cloudera.hive.serde.JSONSerDe does not exist] ] HINT If error message is not descriptive or local, may be we cannot read metadata from hive metastore service thrift://hcathost:9083 or HDFS namenode (check UDxLogs/UDxFencedProcessesJava.log in the catalog directory for more information)
at com.vertica.hcatalogudl.HCatalogSplitsNoOpSourceFactory.plan(HCatalogSplitsNoOpSourceFactory.java:98)
at com.vertica.udxfence.UDxExecContext.planUDSource(UDxExecContext.java:898)
...```
In the error message, you can see that the root cause is a missing SerDe class (shown in bold). To resolve this issue, install the SerDe class on your Vertica cluster. See Using Nonstandard SerDes for more information.

This error may occur intermittently if just one or a few hosts in your cluster do not have the SerDe class.

**Using HDFS Storage Locations**

Vertica stores data in its native format, ROS, in storage locations. You can place storage locations on the local Linux file system or in HDFS. If you are using Premium Edition, you typically use HDFS storage locations for lower-priority data. Doing so frees space on your Vertica cluster for higher-priority data. If you are using Vertica for SQL on Apache Hadoop, you typically place ROS data only on HDFS.

If you use HDFS storage locations, the HDFS data must be available when you start Vertica. Your HDFS cluster must be operational, and the ROS files must be present. If you moved data files, or they are corrupted, or your HDFS cluster is not responsive, Vertica cannot start.

**Requirements for HDFS Storage Locations**

⚠️ **Caution:**

If you use HDFS storage locations, the HDFS data must be available when you start Vertica. Your HDFS cluster must be operational, and the ROS files must be present. If you moved data files, or they are corrupted, or your HDFS cluster is not responsive, Vertica cannot start.

To store Vertica's data on HDFS, verify that:

- Your Hadoop cluster has WebHDFS enabled.
- All of the nodes in your Vertica cluster can connect to all of the nodes in your Hadoop cluster. Any firewall between the two clusters must allow connections on the ports used by HDFS.
- If your HDFS cluster is unsecured, you have a Hadoop user whose username matches the name of the Vertica database superuser (usually named dbadmin). This Hadoop user must have read and write access to the HDFS directory where you want Vertica to store its data.
If your HDFS cluster uses Kerberos authentication, you have a Kerberos principal for Vertica, and it has read and write access to the HDFS directory that will be used for the storage location. See Configuring Kerberos. The Kerberos KDC must also be running.

- Your HDFS cluster has enough storage available for Vertica data. See HDFS Space Requirements below for details.

- The data you store in an HDFS-backed storage location does not expand your database's size beyond any data allowance in your Vertica license. Vertica counts data stored in an HDFS-backed storage location as part of any data allowance set by your license. See Managing Licenses in the Administrator's Guide for more information.

## HDFS Space Requirements

If your Vertica database is **K-safe**, HDFS-based storage locations contain two copies of the data you store in them. One copy is the primary projection, and the other is the buddy projection. If you have enabled HDFS's data-redundancy feature, Hadoop stores both projections multiple times. This duplication might seem excessive. However, it is similar to how a RAID level 1 or higher stores redundant copies of both the primary and buddy projections. The redundant copies also help the performance of HDFS by enabling multiple nodes to process a request for a file.

Verify that your HDFS installation has sufficient space available for redundant storage of both the primary and buddy projections of your K-safe data. You can adjust the number of duplicates stored by HDFS by setting the HadoopFSReplication configuration parameter. See Troubleshooting HDFS Storage Locations for details.

### Additional Requirements for Backing Up Data Stored on HDFS

To back up your data stored in HDFS storage locations, your Hadoop cluster must have snapshotting enabled for the directories to be used for backups. The easiest way to do this is to give the database administrator's account superuser privileges in Hadoop, so that snapshotting can be set automatically. Alternatively, use Hadoop to enable snapshotting for each directory before using it for backups.

In addition, your Vertica database must:
- Have enough Hadoop components and libraries installed to run the Hadoop distcp command as the Vertica database-administrator user (usually dbadmin).
- Have the JavaBinaryForUDx and HadoopHome configuration parameters set correctly.

⚠️ Caution:
After you have created an HDFS storage location, full database backups will fail with the error message:

```plaintext
ERROR 5127: Unable to create snapshot
No such file /usr/bin/hadoop:
check the HadoopHome configuration parameter
```

This error is caused by the backup script not being able to back up the HDFS storage locations. You must configure Vertica and Hadoop to enable the backup script to back up these locations. After you configure Vertica and Hadoop, you can once again perform full database backups.

See [Backing Up HDFS Storage Locations](#) for details on configuring your Vertica and Hadoop clusters to enable HDFS storage location backup.

## Best Practices for SQL on Apache Hadoop

If you are using the Vertica for SQL on Apache Hadoop product, Vertica recommends the following best practices for storage locations:

- Place only data type storage locations on HDFS storage.
- Place temp space directly on the local Linux file system, not in HDFS.
- For the best performance, place the Vertica catalog directly on the local Linux file system.
- Create the database first on a local Linux file system. Then, you can extend the database to HDFS storage locations and set storage policies that exclusively place data blocks on the HDFS storage location.
- For better performance, if you are running Vertica only on a subset of the HDFS nodes, do not run the HDFS balancer on them. The HDFS balancer can move data blocks farther away, causing Vertica to read non-local data during query execution. Queries run faster if they do not require network I/O.

Generally, HDFS requires approximately 2 GB of memory for each node in the cluster. To support this requirement in your Vertica configuration:

1. Create a 2-GB resource pool.
2. Do not assign any Vertica execution resources to this pool. This approach reserves the space for use by HDFS.
Alternatively, use Ambari or Cloudera Manager to find the maximum heap size required by HDFS and set the size of the resource pool to that value.

For more about how to configure resource pools, see Managing Workloads.

**Configuring Kerberos**

To use a storage location in HDFS with Kerberos, take the following steps:

1. Create a Kerberos principal for each Vertica node as explained in Using Kerberos with Vertica.
2. Give all node principals read and write permission to the HDFS directory you will use as a storage location.

If you plan to back up your HDFS storage locations, take the following additional steps:

1. Grant Hadoop superuser privileges to the new principals.
2. Configure backups, including setting the HadoopConfDir configuration parameter, following the instructions in Configuring Hadoop and Vertica to Enable Backup of HDFS Storage.
3. Configure user impersonation to be able to restore from backups following the instructions in "Setting Kerberos Parameters" in Configuring Vertica to Restore HDFS Storage Locations.

Because the keytab file supplies the principal used to create the location, you must have it in place before creating the storage location. After you deploy keytab files to all database nodes, use the CREATE LOCATION statement to create the storage location as usual.

**How the HDFS Storage Location Stores Data**

Vertica stores data in storage locations on HDFS similarly to the way it stores data in the Linux file system. See Managing Storage Locations in the Administrator's Guide for more information about storage locations. When you create a storage location on HDFS, Vertica stores the ROS containers holding its data on HDFS. You can choose which data uses the HDFS storage location: from the data for just a single table or partition to all of the database's data.

When Vertica reads data from or writes data to an HDFS storage location, the node storing or retrieving the data contacts the Hadoop cluster directly to transfer the data. If a single ROS container file is split among several HDFS nodes, the Vertica node connects to each of
them. The Vertica node retrieves the pieces and reassembles the file. Because each node fetches its own data directly from the source, data transfers are parallel, increasing their efficiency. Having the Vertica nodes directly retrieve the file splits also reduces the impact on the Hadoop cluster.

What You Can Store in HDFS

Use HDFS storage locations to store only data. You cannot store catalog information in an HDFS storage location.

Caution:
While it is possible to use an HDFS storage location for temporary data storage, you must never do so. Using HDFS for temporary storage causes severe performance issues.

What HDFS Storage Locations Cannot Do

Because Vertica uses storage locations to store ROS containers in a proprietary format, MapReduce and other Hadoop components cannot access your Vertica ROS data stored in HDFS. Never allow another program that has access to HDFS to write to the ROS files. Any outside modification of these files can lead to data corruption and loss. Applications must use the Vertica client libraries to access Vertica data. If you want to share ROS data with other Hadoop components, you can export it (see Exporting Data to Files).

The storage location stores and reads only ROS containers. It cannot read data stored in native formats in HDFS. See Hadoop Interfaces for other ways to read data stored in HDFS.

Creating an HDFS Storage Location

Use the CREATE LOCATION statement to create an HDFS storage location. Make the following changes from creating local storage locations:

- For the path, use the hdfs:// URL, adding a nameservice or name node, for the HDFS directory where you want Vertica to store the location's data. See URL for information about the URL format. Do not use hdfs:// (three slashes) in URLs for storage locations.
Include the ALL NODES SHARED keywords, as all HDFS storage locations are shared storage. This is required even if you have only one HDFS node in your cluster.

**Caution:**

If you use HDFS storage locations, the HDFS data must be available when you start Vertica. Your HDFS cluster must be operational, and the ROS files must be present. If you moved data files, or they are corrupted, or your HDFS cluster is not responsive, Vertica cannot start.

### Creating the Storage Location

To create an HDFS storage location, first create the location on all nodes and then set its storage policy to HDFS. To create the location in HDFS on all nodes:

```sql
=> CREATE LOCATION 'hdfs://hadoopNS/vertica/colddata' ALL NODES SHARED
    USAGE 'data' LABEL 'coldstorage';
```

Next, set the storage policy for your database objects to use this location:

```sql
=> SELECT SET_OBJECT_STORAGE_POLICY('SchemaName','coldstorage');
```

This causes all data in the named schema to be written to the HDFS storage location (coldstorage) instead of the local disk. You can set storage policies for a schema, a table, a partition, or the entire database.

For more information, see [Managing Storage Locations](#).

### Adding HDFS Storage Locations to New Nodes

If you add nodes to your Vertica cluster, they do not automatically have access to existing HDFS storage locations. You must manually create the storage location for the new node using the CREATE LOCATION statement. Do not use the ALL NODES keyword in this statement. Instead, use the NODE keyword with the name of the new node to tell Vertica that just that node needs to add the shared location.

**Caution:**

You must manually create the storage location. Otherwise, the new node uses the default storage policy (usually, storage on the local Linux file system).
system) to store data that the other nodes store in HDFS. As a result, the node can run out of disk space.

The following example shows how to add the storage location from the preceding example to a new node named v_vmart_node0004:

```sql
=> CREATE LOCATION 'hdfs://hadoopNS/vertica/colddata' NODE 'v_vmart_node0004'
  SHARED USAGE 'data' LABEL 'coldstorage';
```

Any active standby nodes in your cluster when you create an HDFS-based storage location automatically create their own instances of the location. When the standby node takes over for a down node, it uses its own instance of the location to store data for objects using the HDFS-based storage policy. Treat standby nodes added after you create the storage location as any other new node. You must manually define the HDFS storage location.

## Creating a Storage Policy for HDFS Storage Locations

After you create an HDFS storage location, you assign database objects to the location by setting storage policies. Based on these storage policies, database objects such as partition ranges, individual tables, whole schemas, or even the entire database store their data in the HDFS storage location. Use the `SET_OBJECT_STORAGE_POLICY` function to assign objects to an HDFS storage location. In the function call, supply the label you assigned to the HDFS storage location as the location label argument. You do so using the CREATE LOCATION statement's LABEL keyword.

The following example demonstrates using `SET_OBJECT_STORAGE_POLICY` to store a table in an HDFS storage location. The example statement sets the policy for an existing table, named messages, to store its data in an HDFS storage location, named coldstorage.

```sql
=> SELECT SET_OBJECT_STORAGE_POLICY('messages', 'coldstorage');
```

This table's data is moved to the HDFS storage location with the next merge-out. Alternatively, you can have Vertica move the data immediately by using the `enforce-storage-move` parameter.

You can query the `STORAGE_CONTAINERS` system table and examine the location_label column to verify that Vertica has moved the data:

```sql
=> SELECT node_name, projection_name, location_label, total_row_count FROM V_MONITOR.STORAGE_
```
**CONTAINERS**

WHERE projection_name ILIKE 'messages%';

<table>
<thead>
<tr>
<th>node_name</th>
<th>projection_name</th>
<th>location_label</th>
<th>total_row_count</th>
</tr>
</thead>
<tbody>
<tr>
<td>v_vmart_node0001</td>
<td>messages_b0</td>
<td>coldstorage</td>
<td>366057</td>
</tr>
<tr>
<td>v_vmart_node0001</td>
<td>messages_b1</td>
<td>coldstorage</td>
<td>366511</td>
</tr>
<tr>
<td>v_vmart_node0002</td>
<td>messages_b0</td>
<td>coldstorage</td>
<td>367432</td>
</tr>
<tr>
<td>v_vmart_node0002</td>
<td>messages_b1</td>
<td>coldstorage</td>
<td>366057</td>
</tr>
<tr>
<td>v_vmart_node0003</td>
<td>messages_b0</td>
<td>coldstorage</td>
<td>366511</td>
</tr>
<tr>
<td>v_vmart_node0003</td>
<td>messages_b1</td>
<td>coldstorage</td>
<td>367432</td>
</tr>
</tbody>
</table>

(6 rows)

See [Creating Storage Policies](#) in the Administrator's Guide for more information about assigning storage policies to objects.

## Backing Up HDFS Storage Locations

### Caution:

It is important to secure backup locations and strictly limit access to backups to users who are already permitted to access all data in the database. Compromising a backup means compromising the database.

Vertica recommends that you regularly back up the data in your Vertica database. This recommendation includes data stored in your HDFS storage locations. The Vertica backup script (vbr) can back up HDFS storage locations. However, you must perform several configuration steps before it can back up these locations.

### Caution:

After you have created an HDFS storage location, full database backups will fail with the error message:

```
ERROR 5127: Unable to create snapshot No such file /usr/bin/hadoop: 
check the HadoopHome configuration parameter
```

This error is caused by the backup script not being able to back up the HDFS storage locations. You must configure Vertica and Hadoop to enable the backup script to back up these locations. After you configure Vertica and Hadoop, you can once again perform full database backups.

There are several considerations for backing up HDFS storage locations in your database:

- HDFS storage locations do not support object-level backups. You must perform a full database backup to back up the data in your HDFS storage locations.
- Data in an HDFS storage location is backed up to HDFS. This backup guards against
accidental deletion or corruption of data. It does not prevent data loss in the case of a catastrophic failure of the entire Hadoop cluster. To prevent data loss, you must have a backup and disaster recovery plan for your Hadoop cluster.

Data stored on the Linux native file system is still backed up to the location you specify in the backup configuration file. It and the data in HDFS storage locations are handled separately by the vbr backup script.

- You must configure your Vertica cluster to restore database backups containing an HDFS storage location. See Configuring Vertica to Restore HDFS Storage Locations for the configuration steps you must take.
- The HDFS directory for the storage location must have snapshotting enabled. You can either directly configure this yourself or enable the database administrator’s Hadoop account to do it for you automatically. See Configuring Hadoop and Vertica to Enable Backup of HDFS Storage for more information.

The topics in this section explain the configuration steps you must take to enable the backup of HDFS storage locations.

**Configuring Hadoop and Vertica to Enable Backup of HDFS Storage**

The Vertica backup script uses HDFS's snapshotting feature to create a backup of HDFS storage locations. A directory must allow snapshotting before HDFS can take a snapshot. Only a Hadoop superuser can enable snapshotting on a directory. Vertica can enable snapshotting automatically if the database administrator is also a Hadoop superuser.

If HDFS is unsecured, the following instructions apply to the database administrator account, usually dbadmin. If HDFS uses Kerberos security, the following instructions apply to the principal stored in the Vertica keytab file, usually vertica. The instructions below use the term "database account" to refer to this user.

We recommend that you make the database administrator or principal a Hadoop superuser. If you are not able to do so, you must enable snapshotting on the directory before configuring it for use by Vertica.

The steps you need to take to make the Vertica database administrator account a superuser depend on the distribution of Hadoop you are using. Consult your Hadoop distribution's documentation for details.
**Manually Enabling Snapshotting for a Directory**

If you cannot grant superuser status to the database account, you can instead enable snapshotting of each directory manually. Use the following command:

```
hdfs dfsadmin -allowSnapshot path
```

Issue this command for each directory on each node. Remember to do this each time you add a new node to your HDFS cluster.

Nested snapshottable directories are not allowed, so you cannot enable snapshotting for a parent directory to automatically enable it for child directories. You must enable it for each individual directory.

**Additional Requirements for Kerberos**

If HDFS uses Kerberos, then in addition to granting the keytab principal access, you must set a Vertica configuration parameter. In Vertica, set the HadoopConfDir parameter to the location of the directory containing the core-site.xml, hdfs-site.xml, and yarn-site.xml configuration files. The value can be a path, if the files are in multiple directories.

```sql
=> ALTER DATABASE exampledb SET HadoopConfDir = '/etc/hadoop/conf';
```

All three configuration files must be present on this path.

If your Vertica nodes are not co-located on HDFS nodes, then you must copy these files from an HDFS node to each Vertica node. Use the same path on every database node, because HadoopConfDir is a global value.

**Testing the Database Account's Ability to Make HDFS Directories Snapshottable**

After making the database account a Hadoop superuser, verify that the account can set directories snapshottable:

1. Log into the Hadoop cluster as the database account (dbadmin by default).
2. Determine a location in HDFS where the database administrator can create a
directory. The /tmp directory is usually available. Create a test HDFS directory using the command:

```bash
$ hdfs dfs -mkdir /path/testdir
```

3. Make the test directory snapshottable using the command:

```bash
$ hdfs dfsadmin -allowSnapshot /path/testdir
```

The following example demonstrates creating an HDFS directory and making it snapshottable:

```bash
$ hdfs dfs -mkdir /tmp/snaptest
$ hdfs dfsadmin -allowSnapshot /tmp/snaptest
Allowing snapshot on /tmp/snaptest succeeded
```

## Configuring Vertica to Restore HDFS Storage Locations

Your Vertica cluster must be able to run the Hadoop distcp command to restore a backup of an HDFS storage location. The easiest way to enable your cluster to run this command is to install several Hadoop packages on each node. These packages must be from the same distribution and version of Hadoop that is running on your Hadoop cluster.

The steps you need to take depend on:

- The distribution and version of Hadoop running on the Hadoop cluster containing your HDFS storage location.
- The distribution of Linux running on your Vertica cluster.

### Note:

Installing the Hadoop packages necessary to run distcp does not turn your Vertica database into a Hadoop cluster. This process installs just enough of the Hadoop support files on your cluster to run the distcp command. There is no additional overhead placed on the Vertica cluster, aside from a small amount of additional disk space consumed by the Hadoop support files.
**Configuration Overview**

The steps for configuring your Vertica cluster to restore backups for HDFS storage location are:

1. If necessary, install and configure a Java runtime on the hosts in the Vertica cluster.
2. Find the location of your Hadoop distribution's package repository.
3. Add the Hadoop distribution's package repository to the Linux package manager on all hosts in your cluster.
4. Install the necessary Hadoop packages on your Vertica hosts.
5. Set two configuration parameters in your Vertica database related to Java and Hadoop.
6. If your HDFS storage location uses Kerberos, set additional configuration parameters to allow Vertica user credentials to be proxied.
7. Confirm that the Hadoop distcp command runs on your Vertica hosts.

The following sections describe these steps in greater detail.

**Installing a Java Runtime**

You Vertica cluster must have a Java Virtual Machine (JVM) installed to run the Hadoop distcp command. It already has a JVM installed if you have configured it to:

- Execute user-defined extensions developed in Java. See [Developing User-Defined Extensions (UDxs)](Vertica SDKs) for more information.
- Access Hadoop data using the HCatalog Connector. See [Using the HCatalog Connector](Vertica SDKS) for more information.

If your Vertica database has a JVM installed, verify that your Hadoop distribution supports it. See your Hadoop distribution's documentation to determine which JVMs it supports.

If the JVM installed on your Vertica cluster is not supported by your Hadoop distribution you must uninstall it. Then you must install a JVM that is supported by both Vertica and your Hadoop distribution. See [Vertica SDKs](Vertica SDKS) in Supported Platforms for a list of the JVMs compatible with Vertica.

If your Vertica cluster does not have a JVM (or its existing JVM is incompatible with your Hadoop distribution), follow the instructions in [Installing the Java Runtime on Your Vertica Cluster](Vertica SDKS).
Finding Your Hadoop Distribution's Package Repository

Many Hadoop distributions have their own installation system, such as Cloudera's Manager or Hortonwork's Ambari. However, they also support manual installation using native Linux packages such as RPM and .deb files. These package files are maintained in a repository. You can configure your Vertica hosts to access this repository to download and install Hadoop packages.

Consult your Hadoop distribution's documentation to find the location of its Linux package repository. This information is often located in the portion of the documentation covering manual installation techniques.

Each Hadoop distribution maintains separate repositories for each of the major Linux package management systems. Find the specific repository for the Linux distribution running on your Vertica cluster. Be sure that the package repository that you select matches the version of Hadoop distribution installed on your Hadoop cluster.

Configuring Vertica Nodes to Access the Hadoop Distribution’s Package Repository

Configure the nodes in your Vertica cluster so they can access your Hadoop distribution's package repository. Your Hadoop distribution's documentation should explain how to add the repositories to your Linux platform. If the documentation does not explain how to add the repository to your packaging system, refer to your Linux distribution's documentation.

The steps you need to take depend on the package management system your Linux platform uses. Usually, the process involves:

- Downloading a configuration file.
- Adding the configuration file to the package management system's configuration directory.
- For Debian-based Linux distributions, adding the Hadoop repository encryption key to the root account keyring.
- Updating the package management system's index to have it discover new packages.

You must add the Hadoop repository to all hosts in your Vertica cluster.
Installing the Required Hadoop Packages

After configuring the repository, you are ready to install the Hadoop packages. The packages you need to install are:

- hadoop
- hadoop-hdfs
- hadoop-client

The names of the packages are usually the same across all Hadoop and Linux distributions. These packages often have additional dependencies. Always accept any additional packages that the Linux package manager asks to install.

To install these packages, use the package manager command for your Linux distribution. The package manager command you need to use depends on your Linux distribution:

- On Red Hat and CentOS, the package manager command is `yum`.
- On Debian and Ubuntu, the package manager command is `apt-get`.
- On SUSE the package manager command is `zypper`.

Consult your Linux distribution's documentation for instructions on installing packages.

Setting Configuration Parameters

You must set two configuration parameters to enable Vertica to restore HDFS data:

- `JavaBinaryForUDx` is the path to the Java executable. You may have already set this value to use Java UDxs or the HCatalog Connector. You can find the path for the default Java executable from the Bash command shell using the command:

  ```bash
  which java
  ```

- `HadoopHome` is the path where Hadoop is installed on the Vertica hosts. This is the directory that contains `bin/hadoop` (the bin directory containing the Hadoop executable file). The default value for this parameter is `/usr`. The default value is correct if your Hadoop executable is located at `/usr/bin/hadoop`.

The following example shows how to set and then review the values of these parameters:

```sql
=> ALTER DATABASE DEFAULT SET PARAMETER JavaBinaryForUDx = '/usr/bin/java';
=> SELECT current_value FROM configuration_parameters WHERE parameter_name = 'JavaBinaryForUDx';
current_value
---------------
'/usr/bin/java'

=> SELECT current_value FROM configuration_parameters WHERE parameter_name = 'HadoopHome';
current_value
---------------
'/usr/bin/hadoop'
```
You can also set the following parameters:

- HadoopFSReadRetryTimeout and HadoopFSSWriteRetryTimeout specify how long to wait before failing. The default value for each is 180 seconds. If you are confident that your file system will fail more quickly, you can improve performance by lowering these values.

- HadoopFSReplication specifies the number of replicas HDFS makes. By default, the Hadoop client chooses this; Vertica uses the same value for all nodes.

Caution: Do not change this setting unless directed otherwise by Vertica support.

- HadoopFSBlockSizeBytes is the block size to write to HDFS; larger files are divided into blocks of this size. The default is 64MB.

**Setting Kerberos Parameters**

If your Vertica nodes are co-located on HDFS nodes and you are using Kerberos, you must change some Hadoop configuration parameters. These changes are needed in order for restoring from backups to work. In *yarn-site.xml* on every Vertica node, set the following parameters:

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>yarn.resourcemanager.proxy-user-privileges.enabled</td>
<td>true</td>
</tr>
<tr>
<td>yarn.resourcemanager.proxyusers.*.groups</td>
<td>*</td>
</tr>
<tr>
<td>yarn.resourcemanager.proxyusers.*.hosts</td>
<td>*</td>
</tr>
<tr>
<td>yarn.resourcemanager.proxyusers.*.users</td>
<td>*</td>
</tr>
</tbody>
</table>
No changes are needed on HDFS nodes that are not also Vertica nodes.

**Confirming that distcp Runs**

After the packages are installed on all hosts in your cluster, your database should be able to run the Hadoop distcp command. To test it:

1. Log into any host in your cluster as the database superuser.
2. At the Bash shell, enter the command:

   ```bash
   $ hadoop distcp
   ```

3. The command should print a message similar to the following:

```
usage: distcp OPTIONS [source_path...] <target_path>

OPTIONS
-async Should distcp execution be blocking
-atomic Commit all changes or none
-bandwidth <arg> Specify bandwidth per map in MB
-delete Delete from target, files missing in source
-f <arg> List of files that need to be copied
-filelimit <arg> (Deprecated!) Limit number of files copied to <= n
-i Ignore failures during copy
-log <arg> Folder on DFS where distcp execution logs are saved
-m <arg> Max number of concurrent maps to use for copy
-mapredSslConf <arg> Configuration for ssl config file, to use with https://
-overwrite Choose to overwrite target files unconditionally, even if they exist.
-p <arg> preserve status (rbugpc)(replication, block-size, user, group, permission, checksum-type)
-sizeLimit <arg> (Deprecated!) Limit number of files copied to <= n bytes
-skippcccheck Whether to skip CRC checks between source and target paths.
-strategy <arg> Copy strategy to use. Default is dividing work based on file sizes
-tmp <arg> Intermediate work path to be used for atomic commit
-update Update target, copying only missing files or
```
4. Repeat these steps on the other hosts in your database to verify that all of the hosts can run distcp.

**Troubleshooting**

If you cannot run the distcp command, try the following steps:

- If Bash cannot find the hadoop command, you may need to manually add Hadoop's bin directory to the system search path. An alternative is to create a symbolic link in an existing directory in the search path (such as /usr/bin) to the hadoop binary.
- Ensure the version of Java installed on your Vertica cluster is compatible with your Hadoop distribution.
- Review the Linux package installation tool's logs for errors. In some cases, packages may not be fully installed, or may not have been downloaded due to network issues.
- Ensure that the database administrator account has permission to execute the hadoop command. You may need to add the account to a specific group in order to allow it to run the necessary commands.

**Performing Backups Containing HDFS Storage Locations**

After you configure Hadoop and Vertica, HDFS storage locations are automatically backed up when you perform a full database backup. If you already have a backup configuration file for a full database backup, you do not need to make any changes to it. You just run the vbr backup script as usual to perform the full database backup. See [Creating Full Backups](#) in the Administrator’s Guide for instructions on running the vbr backup script.

If you do not have a backup configuration file for a full database backup, you must create one to back up the data in your HDFS storage locations. See [Sample VBR .ini Files](#) and [Configuration File Reference](#) in the Administrator's Guide for more information.

**Removing HDFS Storage Locations**

The steps to remove an HDFS storage location are similar to standard storage locations:
1. Remove any existing data from the HDFS storage location by using `SET_OBJECT_STORAGE_POLICY` to change each object's storage location. Alternatively, you can use `CLEAR_OBJECT_STORAGE_POLICY`. Because the Tuple Mover runs infrequently, set the `enforce-storage-move` parameter to `true` to make the change immediately.

2. Retire the location on each host that has the storage location defined by using `RETIRE_LOCATION`. Set `enforce-storage-move` to `true`.

3. Drop the location on each host that has the storage location defined by using `DROP_LOCATION`.

4. Optionally remove the snapshots and files from the HDFS directory for the storage location.

For more information about changing storage policies, changing usage, retiring locations, and dropping locations, see Managing Storage Locations in the Administrator's Guide.

**Important:**
If you have backed up the data in the HDFS storage location you are removing, you must perform a full database backup after you remove the location. If you do not and restore the database to a backup made before you removed the location, the location's data is restored.

### Removing Storage Location Files from HDFS

Dropping an HDFS storage location does not automatically clean the HDFS directory that stored the location's files. Any snapshots of the data files created when backing up the location are also not deleted. These files consume disk space on HDFS and also prevent the directory from being reused as an HDFS storage location. Vertica refuses to create a storage location in a directory that contains existing files or subdirectories. You must log into the Hadoop cluster to delete the files from HDFS. An alternative is to use some other HDFS file management tool.

### Removing Backup Snapshots

HDFS returns an error if you attempt to remove a directory that has snapshots:

```
$ hdfs dfs -rm -r -f -skipTrash /user/dbadmin/v_vmart_node0001
rm: The directory /user/dbadmin/v_vmart_node0001 cannot be deleted since /user/dbadmin/v_vmart_node0001 is snapshottable and already has snapshots
```
The Vertica backup script creates snapshots of HDFS storage locations as part of the backup process. See Backing Up HDFS Storage Locations for more information. If you made backups of your HDFS storage location, you must delete the snapshots before removing the directories.

HDFS stores snapshots in a subdirectory named .snapshot. You list the snapshots in the directory using the standard HDFS ls command. The following example demonstrates listing the snapshots defined for node0001.

```
$hdfs dfs -ls /user/dbadmin/v_vmart_node0001/.snapshot
Found 1 items
drwxrwx--- - dbadmin supergroup 0 2014-09-02 10:13 /user/dbadmin/v_vmart_node0001/.snapshot/s20140902-101358.629
```

To remove snapshots, use the command:

```
hdfs dfs -removeSnapshot directory snapshotname
```

The following example demonstrates the command to delete the snapshot shown in the previous example:

```
$hdfs dfs -deleteSnapshot /user/dbadmin/v_vmart_node0001 s20140902-101358.629
```

You must delete each snapshot from the directory for each host in the cluster. After you have deleted the snapshots, you can delete the directories in the storage location.

Important: Each snapshot's name is based on a timestamp down to the millisecond. Nodes independently create their own snapshot. They do not synchronize snapshot creation, so their snapshot names differ. You must list each node's snapshot directory to learn the names of the snapshots it contains.

See Apache's HDFS Snapshot documentation for more information about managing and removing snapshots.

Removing the Storage Location Directories

You can remove the directories that held the storage location's data by either of the following methods:

- Use an HDFS file manager to delete directories. See your Hadoop distribution's documentation to determine if it provides a file manager.
Log into the Hadoop NameNode using the database administrator’s account and use HDFS's `rmr` command to delete the directories. See Apache's File System Shell Guide for more information.

The following example uses the HDFS `rmr` command from the Linux command line to delete the directories left behind in the HDFS storage location directory `/user/dbadmin`. It uses the `-skipTrash` flag to force the immediate deletion of the files.

```
$ hdfs dfs -ls /user/dbadmin
Found 3 items
drwxrwx---  - dbadmin supergroup 0 2014-08-29 15:11 /user/dbadmin/v_vmart_node0001
drwxrwx---  - dbadmin supergroup 0 2014-08-29 15:11 /user/dbadmin/v_vmart_node0002
drwxrwx---  - dbadmin supergroup 0 2014-08-29 15:11 /user/dbadmin/v_vmart_node0003

$ hdfs dfs -rmr -skipTrash /user/dbadmin/*
Deleted /user/dbadmin/v_vmart_node0001
Deleted /user/dbadmin/v_vmart_node0002
Deleted /user/dbadmin/v_vmart_node0003
```

**Troubleshooting HDFS Storage Locations**

This topic explains some common issues with HDFS storage locations.

**HDFS Storage Disk Consumption**

By default, HDFS makes three copies of each file it stores. This replication helps prevent data loss due to disk or system failure. It also helps increase performance by allowing several nodes to handle a request for a file.

A Vertica database with a **K-Safety** value of 1 or greater also stores its data redundantly using buddy projections.

When a K-Safe Vertica database stores data in an HDFS storage location, its data redundancy is compounded by HDFS's redundancy. HDFS stores three copies of the primary projection's data, plus three copies of the buddy projection for a total of six copies of the data.

If you want to reduce the amount of disk storage used by HDFS locations, you can alter the number of copies of data that HDFS stores. The Vertica configuration parameter named HadoopFSReplication controls the number of copies of data HDFS stores.
You can determine the current HDFS disk usage by logging into the Hadoop NameNode and issuing the command:

```
hdfs dfsadmin -report
```

This command prints the usage for the entire HDFS storage, followed by details for each node in the Hadoop cluster. The following example shows the beginning of the output from this command, with the total disk space highlighted:

```
$ hdfs dfsadmin -report
Configured Capacity: 51495516981 (47.96 GB)
Present Capacity: 32087212032 (29.88 GB)
DFS Remaining: 31656144064 (29.40 GB)
DFS Used: 522067968 (497.88 MB)
DFS Used%: 1.63%
Under replicated blocks: 0
Blocks with corrupt replicas: 0
Missing blocks: 0
...
```

After loading a simple million-row table into a table stored in an HDFS storage location, the report shows greater disk usage:

```
Configured Capacity: 51495516981 (47.96 GB)
Present Capacity: 32085299338 (29.88 GB)
DFS Remaining: 31373565952 (29.22 GB)
DFS Used: 711733386 (678.76 MB)
DFS Used%: 2.22%
Under replicated blocks: 0
Blocks with corrupt replicas: 0
Missing blocks: 0
...
```

The following Vertica example demonstrates:

1. Creating the storage location on HDFS.
2. Dropping the table in Vertica.
3. Setting the HadoopFSReplication configuration option to 1. This tells HDFS to store a single copy of an HDFS storage location's data.
4. Recreating the table and reloading its data.

```
=> CREATE LOCATION 'hdfs://hadoopNS/user/dbadmin' ALL NODES SHARED
   USAGE 'data' LABEL 'hdfs';
CREATE LOCATION

=> DROP TABLE messages;
DROP TABLE

=> ALTER DATABASE DEFAULT SET PARAMETER HadoopFSReplication = 1;

=> CREATE TABLE messages (id INTEGER, text VARCHAR);
CREATE TABLE
```
=> SELECT SET_OBJECT_STORAGE_POLICY('messages', 'hdfs');
    SET_OBJECT_STORAGE_POLICY
-----------------------------
Object storage policy set.
(1 row)

=> COPY messages FROM '/home/dbadmin/messages.txt';
    Rows Loaded
-----------------------
    1000000

Running the HDFS report on Hadoop now shows less disk space use:

$ hdfs dfsadmin -report
  Configured Capacity: 51495516981 (47.96 GB)
  Present Capacity: 32086278190 (29.88 GB)
  DFS Remaining: 31500988416 (29.34 GB)
  DFS Used: 585289774 (558.18 MB)
  DFS Used%: 1.82%
  Under replicated blocks: 0
  Blocks with corrupt replicas: 0
  Missing blocks: 0
  ...

Caution:
Reducing the number of copies of data stored by HDFS increases the risk of data loss. It can also negatively impact the performance of HDFS by reducing the number of nodes that can provide access to a file. This slower performance can impact the performance of Vertica queries that involve data stored in an HDFS storage location.

ERROR 6966: StorageBundleWriter

You might encounter Error 6966 when loading data into a storage location on a small Hadoop cluster (5 or fewer data nodes). This error is caused by the way HDFS manages the write pipeline and replication. You can mitigate this problem by reducing the number of replicas as explained in HDFS Storage Disk Consumption. For configuration changes you can make in the Hadoop cluster instead, see this blog post from Hortonworks.
Kerberos Authentication When Creating a Storage Location

If HDFS uses Kerberos authentication, then the `CREATE LOCATION` statement authenticates using the Vertica keytab principal, not the principal of the user performing the action. If the creation fails with an authentication error, verify that you have followed the steps described in Configuring Kerberos to configure this principal.

When creating an HDFS storage location on a Hadoop cluster using Kerberos, `CREATE LOCATION` reports the principal being used as in the following example:

```
=> CREATE LOCATION 'hdfs://hadoopNS/user/dbadmin' ALL NODES SHARED
   USAGE 'data' LABEL 'coldstorage';
NOTICE 0: Performing HDFS operations using kerberos principal [vertica/hadoop.example.com]
CREATE LOCATION
```

Backup or Restore Fails When Using Kerberos

When backing up an HDFS storage location that uses Kerberos, you might see an error such as:

```
createSnapshot: Failed on local exception: java.io.IOException:
java.lang.IllegalArgumentException: Server has invalid Kerberos principal:
hdfs/test.example.com@EXAMPLE.COM;
```

When restoring an HDFS storage location that uses Kerberos, you might see an error such as:

```
Error msg: Initialization thread logged exception:
Distcp failure!
```

Either of these failures means that Vertica could not find the required configuration files in the HadoopConfDir directory. Usually this is because you have set the parameter but not copied the files from an HDFS node to your Vertica node. You could also see this error if HadoopConfDir has been changed at the session level to an incompatible value. Check the value of the parameter, and then check that the necessary files are present in that location. See "Additional Requirements for Kerberos" in Configuring Hadoop and Vertica to Enable Backup of HDFS Storage.
Integrating With Cloudera Manager

The Cloudera distribution of Hadoop includes Cloudera Manager, a web-based tool for managing a Hadoop cluster. Cloudera Manager can manage any service for which a service description is available, including Vertica.

You can use Cloudera Manager to start, stop, and monitor individual database nodes or the entire database. You can manage both co-located and separate Vertica clusters—Cloudera can manage services on nodes that are not part of the Hadoop cluster.

You must install and configure your Vertica database before proceeding; you cannot use Cloudera Manager to create the database.

Installing the Service

Note:
Because the service has to send the database password over the network, you should enable encryption on your Hadoop cluster before proceeding.

A Cloudera Service Description (CSD) file describes a service that Cloudera can manage. The Vertica CSD is in /opt/vertica/share/CSD on a database node.

To install the Vertica CSD, follow these steps:

1. On a Vertica node, follow the instructions in VerticaAPIKey to generate an API key. You need this key to finish the installation of the CSD.
2. On the Hadoop node that hosts Cloudera Manager, copy the CSD file into /opt/cloudera/csd.
3. Restart Cloudera Manager:

   $ service cloudera-scm-server restart

4. In a web browser, go to Cloudera Manager and restart the Cloudera Management Service.
5. If your Vertica cluster is separate from your Hadoop cluster (not co-located on it): Use Cloudera Manager to add the hosts for your database nodes. If your cluster is co-located, skip this step.
6. Use Cloudera Manager to add the Vertica service.
7. On the "Role Assignment" page, select the hosts that are database nodes.
8. On the "Configuration" page, specify values for the following fields:
   - database name
   - agent port (accept the default if you’re not sure)
   - API key
   - database user to run as (usually dbadmin) and password

About the Agent

When you manage Vertica through Cloudera Manager, you are actually interacting with the Vertica Agent, not the database directly. The Agent runs on all database nodes and interacts with the database on your behalf. Management Console uses the same agent. Most of the time this extra indirection is transparent to you.

A Cloudera-managed service contains one or more roles. In this case the service is "Vertica" and the single role is "Vertica Node".

Available Operations

Cloudera Manager shows two groups of operations. Service-level operations apply to the service on all nodes, while role-level operations apply only to a single node.

You can perform the following service-level operations on all nodes:

- Start: Starts the agent and, if it is not already running, the database.
- Stop: Stops the database and agent.
- Restart: Calls Stop and then Start.
- Add Role Instances: Adds new database nodes to Cloudera Manager. The nodes must already be part of the Vertica cluster, and the hosts must already be known to Cloudera Manager.
- Enter Maintenance Mode: Suppresses health alerts generated by Cloudera Manager.
- Exit Maintenance Mode: Resumes normal reporting.
- Update Memory Pool Size: Applies memory-pool settings from the Static Service Pools configuration page.

You can perform all of these operations except Add Role Instances on individual nodes as role-level operations.
Managing Memory Pools

Cloudera Manager allows you to change resource allocations, such as memory and CPU, for the nodes it manages. If you are using co-located clusters, centrally managing resources can simplify your cluster management. If you are using separate Hadoop and Vertica clusters, you might prefer to manage Vertica separately as described in Managing the Database in the Administrator's Guide.

Use the Cloudera Manager "Static Service Pools" configuration page to configure resource allocations. The "Vertica Memory Pool" value, specified in GB, is the maximum amount of memory to allocate to the database on each node. If the configuration page includes "Cgroup Memory Hard Limit", set it to the same value as "Vertica Memory Pool".

After you have set these values, you can use the "Update Memory Pool Size" operation to apply the value to the managed nodes. This operation is equivalent to ALTER RESOURCE POOL GENERAL MAXMEMORYSIZE. Configuration changes in "Static Service Pools" do not take effect in Vertica until you perform this operation.

Uninstalling the Service

To uninstall the Vertica CSD, follow these steps:

1. Stop the Vertica service and then remove it from Cloudera Manager.
2. Remove the CSD file from /opt/cloudera/csd.
3. From the command line, restart the Cloudera Manager server.
4. In Cloudera Manager, restart the Cloudera Management Service.

Integrating Vertica with the MapR Distribution of Hadoop

MapR is a distribution of Apache Hadoop produced by MapR Technologies that extends the standard Hadoop components with its own features. Vertica can integrate with MapR in the following ways:

- You can read data from MapR through an NFS mount point. After you mount the MapR file system as an NFS mount point, you can use CREATE EXTERNAL TABLE AS
COPY or COPY to access the data as if it were on the local file system. This option provides the best performance for reading data.

- You can use the HCatalog Connector to read Hive data. Do not use the HCatalog Connector with ORC or Parquet data in MapR for performance reasons. Instead, mount the MapR file system as an NFS mount point and create external tables without using the Hive schema. For more about reading Hive data, see Using the HCatalog Connector.
- You can create a storage location to store data in MapR using the native Vertica format (ROS). Mount the MapR file system as an NFS mount point and then use CREATE LOCATION...ALL NODES SHARED to create a storage location. (CREATE LOCATION does not support NFS mount points in general, but does support them for MapR.)

**Note:**
If you create a Vertica database and place its initial storage location on MapR, Vertica designates the storage location for both DATA and TEMP usage. Vertica does not support TEMP storage locations on MapR, so after you create the location, you must alter it to store only DATA files. See Altering Location Use. Ensure that you have a TEMP location on the Linux file system.

Other Vertica integrations for Hadoop are not available for MapR.

For information on mounting the MapR file system as an NFS mount point, see Accessing Data with NFS and Configuring Vertica Analytics Platform with MapR on the MapR website. In particular, you must configure MapR to add Vertica as a MapR service.

**Examples**

In the following examples, the MapR file system has been mounted as /mapr.

The following statement creates an external table from ORC data:

```sql
=> CREATE EXTERNAL TABLE t (a1 INT, a2 VARCHAR(20))
    AS COPY FROM '/mapr/data/file.orc' ORC;
```

The following statement creates an external table from Parquet data and takes advantage of partition pruning (see Using Partition Columns):

```sql
=> CREATE EXTERNAL TABLE t2 (id int, name varchar(50), created date, region varchar(50))
```
AS COPY FROM '/mapr/**/*' PARQUET(hive_partition_cols='created,region');

The following statement loads ORC data from MapR into Vertica:

=> COPY t FROM '/mapr/data/*.orc' ON ANY NODE ORC;

The following statements create a storage location to hold ROS data in the MapR file system:

=> CREATE LOCATION '/mapr/my.cluster.com/data' SHARED USAGE 'DATA' LABEL 'maprfs';

=> SELECT ALTER_LOCATION_USE('/mapr/my.cluster.com/data', '', 'DATA');
Integrating with Apache Kafka

Vertica provides a high-performance mechanism for integrating with Apache Kafka, an open-source distributed real-time streaming platform. Because Vertica can both consume data from and produce data for Kafka, you can use Vertica as part of an automated analytics workflow: Vertica can retrieve data from Kafka, perform analytics on the data, and then send the results back to Kafka for consumption by other applications.

Prerequisites

- Install Vertica.
- Configure the database.
- Install Java 8.0 or later on your Vertica nodes.
- Install and configure Apache Kafka.

Architecture Overview

The Vertica and Kafka integration provides the following features:

- A UDx library containing functions that load and parse data from Kafka topics into Vertica
- A job scheduler that uses the UDL library to continuously consume data from Kafka with exactly-once semantics
- Push-based notifiers that send data collector messages from Vertica to Kafka
- A KafkaExport function that sends Vertica data to Kafka
Vertica as a Kafka Consumer

A Kafka consumer reads messages written to Kafka by other data streams. Because Vertica can read messages from Kafka, you can store and analyze data from any application that sends data to Kafka without configuring each individual application to connect to Vertica. Vertica provides tools to automatically or manually consume data loads from Kafka.

Automatic Loads

Automatically load data from Kafka with a job scheduler. A scheduler constantly loads data and ensures that each Kafka message is loaded exactly once. For more information, see Automatically Copying Data From Kafka.

Manual Loads

Manually load a finite amount of data from Kafka by directly executing a COPY statement. Example use cases include:

- Managing a streaming data load with greater control than using a scheduler.
- Loading specific chunks of data that you want to analyze, rather than constantly streaming data. For example, you might want to load web server logs from a specific time period to perform in-depth analytics.
- Testing your Kafka and Vertica configuration before creating a streaming data load.

For more information, see Manually Copying Data From Kafka.
Vertica as a Kafka Producer

A Kafka producer sends data to Kafka, which is then available to Kafka consumers for processing. There are two types of data you can send to Kafka:

- Vertica tables and query results. Use the KafkaExport function to export the results of Vertica analytics to Kafka. For more information, see Producing Data Using KafkaExport.
- Health and performance data from Data Collector tables. Use push-based notifiers to send this data for consumption by third-party monitoring tools.

Data Streaming Integration Terms

Vertica uses the following terms to describe its streaming feature. These are general terms, which may differ from each specific streaming platform’s terminology.

### Terminology

<table>
<thead>
<tr>
<th>Term</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Host</td>
<td>A data streaming server.</td>
</tr>
<tr>
<td>Source</td>
<td>A feed of messages in a common category which streams into the same Vertica target tables. In Apache Kafka, a source is known as a topic.</td>
</tr>
<tr>
<td>Partition</td>
<td>Unit of parallelism within data streaming. Data streaming splits a source into multiple partitions, which can each be served in parallel to consumers such as a Vertica database. Within a partition, messages are usually ordered chronologically.</td>
</tr>
<tr>
<td>Offset</td>
<td>An index into a partition. This index is the position within an ordered queue of messages, not an index into an opaque byte stream.</td>
</tr>
<tr>
<td>Message</td>
<td>A unit of data within data streaming. The data is typically in JSON or Avro format. Messages are loaded as rows into Vertica tables, and are uniquely identified by their source, partition, and offset.</td>
</tr>
</tbody>
</table>
Data Loader Terminology

<table>
<thead>
<tr>
<th>Data Loader Term</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Scheduler</td>
<td>An external tool that schedules data loads from a streaming data source into Vertica.</td>
</tr>
<tr>
<td>Microbatch</td>
<td>A microbatch represents a single segment of a data load from a streaming data source. It encompasses all of the information the scheduler needs to perform a load from a streaming data source into Vertica.</td>
</tr>
<tr>
<td>Frame</td>
<td>The window of time during which a Scheduler executes microbatches to load data. This window controls the duration of each COPY statement the scheduler runs as a part of the microbatch. During the frame, the scheduler gives an active microbatch from each source an opportunity to load data. It gives priority to microbatches that need more time to load data based on the history of previous microbatches.</td>
</tr>
<tr>
<td>Stream</td>
<td>A feed of messages that is identified by a source and partition. The offset uniquely identifies the position within a particular source-partition stream.</td>
</tr>
<tr>
<td>Lane</td>
<td>A thread within a job scheduler instance that issues microbatches to perform the load. The number of lanes available is based on the PlannedConcurrency of the job scheduler's resource pool. Multiple lanes allow the scheduler to run microbatches for different sources in parallel during a frame.</td>
</tr>
</tbody>
</table>

Configuring Vertica and Kafka

Both Vertica and Kafka have settings you can use to optimize your streaming data loads. The topics in this section explain these settings.
Kafka and Vertica Configuration Settings

The following sections lists settings for Vertica and Kafka that you can set to optimize performance.

Vertica Producer Settings

These settings change how Vertica acts as a Kafka producer when using either the KafkaExport function or through notifiers. How you change these settings depends on the method you are using to export data (KafkaExport or Notifiers).

<table>
<thead>
<tr>
<th>Setting</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>queue.buffering.max.messages</td>
<td>Specifies the size of the Vertica producer queue. If Vertica generates too many messages too quickly, the queue can fill, resulting in dropped messages. Increasing this value consumes more memory, but reduces the chance of lost messages.</td>
</tr>
<tr>
<td>queue.buffering.max.ms</td>
<td>Specifies the frequency with which Vertica flushes the producer message queue. Lower values decrease latency at the cost of throughput. Higher values increase throughput, but can cause the producer queue (set by queue.buffering.max.messages) to fill more frequently, resulting in dropped messages.</td>
</tr>
<tr>
<td>message.max.bytes</td>
<td>Specifies the maximum size of a Kafka protocol request message batch. This values should be the same on your sources, brokers, and producers.</td>
</tr>
<tr>
<td>message.send.max.retries</td>
<td>Specifies the number of attempts the producer makes to deliver the message to a broker. Higher values increase the chance of success.</td>
</tr>
<tr>
<td>retry.backoff.ms</td>
<td>Specifies the interval Vertica waits before resending a failed message.</td>
</tr>
<tr>
<td>request.required.acks</td>
<td>Specifies how many broker replica acknowledgments Kafka</td>
</tr>
</tbody>
</table>
### Setting Notes

<table>
<thead>
<tr>
<th>Setting</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>request.timeout.ms</td>
<td>Specifies the interval that the producer waits for a response from the broker. Broker response time is affected by server load and the number of message acknowledgments you require. Higher values increase latency.</td>
</tr>
<tr>
<td>compression.type</td>
<td>Specifies the compression algorithm used to encode data before sending it to a broker. Compression helps to reduce the network footprint of your Vertica producers and increase disk utilization. Vertica supports gzip and snappy.</td>
</tr>
</tbody>
</table>

### Kafka Broker Settings

Kafka brokers receive messages from producers and distribute them among Kafka consumers. Configure these settings on the brokers themselves. These settings function independently of your producer and consumer settings. For detailed information on Apache Kafka broker settings, refer to the Apache Kafka documentation.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>message.max.bytes</td>
<td>Specifies the maximum size of a Kafka protocol request message batch. This values should be the same on your sources, brokers, and producers.</td>
</tr>
<tr>
<td>num.io.threads</td>
<td>Specifies the number of network threads the broker uses to receive and process requests. More threads can increase your concurrency.</td>
</tr>
<tr>
<td>num.network.threads</td>
<td>Specifies the number of network threads the broker uses to accept network requests. More threads can increase your concurrency.</td>
</tr>
</tbody>
</table>
Vertica Consumer Settings

The following settings changes how Vertica acts when it consumes data from Kafka. You can set this value using the kafka_conf parameter on the KafkaSource UDL when directly executing a COPY statement. For schedulers, use the -message_max_bytes settings in the scheduler tool.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>message.max.bytes</td>
<td>Specifies the maximum size of a Kafka protocol request message batch. Set this value to a high enough value to prevent the overhead of fetching batches of messages interfering with loading data. Defaults to 24MB for newly-created load specs.</td>
</tr>
</tbody>
</table>

**Important:**
The meaning of this setting changed between Kafka version 0.10 and 0.11. If you have a scheduler you created using Vertica version 9.1.0 or earlier, see Changes to the message.max.bytes Setting in Kafka Version 0.11 and Later for settings you may need to change.

Directly Setting Kafka Library Options

Vertica relies on the open source rdkafka library to communicate with Apache Kafka. This library contains many options for controlling how Vertica and Kafka interact. You set the most common rdkafka library options through the settings in the vkconfig utility and the Kafka integration functions such as KafkaSource.

There are some rdkafka settings that cannot be directly set from within the Vertica. Under normal circumstances, you do not need to change them. However, if you find that you need to set a specific rdkafka setting that is not directly available from Vertica, you can directly pass options to the rdkafka library through the kafka_conf options.

The kafka_conf argument is supported when using a scheduler to load data from Kafka. You can set the values in the following ways (listed in order of lower to higher precedence):
- The Linux environment variable VERTICA_RDKAFKA_CONF set on the host where you run the vkconfig utility.
- The Linux environment variable VERTICA_RDKAFKA_CONF_KAFKA_CLUSTER set on the host where you run the vkconfig utility. The KAFKA_CLUSTER portion of the variable name is the name of a Kafka cluster you have defined using vkconfig's cluster utility. The settings in this environment variable only affect the specific Kafka cluster you name in KAFKA_CLUSTER.
- The -kafka_conf option of the vkconfig utility. This option can be set in the cluster, source, launch, and sync tools. Note that the setting only applies to each vkconfig utility call—it does not carry over to other vkconfig utility calls. For example, if you need to supply an option to the cluster and source tool, you must supply the kafka_conf option to both of them.

**Note:**
Using an environment variable to set your rdkafka options helps to keep your settings consistent. It is easy to forget to set the -kafka_conf option for each call to the vkconfig script.

All of these options cascade, so setting an option using the -kafka_conf argument to the cluster tool overrides the same option that was set in the environment variables.

You can also directly set rdkafka options when directly calling KafkaExport, KafkaSource, and several other Kafka integration functions. These functions accept a parameter named kafka_conf.

**The kafka_conf Option Settings**

The format for the kafka_conf setting is an option name, an equal sign, and a value. You can supply multiple options by separating them with a semicolon. For example, the -kafka_conf option to the vkconfig utility looks like this:

```
-kafka_conf 'option1=value1;option2=value2'
```

See the rdkafka project on github for a list of the configuration options supported by the rdkafka library.

**Important:**
Arbitrarily setting options via kafka_conf can result in errors or unpredictable behavior. If you encounter a problem loading messages after setting an rdkafka option using the kafka_conf option, roll back your change to see if that was the source of the problem.
To prevent confusion, never set options via the kafka_conf parameter that can be set directly through scheduler options. For example, do not use the kafka_conf option to set Kafka's message.max.bytes setting. Instead, use the load-spec tool's --message-max-bytes option.

**Example**

The following example demonstrates disabling rdkafka's api.version.request option when manually loading messages using KafkaSource. You should always disable this option when accessing Kafka cluster running version 0.9 or earlier. See Configuring Vertica for Apache Kafka Version 0.9 and Earlier for more information.

```sql
=> CREATE FLEX TABLE iot_data();
CREATE TABLE => COPY public.iot_data SOURCE KafkaSource(stream='iot_json|0|-2',
brokers='kafka-01.example.com:9092',
stop_on_eof=True,
kafka_conf='api.version.request=false')
PARSER KafkaJSONParser();
Rows Loaded
----------
 5000
(1 row)
```

This example demonstrates setting two options when calling the cluster tool. It disables the api.version.request option and enables CRC checks of messages from Kafka using the check.crcs option:

```
$ vkconfig cluster --create --cluster StreamCluster1 \
    --hosts kafka01.example.com:9092,kafka02.example.com:9092 \
    --conf myscheduler.config \
    --kafka_conf 'api.version.request=false;check.crcs=true'
```

The following example demonstrates setting the same options using an environment variable:

```
$ export VERTICA_RDKAFKA_CONF=api.version.request=false;check.crcs=true
$ vkconfig cluster --create --cluster StreamCluster1 \
    --hosts kafka01.example.com:9092,kafka02.example.com:9092 \
    --conf myscheduler.config
```

**Important:** Setting the check.crc option is just an example. Vertica does not suggest you enable the CRC check in your schedulers under normal circumstances. It adds additional overhead and can result in slower performance.
Configuring Vertica for Apache Kafka Version 0.9 and Earlier

Apache Kafka version 0.10 introduced a new feature that allows consumers to determine which version of the Kafka API the Kafka brokers support. Consumers that support this feature send an initial API version query to the Kafka broker to determine the API version to use when communicating with them. Kafka brokers running version 0.9.0 or earlier cannot respond to the API query. If the consumer does not receive a reply from the Kafka broker within a timeout period (set to 10 seconds by default) the consumer can assume the Kafka broker is running Kafka version 0.9.0 or earlier.

The Vertica integration with Kafka supports this API query feature starting in version 9.1.1. This API check can cause problems if you are connecting Vertica to a Kafka cluster running 0.9.0 or earlier. You may notice poorer performance loading messages from Kafka and may experience errors as the 10 second API request timeout can cause parts of the Kafka integration feature to time out and report errors.

For example, if you run the vkconfig source utility to configure a source on a Kafka 0.9 cluster, you may get the following error:

```
$ vkconfig source --create --conf weblog.conf --cluster kafka_weblog --source web_hits
Exception in thread "main" com.vertica.solutions.kafka.exception.ConfigurationException:

```
Disabling the API Version Request When Using the Streaming Job Scheduler

To avoid these problems, you must disable the API version request feature in the rdkafka library that Vertica uses to communicate with Kafka. The easiest way to disable this setting when using the scheduler is to set a Linux environment variable on the host on which you run the vkconfig script. Using the environment variable ensures that each call to vkconfig includes the setting to disable the API version request. The vkconfig script checks two variables:

- **VERTICA_RDKAFKA_CONF** applies to all Kafka clusters that the scheduler running on the host communicates with.
- **VERTICA_RDKAFKA_CONF_CLUSTERS_NAME** applies to just the Kafka cluster named **CLUSTER_NAME**. Use this variable if your scheduler communicates with several Kafka clusters, some of which are not running version 0.9 or earlier.

If you set both variables, the cluster-specific one takes precedence. This feature is useful if most of the clusters your scheduler connects to are running Kafka 0.9 or earlier, but a few run 0.10 or later. This case, you can disable the API version check for most clusters using the **VERTICA_RDKAFKA_CONF** variable and re-enable the check for specific clusters using **VERTICA_RDKAFKA_CONF_CLUSTERS_NAME**.

If just a few of your Kafka clusters run version 0.9 or earlier, you can just set the cluster-specific variables for them, and leave the default values in place for the majority of your clusters.

The content of the environment variable is the setting to tell the rdkafka library to not to query the Kafka cluster for the API version it supports:

```text
api.version.request=false
```

To set the environment variable in BASH, use the export command:

```
$ export VERTICA_RDKAFKA_CONF=api.version.request=false
```

If you wanted the setting to just affect a cluster named kafka_weblog, the command is:

```
$ export VERTICA_RDKAFKA_CONF_kafka_weblog=api.version.request=false
```

You can add the command to any of the common user environment configuration files such as ~/.bash_profile or the system-wide files such as /etc/profile. You must ensure that the same setting is used for all users who may run the vkconfig script, including any
calls made by daemon processes such as init. You can also directly include this command in any script you use to set configure or start your scheduler.

Disabling the API Version Request When Directly Loading Messages

You can disable the API request when you directly call KafkaSource to load messages by using the kafka_conf parameter:

```sql
=> CREATE FLEX TABLE iot_data();
CREATE TABLE
=> COPY public.iot_data SOURCE KafkaSource(stream='iot_json|0|-2',
brokers='kafka-01.example.com:9092',
stop_on_eof=True,
kafka_conf='api.version.request=false')
PARSER KafkaJSONParser();
Rows Loaded
-----------------
5000
(1 row)
```

- Automatically Copying Data From Kafka
- Manually Copying Data From Kafka

Changes to the message.max.bytes Setting in Kafka Version 0.11 and Later

In Kafka version 0.10 and earlier, the message.max.bytes setting configured the maximum allowable size for an individual message. Starting in version 0.11, Kafka began grouping messages into batches. This version changed the meaning of this setting to be the largest allowable size of a message batch.

This change can have a significant impact on how fast your Vertica database loads messages from Kafka 0.11 and later. If you created your streaming job scheduler using
Vertica version 9.1.0 or earlier, you might find that its load spec's message.max.bytes value is set too low. Upgrading your scheduler does not adjust this setting automatically.

To prevent slow throughput when using Vertica with Kafka 0.11 and later, manually adjust the message.max.bytes setting in scheduler's load spec. Testing by Vertica suggests the best value for this setting is 25165824 (24 × 1024 × 1024) bytes.

The following example demonstrates updating the message.max.bytes setting in the load spec named weblog_load of an existing scheduler that is defined using the configuration file named weblog.conf:

```bash
$ /opt/vertica/packages/kafka/bin/vkconfig load-spec --update -load-spec weblog_load -conf weblog.conf -message-max-bytes 25165824
```

## Manually Copying Data From Kafka

You can manually stream data from Kafka into Vertica using a COPY statement. This technique is similar to copying data from other sources, such as the local file system, a client system, or from Apache Hadoop. See Getting Data into Vertica and the COPY statement reference for more information about using the COPY statement.

Manually copying data from Kafka is useful when you:

- Want to load data on a specific schedule. For example, suppose the data you are loading is sent out at a specific time as a daily report. Then you do not need the overhead of setting up a scheduler that will run constantly. Instead, schedule a statement to run each day to load the data into Vertica.
- Have a specific set of messages that you want to analyze. You can choose to load a subset of the data in a Kafka stream.
- Want to explore the data in a Kafka stream before setting up a scheduler to continuously stream the data into Vertica.
- Want greater control over the data load than using a scheduler. For example, suppose you want to perform business logic or custom rejection handling during the data load from Kafka. The scheduler does not support performing additional processing during its transactions. Instead, you can choose to periodically run a transaction that executes a COPY statement to load data from Kafka and then perform additional processing.

Unlike other copy methods, copying from Kafka often implies your COPY statement loads data for a set period of time, rather than loading all of the data from a file or other source. For example, you can choose to COPY all of the messages sent to a Kafka topic for one minute. Vertica copies just the data streamed during that one minute period. After the duration is up, the COPY statement ends and Vertica does not load any further data.
**Important:**
The durations you set for your data load is not exact. The duration actually controls how long the KafkaSource process runs. The actual COPY statement may run for a shorter period of time.

If you start a long-duration COPY statement from Kafka and need to stop it, you can call one of the functions that closes its session, such as **CLOSE_ALL_SESSIONS**.

You can also choose specific ranges of messages to load from a topic using offsets. Kafka stores a backlog of messages for topics. How long it stores these messages is configured by the Kafka administrator. Copying using offsets lets you load this previously sent data. You can even choose to load all of the messages that Kafka has stored for a topic and also load the messages sent over a period of time.

When copying data from Kafka, the source of your COPY statement is always **KafkaSource**. Your COPY statement usually uses one of three parsers: **KafkaParser**, **KafkaJSONParser**, or **KafkaAvroParser**. The other parsers (such as the Flex FCSVPARSER) are not directly compatible with the output of KafkaSource. You must alter KafkaSource's output using filters before other parsers can process the data. See Parsing Custom Formats for more information.

This example demonstrates copying data from Kafka into a Vertica table:

```
=> COPY public.from_kafka
   SOURCE KafkaSource(stream='iot_data|0|-2,iot_data|1|-2',
                      brokers='kafka01.example.com:9092',
                      duration-interval '10000 milliseconds')
   PARSER KafkaAvroParser(schema_registry_url='http://localhost:8081/subjects/iot_data-
                               value/versions/1')
   REJECTED DATA AS TABLE public.rejections
NO COMMIT;
```

In the previous example:

- The data is copied into a table named from_kafka in the public schema.
- The KafkaSource streams data from partitions 0 and 1 of the topic named iot_data.
- The streaming starts from the earliest available message in the stream set by the -2 in the stream offset parameter. This is a special offset value indicating that the load should start from the earliest possible message.
- KafkaSource reads the data from the Kafka broker running on the host named kafka01.example.com on port 9092.
- COPY loads data for 10000 milliseconds (10 seconds). If it loads all of the existing data in the topic in this time, it waits for any streaming data to arrive until the 10 seconds has elapsed.
- The stream is parsed as Avro data.
Vertica Documentation
Integrating with Apache Kafka

l

l

The schema that the Avro parser uses to parse the data is retrieved from a schema
registry running on the local system.
Rejected data is saved in a table named public.rejections.

For more information, see the KafkaSource reference topic.

Note:
If you are copying data containing default values into a flex table, you must
identify the default value column as __raw__. For more information, see
Bulk Loading Data into Flex Tables.

Manually Loading Kafka Data Example
This example demonstrates loading JSON-encoded data from a Kafka topic named web_hits
that streams server logs of requests from a web site. The messages in the topic look like
this:
{"url": "list.jsp", "ip": "144.177.38.106", "date": "2017/05/02 20:56:00",
"user-agent": "Mozilla/5.0 (compatible; MSIE 6.0; Windows NT 6.0; Trident/5.1)"}
{"url": "search/wp-content.html", "ip": "215.141.172.28", "date": "2017/05/02 20:56:01",
"user-agent": "Opera/9.53.(Windows NT 5.2; sl-SI) Presto/2.9.161 Version/10.00"}

In order to load this data, you first need a table to receive it. At first glance, the data seems
rather uniform, so you could load it into a standard Vertica table. However, as this is JSON
data, some messages may have added values that aren't apparent from a small sample. It
is safer in this case to load the data into flex table. Flex tables can dynamically accept
additional fields that appear in the data. For more information about flex tables, see Using
Flex Tables.
The following example creates a flex table named web_hits to hold the Kafka data:
=> CREATE FLEX TABLE web_hits();

Before you load data from Kafka, you must determine the values for your call to the
KafkaSource UDL based on your Kafka cluster and the topic you are loading:
l

What are the host names (or IP addresses) and port numbers of the brokers in your
Kafka cluster? The Kafka brokers are the service Vertica accesses in order to retrieve
the Kafka data. In this example, the Kafka cluster has a single broker named
kafka01.example.com, running on port 6667. This value is set in the brokers
parameter.

Vertica Analytic Database (11.0.x)

Page 5953 of 6730


What topic will you be loading from, and from what partitions in that topic? Kafka topics split their messages into different partitions to get scalable throughput. As mentioned earlier, this example loads data from a topic named web_hits. There is a single partition in web_hits, so this example uses 0 for the partition. This value is set in the stream parameter.

What offset within the topic do you want to start loading data? Kafka keeps a backlog of messages. The Kafka administrator sets the length of this backlog. You can choose to load some or all of the messages in the backlog, or just load the currently streamed messages. You can also choose to end loading at a specific offset. This example starts loading data at the earliest possible message. The offset value to load the entire backlog is -2. This value is also set in the stream parameter.

When should the COPY statement stop loading data? Copying data from Kafka is unlike most other sources (such as files), because streamed data is constantly arriving. You can choose to:

- copy as much data as possible during a set amount of time.
- have the COPY statement load data until no new data arrives within a timeout period.
- load all of the data that is available, and not wait for any further data to arrive.
- load a specific set of data from a starting offset to an ending offset

This example has COPY run for 10000 milliseconds (10 seconds) to get a sample of the data. If the COPY statement is able to load the entire backlog of data in under 10 seconds, it will spend the remaining time loading streaming data as it arrives. This values is set in the duration parameter.

How many threads should Vertica use to load the data from Kafka? Usually, you want to use 1 thread per partition being loaded from the Kafka topic. You can choose to not specify a value and let Vertica determine the number of threads to use based on the number of partitions and the resources available in the resource pool. This value is set in the KafkaSource's executionparallelism parameter. In this example, there is only one partition, so there's no need for additional threads to load data.

**Note:**
The EXECUTIONPARALLELISM setting on the resource pool assigned is the upper limit on the number of threads your COPY statement can use. Setting the executionparallelism parameter on the KafkaSource function call to a value that is higher than that of the resource pool's EXECUTIONPARALLELISM setting does not increase the number of threads Vertica uses beyond the limits of the resource pool.

What parser do you need to parse the data? Kafka does not enforce any sort of formatting on the messages it sends. They are often in Avro or JSON format.
However, they could be in any format. In this example, the data in the web_hits is encoded in JSON format, so it uses the KafkaJSONParser. This value is set in the COPY statement’s PARSER clause.

- Where should rejected data be sent? Vertica saves raw Kafka messages that the parser cannot parse to a rejects table along with information on why it was rejected. This table is created by the COPY statement. This example saves rejects to the table named web_hits_rejections. This value is set in the COPY statement’s REJECTED DATA AS TABLE clause.

The following statement loads the data using these options:

```
=> COPY web_hits SOURCE KafkaSource(stream='web_hits\0-2',
           brokers='kafka01.example.com:6667',
           duration=interval '10000 milliseconds')
       PARSER KafkaJSONParser()
       REJECTED DATA AS TABLE public.web_hits_rejections;
```

</tbody>
</table>
```

A few things to note in the example statement:
• The stream parameter combines the name of the topic, the topic partition to load from, and the offset into a list delimited by a pipe character (|). To load from additional partitions in the same topic, or even additional topics, supply a comma separated list of topic name, partition number, and offset values delimited by pipe characters. For example, to load from partitions 0 through 2, your stream argument would be:

    stream='web_hits|0|-2,web_hits|1|-2,web_hits|2|-2'

**Note:**
While you can load messages from different Kafka topics in the same COPY statement, you must ensure the data from the different topics is compatible with the target table's schema. The schema is less of a concern if you are loading data into a flex table, which can accommodate almost any data you want to load.

• The KafkaJSONParser accepts parameters that let you control how JSON data is transformed. See KafkaJSONParser for more information.

## Automatically Copying Data From Kafka
Vertica offers a scheduler that loads streamed messages from one or more Kafka topics. Automatically loading streaming data has a number of advantages over manually using COPY:

• The streamed data automatically appears in your database. The frequency with which new data appears in your database is governed by the scheduler's frame duration.
• The scheduler provides an exactly-once consumption process. The schedulers manage offsets for you so that each message sent by Kafka is consumed once.
• You can configure backup schedulers to provide high-availability. Should the primary scheduler fail for some reason, the backup scheduler automatically takes over loading data.
• The scheduler manages resources for the data load. You control its resource usage through the settings on the resource pool you assign to it. When loading manually, you must take into account the resources your load consumes.

There are a few drawbacks to using a scheduler which may make it unsuitable for your needs. You may find that schedulers do not offer the flexibility you need for your load process. For example, schedulers cannot perform business logic during the load transaction. If you need to perform this sort of processing, you are better off creating your own load process. This process would periodically run COPY statements to load data from Kafka. Then it would perform the business logic processing you need before committing the transaction.
For information on job scheduler requirements, refer to Vertica Integration for Apache Kafka.

What the Job Scheduler Does

The scheduler is responsible for scheduling loads of data from Kafka. The scheduler's basic unit of processing is a frame, which is a period of time. Within each frame, the scheduler assigns a slice of time for each active microbatch to run. Each microbatch is responsible for loading data from a single source. Once the frame ends, the scheduler starts the next frame. The scheduler continues this process until you stop it.

The Anatomy of a Scheduler

Each scheduler has several groups of settings, each of which control an aspect of the data load. These groups are:

- The scheduler itself, which defines the configuration schema, frame duration, and resource pool.
- Clusters, which define the hosts in the Kafka cluster that the scheduler contacts to load data. Each scheduler can contain multiple clusters, allowing you to load data from multiple Kafka clusters with a single scheduler.
- Sources, which define the Kafka topics and partitions in those topics to read data from.
- Targets, which define the tables in Vertica that will receive the data. These tables can be traditional Vertica database tables, or they can be flex tables.
- Load specs, which define setting Vertica uses while loading the data. These settings include the parsers and filters Vertica needs to use to load the data. For example, if you are reading a Kafka topic that is in Avro format, your load spec needs to specify the Avro parser and schema.
- Microbatches, which represent an individual segment of a data load from a Kafka stream. They combine the definitions for your cluster, source, target, and load spec that you create using the other vkconfig tools. The scheduler uses all of the information in the microbatch to execute COPY statements using the KafkaSource UDL function to transfer data from Kafka to Vertica. The statistics on each microbatch's load is stored in the stream_microbatch_history table.
The vkconfig Script

You use a Linux command-line script named vkconfig to create, configure, and run schedulers. This script is installed on your Vertica hosts along with the Vertica server in the following path:

```
/opt/vertica/packages/kafka/bin/vkconfig
```

**Note:**
You can install and use the vkconfig utility on a non-Vertica host. You may want to do this if:

- You do not want the scheduler to use Vertica host resources.
- You want users who do not have shell accounts on the Vertica hosts to be able to set up and alter schedulers.

The easiest way to install vkconfig on a host is to install the Vertica server RPM. You must use the RPM that matches the version of Vertica installed on your database cluster. Do not create a database after installing the RPM. The vkconfig utility and its associated files will be in the `/opt/vertica/packages/kafka/bin` directory on the host.

The vkconfig script contains multiple tools. The first argument to the vkconfig script is always the tool you want to use. Each tool performs one function, such as changing one group of settings (such as clusters or sources) or starting and stopping the scheduler. For example, to create or configure a scheduler, you use the command:

```
$ /opt/vertica/packages/kafka/bin/vkconfig scheduler other options...
```

What Happens When You Create a Scheduler

When you create a new scheduler, the vkconfig script takes the following steps:

- Creates a new Vertica schema using the name you specified for the scheduler. You use this name to identify the scheduler during configuration.
- Creates the tables needed to manage the Kafka data load in the newly-created schema. See [Data Streaming Schema Tables](#) for more information.
Validating Schedulers

When you create or configure a scheduler, it validates the following settings:

- Confirms that all brokers in the specified cluster exist.
- Connects to the specified host or hosts and retrieves the list of all brokers in the Kafka cluster. Getting this list always ensures that the scheduler has an up-to-date list of all the brokers. If the host is part of a cluster that has already been defined, the scheduler cancels the configuration.
- Confirms that the specified source exists. If the source no longer exists, the source is disabled.
- Retrieves the number of partitions in the source. If the number of partitions retrieved from the source is different than the partitions value saved by the scheduler, Vertica updates the scheduler with the number of partitions retrieved from the source in the cluster.

You can disable validation using the --validation-type option in the vkconfig script's scheduler tool. See Scheduler Tool Options for more information.

Synchronizing Schedulers

By default, the scheduler automatically synchronizes its configuration and source information with Kafka host clusters. You can configure the synchronization interval using the --config-refresh scheduler utility option. Each interval, the scheduler:

- Checks for updates to the scheduler's configuration by querying its settings in its Vertica configuration schema.
- Performs all of the checks listed in Validating Schedulers.

You can configure synchronization settings using the --auto-sync option using the vkconfig script's scheduler tool. Scheduler Tool Options for details.

Launching a Scheduler

You use the vkconfig script's launch tool to launch a scheduler.
When you launch a scheduler, it collects data from your sources, starting at the specified offset. You can view the stream_microbatch_history table to see what the scheduler is doing at any given time.

To learn how to create, configure, and launch a scheduler, see Setting up a Scheduler in this guide.

You can also choose to bypass the scheduler. For example, you might want to do a single load with a specific range of offsets. For more information, see Manually Copying Data From Kafka in this guide.

If the Vertica cluster goes down, the scheduler attempts to reconnect and fails. You must relaunch the scheduler when the cluster is restarted.

Managing a Running Scheduler

When you launch a scheduler from the command line, it runs in the foreground. It will run until you kill it (or the host shuts down). Usually, you want to start the scheduler as a daemon process that starts it when the host operating system starts, or after the Vertica database has started.

You shut down a running scheduler using the vkconfig script's shutdown tool. See Shutdown Tool Options for details.

You can change most of a scheduler's settings (adding or altering clusters, sources, targets, and microbatches for example) while it is running. The scheduler automatically acts on the configuration updates.

Launching Multiple Job Schedulers for High Availability

For high availability, you can launch two or more identical schedulers that target the same configuration schema. You differentiate the schedulers using the launch tool's --instance-name option (see Launch Tool Options).

The active scheduler loads data and maintains an $lock on the stream_lock table. The scheduler not in use remains in stand-by mode until the active scheduler fails or is disabled. If the active scheduler fails, the backup scheduler immediately obtains the lock on the
stream_lock table, and takes over loading data from Kafka where the failed scheduler left off.

Managing Messages Rejected During Automatic Loads

Vertica rejects messages during automatic loads using the parser definition, which is required in the microbatch load spec.

The scheduler creates a rejection table to store rejected messages for each microbatch automatically. To manually specify a rejection table, use the --rejection-schema and --rejection-table microbatch utility options when creating the microbatch. Query the stream_microbatches table to return the rejection schema and table for a microbatch.

For additional details about how Vertica handles rejected data, see Handling Messy Data.

Passing Options to the Scheduler's JVM

The scheduler uses a Java Virtual Machine to connect to Vertica via JDBC. You can pass command-line options to the JVM through a Linux environment variable named VKCONFIG_JVM_OPTS. This option is useful when configuring a scheduler to use TLS/SSL encryption when connecting to Vertica. See Configuring Your Scheduler for TLS Connections for more information.

Viewing Schedulers from the MC

You can view the status of Kafka jobs from the MC. For more information, refer to Viewing Load History.

Setting up a Scheduler

You set up a scheduler using the Linux command line. Usually you perform the configuration on the host where you want your scheduler to run. It can be one of your
Vertica hosts, or a separate host where you have installed the vkconfig utility (see The vkconfig Script for more information).

Follow these steps to set up and start a scheduler to stream data from Kafka to Vertica:

1. Create a Config File (Optional)
2. Add the vkconfig Directory to Your Path (Optional)
3. Create a Resource Pool for Your Scheduler
4. Create the Scheduler
5. Create a Cluster
6. Create a Data Table
7. Create a Source
8. Create a Target
9. Create a Load-Spec
10. Create a Microbatch
11. Launch the Scheduler

These steps are explained in the following sections. These sections will use the example of loading web log data (hits on a web site) from Kafka into a Vertica table.

Create a Config File (Optional)

Many of the arguments you supply to the vkconfig script while creating a scheduler do not change. For example, you often need to pass a username and password to Vertica to authorize the changes to be made in the database. Adding the username and password to each call to vkconfig is tedious and error-prone.

Instead, you can pass the vkconfig utility a configuration file using the --conf option that specifies these arguments for you. It can save you a lot of typing and frustration.

The config file is a text file with a keyword=value pair on each line. Each keyword is a vkconfig command-line option, such as the ones listed in Common vkconfig Script Options

The following example shows a config file named weblog.conf that will be used to define a scheduler named weblog_sched. This config file is used throughout the rest of this example.

```bash
# The configurations options for the weblog_sched scheduler.
username=dbadmin
password=mypassword
dbhost=vertica01.example.com
dbport=5433
config-schema=weblog_sched
```
Add the vkconfig Directory to Your Path (Optional)

The vkconfig script is located in the `/opt/vertica/packages/kafka/bin` directory. Typing this path for each call to vkconfig is tedious. You can add vkconfig to your search path for your current Linux session using the following command:

```bash
$ export PATH=/opt/vertica/packages/kafka/bin:$PATH
```

For the rest of your session, you are able to call vkconfig without specifying its entire path:

```bash
$ vkconfig
Invalid tool
Valid options are scheduler, cluster, source, target, load-spec, microbatch, sync, launch, shutdown, help
```

If you want to make this setting permanent, add the export statement to your `~/.profile` file. The rest of this example assumes that you have added this directory to your shell’s search path.

Create a Resource Pool for Your Scheduler

Vertica recommends you always create a **resource pool** specifically for each scheduler. Schedulers assume they have exclusive use of the resource pool they are assigned. Using a separate pool for a scheduler lets you fine-tune its impact on your Vertica cluster’s performance. You create resource pools within Vertica using the `CREATE RESOURCE POOL` statement.

The following **resource pool settings** play an important role when creating your scheduler's resource pool:

- **PLANNEDCONCURRENCY** determines the number of microbatches (COPY statements) that the scheduler sends to Vertica simultaneously.
- **EXECUTIONPARALLELISM** determines the maximum number of threads that each node creates to process a microbatch’s partitions.
- **QUEUETIMEOUT** provides manual control over resource timings. Set this to 0 to allow the scheduler to manage timings.

See [Managing Scheduler Resources and Performance](#) for detailed information about these settings and how to fine-tune a resource pool for your scheduler.
The following CREATE RESOURCE POOL statement creates a resource pool that loads 1 microbatch and processes 1 partition:

```sql
=> CREATE RESOURCE POOL weblog_pool
    MEMORYSIZE '10%
    PLANNEDCONCURRENCY 1
    EXECUTIONPARALLELISM 1
    QUEUETIMEOUT 0;
```

If you do not create and assign a resource pool for your scheduler, it uses a portion of the GENERAL resource pool. Vertica suggests you do not use the GENERAL pool for schedulers used in production environments. This fallback to using the GENERAL pool is intended as a convenience during testing your scheduler configuration. When you are ready to deploy your scheduler, create a resource pool that you have tuned to its specific needs. Each time you start a scheduler that is using the GENERAL pool, the vkconfig utility will display a warning message.

Not allocating enough resources to your schedulers can result in errors. For example, you may get OVERSHOT DEADLINE FOR FRAME errors if the scheduler is not able to load data from all of the topics it is supposed to in a data frame.

See Resource Pool Architecture for more information about resource pools.

## Create the Scheduler

Vertica includes a default scheduler named stream_config. You can use this scheduler or create a new scheduler using the vkconfig script's scheduler tool with the --create and --config-schema options:

```
$ vkconfig scheduler --create --config-schema scheduler_name --conf conf_file
```

The --create and --config-schema options are the only ones required to add a scheduler with default options. This command creates a new schema in Vertica that holds the scheduler's configuration. See What Happens When You Create a Scheduler for details on the creation of the scheduler's schema.

You can use additional configuration parameters to further customize your scheduler. See Scheduler Tool Options for more information.

The following example:

- Creates a scheduler named weblog_sched using the --config-schema option.
• Grants privileges to configure and run the scheduler to the Vertica user named kafka_user with the --operator option. The dbadmin user must specify additional privileges separately.
• Specifies a frame duration of seven minutes with the --frame-duration option. For more information about picking a frame duration, see Choosing a Frame Duration.
• Sets the resource pool that the scheduler uses to the weblog_pool created earlier:

```
$ vkconfig scheduler --create --config-schema weblog_sched --operator kafka_user \ 
--frame-duration '00:07:00' --resource-pool weblog_pool --conf weblog.conf
```

**Note:**
Technically, the previous example doesn't need to supply the --config-schema argument because it is set in the weblog.conf file. It appears in this example for clarity. There's no harm in supplying it on the command line as well as in the configuration file, as long as the values match. If they do not match, the value given on the command line takes priority.

### Create a Cluster

You must associate at least one Kafka cluster with your scheduler. Schedulers can access more than one Kafka cluster. To create a cluster, you supply a name for the cluster and host names and ports the Kafka cluster's brokers.

When you create a cluster, the scheduler attempts to validate it by connecting to the Kafka cluster. If it successfully connects, the scheduler automatically retrieves the list of all brokers in the cluster. Therefore, you do not have to list every single broker in the --hosts parameter.

The following example creates a cluster named kafka_weblog, with two Kafka broker hosts: kafka01 and kafka03 in the example.com domain. The Kafka brokers are running on port 9092.

```
$ vkconfig cluster --create --cluster kafka_weblog \ 
--hosts kafka01.example.com:9092,kafka03.example.com:9092 --conf weblog.conf
```

See Cluster Tool Options for more information.
Create a Source

Next, create at least one source for your scheduler to read. The source defines the Kafka topic the scheduler loads data from as well as the number of partitions the topic contains.

To create and associate a source with a configured scheduler, use the `source` tool. When you create a source, Vertica connects to the Kafka cluster to verify that the topic exists. So, before you create the source, make sure that the topic already exists in your Kafka cluster. Because Vertica verifies the existence of the topic, you must supply the previously-defined cluster name using the `--cluster` option.

The following example creates a source for the Kafka topic named `web_hits` on the cluster created in the previous step. This topic has a single partition.

```
$ vkconfig source --create --cluster kafka_weblog --source web_hits --partitions 1 --conf weblog.conf
```

**Note:**
The `--partitions` parameter is the number of partitions to load, not a list of individual partitions. For example, if you set this parameter to 3, the scheduler will load data from partitions 0, 1, and 2.

See Source Tool Options for more information.

Create a Data Table

Before you can create a target for your scheduler, you must create a target table in your Vertica database. This is the table Vertica uses to store the data the scheduler loads from Kafka. You must decide which type of table to create for your target:

- A standard Vertica database table, which you create using the `CREATE TABLE` statement. This type of table stores data efficiently. However, you must ensure that its columns match the data format of the messages in Kafka topic you are loading. You cannot load complex types of data into a standard Vertica table.
- A flex table, which you create using `CREATE FLEXIBLE TABLE`. A flex table is less efficient than a standard Vertica database table. However, it is flexible enough to deal with data whose schema varies and changes. It also can load most complex data types that (such as maps and lists) that standard Vertica tables cannot.
Important:
Avoid having columns with primary key restrictions in your target table. The scheduler stops loading data if it encounters a row that has a value which violates this restriction. If you must have a primary key restricted column, try to filter out any redundant values for that column in the streamed data before it is loaded by the scheduler.

The data in this example is in a set format, so the best table to use is a standard Vertica table. The following example creates a table named web_hits to hold four columns of data. This table is located in the public schema.

```sql
=> CREATE TABLE web_hits (ip VARCHAR(16), url VARCHAR(256), date DATETIME, user_agent VARCHAR(1024));
```

Note:
You do not need to create a rejection table to store rejected messages. The scheduler creates the rejection table automatically.

Create a Target

Once you have created your target table, you can create your scheduler's target. The target tells your scheduler where to store the data it retrieves from Kafka. This table must exist when you create your target. You use the `vkconfig` script's target tool with the `--target-schema` and `--target-table` options to specify the Vertica target table's schema and name. The following example adds a target for the table created in the previous step.

```bash
$ vkconfig target --create --target-schema public --target-table web_hits --conf weblog.conf
```

See Target Tool Options for more information.

Create a Load Spec

The scheduler's load spec provides parameters that Vertica uses when parsing the data loaded from Kafka. The most important option is `--parser` which sets the parser that Vertica uses to parse the data. You have three parser options:

- KafkaAvroParser for data in Avro format.
- KafkaJSONParser for data in JSON format.
• **KafkaParser** to load each message into a single VARCHAR field. See Parsing Custom Formats for more information.

In this example, the data being loaded from Kafka is in JSON format. The following command creates a load spec named weblog_load and sets the parser to KafkaJSONParser.

```
$ vkconfig load-spec --create --parser KafkaJSONParser --load-spec weblog_load --conf weblog.conf
```

See Load Spec Tool Options for more information.

## Create a Microbatch

The microbatch combines all of the settings added to the scheduler so far to define the individual COPY statements that the scheduler uses to load data from Kafka.

The following example uses all of the settings created in the previous examples to create a microbatch called weblog.

```
$ vkconfig microbatch --create --microbatch weblog --target-schema public --target-table web_hits \   --add-source web_hits --add-source-cluster kafka_weblog --load-spec weblog_load \   --conf weblog.conf
```

For microbatches that might benefit from a reduced transaction size, consider using the **--max-parallelism** option when creating the microbatch. This option splits a single microbatch with multiple partitions into the specified number of simultaneous COPY statements consisting of fewer partitions.

See Microbatch Tool Options for more information about **--max-parallelism** and other options.

## Launch the Scheduler

Once you've created at least one microbatch, you can run your scheduler. You start your scheduler using the launch tool, passing it the name of the scheduler's schema. The scheduler begins scheduling microbatch loads for every enabled microbatch defined in its schema.

The following example launches the weblog scheduler defined in the previous steps. It uses the nohup command to prevent the scheduler being killed when the user logs out, and redirects stdout and stderr to prevent a nohup.out file from being created.
$ nohup vkconfig launch --conf weblog.conf >/dev/null 2>&1 &

**Important:**
Vertica does not recommend specifying a password on the command line. Passwords on the command line can be exposed by the system's list of processes, which shows the command line for each process. Instead, put the password in a configuration file. Make sure the configuration file's permissions only allow it to be read by the user.

See [Launch Tool Options](#) for more information.

## Checking that the Scheduler is Running

Once you have launched your scheduler, you can verify that it is running by querying the `stream_microbatch_history` table in the scheduler's schema. This table lists the results of each microbatch the scheduler has run.

For example, this query lists the microbatch name, the start and end times of the microbatch, the start and end offset of the batch, and why the batch ended. The results are ordered to start from when the scheduler was launched:

```sql
=> SELECT microbatch, batch_start, batch_end, start_offset, end_offset, end_reason
    FROM weblog_sched.stream_microbatch_history
    ORDER BY batch_start DESC LIMIT 10;
```

<table>
<thead>
<tr>
<th>microbatch</th>
<th>batch_start</th>
<th>batch_end</th>
<th>start_offset</th>
<th>end_offset</th>
<th>end_reason</th>
</tr>
</thead>
<tbody>
<tr>

</table>
Choosing a Frame Duration

One key setting for your scheduler is its frame duration. The duration sets the amount of time the scheduler has to run all of the microbatches you have defined for it. This setting has significant impact on how data is loaded from Apache Kafka.

What Happens During Each Frame

To understand the right frame duration, you first need to understand what happens during each frame.

The frame duration is split among the microbatches you add to your scheduler. In addition, there is some overhead in each frame that takes some time away from processing the microbatches. Within each microbatch, there is also some overhead which reduces the time the microbatch spends loading data from Kafka. The following diagram shows roughly how each frame is divided:

As you can see, only a portion of the time in the frame is spent actually loading the streaming data.
How the Scheduler Prioritizes Microbatches

To start with, the scheduler evenly divides the time in the frame among the microbatches. It then runs each microbatch in turn.

In each microbatch, the bulk of the time is dedicated to loading data using a COPY statement. This statement loads data using the KafkaSource UDL. It runs until one of two conditions occurs:

- It reaches the ends of the data streams for the topics and partitions you defined for the microbatch. In this case, the microbatch completes processing early.
- It reaches a timeout set by the scheduler.

As the scheduler processes frames, it notes which microbatches finish early. It then schedules them to run first in the next frame. Arranging the microbatches in this manner lets the scheduler allocate more of the time in the frame to the microbatches that are spending the most time loading data (and perhaps have not had enough time to reach the end of their data streams).

For example, consider the following diagram. During the first frame, the scheduler evenly divides the time between the microbatches. Microbatch #2 uses all of the time allocated to it (as indicated by the filled-in area), while the other microbatches do not. In the next frame, the scheduler rearranges the microbatches so that microbatches that finished early go first. It also allocates less time to the microbatches that ran for a shorter period.

Assuming these microbatches finish early again, the scheduler is able to give the rest of the time in the frame to microbatch #2. This shifting of priorities continues while the scheduler runs. If one topic sees a spike in traffic, the scheduler compensates by giving the microbatch reading from that topic more time.
What Happens if the Frame Duration is Too Short

If you make the scheduler's frame duration too short, microbatches may not have enough time to load all of the data in the data streams they are responsible for reading. In the worst case, a microbatch could fall further behind when reading a high-volume topic during each frame. If left unaddressed, this issue could result in messages never being loaded, as they age out of the data stream before the microbatch has a chance to read them.

In extreme cases, the scheduler may not be able to run each microbatch during each frame. This problem can occur if the frame duration is so short that much of is spent in overhead tasks such committing data and preparing to run microbatches. The COPY statement that each microbatch runs to load data from Kafka has a minimum duration of 1 second. Add to this the overhead of processing data loads. In general, if the frame duration is shorter than 2 seconds times the number of microbatches in the scheduler, then some microbatches may not get a chance to run in each frame.

If the scheduler runs out of time during a frame to run each microbatch, it compensates during the next frame by giving priority to the microbatches that didn't run in the prior frame. This strategy makes sure each microbatch gets a chance to load data. However, it cannot address the root cause of the problem. Your best solution is to increase the frame duration to give each microbatch enough time to load data during each frame.
What Happens if the Frame Duration is Too Long

One downside of a long frame duration is increased data latency. This latency is the time between when Kafka sends data out and when that data becomes available for queries in your database. A longer frame duration means that there is more time between each execution of a microbatch. That translates into more time between the data in your database being updated.

Depending on your application, this latency may not be important. When determining your frame duration, consider whether having the data potentially delayed up to the entire length of the frame duration will cause an issue.

Another issue to consider when using a long frame duration is the time it takes to shut down the scheduler. The scheduler does not shut down until the current COPY statement completes. Depending on the length of your frame duration, this process might take a few minutes.

The Minimum Frame Duration

At a minimum, allocate two seconds for each microbatch you add to your scheduler. The vkconfig utility warns you if your frame duration is shorter than this lower limit. In most cases, you want your frame duration to be longer. Two seconds per microbatch leaves little time for data to actually load.

Balancing Frame Duration Requirements

To determine the best frame duration for your deployment, consider how sensitive you are to data latency. If you are not performing time-sensitive queries against the data streaming in from Kafka, you can afford to have the default 5 minute or even longer frame duration. If you need a shorter data latency, then consider the volume of data being read from Kafka. High volumes of data, or data that has significant spikes in traffic can cause problems if you have a short frame duration.
Using Different Schedulers for Different Needs

Suppose you are loading streaming data from a few Kafka topics that you want to query with low latency and other topics that have a high volume but which you can afford more latency. Choosing a "middle of the road" frame duration in this situation may not meet either need. A better solution is to use multiple schedulers: create one scheduler with a shorter frame duration that reads just the topics that you need to query with low latency. Then create another scheduler that has a longer frame duration to load data from the high-volume topics.

For example, suppose you are loading streaming data from an Internet of Things (IOT) sensor network via Kafka into Vertica. You use the most of this data to periodically generate reports and update dashboard displays. Neither of these use cases are particularly time sensitive. However, three of the topics you are loading from do contain time-sensitive data (system failures, intrusion detection, and loss of connectivity) that must trigger immediate alerts.

In this case, you can create one scheduler with a frame duration of 5 minutes or more to read most of the topics that contain the non-critical data. Then create a second scheduler with a frame duration of at least 6 seconds (but preferably longer) that loads just the data from the three time-sensitive topics. The volume of data in these topics is hopefully low enough that having a short frame duration will not cause problems.

Managing Scheduler Resources and Performance

Your scheduler's performance is impacted by the number of microbatches in your scheduler, partitions in each microbatch, and nodes in your Vertica cluster. Use resource pools to allocate a subset of system resources for your scheduler, and fine-tune those resources to optimize automatic loads into Vertica.

The following sections provide details about scheduler resource pool configurations and processing scenarios:

- Schedulers and Resource Pools
- Key Resource Pool Settings
- Loading Multiple Microbatches Concurrently
• Parallel Processing within Vertica
• Loading Partitioned Topics Concurrently

Schedulers and Resource Pools

Vertica recommends you always create a resource pool specifically for each scheduler.Schedulers assume they have exclusive use of the resource pool they are assigned. Using a separate pool for a scheduler lets you fine-tune its impact on your Vertica cluster's performance. You create resource pools within Vertica using the CREATE RESOURCE POOL statement.

If you do not create and assign a resource pool for your scheduler, it uses a portion of the GENERAL resource pool. Vertica suggests you do not use the GENERAL pool for schedulers used in production environments. This fallback to using the GENERAL pool is intended as a convenience during testing your scheduler configuration. When you are ready to deploy your scheduler, create a resource pool that you have tuned to its specific needs. Each time you start a scheduler that is using the GENERAL pool, the vkconfig utility will display a warning message.

Not allocating enough resources to your schedulers can result in errors. For example, you may get OVERSHOT DEADLINE FOR FRAME errors if the scheduler is not able to load data from all of the topics it is supposed to in a data frame.

See Resource Pool Architecture for more information about resource pools.

Key Resource Pool Settings

A microbatch is a unit of work that processes the partitions of a single Kafka topic within the duration of a frame. The following resource pool settings play an important role in how Vertica loads microbatches and processes partitions:

• PLANNEDCONCURRENCY determines the number of microbatches (COPY statements) the scheduler sends to Vertica simultaneously. At the start of each frame, the scheduler creates the number of scheduler threads specified by PLANNEDCONCURRENCY. Each scheduler thread connects to Vertica and loads one microbatch at a time. If there are more microbatches than scheduler threads, the scheduler queues the extra microbatches and loads them as threads become available.

• EXECUTIONPARALLELISM determines the maximum number of threads each node
creates to process a microbatch's partitions. When a microbatch is loaded into Vertica, its partitions are distributed evenly among the nodes in the cluster. During each frame, a node creates a maximum of one thread for each partition. Each thread reads from one partition at a time until processing completes, or the frame ends. If there are more partitions than threads across all nodes, remaining partitions are processed as threads become available.

- QUEUETIMEOUT provides manual control over resource timings. Set the resource pool parameter QUEUETIMEOUT to 0 to allow the scheduler to manage timings. After all of the microbatches are processed, the scheduler waits for the remainder of the frame to process the next microbatch. A properly sized configuration includes rest time to plan for traffic surges. See Choosing a Frame Duration for information about the impacts of frame duration size.

For example, the following CREATE RESOURCE POOL statement creates a resource pool named weblogs_pool that loads 2 microbatches simultaneously. Each node in the Vertica cluster creates 10 threads per microbatch to process partitions:

```sql
=> CREATE RESOURCE POOL weblogs_pool
   MEMORYSIZE '10%'
   PLANNEDCONCURRENCY 2
   EXECUTIONPARALLELISM 10
   QUEUETIMEOUT 0;
```

For a three-node Vertica cluster, weblogs_pool provides resources for each node to create up to 10 threads to process partitions, or 30 total threads per microbatch.

### Loading Multiple Microbatches Concurrently

In some circumstances, you might have more microbatches in your scheduler than available PLANNEDCONCURRENCY. The following images illustrate how the scheduler loads microbatches into a single Vertica node when there are not enough scheduler threads to load each microbatch simultaneously. The resource pool's PLANNEDCONCURRENCY (PC) is set to 2, but the scheduler must load three microbatches: A, B, and C. For simplicity, EXECUTIONPARALLELISM (EP) is set to 1.

To begin, the scheduler loads microbatch A and microbatch B, while microbatch C waits:
When either microbatch finishes loading, the scheduler loads any remaining microbatches. In the following image, microbatch A is completely loaded into Vertica. The scheduler continues to load microbatch B, and uses the newly available scheduler thread to load microbatch C:

The scheduler continues sending data until all microbatches are loaded into Vertica, or the frame ends.

Experiment with PLANNEDCONCURRENCY to optimize performance. Note that setting it too high might create too many connections at the beginning of each frame, resulting in scalability stress on Vertica or Kafka. Setting PLANNEDCONCURRENCY too low does not take full advantage of the multiprocessing power of Vertica.
Parallel Processing within Vertica

The resource pool setting `EXECUTIONPARALLELISM` limits the number of threads each Vertica node creates to process partitions. The following image illustrates how a three-node Vertica cluster processes a topic with nine partitions, when there is not enough `EXECUTIONPARALLELISM` to create one thread per partition. The partitions are distributed evenly among Node 1, Node 2, and Node 3 in the Vertica cluster. The scheduler's resource pool has `PLANNEDCONCURRENCE` (PC) set to 1 and `EXECUTIONPARALLELISM` (EP) set to 2, so each node creates a maximum of 2 threads when the scheduler loads microbatch A. Each thread reads from one partition at a time. Partitions that are not assigned a thread must wait for processing:

As threads finish processing their assigned partitions, the remaining partitions are distributed to threads as they become available:
When setting the EXECUTIONPARALLELISM on your scheduler's resource pool, consider the number of partitions across all microbatches in the scheduler.

**Loading Partitioned Topics Concurrently**

Single topics with multiple partitions might benefit from increased parallel loading or a reduced transaction size. The `--max-parallelism` microbatch utility option enables you to dynamically split a topic with multiple partitions into multiple, load-balanced microbatches that each consist of a subset of the original microbatch's partitions. The scheduler loads the dynamically split microbatches simultaneously using the PLANNEDCONCURRENCY available in its resource pool.

The EXECUTIONPARALLELISM setting in the scheduler's resource pool determines the maximum number of threads each node creates to process its portion of a single microbatch's partitions. Splitting a microbatch enables each node to create more threads for the same unit of work. When there is enough PLANNEDCONCURRENCY and the number of partitions assigned per node is greater than the EXECUTIONPARALLELISM setting in the scheduler's resource pool, use `--max-parallelism` to split the microbatch and create more threads per node to process more partitions in parallel.

The following image illustrates how a two-node Vertica cluster loads and processes microbatch A using a resource pool with PLANNEDCONCURRENCY (PC) set to 2, and EXECUTIONPARALLELISM (EP) set to 2. Because the scheduler is loading only one
microbatch, there is 1 scheduler thread left unused. Each node creates 2 threads per scheduler thread to process its assigned partitions:

Setting microbatch A's `--max-parallelism` option to 2 enables the scheduler to dynamically split microbatch A into 2 smaller microbatches, A1 and A2. Because there are 2 available scheduler threads, the subset microbatches are loaded into Vertica simultaneously. Each node creates 2 threads per scheduler thread to process partitions for microbatches A1 and A2:
Use \texttt{--max-parallelism} to prevent bottlenecks in microbatches consisting of high-volume Kafka topics. It also provides faster loads for microbatches that require additional processing, such as text indexing.

**Using Connection Load Balancing with the Kafka Scheduler**

You supply the scheduler with the name of a Vertica node in the \texttt{--dbhost} option or the \texttt{dbhost} entry in your configuration file. The scheduler connects to this node to initiate all of the statements it executes to load data from Kafka. For example, each time it executes a microbatch, the scheduler connects to the same node to run the \texttt{COPY} statement. Having a single node act as the initiator node for all of the scheduler's actions can affect the performance of the node, and in turn the database as a whole.

To avoid a single node becoming a bottleneck, you can use connection load balancing to spread the load of running the scheduler's statements across multiple nodes in your database. Connection load balancing distributes client connections among the nodes in a load balancing group. See \texttt{About Native Connection Load Balancing} for an overview of this feature.

Enabling connection load balancing for a scheduler is a two-step process:

1. Choose or create a load balancing policy for your scheduler.
2. Enable load balancing in the scheduler.

**Choosing or Creating a Load Balancing Policy for the Scheduler**

A connecting load balancing policy redirects incoming connections in from a specific set of network addresses to a group of nodes. If your database already defines a suitable load balancing policy, you can use it instead of creating one specifically for your scheduler.

If your database does not have a suitable policy, create one. Have your policy redirect connections coming from the IP addresses of hosts running Kafka schedulers to a group of nodes in your database. The group of nodes that you select will act as the initiators for the statements that the scheduler executes.
**Important:**

In an **Eon Mode** database, only include nodes that are part of a **primary subcluster** in the scheduler's load balancing group. These nodes are the most efficient for loading data.

The following example demonstrates setting up a load balancing policy for all three nodes in a three-node database. The scheduler runs on node 1 in the database, so the source address range (192.168.110.0/24) of the routing rule covers the IP addresses of the nodes in the database. The last step of the example verifies that connections from the first node (IP address 10.20.110.21) are load balanced.

```sql
=> SELECT node_name,node_address,node_address_family FROM v_catalog.nodes;

<table>
<thead>
<tr>
<th>node_name</th>
<th>node_address</th>
<th>node_address_family</th>
</tr>
</thead>
<tbody>
<tr>
<td>v_vmart_node0001</td>
<td>10.20.110.21</td>
<td>ipv4</td>
</tr>
<tr>
<td>v_vmart_node0002</td>
<td>10.20.110.22</td>
<td>ipv4</td>
</tr>
<tr>
<td>v_vmart_node0003</td>
<td>10.20.110.23</td>
<td>ipv4</td>
</tr>
</tbody>
</table>

(4 rows)

=> CREATE NETWORK ADDRESS node01 ON v_vmart_node0001 WITH '10.20.110.21';
CREATE NETWORK ADDRESS
=> CREATE NETWORK ADDRESS node02 ON v_vmart_node0002 WITH '10.20.110.22';
CREATE NETWORK ADDRESS
=> CREATE NETWORK ADDRESS node03 on v_vmart_node0003 WITH '10.20.110.23';
CREATE NETWORK ADDRESS
=> CREATE LOAD BALANCE GROUP kafka_scheduler_group WITH ADDRESS node01,node02,node03;
CREATE LOAD BALANCE GROUP
=> CREATE ROUTING RULE kafka_scheduler_rule ROUTE
   '10.20.110.0/24' TO kafka_scheduler_group;
CREATE ROUTING RULE
=> SELECT describe_load_balance_decision('10.20.110.21');

describe_load_balance_decision

-----------------------------
Describing load balance decision for address [10.20.110.21]
Load balance cache internal version id (node-local): [2]
Considered rule [kafka_scheduler_rule] source ip filter [10.20.110.0/24]...
input address matches this rule
Matched to load balance group [kafka_scheduler_group] the group has policy [ROUNDROBIN]
number of addresses [3]
(0) LB Address: [10.20.110.21]:5433
(1) LB Address: [10.20.110.22]:5433
(2) LB Address: [10.20.110.23]:5433
Chose address at position [1]
Routing table decision: Success. Load balance redirect to: [10.20.110.23] port [5433]

(1 row)

**Important:**

Be careful if you run your scheduler on a Vertica node and have either set its dbhost name to localhost or are not specifying a value (which means
dbhost defaults to localhost). Connections to localhost use the loopback IP address 127.0.0.1 instead of the node's primary network address. If you create a load balancing routing rule that redirects incoming connections from the node's IP address range, it will not apply to connections made using localhost. The best solution is to use the node's IP address or FQDN as the dbhost setting.

If your scheduler connects to Vertica from an IP address that no routing rule applies to, you will see messages similar to the following in the vertica.log:

```
[Session] <INFO> Load balance request from client address ::1 had decision:
    Classic load balancing considered, but either the policy was NONE or no target was available. Details: [NONE or invalid]
<LOG> @v_vmart_node0001: 00000/5789: Connection load balance request refused by server
```

## Enabling Load Balancing in the Scheduler

Clients must opt-in to load balancing for Vertica to apply the connection load balancing policies to the connection. For example, you must pass the -C flag to the vsql command for your interactive session to be load balanced.

The scheduler uses the Java JDBC library to connect to Vertica. To have the scheduler opt-in to load balancing, you must set the JDBC library’s ConnectionLoadBalance option to 1. See [Enabling Native Connection Load Balancing in JDBC](#) for details.

Use the vkconfig script's `--jdbc-opt` option, or add the jdbc-opt option to your configuration file to set the ConnectionLoadBalance option. For example, to start the scheduler from the command line using a configuration file named weblog.conf, use the command:

```
$ nohup vkconfig launch --conf weblog.conf --jdbc-opt ConnectionLoadBalance=1 >/dev/null 2>&1 &
```

To permanently enable load balancing, you can add the load balancing option to your configuration file. The following example shows the weblog.conf file from the example in [Setting up a Scheduler](#) configured to use connection load balancing.

```plaintext
username=dbadmin
password=mypassword
dbhost=10.20.110.21
dbport=5433
```
You can check whether the scheduler's connections are being load balanced by querying the `SESSIONS` table:

```sql
=> SELECT node_name, user_name, client_label FROM V_MONITOR.SESSIONS;
```

<table>
<thead>
<tr>
<th>node_name</th>
<th>user_name</th>
<th>client_label</th>
</tr>
</thead>
<tbody>
<tr>
<td>v_vmart_node0001</td>
<td>dbadmin</td>
<td>vkstream_weblog_sched_leader_persistent_4</td>
</tr>
<tr>
<td>v_vmart_node0001</td>
<td>dbadmin</td>
<td>vkstream_weblog_sched_lane-worker-0_0_8</td>
</tr>
<tr>
<td>v_vmart_node0003</td>
<td>dbadmin</td>
<td>vkstream_weblog_sched_VDBLogger_0_9</td>
</tr>
</tbody>
</table>

(4 rows)

In the `client_label` column, the scheduler's connections have labels starting with `vkstream` (the row without a client label is an interactive session). You can see that the three connections the scheduler has opened all go to different nodes.

### Limiting Loads Using Offsets

Kafka maintains a user-configurable backlog of messages. By default, a newly-created scheduler reads all of the messages in a Kafka topic, including all of the messages in the backlog, not just the messages that are streamed out after the scheduler starts. Often, this is what you want.

In some cases, however, you may want to stream just a section of a source into a table. For example, suppose you want to analyze the web traffic of your e-commerce site starting at specific date and time. However, your Kafka topic contains web access records from much further back in time than you want to analyze. In this case, you can use an offset to stream just the data you want into Vertica for analysis.

Another common use case is when you have already loaded data some from Kafka manually (see `Manually Copying Data From Kafka`). Now you want to stream all of the newly-arriving data. By default, your scheduler will reload all of the previously loaded data (assuming it is still available from Kafka). You can use an offset to tell your scheduler to start automatically loading data at the point where your manual data load left off.
Configuring a Scheduler to Start Streaming From an Offset

The `vkconfig` script's microbatch tool has an `--offset` option that lets you specify the index of the message in the source where you want the scheduler to begin loading. This option accepts a comma-separated list of index values. You must supply one index value for each partition in the source unless you use the `--partition` option. This option lets you choose the partitions the offsets apply to. The scheduler cannot be running when you set an offset in the microbatch.

If your microbatch defines more than one cluster, use the `--cluster` option to select which one the offset option applies to. Similarly, if your microbatch has more than one source, you must select one using the `--source` option.

For example, suppose you want to load just the last 1000 messages from a source named `web_hits`. To make things easy, suppose the source contains just a single partition, and the microbatch defines just a single cluster and single topic.

Your first task is to determine the current offset of the end of the stream. You can do this on one of the Kafka nodes by calling the `GetOffsetShell` class with the time parameter set to `-1` (the end of the topic):

```
$ path_to_kafka/bin/kafka-run-class.sh kafka.tools.GetOffsetShell \
   --broker-list kafka01:9092,kafka03:9092 --time -1 \
   --topic web_hits

{metadata.broker.list=kafka01:9092,kafka03:9092, request.timeout.ms=1000, 
client.id=GetOffsetShell, security.protocol=PLAINTEXT}
web_hits:0:8932
```

You can also use `GetOffsetShell` to find the offset in the stream that occurs before a timestamp.

In the above example, the `web_hits` topic's single partition has an ending offset of 8932. If we want to load the last 1000 messages from the source, we need to set the microbatch's offset to 8932 - 1001 or 7931.

**Note:**

The start of an offset is inclusive in the Vertica `COPY` statement. Kafka's native starting offset is exclusive. Therefore, you must add one to the offset to get the correct number of messages.
With the offset calculated, you are ready to set it in the microbatch's configuration. The following example:

- Shuts down the scheduler whose configuration information stored in the weblog.conf file.
- Sets the starting offset using the microbatch utility.
- Restarts the scheduler.

```
$ vkconfig shutdown --conf weblog.conf
$ vkconfig microbatch --microbatch weblog --update --conf weblog.conf --offset 7931
$ nohup vkconfig launch --conf weblog.conf >/dev/null 2>&1 &
```

If the target table was empty or truncated before the scheduler started, it will have 1000 rows in the table in it (until more messages are streamed through the source):

```
=> select count(*) from web_hits;
   count
  -------
     1000
(1 row)
```

**Note:**

The last example assumes that the offset values for the last 1000 messages in the Kafka topic were assigned consecutively. This assumption is not always be true. A Kafka topic can have gaps in its offset numbering for a variety of reasons. Offsets refer to the key value assigned to a message by Kafka, not its position in the topic.

### Ending a COPY From Kafka at an Offset

When you manually copy data from a Kafka source into Vertica, the COPY statement defaults to loading all of the messages in the topic. You can specify a maximum offset the COPY should load to by supplying an end offset value in addition to the starting offset in the KafkaSource's source parameter.

### Updating Schedulers After Vertica Upgrades

A scheduler is only compatible with the version of Vertica that created it. Between Vertica versions, the scheduler's configuration schema or the U Dx function the scheduler calls may
change. After you upgrade Vertica, you must update your schedulers to account for these changes.

When you upgrade Vertica to a new major version or service pack, use the `vkconfig scheduler --upgrade` option to update your scheduler. If you do not update a scheduler, you receive an error message if you try to launch it. For example:

```bash
$ nohup vkconfig launch --conf weblog.conf >/dev/null 2>&1 &
com.vertica.solutions.kafka.exception.FatalException: Configured scheduler schema and current scheduler configuration schema version do not match. Upgrade configuration by running:
  vkconfig scheduler --upgrade
  at com.vertica.solutions.kafka.scheduler.StreamCoordinator.assertVersion
  (StreamCoordinator.java:64)
  at com.vertica.solutions.kafka.scheduler.StreamCoordinator.run(StreamCoordinator.java:125)
  at com.vertica.solutions.kafka.Launcher.run(Launcher.java:205)
  at com.vertica.solutions.kafka.Launcher.main(Launcher.java:258)
$ vkconfig scheduler --upgrade --conf weblog.conf
Checking if UPGRADE necessary...
UPGRADE required, running UPGRADE...
UPGRADE completed successfully, now the scheduler configuration schema version is v8.1.1
$ nohup vkconfig launch --conf weblog.conf >/dev/null 2>&1 &
```

## Vertica Eon Mode and Kafka

You can use the Vertica integration with Apache Kafka when Vertica is running in [Eon Mode](Eon Mode). For Eon Mode running in a cloud environment, consider using a larger frame duration for schedulers in clusters. Cloud infrastructures lead to larger latencies overall, especially when storage layers are separated from compute layers. If you do not account for the added latency, you can experience a lower data throughput, as more of the frame's time is lost to overhead caused by the cloud environment. Using a longer frame length can also help prevent Vertica from creating many small ROS containers when loading data from Kafka. The trade off when you use a larger frame length is that your data load experiences more latency. See [Choosing a Frame Duration](Choosing a Frame Duration) for more information.

## Monitoring Message Consumption

You can monitor the progress of your data streaming from Kafka several ways:

- Monitoring the consumer groups to which Vertica reports its progress. This technique is best if the tools you want to use to monitor your data load work with Kafka.
- Use the monitoring APIs built into the `vkconfig` tool. These APIs report the configuration and consumption of your streaming scheduler in JSON format. These APIs are useful if you are developing your own monitoring scripts, or your monitoring tools can consume status information in JSON format.
Monitoring Vertica Message Consumption with Consumer Groups

Apache Kafka has a feature named consumer groups that helps distribute message consumption loads across sets of consumers. When using consumer groups, Kafka evenly divides up messages based on the number of consumers in the group. Consumers report back to the Kafka broker which messages it read successfully. This reporting helps Kafka to manage message offsets in the topic's partitions, so that no consumer in the group is sent the same message twice.

Vertica does not rely on Kafka's consumer groups to manage load distribution or preventing duplicate loads of messages. The streaming job scheduler manages topic partition offsets on its own.

Even though Vertica does not need consumer groups to manage offsets, it does report back to the Kafka brokers which messages it consumed. This feature lets you use third-party tools to monitor the Vertica cluster's progress as it loads messages. By default, Vertica reports its progress to a consumer group named vertica-\{databaseName\}, where databaseName is the name of the Vertica database. You can change the name of the consumer group that Vertica reports its progress to when defining a scheduler or during manual loads of data. Third party tools can query the Kafka brokers to monitor the Vertica cluster's progress when loading data.

For example, you can use Kafka's kafka-consumer-groups.sh script (located in the bin directory of your Kafka installation) to view the status of the Vertica consumer group. The following example demonstrates listing the consumer groups available defined in the Kafka cluster and showing the details of the Vertica consumer group:

```
$ cd /opt/kafka/bin
$ ./kafka-consumer-groups.sh --list --bootstrap-server localhost:9092
Note: This will not show information about old Zookeeper-based consumers.

vertica-vmart
$ ./kafka-consumer-groups.sh --describe --group vertica-vmart \  
--bootstrap-server localhost:9092
Note: This will not show information about old Zookeeper-based consumers.

Consumer group 'vertica-vmart' has no active members.

<table>
<thead>
<tr>
<th>TOPIC</th>
<th>PARTITION</th>
<th>CURRENT-OFFSET</th>
<th>LOG-END-OFFSET</th>
<th>LAG</th>
<th>CONSUMER-ID</th>
</tr>
</thead>
<tbody>
<tr>
<td>web_hits</td>
<td>0</td>
<td>24500</td>
<td>30000</td>
<td>5500</td>
<td>-</td>
</tr>
</tbody>
</table>
```
From the output, you can see that Vertica reports its consumption of messages back to the vertica-vmart consumer group. This group is the default consumer group when Vertica has the example VMart database loaded. The second command lists the topics being consumed by the vertica-vmart consumer group. You can see that the Vertica cluster has read 24500 of the 30000 messages in the topic's only partition. Later, running the same command will show the Vertica cluster's progress:

```
$ cd /opt/kafka/bin
$ ./kafka-consumer-groups.sh --describe --group vertica-vmart \
   --bootstrap-server localhost:9092
Note: This will not show information about old Zookeeper-based consumers.
```

<table>
<thead>
<tr>
<th>TOPIC</th>
<th>PARTITION</th>
<th>CURRENT-OFFSET</th>
<th>LOG-END-OFFSET</th>
<th>LAG</th>
<th>CONSUMER-ID</th>
</tr>
</thead>
<tbody>
<tr>
<td>web_hits</td>
<td>0</td>
<td>30000</td>
<td>30000</td>
<td>0</td>
<td>-</td>
</tr>
</tbody>
</table>

**Changing the Consumer Group Where Vertica Reports its Progress**

You can change the consumer group to which Vertica reports its progress when consuming messages. When using a scheduler, you set the consumer group by setting the --consumer-group-id argument to the vkconfig script's scheduler or microbatch utilities. For example, suppose you want the example scheduler shown in Setting up a Scheduler to report its consumption to the consumer group name vertica-database. Then you could use the command:

```
$ /opt/vertica/packages/kafka/bin/vkconfig microbatch --update \
   --conf weblog.conf --microbatch weblog --consumer-group-id vertica-database
```

When the scheduler begins loading data, it will start updating the new consumer group. You can see this on a Kafka node using kafka-consumer-groups.sh:

```
$ /opt/kafka/bin/kafka-consumer-groups.sh --list --bootstrap-server localhost:9092
Note: This will not show information about old Zookeeper-based consumers.
```

```
vertica-database
vertica-vmart
```

```
$ /opt/kafka/bin/kafka-consumer-groups.sh --describe --group vertica-database \
   --bootstrap-server localhost:9092
Note: This will not show information about old Zookeeper-based consumers.
```

<table>
<thead>
<tr>
<th>TOPIC</th>
<th>PARTITION</th>
<th>CURRENT-OFFSET</th>
<th>LOG-END-OFFSET</th>
<th>LAG</th>
<th>CONSUMER-ID</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
To change the consumer group when manually loading data, use the group_id parameter of KafkaSource function:

```sql
=> COPY web_hits SOURCE KafkaSource(stream='web_hits|0|-2',
                                       brokers='kafka01.example.com:9092',
                                       stop_on_eof=True,
                                       group_id='vertica_database')
PARSER KafkaJSONParser();
Rows Loaded
--------
50000
(1 row)
```

### Using Consumer Group Offsets When Loading Messages

You can choose to have your scheduler, manual load, or custom loading script start loading messages from the consumer group's offset. You tell the scheduler or KafkaSource function to load messages from the last offset stored in the consumer group using the special -3 offset value.

This example demonstrates loading messages from the web_hits topic based on the saved offset in a consumer group named vertica_manual. This consumer group is created by the first COPY statement, as it did not exist in Kafka previously. So, this initial COPY statement is identical to using the special -2 offset to load all of the messages currently in the topic's partition because there was no previously-saved offset. The second COPY statement is run almost immediately after the first, before any more messages have arrived, so it does not load any messages. The third COPY statement is run some time after that, after new messages have arrived:

```sql
=> TRUNCATE TABLE web_hits;
TRUNCATE TABLE
=> COPY web_hits SOURCE KafkaSource(stream='web_hits|0|-3',
                                       brokers='kafka01.example.com:9092',
                                       stop_on_eof=True,
                                       group_id='vertica_manual')
PARSER KafkaJsonParser();
Rows Loaded
--------
50000
(1 row)
=> COPY web_hits SOURCE KafkaSource(stream='web_hits|0|-3',
                                       brokers='kafka01.example.com:9092',
                                       stop_on_eof=True,
                                       group_id='vertica_manual')
PARSER KafkaJsonParser();
Rows Loaded
--------
50000
(1 row)
```
You can have your scheduler start loading messages from the consumer group's saved offset. Use the \texttt{--offset} argument of the \texttt{vkconfig} script's microbatch tool to set the offset to -3 from all topic partitions your scheduler reads from. Once it starts its initial load, the scheduler still manages its offsets on its own.

## Disabling Consumer Group Reporting

Vertica reports the offsets of the messages it consumes to Kafka by default. If you do not specifically configure a consumer group for Vertica, it still reports its offsets to a consumer group named \texttt{vertica\_database-name} (where \texttt{database-name} is the name of the database Vertica is currently running).

If you want to completely disable having Vertica report its consumption back to Kafka, you can set the consumer group to an empty string or \texttt{NULL}. For example:

```sql
=> COPY web\_hits SOURCE KafkaSource(stream='web\_hits\|0\|3',
                                      brokers='kafka01.example.com:9092',
                                      stop_on_eof=True,
                                      group_id='vertica\_manual')
Rows Loaded
----------
0
(1 row)
```

```sql
=> COPY web\_hits SOURCE KafkaSource(stream='web\_hits\|0\|3',
                                      brokers='kafka01.example.com:9092',
                                      stop_on_eof=True,
                                      group_id='vertica\_manual')
Rows Loaded
----------
2400
(1 row)
```
Getting Configuration and Statistics Information From vkconfig

The vkconfig tool has two features that help you examine your scheduler's configuration and monitor your data load:

- The vkconfig tools that configure your scheduler (scheduler, cluster, source, target, load-spec, and microbatch) have a \(--read\) argument that has them output their current settings in the scheduler.
- The vkconfig statistics tool lets you get statistics on your microbatches. You can filter the microbatch records based on a date and time range, cluster, partition, and other criteria.

Both of these features output their data in JSON format. You can use third-party tools that can consume JSON data or write your own scripts to process the configuration and statics data.

You can also access the data provided by these vkconfig options by querying the configuration tables in the scheduler's schema. However, you may find these options easier to use as they do not require you to connect to the Vertica database.

Getting Configuration Information

You pass the \(--read\) option to vkconfig's configuration tools to get the current settings for the options that the tool can set. This output is in JSON format. This example demonstrates getting the configuration information from the scheduler and cluster tools for the scheduler defined in the weblog.conf configuration file:

```
$ vkconfig scheduler --read --conf weblog.conf
{"version":"v9.2.0", "frame_duration":"00:00:10", "resource_pool":"weblog_pool",  
"config_refresh":"00:05:00", "new_source_policy":"FAIR", 
"pushback_policy":"LINEAR", "pushback_max_count":5, "auto_sync":true, 
"consumer_group_id":null}
```

```
$ vkconfig cluster --read --conf weblog.conf
{"cluster":"kafka_weblog", "hosts":"kafak01.example.com:9092,kafka02.example.com:9092"}
```

The \(--read\) option lists all of values created by the tool in the scheduler schema. For example, if you have defined multiple targets in your scheduler, the \(--read\) option lists all of them.
You can filter the --read option output using the other arguments that the vkconfig tools accept. For example, in the cluster tool, you can use the --host argument to limit the output to just show clusters that contain a specific host. These arguments support LIKE-predicate wildcards, so you can match partial values. See LIKE predicate for more information about using wildcards.

The following example demonstrates how you can filter the output of the --read option of the cluster tool using the --host argument. The first call shows the unfiltered output. The second call filters the output to show only those clusters that start with "kafka":

```
$ vkconfig cluster --read --conf weblog.conf
{"cluster":"some_cluster","hosts":"host01.example.com"}
{"cluster":"iot_cluster","hosts":"kafka-iot01.example.com:9092,kafka-iot02.example.com:9092"}
{"cluster":"weblog","hosts":"web01.example.com:9092,web02.example.com:9092"}
{"cluster":"streamcluster1","hosts":"kafka-a-01.example.com:9092,kafka-a-02.example.com:9092"}
{"cluster":"test_cluster","hosts":"test01.example.com:9092,test02.example.com:9092"}

$ vkconfig cluster --read --conf weblog.conf --hosts kafka%
{"cluster":"iot_cluster","hosts":"kafka-iot01.example.com:9092,kafka-iot02.example.com:9092"}
{"cluster":"streamcluster1","hosts":"kafka-a-01.example.com:9092,kafka-a-02.example.com:9092"}
```

See the Cluster Tool Options, Load Spec Tool Options, Microbatch Tool Options, Scheduler Tool Options, Target Tool Options, and Source Tool Options for more information.

**Getting Streaming Data Load Statistics**

The vkconfig script's statistics tool lets you view the history of your scheduler's microbatches. You can filter the results using any combination of the following criteria:

- The name of the microbatch
- The Kafka cluster that was the source of the data load
- The name of the topic
- The partition within the topic
- The Vertica schema and table targeted by the data load
- A date and time range
- The latest microbatches
See Statistics Tool Options for all of the options available in this tool.

This example gets the last two microbatches that the scheduler ran:

```
$ vkconfig statistics --last 2 --conf weblog.conf
{
"microbatch": "weblog", "target_schema": "public", "target_table": "web_hits",
"source_name": "web_hits", "source_cluster": "kafka_weblog", "source_partition": 0,
"start_offset": 73300, "end_offset": 73399, "end_reason": "END_OF_STREAM",
"end_reason_message": null, "partition_bytes": 19588, "partition_messages": 100,
"timeslice": "00:00:00.000000", "batch_start": "2018-11-02 13:21:07.82595", 
"batch_end": "2018-11-02 13:21:18.850705", "source_duration": "00:00:00.219619",
"consecutive_error_count": null, "transaction_id": 45035996273976123,
"frame_start": "2018-11-02 13:21:07.601", "frame_end": null}
{
"microbatch": "weblog", "target_schema": "public", "target_table": "web_hits",
"source_name": "web_hits", "source_cluster": "kafka_weblog", "source_partition": 0,
"start_offset": 73200, "end_offset": 73299, "end_reason": "END_OF_STREAM",
"end_reason_message": null, "partition_bytes": 19781, "partition_messages": 100,
"timeslice": "00:00:00.561000", "batch_start": "2018-11-02 13:21:58.044698",
"batch_end": "2018-11-02 13:21:59.35431", "source_duration": "00:00:00.214868",
"consecutive_error_count": null, "transaction_id": 45035996273976095,
"frame_start": "2018-11-02 13:21:57.561", "frame_end": null}
```

This example gets the microbatches from the source named web_hits between 13:21:00 and 13:21:20 on November 2nd 2018:

```
$ vkconfig statistics --source "web_hits" --from-timestamp \ 
"2018-11-02 13:21:00" --to-timestamp "2018-11-02 13:21:20" \ 
--conf weblog.conf
{
"microbatch": "weblog", "target_schema": "public", "target_table": "web_hits",
"source_name": "web_hits", "source_cluster": "kafka_weblog", "source_partition": 0,
"start_offset": 72900, "end_offset": 72999, "end_reason": "END_OF_STREAM",
"end_reason_message": null, "partition_bytes": 19989, "partition_messages": 100,
"timeslice": "00:00:00.778000", "batch_start": "2018-11-02 13:21:17.583606",
"batch_end": "2018-11-02 13:21:18.850705", "source_duration": "00:00:01.215751",
"consecutive_error_count": null, "transaction_id": 45035996273975997,
"frame_start": "2018-11-02 13:21:17.34", "frame_end": null}
{
"microbatch": "weblog", "target_schema": "public", "target_table": "web_hits",
"source_name": "web_hits", "source_cluster": "kafka_weblog", "source_partition": 0,
"start_offset": 72700, "end_offset": 72799, "end_reason": "END_OF_STREAM",
"end_reason_message": null, "partition_bytes": 19640, "partition_messages": 100,
"timeslice": "00:00:00.857000", "batch_start": "2018-11-02 13:21:07.470834",
"batch_end": "2018-11-02 13:21:08.737255", "source_duration": "00:00:01.218932",
"consecutive_error_count": null, "transaction_id": 45035996273975978,
"frame_start": "2018-11-02 13:21:07.309", "frame_end": null}
```

See Statistics Tool Options for more examples of using this tool.

**Parsing Custom Formats**

Vertica supports the use of user-defined filters to manipulate data arriving from your streaming message bus. You can apply these filters to data before you parse it. By default, data that flows from the source does not contain message boundaries. The default Kafka parsers can locate the message boundaries on their own. However, other user-defined and
Vertica parsers are not designed to recognize the message boundaries. Two Kafka-specific filters let you insert message boundary information to the data stream (such as delimiters) so that parsers are able to extract and parse individual messages.

Filters for Use with Kafka Data

Vertica includes the following filters:

- **KafkaInsertDelimiters** — Transforms the Kafka data stream by inserting a user-specified delimiter between each message. The delimiter can contain any characters and be of any length. This parser uses the following syntax:

  ```
  KafkaInsertDelimiters(delimiter = 'delimiter')
  ```

- **KafkaInsertLengths** — Transforms the Kafka data stream by inserting the length of the following record in bytes at the beginning of the record. Vertica writes lengths as 4-byte uint32 values in Big Endian network byte order. For example, a 100-byte record would be preceded by 0x00000064.

  ```
  KafkaInsertLengths()
  ```

**Note:** The Vertica provided filters are mutually exclusive. You cannot use both to process a Kafka data stream in the same COPY statement.

Vertica also supports the use of additional Vertica and user-defined filters. If you are using a Vertica filter, it must appear first in the filter list. Use a comma to delimit multiple filters. If you are using a non-Kafka parser, you must use at least one filter to prepare your content for that parser. If you do not provide a filter, the parser fails with the message:

**Input is not from Kafka source.**

Example

The following example demonstrates loading comma-separated values from two partitions in a topic named iot-data. The load processes all of the messages in the two partitions, and exits when it reaches the end of the messages currently in Kafka. The example uses the KafkaInsertDelimiters filter to insert newlines between Kafka messages, turning them into traditional rows of data. It relies on the standard COPY parser to parse the CSV values by telling it to use a comma as the column delimiter.
Using a Schema Registry with Kafka

Vertica supports the use of a Confluent schema registry for Avro schemas with the KafkaAvroParser. By using a schema registry, you enable the Avro parser to parse and decode messages written by the registry and to retrieve schemas stored in the registry. In addition, a schema registry enables Vertica to process streamed data without sending a copy of the schema with each record. Vertica can access a schema registry in the following ways:

- schema ID
- subject and version

**Note:**
If you use the compatibility config resource in your schema registry, you should specify a value of at least BACKWARD. You may also choose to use a stricter compatibility setting. For more information on installing and configuring a schema registry, refer to the Confluent documentation.

Schema ID Loading

In schema ID based loading, the Avro parser checks the schema ID associated with each message to identify the correct schema to use. A single COPY statement can reference multiple schemas. Because each message is not validated, Vertica recommends that you use a flex table as the target table for schema ID based loading.

The following example shows a COPY statement that refers to a schema registry located on the same host.

```sql
=> COPY logs source kafkasource(stream='simple|0|0', stop_on_eof=true, duration=interval '10 seconds') parser KafkaAvroParser(schema_registry_url='http://localhost:8081/');
```
Subject and Version Loading

In subject and version loading, you specify a subject and version in addition to the schema registry URL. The addition of the subject and version identifies a single schema to use for all messages in the COPY. If any message in the statement is incompatible with the schema, the COPY fails. Because all messages are validated prior to loading, Vertica recommends that you use a standard Vertica table as the target for subject and version loading.

The following example shows a COPY statement that identifies a schema subject and schema version as well as a schema registry.

```sql
=> COPY t source kafkasource(stream='simpleEvolution|0|0',
stop_on_eof=true, duration=interval '10 seconds') parser
KafkaAvroParser(schema_registry_url='http://repository:8081/schema-repo/',
schema_registry_subject='simpleEvolution-value',schema_registry_version='1')
REJECTED DATA AS TABLE "t_rejects";
```

Using Vertica to Produce Data for Kafka

In addition to consuming data from Kafka, Vertica can produce data for Kafka. There are two ways you can have Vertica stream data to Kafka:

- Using the KafkaExport function to send Vertica data to a Kafka topic. Use this feature to export arbitrary data to Kafka for consumption by any other application that is a Kafka consumer.
- Using notifiers to send Vertica diagnostic data from the data collector tables. You use this method primarily to let third-party monitoring applications view the status of your Vertica cluster. See Monitoring Vertica Using Notifiers.

The topics in this section explain how to use these methods in greater detail.

Producing Data Using KafkaExport

The KafkaExport function lets you stream data from Vertica to Kafka. You pass this function three arguments and two or three parameters:

```sql
SELECT KafkaExport(partitionColumn, keyColumn, valueColumn
USING PARAMETERS brokers='host[[:port]][,host...]',
```
The `partitionColumn` and `keyColumn` arguments set the Kafka topic's partition and key value, respectively. You can set either or both of these values to NULL. If you set the partition to NULL, Kafka uses its default partitioning scheme (either randomly assigning partitions if the key value is NULL, or based on the key value if it is not).

The `valueColumn` argument is a LONG VARCHAR containing message data that you want to send to Kafka. Kafka does not impose structure on the message content. Your only restriction on the message format is what the consumers of the data are able to parse.

You are free to convert your data into a string in any way you like. For simple messages (such as a comma-separated list), you can use functions such as CONCAT to assemble your values into a message. If you need a more complex data format, such as JSON, consider writing a UDX function that accepts columns of data and outputs a LONG VARCHAR containing the data in the format you require. See Developing User-Defined Extensions (UDxs) for more information.

The data exported from Vertica using KafkaExport is sent to Kafka in JSON format.

See KafkaExport for detailed information about KafkaExport's syntax.

**Export Example**

This example shows you how to perform a simple export of several columns of a table. Suppose you have the following table containing a simple set of Internet of things (IOT) data:

```sql
=> SELECT * FROM iot_report LIMIT 10;
server   | date           | location          | id

=> \d iot_report
List of Fields by Tables
```
### Integrating with Apache Kafka

You want to send the data in this table to a Kafka topic named `iot_results` for consumption by other applications. Looking at the data and the structure of the `iot_report`, you may decide the following:

- The `server` column is a good match for the partitions in `iot_report`. There are three partitions in the Kafka topic, and the values in `server` column are between 1 and 3. Suppose the partition column had a larger range of values (for example, between 1 and 100). Then you could use the modulo operator (%) to coerce the values into the same range as the number of partitions (server % 3).
  
  A complication with these values is that the values in the server are 1-based (the lowest value in the column is 1). Kafka's partition numbering scheme is zero-based. So, you must adjust the values in the server column by subtracting 1 from them.

- The `id` column can act as the key. This column has a data type of `INTEGER`. The `KafkaExport` function expects the key value to be a `VARCHAR`. Vertica does not automatically cast `INTEGER` values to `VARCHAR`, so you must explicitly cast the value in your function call.

- The consumers of the `iot_report` topic expect values in comma-separated format. You can combine the values from the `date` and `location` columns into a single `VARCHAR` using nested calls to the `CONCAT` function.

The final piece of information you need to know is the host names and port numbers of the brokers in your Kafka cluster. In this example, there are two brokers named `kafka01` and `kafka03`, running on port 6667 (the port that Hortonworks clusters use). Once you have all of this information, you are ready to export your data.

The following example shows how you might export the contents of `iot_report`:

```sql
=> SELECT KafkaExport(server - 1, id::VARCHAR,
            CONCAT(CONCAT(date, ', ', location),
            USING PARAMETERS brokers='kafka01:6667,kafka03:6667',
            topic='iot_results') OVER (PARTITION BEST) FROM iot_report;
```

KafkaExport returned 0 rows which means Vertica was able to send all of your data to Kafka without any errors.
Other things to note about the example:

- The CONCAT function automatically converts the date column's DATETIME value to a VARCHAR for you, so you do not need to explicitly cast it.
- Two nested CONCAT functions are necessary to concatenate the date field with a comma, and the resulting string with the location field.
- Adding a third column to the message field would require two additional CONCAT function calls (one to concatenate a comma after the location column, and one to concatenate the additional column's value). Using CONCAT becomes messy after just a few column's worth of data.

On the Kafka side, you will see whatever you sent as the valueColumn (third) argument of the KafkaExport function. In the above example, this is a CSV list. If you started a console consumer for iot_results topic before running the example query, you would see the following output when the query runs:

```
$ /opt/kafka/bin/kafka-console-consumer.sh --topic iot_results --zookeeper localhost
2017-10-10 12:08:33, 78.84883, -137.56584
2017-12-06 16:50:57, -25.33024, -157.91389
2018-08-19 00:02:18, 13.08436, 85.44815
2016-10-11 04:09:28, -14.86058, 112.75848
2017-10-19 14:04:33, -71.72156, -36.27381
2018-07-11 19:35:18, -9.41315, 102.36866
2018-08-30 08:09:45, 83.97962, 162.83848
2017-01-20 03:05:24, 37.17372, 136.14026
2017-07-29 11:38:37, -38.99517, 171.72671
2018-04-19 13:06:58, 69.28989, 133.98275
2018-08-28 01:09:51, -59.71784, -144.97142
2018-09-14 23:16:15, 58.07275, 111.07354
```

**KafkaExport's Return Value**

KafkaExport outputs any rows that Kafka rejected. For example, suppose you forgot to adjust the partition column to be zero-based in the previous example. Then some of the rows exported to Kafka would specify a partition that does not exist. In this case, Kafka rejects these rows, and KafkaExport reports them in table format:

```
=> SELECT KafkaExport(server, id::VARCHAR,
CONCAT(CONCAT(date, ', '), location)
USING PARAMETERS brokers='kafka01:6667,kafka03:6667',
topic='iot_results') OVER (PARTITION BEST) FROM iot_report;
  partition |   key   | message | failure_reason
-------------+---------+---------+-------------------
          3 | 40492866 | 2017-10-10 12:08:33, 78.84883, -137.56584, | Local: Unknown partition
          3 | 73846006 | 2017-12-06 16:50:57, -25.33024, -157.91389, | Local: Unknown partition
```
Note:
Another common reason for Kafka rejecting a row is that its message value is longer than Kafka's message.max.bytes setting.

You can capture this output by creating a table to hold the rejects. Then use an INSERT statement to insert KafkaExport's results:

```sql
=> CREATE TABLE export_rejects (partition INTEGER, key VARCHAR, message LONG VARCHAR, failure_reason VARCHAR);
=> INSERT INTO export_rejects SELECT KafkaExport(server, id::VARCHAR, CONCAT(CONCAT(date, ', '), location) USING PARAMETERS brokers='kafka01:6667,kafka03:6667', topic='iot_results') OVER (PARTITION BEST) FROM iot_report;
```

```sql
=> SELECT * FROM export_rejects;
```

<table>
<thead>
<tr>
<th>partition</th>
<th>key</th>
<th>message</th>
<th>failure_reason</th>
</tr>
</thead>
<tbody>
<tr>
<td>3</td>
<td>27462612</td>
<td>2018-08-19 00:02:18, 13.00436, 85.44815</td>
<td>Local: Unknown partition</td>
</tr>
<tr>
<td>3</td>
<td>40492866</td>
<td>2017-10-10 12:08:33, 78.84883, -137.56584</td>
<td>Local: Unknown partition</td>
</tr>
<tr>
<td>3</td>
<td>73846006</td>
<td>2017-12-06 16:50:57, -25.33024, -157.91389</td>
<td>Local: Unknown partition</td>
</tr>
</tbody>
</table>

---

### Producing Kafka Messages Using Notifiers

You can use notifiers to help you monitor your Vertica database using third-party Kafka-aware tools by producing messages to a Kafka topic. You can directly publish messages (for example, from a SQL script to indicate a long-running query has finished). Notifiers can also automatically send messages when a component in the data collector tables is updated.

#### Creating a Notifier

You must create a notifier before you can use it. At a minimum, a notifier defines:
Vertica Documentation
Integrating with Apache Kafka

- A unique name.
- A message protocol. This is kafka:// when sending messages to Kafka.
- The server to communicate with. For Kafka, this is the address and port number of a Kafka broker.
- The maximum message buffer size. If the queue of messages to be sent via the notifier exceed this limit, messages are dropped.

You create the notifier with CREATE NOTIFIER. This example creates a notifier named load_progress_notifier that sends messages via the Kafka broker running on kafka01.example.com on port 9092:

=> CREATE NOTIFIER load_progress_notifier
   ACTION 'kafka://kafka01.example.com:9092'
   MAXMEMORYSIZE '10M';

While not required, it's best practice to create notifiers that use an encrypted connection. The following example creates a notifier that uses an encrypted connection and verifies the Kafka server's certificate with the provided CA bundle:

=> CREATE NOTIFIER encrypted_notifier
   ACTION 'kafka://127.0.0.1:9092'
   MAXMEMORYSIZE '10M'
   TLSMODE 'verify-ca'
   CA BUNDLE ca_bundle;

Follow this procedure to create or alter notifiers for Kafka endpoints that use SASL_SSL. Note that you must repeat this procedure whenever you change the TLSMODE, certificates, or CA bundle for a given notifier.

1. Use CREATE or ALTER to disable the notifier while setting the TLSMODE, certificate, and CA bundle.

   => ALTER NOTIFIER encrypted_notifier
      DISABLE
      TLSMODE 'verify-ca'
      CA BUNDLE ca_bundle2;

2. ALTER the notifier and set the proper rdkafka adapter parameters for SASL_SSL.

   => ALTER NOTIFIER encrypted_notifier PARAMETERS
      'sasl.username=user;sasl.password=password;sasl.mechanism=PLAIN;security.protocol=SASL_SSL';

3. Enable the notifier.

   => ALTER NOTIFIER encrypted_notifier ENABLE;
Sending Individual Messages Via a Notifier

You can send an individual message via a notifier using the **NOTIFY** function. This feature is useful for reporting the progress of SQL scripts such as ETL tasks to third-party reporting tools.

You pass this function three string values:

- The message to send.
- The name of the notifier to send the message.
- The Kafka topic to receive the message.

For example, suppose you want to send the message "Daily load finished" to the vertica_notifications topic of the Kafka cluster defined in the load_progress_notifier notifier created earlier. Then you could execute the following statement:

```sql
=> SELECT NOTIFY('Daily load finished.', 'load_progress_notifier', 'vertica_notifications');
```

The message the notifier sends to Kafka is in JSON format. You can see the resulting message by using the console consumer on a Kafka node. For example:

```bash
$ /opt/kafka/bin/kafka-console-consumer.sh --bootstrap-server localhost:9092 \\
    --from-beginning \\
    --topic vertica_notifications \\
    --max-messages 1
```

```json
{"_db":"vmart","_schema":"v_internal","_table":"dc_notifications","channel":"vertica_notifications","message":"Daily load finished.","node_name":"v_vmart_node0001","notifier":"load_progress_notifier","request_id":2,"session_id":"v_vmart_node0001-463079:0x4ba6f","statement_id":-1,"time":"2018-06-19 09:48:42.314181-04","transaction_id":45035996275565458,"user_id":45035996273704962,"user_name":"dbadmin"}
```

Processed a total of 1 messages
Monitoring DC Tables with Notifiers

The Vertica Data Collector (DC) tables monitor many different database functions. You can have a notifier automatically send a message when a DC component updates. You can query the DATA_COLLECTOR table to get a list of the DC components.

You configure the notifier to send DC component updates to Kafka using the function SET_DATA_COLLECTOR_NOTIFY_POLICY.

To be notified of failed login attempts, you can create a notifier that sends a notification when the DC component LoginFailures updates. The TLSMODE 'verify-ca' verifies that the server's certificate is signed by a trusted CA.

```
=> CREATE NOTIFIER vertica_stats ACTION 'kafka://kafka01.example.com:9092' MAXMEMORYSIZE '10M' TLSMODE 'verify-ca';
CREATE NOTIFIER
=> SET DATA_COLLECTOR_NOTIFY_POLICY('LoginFailures', 'vertica_stats', 'vertica_notifications', true);
SET DATA_COLLECTOR_NOTIFY_POLICY
-------------------------------
SET (1 row)
```

Like the messages sent via the NOTIFY function, the data sent to Kafka from the DC components is in JSON format. The previous example results in messages like the following being sent to the vertica_notifications Kafka topic:

```
```

Viewing Notification Policies for a DC Component

Use the GET_DATA_COLLECTOR_NOTIFY_POLICY function to list the policies set for a DC component.

```
=> SELECT GET_DATA_COLLECTOR_NOTIFY_POLICY('LoginFailures');

SELECT GET_DATA_COLLECTOR_NOTIFY_POLICY
-------------------------------
Notifiable; Notifier: vertica_stats; Channel: vertica_notifications
```
Disabling a Notification Policy

You can call `SET_DATA_COLLECTOR_NOTIFY_POLICY` function with its fourth argument set to FALSE to disable a notification policy. The following example disables the notify policy for the LoginFailures component:

```sql
=> SELECT SET_DATA_COLLECTOR_NOTIFY_POLICY('LoginFailures','vertica_stats', 'vertica_notifications', false);
SET_DATA_COLLECTOR_NOTIFY_POLICY
(1 row)
```

```sql
=> SELECT GET_DATA_COLLECTOR_NOTIFY_POLICY('LoginFailures');
GET_DATA_COLLECTOR_NOTIFY_POLICY
(1 row)
```

Not notifiable;

Using TLS/SSL Encryption with Kafka

You can use TLS/SSL encryption between Vertica, your scheduler, and Kafka. This encryption prevents others from accessing the data that is sent between Kafka and Vertica. It can also verify the identity of all parties involved in data streaming, so no impostor can pose as your Vertica cluster or a Kafka broker.

**Note:**

Many people often confuse the terms TLS and SSL. SSL is an older encryption protocol that has been largely replace with the newer and more secure TLS standard. However, many people still use the term SSL to refer to encryption between servers and applications, even when that encryption is actually TLS. For example, Java and Kafka use the term SSL exclusively, even when dealing with TLS. This document uses SSL/TLS and SSL interchangeably.

Some common cases where you want to use SSL encryption between Vertica and Kafka are:

- Your Vertica database and Kafka communicate over an insecure network. For example, suppose your Kafka cluster is located in a cloud service and your Vertica cluster is within your internal network. In this case, any data you read from Kafka
travels over an insecure connection across the Internet.

- You are required by security policies, laws, or other requirements to encrypt all of your network traffic.

For more information about TLS/SSL encryption in Vertica, see TLS Protocol.

## Using TLS/SSL Between the Scheduler and Vertica

The scheduler connects to Vertica the same way other client applications do. There are two ways you can configure Vertica to use SSL/TLS authentication and encryption with clients:

- If Vertica is configured to use SSL/TLS server authentication, you can choose to have your scheduler confirm the identity of the Vertica server.
- If Vertica is configured to use mutual SSL/TLS authentication, you can configure your scheduler identify itself to Vertica as well as have it verify the identity of the Vertica server. Depending on your database's configuration, the Vertica server may require your scheduler to use TLS when connecting. See Implementing Client Self-Authentication for more information.

For information on encrypted client connections with Vertica, refer to TLS Protocol.

The scheduler runs on a Java Virtual Machine (JVM) and uses JDBC to connect to Vertica. It acts like any other JDBC client when connecting to Vertica. To use TLS/SSL encryption for the scheduler's connection to Vertica, use the Java keystore and truststore mechanism to hold the keys and certificates the scheduler uses to identify itself and Vertica.

- The keystore contains your scheduler's private encryption key and its certificate (public key).
- The truststore contains CAs that you trust. If you enable authentication, the scheduler uses these CAs to verify the identity of the Vertica cluster it connects to. If one of the CAs in the trust store was used to sign the server's certificate, then the Scheduler knows it can trust the identity of the Vertica server.

You can pass options to the JVM that executes the scheduler through the Linux environment variable named VKCONFIG_JVM_OPTS. You add the parameters to this variable that alter the scheduler's JDBC settings (such as the truststore and keystore for the scheduler's JDBC connection). See Configure Kafka for TLS for an example.
You can also use the \texttt{- -jdbc-url} scheduler option to alter the JDBC configuration. See \texttt{Common vkconfig Script Options} for more information about the scheduler options and \texttt{JDBC Connection Properties} for more information about the properties they can alter.

\section*{Using TLS/SSL Between Vertica and Kafka}

You can stream data from Kafka into Vertica two ways: manually using a \texttt{COPY} statement and the Kafka\texttt{Source} UD source function, or automatically using the scheduler.

To directly copy data from Kafka via an SSL connection, you set session variables containing an SSL key and certificate. When Kafka\texttt{Source} finds that you have set these variables, it uses the key and certificate to create a secure connection to Kafka. See \texttt{Configure Kafka for TLS} for details.

When automatically streaming data from Kafka to Vertica, you configure the scheduler the same way you do to use an SSL connection to Vertica. When the scheduler executes \texttt{COPY} statements to load data from Kafka, it uses its own keystore and truststore to create an SSL connection to Kafka.

To use an SSL connection when producing data from Vertica to Kafka, you set the same session variables you use when directly streaming data from Kafka via an SSL connection. The \texttt{KafkaExport} function uses these variables to establish a secure connection to Kafka.

\begin{itemize}
  \item \textbf{Note:} Notifiers do not currently support using TLS/SSL connections.
\end{itemize}

See the \texttt{Apache Kafka documentation} for more information about using SSL/TLS authentication with Kafka.

\section*{Planning TLS/SSL Encryption Between Vertica and Kafka}

Some things to consider before you begin configuring TLS/SSL:

\begin{itemize}
  \item Which connections between the scheduler, Vertica, and Kafka needs to be encrypted?
\end{itemize}

In some cases, you may only need to enable encryption between Vertica and Kafka. This scenario is common when Vertica and the Kafka cluster are on different networks. For example, suppose Kafka is hosted in a cloud provider and Vertica is
hosted in your internal network. Then the data must travel across the unsecured Internet between the two. However, if Vertica and the scheduler are both in your local network, you may decide that configuring them to use SSL/TLS is unnecessary. In other cases, you will want all parts of the system to be encrypted. For example, you want to encrypt all traffic when Kafka, Vertica, and the scheduler are all hosted in a cloud provider whose network may not be secure.

- Which connections between the scheduler, Vertica, and Kafka require trust? You can opt to have any of these connections fail if one system cannot verify the identity of another. See Verifying Identities below.
- Which CAs will you be using to sign each certificate? The simplest way to configure the scheduler, Kafka, and Vertica is to use the same CA to sign all of the certificates you will use when setting up TLS/SSL. Using the same root CA to sign the certificates requires you to be able to edit the configuration of Kafka, Vertica, and the scheduler. If you cannot use the same CA to sign all certificates, all truststores must contain the entire chain of CAs used to sign the certificates, all the way up to the root CA. Including the entire chain of trust ensures each system can verify each other's identities.

**Verifying Identities**

Your primary challenge when configuring TLS/SSL encryption between Vertica, the scheduler, and Kafka is making sure the scheduler, Kafka, and Vertica can all verify each other's identity. The most common problem people have encountered when setting up TLS/SSL encryption is ensuring the remote system can verify the authenticity of a system's certificate. The best way to prevent this problem is to ensure that the all systems have their certificates signed by a CA that all of the systems explicitly trust.

When a system attempts to start an encrypted connection with another system, it sends its certificate to the remote system. This certificate can be signed by one or more Certificate Authorities (CA) that help identify the system making the connection. These signatures form a "chain of trust." A certificate is signed by a CA. That CA, in turn, could have been signed by another CA, and so forth. Often, the chain ends with a CA (referred to as the root CA) from a well-known commercial provider of certificates, such as Comodo SSL or DigiCert, that are trusted by default on many platforms such as operating systems and web browsers.

If the remote system finds a CA in the chain that it trusts, it verifies the identity of the system making the connection, and the connection can continue. If the remote system cannot find the signature of a CA it trusts, it may block the connection, depending on its
configuration. Systems can be configured to only allow connections from systems whose identity has been verified.

**Note:**
Verifying the identity of another system making a TLE/SSL connection is often referred to as "authentication." Do not confuse this use of authentication with other forms of authentication used with Vertica. For example, TLS/SSL's authentication of a client connection has nothing to do with Vertica user authentication. Even if you successfully establish a TLS/SSL connection to Vertica using a client, Vertica still requires you to provide a user name and password before you can interact with it.

### Configuring Your Scheduler for TLS Connections

The scheduler can use TLS for two different connections: the one it makes to Vertica, and the connection it creates when running COPY statements to retrieve data from Kafka. Because the scheduler is a Java application, you supply the TLS key and the certificate used to sign it in a keystore. You also supply a truststore that contains in the certificates that the scheduler should trust. Both the connection to Vertica and to Kafka can use the same keystore and truststore. You can also choose to use separate keystores and truststores for these two connections by setting different JDBC settings for the scheduler. See [JDBC Connection Properties](#) for a list of these settings.

See [Configure Kafka for TLS](#) for detailed steps on configuring your scheduler to use SSL.

**Important:**
If you choose to use a file format other than the standard Java Keystore (JKS) format for your keystore or truststore files, you must use the correct file extension in the filename. For example, suppose you choose to use a keystore and truststore saved in PKCS#12 format. Then your keystore and trustore files must end with the .pfx or .p12 extension.

If the scheduler does not recognize the file's extension (or there is no extension in the file name), it assumes that the file is in JKS format. If the file is not in JKS format, you will see an error message when starting the
scheduler, similar to "Failed to create an SSLSocketFactory when setting up TLS: keystore not found."

Note that if the Kafka server's parameter client.ssl.auth is set to none or requested, you do not need to create a keystore.

Using TLS/SSL When Directly Loading Data from Kafka

You can manually load data from Kafka using the COPY statement and the KafkaSource user-defined load function (see Manually Copying Data From Kafka). To have KafkaSource open a secure connection to Kafka, you must supply it with an SSL key and other information.

When starting, the KafkaSource function checks if several user session variables are defined. These variables contain the SSL key, the certificate used to sign the key, and other information that the function needs to create the SSL connection. See Kafka User-Defined Session Parameters for a list of these variables. If KafkaSource finds these variables are defined, it uses them to create an SSL connection to Kafka.

See Configure Kafka for TLS for a step-by-step guide on configuring and using an SSL connection when directly copying data from Kafka.

These variables are also used by the KafkaExport function to establish a secure connection to Kafka when exporting data.

Configure Kafka for TLS

This page covers procedures for configuring TLS connections Vertica, Kafka, and the scheduler.

Note that the following example configures TLS for a Kafka server where ssl.client.auth=required, which requires the following:

- kafka_SSL_Certificate
- kafka_SSL_PrivateKey_secret
- kafka_SSL_PrivateKeyPassword_secret
- A keystore for the Scheduler

If your configuration uses ssl.client.auth=none or ssl.client.auth=requested, these parameters and the scheduler keystore are optional.

Creating Certificates for Vertica and Clients

The CA certificate in this example is self-signed. In a production environment, you should instead use a trusted CA.

This example uses the same self-signed root CA to sign all of the certificates used by the scheduler, Kafka brokers, and Vertica. If you cannot use the same CA to sign the keys for all of these systems, make sure you include the entire chain of trust in your keystores.

For more information, see Generating TLS Certificates and Keys.

1. Generate a private key, root.key.

```
$ openssl genrsa -out root.key
Generating RSA private key, 2048 bit long modulus
.................................................................+++
................................................+++e is 65537 (0x10001)
```

2. Generate a self-signed CA certificate.

```
$ openssl req -new -x509 -key root.key -out root.crt
You are about to be asked to enter information that will be incorporated into your certificate request.
What you are about to enter is what is called a Distinguished Name or a DN.
There are quite a few fields but you can leave some blank
For some fields there will be a default value,
If you enter '.', the field will be left blank.
-----
Country Name (2 letter code) [AU]:US
State or Province Name (full name) [Some-State]:MA
Locality Name (eg, city) []:Cambridge
Organization Name (eg, company) [Internet Widgits Pty Ltd]:My Company
Organizational Unit Name (eg, section) []:
Common Name (e.g. server FQDN or YOUR name) []:*.mycompany.com
Email Address []:myemail@mycompany.com
```

3. Restrict to the owner read/write permissions for root.key and root.crt. Grant read permissions to other groups for root.crt.
4. Generate the server private key, `server.key`.

```
$ openssl genrsa -out server.key
Generating RSA private key, 2048 bit long modulus
.........................................................+
.........................................................+
e is 65537 (0x10001)
```

5. Create a certificate signing request (CSR) for your CA. Be sure to set the "Common Name" field to a wildcard (asterisk) so the certificate is accepted for all Vertica nodes in the cluster:

```
$ openssl req -new -key server.key -out server_reqout.txt
You are about to be asked to enter information that will be incorporated into your certificate request.
What you are about to enter is what is called a Distinguished Name or a DN.
There are quite a few fields but you can leave some blank for some fields there will be a default value.
If you enter '.', the field will be left blank.
-----
Country Name (2 letter code) [AU]:US
State or Province Name (full name) [Some-State]:MA
Locality Name (eg, city) []:Cambridge
Organization Name (eg, company) [Internet Widgits Pty Ltd]:My Company
Organizational Unit Name (eg, section) []:
Common Name (e.g. server FQDN or YOUR name) []:*.mycompany.com
Email Address []:myemail@mycompany.com

Please enter the following 'extra' attributes to be sent with your certificate request
A challenge password []: server_key_password
An optional company name []:
```

6. Sign the server certificate with your CA. This creates the server certificate `server.crt`.

```
$ openssl x509 -req -in server_reqout.txt -days 3650 -sha1 -CAcreateserial -CA root.crt -CAkey root.key -out server.crt
Signature ok
subject=/C=US/ST=MA/L=Cambridge/CN=*.mycompany.com/emailAddress=myemail@mycompany.com
Getting CA Private Key
```

7. Set the appropriate permissions for the key and certificate.

```
$ chmod 600 server.key
$ chmod 644 server.crt
```
Create a Client Key and Certificate (Mutual Mode Only)

In **Mutual Mode**, clients and servers verify each other's certificates before establishing a connection. The following procedure creates a client key and certificate to present to Vertica. The certificate must be signed by a CA that Vertica trusts.

The steps for this are identical to those above for creating a server key and certificate for Vertica.

```
$ openssl genrsa -out client.key
Generating RSA private key, 2048 bit long modulus
.................................................................+++  
.........................................................+++  
e is 65537 (0x10001)

$ openssl req -new -key client.key -out client_reqout.txt
You are about to be asked to enter information that will be incorporated into your certificate request.
What you are about to enter is what is called a Distinguished Name or a DN.
There are quite a few fields but you can leave some blank
For some fields there will be a default value,
If you enter '.', the field will be left blank.
-----
Country Name (2 letter code) [AU]:US
State or Province Name (full name) [Some-State]:MA
Locality Name (eg, city) []:Cambridge
Organization Name (eg, company) [Internet Widgits Pty Ltd]:My Company
Organizational Unit Name (eg, section) []:
Common Name (e.g. server FQDN or YOUR name) []:*.*mycompany.com
Email Address []:myemail@mycompany.com

Please enter the following 'extra' attributes to be sent with your certificate request
A challenge password []: server_key_password
An optional company name []:

$ openssl x509 -req -in client_reqout.txt -days 3650 -sha1 -CAcreateserial -CA root.crt \   -CAkey root.key -out client.crt
Signature ok

Getting CA Private Key

$ chmod 600 client.key
$ chmod 644 client.crt
```
Set up Mutual Mode Client-Server TLS

Configure Vertica for Mutual Mode

The following keys and certificates must be imported and then distributed to the nodes on your Vertica cluster with TLS CONFIGURATION for Mutual Mode:

- root.key
- root.crt
- server.key
- server.crt

You can view existing keys and certificates by querying CRYPTOGRAPHIC KEYS and CERTIFICATES.

1. Import the server and root keys and certificates into Vertica with CREATE KEY and CREATE CERTIFICATE. See Generating TLS Certificates and Keys for details.

   >>> CREATE KEY imported_key TYPE 'RSA' AS '-----BEGIN PRIVATE KEY-----
   END PRIVATE KEY-----';
   >>> CREATE CA CERTIFICATE imported_ca AS '-----BEGIN CERTIFICATE-----
   END CERTIFICATE-----';
   >>> CREATE CERTIFICATE imported_cert AS '-----BEGIN CERTIFICATE-----
   END CERTIFICATE-----';

   In this example, \set is used to retrieve the contents of root.key, root.crt, server.key, and server.crt.

   >>> \set ca_cert `''``cat root.crt`````
   >>> \set serv_key `''``cat server.key`````
   >>> \set serv_cert `''``cat server.crt`````

   >>> CREATE CA CERTIFICATE root_ca AS :ca_cert;
   CREATE CERTIFICATE
   >>> CREATE KEY server_key TYPE 'RSA' AS :serv_key;
   CREATE KEY
   >>> CREATE CERTIFICATE server_cert AS :serv_cert;
   CREATE CERTIFICATE

2. Follow the steps for Mutual Mode in Configuring Client-server TLS to set the proper TLSMODE and TLS CONFIGURATION parameters.
Configure a Client for Mutual Mode

Clients must have their private key, certificate, and CA certificate. The certificate will be presented to Vertica when establishing a connection, and the CA certificate will be used to verify the server certificate from Vertica.

This example configures the `vsql` client for mutual mode.

1. Create a `.vsql` directory in the user's home directory.
   
   ```bash
   $ mkdir ~/.vsql
   ```

2. Copy `client.key`, `client.crt`, and `root.crt` to the `vsql` directory.
   
   ```bash
   $ cp client.key client.crt root.crt ~/.vsql
   ```

3. Log into Vertica with `vsql` and query the `SESSIONS` system table to verify that the connection is using mutual mode:

   ```bash
   $ vsql
   Password: user-password
   Welcome to vsql, the Vertica Analytic Database interactive terminal.

   Type:  \h or  \? for help with vsql commands
   \g or terminate with semicolon to execute query
   \q to quit

   SSL connection (cipher: DHE-RSA-AES256-GCM-SHA384, bits: 256, protocol: TLSv1.2)

   => select user_name,ssl_state from sessions;
     user_name | ssl_state
     ---------+-----------
     dbadmin   | Mutual
(1 row)
   ```

Configure Kafka for TLS

Configure the Kafka Brokers

This procedure configures Kafka to use TLS with client connections. You can also configure Kafka to use TLS to communicate between brokers. However, inter-broker TLS has no impact on establishing an encrypted connection between Vertica and Kafka.
1. Create a truststore file for all of your Kafka brokers, importing your CA certificate. This example uses the self-signed root.crt created above.

```bash
=> $ keytool -keystore kafka.truststore.jks -alias CARoot -import \
      -file root.crt
Enter keystore password: some_password
Re-enter new password: some_password
Owner: EMAILADDRESS=myemail@mycompany.com, CN=*.mycompany.com, O=MyCompany, L=Cambridge, ST=MA, C=US
Issuer: EMAILADDRESS=myemail@mycompany.com, CN=*.mycompany.com, O=MyCompany, L=Cambridge, ST=MA, C=US
Serial number: c3f02e87707d01aa
Certificate fingerprints:
Signature algorithm name: SHA256withRSA
Subject Public Key Algorithm: 2048-bit RSA key
Version: 3
Extensions:
#1: ObjectId: 2.5.29.35 Criticality=false
   AuthorityKeyIdentifier [ 
      KeyIdentifier [ 
         0000: 50 69 11 64 45 E9 CC C5 09 EE 26 B5 3E 71 39 7C Pi.dE.....&.>q9.
         0010: 53 3D 78 16               .x.
       ]
   ]
#2: ObjectId: 2.5.29.19 Criticality=false
   BasicConstraints: [ 
      CA:true
      PathLen:2147483647
   ]
#3: ObjectId: 2.5.29.14 Criticality=false
   SubjectKeyIdentifier [ 
      KeyIdentifier [ 
         0000: 50 69 11 64 45 E9 CC C5 09 EE 26 B5 3E 71 39 7C Pi.dE.....&.>q9.
         0010: 53 3D 78 16               .x.
       ]
   ]

Trust this certificate? [no]: yes
Certificate was added to keystore
```

2. Create a keystore file for the Kafka broker named kafka01. Each broker's keystore should be unique.

The keytool command adds the a Subject Alternative Name (SAN) used as a fallback when establishing a TLS connection. Use your Kafka' broker's fully-qualified domain
name (FQDN) as the value for the SAN and "What is your first and last name?"
prompt.

In this example, the FQDN is kafka01.example.com. The alias for keytool is set
to localhost, so local connections to the broker use TLS.

```bash
$ keytool -keystore kafka01.keystore.jks -alias localhost -validity 365 -genkey -keyalg RSA \
   -ext SAN=DNS:kafka01.mycompany.com
Enter keystore password: some_password
Re-enter new password: some_password
What is your first and last name?
[Unknown]: kafka01.mycompany.com
What is the name of your organizational unit?
[Unknown]:
What is the name of your organization?
[Unknown]: MyCompany
What is the name of your City or Locality?
[Unknown]: Cambridge
What is the name of your State or Province?
[Unknown]: MA
What is the two-letter country code for this unit?
[Unknown]: US
Is CN=Database Admin, OU=MyCompany, O=Unknown, L=Cambridge, ST=MA, C=US correct?
[no]: yes

Enter key password for <localhost>
(RETURN if same as keystore password):
```

3. Export the Kafka broker's certificate. In this example, the certificate is exported as
   kafka01.unsigned.crt.

```bash
$ keytool -keystore kafka01.keystore.jks -alias localhost \
   -certreq -file kafka01.unsigned.crt
Enter keystore password: some_password
```

4. Sign the broker's certificate with the CA certificate.

```bash
$ openssl x509 -req -CA root.crt -CAkey root.key -in kafka01.unsigned.crt \
   -out kafka01.signed.crt -days 365 -CAcreateserial
Signature ok
subject=/C=US/ST=MA/L=Cambridge/O=Unknown/OU=MyCompany/CN=Database Admin
Getting CA Private Key
```

5. Import the CA certificate into the broker's keystore.

   **Note:**
   If you use different CAs to sign the certificates in your environment,
you must add the entire chain of CAs you used to sign your certificate
to the keystore, all the way up to the root CA. Including the entire chain of trust helps other systems verify the identity of your Kafka broker.

$ keytool -keystore kafka01.keystore.jks -alias CARoot -import -file root.crt
Enter keystore password: some_password
Owner: EMAILADDRESS=myemail@mycompany.com, CN=*.mycompany.com, O=MyCompany, L=Cambridge, ST=MA, C=US
Issuer: EMAILADDRESS=myemail@mycompany.com, CN=*.mycompany.com, O=MyCompany, L=Cambridge, ST=MA, C=US
Serial number: c3f02e87707d01aa
Certificate fingerprints:
Signature algorithm name: SHA256withRSA
Subject Public Key Algorithm: 2048-bit RSA key
Version: 3

Extensions:

#1: ObjectId: 2.5.29.35 Criticality=false
  AuthorityKeyIdentifier [ ]
    KeyIdentifier [ 0000: 50 69 11 64 45 E9 CC C5 09 EE 26 B5 3E 71 39 7C Pi.dE.....&.>q9. 0010: E5 3D 78 16 ]
  ]

#2: ObjectId: 2.5.29.19 Criticality=false
  BasicConstraints:[
    CA:true
    PathLen:2147483647 ]
  ]

#3: ObjectId: 2.5.29.14 Criticality=false
  SubjectKeyIdentifier [ ]
    KeyIdentifier [ 0000: 50 69 11 64 45 E9 CC C5 09 EE 26 B5 3E 71 39 7C Pi.dE.....&.>q9. 0010: E5 3D 78 16 ]
  ]

Trust this certificate? [no]: yes
Certificate was added to keystore

6. Import the signed Kafka broker certificate into the keystore.

$ keytool -keystore kafka01.keystore.jks -alias localhost \\ -import -file kafka01.signed.crt
Enter keystore password: some_password
Owner: CN=Database Admin, OU=MyCompany, O=Unknown, L=Cambridge, ST=MA, C=US
7. If you are not logged into the Kafka broker for which you prepared the keystore, copy the truststore and keystore to it using scp. If you have already decided where to store the keystore and truststore files in the broker's filesystem, you can directly copy them to their final destination. This example just copies them to the root user's home directory temporarily. The next step moves them into their final location.

```
$ scp kafka.truststore.jks kafka01.keystore.jks root@kafka01.mycompany.com:
root@kafka01.mycompany.com's password: root_password
kafka.truststore.jks              100% 1048  1.0KB/s  00:00
kafka01.keystore.jks             100% 3277  3.2KB/s  00:00
```

8. Repeat steps 2 through 7 for the remaining Kafka brokers.

### Allow Kafka to Read the Keystore and Truststore

If you did not copy the truststore and keystore to directory where Kafka can read them in the previous step, you must copy them to a final location on the broker. You must also allow the user account you use to run Kafka to read these files. The easiest way to ensure the user's access is to give this user ownership of these files.

In this example, Kafka is run by a Linux user `kafka`. If you use another user to run Kafka, be sure to set the permissions on the truststore and keystore files appropriately.

1. Log into the Kafka broker as root.

2. Copy the truststore and keystore to a directory where Kafka can access them. There is no set location for these files: you can choose a directory under `/etc`, or some other location where configuration files are usually stored. This example copies them from root's home directory to Kafka's configuration directory named `/opt/kafka/config/`. In your own system, this configuration directory may be in a different location.
depending on how you installed Kafka.

3. Copy the truststore and keystore to a directory where Kafka can access them. There is no set location for these files: you can choose a directory under /etc, or some other location where configuration files are usually stored. This example copies them from root's home directory to Kafka's configuration directory named /opt/kafka/config/. In your own system, this configuration directory may be in a different location depending on how you installed Kafka.

   ~## cd /opt/kafka/config/
   /opt/kafka/config# cp /root/kafka01.keystore.jks /root/kafka.truststore.jks.

4. If you aren't logged in as a user account that runs Kafka, change the ownership of the truststore and keystore files. This example changes the ownership from root (which is the user currently logged in) to the kafka user:

   /opt/kafka/config# ls -l
   total 80
   ...
   -rw-r--r-- 1 kafka nogroup 1221 Feb 21 2018 consumer.properties
   -rw------- 1 root root 3277 Mar 27 08:03 kafka01.keystore.jks
   -rw-r--r-- 1 root root 1048 Mar 27 08:03 kafka.truststore.jks
   -rw-r--r-- 1 kafka nogroup 4727 Feb 21 2018 log4j.properties
   ...
   /opt/kafka/config# chown kafka kafka01.keystore.jks kafka.truststore.jks
   /opt/kafka/config# ls -l
   total 80
   ...
   -rw-r--r-- 1 kafka nogroup 1221 Feb 21 2018 consumer.properties
   -rw------- 1 kafka root 3277 Mar 27 08:03 kafka01.keystore.jks
   -rw-r--r-- 1 kafka root 1048 Mar 27 08:03 kafka.truststore.jks
   -rw-r--r-- 1 kafka nogroup 4727 Feb 21 2018 log4j.properties
   ...

5. Repeat steps 1 through 3 for the remaining Kafka brokers.

Configure Kafka to use TLS

With the truststore and keystore in place, your next step is to edit the Kafka's server.properties configuration file to tell Kafka to use TLS/SSL encryption. This file is usually stored in the Kafka config directory. The location of this directory depends on how you installed Kafka. In this example, the file is located in /opt/kafka/config.

When editing the files, be sure you do not change their ownership. The best way to ensure Linux does not change the file's ownership is to use su to become the user account that runs Kafka, assuming you are not already logged in as that user:
$ /opt/kafka/config# su -s /bin/bash kafka

Note:
The previous command lets you start a shell as the kafka system user even if that user cannot log in.

The server.properties file contains Kafka broker settings in a \textit{property=value} format. To configure the Kafka broker to use SSL, alter or add the following property settings:

<table>
<thead>
<tr>
<th>Property</th>
<th>Set to:</th>
</tr>
</thead>
<tbody>
<tr>
<td>listeners</td>
<td>Host names and ports on which the Kafka broker listens. If you are not using SSL for connections between brokers, you must supply both a PLANTEXT and SSL option. For example: listeners=PLAINTEXT://hostname:9092,SSL://hostname:9093</td>
</tr>
<tr>
<td>ssl.keystore.location</td>
<td>Absolute path to the keystore file.</td>
</tr>
<tr>
<td>ssl.keystore.password</td>
<td>Password for the keystore file.</td>
</tr>
<tr>
<td>ssl.key.password</td>
<td>Password for the Kafka broker's key in the keystore. You can make this password different than the keystore password if you choose.</td>
</tr>
<tr>
<td>ssl.truststore.location</td>
<td>Location of the truststore file.</td>
</tr>
<tr>
<td>ssl.truststore.password</td>
<td>Password to access the truststore.</td>
</tr>
<tr>
<td>ssl.enabled.protocols</td>
<td>TLS/SSL protocols that Kafka allows clients to use.</td>
</tr>
<tr>
<td>ssl.client.auth</td>
<td>Specifies whether SSL authentication is required or optional. The most secure setting for this setting is required to verify the client's identity.</td>
</tr>
</tbody>
</table>

Important:
These settings vary depending on your version of Kafka. Always consult the \texttt{Apache Kafka documentation} for your version of Kafka before making changes to server.properties. In particular, be aware that Kafka version 2.0 and later enables host name verification for clients and inter-
broker communications by default.

This example configures Kafka to verify client identities via SSL authentication. It does not use SSL to communicate with other brokers, so the server.properties file defines both SSL and PLAINTEXT listener ports. It does not supply a host name for listener ports which tells Kafka to listen on the default network interface.

The lines added to the kafka01 broker's copy of server.properties for this configuration are:

```
listeners=PLAINTEXT://:9092,SSL://:9093
ssl.keystore.location=/opt/kafka/config/kafka01.keystore.jks
ssl.keystore.password=vertica
ssl.key.password=vertica
ssl.truststore.location=/opt/kafka/config/kafka.truststore.jks
ssl.truststore.password=vertica
ssl.enabled.protocols=TLSv1.2,TLSv1.1,TLSv1
ssl.client.auth=required
```

You must make these changes to the server.properties file on all of your brokers.

After making your changes to your broker's server.properties files, restart Kafka. How you restart Kafka depends on your installation:

- If Kafka is running as part of a Hadoop cluster, you can usually restart it from within whatever interface you use to control Hadoop (such as Ambari).
- If you installed Kafka directly, you can restart it either by directly running the kafka-server-stop.sh and kafka-server-start.sh scripts or via the Linux system's service control commands (such as systemctl). You must run this command on each broker.

Test the Configuration

If you have not configured client authentication, you can quickly test whether Kafka can access its keystore by running the command:

```
$ openssl s_client -debug -connect broker_host_name:9093 -tls1
```

If Kafka is able to access its keystore, this command will output a dump of the broker's certificate (exit with CTRL+C):

```
=> # openssl s_client -debug -connect kafka01.mycompany.com:9093 -tls1
CONNECTED(00000003)
write to 0xa4e4f0 [0xa58023] (197 bytes => 197 (0xC5))
0000 - 16 03 01 00 c8 01 00 00-bc 03 01 76 85 ed f0 fe ..........v....
0010 - 60 60 7e 78 9d d4 a8 f7-e6 aa 5c 80 b9 a7 37 61 `~x......\...7a
```
The above method is not conclusive, however; it only tells you if Kafka is able to find its keystore.

The best test of whether Kafka is able to accept TLS connections is to configure the command-line Kafka producer and consumer. In order to configure these tools, you must first create a client keystore. These steps are identical to creating a broker keystore.

**Note:**
This example assumes that Kafka has a topic named test that you can send test messages to.

1. Create the client keystore:

   ```
   keytool -keystore client.keystore.jks -alias localhost -validity 365 -genkey -keyalg RSA
   -ext SAN=DNS:fqdn_of_client_system
   ```

2. Respond to the "What is your first and last name?" with the FQDN of the system you will use to run the producer and/or consumer. Answer the rest of the prompts with the details of your organization.

3. Export the client certificate so it can be signed:

   ```
   keytool -keystore client.keystore.jks -alias localhost -certreq -file client.unsigned.cert
   ```

4. Sign the client certificate with the root CA:

   ```
   openssl x509 -req -CA root.crt -CAkey root.key -in client.unsigned.cert -out client.signed.crt
   -days 365 -CAcreateserial
   ```

5. Add the root CA to keystore:

   ```
   keytool -keystore client.keystore.jks -alias CARoot -import -file root.crt
   ```
6. Add the signed client certificate to the keystore:

```
keytool -keystore client.keystore.jks -alias localhost -import -file client.signed.cert
```

7. Copy the keystore to a location where you will use it. For example, you could choose to copy it to the same directory where you copied the keystore for the Kafka broker. If you choose to copy it to some other location, or intend to use some other user to run the command-line clients, be sure to add a copy of the truststore file you created for the brokers. Clients can reuse this truststore file for authenticating the Kafka brokers because the same CA is used to sign all of the certificates. Also set the file's ownership and permissions accordingly.

Next, you must create a properties file (similar to the broker's `server.properties` file) that configures the command-line clients to use TLS. For a client running on the Kafka broker named `kafka01`, your configuration file could would look like this:

```
security.protocol=SSL
ssl.truststore.location=/opt/kafka/config/kafka.truststore.jks
ssl.truststore.password=truststore_password
ssl.key.location=/opt/kafka/config/client.keystore.jks
ssl.key.password=keystore_password
ssl.enabled.protocols=TLSv1.2,TLSv1.1,TLSv1
ssl.client.auth=required
```

This property file assumes the keystore file is located in the Kafka configuration directory.

Finally, you can run the command line producer or consumer to ensure they can connect and process data. You supply these clients the properties file you just created. The following example assumes you stored the properties file in the Kafka configuration directory, and that Kafka is installed in `/opt/kafka`:

```
~# cd /opt/kafka

/opt/kafka# bin/kafka-consumer.sh --bootstrap-server kafka01.mycompany.com:9093 --topic test \  
consumer.config config/client.properties
```

```
>test
test again
>More testing. These messages seem to be getting through!
^D
```

```
/opt/kafka# bin/kafka-console-producer.sh --broker-list kafka01.mycompany.com:9093 \  
--topic test --producer.config config/client.properties
```

```
>test
>test again
>More testing. These messages seem to be getting through!
^C
```

```
Processed a total of 3 messages
```
Loading Data from Kafka

After you configure Kafka to accept TLS connections, verify that you can directly load data from it into Vertica. You should perform this step even if you plan to create a scheduler to automatically stream data.

You can choose to create a separate key and certificate for directly loading data from Kafka. This example re-uses the key and certificate created for the Vertica server in part 2 of this example.

You directly load data from Kafka by using the KafkaSource data source function with the COPY statement (see Manually Copying Data From Kafka). The KafkaSource function creates the connection to Kafka, so it needs a key, certificate, and related passwords to create an encrypted connection. You pass this information via session parameters. See Kafka User-Defined Session Parameters for a list of these parameters.

The easiest way to get the key and certificate into the parameters is by first reading them into vsq1 variables. You get their contents by using back quotes to read the file contents via the Linux shell. Then you set the session parameters from the variables. Before setting the session parameters, increase the MaxSessionUDParameterSize session parameter to add enough storage space in the session variables for the key and the certificates. They can be larger than the default size limit for session variables (1000 bytes).

The following example reads the server key and certificate and the root CA from the a directory named /home/dbadmin/SSL. Because the server's key password is not saved in a file, the example sets it in a Linux environment variable named KVERTICA_PASS before running vsq1. The example sets MaxSessionUDParameterSize to 100000 before setting the session variables. Finally, it enables TLS for the Kafka connection and streams data from the topic named test.

```
$ export KVERTICA_PASS=server_key_password
$ vsq1
Password: Welcome to vsq1, the Vertica Analytic Database interactive terminal.
Type: \h or \? for help with vsq1 commands
  \g or terminate with semicolon to execute query
  \q to quit

SSL connection (cipher: DHE-RSA-AES256-GCM-SHA384, bits: 256, protocol: TLSv1.2)

=> \set cert `"cat /home/dbadmin/SSL/server.crt`
=> \set pkey `"cat /home/dbadmin/SSL/server.key`
=> \set ca `"cat /home/dbadmin/SSL/root.crt`
```
=> \set pass `''echo $KVERTICA_PASS`''
=> alter session set MaxSessionUDParameterSize=100000;
ALTER SESSION
=> ALTER SESSION SET UDPARAMETER kafka_SSL_Certificate=:cert;
ALTER SESSION
=> ALTER SESSION SET UDPARAMETER kafka_SSL_PrivateKey_secret=:pkey;
ALTER SESSION
=> ALTER SESSION SET UDPARAMETER kafka_SSL_PrivateKeyPassword_secret=:pass;
ALTER SESSION
=> ALTER SESSION SET UDPARAMETER kafka_SSL_CA=:ca;
ALTER SESSION
=> ALTER SESSION SET UDPARAMETER kafka_Enable_SSL=1;
ALTER SESSION
=> CREATE TABLE t (a VARCHAR);
CREATE TABLE
=> COPY t SOURCE KafkaSource(brokers='kafka01.mycompany.com:9093',
   stream='test|0|-2', stop_on_eof=true,
   duration=interval '5 seconds')
   PARSER KafkaParser();

Configure the Scheduler

The final piece of the configuration is to set up the scheduler to use SSL when communicating with Kafka (and optionally with Vertica). When the scheduler runs a COPY command to get data from Kafka, it uses its own key and certificate to authenticate with Kafka. If you choose to have the scheduler use TLS/SSL to connect to Vertica, it can reuse the same keystore and truststore to make this connection.

Create a Truststore and Keystore for the Scheduler

Because the scheduler is a separate component, it must have its own key and certificate. The scheduler runs in Java and uses the JDBC interface to connect to Vertica. Therefore, you must create a keystore (when ssl.client.auth=required ) and truststore for it to use when making a TLS-encrypted connection to Vertica.
Keep in mind that creating a keystore is optional if your Kafka server sets ssl.client.auth to none or requested.

This process is similar to creating the truststores and keystores for Kafka brokers. The main difference is using the the -dname option for keytool to set the Common Name (CN) for the key to a domain wildcard. Using this setting allows the key and certificate to match any host in the network. This option is especially useful if you run multiple schedulers on different servers to provide redundancy. The schedulers can use the same key and certificate, no matter which server they are running on in your domain.

1. Create a truststore file for the scheduler. Add the CA certificate that you used to sign the keystore of the Kafka cluster and Vertica cluster. If you are using more than one CA to sign your certificates, add all of the CAs you used.

```
$ keytool -keystore scheduler.truststore.jks -alias CARoot -import \
    -file root.crt
Enter keystore password: some_password
Re-enter new password: some_password

        0000: 50 69 11 64 45 E9 CC C5 09 EE 26 B5 3E 71 39 7C Pi.dE.....<&.q9.
        0010: E5 3D 78 16 .x. 
    ] ]
```
Trust this certificate? [no]: yes
Certificate was added to keystore

2. Initialize the keystore, passing it a wildcard host name as the Common Name. The alias parameter in this command is important, as you use it later to identify the key the scheduler must use when creating SSL connections:

```
keytool -keystore scheduler.keystore.jks -alias vsched -validity 365 -genkey \n  -keyalg RSA -dname CN=*.*mycompany.com
```

**Important:**

If you choose to use a file format other than the standard Java Keystore (JKS) format for your keystore or truststore files, you must use the correct file extension in the filename. For example, suppose you choose to use a keystore and truststore saved in PKCS#12 format. Then your keystore and trustore files must end with the `.pfx` or `.p12` extension.

If the scheduler does not recognize the file's extension (or there is no extension in the file name), it assumes that the file is in JKS format. If the file is not in JKS format, you will see an error message when starting the scheduler, similar to "Failed to create an SSLSocketFactory when setting up TLS: keystore not found."

3. Export the scheduler's key so you can sign it with the root CA:

```
$ keytool -keystore scheduler.keystore.jks -alias vsched -certreq \n  -file scheduler.unsigned.cert
```

4. Sign the scheduler key with the root CA:

```
$ openssl x509 -req -CA root.crt -CAkey root.key -in scheduler.unsigned.cert \n  -out scheduler.signed.cert -days 365 -CAcreateserial
```

5. Re-import the scheduler key into the keystore:

```
$ keytool -keystore scheduler.keystore.jks -alias localhost -import -file \n  scheduler.signed.cert
```
Set Environment Variable VKCONFIG_JVM_OPTS

You must pass several settings to the JDBC interface of the Java Virtual Machine (JVM) that runs the scheduler. These settings tell the JDBC driver where to find the keystore and truststore, as well as the key's password. The easiest way to pass in these settings is to set a Linux environment variable named VKCONFIG_JVM_OPTS. As it starts, the scheduler checks this environment variable and passes any properties defined in it to the JVM.

The properties that you need to set are:

- `javax.net.ssl.keystore`: the absolute path to the keystore file to use.
- `javax.net.ssl.keyStorePassword`: the password for the scheduler's key.
- `javax.net.ssl.trustStore`: The absolute path to the truststore file.

The Linux command line to set the environment variable is:

```bash
export VKCONFIG_JVM_OPTS="$VKCONFIG_JVM_OPTS -Djavax.net.ssl.trustStore=/path/to/truststore \
-Djavax.net.ssl.keyStore=/path/to/keystore \
-Djavax.net.ssl.keyStorePassword=keystore_password"
```

**Note:**
The previous command preserves any existing contents of the VKCONFIG_JVM_OPTS variable. If you find the variable has duplicate settings, remove the `$VKCONFIG_JVM_OPTS` from your statement so you override the existing values in the variable.

For example, suppose the scheduler's truststore and keystore are located in the directory `/home/dbadmin/SSL`. Then you could use the following command to set the VKCONFIG_JVM_OPTS variable:

```bash
$ export VKCONFIG_JVM_OPTS="$VKCONFIG_JVM_OPTS \\
-Djavax.net.ssl.trustStore=/home/dbadmin/SSL/scheduler.truststore.jks \\
-Djavax.net.ssl.keyStore=/home/dbadmin/SSL/scheduler.keystore.jks \\
-Djavax.net.ssl.keyStorePassword=key_password"
```

**Important:**
The Java property names are case sensitive.

To ensure that this variable is always set, add the command to the `~/.bashrc` or other startup file of the user account that runs the scheduler.

If you require TLS on the JDBC connection to Vertica, add `TLSmode=require` to the JDBC URL that the scheduler uses. The easiest way to add this is to use the scheduler's `--jdbc-`
url option. Assuming that you use a configuration file for your scheduler, you can add this line to it:

```sql
jdbc-url=jdbc:vertica://VerticaHost:portNumber/databaseName?user=username&password=password&TLSmode=require
```

For more information about using the JDBC with Vertica, see Programming JDBC Client Applications.

Enable TLS in the Scheduler Configuration

Lastly, enable TLS. Every time you run `vkconfig`, you must pass it the following options:

<table>
<thead>
<tr>
<th>Option</th>
<th>Set to:</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>--enable-ssl</code></td>
<td><code>true</code>, to enable the scheduler to use SSL when connecting to Kafka.</td>
</tr>
<tr>
<td><code>--ssl-ca-alias</code></td>
<td>Alias for the CA you used to sign your Kafka broker's keys. This must match the value you supplied to the <code>-alias</code> argument of the keytool command to import the CA into the truststore.</td>
</tr>
<tr>
<td></td>
<td><strong>Note:</strong> If you used more than one CA to sign keys, omit this option to import all of the CAs into the truststore.</td>
</tr>
<tr>
<td><code>--ssl-key-alias</code></td>
<td>Alias assigned to the schedule key. This value must match the value you supplied to the <code>-alias</code> you supplied to the keytool command when creating the scheduler's keystore.</td>
</tr>
<tr>
<td><code>--ssl-key-password</code></td>
<td>Password for the scheduler key.</td>
</tr>
</tbody>
</table>

See Common `vkconfig` Script Options for details of these options. For convenience and security, add these options to a configuration file that you pass to `vkconfig`. Otherwise, you run the risk of exposing the key password via the process list which can be viewed by other users on the same system. See Configuration File Format for more information on setting up a configuration file.

Add the following to the scheduler configuration file to allow it to use the keystore and truststore and enable TLS when connecting to Vertica:

```conf
enable-ssl=true
```
Start the Scheduler

Once you have configured the scheduler to use SSL, start it and verify that it can load data. For example, to start the scheduler with a configuration file named `weblog.conf`, use the command:

```
$ nohup vkconfig launch --conf weblog.conf > /dev/null 2>&1 &
```

Troubleshooting Kafka TLS/SSL Connection Issues

After configuring Vertica, Kafka, and your scheduler to use TLS/SSL authentication and encryption, you may encounter issues with data streaming. This section explains some of the more common errors you may encounter, and how to troubleshoot them.

Errors when Launching the Scheduler

You may see errors like this when launching the scheduler:

```
$ vkconfig launch --conf weblog.conf
java.sql.SQLNonTransientException: com.vertica.solutions.kafka.exception.ConfigurationException: No keystore system property found: null
    at com.vertica.solutions.kafka.util.SQLUtilities.getConnection(SQLUtilities.java:181)
    at com.vertica.solutions.kafka.cli.CLIUtil.assertDBConnectionWorks(CLIUtil.java:40)
    at com.vertica.solutions.kafka.Launcher.run(Launcher.java:135)
    at com.vertica.solutions.kafka.Launcher.main(Launcher.java:263)
Caused by: com.vertica.solutions.kafka.exception.ConfigurationException: No keystore system property found: null
    at com.vertica.solutions.kafka.security.KeyStoreUtil.loadStore(KeyStoreUtil.java:77)
    at com.vertica.solutions.kafka.security.KeyStoreUtil.<init>(KeyStoreUtil.java:42)
    at com.vertica.solutions.kafka.util.SQLUtilities.getConnection(SQLUtilities.java:179)
    ... 3 more
```
The scheduler throws these errors when it cannot locate or read the keystore or truststore files. To resolve this issue:

- Verify you have set the VKCONFIG_JVM_OPTS Linux environment variable. Without this variable, the scheduler will not know where to find the truststore and keystore to use when creating TLS/SSL connections. See Configure Kafka for TLS for more information.
- Verify that the keystore and truststore files are located in the path you set in the VKCONFIG_JVM_OPTS environment variable.
- Verify that the user account that runs the scheduler has read access to the truststore and keystore files.
- Verify that the key password you provide in the scheduler configuration is correct. Note that you must supply the password for the key, not the keystore.

Another possible error message is a failure to set up a TLS Keystore:

```java
Exception in thread "main" java.sql.SQLRecoverableException: [Vertica][VJDBC](100024) IOException
while communicating with server: java.io.IOException: Failed to create an SSLSocketFactory when setting up TLS: keystore not found.
at com.vertica.io.ProtocolStream.logAndConvertToNetworkException(Unknown Source)
at com.vertica.io.ProtocolStream.enableSSL(Unknown Source)
at com.vertica.io.ProtocolStream.initSession(Unknown Source)
at com.vertica.core.VConnection.tryConnect(Unknown Source)
at com.vertica.core.VConnection.connect(Unknown Source)
...
```

This error can be caused by using a keystore or truststore file in a format other than JKS and not supplying the correct file extension. If the scheduler does not recognize the file extension of your keystore or truststore file name, it assumes the file is in JKS format. If the file isn't in this format, the scheduler will exit with the error message shown above. To correct this error, rename the keystore and truststore files to use the correct file extension. For example, if your files are in PKCS 12 filemat, change their file extension to .p12 or .pks.

**Data Does Not Load**

If you find that scheduler is not loading data into your database, you should first query the stream_microbatch_history table to determine whether the scheduler is executing microbatches, and if so, what their results are. A faulty TLS/SSL configuration usually results in a status of NETWORK_ISSUE:

```sql
=> SELECT frame_start, end_reason, end_reason_message FROM weblog_sched.stream_microbatch_history;
frame_start | end_reason | end_reason_message
-------------------------------
```
If you suspect an SSL issue, you can verify that Vertica is establishing a connection to Kafka by looking at Kafka's server.log file. Failed SSL connection attempts can appear in this log like this example:

```
java.io.IOException: Unexpected status returned by SSLEngine.wrap, expected CLOSED, received OK. Will not send close message to peer.
    at org.apache.kafka.common.network.SslTransportLayer.close(SslTransportLayer.java:172)
    at org.apache.kafka.common.network.Utils.closeAll(Utils.java:703)
    at org.apache.kafka.common.network.KafkaChannel.close(KafkaChannel.java:61)
    at org.apache.kafka.common.network.Selector.doClose(Selector.java:739)
    at org.apache.kafka.common.network.Selector.close(Selector.java:727)
    at org.apache.kafka.common.network.Selector.pollSelectionKeys(Selector.java:520)
    at org.apache.kafka.common.network.Selector.poll(Selector.java:412)
    at kafka.network.Processor.poll(SocketServer.scala:468)
    at kafka.network.Processor.run(SocketServer.scala:468)
    at java.lang.Thread.run(Thread.java:748)
```

If you do not see errors of this sort, you likely have a network problem between Kafka and Vertica. If you do see these errors, consider the following debugging steps:

- **Verify that the configuration of your Kafka cluster is uniform.** For example, you may see connection errors if some Kafka nodes are set to require client authentication and others aren't.
- **Verify that the Common Names (CN) in the certificates and keys match the host name of the system.**
- **Verify that the Kafka cluster is accepting connections on the ports and host names you specify in the server.properties file's listeners property.** For example, suppose you use IP addresses in this setting, but use host names when defining the cluster in the scheduler's configuration. Then Kafka may reject the connection attempt by Vertica or Vertica may reject the Kafka node's identity.
- **If you are using client authentication in Kafka, try turning it off to see if the scheduler can connect.** If disabling authentication allows the scheduler to stream data, then you can isolate the problem to client authentication. In this case, review the certificates and CAs of both the Kafka cluster and the scheduler. Ensure that the truststores include all of the CAs used to sign the key, up to and including the root CA.

**Authenticating with Kafka Using SASL**

Kafka supports using Simple Authentication and Security Layer (SASL) to authenticate producers and consumers. You can use SASL to authenticate Vertica with Kafka when using most of the Kafka-related functions such as KafkaSource.
Vertica supports using the SASL_PLAINTEXT and SASL_SSL protocols with the following authentication mechanisms:

- PLAIN
- SCRAM-SHA-256
- SCRAM-SHA-512

You must configure your Kafka cluster to enable SASL authentication. See the [Kafka documentation](#) for your Kafka version to learn how to configure SASL authentication.

**Note:** KafkaExport does not support using TLS/SSL with SASL authentication at this time.

To use SASL authentication between Vertica and Kafka, directly set SASL-related configuration options in the rdkafka library using the kafka_conf parameter. Vertica uses this library to connect to Kafka. See [Directly Setting Kafka Library Options](#) for more information on directly setting configuration options in the rdkafka library.

Among the relevant configuration options are:

- `security.protocol` sets the security protocol to use to authenticate with Kafka.
- `sasl.mechanism` sets the security mechanism.
- `sasl.username` sets the SASL user to use for authentication.
- `sasl.password` sets the password to use for SASL authentication.

See the [rdkafka configuration documentation](#) for a list of all the SASL-related settings.

The following example demonstrates calling KafkaCheckBrokers using the SASL_PLAINTEXT security protocol.

```sql
=> SELECT KafkaCheckBrokers(USING PARAMETERS
   brokers='kafka01.example.com:9092',
   kafka_conf='sasl.username=user;sasl.password=password;sasl.mechanism=PLAIN;security.protocol=SASL_PLAINTEXT'
) OVER ();
```

This example demonstrates using SASL authentication when copying data from Kafka via an SSL connection. This example assumes that Vertica and Kafka have been configured to use TLS/SSL encryption as described in [Using TLS/SSL Encryption with Kafka](#).

```sql
=> COPY mytopic_table
   SOURCE KafkaSource(
      stream='mytopic|0|-2',
      brokers='kafka01.example.com:9092',
      stop_on_eof=true,
      kafka_
```
**Troubleshooting Kafka Integration Issues**

The following topics can help you troubleshoot issues integrating Vertica with Apache Kafka.

**Using kafkacat to Troubleshoot Kafka Integration Issues**

Kafkacat is a third-party open-source utility that lets you connect to Kafka from the Linux command line. It uses the same underlying library that the Vertica integration for Apache Kafka uses to connect to Kafka. This shared library makes kafkacat a useful tool for testing and debugging your Vertica integration with Kafka.

You may find kafkacat useful for:

- Testing connectivity between your Vertica and Kafka clusters.
- Examining Kafka data for anomalies that may prevent some of it from loading into Vertica.
- Producing data for test loads into Vertica.
- Listing details about a Kafka topic.

For more information about kafkacat, see its [project page at Github](https://github.com/kafkacat/kafkacat).

**Running kafkacat on Vertica Nodes**

The kafkacat utility is bundled in the Vertica install package, so it is available on all nodes of your Vertica cluster in the `/opt/vertica/packages/kafka/bin` directory. This is
the same directory containing the vkconfig utility, so if you have added it to your path, you can use the kafkacat utility without specifying its full path. Otherwise, you can add this path to your shell's environment variable using the command:

```
set PATH=/opt/vertica/packages/kafka/bin:$PATH
```

**Note:**
On Debian and Ubuntu systems, you must tell kafkacat to use Vertica's own copy of the SSL libraries by setting the LD_LIBRARY_PATH environment variable:

```
$ export LD_LIBRARY_PATH=/opt/vertica/lib
```

If you do not set this environment variable, the kafkacat utility exits with the error:

```
kafkacat: error while loading shared libraries: libcrypto.so.10: cannot open shared object file: No such file or directory
```

Executing kafkacat without any arguments gives you a basic help message:

```
$ kafkacat
Error: -b <broker,..> missing

Usage: kafkacat <options> [file1 file2 .. | topic1 topic2 ..]]
```

Copyright (c) 2014-2015, Magnus Edenhill
Version releases/VER_8_1_RELEASE_BUILD_1_555_20170615-4931-g3fb918 (librdkafka releases/VER_8_1_RELEASE_BUILD_1_555_20170615-4931-g3fb918)

**General options:**
- `-C | -P | -L` Mode: Consume, Produce or metadata List
- `-G <group-id>` Mode: High-level KafkaConsumer (Kafka 0.9 balanced consumer groups)
- `-t <topic>` Topic to consume from, produce to, or list
- `-p <partition>` Partition
- `-b <brokers,..>` Bootstrap broker(s) (host[:port])
- `-D <delim>` Message delimiter character:
  - `a-z.. | \r | \n | \t | \xNN`
  - Default: `\n`
- `-K <delim>` Key delimiter (same format as `-D`)
- `-c <cnt>` Limit message count
- `-X list` List available librdkafka configuration properties
- `-X prop=val` Set librdkafka configuration property.
  - Properties prefixed with "topic." are applied as topic properties.
- `-X dump` Dump configuration and exit.
- `-d <dbg1,...>` Enable librdkafka debugging:
  - `all,generic,broker,topic,metadata,queue,msg,protocol,cgrp,security,fetch,feature`
- `-q` Be quiet (verbosity set to 0)
- `-v` Increase verbosity
-V  Print version

Producer options:
- z snappy|gzip  Message compression. Default: none
- p -I  Use random partitioner
- D <delim>  Delimiter to split input into messages
- K <delim>  Delimiter to split input key and message
- I  Send messages from a file separated by delimiter, as with stdin.
   (only one file allowed)
- T  Output sent messages to stdout, acting like tee.
- c <cnt>  Exit after producing this number of messages
- Z  Send empty messages as NULL messages
file1 file2..  Read messages from files.
   With -l, only one file permitted.
   Otherwise, the entire file contents will be sent as one single message.

Consumer options:
- o <offset>  Offset to start consuming from:
   beginning | end | stored |
   <value> (absolute offset) |
   -<value> (relative offset from end)
- e  Exit successfully when last message received
- f <fmt..>  Output formatting string, see below.
   Takes precedence over -D and -K.
- D <delim>  Delimiter to separate messages on output
- K <delim>  Print message keys prefixing the message
   with specified delimiter.
- O  Print message offset using -K delimiter
- c <cnt>  Exit after consuming this number of messages
- Z  Print NULL messages and keys as "NULL"(instead of empty)
- u  Unbuffered output

Metadata options:
- t <topic>  Topic to query (optional)

Format string tokens:
%  Message payload
%S  Message payload length (or -I for NULL)
%R  Message payload length (or -I for NULL) serialized
   as a binary big endian 32-bit signed integer
%k  Message key
%K  Message key length (or -I for NULL)
%t  Topic
%p  Partition
%o  Message offset
\n \r \t  Newlines, tab
\xXX \xNN  Any ASCII character

Example:
- f 'Topic %t [%p] at offset %o: key %k: %s\n'

Consumer mode (writes messages to stdout):
kafkacat -b <broker> -t <topic> -p <partition>
or:
kafkacat -C -b ...

High-level KafkaConsumer mode:
Testing Connectivity to a Kafka Cluster and Getting Metadata

One basic troubleshooting step you often need to perform is verifying that Vertica nodes can connect to the Kafka cluster. Successfully executing just about any kafkacat command will prove the Vertica node you are logged into is able to reach the Kafka cluster. One simple command you can execute to verify connectivity is to get the metadata for all of the topics the Kafka cluster has defined. The following example demonstrates using kafkacat's metadata listing command to connect to the broker named kafka01 running on port 6667 (the Kafka broker port used by Hortonworks Hadoop clusters).

```bash
$ kafkacat -L -b kafka01:6667
Metadata for all topics (from broker -1: kafka01:6667/bootstrap):
  2 brokers:
    broker 1001 at kafka03.example.com:6667
    broker 1002 at kafka01.example.com:6667
  4 topics:
    topic "iot-data" with 3 partitions:
      partition 2, leader 1002, replicas: 1002, isrs: 1002
      partition 1, leader 1001, replicas: 1001, isrs: 1001
      partition 0, leader 1002, replicas: 1002, isrs: 1002
    topic "__consumer_offsets" with 50 partitions:
      partition 23, leader 1001, replicas: 1002,1001, isrs: 1001,1002
      partition 41, leader 1001, replicas: 1002,1001, isrs: 1001,1002
      partition 32, leader 1002, replicas: 1002,1001, isrs: 1001,1002
      partition 8, leader 1002, replicas: 1002,1001, isrs: 1001,1002
      partition 17, leader 1001, replicas: 1002,1001, isrs: 1001,1002
      partition 44, leader 1002, replicas: 1002,1001, isrs: 1001,1002
      partition 35, leader 1001, replicas: 1002,1001, isrs: 1001,1002
      partition 26, leader 1002, replicas: 1002,1001, isrs: 1001,1002
      partition 11, leader 1001, replicas: 1002,1001, isrs: 1001,1002
      partition 29, leader 1001, replicas: 1002,1001, isrs: 1001,1002
      partition 38, leader 1002, replicas: 1002,1001, isrs: 1001,1002
      partition 47, leader 1001, replicas: 1002,1001, isrs: 1001,1002
      partition 20, leader 1002, replicas: 1002,1001, isrs: 1001,1002
      partition 2, leader 1002, replicas: 1002,1001, isrs: 1001,1002
      partition 5, leader 1001, replicas: 1002,1001, isrs: 1001,1002
      partition 14, leader 1002, replicas: 1002,1001, isrs: 1001,1002
      partition 46, leader 1002, replicas: 1002,1001, isrs: 1001,1002
```
You can also use this output to verify the topics defined by your Kafka cluster, as well as the number of partitions each topic defines. You need this information when copying data between Kafka and Vertica.

## Retrieving Messages from a Kafka Topic

When you are troubleshooting issues with streaming messages from Kafka in Vertica, you often want to look at the raw data that Kafka sent. For example, you may want to verify that the messages are in the format that you expect. Or, you may want to review specific messages to see if some of them weren’t in the right format for Vertica to parse. You can use kafkacat to read messages from a topic using its consume command (-C). At the very least, you must pass kafkacat the brokers (-b argument) and the topic you want to read from (-t). You can also choose to read messages from a specific offset (-o) and partition
Vertica Documentation
Integrating with Apache Kafka
(-p). You will usually also want kafkacat to exit after completing the data read (-e) instead
continuing to wait for more messages.
This example gets the last message in the topic named web_hits. The offset argument uses
a negative value, which tells kafkacat to read from the end of the topic.
$ kafkacat -C -b kafka01:6667 -t web_hits -o -1 -e
{"url": "wp-content/list/search.php", "ip": "132.74.240.52",
"date": "2018/03/28 14:12:34",
"user_agent": "Mozilla/5.0 (iPod; U; CPU iPhone OS 4_2 like
Mac OS X; sl-SI) AppleWebKit/532.22.4 (KHTML, like Gecko) Version/3.0.5
Mobile/8B117 Safari/6532.22.4"}
% Reached end of topic web_hits [0] at offset 54932: exiting

You can also read a specific range of messages by specifying an offset and a limit (-c
argument). For example, you may want to look at a specific range of data to determine why
Vertica could not load it. The following example reads 10 messages from the topic iot-data
starting at offset 3280:
$ kafkacat -C -b kafka01:6667 -t iot-data -o 3280 -c 10 -e
63680, 19, 24.439323, 26.0128725
43510, 71, 162.319805, -37.4924025
91113, 53, 139.764857, -74.735731
88508, 14, -85.821967, -7.236280
20419, 31, -129.583988, 13.995481
79365, 79, 153.184594, 51.1583485
26283, 25, -168.911020, 35.331027
32111, 56, -157.930451, 82.2676385
56808, 17, 19.603286, -0.7698495
9118, 73, 97.365445, -74.8593245

Generating Data for a Kafka Topic
If you are preparing to stream data from a Kafka topic that is not yet active, you may want
a way to stream test messages. You can then verify that the topic's messages load into
Vertica without worrying that you will miss actual data.
To send data to Kafka, use kafkacat's produce command (-P). The easiest way to supply it
with messages is to pipe them in via STDIN, one message per line. You can choose a specific
partition for the data, or have kafkacat randomly assign each message to a random
partition by setting the partition number to -1. For example, suppose you have a file named
iot-data.csv that you wanted to produce to random partitions of a Kafka topic named iotdata. Then you could use the following command:
$ cat iot_data.csv | kafkacat -P -p -1 -b kafka01:6667 -t iot-data

Vertica Analytic Database (11.0.x)

Troubleshooting Slow Load Speeds

Here are some potential issues that could cause messages to load slowly from Kafka.

Verify You Have Disabled the API Version Check When Communicating with Kafka 0.9 or Earlier

If your Kafka cluster is running 0.9 or earlier, be sure you have disable the rdkafka library's `api.version.request` option. If you do not, every Vertica connection to Kafka will pause for 10 seconds until the API version request times out. Depending on the frame size of your load or other timeout settings, this delay can either reduce the throughput of your data loads. It can even totally prevent messages from being loaded. See Configuring Vertica for Apache Kafka Version 0.9 and Earlier

Update the message-max-bytes Setting of Schedulers Created Before Vertica Version 9.1.1

If you find that a scheduler is loading data slowly after upgrading to Vertica Version 9.1.1 or later, consider updating its load spec's `message-max-bytes` parameter. The meaning of this setting changed in Kafka 0.11. See Changes to the message.max.bytes Setting in Kafka Version 0.11 and Later for more information.

Eon Mode and Cloud Latency

Eon Mode separates compute from storage in a Vertica cluster, which can cause a small amount of latency when Vertica loads and saves data. Cloud computing infrastructure can also cause latency. This latency can eat into the frame duration for your schedulers, causing them to load less data in each frame. For this reason, you should consider increasing frame durations when loading data from Kafka in an Eon Mode database. See Vertica Eon Mode and Kafka for more information.
Troubleshooting Missing Messages

Kafka producers that emit a high data volume might overwhelm Vertica, possibly resulting in messages expiring in Kafka before the scheduler loads them into Vertica. This is more common when Vertica performs additional processing on the loaded messages, such as text indexing.

If you see that you are missing messages from a topic with multiple partitions, consider configuring the --max-parallelism microbatch utility option. The --max-parallelism option splits a microbatch into multiple subset microbatches. This enables you to use PLANNEDCONCURRENCY available in the scheduler's resource pool to create more scheduler threads for simultaneous loads of a single microbatch. Each node uses the resource pool EXECUTIONPARALLELISM setting to determine the number of threads created to process partitions. Because EXECUTIONPARALLELISM threads are created per scheduler thread, using more PLANNEDCONCURRENCY per microbatch enables you to process more partitions in parallel for a single unit of work.

For details, see Managing Scheduler Resources and Performance.

vkconfig Script Options

Vertica includes the vkconfig script that lets you configure your schedulers. This script contains multiple tools that set groups of options in the scheduler, as well as starting and shutting it down. You supply the tool you want to use as the first argument in your call to the vkconfig script.

The topics in this section explain each of the tools available in the vkconfig script as well as their options. You can use the options in the Common vkconfig Script Options topic with any of the utilities. Utility-specific options appear in their respective tables.

Common vkconfig Script Options

These options are available across the different tools available in the vkconfig script.
<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>--conf filename</td>
<td>A text file containing configuration options for the vkconfig script. See Configuration File Format below.</td>
</tr>
</tbody>
</table>
| --config-schema schema_name | The name of the scheduler's Vertica schema. This value is the same as the name of the scheduler. You use this name to identify the scheduler during configuration.  
**Default Value:**  
stream_config |
| --dbhost host name    | The host name or IP address of the Vertica node acting as the initiator node for the scheduler.   
**Default Value:**  
localhost |
| --dbport port_number  | The port to use to connect to a Vertica database.   
**Default Value:**  
5433 |
<p>| --enable-ssl          | Enables the vkconfig script to use SSL to connect to Vertica or between Vertica and Kafka. See Configuring Your Scheduler for TLS Connections for more information. |
| --help                | Prints out a help menu listing available options with a description. |
| --jdbc-opt option=value [&amp; option2 =value2...] | One or more options to add to the standard JDBC URL that vkconfig uses to connect to Vertica. Cannot be combined with --jdbc-url. |
| --jdbc-url url        | A complete JDBC URL that vkconfig uses instead of standard JDBC URL string to connect to Vertica. |
| --password password   | Password for the database user. |
| --ssl-ca-alias alias_name | The alias of the root certificate authority in the truststore. When set, the scheduler loads only the certificate associated with the specified |</p>
<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>alias</td>
<td>alias. When omitted, the scheduler loads all certificates into the truststore.</td>
</tr>
<tr>
<td>--ssl-key-alias alias alias_name</td>
<td>The alias of the key and certificate pairs within the keystore. Must be set when Vertica uses SSL to connect to Kafka.</td>
</tr>
<tr>
<td>--ssl-key-password password</td>
<td>The password for the SSL key. Must be set when Vertica uses SSL to connect to Kafka.</td>
</tr>
<tr>
<td>Caution:</td>
<td>Specifying this option on the command line can expose it to other users logged into the host. Always use a configuration file to set this option.</td>
</tr>
<tr>
<td>--username username</td>
<td>The Vertica database user used to alter the configuration of the scheduler. This use must have create privileges on the scheduler's schema.</td>
</tr>
<tr>
<td>Default Value:</td>
<td>Current user</td>
</tr>
<tr>
<td>--version</td>
<td>Displays the version number of the scheduler.</td>
</tr>
</tbody>
</table>

### Configuration File Format

You can use a configuration file to store common parameters you use in your calls to the vkconfig utility. The configuration file is a text file containing one option setting per line in the format:

```
option=value
```

You can also include comments in the option file by prefixing them with a hash mark (#).

```plaintext
#config.properties:
username=myuser
password=mypassword
dbhost=localhost
dbport=5433
```

You tell vkconfig to use the configuration file using the --conf option:
$ /opt/vertica/packages/kafka/bin/vkconfig source --update --conf config.properties

You can override any stored parameter from the command line:

$ /opt/vertica/packages/kafka/bin/vkconfig source --update --conf config.properties --dbhost otherVerticaHost

## Examples

These examples show how you can use the shared utility options.

Display help for the scheduler utility:

```bash
$ vkconfig scheduler --help
This command configures a Scheduler, which can run and load data from configured sources and clusters into Vertica tables. It provides options for changing the 'frame duration' (time given per set of batches to resolve), as well as the dedicated Vertica resource pool the Scheduler will use while running.
```

<table>
<thead>
<tr>
<th>PARAMETER</th>
<th>#ARGS</th>
<th>DESCRIPTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>conf</td>
<td>1</td>
<td>Allow the use of a properties file to associate parameter keys and values. This file enables command string reuse and cleaner command strings.</td>
</tr>
<tr>
<td>help</td>
<td>0</td>
<td>Outputs a help context for the given subutility.</td>
</tr>
<tr>
<td>version</td>
<td>0</td>
<td>Outputs the current Version of the scheduler.</td>
</tr>
<tr>
<td>skip-validation</td>
<td>0</td>
<td>[Depricated] Use --validation-type.</td>
</tr>
<tr>
<td>validation-type</td>
<td>1</td>
<td>Determine what happens when there are configuration errors. Accepts: ERROR - errors out, WARN - prints out a message and continues, SKIP - skip running validations</td>
</tr>
<tr>
<td>dbhost</td>
<td>1</td>
<td>The Vertica database hostname that contains metadata and configuration information. The default value is 'localhost'.</td>
</tr>
<tr>
<td>dbport</td>
<td>1</td>
<td>The port at the hostname to connect to the Vertica database. The default value is '5433'.</td>
</tr>
<tr>
<td>username</td>
<td>1</td>
<td>The user to connect to Vertica. The default value is the current system user.</td>
</tr>
<tr>
<td>password</td>
<td>1</td>
<td>The password for the user connecting to Vertica. The default value is empty.</td>
</tr>
<tr>
<td>jdbc-url</td>
<td>1</td>
<td>A JDBC URL that can override Vertica connection parameters and provide additional JDBC options.</td>
</tr>
<tr>
<td>jdbc-opt</td>
<td>1</td>
<td>Options to add to the JDBC URL used to connect to Vertica ('&amp;'-separated key=value list). Used with generated URL (i.e. not with '--jdbc-url' set).</td>
</tr>
<tr>
<td>enable-ssl</td>
<td>1</td>
<td>Enable SSL between JDBC and Vertica and/or Vertica and Kafka.</td>
</tr>
<tr>
<td>ssl-ca-alias</td>
<td>1</td>
<td>The alias of the root CA within the provided truststore used when connecting between Vertica and Kafka.</td>
</tr>
<tr>
<td>ssl-key-alias</td>
<td>1</td>
<td>The alias of the key and certificate pair within the provided keystore used when connecting between Vertica and Kafka.</td>
</tr>
</tbody>
</table>
ssl-key-password 1 The password for the key used when connecting between Vertica and Kafka. Should be hidden with file access (see --conf).

cfg-schema 1 The schema containing the configuration details to be used, created or edited. This parameter defines the scheduler. The default value is 'stream_config'.

create 0 Create a new instance of the supplied type.
read 0 Read an instance of the supplied type.
update 0 Update an instance of the supplied type.
delete 0 Delete an instance of the supplied type.
drop 0 Drops the specified configuration schema. CAUTION: this command will completely delete and remove all configuration and monitoring data for the specified scheduler.

dump 0 Dump the config schema query string used to answer this command in the output.
operator 1 Specifies a user designated as an operator for the created configuration. Used with --create.
add-operator 1 Add a user designated as an operator for the specified configuration. Used with --update.
remove-operator 1 Removes a user designated as an operator for the specified configuration. Used with --update.
upgrade 0 Upgrade the current scheduler configuration schema to the current version of this scheduler. WARNING: if upgrading between EXCAVATOR and FRONTLOADER be aware that the Scheduler is not backwards compatible. The upgrade procedure will translate your kafka model into the new stream model.

upgrade-to-schema 1 Used with upgrade: will upgrade the configuration to a new given schema instead of upgrading within the same schema.
fix-config 0 Attempts to fix the configuration (ex: dropped tables) before doing any other updates. Used with --update.
frame-duration 1 The duration of the Scheduler's frame, in which every configured Microbatch runs. Default is 300 seconds: '00:05:00'
resource-pool 1 The Vertica resource pool to run the Scheduler on. Default is 'general'.
config-refresh 1 The interval of time between Scheduler configuration refreshes. Default is 5 minutes: '00:05'
new-source-policy 1 The policy for new Sources to be scheduled during a frame. Options are: START, END, and FAIR. Default is 'FAIR'.
pushback-policy 1
pushback-max-count 1
auto-sync 1 Automatically update configuration based on metadata from the Kafka cluster
consumer-group-id 1 The Kafka consumer group id to report offsets to.
eof-timeout-ms 1 [DEPRECATED] This option has no effect.
Scheduler Tool Options

The `vkconfig` script's scheduler tool lets you configure schedulers that continuously loads data from Kafka into Vertica. Use the scheduler tool to create, update, or delete a scheduler, defined by `config-schema`. If you do not specify a scheduler, commands apply to the default `stream_config` scheduler.

Syntax

```
vkconfig scheduler {--create | --read | --update | --drop} other_options...
```

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>--create</code></td>
<td>Creates a new load spec, cannot be used with <code>--delete</code>, <code>--read</code>, or <code>--update</code>.</td>
</tr>
<tr>
<td><code>--read</code></td>
<td>Outputs the current setting of the scheduler in JSON format. Cannot be used with <code>--create</code>, <code>--delete</code>, or <code>--update</code>.</td>
</tr>
<tr>
<td><code>--update</code></td>
<td>Updates an existing scheduler. Cannot be used with <code>--create</code>, <code>--delete</code>, or <code>--read</code>.</td>
</tr>
<tr>
<td><code>--drop</code></td>
<td>Drops the scheduler's schema. Dropping its schema deletes the scheduler. After you drop the scheduler's schema, you cannot recover it.</td>
</tr>
<tr>
<td><code>--add-operator</code></td>
<td>Grants a Vertica user account or role access to use and alter the scheduler. Requires the <code>--update</code> shared utility option.</td>
</tr>
<tr>
<td><code>--auto-sync</code></td>
<td>When TRUE, Vertica automatically synchronizes scheduler source information at the interval specified in <code>--config-refresh</code>.</td>
</tr>
<tr>
<td></td>
<td>For details about what the scheduler synchronizes at each interval, see the &quot;Validating Schedulers&quot; and &quot;Synchronizing Schedulers&quot; sections in</td>
</tr>
<tr>
<td></td>
<td>Automatically Copying Data From Kafka.</td>
</tr>
</tbody>
</table>

**Default Value:**

TRUE
<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>--config-refresh</td>
<td>The interval of time that the scheduler runs before synchronizing its settings and updating its cached metadata (such as changes made by using the --update option).</td>
</tr>
<tr>
<td>HH:MM:SS</td>
<td><strong>Default Value:</strong>                                                                                                                                                                                                                                                                                                                                                                                                                                                           00:05:00</td>
</tr>
<tr>
<td>--consumer-group-id</td>
<td>The name of the Kafka consumer group to which Vertica reports its progress consuming messages. See Monitoring Vertica Message Consumption with Consumer Groups for more information.</td>
</tr>
<tr>
<td>id_id_name</td>
<td><strong>Default Value:</strong>                                                                                                                                                                                                                                                                                                                                                                                                                                                           vertica_database-name</td>
</tr>
<tr>
<td></td>
<td>Set this value to an empty string ('') to disable progress reports to a Kafka consumer group.</td>
</tr>
<tr>
<td>--dump</td>
<td>When you use this option along with the --read option, vkconfig outputs the Vertica query it would use to retrieve the data, rather than outputting the data itself. This option is useful if you want to access the data from within Vertica without having to go through vkconfig. This option has no effect if not used with --read.</td>
</tr>
<tr>
<td>--eof-timeout-ms</td>
<td>If a COPY command does not receive any messages within the eof-timeout-ms interval, Vertica responds by ending that COPY statement.</td>
</tr>
<tr>
<td>number of milliseconds</td>
<td><strong>Default Value:</strong>                                                                                                                                                                                                                                                                                                                                                                                                                                                           1 second</td>
</tr>
<tr>
<td></td>
<td>See Manually Copying Data From Kafka for more information.</td>
</tr>
<tr>
<td>--fix-config</td>
<td>Repairs the configuration and re-creates any missing tables. Valid only with the --update shared configuration option.</td>
</tr>
<tr>
<td>--frame-duration</td>
<td>The interval of time that all individual frames last with this scheduler. The scheduler must have enough time to run each microbatch (each of which execute a COPY statement). You can approximate the average available time per microbatch using</td>
</tr>
<tr>
<td>HH:MM:SS</td>
<td></td>
</tr>
</tbody>
</table>
Option | Description
--- | ---
| | the following equation:

\[
\text{TimePerMicrobatch} = \frac{(\text{FrameDuration} \times \text{Parallelism})}{\text{Microbatches}}
\]

This is just a rough estimate as there are many factors that impact the amount of time that each microbatch will be able to run.

The vkconfig utility warns you if the time allocated per microbatch is below 2 seconds. You usually should allocate more than two seconds per microbatch to allow the scheduler to load all of the data in the data stream.

**Default Value:**

00:05:00

**Note:**

In versions of Vertica earlier than 10.0, the default frame duration was 10 seconds. In version 10.0, this default value was increased to 5 minutes in part to compensate for the removal of WOS. If you created your scheduler with the default frame duration in a version prior to 10.0, the frame duration is not updated to the new default value. In this case, consider adjusting the frame duration manually. See [Choosing a Frame Duration](#) for more information.

---

**--message_max_bytes max_message_size**

Specifies the maximum size, in bytes, of a Kafka protocol batch message.

**Default Value:**

25165824

**Important:**

You may need to manually update this value if you created a scheduler using Vertica 9.1.0 or earlier. The meaning of Kafka's `max.message.bytes` setting changed between version 0.10 and 0.11. See [Changes to the message.max.bytes Setting in Kafka Version 0.11 and Later](#) for more information.

To upgrade a scheduler to an alternate schema, use the upgrade-to-schema parameter. See Updating Schedulers After Vertica Upgrades for more information.</td>
</tr>
<tr>
<td>--upgrade-to-schema <em>schema name</em></td>
<td>Copies the scheduler's schema to a new schema specified by <em>schema name</em> and then upgrades it to be compatible with the current version of Vertica. Vertica does not alter the old schema. Requires the --upgrade scheduler utility option.</td>
</tr>
</tbody>
</table>
| --validation-type {ERROR|WARN|SKIP} | Specifies the level of validation performed on the scheduler. Invalid SQL syntax and other errors can cause invalid microbatches. Vertica supports the following validation types:  
  - ERROR - Cancel configuration or creation if validation fails.  
  - WARN - Proceed with task if validation fails, but display a warning.  
  - SKIP - Perform no validation.  
  **Default Value:**  
  ERROR  
  For more information on validation, refer to Automatically Copying Data From Kafka.  
  Renamed from --skip-validation. |

See Common vkconfig Script Options for options that are available in all of the vkconfig tools.
Examples

These examples show how you can use the scheduler utility options.

Give a user, Jim, privileges on the StreamConfig scheduler. Specify that you are making edits to the stream_config scheduler with the --config-schema option:

```
$ /opt/vertica/packages/kafka/bin/vkconfig scheduler --update --config-schema stream_config --add-operator Jim
```

Edit the default stream_config scheduler so that every microbatch waits for data for one second before ending:

```
$ /opt/vertica/packages/kafka/bin/vkconfig scheduler --update --eof-timeout-ms 1000
```

Upgrade the scheduler named iot_scheduler_8.1 to a new scheduler named iot_scheduler_9.0 that is compatible with the current version of Vertica:

```
$ /opt/vertica/packages/kafka/bin/vkconfig scheduler --upgrade --config-schema iot_scheduler_8.1 \
    --upgrade-to-schema iot_scheduler_9.0
```

Drop the schema scheduler219a:

```
$ /opt/vertica/packages/kafka/bin/vkconfig scheduler --drop --config-schema scheduler219a --username dbadmin
```

Read the current setting of the options you can set using the scheduler tool for the scheduler defined in weblogs.conf.

```
$ vkconfig scheduler --read --conf weblog.conf
dict
{"version":"v9.2.0", "frame_duration":"00:00:10", "resource_pool":"weblog_pool", "config_refresh":"00:05:00", "new_source_policy":"FAIR", "pushback_policy":"LINEAR", "pushback_max_count":5, "auto_sync":true, "consumer_group_id":null}
```

Cluster Tool Options

The vkconfig script's cluster tool lets you define the streaming hosts your scheduler connects to.
## Syntax

vkconfig cluster {--create | --read | --update | --delete} [--cluster _cluster_name_] [other_options...]

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>--create</td>
<td>Creates a new load spec, cannot be used with --delete, --read, or --update.</td>
</tr>
<tr>
<td>--read</td>
<td>Outputs the settings of all clusters defined in the scheduler. This output is in JSON format. Cannot be used with --create, --delete, or --update.</td>
</tr>
<tr>
<td></td>
<td>You can limit the output to specific clusters by supplying one or more cluster names in the --cluster option. You can also limit the output to clusters that contain one or more specific hosts using the --hosts option. Use commas to separate multiple values.</td>
</tr>
<tr>
<td></td>
<td>You can use LIKE wildcards in these options. See LIKE predicate for more information about using wildcards.</td>
</tr>
<tr>
<td>--update</td>
<td>Updates an existing cluster. Cannot be used with --create, --delete, or --read.</td>
</tr>
<tr>
<td>--delete</td>
<td>Deletes a cluster. Cannot be used with --create, --read, or --update.</td>
</tr>
<tr>
<td>--dump</td>
<td>When you use this option along with the --read option, vkconfig outputs the Vertica query it would use to retrieve the data, rather than outputting the data itself. This option is useful if you want to access the data from within Vertica without having to go through vkconfig. This option has no effect if not used with --read.</td>
</tr>
<tr>
<td>--cluster <em>cluster_name</em></td>
<td>A unique, case-insensitive name for the cluster to operate on. This option is required for --create, --update, and --delete.</td>
</tr>
<tr>
<td>--hosts b1:port [,b2:port...]</td>
<td>Identifies the broker hosts that you want to add, edit, or remove from a Kafka cluster. To identify multiple hosts, use a comma delimiter.</td>
</tr>
<tr>
<td>--kafka_conf</td>
<td>A semicolon-delimited list of option=value pairs to pass</td>
</tr>
</tbody>
</table>
Vertica Documentation
Integrating with Apache Kafka

Option

Description

'option=value
[;
option2
=value2...]'

directly to the rdkafka library. This is the library Vertica uses to
communicate with Kafka. You can use this parameter to directly
set configuration options that are not available through the
Vertica integration with Kafka. See Directly Setting Kafka Library
Options for details.

--new-cluster
cluster_name

The updated name for the cluster. Requires the --update shared
utility option.

--validation-type Specifies the level of validation performed on a created or
{ERROR|WARN|SKIP} updated cluster:
l

l

l

ERROR - Cancel configuration or creation if vkconfig
cannot validate that the cluster exists. This is the default
setting.
WARN - Proceed with task if validation fails, but display a
warning.
SKIP - Perform no validation.

Renamed from --skip-validation.
See Common vkconfig Script Options for options that are available in all of the vkconfig
tools.

Examples
This example shows how you can create the cluster, StreamCluster1, and assign two hosts:
$ /opt/vertica/packages/kafka/bin/vkconfig cluster --create --cluster StreamCluster1 \
--hosts 10.10.10.10:9092,10.10.10.11:9092
--conf myscheduler.config

This example shows how you can list all of the clusters associated with the scheduler
defined in the weblogs.conf file:
$ vkconfig cluster --read --conf weblog.conf
{"cluster":"kafka_weblog",
"hosts":"kafka01.example.com:9092,kafka02.example.com:9092"}

Vertica Analytic Database (11.0.x)

Source Tool Options

Use the vkconfig script's source tool to create, update, or delete a source.

Syntax

vkconfig source (--create | --read | --update | --delete) --source source_name [other_options...]

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>--create</td>
<td>Creates a new load spec, cannot be used with --delete, --read, or --update.</td>
</tr>
<tr>
<td>--read</td>
<td>Outputs the current setting of the sources defined in the scheduler. The output is in JSON format. Cannot be used with --create, --delete, or --update.</td>
</tr>
<tr>
<td></td>
<td>By default this option outputs all of the sources defined in the scheduler. You can limit the output by using the --cluster, --enabled, --partitions, and --source options. The output will only contain sources that match the values in these options. The --enabled option can only have a true or false value. The --source option is case-sensitive. You can use LIKE wildcards in these options. See LIKE predicate for more information about using wildcards.</td>
</tr>
<tr>
<td>--update</td>

</tbody>
</table>
## Examples

The following examples show how you can create or update SourceFeed.

Create the source SourceFeed and assign it to the cluster, StreamCluster1 in the scheduler defined by the myscheduler.conf config file:

```
$ /opt/vertica/packages/kafka/bin/vkconfig source --create --source SourceFeed \
    --cluster StreamCluster1 --partitions 3 \
    --conf myscheduler.conf
```

Update the existing source SourceFeed to use the existing cluster, StreamCluster2 in the scheduler defined by the myscheduler.conf config file:

```
$ /opt/vertica/packages/kafka/bin/vkconfig source --update --source SourceFeed \
    --new-cluster StreamCluster2 \
    --conf myscheduler.conf
```

The following example reads the sources defined in the scheduler defined by the weblogs.conf file.

```
$ vkconfig source --read --conf weblog.conf
{
    "source":"web_hits", "partitions":1, "src_enabled":true,
    "cluster":"kafka_weblog",
    "hosts":"kafka01.example.com:9092,kafka02.example.com:9092"
}
```

## Target Tool Options

Use the target tool to configure a Vertica table to receive data from your streaming data application.
## Syntax

vkconfig target [--create | --read | --update | --delete] [--target-table table --table_schema schema] [other_options...]

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>--create</td>
<td>Creates a new load spec, cannot be used with --delete, --read, or --update.</td>
</tr>
<tr>
<td>--read</td>
<td>Outputs the targets defined in the scheduler. This output is in JSON format. Cannot be used with --create, --delete, or --update.</td>
</tr>
<tr>
<td></td>
<td>By default this option outputs all of the targets defined in the configuration schema. You can limit the output to specific targets by using the --target-schema and --target-table options. The vkconfig script only outputs targets that match the values you set in these options.</td>
</tr>
<tr>
<td></td>
<td>You can use LIKE wildcards in these options. See <a href="https://docs.vertica.com/en-us/11.0.2/help/pdfbooks/verticahelp11.0.2.pdf">LIKE predicate</a> for more information about using wildcards.</td>
</tr>
<tr>
<td>--update</td>
<td>Updates an existing target. Cannot be used with --create, --delete, or --read.</td>
</tr>
<tr>
<td>--delete</td>
<td>Deletes a target. Cannot be used with --create, --read, or --update.</td>
</tr>
<tr>
<td>--target-table table</td>
<td>The name of a Vertica table receive data from the scheduler. This option is required for --create, --update, and --delete.</td>
</tr>
<tr>
<td>--target-schema schema</td>
<td>The existing Vertica schema containing the target table. This option is required for --create, --update, and --delete.</td>
</tr>
<tr>
<td>--dump</td>
<td>When you use this option along with the --read option, vkconfig outputs the Vertica query it would use to retrieve the data, rather than outputting the data itself. This option is useful if you want to access the data from within Vertica without having to go through vkconfig. This option has no effect if not used with --read.</td>
</tr>
<tr>
<td>--new-target-schema schema_name</td>
<td>Changes the Vertica schema associated with this schema to a</td>
</tr>
<tr>
<td>Option</td>
<td>Description</td>
</tr>
<tr>
<td>------------------------------------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>new, already created schema.</td>
<td></td>
</tr>
<tr>
<td>Requires: --update option.</td>
<td></td>
</tr>
<tr>
<td>--new-target-table <em>schema_name</em></td>
<td>Changes the Vertica target table associated with this schema to a new, already created table.</td>
</tr>
<tr>
<td>Requires: --update option.</td>
<td></td>
</tr>
<tr>
<td>--validation-type {ERROR</td>
<td>WARN</td>
</tr>
<tr>
<td></td>
<td>• ERROR - Cancel configuration or creation if vkconfig cannot validate that the table exists. This is the default setting.</td>
</tr>
<tr>
<td></td>
<td>• WARN - Creates or updates the target if validation fails, but display a warning.</td>
</tr>
<tr>
<td></td>
<td>• SKIP - Perform no validation.</td>
</tr>
<tr>
<td></td>
<td>Renamed from --skip-validation.</td>
</tr>
</tbody>
</table>

**Important:**

Avoid having columns with primary key restrictions in your target table. The scheduler stops loading data if it encounters a row that has a value which violates this restriction. If you must have a primary key restricted column, try to filter out any redundant values for that column in the streamed data before it is loaded by the scheduler.

See [Common vkconfig Script Options](#) for options that are available in all of the vkconfig tools.

## Examples

This example shows how you can create a target for the scheduler defined in the myscheduler.conf configuration file from public.streamtarget table:

```bash
$ /opt/vertica/packages/kafka/bin/vkconfig target --create --target-table streamtarget --conf myscheduler.conf
```

This example lists all of the targets in the scheduler defined in the weblogs.conf configuration file.
Load Spec Tool Options

The `vkconfig` script's load spec tool lets you provide parameters for a `COPY` statement that loads streaming data.

Syntax

```
$ vkconfig load-spec {--create | --read | --update | --delete} [--load-spec spec-name]
[other-options...]
```

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>--create</code></td>
<td>Creates a new load spec, cannot be used with <code>--delete</code>, <code>--read</code>, or <code>--update</code>.</td>
</tr>
<tr>
<td><code>--read</code></td>
<td>Outputs the current settings of the load specs defined in the scheduler. This output is in JSON format. Cannot be used with <code>--create</code>, <code>--delete</code>, or <code>--update</code>. By default, this option outputs all load specs defined in the scheduler. You can limit the output by supplying a single value or a comma-separated list of values to these options:</td>
</tr>
<tr>
<td></td>
<td>- <code>--load-spec</code></td>
</tr>
<tr>
<td></td>
<td>- <code>--filters</code></td>
</tr>
<tr>
<td></td>
<td>- <code>--uds-kv-parameters</code></td>
</tr>
<tr>
<td></td>
<td>- <code>--parser</code></td>
</tr>
<tr>
<td></td>
<td>- <code>--load-method</code></td>
</tr>
<tr>
<td></td>
<td>- <code>--message-max-bytes</code></td>
</tr>
<tr>
<td></td>
<td>- <code>--parser-parameters</code></td>
</tr>
</tbody>
</table>

The `vkconfig` script only outputs the...
<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>configuration of load specs that match the values you supply.  You can use LIKE wildcards in these options. See LIKE predicate for more information about using wildcards.</td>
</tr>
<tr>
<td>--update</td>
<td>Updates an existing load-spec. Cannot be used with --create, --delete, or --read.</td>
</tr>
<tr>
<td>--delete</td>
<td>Deletes a load-spec. Cannot be used with --create, --read, or --update.</td>
</tr>
<tr>
<td>--load-spec <em>spec-name</em></td>
<td>A unique name for copy load spec to operate on. This option is required for --create, --update, and --delete.</td>
</tr>
<tr>
<td>--dump</td>
<td>When you use this option along with the --read option, vkconfig outputs the Vertica query it would use to retrieve the data, rather than outputting the data itself. This option is useful if you want to access the data from within Vertica without having to go through vkconfig. This option has no effect if not used with --read.</td>
</tr>
<tr>
<td>--filters &quot;<em>filter-name</em>&quot;</td>
<td>A Vertica FILTER chain containing all of the UDFilters to use in the COPY statement. For more information on filters, refer to Parsing Custom Formats.</td>
</tr>
</tbody>
</table>
| --load-method AUTO|TRICKLE|DIRECT | The load method to use for all loads with this scheduler.  

**Deprecated:**

The Load method option no longer has an effect because of the phase-out of WOS support.
<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Default Value:</strong> TRICKLE</td>
<td></td>
</tr>
<tr>
<td><code>--message-max-bytes max-size</code></td>
<td>Specifies the maximum size, in bytes, of a Kafka protocol batch message. Default Value: 25165824. Important: You may need to manually update this value if you created a scheduler using Vertica 9.1.0 or earlier. The meaning of Kafka's max.message.bytes setting changed between version 0.10 and 0.11. See <a href="#">Changes to the message.max.bytes Setting in Kafka Version 0.11 and Later</a> for more information.</td>
</tr>
<tr>
<td><code>--new-load-spec new-name</code></td>
<td>A new, unique name for an existing load spec. Requires the <code>--update</code> parameter.</td>
</tr>
<tr>
<td><code>--parser-parameters &quot;key=value[,]...&quot;</code></td>
<td>A list of parameters to provide to the parser specified in the <code>--parser</code> parameter. When you use a Vertica native parser, the scheduler passes these parameters to the COPY statement where they are in turn passed to the parser.</td>
</tr>
<tr>
<td><code>--parser parser-name</code></td>
<td>Identifies a Vertica UDPParser to use with a specified target. This parser is used within the COPY statement that the scheduler runs to load data. If you are using a Vertica native parser, the values supplied to the <code>--parser-parameters</code> option are passed through to the COPY statement.</td>
</tr>
<tr>
<td>Option</td>
<td>Description</td>
</tr>
<tr>
<td>----------------------------------------------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td><strong>Default Value:</strong></td>
<td>KafkaParser</td>
</tr>
<tr>
<td>--uds-(\text{kv})-(\text{parameters}) \text{key=\text{value}}[,...]</td>
<td>A comma separated list of key value pairs for the user-defined source.</td>
</tr>
<tr>
<td>--validation-type {\text{ERROR</td>
<td>WARN</td>
</tr>
<tr>
<td></td>
<td>- ERROR: Cancel configuration or creation if \text{vkconfig} cannot validate the load spec. This is the default setting.</td>
</tr>
<tr>
<td></td>
<td>- WARN: Proceed with task if validation fails, but display a warning.</td>
</tr>
<tr>
<td></td>
<td>- SKIP: Perform no validation.</td>
</tr>
<tr>
<td></td>
<td>Renamed from --\text{skip}-\text{validation}.</td>
</tr>
</tbody>
</table>

See [Common \text{vkconfig} Script Options](#) for options that are available in all of the \text{vkconfig} tools.

### Examples

These examples show how you can use the Load Spec utility options.

Create load spec \text{Streams\text{spec1}}:

\$ /opt/vertica/packages/kafka/bin/vkconfig load-spec --create --load-spec Streams\text{spec1} --conf myscheduler.conf

Rename load spec \text{Streams\text{spec1}} to \text{Streams\text{spec2}}, and update the load method to Direct:

\$ /opt/vertica/packages/kafka/bin/vkconfig load-spec --update --load-spec Streams\text{spec1} \
   direct \|--new-load-spec Streams\text{spec2} --load-method \
   --conf myscheduler.conf

Update load spec \text{Filters\text{spec}} to use the \text{Kafka\text{Insert\text{Lengths}}} filter and a custom decryption filter:
Microbatch Tool Options

The `vkconfig` script's microbatch tool lets you configure a scheduler's microbatches.

Syntax

```
vkconfig microbatch (--create | --read | --update | --delete) [--microbatch name] [other_options...]
```

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>--create</code></td>
<td>Creates a new load spec, cannot be used with <code>--delete</code>, <code>--read</code>, or <code>--update</code>.</td>
</tr>
<tr>
<td><code>--read</code></td>
<td>Outputs the current settings of all microbatches defined in the scheduler. This output is in JSON format. Cannot be used with <code>--create</code>, <code>--delete</code>, or <code>--update</code>. You can limit the output to specific microbatches by using the <code>--consumer-group-id</code>, <code>--enabled</code>, <code>--load-spec</code>, <code>--microbatch</code>, <code>--rejection-schema</code>, <code>--rejection-table</code>, <code>--target-schema</code>, <code>--target-table</code>, and <code>--target-columns</code> options. The <code>--enabled</code> option only</td>
</tr>
<tr>
<td>Option</td>
<td>Description</td>
</tr>
<tr>
<td>-------------------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td><strong>--update</strong></td>
<td>Updates an existing microbatch. Cannot be used with <strong>--create</strong>, <strong>--delete</strong>, or <strong>--read</strong></td>
</tr>
<tr>
<td><strong>--delete</strong></td>
<td>Deletes a microbatch. Cannot be used with <strong>--create</strong>, <strong>--read</strong>, or <strong>--update</strong></td>
</tr>
<tr>
<td><strong>--microbatch</strong> <em>name</em></td>
<td>A unique, case insensitive name for the microbatch. This option is required for <strong>--create</strong>, <strong>--update</strong>, and <strong>--delete</strong></td>
</tr>
<tr>
<td><strong>--add-source-cluster</strong> <em>cluster_name</em></td>
<td>The name of a cluster to assign to the microbatch you specify with the <strong>--microbatch</strong> option. You can use this parameter once per command. You can also use it with <strong>--update</strong> to add sources to a microbatch. You can only add sources from the same cluster to a single microbatch. Requires <strong>--add-source</strong>.</td>
</tr>
<tr>
<td><strong>--add-source</strong> <em>source_name</em></td>
<td>The name of a source to assign to this microbatch. You can use this parameter once per command. You can also use it with <strong>--update</strong> to add sources to a microbatch. Requires <strong>--add-source-cluster</strong>.</td>
</tr>
<tr>
<td><strong>--cluster</strong> <em>cluster_name</em></td>
<td>The name of the cluster to which the <strong>--offset</strong> option applies. Only required if the microbatch defines more than one cluster or the <strong>--source</strong> parameter is supplied. Requires the <strong>--offset</strong> option.</td>
</tr>
<tr>
<td>Option</td>
<td>Description</td>
</tr>
<tr>
<td>--------</td>
<td>-------------</td>
</tr>
</tbody>
</table>
| **--consumer-group-id id_name** | The name of the Kafka consumer group to which Vertica reports its progress consuming messages. See Monitoring Vertica Message Consumption with Consumer Groups for more information.  

**Default Value:**
vertica\_database-name  
Set this value to an empty string ("") to disable progress reports to a Kafka consumer group. |
| **--dump** | When you use this option along with the **--read** option, vkconfig outputs the Vertica query it would use to retrieve the data, rather than outputting the data itself. This option is useful if you want to access the data from within Vertica without having to go through vkconfig. This option has no effect if not used with **--read**. |
| **--enabled TRUE|FALSE** | When TRUE, allows the microbatch to execute. |
| **--load-spec Loadspec\_name** | The load spec to use while processing this microbatch. |
| **--max-parallelism max_num_loads** | The maximum number of simultaneous COPY statements created for the microbatch. The scheduler dynamically splits a single microbatch with multiple partitions into max\_num\_Loads COPY statements with fewer partitions.  

This option allows you to:  
- Control the transaction size.  
- Optimize your loads according to |

<td>--target-table table_name</td>
<td>The name of a Vertica table corresponding to the target. This table must belong to the target schema.</td>
</tr>
</tbody>
</table>
| --validation-type{ERROR|WARN|SKIP} | Controls the validation performed on a
### Option Description

- **created or updated microbatch:**
  - ERROR - Cancel configuration or creation if vkconfig cannot validate the microbatch. This is the default setting.
  - WARN - Proceed with task if validation fails, but display a warning.
  - SKIP - Perform no validation.

Renamed from **--skip-validation**.

See [Common vkconfig Script Options](#) for options that are available in all of the vkconfig tools.

### Special Starting Offset Values

The **start_offset** portion of the **stream** parameter lets you start loading messages from a specific point in the topic's partition. It also accepts one of two special offset values:

- **-2** tells the scheduler to start loading at the earliest available message in the topic's partition. This value is useful when you want to load as many messages as you can from the Kafka topic's partition.
- **-3** tells the scheduler to start loading from the consumer group's saved offset. If the consumer group does not have a saved offset, it starts loading from the earliest available message in the topic partition. See [Monitoring Vertica Message Consumption with Consumer Groups](#) for more information.

### Examples

This example shows how you can create the microbatch, mbatch1. This microbatch identifies the schema, target table, load spec, and source for the microbatch:

```
$ /opt/vertica/packages/kafka/bin/vkconfig microbatch --create --microbatch mbatch1 \
    --target-schema public \
    --target-table BatchTarget \
    --load-spec Filterspec \
```
Vertica Documentation
Integrating with Apache Kafka

--add-source SourceFeed \
--add-source-cluster StreamCluster1 \
--conf myscheduler.conf

This example demonstrates listing the current settings for the microbatches in the
scheduler defined in the weblog.conf configuration file.
$ vkconfig microbatch --read --conf weblog.conf
{"microbatch":"weblog", "target_columns":null, "rejection_schema":null,
"rejection_table":null, "enabled":true, "consumer_group_id":null,
"load_spec":"weblog_load", "filters":null, "parser":"KafkaJSONParser",
"parser_parameters":null, "load_method":"TRICKLE", "message_max_bytes":null,
"uds_kv_parameters":null, "target_schema":"public", "target_table":"web_hits",
"source":"web_hits", "partitions":1, "src_enabled":true, "cluster":"kafka_weblog",
"hosts":"kafka01.example.com:9092,kafka02.example.com:9092"}

Launch Tool Options
Use the vkconfig script's launch tool to assign a name to a scheduler instance.

Syntax
vkconfig launch [options...]

Option

Description

--enable-ssl (Optional) Enables SSL authentication
{true|false} between Kafka and Vertica . For more information, refer to Using
TLS/SSL Encryption with Kafka.
--ssl-caalias alias

The user-defined alias of the root certifying authority you are using to
authenticate communication between Vertica and Kafka. This parameter
is used only when SSL is enabled.

--ssl-keyalias alias

The user-defined alias of the key/certificate pair you are using to
authenticate communication between Vertica and Kafka. This parameter
is used only when SSL is enabled.

--ssl-keypassword
password

The password used to create your SSL key. This parameter is used only
when SSL is enabled.

--instance-

(Optional) Allows you to name the process running the scheduler. You

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>name name</td>
<td>can use this command when viewing the scheduler_history table, to find which instance is currently running.</td>
</tr>
<tr>
<td>--kafka_conf'</td>
<td>A semicolon-delimited list of <em>option=value</em> pairs to pass directly to the rdkafka library. This is the library Vertica uses to communicate with Kafka. You can use this parameter to directly set configuration options that are not available through the Vertica integration with Kafka. See Directly Setting Kafka Library Options for details.</td>
</tr>
</tbody>
</table>

See Common vkconfig Script Options for options that are available in all of the vkconfig tools.

**Examples**

This example shows how you can launch the scheduler defined in the myscheduler.conf config file and give it the instance name PrimaryScheduler:

```bash
$ nohup /opt/vertica/packages/kafka/bin/vkconfig launch --instance-name PrimaryScheduler \  
--conf myscheduler.conf >/dev/null 2>&1 &
```

This example shows how you can launch an instance named SecureScheduler with SSL enabled:

```bash
$ nohup /opt/vertica/packages/kafka/bin/vkconfig launch --instance-name SecureScheduler --enable-SSL true \  
--ssl-ca-alias authenticcert --ssl-key-alias ourkey \  
--ssl-key-password secret \  
--conf myscheduler.conf \  
>/dev/null 2>&1 &
```

**Shutdown Tool Options**

Use the vkconfig script's shutdown tool to terminate all Vertica schedulers running on a host. Always run this command before restarting a scheduler to ensure the scheduler has shutdown correctly.
### Syntax

`vkconfig shutdown [options...]`

See [Common vkconfig Script Options](#) for options that are available in all of the vkconfig tools.

### Examples

This example shows how you can terminate all Vertica Kafka schedulers:

```
$ /opt/vertica/packages/kafka/bin/vkconfig shutdown --conf myscheduler.conf
```

### Statistics Tool Options

The statistics tool lets you access the history of microbatches that your scheduler has run. This tool outputs the log of the microbatches in JSON format to the standard output. You can use its options to filter the list of microbatches to get just the microbatches that interest you.

**Note:**

The statistics tool can sometimes produce confusing output if you have altered the scheduler configuration over time. For example, suppose you have microbatch-a target a table. Later, you change the scheduler's configuration so that microbatch-b targets the table. Afterwards, you run the statistics tool and filter the microbatch log based on target table. Then the log output will show entries from both microbatch-a and microbatch-b.
## Syntax

vkconfig statistics [options]

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>--cluster &quot;cluster&quot;,&quot;cluster2&quot;...</code></td>
<td>Only return microbatches that retrieved data from a cluster whose name matches one in the list you supply.</td>
</tr>
<tr>
<td><code>--dump</code></td>
<td>Instead of returning microbatch data, return the SQL query that vkconfig would execute to extract the data from the scheduler tables. You can use this option if you want use a Vertica client application to get the microbatch log instead of using vkconfig’s JSON output.</td>
</tr>
<tr>
<td><code>--from-timestamp &quot;timestamp&quot;</code></td>
<td>Only return microbatches that began after <code>timestamp</code>. The timestamp value is in <code>yyyy-[m][d] hh:mm:ss</code> format. Cannot be used in conjunction with <code>--last</code>.</td>
</tr>
<tr>
<td><code>--last number</code></td>
<td>Returns the <code>number</code> most recent microbatches that meet all other filters. Cannot be used in conjunction with <code>--from-timestamp</code> or <code>--to-timestamp</code>.</td>
</tr>
<tr>
<td><code>--microbatch &quot;name&quot;,&quot;name2&quot;...</code></td>
<td>Only return microbatches whose name matches one of the names in the comma-separated list.</td>
</tr>
<tr>
<td><code>--partition partition#&quot;,partition#2...</code></td>
<td>Only return microbatches that accessed data from the topic partition that matches ones of the values in the partition list.</td>
</tr>
</tbody>
</table>
### Usage Considerations

- You can use LIKE wildcards in the values you supply to the `--cluster`, `--microbatch`, `--source`, `--target-schema`, and `--target-table` arguments. This feature lets you match partial strings in the microbatch data. See LIKE predicate for more information about using wildcards.
- The string comparisons for the `--cluster`, `--microbatch`, `--source`, `--target-schema`, and `--target-table` arguments are case-insensitive.
- The date and time values you supply to the `--from-timestamp` and `--to-timestamp` arguments use the `java.sql.timestamp` format for parsing the value. This format's parsing can accept values that you may consider invalid and would expect it to reject. For example, if you supply a timestamp of 01-01-2018 24:99:99, the Java timestamp parser silently converts the date to 2018-01-02 01:40:39 instead of returning an error.

Vertica Documentation
Integrating with Apache Kafka

Examples
This example gets the last microbatch that the scheduler defined in the weblog.conf file
ran:
$ /opt/vertica/packages/kafka/bin/vkconfig statistics --last 1 --conf weblog.conf
{"microbatch":"weblog", "target_schema":"public", "target_table":"web_hits",
"source_name":"web_hits", "source_cluster":"kafka_weblog", "source_partition":0,
"start_offset":80000, "end_offset":79999, "end_reason":"END_OF_STREAM",
"end_reason_message":null, "partition_bytes":0, "partition_messages":0,
"timeslice":"00:00:09.793000", "batch_start":"2018-11-06 09:42:00.176747",
"batch_end":"2018-11-06 09:42:00.437787", "source_duration":"00:00:00.214314",
"consecutive_error_count":null, "transaction_id":45035996274513069,
"frame_start":"2018-11-06 09:41:59.949", "frame_end":null}

If your scheduler is reading from more than partition, the --last 1 option lists the last
microbatch from each partition:
$ /opt/vertica/packages/kafka/bin/vkconfig statistics --last 1 --conf iot.conf
{"microbatch":"iotlog", "target_schema":"public", "target_table":"iot_data",
"source_name":"iot_data", "source_cluster":"kafka_iot", "source_partition":0,
"start_offset":-2, "end_offset":-2, "end_reason":"DEADLINE",
"end_reason_message":null, "partition_bytes":0, "partition_messages":0,
"timeslice":"00:00:09.842000", "batch_start":"2018-11-06 12:52:49.387567",
"batch_end":"2018-11-06 12:52:59.400219", "source_duration":"00:00:09.950127",
"consecutive_error_count":null, "transaction_id":45035996274537015,
"frame_start":"2018-11-06 12:52:49.213", "frame_end":null}
{"microbatch":"iotlog", "target_schema":"public", "target_table":"iot_data",
"source_name":"iot_data", "source_cluster":"kafka_iot", "source_partition":1,
"start_offset":1604, "end_offset":1653, "end_reason":"END_OF_STREAM",
"end_reason_message":null, "partition_bytes":4387, "partition_messages":50,
"timeslice":"00:00:09.842000", "batch_start":"2018-11-06 12:52:49.387567",
"batch_end":"2018-11-06 12:52:59.400219", "source_duration":"00:00:00.220329",
"consecutive_error_count":null, "transaction_id":45035996274537015,
"frame_start":"2018-11-06 12:52:49.213", "frame_end":null}
{"microbatch":"iotlog", "target_schema":"public", "target_table":"iot_data",
"source_name":"iot_data", "source_cluster":"kafka_iot", "source_partition":2,
"start_offset":1603, "end_offset":1652, "end_reason":"END_OF_STREAM",
"end_reason_message":null, "partition_bytes":4383, "partition_messages":50,
"timeslice":"00:00:09.842000", "batch_start":"2018-11-06 12:52:49.387567",
"batch_end":"2018-11-06 12:52:59.400219", "source_duration":"00:00:00.318997",
"consecutive_error_count":null, "transaction_id":45035996274537015,
"frame_start":"2018-11-06 12:52:49.213", "frame_end":null}
{"microbatch":"iotlog", "target_schema":"public", "target_table":"iot_data",
"source_name":"iot_data", "source_cluster":"kafka_iot", "source_partition":3,
"start_offset":1604, "end_offset":1653, "end_reason":"END_OF_STREAM",
"end_reason_message":null, "partition_bytes":4375, "partition_messages":50,
"timeslice":"00:00:09.842000", "batch_start":"2018-11-06 12:52:49.387567",
"batch_end":"2018-11-06 12:52:59.400219", "source_duration":"00:00:00.219543",
"consecutive_error_count":null, "transaction_id":45035996274537015,
"frame_start":"2018-11-06 12:52:49.213", "frame_end":null}

You can use the --partition argument to get just the partitions you want:

Vertica Analytic Database (11.0.x)

Page 6075 of 6730


Vertica Documentation
Integrating with Apache Kafka

$ /opt/vertica/packages/kafka/bin/vkconfig statistics --last 1 --partition 2 --conf iot.conf
{"microbatch":"iotlog", "target_schema":"public", "target_table":"iot_data",
"source_name":"iot_data", "source_cluster":"kafka_iot", "source_partition":2,
"start_offset":1603, "end_offset":1652, "end_reason":"END_OF_STREAM",
"end_reason_message":null, "partition_bytes":4383, "partition_messages":50,
"timeslice":"00:00:09.842000", "batch_start":"2018-11-06 12:52:49.387567",
"batch_end":"2018-11-06 12:52:59.400219", "source_duration":"00:00:00.318997",
"consecutive_error_count":null, "transaction_id":45035996274537015,
"frame_start":"2018-11-06 12:52:49.213", "frame_end":null}

If your scheduler reads from more than one source, the --last 1 option outputs the last
microbatch from each source:
$ /opt/vertica/packages/kafka/bin/vkconfig statistics --last 1 --conf weblog.conf
{"microbatch":"weberrors", "target_schema":"public", "target_table":"web_errors",
"source_name":"web_errors", "source_cluster":"kafka_weblog",
"source_partition":0, "start_offset":10000, "end_offset":9999,
"end_reason":"END_OF_STREAM", "end_reason_message":null,
"partition_bytes":0, "partition_messages":0, "timeslice":"00:00:04.909000",
"batch_start":"2018-11-06 10:58:02.632624",
"batch_end":"2018-11-06 10:58:03.058663", "source_duration":"00:00:00.220618",
"consecutive_error_count":null, "transaction_id":45035996274523991,
"frame_start":"2018-11-06 10:58:02.394", "frame_end":null}
{"microbatch":"weblog", "target_schema":"public", "target_table":"web_hits",
"source_name":"web_hits", "source_cluster":"kafka_weblog", "source_partition":0,
"start_offset":80000, "end_offset":79999, "end_reason":"END_OF_STREAM",
"end_reason_message":null, "partition_bytes":0, "partition_messages":0,
"timeslice":"00:00:09.128000", "batch_start":"2018-11-06 10:58:03.322852",
"batch_end":"2018-11-06 10:58:03.63047", "source_duration":"00:00:00.226493",
"consecutive_error_count":null, "transaction_id":45035996274524004,
"frame_start":"2018-11-06 10:58:02.394", "frame_end":null}

You can use wildcards to enable partial matches. This example demonstrates getting the
last microbatch for all microbatches whose names end with "log":
~$ /opt/vertica/packages/kafka/bin/vkconfig statistics --microbatch "%log" \
--last 1 --conf weblog.conf
{"microbatch":"weblog", "target_schema":"public", "target_table":"web_hits",
"source_name":"web_hits", "source_cluster":"kafka_weblog", "source_partition":0,
"start_offset":80000, "end_offset":79999, "end_reason":"END_OF_STREAM",
"end_reason_message":null, "partition_bytes":0, "partition_messages":0,
"timeslice":"00:00:04.874000", "batch_start":"2018-11-06 11:37:16.17198",
"batch_end":"2018-11-06 11:37:16.460844", "source_duration":"00:00:00.213129",
"consecutive_error_count":null, "transaction_id":45035996274529932,
"frame_start":"2018-11-06 11:37:15.877", "frame_end":null}

To get microbatches from a specific period of time, use the --from-timestamp and -to-timestamp arguments. This example gets the microbatches that read from partition
#2 between 12:52:30 and 12:53:00 on 2018-11-06 for the scheduler defined in iot.conf.
$ /opt/vertica/packages/kafka/bin/vkconfig statistics --partition 1 \
--from-timestamp "2018-11-06 12:52:30" \
--to-timestamp "2018-11-06 12:53:00" --conf iot.conf
{"microbatch":"iotlog", "target_schema":"public", "target_table":"iot_data",

Vertica Analytic Database (11.0.x)

Page 6076 of 6730


This example demonstrates using the `--dump` argument to get the SQL statement `vkconfig` executed to retrieve the output from the previous example:

```bash
$ /opt/vertica/packages/kafka/bin/vkconfig statistics --dump --partition 1 --from-timestamp "2018-11-06 12:52:30" --to-timestamp "2018-11-06 12:53:00" --conf iot.conf
SELECT microbatch, target_schema, target_table, source_name, source_cluster, source_partition, start_offset, end_offset, end_reason, end_reason_message, partition_bytes, partition_messages, timeslice, batch_start, batch_end, last_batch_duration AS source_duration, consecutive_error_count, transaction_id, frame_start, frame_end FROM "iot_sched".stream_microbatch_history WHERE (source_partition = 1) AND (frame_start >= '2018-11-06 12:52:30.0') AND (frame_end < '2018-11-06 12:53:00.0') ORDER BY frame_start DESC, microbatch, source_cluster, source_name, source_partition;
```

### Sync Tool Options

The `sync` utility immediately updates all source definitions by querying the Kafka cluster's brokers defined by the source. By default, it updates all of the sources defined in the target schema. To update just specific sources, use the `--source` and `--cluster` options to specify which sources to update.

### Syntax

`vkconfig sync [options...]`

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>--source source_name</code></td>
<td>The name of the source sync. This source must already exist in the target schema.</td>
</tr>
<tr>
<td>Option</td>
<td>Description</td>
</tr>
<tr>
<td>---------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>--cluster name</td>
<td>Identifies the cluster containing the source that you want to sync. You must have already defined this cluster in the scheduler.</td>
</tr>
<tr>
<td>--kafka_conf</td>
<td>A semicolon-delimited list of option=value pairs to pass directly to the rdkafka library. This is the library Vertica uses to communicate with Kafka. You can use this parameter to directly set configuration options that are not available through the Vertica integration with Kafka. See Directly Setting Kafka Library Options for details.</td>
</tr>
</tbody>
</table>

See the Common vkconfig Script Options for options available in all of the vkconfig tools.

## Kafka Function Reference

This section lists the functions that make up Vertica's Kafka integration feature.

### KafkaAvroParser

The KafkaAvroParser parses Avro-formatted Kafka messages and loads them into a regular Vertica table or a Vertica flex table.

```sql
KafkaAvroParser("enforce_length=Boolean"
[, reject_on_materialized_type_error=Boolean]
[, flatten_maps=Boolean]
[, flatten_arrays=Boolean]
[, flatten_records=Boolean]
[, external_schema=JSON_string]
[, codec='default'|'snappy'|'null']
[, with_metadata=Boolean]
[, schema-registry-url='url']
[, schema_registry_subject='subject_name']
[, schema_registry_version='version_number']
[, key_separator='separator'])
```
<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>enforce_length</td>
<td>When set to TRUE, rejects the row if any value is too wide to fit into its column. When using the default setting (FALSE), the parser truncates any value that is too wide to fit within the column's maximum width.</td>
</tr>
<tr>
<td>reject_on_materialized_type_error</td>
<td>When set to TRUE, rejects the row if it contains a materialized column value that cannot be mapped into the materialized column's data type.</td>
</tr>
<tr>
<td>flatten_maps</td>
<td>If set to TRUE, flattens all Avro maps.</td>
</tr>
<tr>
<td>flatten_arrays</td>
<td>If set to TRUE, flattens Avro arrays.</td>
</tr>
<tr>
<td>flatten_records</td>
<td>If set to TRUE, flattens all Avro records.</td>
</tr>
<tr>
<td>external_schema</td>
<td>Specifies the schema of the Avro file as a JSON string. If this parameter is not specified, the parser assumes that each message has the schema on it. If you are using a schema registry, do not use this parameter.</td>
</tr>
</tbody>
</table>
| codec                | Specifies the codec in which the Avro file was written. Valid values are:  
  * 'default' - data is not compressed and codec is not needed  
  * 'deflate' - data is compressed using the deflate codec  
  * 'snappy' - snappy compression  

**Note:**  
This option is mainly provided for backwards compatibility. You usually have Kafka compress data at the message level, and have KafkaSource decompress the message for you.|
<p>| with_metadata        | If set to TRUE, messages include Avro datum, schema, and object metadata. By default, the KafkaAvroParser parses messages without including schema and metadata. If you enable this parameter, write your messages using the Avro API and confirm they contain only Avro datum. The default value is FALSE. |
| schema_registry_url  | Specifies the URL of the Confluent schema registry. This parameter is required to load data based on a schema registry version. If you are using an external schema, do not use this parameter. For more information, refer to <a href="#">Using a Schema Registry with Kafka</a>. |</p>
<table>
<thead>
<tr>
<th><strong>Parameter</strong></th>
<th><strong>Description</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td><code>schema_registry_subject</code></td>
<td>In the schema registry, the subject of the schema to use for data loading.</td>
</tr>
<tr>
<td><code>schema_registry_version</code></td>
<td>In the schema registry, the version of the schema to use for data loading.</td>
</tr>
<tr>
<td><code>key_separator</code></td>
<td>Sets the character to use as the separator between keys.</td>
</tr>
</tbody>
</table>

KafkaAvroParser supports the same data types as the favroparser. For details, see Avro Data.

The following example demonstrates loading data from Kafka in an Avro format. The statement:

- Loads data into an existing flex table named `weather_logs`.
- Copies data from the default Kafka broker (running on the local system on port 9092).
- The source is named `temperature`.
- The source has a single partition.
- The load starts from offset 0.
- The load ends either after 10 seconds or the load reaches the end of the source, whichever occurs first.
- The KafkaAvroParser does not flatten any arrays, maps, or records it finds in the source.
- The schema for the data is provided in the statement as a JSON string. It defines a record type named `Weather` that contains fields for a station name, a time, and a temperature.
- Rejected rows of data are saved to a table named `t_rejects1`.

```sql
=) COPY weather_logs
    SOURCE KafkaSource(stream='temperature|0|0', stop_on_eof=true,
                        duration=interval '10 seconds')
    PARSER KafkaAvroParser(flatten_arrays=False, flatten_maps=False, flatten_records=False,
                             external_schema=E'{"type":"record","name":"Weather","fields":
                             ["{"name":"station","type":"string"},
                             {"name":"time","type":"long"},
                             {"name":"temp","type":"int"}]}')
    REJECTED DATA AS TABLE "t_rejects1";
```
KafkaCheckBrokers

Retrieves information about the brokers in a Kafka cluster. This function is intended mainly for internal use—it used by the streaming job scheduler to get the list of brokers in the Kafka cluster. You can call the function to determine which brokers Vertica knows about.

Syntax

KafkaCheckBrokers(USING PARAMETERS brokers='hostname:port[,hostname2:port...]'
                 [, kafka_conf='option=value[;option2=value2...]']
                 [, timeout=timeout_sec])

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>brokers</td>
<td>The host name and port number of a broker in the Kafka cluster used to retrieve the list of brokers. You can supply more than one broker as a comma-separated list. If the list includes brokers from more than one Kafka cluster, the cluster containing the last host in the list is queried.</td>
</tr>
<tr>
<td>kafka_conf</td>
<td>A semicolon-delimited list of option=value pairs to pass directly to the rdkafka library. This is the library Vertica uses to communicate with Kafka. You can use this parameter to directly set configuration options that are not available through the Vertica integration with Kafka. See Directly Setting Kafka Library Options for details.</td>
</tr>
<tr>
<td>timeout</td>
<td>Integer number of seconds to wait for a response from the Kafka cluster.</td>
</tr>
</tbody>
</table>

Example

```sql
=> SELECT KafkaCheckBrokers(USING PARAMETERS brokers='kafka01.example.com:9092')
OVER ()

broker_id | hostname | port |
----------|----------|------|
          2 | kafka03.example.com | 9092 |
          1 | kafka02.example.com | 9092 |
          3 | kafka04.example.com | 9092 |
          0 | kafka01.example.com | 9092 |
```

(4 rows)
KafkaExport

Sends Vertica data to Kafka.

If Vertica successfully exports all of the rows of data to Kafka, this function returns zero rows. You can use the output of this function to copy failed messages to a secondary table for evaluation and reprocessing.

Syntax

```sql
SELECT KafkaExport (partitionColumn, keyColumn, valueColumn
   USING PARAMETERS brokers='host[:port][,host...]',
   topic='topicname'
   [,kafka_conf='kafka_configuration_setting'])
OVER (partition_clause) FROM table;
```

Parameters

<table>
<thead>
<tr>
<th>Argument</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>partitionColumn</code></td>
<td>The target partition for the export. If you set this value to NULL, Vertica uses the default partitioning scheme. You can use the partition argument to send messages to partitions that map to Vertica segments.</td>
</tr>
<tr>
<td><code>keyColumn</code></td>
<td>The user defined key value associated with the valueColumn. Use NULL to skip this argument.</td>
</tr>
<tr>
<td><code>valueColumn</code></td>
<td>The message itself. The column is a LONG VARCHAR, allowing you to send up to 32MB of data to Kafka. However, Kafka may impose its own limits on message size.</td>
</tr>
<tr>
<td><code>brokers</code></td>
<td>A string containing a comma-separated list of one or more host names or IP addresses (with optional port number) of brokers in the Kafka cluster.</td>
</tr>
<tr>
<td><code>topic</code></td>
<td>The Kafka topic to which you are exporting.</td>
</tr>
<tr>
<td><code>kafka_conf</code></td>
<td>A semicolon-delimited list of <code>option=value</code> pairs to pass directly to the rdkafka library. This is the library Vertica uses to</td>
</tr>
<tr>
<td>Argument</td>
<td>Description</td>
</tr>
<tr>
<td>----------</td>
<td>-------------</td>
</tr>
<tr>
<td>brokers</td>
<td>communicate with Kafka. You can use this parameter to directly set configuration options that are not available through the Vertica integration with Kafka. See Directly Setting Kafka Library Options for details.</td>
</tr>
</tbody>
</table>

### Examples

```sql
=> SELECT KafkaExport(partition, messageId, message
    USING PARAMETERS brokers='kafka01.example.com:9092',
             source='failure_test',
             kafka_conf='message.max.bytes=64000')
OVER (PARTITION BEST)
FROM failure_test;

<table>
<thead>
<tr>
<th>partition</th>
<th>key</th>
<th>substr</th>
<th>failure_reason</th>
</tr>
</thead>
<tbody>
<tr>
<td>-123</td>
<td>key1</td>
<td>negative partition not allowed</td>
<td>Local: Unknown partition</td>
</tr>
<tr>
<td>54321</td>
<td>key2</td>
<td>nonexistant partition</td>
<td>Local: Unknown partition</td>
</tr>
<tr>
<td>0</td>
<td>normal key1</td>
<td>normal value1</td>
<td>Broker: Message size too</td>
</tr>
<tr>
<td>large</td>
<td></td>
<td>aaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaa</td>
<td>Broker: Message size too</td>
</tr>
<tr>
<td>large</td>
<td></td>
<td>normal key2</td>
<td>normal value2</td>
</tr>
<tr>
<td>large</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
```

- Producing Data Using KafkaExport

### KafkaJSONParser

The KafkaJSONParser parses JSON-formatted Kafka messages and loads them into a regular Vertica table or a Vertica flex table.

### Syntax

```sql
KafkaJSONParser(
    [enforce_length=Boolean]
    [, flatten_maps=Boolean]
    [, flatten_arrays=Boolean]
    [, start_point=string]
    [, start_point_occurrence=integer]
    [, omit_empty_keys=Boolean]
)```

Vertica Analytic Database (11.0.x)
Vertica Documentation
Integrating with Apache Kafka

```
[, reject_on_duplicate=Boolean]
[, reject_on_materialized_type_error=Boolean]
[, reject_on_empty_key=Boolean]
[, key_separator=char]
[, suppress_nonalphanumeric_key_chars=Boolean]
```

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>enforce_length</td>
<td>If set to TRUE, rejects the row if data being loaded is too wide to fit into its column. Defaults to FALSE, which truncates any data that is too wide to fit into its column.</td>
</tr>
<tr>
<td>flatten_maps</td>
<td>If set to TRUE, flattens all JSON maps.</td>
</tr>
<tr>
<td>flatten_arrays</td>
<td>If set to TRUE, flattens JSON arrays.</td>
</tr>
<tr>
<td>start_point</td>
<td>Specifies the key in the JSON data that the parser should parse. The parser only extracts data that is within the value associated with the start_point key. It parses the values of all instances of the start_point key within the data.</td>
</tr>
<tr>
<td>start_point_occurrence</td>
<td>Integer value indicating which the occurrence of the key specified by the start_point parameter where the parser should begin parsing. For example, if you set this value to 4, the parser will only begin loading data from the fifth occurrence of the start_point key. Only has an effect if you also supply the start_point parameter.</td>
</tr>
<tr>
<td>omit_empty_keys</td>
<td>If set to TRUE, omits any key from the load data that does not have a value set.</td>
</tr>
<tr>
<td>reject_on_duplicate</td>
<td>If set to TRUE, rejects the row that contains duplicate key names. Key names are case-insensitive, so the keys &quot;mykey&quot; and &quot;MyKey&quot; are considered duplicates.</td>
</tr>
<tr>
<td>reject_on_materialized_type_error</td>
<td>If set to TRUE, rejects the row if the data includes keys matching an existing materialized column and has a key that cannot be mapped into the materialized column's data type.</td>
</tr>
<tr>
<td>reject_on_empty_key</td>
<td>If set to TRUE, rejects any row containing a key without a value.</td>
</tr>
<tr>
<td>key_separator</td>
<td>A single character to use as the separator between key values instead of the default period (.) character.</td>
</tr>
</tbody>
</table>
### Parameter Description

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>suppress_nonalphanumeric_key_chars</td>
<td>If set to TRUE, replaces all non-alphanumeric characters in JSON key values with an underscore (_) character.</td>
</tr>
</tbody>
</table>

See [JSON Data](#) for more information.

The following example demonstrates loading JSON data from Kafka. The parameters in the statement define to the load to:

- Load data into the pre-existing table named logs.
- The KafkaSource streams the data from a single partition in the source called server_log.
- The Kafka broker for the data load is running on the host named kafka01 on port 9092.
- KafkaSource stops loading data after either 10 seconds or on reaching the end of the stream, whichever happens first.
- The KafkaJSONParser flattens any arrays or maps in the JSON data.

```sql
=> COPY logs SOURCE KafkaSource(stream='server_log|0|0',
                              stop_on_eof=true,
                              duration=interval '10 seconds',
                              brokers='kafka01:9092')
PARSER KafkaJSONParser(flatten_arrays=True, flatten_maps=True);
```

## KafkaListManyTopics

Retrieves information about all topics from a Kafka broker. This function lists all of the topics defined in the Kafka cluster as well the number of partitions it contains and which brokers serve the topic.

### Syntax

```sql
KafkaListManyTopics('broker:port[;...]'[
    [USING PARAMETERS
        [kafka_conf='option=value[;option2=value2...]'
        [, timeout=timeout_sec]]]
```

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>broker</td>
<td>The hostname (or ip address) of a broker in the Kafka cluster</td>
</tr>
</tbody>
</table>
The port number on which the broker is running.

A semicolon-delimited list of option=value pairs to pass directly to the rdkafka library. This is the library Vertica uses to communicate with Kafka. You can use this parameter to directly set configuration options that are not available through the Vertica integration with Kafka. See Directly Setting Kafka Library Options for details.

Integer number of seconds to wait for a response from the Kafka cluster.

### Example

```sql
=> \x
Expanded display is on.
=> SELECT KafkaListManyTopics('kafka01.example.com:9092')
   OVER (PARTITION AUTO);
- RECORD 1 -------------------------------
brokers     | kafka01.example.com:9092,kafka02.example.com:9092
num_partitions | 50
- RECORD 2 ---------------------------------
brokers     | kafka01.example.com:9092,kafka02.example.com:9092
num_partitions | 1
- RECORD 3 ---------------------------------
brokers     | kafka01.example.com:9092,kafka02.example.com:9092
num_partitions | 1
```

### KafkaListTopics

Gets the list of topics available from a Kafka broker.

#### Syntax

KafkaListTopics(USING PARAMETERS brokers='hostname:port[,hostname2:port2...]' , kafka_conf='option=value[;option2=value2...]' [, timeout=timeout_sec])

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>brokers</td>
<td>The host name and port number of the broker to query for a topic list. You can supply more than one broker as a comma-separated list. However, the</td>
</tr>
</tbody>
</table>
### Parameter Description

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>returned list</td>
<td>will only contain the topics served by the last broker in the list.</td>
</tr>
<tr>
<td>kafka_conf</td>
<td>A semicolon-delimited list of <code>option=value</code> pairs to pass directly to the <code>rdkafka</code> library. This is the library Vertica uses to communicate with Kafka. You can use this parameter to directly set configuration options that are not available through the Vertica integration with Kafka. See <a href="#">Directly Setting Kafka Library Options</a> for details.</td>
</tr>
<tr>
<td>timeout</td>
<td>Integer number of seconds to wait for a response from the Kafka cluster.</td>
</tr>
</tbody>
</table>

#### Example

```sql
=> SELECT KafkaListTopics(USING PARAMETERS brokers='kafka1-01.example.com:9092')
    OVER ();
```

<table>
<thead>
<tr>
<th>topic</th>
<th>num_partitions</th>
</tr>
</thead>
<tbody>
<tr>
<td>test</td>
<td>1</td>
</tr>
<tr>
<td>iot_data</td>
<td>1</td>
</tr>
<tr>

### KafkaOffsets

The `KafkaOffsets` user-defined transform function returns load operation statistics generated by the most recent invocation of `KafkaSource`. Query `KafkaOffsets` to see the metadata produced by your most recent load operation. You can query `KafkaOffsets` after each `KafkaSource` invocation to view information about that load. If you are using the scheduler, you can also view historical load information in the `stream_microbatch_history` table.

For each load operation, `KafkaOffsets` returns the following:

- source kafka topic
- source kafka partition
- starting offset
- ending offset
- number of messages loaded
- number of bytes read
The following example demonstrates calling KafkaOffsets to show partition information on the table named web_test that was loaded using KafkaSource.

```
=> SELECT kpartition, start_offset, end_offset, msg_count, ending FROM (select KafkaOffsets() over ()
FROM web_test) AS stats ORDER BY kpartition;
```

<table>
<thead>
<tr>
<th>kpartition</th>
<th>start_offset</th>
<th>end_offset</th>
<th>msg_count</th>
<th>ending</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>-2</td>
<td>9999</td>
<td>1068</td>
<td>END_OFFSET</td>
</tr>
</tbody>
</table>

The output shows that KafkaSource loaded 1068 messages (rows) from Kafka in a single partition. The KafkaSource ended the data load because it reached the ending offset.

**Note:**
The values shown in the start_offset column are exclusive (the message with the shown offset was not loaded) and the values in the end_offset column are inclusive (the message with the shown offset was loaded). This is the opposite of the values specified in the KafkaSource's stream parameter. The difference between the inclusiveness of KafkaSource's and KafkaOffset's start and end offsets are based on the needs of the job scheduler. KafkaOffset is primarily intended for the job scheduler's use, so the start and end offset values are defined so the scheduler can easily start streaming from where left off.

**KafkaParser**

The KafkaParser does not parse data loaded from Kafka. Instead, it passes the messages through as LONG VARCHAR values. Use this parser when you want to load raw Kafka messages into Vertica for further processing. You can use this parser as a catch-all for unsupported formats.

KafkaParser does not take any parameters.
Example

The following example loads raw messages from a Kafka topic named iot-data into a table named raw_iot.

```sql
=> CREATE TABLE raw_iot(message LONG VARCHAR);
CREATE TABLE
=> COPY raw_iot SOURCE KafkaSource(stream='iot-data|0|-2,iot-data|1|-2,iot-data|2|-2',
                                   brokers='docd01:6667,docd03:6667', stop_on_eof=TRUE)
   PARSER KafkaParser();

Rows Loaded
----------
5000
(1 row)

=> select * from raw_iot limit 10;
message
---------------------
10039, 59, -60.951406, -19.270126
10042, 48, -82.688712, 4.7187705
10054, 6, -153.805268, -10.5173935
10054, 71, -135.613150, 58.286458

10183, 62, 17.225394, -55.6644765
(10 rows)
```

KafkaSource

The KafkaSource UDL accesses data from a Kafka cluster. All Kafka parsers must use KafkaSource. Messages processed by KafkaSource must be at least one byte in length. KafkaSource writes an error message to vertica.log for zero length messages.

The output of KafkaSource does not work directly with any of the non-Kafka parsers in Vertica (such as the FCSVPARSER). The KafkaParser produces additional metadata about the stream that parsers need to use in order to correctly parse the data. You must use filters such as KafkaInsertDelimiters to transform the data into a format that can be processed by other parsers. See Parsing Custom Formats for more an example.

You can cancel a running KafkaSource data load by using a close session function such as CLOSE_ALL_SESSIONS.
Syntax

KafkaSource(stream='topic_name|partition|start_offset[|end_offset][,...]' [, brokers='host:port[, ...]'] [, duration=interval] [, executionparallelism='value'] [, stop_on_eof=Boolean] [, eof_timeout=timeout] [, group_id='consumer_group_name'] [, kafka_conf='option=value[;option2=value2...]]

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>stream</td>
<td>Required. Defines the data to be loaded as a comma-separated list of one or more partitions. Each partition is defined by three required values and one optional value separated by pipe characters (</td>
</tr>
<tr>
<td></td>
<td>• topic_name: the name of the Kafka topic to load data from. You can read from different Kafka topics in the same stream parameter, with some limitations.</td>
</tr>
<tr>
<td></td>
<td>See Loading from Multiple Topics in the Same Stream Parameter below for more information.</td>
</tr>
<tr>
<td></td>
<td>• partition: the partition in the Kafka topic to copy.</td>
</tr>
<tr>
<td></td>
<td>• start_offset: the offset in the Kafka topic where the load will begin. This offset is inclusive (the message with the offset start_offset is loaded).</td>
</tr>
<tr>
<td></td>
<td>See Special Starting Offset Values below for additional options.</td>
</tr>
<tr>
<td></td>
<td>• end_offset: the optional offset where the load should end. This offset is exclusive (the message with the offset end_offset will not be loaded).</td>
</tr>
<tr>
<td></td>
<td>To end a load using end_offset, you must supply an ending offset value for all partitions in the stream parameter. Attempting to set an ending offset for some partitions and not set offset values for others results in an error.</td>
</tr>
<tr>
<td></td>
<td>If you do not specify an ending offset, you must supply at least one other ending condition using stop_on_eof or duration.</td>
</tr>
<tr>
<td>brokers</td>
<td>A comma-separated list of host:port pairs of the brokers in the Kafka cluster. Vertica recommends running Kafka on a</td>

</tr>
<tr>
<td>different machine than Vertica.</td>
<td><strong>Default Value:</strong> localhost:9092</td>
</tr>
<tr>
<td>duration</td>
<td>An INTERVAL that specifies the duration of the frame. After this specified amount of time, KafkaSource terminates the COPY statements. If this parameter is not set, you must set at least one other ending condition by using stop_on_eof or specify an ending offset instead. See Duration Note below for more information.</td>
</tr>
<tr>
<td>executionparallelism</td>
<td>The number of threads to use when loading data. Normally, you set this to an integer value between 1 and the number of partitions the node is loading from. Setting this parameter to a reduced value limits the number of threads used to process any COPY statement. It also increases the throughput of short queries issued in the pool, especially if the queries are executed concurrently.</td>
</tr>
<tr>
<td></td>
<td>If you do not specify this parameter, Vertica automatically creates a thread for every partition, up to the limit allowed by the resource pool.</td>
</tr>
<tr>
<td></td>
<td>If the value you specify for the KafkaSource is lower than the value specified for the scheduler resource pool, the KafkaSource value applies. This value cannot exceed the value specified for the scheduler's resource pool.</td>
</tr>
<tr>
<td>stop_on_eof</td>
<td>Determines whether KafkaSource should terminate the COPY statement after it reaches the end of a file. If this value is not set, you must set at least one other ending condition using duration or by supplying ending offsets instead.</td>
</tr>
<tr>
<td></td>
<td><strong>Default Value:</strong> FALSE</td>
</tr>
<tr>
<td>eof_timeout</td>
<td>A timeslice of type INTERVAL. If a COPY command does not receive any Kafka messages within the eof_timeout interval, Vertica responds by ending that COPY statement. This parameter applies only if stop_on_eof is TRUE.</td>
</tr>
</tbody>
</table>
### Parameter Description

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Deprecated:</strong></td>
<td>This parameter has been deprecated and will be removed in a future version of the product. It is no longer necessary because newer versions of the library that Vertica uses to communicate with Kafka now indicate when the stream has ended.</td>
</tr>
</tbody>
</table>
| **group_id** | The name of the Kafka consumer group to which Vertica reports its progress consuming messages. See Monitoring Vertica Message Consumption with Consumer Groups for more information.  
**Default Value:**  
*vertica_database-name*  
Set this value to NULL to disable progress reports to a Kafka consumer group. |
| **kafka_conf** | A semicolon-delimited list of *option=value* pairs to pass directly to the rdkafka library. This is the library Vertica uses to communicate with Kafka. You can use this parameter to directly set configuration options that are not available through the Vertica integration with Kafka. See Directly Setting Kafka Library Options for details. |

## Special Starting Offset Values

The *start_offset* portion of the *stream* parameter lets you start loading messages from a specific point in the topic's partition. It also accepts one of two special offset values:

- -2 tells KafkaSource to start loading at the earliest available message in the topic's partition. This value is useful when you want to load as many messages as you can from the Kafka topic's partition.
- -3 tells KafkaSource to start loading from the consumer group's saved offset. If the consumer group does not have a saved offset, it starts loading from the earliest available message in the topic partition. See Monitoring Vertica Message Consumption with Consumer Groups for more information.
Loading from Multiple Topics in the Same Stream Parameter

You can load from multiple Kafka topics in a single stream parameter as long as you follow these guidelines:

- The data for the topics must be in the same format because you pass the data from KafkaSource to a single parser. For example, you cannot load data from one topic that is in Avro format and another in JSON format.
- Similarly, you need to be careful if you are loading Avro data and specifying an external schema from a registry. The Avro parser accepts a single schema per data load. If the data from the separate topics have different schemas, then all of the data from one of the topics will be rejected.
- The data in the different topics should have the same (or very similar) schemas, especially if you are loading data into a traditional Vertica table. While you can load data with different schemas into a flex table, there are only a few scenarios where it makes sense to combine dissimilar data into a single table.

Duration Note

The duration parameter applies to the length of time that Vertica allows the KafkaSource function to run. It usually reflects the amount of time the overall load statement takes. However, if KafkaSource is loading a large volume of data or the data needs extensive processing and parsing, the overall runtime of the query can exceed the amount of time specified in duration.

Example

The following example demonstrates calling KafkaSource to load data from Kafka into an existing flex table named web_test with the following options:

- The stream is named web_hits which has a single partition.
- The load starts at the earliest message in the stream (identified by passing -2 as the start offset).
- The load ends when it reaches the message with offset 10000.
- The Kafka cluster's brokers are kafka01 and kafka03 in the example.com domain.
- The brokers are listening on port 6667. (This is port number that the Hortonworks Hadoop distribution assigns to its Kafka brokers.)
- The load ends if it reaches the end of the stream before reaching the message with offset 10000. If you do not supply this option, the connector waits until Kafka sends a message with offset 10000.
- The loaded data is sent to the KafkaJSONParser for processing.

```
=> COPY web_test
    SOURCE KafkaSource(stream='web_hits|0|-2|10000',
                       brokers='kafka01.example.com:6667,kafka03.example.com:6667',
                       stop_on_eof=true)
    PARSER KafkaJSONParser();
Rows Loaded
----------
1868
(1 row)
```

**KafkaTopicDetails**

Retrieves information about the specified topic from one or more Kafka brokers. This function lists details about the topic partitions, and the Kafka brokers that serve each partition in the Kafka cluster.

**Syntax**

```
KafkaTopicDetails(USING PARAMETERS brokers='hostname:port[,hostname2:port2...]'
                       , topic=topic_name
                       [, kafka_conf='option=value[,option2=value2...]']
                       [, timeout=timeout_sec])
```

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>brokers</td>
<td>The hostname (or IP address) of a broker in the Kafka cluster.</td>
</tr>
<tr>
<td>port</td>
<td>The port number on which the broker is running.</td>
</tr>
<tr>
<td>topic</td>
<td>Kafka topic that you want details for.</td>
</tr>
<tr>
<td>kafka_conf</td>
<td>A semicolon-delimited list of option=value pairs to pass directly to the rdkafka library. This is the library Vertica uses to communicate with Kafka. You can use this parameter to directly set configuration options that are not available through the Vertica integration with Kafka. See Directly Setting Kafka Library Options for details.</td>
</tr>
</tbody>
</table>
### Parameter Description

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>timeout</td>
<td>Integer number of seconds to wait for a response from the Kafka cluster.</td>
</tr>
</tbody>
</table>

### Example

```sql

### Data Streaming Schema Tables

Every time you create a scheduler (`--create`), Vertica creates a schema for that scheduler with the name you specify or the default `stream_config`. Each schema has the following tables:

- stream_clusters
- stream_events
- stream_load_specs
- stream_microbatch_history
- stream_microbatch_source_map
- stream_microbatches
- stream_scheduler
- stream_scheduler_history
- stream_sources
- stream_targets

**Caution:**
Vertica recommends that you do not alter these tables except in consultation with support.
stream_clusters

This table lists clusters and hosts. You change settings in this table using the vkconfig cluster tool. See Cluster Tool Options for more information.

<table>
<thead>
<tr>
<th>Column</th>
<th>Data Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>INTEGER</td>
<td>The identification number assigned to the cluster.</td>
</tr>
<tr>
<td>cluster</td>
<td>VARCHAR</td>
<td>The name of the cluster.</td>
</tr>
<tr>
<td>hosts</td>
<td>VARCHAR</td>
<td>A comma-separated list of hosts associated with the cluster.</td>
</tr>
</tbody>
</table>

Examples

This example shows a cluster and its associated hosts.

```sql
=> SELECT * FROM stream_config.stream_clusters;
 id  | cluster     | hosts                      
-----|-------------|----------------------------|
2250001 | streamcluster1 | 10.10.10.10:9092,10.10.11:9092
(1 rows)
```

stream_events

This table logs microbatches and other important events from the scheduler in an internal log table.

This table was renamed from kafka_config.kafka_events.

<table>
<thead>
<tr>
<th>Column</th>
<th>Data Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>event_time</td>
<td>TIMESTAMP</td>
<td>The time the event was logged.</td>
</tr>
<tr>
<td>log_level</td>
<td>VARCHAR</td>
<td>The type of event that was logged.</td>
</tr>
</tbody>
</table>

Valid Values:
<table>
<thead>
<tr>
<th>Column</th>
<th>Data Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>log_level</td>
<td>STRING</td>
<td>The log level specified in the log file.</td>
</tr>
<tr>
<td>trace_level</td>
<td>STRING</td>
<td>The trace level specified in the log file.</td>
</tr>
<tr>
<td>frame_start</td>
<td>TIMESTAMP</td>
<td>The time when the frame executed.</td>
</tr>
<tr>
<td>frame_end</td>
<td>TIMESTAMP</td>
<td>The time when the frame completed.</td>
</tr>
<tr>
<td>microbatch</td>
<td>INTEGER</td>
<td>The identification number of the associated microbatch.</td>
</tr>
<tr>
<td>message</td>
<td>VARCHAR</td>
<td>A description of the event.</td>
</tr>
<tr>
<td>exception</td>
<td>VARCHAR</td>
<td>If this log is in the form of a stack trace, this column lists the exception.</td>
</tr>
</tbody>
</table>

**Default value:**
INFO

```sql
=> SELECT * FROM stream_config.stream_events;
```

- RECORD 1
  - event_time: 2016-07-17 13:28:35.548-04
  - log_level: INFO
  - frame_start: 2015-07-17 12:28:45.633
  - microbatch: 0
  - message: New leader registered for schema stream_config. New ID: 0, new Host: 10.20.30.40
  - exception: 

- RECORD 2
  - event_time: 2016-07-17 13:28:45.643-04
  - log_level: INFO
  - frame_start: 2015-07-17 12:28:45.633
  - microbatch: 0
  - message: Generated tuples: test3|2|2, test3|1|1, test3|0|2
  - exception: 

- RECORD 3
  - event_time: 2016-07-17 14:28:50.701-04
stream_load_specs

This table describes user-created load specs. You change the entries in this table using the \texttt{vkconfig} utility's \texttt{load spec tool}.

<table>
<thead>
<tr>
<th>Column</th>
<th>Data Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>INTEGER</td>
<td>The identification number assigned to the cluster.</td>
</tr>
<tr>
<td>load_spec</td>
<td>VARCHAR</td>
<td>The name of the load spec.</td>
</tr>
<tr>
<td>filters</td>
<td>VARCHAR</td>
<td>A comma-separated list of UDFilters for the scheduler to include in the COPY statement it uses to load data from Kafka.</td>
</tr>
<tr>
<td>parser</td>
<td>VARCHAR</td>
<td>A VerticaUDParser to use with a specified target. If you are using a Vertica native parser, parser parameters serve as a COPY statement parameters.</td>
</tr>
<tr>
<td>parser_parameters</td>
<td>VARCHAR</td>
<td>A list of parameters to provide to the parser.</td>
</tr>
<tr>
<td>load_method</td>
<td>VARCHAR</td>
<td>The COPY load method to use for all loads with this scheduler.</td>
</tr>
<tr>
<td>message_max_bytes</td>
<td>INTEGER</td>
<td>The maximum size, in bytes, of a message.</td>
</tr>
<tr>
<td>uds_kv_parameters</td>
<td>VARCHAR</td>
<td>A list of parameters that are supplied to the KafkaSource statement. If the value in this column is in the format \texttt{key=value}, the scheduler it to the COPY statement's KafkaSource call.</td>
</tr>
</tbody>
</table>

\textbf{Deprecated:}  
In Vertica 10.0, load methods are no longer used due to the removal of the WOS. The value shown in this column has no effect.
Examples

This example shows the load specs that you can use with a Vertica instance.

```
SELECT * FROM stream_config.stream_load_specs;
-| RECORD 1 |-----------------------
id | 1
load_spec | loadspec2
filters | 
parser | KafkaParser
parser_parameters | 
load_method | direct
message_max_bytes | 1048576
uds_kv_parameters | 
-| RECORD 2 |-----------------------
id | 750001
load_spec | streamspec1
filters | 
parser | KafkaParser
parser_parameters | 
load_method | TRICKLE
message_max_bytes | 1048576
uds_kv_parameters | 
```

stream_lock

This table is locked by the scheduler. This locks prevent multiple schedulers from running at the same time. The scheduler that locks this table updates it with its own information.

**Important:**

Do not use this table in a serializable transaction that locks this table. Locking this table can interfere with the operation of the scheduler.

<table>
<thead>
<tr>
<th>Column</th>
<th>Data Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>scheduler_id</td>
<td>INTEGER</td>
<td>A unique ID for the scheduler instance that is currently running.</td>
</tr>
<tr>
<td>update_time</td>
<td>TIMESTAMP</td>
<td>The time the scheduler took ownership of writing to the schema.</td>
</tr>
<tr>
<td>process_info</td>
<td>VARCHAR</td>
<td>Information about the scheduler process. Currently unused.</td>
</tr>
</tbody>
</table>
Example

```sql
=> SELECT * FROM weblog_sched.stream_lock;
scheduler_id | update_time | process_info
--------------|-------------|----------------
              | 2018-11-08 10:12:36.033 | (1 row)
```

stream_microbatch_history

This table contains a history of every microbatch executed within this scheduler configuration.

<table>
<thead>
<tr>
<th>Column</th>
<th>Data Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>source_name</td>
<td>VARCHAR</td>
<td>The name of the source.</td>
</tr>
<tr>
<td>source_cluster</td>

<td></td>
<td><strong>Default Value:</strong> NULL</td>
</tr>
<tr>
<td>scheduler_id</td>
<td>INTEGER</td>
<td>The identification number of the scheduler.</td>
</tr>
<tr>
<td>version</td>
<td>VARCHAR</td>
<td>The version of the scheduler.</td>
</tr>
</tbody>
</table>

Examples

This example shows typical rows from the stream_scheduler_history table.
### stream_sources

This table contains metadata related to data streaming sources.

This table was formerly named kafka_config.kafka_scheduler.

<table>
<thead>
<tr>
<th>Column</th>
<th>Data Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>INTEGER</td>
<td>The identification number of the source</td>
</tr>
<tr>
<td>source</td>
<td>VARCHAR</td>
<td>The name of the source.</td>
</tr>
<tr>
<td>cluster</td>
<td>INTEGER</td>
<td>The identification number of the cluster associated with the source.</td>
</tr>
<tr>
<td>partitions</td>
<td>INTEGER</td>
<td>The number of partitions in the source.</td>
</tr>
<tr>
<td>enabled</td>
<td>BOOLEAN</td>
<td>When TRUE, the source is enabled for use.</td>
</tr>
</tbody>
</table>

### Examples

This example shows a typical row from the stream_sources table.

```
SELECT * FROM stream_config.stream_sources;
```

```
- [ RECORD 1 ]-----------------
   id | 1
   source | SourceFeed1
   cluster | 1
   partitions | 1
   enabled | t
- [ RECORD 2 ]-----------------
   id | 250001
```
stream_targets

This table contains the metadata for all Vertica target tables.

The table was formerly named kafka_config.kafka_targets.

<table>
<thead>
<tr>
<th>Column</th>
<th>Data Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>INTEGER</td>
<td>The identification number of the target table</td>
</tr>
<tr>
<td>target_schema</td>
<td>VARCHAR</td>
<td>The name of the schema for the target table.</td>
</tr>
<tr>
<td>target_table</td>
<td>VARCHAR</td>
<td>The name of the target table.</td>
</tr>
</tbody>
</table>

Examples

This example shows typical rows from the stream_tables table.

```sql
=> SELECT * FROM stream_config.stream_targets;
- [ RECORD 1 ]------------------------------------------
id | 1
- [ RECORD 1 ]------------------------------------------
target_schema | public
- [ RECORD 1 ]------------------------------------------
target_table | stream_flex1
- [ RECORD 2 ]------------------------------------------
id | 2
- [ RECORD 2 ]------------------------------------------
target_schema | public
- [ RECORD 2 ]------------------------------------------
target_table | stream_flex2
```
Integrating with Apache Spark

Apache Spark is an open-source, general-purpose cluster-computing framework. See the Apache Spark website for more information. Vertica provides a connector that you install into Spark that lets you transfer data between Vertica and Spark.

Using the connector, you can:

- Copy large volumes of data from Spark DataFrames to Vertica tables. This feature lets you save your Spark analytics in Vertica.
- Copy data from Vertica to Spark RDDs or DataFrames for use with Python, R, Scala and Java. The connector efficiently pushes down column selection and predicate filtering to Vertica before loading the data.

The connector lets you use Spark to preprocess data for Vertica and to use Vertica data in your Spark application. You can even round-trip data from Vertica to Spark—copy data from Vertica to Spark for analysis, and then save the results of that analysis back to Vertica.

How the Connector Works

The Vertica Apache Spark connector is a library that you incorporate into your Spark applications to read data from and write data to Vertica. When transferring data, the connector uses an intermediate storage location as a buffer between the Vertica and Spark clusters. Using the intermediate storage location lets both Vertica and Spark use all of the nodes in their clusters to transfer data in parallel. Currently, the connector only supports using HDFS as an intermediate storage location.
When transferring data from Vertica to Spark, the connector tells Vertica to write the data as Parquet files in the intermediate storage location. As part of this process, the connector pushes down the required columns and any Spark data filters into Vertica as SQL. This push down lets Vertica pre-filter the data so it only copies the data that Spark needs. Once Vertica finishes copying the data, the connector has Spark load it into DataFrames from the intermediate location.

When transferring data from Spark to Vertica, the process is reversed. Spark writes data into the intermediate storage location. It then connects to Vertica and runs a COPY statement to load the data from the intermediate location into a table. When loading data into Vertica, you can choose to have the data

### Available Connector Versions

There are two main versions of the Spark connector:

- The legacy connector (now referred to as the connector V1) is a closed-source connector distributed as part of the Vertica server install. This was the only version of the connector available before Vertica version 10.1.1. See [The Spark Connector V1](#) for more information.

  **Deprecated:**
  
  The V1 Spark Connector has been deprecated. No new features will be added to this version of the connector. It will remain available for use with older versions of Spark or Scala that are not supported by the newer connector.

- The Spark connector V2 is a new, open-source version of the connector. It does not support versions of Spark older than 3.0 or Scala versions earlier than 2.12. This version of the connector is distributed separately from the Vertica server. See [The Spark Connector V2](#) for more information.

Each of these connectors may have sub-versions that work with specific version combinations of Spark and Scala.

The new connector differs from the old in the following ways:

- The new connector uses the Spark V2 API. Using this newer API makes it more future-proof than the connector V1, which uses an older Spark API.
- The primary class name has changed. Also, the primary class has several renamed configuration options and a few removed options. See [Migrating From the Vertica Spark Connector V1 to V2](#) for a list of these changes.
It supports more features than the older connector V1, such as Kerberos authentication.

It comes compiled as an assembly which contains supporting libraries such as the Vertica JDBC library. To use the connector V1, you must also configure the JDBC library yourself.

It is distributed separate from the Vertica server. You can directly download it from the GitHub project. It is also available from the Maven Central Repository, making it easier for you to integrate it into your Gradle, Maven, or SBT workflows.

It is an open-source project that is not tied to the Vertica server release cycle. New features and bug fixes do not have to wait for a Vertica release. You can also contribute your own features and fixes.

Use the connector V2 if your environment supports it. It has more features than the connector V1. If your Spark cluster is running a version of Spark earlier than 3.0, continue to use the connector V1. You can load both versions of the connector into Spark at the same time, so you can gradually port your Spark applications to the new version.

**Spark Connector Requirements**

To use the Vertica Spark connector, you must have:

- An installed and configured Vertica database. See Installing Vertica and the Configuring the Database for details.
- An Apache Spark cluster supported by one of the versions of the Vertica Spark connector. See Vertica Integration for Apache Spark for details on the versions of Spark and Scala supported by the connector.
- An intermediate storage location where Vertica and Spark can save data being transferred to the other system. See the next section for details.

For details on installing and using Apache Spark and Apache Hadoop, see the Apache Spark web site, the Apache Hadoop website, or your Hadoop vendor's installation documentation.

**Intermediate Storage Configuration**

When transferring data, the Spark connector has Spark and Vertica write data to a temporary storage location. Currently, the connector supports using HDFS as an intermediate storage location. Both Spark and Vertica must be configured to access this location. Dedicate a directory in the intermediate storage location for transferring files between Spark and Vertica. A dedicated storage can help prevent interference from other applications.
On the Vertica size, you must configure your database to read data from and write data to the HDFS storage location. See Reading from HDFS for the steps you need to take to configure Vertica to be able to access the intermediate storage location.

For Spark, you will need any credentials the HDFS storage location requires to access it.

**Supported Versions**

For supported versions of Apache Spark and Apache Hadoop see the following sections in the Supported Platforms guide:

- Vertica Integration for Apache Spark
- Vertica Integrations for Hadoop

**The Spark Connector V1**

Use the legacy Vertica Spark connector V1 when using versions of Spark older than 3.0 or Scala versions earlier than 2.12. If your Spark cluster is running a version later than 3.0, you should use the newer connector V2, because it is faster, has more features, and is fully supported.

**Deprecated:**
The V1 Spark Connector has been deprecated. No new features will be added to this version of the connector. It will remain available for use with older versions of Spark or Scala that are not supported by the newer connector.

**Getting the Connector**

The legacy Spark connector V1 is packaged as a JAR file. You install this file on your Spark cluster to enable Spark and Vertica to exchange data. In addition to the connector JAR file, you also need to install the Vertica JDBC client library. The connector uses this library to connect to Vertica.

Both of these libraries are distributed with the Vertica server and are available on all nodes in the Vertica cluster in the following locations:

- The Spark connector files are located in
  `/opt/vertica/packages/SparkConnector/lib`. 

Vertica Documentation
Integrating with Apache Spark

Vertica Analytic Database (11.0.x) Page 6113 of 6730
• The JDBC client library is /opt/vertica/java/vertica-jdbc.jar.

Choosing the Correct Connector Version

Vertica supplies multiple versions of the connector JAR files. Each file is compatible one or more versions of Apache Spark and a specific version of Scala. The connector file you need depends on the version of Apache Spark and Scala you have installed. You can determine your Spark and Scala version by starting a Spark shell:

```
$ spark-shell
SPARK_MAJOR_VERSION is set to 2, using Spark2
Setting default log level to "WARN".
To adjust logging level use sc.setLogLevel(newLevel). For SparkR, use setLogLevel(newLevel).
Spark context Web UI available at http://node01:4040
Spark context available as 'sc' (master = local[*], app id = local-1488824765565).
Spark session available as 'spark'.
Welcome to
    _/\__\__\__\__\__\__\\_/\
   \//\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\///\ ///  version 2.1.0.2.6.0.3-8
```

The startup messages contain the version numbers of both Spark and Scala (shown in bold in the previous example for clarity).

The list in Vertica Integration for Apache Spark tells you which version of the connector JAR file you need for each combination of Spark and Scala. Note that some versions of the connector are compatible with multiple versions of Spark. For example, the connector for Spark 2.1 is also compatible with Spark 2.2.

Deploying the Connector

Once you have the connector and JDBC library JAR files, you can deploy them to your Spark cluster in two ways:

• Include the connector and Vertica JDBC JAR files using the "--jars" option when invoking spark-submit or spark-shell.
- Deploy the connector to a Spark cluster so that all Spark applications have access across all nodes.

Copying the Connector for Use with Spark Submit or Spark Shell

The easiest way to deploy the connector to your Spark cluster is to copy it to a single Spark node, then include them in a spark-submit or spark-shell command line.

1. Transfer both the Vertica Spark connector and Vertica JDBC driver JAR files to a directory on a Spark node.
2. Log into the Spark node where you copied the files.
3. Add the connector and JDBC files to the --jars argument of your spark-submit or spark-shell command line. If you are not in the directory where you downloaded the connector and JDBC JAR files, specify the path to them.

- To start a Spark Application using spark-submit if you are in the same directory as the JAR files:

```
spark-submit --jars vertica-spark2.1_scala2.11.jar,vertica-jdbc-11.0.0-0.jar other options SparkApplication.jar
```

**Note:**
Do not include a space before or after the comma in the --jars argument.

- To start an interactive Spark shell using spark-shell if you are in the same directory as the JAR files:

```
spark-shell --jars vertica-spark2.1_scala2.11.jar,vertica-jdbc-11.0.0-0.jar other options
```

**Note:**
The version numbers in the JAR file names will vary depending on your version of Vertica, Spark, and Scala.

Add the Connector to the Spark Cluster's Configuration

Having to always include the JAR files in your Spark command lines is cumbersome. You can configure Spark to always load the connector. This approach gives all Spark applications on your cluster the ability to transfer data with Vertica.

To deploy to the Spark cluster:
1. Copy the connector and JDBC JAR files to a common path on all nodes in your Spark cluster.
2. Add the path for the connector and JDBC driver to your `conf/spark-defaults.conf`, and restart the Spark Master. For example, modify the `spark.jars` line by adding the connector and JDBC JARS as follows (replace paths and version numbers with your values):

   ```
   spark.jars /JAR_file_Path/vertica-spark2.0 scala2.11.jar,/JAR_file_Path/vertica-jdbc-11.0.0-0.jar
   ```

See the Spark Documentation's [Configuration page](#) for more information on including JAR files in your Spark jobs.

### Saving an Apache Spark DataFrame to a Vertica Table with the connector V1

The Vertica Apache Spark connector copies data partitions distributed across multiple Spark worker-nodes into a temporary location in HDFS. Vertica then reads the data from HDFS. These data transfers use parallel reads and writes, letting the connector efficiently load large volumes of data from Spark to Vertica.

### Save Options

When writing Spark DataFrames to Vertica, you specify a Vertica target table. You also set how the data is saved using the DataFrame `SaveMode`. The valid values for the `SaveMode` are:

- **SaveMode.Overwrite** If the table already exists, Vertica overwrites all existing data in the table. If the table does not exist, Vertica creates it.

**Note:**

In this mode, Vertica drops the existing table whether the save succeeds or not. The only exception is if the connector is asked to load a DataFrame that contains zero rows.
- **SaveMode.Append** Vertica appends data to any existing table data or creates the table if it does not exist.
- **SaveMode.ErrorIfExists** Vertica creates a new table if the table does not exist. If the table already exists, Vertica returns an error.
- **SaveMode.Ignore** Vertica creates a new table if the table does not exist. If the table does exist, Vertica does not save any of the data and does not return an error.

The `save()` operation never results in a partial or duplicate save. The connector either saves the DataFrame in its entirety to the target table successfully or it aborts the save. In case of failures, to avoid leaving the target table in an inconsistent state, the connector:

1. Saves the data to HDFS as an intermediate staging location
2. Safely copies it into the actual target table in Vertica

### Rejected Rows

For bulk loads, the connector API provides user control to specify a tolerance for rejected rows. You can specify the user tolerance as a parameter (see [V1 Spark Connector Save Options](Vertica-Documentation-Integrating-with-Apache-Spark.html) in [Saving Spark Data to Vertica Using the DefaultSource API](Vertica-Documentation-Integrating-with-Apache-Spark.html)). If the number of rejected rows falls within the tolerance level, the save completes successfully. Otherwise, the connector aborts the save and reports an error.

### Job Status

The connector creates a Vertica table, `S2V_JOB_STATUS_USER_$USERNAME$`, to report the status of each job. When the save to Vertica starts, the connector writes the unique job_id to the Spark log. After the Spark job is started, users can consult this table for the job status based on the job_id. The `S2V_JOB_STATUS_USER_$USERNAME$` has the following columns:

- `target_table_schema`
- `target_table_name`
- `save_mode`
- `job_name`
- `start_time`
- `all_done`
- `success`
- `percent_failed_rows`

The table indicates the start time, unique job name, date, percentage of rows that failed, and final outcome of the save job (success=T/F). The column `all_done` indicates the Spark
job finished without errors and the column **success** indicates the data was saved to the Vertica table (rejected rows must fall within specified tolerance).

**Saving Spark Data to Vertica Using the DefaultSource API**

The Vertica Connector for Apache Spark provides the `com.vertica.spark.datasource.DefaultSource` API to simplify writing data from a Spark DataFrame to a Vertica table using the Spark `df.write.format()` method. The DefaultSource API provides generic key-value options for configuring the database connection and tuning parameters as well as other options.

**Requirements**

The following requirements apply to using the connector to save Spark data to Vertica.

- When you append to an existing Vertica table (using `SaveMode.Append`), your DataFrame must have the same column types, column order, and number of columns as the Vertica table. If your DataFrame and target table are not compatible, use the `column_copy_list` option to alter the DataFrame's data to fit into your Vertica table. See [Copying Data to a Table With a Different Schema](Vertica_Documentation_Integrating_with_Apache_Spark.html).
- The specified Vertica username must have CREATE privileges on the Vertica schema. The connector defaults to "public" schema, but any schema name can be provided as an option by using the "dbschema" optional argument.
- A Spark SaveMode must to be specified (Append, Overwrite, Ignore, ErrorIfExists). See [Saving an Apache Spark DataFrame to a Vertica Table with the connector V1](Vertica_Documentation_Integrating_with_Apache_Spark.html) and [https://spark.apache.org/docs/1.6.2/api/java/org/apache/spark/sql/SaveMode.html](https://spark.apache.org/docs/1.6.2/api/java/org/apache/spark/sql/SaveMode.html).

**Limitations**

The following limitations apply to using the connector to save Spark data to Vertica.

- **Supported Data Types**—The Spark DataFrame cannot have complex types such as Maps, Structs, and Arrays. Vertica currently supports all other Spark data types. The connector cannot save a DataFrame that contains any of these types.
- **Target Table Limitations**—The Vertica target table specified cannot be a view or a temporary table.
- **Null Values in Spark and Vertica**—Spark’s long type is converted to Vertica’s INTEGER type when data moves from Spark to Vertica. Vertica uses the value \(-2^{63}\) (-
9223372036854775808) to represent a NULL value. Spark does not treat this value in any special way. If you save -2^{63} from Spark to Vertica then it is stored as NULL in Vertica.

- **SQL Strings**—Length of Strings. Currently the connector converts all Spark SQL Strings to VARCHAR(strlen) for Vertica. The ‘strlen’ parameter is a user option that defaults to 1024. If strlen is set to a value greater than 65000, Spark SQL Strings are instead converted to LONG VARCHAR(strlen). Values in the range 1 to 32,000,000 are valid.

When using SaveMode.Append, the existing Vertica table should have the corresponding column types for Spark SQL Strings declared as either VARCHAR or LONG VARCHAR.

Spark SQL Strings longer than strlen are always truncated when saving to Vertica.

- **Float Values**—Float Values Represented Differently. Because float values are approximations, the value of a float can be different when it is moved from Spark to Vertica. If you require more precision, then use a more precise data type in Spark, such as double or decimal.

- **Gregorian/Julian Calendar Issues**—Inconsistent dates before the year 1583. The ORC file writer used to stage the data to in HDFS converts dates before 1583 from the Gregorian calendar to the Julian calendar. However Vertica does not perform this conversion. If your data in Spark contains dates before 1583, then the values in Spark and the corresponding values in Vertica can differ by up to 10 days. This difference applies to both DATE and TIMESTAMP values.

- **Different Jobs Writing to the Same Table in Overwrite Mode cause error:**—

  ERROR: java.sql.SQLNonTransientException: [Vertica][VJDBC] (3007) ERROR: DDL statement interfered with this statement. If you have different jobs writing to the same table and are using Overwrite mode then errors can occur. For example, Job 1 starts and begins writing to the Vertica table. Then Job 2 begins and is set to write to the same table. Because the mode is Overwrite, it drops the table to which Job 1 is writing, causing an error. Do not use different jobs to write to the same table when using overwrite mode.

- **Files not cleaned up if process interrupted.**—The files written on by Spark to HDFS are normally cleaned up when the job completes. However, if something interrupts the process (such as a network failure), then files may be left behind and you should manually cleanup the HDFS directory. The HDFS directory is the one provided in the hdfs://url path, and the specific subdirectory is S2V_jobxyz as reported by the connector.

- **Error if the DataFrame has zero rows**—The connector returns an error message asking you to check whether the DataFrame is empty. This error occurs before the
connector begins loading data into Vertica. The data in the targeted Vertica table is not altered, even if mode was set to SaveMode.Overwrite (which would normally delete the table).

## V1 Spark Connector Save Options

To save your Spark DataFrame to Vertica, you must specify the following required parameters as options to `sqlContext.createDataFrame(...)`.format("com.vertica.spark.datasource.DefaultSource").options(...):

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>table</td>
<td>The name of the target Vertica table to save your Spark DataFrame.</td>
</tr>
<tr>
<td>db</td>
<td>The name of the Vertica Database.</td>
</tr>
<tr>
<td>user</td>
<td>The name of the Vertica user. This user must have CREATE and INSERT privileges in the Vertica schema. The schema defaults to “public”, but may be changed using the “dbschema” optional tuning parameter.</td>
</tr>
<tr>
<td>password</td>
<td>The password for the Vertica user.</td>
</tr>
<tr>
<td>host</td>
<td>The hostname of a Vertica node. This value is used to make the initial connection to Vertica and look up all the other Vertica node IP addresses. You can provide a specific IP address or a resolvable name such as myhostname.com.</td>
</tr>
<tr>
<td>hdfs_url</td>
<td>The fully-qualified path to a directory in HDFS that will be used as a data staging area. For example, hdfs://myhost:8020/data/test. The connector first saves the DataFrame in its entirety to this location before loading into Vertica. The data is saved in ORC format, and the files are saved in a directory specific to each job. This directory is then is deleted when the job completes. Note that you need additional configuration changes to use HDFS. See Configuring HDFS Access. You can optionally use the webhdfs protocol instead. See HDFS and WebHDFS.</td>
</tr>
</tbody>
</table>

You must provide an HDFS URL even if you intend to use webhdfs. You can use a dummy URL.
In addition to the required parameters, you can optionally specify the following parameters as options to `sqlContext.createDataFrame(...)`.format("com.vertica.spark.datasource.DefaultSource").options(...).

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>dbschema</td>
<td>The schema space for the Vertica table. Default Value: public</td>
</tr>
<tr>
<td>port</td>
<td>The Vertica Port. Default value: 5433</td>
</tr>
<tr>
<td>failed_rows_percent_tolerance</td>
<td>The tolerance level for failed rows, as a percentage. For example, to specify that the job fail if greater than 10% of the rows are rejected, specify this value as 0.10 for 10% tolerance. Default Value: 0.00</td>
</tr>
<tr>
<td>strlen</td>
<td>The string length. Use this option to increase (or decrease) the default length when saving Spark StringType to Vertica VARCHAR type. Default Value: 1024</td>
</tr>
<tr>
<td>web_hdfs_url</td>
<td>The fully-qualified path to a directory in HDFS that will be used by Vertica to retrieve the data. For example, <code>webhdfs://myserver:50070/data/test</code>. You must use this option (in addition to &quot;hdfs_url&quot;) if the Vertica nodes are not configured for HDFS access. See HDFS and WebHDFS. below.</td>
</tr>
<tr>
<td>fileformat</td>
<td>The format for the intermediate data file written to HDFS. Supported values are:</td>
</tr>
<tr>
<td></td>
<td>- &quot;orc&quot; (default)</td>
</tr>
<tr>
<td></td>
<td>- &quot;parquet&quot;</td>
</tr>
<tr>
<td></td>
<td>See Intermediate Data File Format Settings below for more information.</td>
</tr>
<tr>
<td>target_table_ddl</td>
<td>A SQL DDL statement to run in Vertica before copying data. You usually use this option to create the target table to receive the data from Spark. The table this statement creates should match the table name you specify in the table option. See Creating the Destination Table From Spark for more information.</td>
</tr>
<tr>
<td>column_copy_list</td>
<td>A custom column list to supply to the Vertica COPY statement that loads the Spark data into Vertica. This option lets you adjust the data so that the Vertica table and the Spark data frame to do not have to have the same number of columns. See Copying Data to a Table With a Different Schema for more information.</td>
</tr>
</tbody>
</table>
HDFS and WebHDFS

The connector transfers data from Spark to an HDFS directory before moving it to Vertica. Vertica can access data in the HDFS directory either using the hdfs scheme (LibHDFS++), or through the web-based webhdfs scheme.

You must configure your Vertica cluster before it can directly access data stored in HDFS. See Configuring HDFS Access in the Integrating with Apache Hadoop.

By default, the connector uses the hdfs protocol when possible. It falls back to the webhdfs protocol in several cases:

- If you do not have your nodes configured for direct HDFS access.
- If the data stored in the HDFS directory is encrypted. The library that Vertica uses to read directly from HDFS cannot decrypt this data. The webhdfs scheme transparently decrypts the data for Vertica.

For Vertica to fall back to webhdfs, you must verify that webhdfs.enabled set to true on your HDFS cluster.

Intermediate Data File Format Settings

When Spark sends data to Vertica, it writes the data to intermediate files stored in HDFS. Vertica then reads these files off of HDFS. By default, Spark writes these data files in ORC format. You can choose to have it use Parquet format instead by setting the fileformat parameter to "parquet".

You usually do not directly access these files, so you normally do not care about their format. The Spark connector automatically deletes these files after Vertica is through with them.

Important:
Testing shows that Spark writes ORC files faster than Parquet files. Writing of the data files makes up a large portion of the time it takes to transfer data from Spark to Vertica. Using the format that takes Spark the least amount of time to write results in faster transfers. For this reason, Vertica recommends you use the default ORC format for the intermediate files unless you are required to use Parquet format files.
Quick Start with Code Example

You can use the spark-shell and some brief Scala code to verify that the connector can write data from Spark to Vertica.

1. Start the spark-shell and include both the Vertica JDBC Driver and the Vertica Spark Connector JAR files in the jars argument. Then, specify any other Spark options you normally use:

```
spark-shell --jars vertica-8.1.0_spark2.0_scala2.11.jar,vertica-jdbc-8.1.0-0.jar other options
```

2. The following code creates a DataFrame in Spark and saves it to a new Vertica table using the connector:

1. Modify the host, db, user, password, and table settings in the following example to match your Vertica instance.
2. Paste the following code into your Spark shell.

```
// S2V_basic.scala
import org.apache.spark.sql.types._
import org.apache.spark.sql.(
  DataFrame, Row, SQLContext, SaveMode
)
import com.vertica.spark._
// Create a sample DataFrame and save it to Vertica
val rows = sc.parallelize(Array(
  Row(1,"hello", true),
  Row(2,"goodbye", false)
))
val schema = StructType(Array(
  StructField("id",IntegerType, false),
  StructField("message",StringType,true),
  StructField("still_here",BooleanType,true)
))
// Note: Spark's API changed between version 1.6 and 2.0. In version 1.6
// you use sqlContext to create a DataFrame. In 2.0, you use the spark object.
// val df = sqlContext.createDataFrame(rows, schema) // Spark 1.6
val df = spark.createDataFrame(rows, schema) // Spark 2.0
// View the sample data and schema
df.show
df.schema

// Setup the user options, defaults are shown where applicable for optional values.
// Replace the values in italics with the settings for your Vertica instance.
val opts: Map[String, String] = Map(
  "table" -> "VerticaTableName",
  "db" -> "VerticaDatabaseName",
)
Creating the Destination Table From Spark

You can use the `DefaultSource`'s `target_table_ddl` option to run an arbitrary Vertica DDL statement before Vertica load your data. You usually use this option to create a table to receive the data. The content of the `target_table_ddl` statement is run before Vertica loads the data exported from Spark.

The following example shows an options object that has a `target_table_ddl` option that creates a target table named `employee` for the data the Spark Connector loads into Vertica:

```scala
val opts: Map[String, String] = Map(
    "table" -> "employee",
    "target_table_ddl" -> "
      CREATE TABLE employee (  
        key    IDENTITY(1,1),  
        fullname VARCHAR(1024) NOT NULL,  
        age    INTEGER,  
        hiredate DATE NOT NULL,  
        region  VARCHAR(1024) NOT NULL,  
        loaddate TIMESTAMP DEFAULT NOW()  
      )  
      PARTITION BY EXTRACT (year FROM hiredate);  
      CREATE PROJECTION employee_p(key, fullname, hiredate) AS  
      SELECT key, fullname, hiredate FROM employee SEGMENTED BY HASH(key) ALL NODES;
    
    "db" -> "VerticaDatabaseName",
    "user" -> "VerticaDatabaseUser",
    "password" -> "VerticaDatabasePassword",
    "host" -> "VerticaHostName",
    "hdfs_url" -> "hdfs://HDFSNameNode:9000/user/hduser/someDirectory",
    "web_hdfs_url" -> "webhdfs://HDFSNameNode:50070/user/hduser/someDirectory"
  )
```

// SaveMode can be either Overwrite, Append, ErrorIfExists, Ignore
val mode = SaveMode.Overwrite

// save the DataFrame via Spark's Datasource API
df.write.format("com.vertica.spark.datasource.DefaultSource").options(opts).mode(mode).save()
Copying Data to a Table With a Different Schema

Normally, the column definitions in your Spark DataFrame matches the columns in your Vertica target table. Sometimes, you cannot have your target table exactly match the definition of your DataFrame. For example, suppose the definition of your DataFrame has to change, but you do not want to update the schema of your target table as your client applications rely on it remaining the same. In this case, you can use the column_copy_list option to alter the data columns from the DataFrame into values that can be inserted into your Vertica target table. The contents of this option are passed as column arguments to the COPY statement that Vertica uses to load the data. Using it, you can split, combine, or skip columns in the DataFrame as COPY loads them into your target table. See Transforming Data During Loads for more information on using column arguments in the COPY statement to change the source data to match your target table's schema.

The following example demonstrates using the column_copy_list setting in a situation where the DataFrame has separate column for a first, middle, and last name, but the Vertica target table has just a single column for a full name. It also demonstrates compensating for the DataFrame's lack of an age column by setting the target table's age column value to NULL.

```scala
def columnCopyListExample() = requireSparkDataFrameOptions

val opts: Map[String, String] = Map(
  "table" -> "employee",
  "copy_column_list" -> "
    firstname  FILLER VARCHAR(1024),
    middlename FILLER VARCHAR(1024),
    lastname   FILLER VARCHAR(1024),
    fullname AS firstname || '|' || NVL(middlename, '') || '|' || lastname,
    age as NULL,
    hiredate,
    region",
  "db" -> "VerticaDatabaseName",
  "user" -> "VerticaDatabaseUser",
  "password" -> "VerticaDatabasePassword",
  "host" -> "VerticaHostName",
  "hdfs_url" -> "hdfs://HDFSNameNode:9000/user/hduser/someDirectory",
  "web_hdfs_url" -> "webhdfs://HDFSNameNode:50070/user/hduser/someDirectory"
)
```
Loading Vertica Data into Spark Using the Connector V1

The Vertica Apache Spark connector V1 includes APIs to simplify loading Vertica table data efficiently with an optimized parallel data-reader:

- `com.vertica.spark.datasource.DefaultSource` — The data source API, which is used for writing to Vertica and is also optimized for loading data into a DataFrame.
- RDD API `com.vertica.spark.rdd.VerticaRDD` — This API simplifies creating an RDD object based on a Vertica table or view.

Typically, Vertica tables are segmented across multiple nodes. Using the Spark connector, you invoke a parallel data reader to efficiently read data from Vertica by minimizing data movement between Vertica nodes. The DataFrame reader supports pushing column and row filtering to Vertica to avoid transferring large volumes of Vertica data into the Spark in-memory data structures.

**Important:**
For the best possible performance, segment your Vertica table by hash on one or more attributes that return integer values. This method is faster than segmenting by hash. See Hash Segmentation Clause for more details. An example of creating a table segmented by hash:

```
create table example(a integer, b integer) segmented by hash(a) all nodes;
```

Loading Vertica Table Segments into the Spark DataFrames and RDD Partitions

All Spark RDDs and DataFrames require you to define the number of partitions. You can define an arbitrary number of partitions. The Vertica Spark connector library automatically generates the hash-intervals for each partition and intervals. When you segment the table
by a proper hash expression on one or more of its columns, these intervals minimize cross-
node data shuffling (w) inside Vertica and data skew.

No cross-node data shuffling occurs inside Vertica when both of the following conditions exist:

- The Vertica cluster has \( N \) nodes.
- The number of the Spark partitions is \( P*N \) (\( P \) is an integer greater than 0).

Therefore, you can use the full network throughput for data transfer, achieving the best performance. The following figure shows 8 Spark partitions defined over 4 Vertica segmentations.

The next figure shows another example where the number of Spark partitions is smaller (two) than the number of Vertica segmentations (four).

According to Vertica benchmark tests, a setting of \( P=4 \) achieves the best loading performance. For example, when Vertica has 4 nodes, the number of Spark partitions recommended is 16 (\( P = 4, \text{Nodes} = 4, P * N = 16 \) partitions).

During Spark job execution, each Spark partition executes inside a task. Each task launches a JDBC connection to a Vertica node. This connection contacts the Vertica node that stores the segment containing the data of the Spark partition. The Spark task then issues a query to the Vertica node and fetches the query result into a VerticaRDD/DataFrame.

For an unsegmented Vertica table, the connector replicates the table onto multiple Vertica nodes. The Spark partition is defined as a range on the sorted columns of the table. Spark tasks send the queries to different replicas for load-balancing. The next figure shows Spark partitions defined over an unsegmented table.
The following figure illustrates the runtime behavior of the Vertica to Spark connector. Spark tasks containing VerticaRDD/DataFrame partitions fetch data from Vertica through JDBC connections. Those queries that are used to fetch data are based on the computed ranges of hash values.

![Runtime Behavior Diagram]

**Spark Numeric Value Limitation**

Both Vertica and Spark support variable-precision NUMERIC values. Vertica's NUMERIC values support more digits of precision (up to 1024) than Spark does (38 digits). If you attempt to copy a Vertica table to Spark that has a NUMERIC column with more than 38 digits of precision, the VerticaDataSourceRDD class throws an error similar to the following:

```
java.lang.IllegalArgumentException: requirement failed: Decimal precision 41 exceeds max precision 38
    at scala.Predef$.require(Predef.scala:224)
    at org.apache.spark.sql.types.Decimal.set(Decimal.scala:113)
    at org.apache.spark.sql.types.Decimal$.apply(Decimal.scala:426)
    at com.vertica.spark.datasource.VerticaDataSourceRDD$$anon$1.getNext(VerticaRDD.scala:382)
    ...
```

**Using the Vertica Data Source API with the Connector V1**

The Vertica Spark connector source API supports both parallel write and read operations. The following code sample illustrates how you can create an in-memory DataFrame by invoking SQLContext.read function, using Vertica’s com.vertica.spark.datasource.DefaultSource formatter.
V1 Spark Connector Load Options

To connect to Vertica, you must specify the following parameters for the options in sqlContext.read.format("com.vertica.spark.datasource.DefaultSource").options(...).

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>table</td>
<td>The name of the target Vertica table or view to save your Spark DataFrame. Note that the Vertica table must be segmented by hash or by an expression that returns non-negative integer values. Also, if the Vertica table is an external table, the underlying file(s) on which the external table is based must be accessible on all Vertica nodes.</td>
</tr>
<tr>
<td>db</td>
<td>The name of the Vertica Database</td>
</tr>
<tr>
<td>user</td>
<td>The name of the Vertica user. This user must have CREATE and INSERT privileges in the Vertica schema. The schema defaults to “public”, but may be changed using the dbschema optional parameter.</td>
</tr>
<tr>
<td>password</td>
<td>The password for the Vertica user.</td>
</tr>
<tr>
<td>host</td>
<td>The hostname of a Vertica node. This value is used to make the initial connection to Vertica and look up all the other Vertica node IPs. You can provide a specific IP address or resolvable name such as myhostname.com.</td>
</tr>
<tr>
<td>numPartitions</td>
<td>Optional. The number of Spark partitions for the load from the Vertica job, each partition creates a JDBC connection. Default Value: 16.</td>
</tr>
<tr>
<td>dbschema</td>
<td>Optional. The schema space for the Vertica table. Default value: public.</td>
</tr>
<tr>
<td>port</td>
<td>Optional. The Vertica Port. Default value: 5433</td>
</tr>
</tbody>
</table>

Example: Load Data into a DataFrame

The following example demonstrates reading the content of a Vertica table named test into a DataFrame.
Column Selection and Filter Push Down

Column selections and row filters applied on the DataFrame are pushed down into Vertica. Refer to the Spark SQL API for more details about applying column selections and row filters. The following example illustrates how you can load a column containing filtered rows as a DataFrame:

```scala
val c = df.select("a").filter("a > 5").count
```

**Note:**
When filtering it is important to specify the correct type. For example, single-quoted values are treated as strings, so if you wrote the above filter code as filter("a > '5'") then the filter is not pushed down, because the target column is an integer and the value '5' when single-quoted is treated as a string.

Additionally, when using other types such as dates, cast the value as a date type, such as:

filter("c1 >= cast('2010-1-2' as date)" rather than filter("c1 >= '2010-1-2'"). The latter example does not push down.

Additional examples of valid filters:

- df.filter("id<=3").groupBy("id").sum("id").show
- df.filter("$c".like("str%")) .show // has to be varchar type to be pushed down
Considerations When Using the Spark DataFrame Filter Method with Vertica

Be aware of the following considerations when using the DataFrame's filter method when loading data from Vertica:

- Vertica supports the case insensitive terms “inf” and “infinity” to refer to INFINITY in SQL queries. However, when filtering using Spark's filter method you must instead use the term (case sensitive) “Infinity”.
- When filtering on Boolean values, do not use "is true/false" or "is not true/false" instead, cast the value as a Boolean, or use the equals operator, for example:
  - df.filter("c = 1").show
  - df.filter("c = True").show
  - df.filter("c = False").show

Example: Creating a DataFrame Using the Vertica Data Source

Use the following example to learn how to create a Spark DataFrame from a Vertica table:

1. Create a sample table in Vertica:

   ```sql
   => CREATE TABLE test (a int, b int, c int, d varchar);
   => INSERT INTO test VALUES (1, 3, 5, 'odds');
   => INSERT INTO test VALUES (10, 14, 8, 'evens');
   => INSERT INTO test VALUES (11, 13, 19, 'odds');
   => COMMIT;
   ```

2. Modify the database connection details (host, db, table, user, and password) in the code below with your Vertica connection details.

   ```scala
   import org.apache.spark.sql.SQLContext
   import org.apache.spark.SparkConf
   import org.apache.spark.SparkContext
   ```
val conf = new SparkConf().setAppName("vertica-spark-connector-testing").setMaster("local [1]")
val sc = new SparkContext(conf)
val sqlContext = new SQLContext(sc)

val host = "VerticaHost"
val db = "VerticaDB"
val table = "VerticaTable"
val user = "VerticaUser"
val password = "VerticaPassword"
val part = "12"

val opt = Map("host" -> host, "table" -> table, "db" -> db, "numPartitions" -> part, "user" -> user, "password" -> password)

val df = sqlContext.read.format("com.vertica.spark.datasource.DefaultSource").options (opt).load()

val c = df.select("a").filter("a > 5").count
println(c)
sc.stop();

3. Run the example code in a Spark shell. Start the shell, then paste in your modified code.

Using the Vertica RDD API with the Connector V1

Use the Vertica RDD API to load Vertica table data into a Spark RDD. You create a VerticaRDD object either by initiating it or by calling one of the multiple RDD.create methods available. The following example uses VerticaRDD.create to create an RDD from Vertica data. In this example, the parameters of create() are:

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>hostname</td>
<td>A Vertica node host name</td>
</tr>
<tr>
<td>port</td>
<td>Vertica port number. The default value is 5433.</td>
</tr>
<tr>
<td>prop</td>
<td>A property object that include user name and password</td>
</tr>
<tr>
<td>table</td>
<td>Vertica table name, including the schema name, such as, “schema_name.table_name”.</td>
</tr>
<tr>
<td>dbname</td>
<td>Vertica database name</td>
</tr>
<tr>
<td>col</td>
<td>The column names of the Vertica table that will be loaded into Spark. An empty col array means all columns.</td>
</tr>
</tbody>
</table>
### Parameter Description

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>numPartitions</td>
<td>The number of Spark partitions for the resulting VerticaRDD</td>
</tr>
</tbody>
</table>
| mapRow        | A function used to convert one row of JDBC results into the element data type T of VerticaRDD. The generated VerticaRDD has the type VerticaRDD[T].

For example:

```scala
val extractValues = (r: ResultSet) => {
  (r.getInt(1), r.getInt(2))
}
```

This function converts a tuple that contains two integers—for example, (101, 102), into an array of objects. Refer to the Spark JDBC RDD for more details about this parameter.

**Note:**
This function must be serializeable by Spark.

### RDD Create Methods

The `com.vertica.spark.rdd.VerticaRDD` API has three different create methods that you can use to create a VerticaRDD object:

- `create(sc, connect, table, columns, numPartitions, mapRow)`
- `create(sc, connect, table, columns, numPartitions, ipMap, mapRow)`
- `create(sc, host, port: Int = 5433, db, properties, table, columns, numPartitions, mapRow)`

The parameters for the Create methods:

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>sc</td>
<td>Spark Context object.</td>
</tr>
<tr>
<td>connect</td>
<td>A connection object that contains a function that returns an open JDBC Connection.</td>
</tr>
<tr>
<td>table</td>
<td>A string value for the database table name</td>
</tr>
<tr>
<td>columns</td>
<td>An <code>Array[String]</code> that contains the columns of the database table</td>
</tr>
<tr>
<td>Parameter</td>
<td>Description</td>
</tr>
<tr>
<td>-----------</td>
<td>-------------</td>
</tr>
<tr>
<td></td>
<td>that will be loaded. If an empty array, this RDD loads all columns.</td>
</tr>
<tr>
<td>numPartitions</td>
<td>An integer value specifying the number of partitions for the VerticaRDD.</td>
</tr>
<tr>
<td>ipMap</td>
<td>A Map [String, String] containing the optional map from private IP addresses to public IP addresses for all Vertica nodes. This map is used only when Vertica is installed on private IP addresses but is listening on both private and public IP addresses. You can also update each Vertica node's EXPORT_ADDRESS instead of providing the ipMap parameter if Vertica is running on both private and public IP addresses. When a database is installed, the export_address and node_address in the system NODES table are set to the same value. If you installed Vertica on a private address, you must set the export_address to a public address for each node. See Identify the Database or Nodes Used for Import/Export in the Administrator's Guide.</td>
</tr>
<tr>
<td>mapRow</td>
<td>A function from a ResultSet to a single row of the upi result types you want. This function should call only getInt, getString, etc; the RDD takes care of calling next. The default maps a ResultSet to an array of Object.</td>
</tr>
<tr>
<td>host</td>
<td>A string containing the host name (or IP address) of a Vertica node, that can be used to connect to Vertica.</td>
</tr>
<tr>
<td>port</td>
<td>An integer value specifying the number for Vertica connection. Default Value: 5433</td>
</tr>
<tr>
<td>properties</td>
<td>Properties object for JDBC connection properties, such as user, password.</td>
</tr>
</tbody>
</table>

**Example: Loading Vertica Table Data into a VerticaRDD**

This section contains complete example code used to create a VerticaRDD from a Vertica table, test whose definition is:
create table test (a int, b int);

This program creates VerticaRDD[(Int, Int)] and calls count that returns the number of rows of table, test.

```scala
// V2S_rdd.scala
import com.vertica.spark.rdd.VerticaRDD
import java.util.Properties
import java.sql.ResultSet
import org.apache.spark.SparkConf
import org.apache.spark.SparkContext

val extractValues = (r: ResultSet) => {
  (r.getInt(1), r.getInt(2))
}

val conf = new SparkConf().setAppName("vertica-spark-connector-testing").setMaster("local[1]")
//val sc = new SparkContext(conf) // uncomment if not used in spark shell

val host = "VerticaHost"
val port = 5433
val db = "VerticaDB"
val prop = new Properties
  prop.put("user", "VerticaUserName")
  prop.put("password", "VerticaPassword")
val table = "test"
val cols = Array[String]()
val part = 12;
val data = VerticaRDD.create(sc, host, port, db, prop, table, cols, numPartitions = part, mapRow = extractValues)
val c = data.count
println("count:" + c)
```

The Spark Connector V2

Use the Spark Connector V2 when your Spark cluster has version Spark 3.0 or later installed. The connector V2 is not backwards-compatible with versions of Spark earlier than 3.0 or versions of Scala earlier than 2.12.

Getting the Connector

The Spark connector V2 is an open source project. For the latest information on the Spark connector, visit the spark-connector project on GitHub. To get an alert when there are updates to the connector, you can log into a GitHub account and click the Notifications button on any of the project’s pages.

You have three options to get the Spark connector V2:
• Get the connector from [Maven Central](https://mvnrepository.com). If you use Gradle, Maven, or SBT to manage your Spark applications, you can add a dependency to your project to automatically get the connector and its dependencies and add them into your Spark application. See [Getting the Connector from Maven Central](#) below.

• Download a precompiled assembly from the GitHub project's [releases page](https://github.com/vertica/sparkconnector/releases). Once you have downloaded the connector, you must configure Spark to use it. See [Deploy the Connector to the Spark Cluster](#) below.

• Clone the connector project and compile it. This option is useful if you want features or bugfixes that have not been released yet. See [Compiling the Connector](#) below.

## Getting the Connector from Maven Central

The Vertica Spark connector is available from the Maven Central Repository. Using Maven Central is the easiest method of getting the connector if you are already using a build tool that can download dependencies from it.

If your Spark project is managed by Gradle, Maven, or SBT you can add the Spark connector to it by listing it as a dependency in its configuration file. You may also have to enable Maven Central if your build tool does not automatically do so.

For example, suppose you use SBT to manage your Spark application. In this case, the Maven Central repository is enabled by default. All you need to do is add the `com.vertica.spark` dependency to your `build.sbt` file.

See the [com.vertica.spark](https://mvnrepository.com) page on the Maven Repository site for more information on the available Spark connector versions and dependency information for your build system.

## Compiling the Connector

You may choose to compile the Spark connector V2 if you want to test new features or bugfixes that have not yet been released. Compiling the connector is necessary if you plan on contributing your own features.

To compile the connector, you need:

• The SBT build tool. In order to compile the connector, you must install SBT and all of its dependencies (including a version of the Java SDK). See the [SBT documentation](https://www.sbt.io) for requirements and installation instructions.

• [git](https://git-scm.com) to clone the Spark connector V2 source from the GitHub.
As a quick overview, executing the following commands on a Linux command line will download the source and compile it into an assembly file:

```bash
$ git clone https://github.com/vertica/spark-connector.git
$ cd spark-connector/connector
$ sbt assembly
```

Once compiled, the connector is located at `target/scala-\textit{n.n}/spark-vertica-connector-assembly-\textit{x.x}.jar`. The \textit{n.n} is the currently-supported version of Scala and \textit{x.x} is the current version of the Spark connector.

See the [CONTRIBUTING](https://github.com/vertica/spark-connector) document in the connector's GitHub project for detailed requirements and compiling instructions.

Once you compile the connector, you must deploy it to your Spark cluster. See the next section for details.

## Deploy the Connector to the Spark Cluster

If you downloaded the Spark connector V2 from GitHub or compiled it yourself, you must deploy it to your Spark cluster before you can use it. Two options include copying it to a Spark node and including it in a \texttt{spark-submit} or \texttt{spark-shell} command or deploying it to the entire cluster and having it loaded automatically.

### Loading the Spark Connector from the Command Line

The quickest way to use the connector is to include it in the \texttt{--jars} argument when executing a \texttt{spark-submit} or \texttt{spark-shell} command. To be able to use the connector in the command line, you must first copy its assembly JAR to the Spark node on which you will run the commands. Then add the path to the assembly JAR file as part of the \texttt{--jars} command line argument.

For example, suppose you copied the assembly file to your current directory on a Spark node. Then you could load the connector when starting \texttt{spark-shell} with the command:

```
spark-shell --jars spark-vertica-connector-assembly-1.0.jar
```

You could also enable the connector when submitting a Spark job using \texttt{spark-submit} with the command:

```
spark-submit --jars spark-vertica-connector-assembly-1.0.jar
```

### Configure Spark to Automatically Load the Connector
You can also choose to configure your Spark cluster to automatically load the connector. Deploying the connector this way ensures that the Spark connector is available to all Spark applications on your cluster.

To have Spark automatically load the Spark connector:

1. Copy the Spark connector's assembly JAR file to the same path on all of the nodes in your Spark cluster. For example, on Linux you could copy the spark-vertica-connector-assembly-1.0.jar file to the /usr/local/lib directory on every Spark node. The file must be in the same location on each node.

2. In your Spark installation directories on each node in your cluster, edit the conf/spark-defaults.conf file to add or alter the following line:

   ```
   spark.jars /path_to_assembly/spark-vertica-connector-assembly-1.0.jar
   ```

   For example, if you copied the assembly JAR file to /usr/local/lib, you would add:

   ```
   spark.jars /usr/local/lib/spark-vertica-connector-assembly-1.0.jar
   ```

   **Note:**

   If the `spark.jars` line already exists in the configuration file, add a comma to the end of the line, then add the path to the assembly file. Do not add a space between the comma and the surrounding values.

   If you have the JAR files for the Spark connector V1 in your configuration file, you do not need to remove them. Both connector versions can be loaded into Spark at the same time without a conflict.

3. Test your configuration by starting a Spark shell and entering the statement:

   ```
   import com.vertica.spark._
   ```

   If the statement completes successfully, then Spark was able to locate and load the Spark connector library correctly.

---

**Configuring The Vertica Spark Connector V2**

Your Spark application uses the connector's data source (named `com.vertica.spark.datasource.VerticaSource`) when loading data from or
saving data to Vertica. To use the connector to transfer data between Spark and Vertica, your Spark application must import the Vertica Spark connector classes. Usually, you will also import other Spark SQL classes as well.

The following example demonstrates importing some Spark SQL classes as well as the Spark connector.

``` scala
import org.apache.spark.sql.types._
import org.apache.spark.sql.{DataFrame, Row, SQLContext, SaveMode}
import com.vertica.spark._
```

You Spark application configures the connector by setting options in a Map that it passes to the VerticaSource. When writing data from Spark to Vertica your application must also supply a Spark SaveMode that tells the connector how to handle any existing data in the target Vertica table.

## The Options Map

The contents of the Map your Spark application passes to the VerticaSource gives the connector the information it needs about your Vertica database and the intermediate storage location. The following table shows some of the common options you can set in the Map:

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>host</td>
<td>The host name or IP address of a node in your Vertica database. The Spark connector connects to this node to execute statements, such as statements that save data to or read data from the intermediate storage location.</td>
</tr>
<tr>
<td>user</td>
<td>The user name of the connector uses when x connecting to Vertica.</td>
</tr>
<tr>
<td>db</td>
<td>The name of the Vertica database the connector will access.</td>
</tr>
<tr>
<td>password</td>
<td>The password for the vertica user supplied in the user option.</td>
</tr>
<tr>
<td>staging_fs_url</td>
<td>The URI for the intermediate storage location. This must be an hdfs:// schema URL.</td>
</tr>
<tr>
<td>table</td>
<td>The Vertica table that is the source of data is being transferred from Vertica to Spark or the target being written to when transferring data from Spark to Vertica.</td>
</tr>
</tbody>
</table>
There are many other options you can set. See the connector's API description on its [GitHub project page](https://github.com) for a complete list of the options you can set.

The following Scala example shows a defining a Map for a simple configuration that connects to a Vertica named mydatabase on host vnode01, and accesses a table named sparktest.

```scala
val opts = Map(
  "host" -> "vnode01",
  "user" -> "myuser",
  "db" -> "mydatabase",
  "password" -> "mypassword",
  "staging_fs_url" -> "hdfs://hadoop01:9002/data",
  "table" -> "sparktest"
)
```

## The SaveMode Setting

When saving data from Spark to Vertica, your Spark application must tell the connector how Vertica should handle any existing data in the target table. You indicate the behavior you want using a value from the [Spark SaveMode enumeration](https):

- **SaveMode.Overwrite** If the table already exists, Vertica overwrites all existing data in the table. If the table does not exist, Vertica creates it.

  **Note:**

  In this mode, Vertica drops the existing table whether the save succeeds or not. The only exception is if the connector is asked to load a DataFrame that contains zero rows.

- **SaveMode.Append** Vertica appends data to any existing table data or creates the table if it does not exist.
- **SaveMode.ErrorIfExists** Vertica creates a new table if the table does not exist. If the table already exists, Vertica returns an error.
- **SaveMode.Ignore** Vertica creates a new table if the table does not exist. If the table does exist, Vertica does not save any the data and does not return an error.

You pass the SaveMode as an option to the DataFrame object's write method. For example, this Scala statement calls a DataFrame's write method and sets the SaveMode to overwrite any existing data:

```scala
df.write.format("com.vertica.spark.datasource.VerticaSource").options(opts)
  .mode(SaveMode.Overwrite).save()
```

See the [Spark API entry for SaveMode](https) for more information.
Kerberos Authentication

The Vertica Spark connector V2 supports authenticating via Kerberos. See the Kerberos documentation at the Vertica Spark connector's GitHub project for instructions on configuring the connector to use Kerberos.

Connector Example

Once you have configured the connector, you can use the VerticaSource data source to read and write data. The following Scala example demonstrates writing a single value to a table named sparktest in Vertica, and then reading it back from Vertica into a new DataFrame.

```scala
import org.apache.spark.sql.types._
import org.apache.spark.sql.{DataFrame, Row, SQLContext, SaveMode}
import com.vertica.spark._

val opts = Map(
  "host" -> "vnode01",
  "user" -> "myverticauser",
  "db" -> "mydatabase",
  "password" -> "mypassword",
  "staging_fs_url" -> "hdfs://hadoop01:9002/data",
  "table" -> "sparktest"
)

// Create data and put it in a dataframe
val schema = new StructType(Array(StructField("col1", IntegerType)))
val data = Seq(Row(77))
val df = spark.createDataFrame(spark.sparkContext.parallelize(data), schema).coalesce(1)

// Vertica will overwrite any existing data in the sparktest table.
val mode = SaveMode.Overwrite

da.write.format("com.vertica.spark.datasource.VerticaSource").options(opts)
  .mode(mode).save()

// Read it back from Vertica
val dfRead: DataFrame = spark.read.format("com.vertica.spark.datasource.VerticaSource").options(opts).load()
```

For details on loading data from Vertica to Spark, see Loading Data into Spark from Vertica with the Connector V2. For more information about saving Spark data to Vertica, see Saving Spark Data to Vertica Using the Connector V2.
Running the Connector V2 Examples

The Vertica Spark connector V2 GitHub project has several example Spark applications that use the connector. These examples provide you with a good overview of how the connector works, as well as providing a convenient way for you to test your Vertica, Spark, and intermediate storage configuration. If the examples run, then you have configured your environment correctly.

Some of the examples in the GitHub project are:

- basic-read reads data from Vertica.
- basic-write writes data to Vertica.
- looped repeatedly appends data to a Vertica table.

Prerequisites

Before you can run the examples, your environment must meet the following prerequisites (which are the same requirements for running and compiling the Spark connector):

- An intermediate storage location.
- A Vertica database cluster configured to access the intermediate storage location.
- A supported version of Spark.
- The SBT build tool installed on your Spark system. This tool runs the examples. See the SBT documentation for instructions on installing SBT.
- git installed on your Spark system, so you can get the Spark connector project from GitHub. See the git documentation for installation instructions.

See Spark Connector Requirements for more information.

Getting and Running the Examples

To clone the GitHub repository and run an example:

1. Log into a Spark host.
2. Use git to clone the Spark connector project from GitHub:

   ```
   git clone https://github.com/vertica/spark-connector.git
   ```
3. Change the current directory to one of the example subdirectories located under spark-connector/examples. For example:

```bash
cd spark-connector/examples/basic-read
```

(On Microsoft Windows, use \\ instead of / for the path separator.)

4. Edit the src/main/resources/application.conf configuration file to match your environment. Most of the settings in this file are the same as those described in Configuring The Vertica Spark Connector V2. For example, for the environment shown in Connector Example you would edit the configuration file to be:

```conf
functional-tests {
  host="vnode01"
  port=5433
  db="mydatabase"
  user="myverticauser"
  password="mypassword"
  log=true
  filepath="hdfs://hadoop01:9002/data/"
  dirpath="hdfs://hadoop01:9002/data/dirtest/"
}
```

**Note:** Currently, the dirpath setting is not used by the examples.

5. Create a subdirectory named lib and copy the Vertica Spark connector assembly JAR file to it. If you are on Linux, you can make a symbolic link to the assembly from this subdirectory. For example, if you compiled the connector in your clone of the GitHub project following the steps in Compiling the Connector, you can link to the copy in in your project directory:

```bash
$ mkdir lib
$ cd lib
$ ln -s ../../../connector/target/scala-2.12/spark-vertica-connector-assembly-1.0.jar spark-vertica-connector-assembly-1.0.jar
```

6. Run the example with the command:

```bash
sbt run
```

As the example runs, you will see many status messages. If the example finishes successfully, you will see a success message similar to the following:

```
```
If, instead, you see error messages, examine them to determine what went wrong. The root cause is often some sort of misconfiguration, either in the the connection between the connector and Vertica, between Vertica and the intermediate storage, or between Spark and the intermediate storage. Review your settings and try again.

**Note:**
Most of the examples load data into a Vertica table named df1est. Most of the examples have a SaveMode of ErrorIfExists, so they will report an error if you run them a second time. Manually drop the df1est table after running an example to avoid these errors.

## Loading Data into Spark from Vertica with the Connector V2

The Vertica Spark connector V2 API supports parallel read operations from Vertica. The following code sample illustrates how you can create an in-memory DataFrame using the Vertica com.vertica.spark.datasource.VerticaSource class.

To configure the connector, you pass the VerticaSource class a Map object containing a set of options. See [The Options Map](#) for more information.

You load data by calling `spark.read.format` with the com.vertica.spark.datasource.VerticaSource class name:

```scala
spark.read.format("com.vertica.spark.datasource.VerticaSource").options(opts).load()
```

where `opts` is the name of the option map you created.

For example, suppose you create a table in Vertica named sparkloadtest:

```sql
=> CREATE TABLE sparkloadtest (a int, b int, c int, d varchar);
=> INSERT INTO sparkloadtest VALUES (1, 3, 5, 'odds');
=> INSERT INTO sparkloadtest VALUES (10, 14, 7, 'evens');
=> INSERT INTO sparkloadtest VALUES (11, 13, 19, 'odds');
=> COMMIT;
```

You can read this table into a Spark DataFrame and print the rows using the following Scala code:

```scala
import org.apache.spark.sql.types._
import org.apache.spark.sql.{DataFrame, Row, SQLContext, SaveMode}
```
import com.vertica.spark._

val opts = Map(
  "host" -> "vnode01",
  "user" -> "myuser",
  "db" -> "mydatabase",
  "password" -> "mypassword",
  "staging_fs_url" -> "hdfs://hadoop01:9002/data",
  "table" -> "sparkloadtest"
)

val dfRead: DataFrame =
  spark.read.format("com.vertica.spark.datasource.VerticaSource").options(opts).load()

dfRead.rdd.foreach(x => println("Row: " + x))

You can run this example (after changing the configuration options to fit your environment) by starting spark-shell and running the code via the :load command. For example, suppose you save the example to a file named v2c-load-demo.scala. Then you could run the example like this:

Scala> :load v2c-load-demo.scala
Loading vsc-load-demo.scala...
import org.apache.spark.sql.types._
import org.apache.spark.sql.{DataFrame, Row, SQLContext, SaveMode}
import com.vertica.spark._
opts: scala.collection.immutable.Map[String,String] = Map(host -> vnode01,
  db -> mydatabase, staging_fs_url -> hdfs://hadoop01:9002/data,
  user -> myuser, table -> sparkloadtest, password -> mypassword)
dfRead: org.apache.spark.sql.DataFrame = [a: bigint, b: bigint ... 2 more fields]
Row: [1,3,5,odds]
Row: [10,14,8,evens]
Row: [11,13,19,odds]

Setting the Number of Spark Partitions

Sparks let you partition the data in your DataFrames so that your transformations can happen in parallel. You can arbitrarily set the number of partitions for your Spark data. When loading data from Vertica, you can tell the connector how many Spark partitions it should break the data into by using the num_partitions option in the option Map.

The number of partitions you choose can affect how efficiently the data is transferred from Vertica to Spark. If the number of partitions is too small, Vertica can be forced shuffle data between nodes when writing the data out to the intermediate storage location. You may need to experiment to find the best number of partitions for your data and environment. A good starting point is to set num_partitions to 4 times the number of nodes in your Vertica cluster or the subcluster Spark connects to when Vertica is running in Eon Mode.
Spark Numeric Value Limitation

Both Vertica and Spark support variable-precision NUMERIC values. Vertica supports defining a NUMERIC column with up to 1024 digits of precision (see NUMERIC). Spark is limited to 38 digits.

If you attempt to load a table from Vertica that has a NUMERIC column defined with more than 38 digits of precision, the Spark connector throws the following error:

```
21/05/07 10:01:54 ERROR v2.VerticaScan: There was an error when attempting to export from Vertica: connection error with JDBC.
Unexpected SQL Error.
A generic JDBC error occurred
Caused by:
java.sql.SQLException: [Vertica][VJDBC](5861) ERROR: Error calling processPartition() in User Function ParquetExport at
[/data/qb_workspaces/jenkins2/PrimaryBuilds/build_master/build/udx/supported/ParquetExport/ParquetExport.cpp:1395], error code: 0, message:
<ParquetExport> ERROR: Decimal type with precision 80 (> 38) is not supported
```

Column Selection and Filter Push Down

Column selections and row filters applied on the DataFrame are pushed down into Vertica. Refer to the Spark SQL API for more details about applying column selections and row filters. The following example illustrates how you can load a column containing filtered rows as a DataFrame:

```
val c = df.select("a").filter("a > 5").count
```

When filtering it is important to specify the correct type. For example, single-quoted values are treated as strings, so if you wrote the above filter code as `filter("a > '5'")` then the filter is not pushed down, because the target column is an integer and the value '5' when single-quoted is treated as a string.

Additionally, when using other types such as dates, cast the value as a date type, such as:

```
filter("c1 >= cast('2010-1-2' as date) rather than filter("c1 >= '2010-1-2'"). The latter example does not push down.
```

Additional examples of valid filters:
Considerations When Using the Spark DataFrame Filter Method with Vertica

Be aware of the following considerations when using the DataFrame’s filter method when loading data from Vertica:

- Vertica supports the case insensitive terms “inf” and “infinity” to refer to INFINITY in SQL queries. However, when filtering using Spark’s filter method you must instead use the term (case sensitive) “Infinity”.
- When filtering on Boolean values, do not use "is true/false" or "is not true/false" instead, cast the value as a Boolean, or use the equals operator, for example:
  - df.filter("c = 1").show
  - df.filter("c = True").show
  - df.filter("c = False").show

Saving Spark Data to Vertica Using the Connector V2

The Vertica Spark connector V2 lets you save Spark data into Vertica tables. Use the `com.vertica.spark.datasource.VerticaSource` class to save a DataFrame to Vertica Spark DataFrame.write.format() method. You configure where and how the data is saved using a Map object containing a set of options. See The Options Map for details.

Requirements

The following requirements apply to using the connector to save Spark data to Vertica.
- When you append to an existing Vertica table (using SaveMode.Append), your DataFrame must have the same column types, column order, and number of columns as the Vertica table. If your DataFrame and target table are not compatible, use the copy_column_list option to alter the DataFrame's data to fit into your Vertica table. See Copying Data to a Table With a Different Schema.
- The Vertica username you supply in the options Map must have CREATE privileges on the Vertica schema the table will be created in. The connector defaults to public schema, but any schema name can be provided using the dbschema option.
- You must supply a Spark SaveMode. See The SaveMode Setting.

Spark and Vertica Data Compatibility

Spark and Vertica represent data differently. These differences of have implications you must be aware of when saving Spark data to Vertica.

- **Supported Data Types**—The connector cannot convert complex data types in a Spark DataFrame such as Maps, Structs, and Arrays into a Vertica table. The connector currently supports all other Spark data types.
- **Target Table Limitations**—The Vertica table you target to receive the Spark data cannot be a view or a temporary table.
- **Null Values in Spark and Vertica**—The connector converts Spark long values to Vertica INTEGER values. Vertica uses the value $-2^{63} (-9223372036854775808)$ to represent a NULL value. Spark does not treat this value in any special way. Therefore, if you save $-2^{63}$ from Spark, the value is stored as NULL in Vertica.
- **SQL Strings**—The Spark connector converts all Spark SQL Strings to Vertica VARCHAR values. The length of these VARCHAR values defaults to 1024. You can change the length of the VARCHAR that is stored in Vertica by setting the strlen option in the option Map.

You can set strlen to between 1 and 32,000,000. If you set strlen to greater than 65000, the connector converts the values to Vertica LONG VARCHAR instead of VARCHAR. Because of this data type change, if you use SaveMode.Append to append to an existing table, make sure the target table's column types match the VARCHAR or LONG VARCHAR values the connector will convert the data.

The connector truncates any Spark SQL Strings longer than strlen setting.

- **Float Values**—Because float values are approximations, the value of a float can be different when it is moved from Spark to Vertica. If you require more precision, then use a more precise data type in Spark, such as double or decimal.
Saving Spark Data Example

The following Scala example creates a DataFrame with two rows of data and saves it to a Vertica table named SparkSaveTest:

```scala
// S2V_example.scala
import org.apache.spark.sql.types._
import org.apache.spark.sql.{DataFrame, Row, SQLContext, SaveMode}
import com.vertica.spark._

val rows = sc.parallelize(Array(
  Row(1,"hello", true),
  Row(2,"goodbye", false)
))

// Create a schema for the data.
val schema = StructType(Array(
  StructField("id",IntegerType, false),
  StructField("message",StringType,true),
  StructField("still_here",BooleanType,true)
))

val df = spark.createDataFrame(rows, schema)

// View the sample data and schema
df.show
df.schema

// Setup the user options, defaults are shown where applicable for optional values.
val opts: Map[String, String] = Map(
  "host" -> "vnode01",
  "user" -> "myuser",
  "db" -> "mydatabase",
  "password" -> "mypassword",
  "staging_fs_url" -> "hdfs://hadoop01:9002/data",
  "table" -> "SparkSaveExample"
  // "failed_rows_percent_tolerance"-> "0.00"  // OPTIONAL (default val shown)
  // "dbschema" -> "public"  // OPTIONAL (default val shown)
  // "port" -> "5433"  // OPTIONAL (default val shown)
  // "strlen" -> "1024"  // OPTIONAL (default val shown)
)

// SaveMode can be either Overwrite, Append, ErrorIfExists, Ignore
val mode = SaveMode.Overwrite

// save the DataFrame via Spark’s Datasource API
df.write.format("com.vertica.spark.datasource.VerticaSource").options(opts).mode(mode).save()
```

If you save the above example as s2v_example.scala and run it using spark-shell, the output looks like this:

```
scala> :load s2v_example.scala
Loading s2v_example.scala...
```
import org.apache.spark.sql.types._
import org.apache.spark.sql.{DataFrame, Row, SQLContext, SaveMode}
import com.vertica.spark._
rows: org.apache.spark.rdd.RDD[org.apache.spark.sql.Row] = ParallelCollectionRDD[0] at parallelize at s2v_example.scala:31
schema: org.apache.spark.sql.types.StructType = StructType(StructField(id, IntegerType, false),
StructField(message, StringType, true), StructField(still_here, BooleanType, true))
df: org.apache.spark.sql.DataFrame = [id: int, message: string ... 1 more field]
+++
<table>
<thead>
<tr>
<th>id</th>
<th>message</th>
<th>still_here</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>hello</td>
<td>true</td>
</tr>
<tr>
<td>2</td>
<td>goodbye</td>
<td>false</td>
</tr>
</tbody>
</table>
+++
res1: org.apache.spark.sql.types.StructType = StructType(StructField(id, IntegerType, false),
StructField(message, StringType, true), StructField(still_here, BooleanType, true))

The following example demonstrates examining the resulting table in Vertica:

```sql
=> SELECT * FROM SparkSaveExample;
  id | message | still_here
-----+---------+-----------
   1 | hello   | t
   2 | goodbye | f
(2 rows)
```

```sql
=> \d SparkSaveExample

```

## Defining the Schema of the Destination Table

When it is not appending data to an existing table, the Spark connector creates the Vertica target table for you. It defines the columns in this table based on the contents of the Spark DataFrame.

You can change this behavior by using the the target_table_sql option in the option Map you pass to the VerticaSource class. This option contains an arbitrary Vertica SQL statement that the connector executes before it saves data to Vertica. You usually use this option to create a table to receive the data.
The following example shows an options Map that has a target_table_sql option that creates a target table named employee for the data the Spark connector loads into Vertica. The SQL defines segmentation and a column with a default value. The Spark connector would not ordinarily define the target table with these settings.

```scala
val opts: Map[String, String] = Map(
  "table" -> "employee",
  "target_table_sql" -> "
    CREATE TABLE employee (
        key    IDENTITY(1,1),
        fullname VARCHAR(1024) NOT NULL,
        age    INTEGER,
        hiredate DATE       NOT NULL,
        region  VARCHAR(1024) NOT NULL,
        loaddate TIMESTAMP DEFAULT NOW())
    PARTITION BY EXTRACT (year FROM hiredate);
    CREATE PROJECTION employee_p(key, fullname, hiredate) AS
    SELECT key, fullname, hiredate FROM employee SEGMENTED BY HASH(key) ALL NODES;
  )
```

### Copying Data to a Table With a Different Schema

Normally, the column definitions in your Spark DataFrame match the columns in your Vertica target table. You may have a situation where you cannot have your target table match the definition of your DataFrame. For example, suppose the definition of your DataFrame has to change. However, you do not want to update the schema of your Vertica target table to match the DataFrame because your client applications rely on it remaining the same. In this case, you can set the copy_column_list option in the options Map to alter the data columns from the DataFrame into values that can be inserted into your Vertica target table. The contents of this option are passed as column arguments to the COPY statement that Vertica executes to load the data. This option lets you split, combine, or skip columns in the DataFrame as COPY loads them into your target table. See Transforming Data During Loads for more information on using column arguments in the COPY statement to change the source data to match your target table's schema.

The following example demonstrates using the copy_column_list option in a situation where the DataFrame has separate column for a first, middle, and last name, but the Vertica target table has just a single column for a full name. It also demonstrates compensating for the DataFrame's lack of an age column by setting the target table's age column value to NULL.
val opts: Map[String, String] = Map{
  "table" -> "employee",
  "copy_column_list" -> "
    firstname FILLER VARCHAR(1024),
    middlename FILLER VARCHAR(1024),
    lastname FILLER VARCHAR(1024),
    fullname AS firstname || '|' || NVL(middlename,'') || '|' || lastname,
    age as NULL,
    hiredate,
    region",
  "db" -> "VerticaDatabaseName",
  "user" -> "VerticaDatabaseUser",
  "password" -> "VerticaDatabasePassword",
  "host" -> "VerticaHostName",
  "staging_fs_url" -> "hdfs://HDFSNameNode:Port#/somePath",
}

Rejected Rows

When saving data from Spark to Vertica, Vertica may reject some of the data (for example, if the some of the data is the wrong data type for the column in the target table). You can tell the connector to stop saving data if too many rows are rejected by setting the failed_rows_percentage_tolerance. This is a real value. So, to specify that the connector should abort the save if more than 10% of the rows are rejected, set the failed_rows_percentage_tolerance to 0.10.

Monitoring the Save Status

The Spark connector reports the status of saving data from Spark to Vertica into a table named S2V_JOB_STATUS_USER_$USERNAME$. When the save to Vertica starts, the connector writes the unique job_id to the Spark log. After the Spark job is started, users can consult this table for the job status based on the job_id. The S2V_JOB_STATUS_USER_$USERNAME$ has the following columns:

- target_table_schema
- target_table_name
- save_mode
- job_name
- start_time
- all_done
- success
- percent_failed_rows
For example, to see the most recent data load by the user named myuser, you could run the following query:

```sql
-> \x
Expanded display is on.
-> SELECT * from S2V_JOB_STATUS_USER_MYUSER ORDER BY start_time DESC LIMIT 1;
- [ RECORD 1 ] -----------------------------------------------
target_table_schema | public
target_table_name | SparkSaveExample
save_mode | OVERWRITE
job_name | 1108e0bd_e49a_4cc2_996a_2be49ac47c6
start_time | 2021-05-04 10:32:25.365-04
all_done | t
success | t
percent_failed_rows | 0
```

The table indicates the start time, unique job name, date, percentage of rows that failed, and final outcome of the save job (success=T/F). The column all_done indicates the Spark job finished without errors and the column success indicates the data was saved to the Vertica table (rejected rows must fall within specified tolerance).

**Troubleshooting**

There are several issues you may encounter when saving data from Spark to Vertica:

- **Different Jobs Writing to the Same Table in Overwrite Mode cause error:**— If you have different Spark applications saving data to the same Vertica table in SaveMove.Overwrite mode, you can get errors if one application starts writing to a table before the other application is finished. If you see errors such as:

```sql
ERROR: java.sql.SQLNonTransientException: [Vertica][VJDBC](3007) ERROR: DDL statement interfered with this statement.
```

the likely cause is that one Spark application dropped the table before recreating it and saving to it while another application was writing data to the table. To avoid these errors, do not use different jobs to write to the same table when using overwrite mode.

- **Files not cleaned up if process interrupted.**—The files written by Spark to the intermediate storage location are normally cleaned up when the job completes. However, if something interrupts the process (such as a network failure), then files may be left behind in the intermediate storage. You can manually delete these files from the intermediate storage directory. The files are located in a subdirectory with the same name as the job_name column in the S2V_JOB_STATUS_USER\_\$USERNAME\$ table. See Monitoring the Save Status for details about this table.
Migrating From the Vertica Spark Connector V1 to V2

If you have existing Spark 3.0 or later cluster that uses the Vertica Spark connector V1, consider upgrading to the connector V2. The connector V2 offers new features, better performance, and is under ongoing development. The connector V1 is deprecated, and will eventually be removed from service. See for Available Connector Versions more information about how the V2 connector compares to the connector V1.

When transitioning from the V1 to the connector V2, there are several changes you must take into account.

Deployment Changes between the V1 and Connector V2

The connector V1 is only distributed with the Vertica server install. To use it, you must copy it from a Vertica node to your Spark cluster. The connector V2 is distributed via several channels giving you more ways to deploy it.

The Spark connector V2 is available from Maven Central. If you use Gradle, Maven, or SBT to manage your Spark applications, you may find it more convenient to deploy the Spark connector using a dependency rather than manually installing it on your Spark cluster. Integrating the Spark Connector into your Spark project as a dependency makes updating to newer versions of the connector easy—just update the required version in the dependency. See Getting the Connector from Maven Central for more information.

You can also download the precompiled connector V2 assembly or build it from source. In this case, you must deploy the connector to your Spark cluster. The connector V1 depends on the Vertica JDBC driver and requires that you separately include it. The connector V2 is an assembly that incorporates all of its dependencies, including the JDBC driver. You only need to deploy a single JAR file containing the Spark connector V2 to your Spark cluster.

You can have Spark load both the V1 and connector V2 at the same time because the connector’s primary class name is different in V2 (see below). This renaming lets you add the connector V2 to your Spark configuration files without having to immediately port all of your Spark applications that use the connector V1 to the new V2 API. You can just add theV2 assembly JAR file to spark-jars list in the spark-defaults.conf file.
API Changes

There are several changes from the Spark Connector V1 to the connector V2 API that require changes to your Spark application.

VerticaRDD Class no Longer Supported

The connector V1 supported a class named VerticaRDD to perform data loading from Vertica using the Spark resilient distributed dataset (RDD) feature (see Using the Vertica RDD API with the Connector V1). The connector V2 does not support this separate class. Instead, if you want to directly manipulate an RDD, access it through the DataFrame object you create using the DataSource API.

DefaultSource Class Renamed VerticaSource

The primary class in the connector V1 is named DataSource. In the connector V2, this class has been renamed to VerticaSource. This renaming lets both connectors coexist, allowing you to gradually transition your Spark applications from the V1 to the connector V2.

For your existing Spark application to use the connector V2, you must change calls to the DataSource class to the VerticaSource class. For example, suppose your Spark application has this method call to read data from the connector V1:

```
spark.read.format("com.vertica.spark.datasource.DefaultSource").options(opts).load()
```

Then to have it use the connector V2, you change it to this:

```
spark.read.format("com.vertica.spark.datasource.VerticaSource").options(opts).load()
```

Changed API Options

In addition to renaming of the DataSource class to VerticaSource, some of the names for options for the primary connector class have changed. Other options are no longer supported. If you are porting a Spark application from the V1 to connector V2 that uses one of the following options, you must update your code:
<table>
<thead>
<tr>
<th>V1 DataSource Option</th>
<th>V2 VerticaSource Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>fileformat</td>
<td>none</td>
<td>The connector V2 does not support the fileformat option. The files that Vertica and Spark write to the intermediate storage location are always in parquet format.</td>
</tr>
<tr>
<td>hdfs_url</td>
<td>staging_fs_url</td>
<td>The location of the intermediate storage location that Vertica and Spark use to exchange data. Renamed to be more general, as future versions of the connector will support storage platforms in addition to HDFS.</td>
</tr>
<tr>
<td>logging_level</td>
<td>none</td>
<td>The connector no longer supports setting a logging level. Instead, set the logging level in Spark.</td>
</tr>
<tr>
<td>numpartitions</td>
<td>num_partitions</td>
<td>The number of Spark partitions to use when reading data from Vertica.</td>
</tr>
<tr>
<td>target_table_ddl</td>
<td>target_table_sql</td>
<td>A SQL statement for Vertica to execute before loading data from Spark.</td>
</tr>
<tr>
<td>web_hdfs_url</td>
<td>none</td>
<td>The connector V2 does not support using the web HDFS protocol as a fallback.</td>
</tr>
</tbody>
</table>

In addition, the connector V2 has added options to support new features such as Kerberos authentication. For details on the connector V2’s VerticaSource options API, see the Vertica Spark connector GitHub project.

For details on the DataSource options API, see V1 Spark Connector Load Options and V1 Spark Connector Save Options.

## Take Advantage of New Features

The Vertica Spark connector V2 offers new features that you may want to take advantage of.

Currently, the most notable new feature in the connector V2 is support for Kerberos authentication. This feature lets you configure the connector for passwordless connections to Vertica. See the Kerberos documentation in the Vertica Spark connector GitHub project for details of using this feature.
Integrating with Voltage SecureData

Voltage SecureData is a suite of encryption technologies that let you integrate end-to-end data encryption into other applications. It uses Format-Preserving Encryption (FPE): the encrypted values have the same overall format as the unencrypted data. This feature means you do not have to change the data types of table columns that you want to encrypt. It also preserves reference integrity: the encrypted values have the same sort order as unencrypted data, and encrypted values can be cross-referenced between tables, as long as each instance of the value is encrypted with the same key.

See the Voltage web site for more about SecureData.

This section explains how you can integrate the SecureData encryption feature into Vertica.

How Vertica and SecureData Work Together

Vertica provides functions to encrypt and decrypt data using SecureData.
Voltage SecureData supplies a number of interfaces for applications to use its encryption: web-based APIs, command-line tools, and SDKs for C, C#, and Java. Vertica has developed a connector that calls the SecureData API that lets you:

- Encrypt sensitive data as it is being loaded into Vertica using SecueData's FPE feature. You can ensure data is stored in Vertica in its encrypted state (referred to as "encrypted at rest"). Authorized users can decrypt the data as needed. Unauthorized users only see the encrypted values. Decryption for authorized users can be automated using views or access policies. The data is transparently decrypted for them.
- Encrypt semi-sensitive data that is stored unencrypted in Vertica so unauthorized users only see a masked version of the data. You an also automate this on-the-fly encryption using access policies.

The encryption method you choose depends in the data you are processing. For example, regulations or contracts may require you to encrypt specific pieces of data. In these cases, use SecureData to encrypt your data as it is loaded, so it is never stored in an unencrypted format within Vertica.

In other cases, you may have semi-sensitive data that you can choose between the two options. In these cases, choose the method that requires the least number encryptions or decryptions (and therefore of calls to SecureData). If most of the queries on the data need to be masked from users who should not see the unencrypted values, then encrypt the data at rest. Alternatively, if the most of the queries will be from authorized users, with only occasional queries where the data should be masked, then store the data in an unencrypted format and use on-the-fly encryption to mask the data.

## Requirements for Integrating with SecureData

Before you can use SecureData with Vertica, you must verify the following:

- You are using version 6.0 or later of SecureData. The Vertica integration functions use APIs introduced in version 6.0 of SecureData.
- All of the nodes in your Vertica cluster are able to communicate with all of your SecureData appliance hosts. Any firewalls between your Vertica cluster and your SecureData appliance must allow connections on the ports that SecureData uses for communications. See "Ensuring Access to SecureData Services" in the SecureData Appliance Installation Guide for a list of the ports that SecureData uses.
- Your Vertica database is not using Federal Information Processing Standard (FIPS) mode. FIPS is incompatible with the Voltage SecureData integration. When FIPS mode is active, the SecureData integration library is not installed by default. Do not manually install this library if you are using FIPS.
- You are following the best practices when using Safe Unicode FPE formats.

Best Practices for Safe Unicode FPE

Starting with Voltage SecureData Simple API 6.0, you can use Safe Unicode Format Preserving Encryption (FPE) formats to encrypt and decrypt Unicode strings.

When encrypting Unicode with Safe Unicode FPE formats, the plaintext passed into the VoltageSecureProtect function is first encrypted with an alphabet of all Unicode code points, and then encoded with the Base32K-encoding to produce encrypted text in Unicode Normalization Form C (NFC). The encrypted text will generally consist of 3-byte Chinese and Japanese characters, as they account for a significant portion of the NFC-stable alphabet. VoltageSecureAccess reverses this process.

Unlike regular FPE, which handles ASCII strings consisting of single bytes, Safe Unicode FPE handles strings consisting of variable-length code points. This variability introduces an important complication: Safe Unicode FPE formats like UNICODE_BASE32K are not length-preserving. The encryption algorithm guarantees that the encrypted text will be larger than the original, and failing to account for this expansion can lead to truncated or otherwise improperly stored encrypted text, making decryption impossible.

Additionally, Unicode allows semantically equivalent characters to be encoded in different ways, which means that unnormalized, semantically equivalent plaintexts can have different forms when encrypted, compromising referential integrity. To prevent this, you should always normalize your plaintext strings into their NFC forms before encryption. For more information on Unicode normalization, see the Unicode Consortium’s Normalization FAQ.

The encrypted text is guaranteed to be larger than the plaintext in the following ways:

- 16/15ths longer in character-length (rounded up)
- up to 4-times larger (in bytes)

For a list of predefined formats for Safe Unicode FPE, consult your copy of the Voltage SecureData Simple API documentation.

Checklist for Safe Unicode FPE

Before using Safe Unicode FPE:
- Normalize your plaintext to its NFC form before encryption.
- For fixed-length data types: remove any padding from the plaintext string.
- To store the encrypted text, ensure that the columns storing the encrypted text can handle:
  - strings 16/15ths times longer than your longest plaintext string
  - strings up to 4-times larger (in bytes) than your largest plaintext string

**Verifying the Vertica Server's Access to the SecureData CA Certificate**

Before you can use SecureData with Vertica, you must verify that the root certificate authority (CA) and any intermediate certificate authority used to sign the SecureData Appliance's certificate is in the Vertica server’s trust store (/opt/vertica/packages/voltagesecure/trustStore/). Vertica supplies many standard root certificates in this directory. If your SecureData Appliance uses a certificate signed by a standard CA authority, it is likely already in the trust store.

If your SecureData Appliance is using a certificate signed by your own internal CA authority, you must add this CA Certificate to the Vertica trust store.

If you are unsure whether your CA Certificate is in the Vertica trust store, follow the steps under Troubleshooting Certificate Problems to test whether the Vertica already has the CA certificate. If you are able to retrieve the client policy XML file from the SecureData Appliance, then your Vertica cluster has the correct CA certificate to access SecureData.

**Adding the CA Certificate to Vertica**

You must add the CA to Vertica trust store before using the SecureData Integration if you used:

- Your own CA certificate to sign your SecureData Appliance's certificate.
- A third-party CA that is not in the Vertica trust store.

To add the CA certificate to the Vertica trust store, you need:

- The certificate authority (CA) file used to sign the SecureData Appliance's certificate. This file must be in Privacy Enhanced Mail (.pem) format. The file name does not matter, as long as it has the .pem extension.
Access to the dbadmin account on the Vertica nodes. This access is required in order to copy the certificate file to trust store directory in the Vertica installation.

To add the necessary CA file to Vertica:

1. Login to one of the Vertica nodes as the dbadmin user.
2. Copy the .pem file to the /opt/vertica/packages/voltagesecure/trustStore/ directory. You only need to copy this file to a single node. Vertica takes care of distributing the file to the rest of the nodes in the cluster.
3. On the Linux command line, execute the following command to reinstall the SecureData integration library:

   ```
   $ admintools -t install_package -d database_name -p 'password' --package voltagesecure --force-reinstall
   ```

When Vertica reinstalled the SecureData integration library, it copies the CA authority file to the all nodes in the cluster. After the file is distributed, all Vertica nodes can authenticate with the SecureData Appliance.

For example, suppose:

1. Your certificate file is named `my_ca.cert.pem`, and you have copied it to the dbadmin home directory on node in your cluster.
2. Your database is named VMart.

Then the process of installing the CA file would look like this:

```
$ cp my_ca.cert.pem /opt/vertica/packages/voltagesecure/trustStore/
$ admintools -t install_package -d VMart -p dbadminpassword --package voltagesecure --force-reinstall
Installing package voltagesecure...
...Success!
```

**Troubleshooting Certificate Problems**

You can test whether the Vertica trust store has the correct certificate by executing the following statement from the Linux command line:

```
curl --capath /vertica_catalog_directory/Libraries/\$(vsql -A -t -c "SELECT sal_storage_id from user_libraries WHERE lib_name = 'VoltageSecureLib';")\https://SecureData_appliance_hostname/policy/clientPolicy.xml
```

Where:
- `vertica_catalog_directory` is the absolute path to the Vertica catalog directory. See Understanding the Catalog Directory for more information about the catalog directory.
- `SecureData_appliance_hostname` is the host name of your Voltage SecureData Appliance.

For example, suppose you are connected to node0001 of the example VMart database. Also, your Voltage SecureData appliance's host name is voltage-pp-0000.example.com. Then you would use the following command to test your certificate installation.

```bash
$ curl --capath /home/dbadmin/VMart/v_vmart_node0001_catalog/Libraries/\ $(vsql -A -t -c "SELECT sal_storage_id from user_libraries WHERE lib_name = 'VoltageSecureLib';") \ https://voltage-pp-0000.example.com/policy/clientPolicy.xml
```

```
<clientPolicy version="2">
  <server name="SecureDataAppliance" version="6.4.2.232000" />
  <localDomains>example.com</localDomains>
  <userWhitelist/>
  <defaultDistrict value="0" />
  <sendUniversalReader value="1" />
  <messageFooterGlobal/>
  <parameterAggressiveDistricts>example.com</parameterAggressiveDistricts>
  <localPolicyLocked value="0" />
  <trustedDistricts/>
  <fallThroughDistrict>example.com</fallThroughDistrict>
  ...
```

The `<clientPolicy>...` output (which is the content of the `clientPolicy.xml` file) indicates that the Vertica node was able to use its CA certificate to connect to the SecureData Appliance.

**Tip:** If you are unsure which Format Preserving Encryption (FPE) formats are defined in your SecureData Appliance, examine the output of the curl command. Look for the tags with `formatName` attributes which describe each of the formats.

If the CA certificate you installed on Vertica does not match the certificate installed on the SecureData Appliance, you will see an error similar to the following:
In this case, verify that you have installed the correct CA certificate in Vertica, and that its file name has a .pem extension.

If you see other errors, such as "couldn't connect to host," verify that your firewall configuration allows your Vertica nodes to access your SecureData Appliance.

## Configuring Access to SecureData

The Vertica integration functions require several pieces of information in order to connect to and authenticate with SecureData.

### SecureData Global Configuration Settings

The SecureData integration has one required setting and two optional settings that you set globally using the `VoltageSecureConfigureGlobal` function. This function saves the settings to a configuration file named `/voltagesecure/conf.global` stored in the Vertica Distributed File System (DFS). This file system is used by Vertica to store data that can be accessed by all nodes. You must use the function to create this file before you use any of the other SecureData integration functions. All users who have access to the SecureData functions are able to access the settings in this file.

The one required setting is the URL of the SecureData policy file. This file provides the SecureData integration library with details of how the SecureData Appliance is configured. The library also uses this URL to determine the address of the SecureData Appliance.

The two optional settings are:

- **allow_short_fpe**: When set to True, SecureData ignores the lower length limit for encoding FPE values. Usually, SecureData does not use FPE to encrypt data shorter than a lower limit (usually, 8 bits). See the `SecureData Architecture Guide`'s section on Data Length Restrictions for more information.
- **enable_file_cache**: When set to True, Vertica caches the SecureData policy file and encryption keys to disk, rather than just to memory. Defaults to false.
This example sets the policy URL globally to https://voltage-pp-0000.example.com/policy/clientPolicy.xml and the network timeout to 200 seconds.

```sql
=> SELECT VoltageSecureConfigureGlobal(USING PARAMETERS
   policy_url='https://voltage-pp-0000.example.com/policy/clientPolicy.xml',
   NETWORK_TIMEOUT=200)
OVER ();
```

<table>
<thead>
<tr>
<th>policy_url</th>
<th>allow_short_fpe</th>
<th>enable_file_</th>
</tr>
</thead>
<tbody>
<tr>
<td><a href="https://voltage-pp-0000.example.com/policy/clientPolicy.xml">https://voltage-pp-0000.example.com/policy/clientPolicy.xml</a></td>
<td>0</td>
<td>1</td>
</tr>
</tbody>
</table>

(1 row)

Manually refresh the client policy across the nodes:

```sql
=> SELECT VoltageSecureRefreshPolicy() OVER ();
```

Successfully refreshed policy on node [v_sandbox_node001]. Policy on other nodes will be refreshed the next time a Voltage operation is run on them.

(1 row)

ℹ️ **Important:**
The SecureData integration only supports one configuration for the SecureData Appliance at a time.

## SecureData User Configuration Settings

The remaining SecureData settings define SecureData user information. They are usually specific to each user accessing the integration functions. However, you can have all Vertica users share the same SecureData user configuration. These settings are:

- Your authentication credentials for SecureData. The exact information you need depends on your SecureData Appliance's configuration. There are four potential settings you that you can use:
  - `username`: a username that you use to identify yourself. Your user name is either defined by LDAP (when using LDAP authentication) or by the SecureData appliance when using shared secret authentication.
  - `identity`: the SecureData identity to use. See the *SecureData Administrator Guide* for more information about identities in SecureData. The identity usually takes the form of an email address. When your SecureData Appliance uses LDAP authentication, your LDAP account must have access to this identity.
- **shared_secret**: a password set in SecureData.
- **password**: the LDAP password to use to authenticate with SecureData.

You can supply both a username and identity, depending on the SecureData Appliance's configuration. Your SecureData Appliance can be configured to supply the identity based on your SecureData username.

However, you can only use a shared_secret or a password. If you set both parameters, the Vertica SecureData functions exit with an error.

You have two options for setting these configuration values: setting them in [user-defined session parameters](https://docs.vertica.com/11.0.x/Vertica_Ana...functions), or saving the values in a configuration file stored in the Vertica distributed file system.

## Setting SecureData User Session Parameters

Use the `ALTER SESSION` statement to set parameters for the `voltagesecurelib` library. This library contains all of the SecureData functions. The following example demonstrates configuring the session to access SecureData using shared secret authentication.

```sql
=> ALTER SESSION SET UDPARAMETER FOR voltagesecurelib identity='alice@example.com';
ALTER SESSION
=> ALTER SESSION SET UDPARAMETER FOR voltagesecurelib username='alice';
ALTER SESSION
=> ALTER SESSION SET UDPARAMETER FOR voltagesecurelib shared_secret='my_shared_secret';
ALTER SESSION
```

Once set, these parameters only last for the duration of your session.

## Saving Parameters in Configuration Files

You can use the `VoltageSecureConfigure` function to save SecureData user parameters to a configuration file in the DFS. You must supply a file name for your configuration file. You can choose to store your SecureData parameters in a user-specific file by supplying just a file name, such as `securedata.conf`. Behind the scenes, your configuration file is stored in DFS under a directory named for your username. This directory prevents your configuration file from conflicting with other users' files. You do not use this directory name when accessing your configuration file.
You can also store the configuration parameters in an absolute file named `/voltagesecure/conf`. All users who have access to the SecureData integration functions can use this configuration file in their function calls. You can use this file if all of the users accessing the SecureData functions share the same SecureData user settings.

**Important:**
All users that have access to the VoltageSecureConfigure function can write to the global `/voltagesecure/conf` file. Users do not need to be able to write to this file in order to use it in calls to the other SecureData integration functions. You will usually choose to either grant users access to VoltageSecureConfigure in order to save their own configuration files, or you will use the global `/voltagesecure/conf` file and not grant users access to VoltageSecureConfigure.

Values in the session parameters override values in configuration files.

You call VoltageSecureConfigure with the parameters you want to save to the configuration file. Values that you do not set in this function call are not set in the configuration file. You must supply those values to the other SecureData integration functions using session parameters.

If you choose to save either the password or shared secret to your configuration file, you do not directly pass them to the VoltageSecureConfigure function. Instead, you set the value in the appropriate session variable, and then set either VoltageSecureConfigure's `store_password` or `store_shared_secret` parameter to true. When either of these parameters are true, VoltageSecureConfigure reads the value from the session variable and saves it in the configuration file.

**Caution:**
Under normal circumstances, users are not able to directly read data from files stored in DFS. However, all users who have access to U Dx functions that read from the DFS could access these files from within Vertica.

In addition, these files are stored as plain text in every node's file system. Anyone with the proper file system access on the nodes can read the file's contents.

You should take both of these facts into consideration when deciding whether to store sensitive information such as passwords or shared secrets in either the shared or per-user configuration files.
Example: Creating a User-Specific Configuration File

The following example shows how you can create a user-specific configuration file. This example does not store information such as the password or shared secret, so you must still set session parameters for these values before you can call the other SecureData integration functions.

```
=> \x
Expanded display is on.
=> SELECT VoltageSecureConfigure(USING PARAMETERS config_dfs_path='voltage.conf',
                           username='alice', identity='alice@example.com', store_
password=false
                           ) OVER ();
- [ RECORD 1 ]---------------------------------------------------------------------------
config_dfs_path | voltage.conf
identity       | alice@example.com
username       | alice
```

Encrypting, Decrypting, and Hashing Data

Once you have set up authentication with the SecureData Appliance (SDA), call the VoltageSecureProtect and VoltageSecureAccess functions to encrypt/hash or decrypt your data, respectively. At a minimum, you pass these functions the value to be encrypted, hashed, or decrypted and value's FPE format as defined in the Voltage SDA. You can also capture these parameters in SQL Macros and access policies.

Connecting Vertica to the SecureData Appliance

The following example demonstrates how to fetch the SDA client policy with Vertica and then how to set the session parameters for authentication to the SDA.
1. **Add the SecureData CA certificate to Vertica.**  
2. **Set the client policy with** VoltageSecureConfigureGlobal.  
   
   ```sql  
   => SELECT VoltageSecureConfigureGlobal(USING PARAMETERS  
   policy_url='https://voltage-pp-0000.example.com/policy/clientPolicy.xml')  
   OVER ();  
   enable_file_cache  
   ----------------------------------  
   https://voltage-pp-0000.example.com/policy/clientPolicy.xml | allow_short_fpe |  
   (1 row)  
   ```

3. **(Optional) Retrieve the latest version of the client policy with** VoltageSecureRefreshPolicy.  

   ```sql  
   => SELECT VoltageSecureRefreshPolicy() OVER ();  
   PolicyRefresh  
   ----------------------------------  
   Successfully refreshed policy on node [v_node0001]. Policy on other nodes  
   will be refreshed the next time a Voltage operation is run on them.  
   (1 row)  
   ```

4. **Set the authentication parameters to authenticate to the SDA as a Vertica user with** ALTER SESSION or VoltageSecureConfigure. For details on this process, see Configuring Access to SecureData.  

   ALTER SESSION sets these parameters for the duration of your session and override parameters set in configuration files.  

   ```sql  
   => ALTER SESSION SET UDPARAMETER FOR voltagesecurelib identity='alice@example.com';  
   ALTER SESSION  
   => ALTER SESSION SET UDPARAMETER FOR voltagesecurelib username='alice';  
   ALTER SESSION  
   => ALTER SESSION SET UDPARAMETER FOR voltagesecurelib shared_secret='my_secret';  
   ALTER SESSION  
   ```

   VoltageSecureConfigure saves these parameters to the specified config_dfs_path. This configuration file can then be passed to other Voltage functions.  

   ```sql  
   => SELECT VoltageSecureConfigure(USING PARAMETERS config_dfs_path='voltage.conf',  
   username='alice', identity='alice@example.com', store_password=false) OVER ();  
   config_dfs_path | identity | username  
   ----------------------------------  
   voltage.conf | alice@example.com | alice  
   => SELECT VoltageSecureProtect('123-45-6789' USING PARAMETERS  
   format='ssn',  
   config_dfs_path='voltage.conf');  
   VoltageSecureProtect  
   ```
Encrypting and Decrypting Data

*VoltageSecureProtect* takes a format-preserving encryption (FPE) format defined in your SDA and VARCHAR data and returns format-preserved ciphertext, which can then be decrypted with *VoltageSecureAccess*. That is, if the plaintext follows the form of a phone number (###-####-####), the resulting ciphertext will be in the same form. Formats can be customized in various ways, like masking certain values, leaving some part of the string unencrypted, etc.

One of the many predefined formats in the SDA is *ssn*. The *ssn* format encrypts all but the last four digits of the social security number, which can be useful for certain roles like customer support, which may need the last four digits of the SSN to authenticate individuals over the phone.

```sql
=> SELECT VoltageSecureProtect('123-45-6789' USING PARAMETERS format='ssn');
VoltageSecureProtect
---------------------
376-69-6789
(1 row)
```

```sql
=> SELECT VoltageSecureAccess('376-69-6789' USING PARAMETERS format='ssn');
VoltageSecureAccess
---------------------
123-45-6789
(1 row)
```

Another predefined format is *auto*, which can handle a wide variety of data, including SSNs. In contrast to *ssn*, *auto* is configured in the SDA to encrypt all characters in the plaintext.

```sql
=> SELECT VoltageSecureProtect('123-45-6789' USING PARAMETERS format='auto');
VoltageSecureProtect
---------------------
820-31-5110
(1 row)
```

Note that you can only decrypt ciphertext with the same format that generated it. In this case, ciphertext created with *ssn* must be decrypted with *ssn*. Passing the format *auto* with a ciphertext generated with *ssn*, for instance, would simply return an incorrect plaintext.

Encrypting Data During Load
When handling sensitive data, you often want to encrypt it as you load it so the unencrypted values are never stored in your database.

The following example demonstrates loading data using COPY. Suppose you have a data filled with customer information with the following fields: id number, first name, last name, social security number, card verification number, and date of birth:

```
5345, Thane, Ross, 559-32-0670, 3767565613414013, 618, 05-09-1996
5346, Talon, Wilkins, 540-48-0784, 4716511603424923, 111, 09-17-1941
5347, Daquan, Phelps, 785-34-0092, 342226134491834, 294, 05-08-1963
5348, Basia, Lopez, 811-85-0705, 4595818418314603, 503, 04-29-1948
5349, Kaseem, Hendrix, 672-57-0309, 4556 078 73 7944, 693, 03-11-1942
5350, Omar, Lott, 825-45-0131, 6462 0541 0799 6261, 555, 02-17-1956
5351, Nell, Cooke, 637-50-0105, 646 59756 38093 530, 818, 02-14-1995
5352, Illana, Middleton, 831-47-0929, 648 23648 86684 267, 883, 12-29-1949
5353, Garrett, Williamson, 488-73-0207, 5334 2702 1368 8370, 869, 11-06-1955
5354, Hanna, Ware, 694-97-0394, 543 38494 19219 254, 586, 08-08-1967
```

To encrypt the social security number and the credit card number columns, call VoltageSecureProtect to encrypt these columns in the COPY statement you use to load the data:

```
=> CREATE TABLE customers (id INTEGER, first_name VARCHAR, last_name VARCHAR, 
  ssn VARCHAR(11), cc_num VARCHAR(25), cvv VARCHAR(5), dob DATE);
CREATE TABLE
=> COPY customers (id, first_name, last_name, ssn_raw FILLER VARCHAR(11), 
  cc_num_raw FILLER VARCHAR(25), cvv, dob, 
  ssn AS VoltageSecureProtect(ssn_raw USING PARAMETERS format='ssn', 
  config_dfs_path='voltage.conf'), 
  cc_num AS VoltageSecureProtect(cc_num_raw USING PARAMETERS format='cc', 
  config_dfs_path='voltage.conf'))
  FROM '/home/dbadmin/customer_data.csv' DELIMITER ',';
Rows Loaded
----------
  100
(1 row)
```

```
=> SELECT * FROM customers ORDER BY id ASC LIMIT 10;

 id | first_name | last_name | ssn | cc_num | cvv | dob
-----+------------+-----------+-----+--------+-----+-----
 5345 | Thane      | Ross      | 072-52-0670 | 405939553794013 | 618 | 1996-05-09
 5346 | Talon      | Wilkins   | 348-30-0784 | 5350908688294923 | 111 | 1941-09-17
 5347 | Daquan     | Phelps    | 983-53-0092 | 13383311411834 | 294 | 1963-05-08
 5348 | Basia      | Lopez     | 490-63-0705 | 7979155436134603 | 503 | 1948-04-29
 5349 | Kaseem     | Hendrix   | 268-74-0309 | 3212 314 45 7944 | 693 | 1942-03-11
 5350 | Omar       | Lott      | 872-03-0131 | 4914 1839 6801 6261 | 555 | 1956-02-17
 5351 | Nell       | Cooke     | 785-90-0105 | 332 34312 95233 530 | 818 | 1995-02-14
 5352 | Illana     | Middleton | 947-60-0029 | 219 06376 36044 267 | 883 | 1949-12-29
 5353 | Garrett    | Williamson| 333-23-0207 | 1126 1022 5922 8370 | 869 | 1955-11-06
 5354 | Hanna      | Ware      | 661-57-0394 | 106 09915 59049 254 | 586 | 1967-08-08
(10 rows)
```

**Caution:**
Alway use the same FPE format to encrypt data in a column. If you use
different FPE formats in the same column (such as loading some data using ssn and other data using auto) there is no way to tell which format was used for any particular row, and properly and improperly encrypted ciphertexts will be indistinguishable.

Encrypting Non-VARCHAR Data

VoltageSecureProtect function only encrypts VARCHAR values, so if you need to encrypt other data types, such as DATE or INTEGER, you must cast these values to VARCHAR in your function call and then cast them back to DATE or INTEGER when storing them.

Building off the previous example, the following encrypts the date of birth (dob) column, which holds date type DATE.

```sql
=> CREATE TABLE customers2 (id INTEGER, first_name VARCHAR, last_name VARCHAR, ssn VARCHAR(11),
   cc_num VARCHAR(25), cvv VARCHAR(5), dob DATE);
CREATE TABLE
=> COPY customers2 (id, first_name, last_name, ssn, cc_num, cvv, dob_raw FILLER DATE,
   dob AS VoltageSecureProtect(dob_raw::VARCHAR USING PARAMETERS
   format='birthday',
   config_dfs_path='voltage.conf')::DATE)
   FROM '/home/dbadmin/customer_data.csv' DELIMITER ',';
Rows Loaded
-------------
  100 (1 row)

=> SELECT * FROM customers2 ORDER BY id ASC LIMIT 10;

</tbody>
</table>
(10 rows)
```

**Note:**

To encrypt dates, you must create your own FPE format. Be sure to match your custom FPE format to standard Vertica date format of YYYY-MM-DD. The example's birthday is one such custom format.

Note that you cannot use the auto format for DATE types; ciphertext generated by auto uses the full range of numbers and letters and only preserves the number of characters and any separators, so the resulting ciphertext cannot typically be cast to a date.
=> SELECT VoltageSecureProtect('07-16-1969' USING PARAMETERS format='auto',
config_dfs_path='/voltagesecure/conf');
VoltageSecureProtect
-------------------------------
45-86-8651
(1 row)

=> SELECT VoltageSecureProtect('07-16-1969' USING PARAMETERS format='auto',
config_dfs_path='/voltagesecure/conf')::DATE;
ERROR 2992: Date/time field value out of range: "45-86-8651"
HINT: Perhaps you need a different "datestyle" setting

Decryption Values in Queries

To decrypt ciphertext stored in tables, call VoltageSecureAccess on the encrypted column in your query.

The following example queries a table and decrypts the SSN column:

=> SELECT id,
   first_name,
   last_name,
   VoltageSecureAccess(ssn USING PARAMETERS format='ssn',
   config_dfs_path='/voltagesecure/conf') AS ssn_plaintext,
   dob
FROM customers
WHERE dob < '1970-1-1'
ORDER BY id ASC
LIMIT 10;

<table>
<thead>
<tr>
<th>id</th>

(10 rows)

Important:
The VoltageSecureAccess function has no way of determining if the values you are passing it are actually encrypted or not; the function simply takes the input and transforms it using the decryption key. If you pass it values from an unencrypted column, you will get back scrambled values. For example:

=> SELECT first_name,
Deciphering Non-VARCHAR Columns

Like `VoltageSecureProtect`, `VoltageSecureAccess` can only handle VARCHAR values. When you decrypt ciphertext from a non-VARCHAR column, you must cast it to a VARCHAR before passing it to `VoltageSecureAccess`. If your query or client application depends on the original data type of the column, you must then cast the returned plaintext back to the column's original data type.

The following example decrypts the `dob` column by casting the column data from DATE to VARCHAR, passing it to `VoltageSecureAccess`, and then casting the plaintext back to DATE.

```sql
=> SELECT id, first_name, last_name,
    VoltageSecureAccess(dob::VARCHAR USING PARAMETERS format='birthday',
                          config_dfs_path='/voltagesecure/conf')::DATE AS dob
FROM customers2 ORDER BY id LIMIT 10;
```

<table>
<thead>
<tr>
<th>id</th>
<th>first_name</th>
<th>last_name</th>
<th>dob</th>
</tr>
</thead>
<tbody>
<tr>
<td>5345</td>
<td>Thane</td>
<td>Ross</td>
<td>1996-05-09</td>
</tr>
<tr>

</tr>
</tbody>
</table>

(10 rows)
**Masking Decrypted Values**

If the ciphertext was created with a format that specifies a form of "masking," plaintexts returned by VoltageSecureAccess can be masked by using the `mask=true` parameter. If you don't specify this parameter, the full plaintext will be returned regardless of the format.

This format, as defined in the Voltage SDA, obscures all but the last two characters of the decrypted plaintext.

```
=> SELECT VoltageSecureAccess('g3kbx6ru19', USING PARAMETERS
    format='maskedFormat',
    config_dfs_path='voltage.conf');
VoltageSecureAccess
-----------------------
1234567XXX

=> SELECT VoltageSecureAccess('g3kbx6ru19', USING PARAMETERS
    format='maskedFormat',
    config_dfs_path='voltage.conf',
    mask=true);
VoltageSecureAccess
-----------------------
XXXXXXXXXXX
```

**Tweaking Ciphertext**

Analogous to a `salt`, you can pass an additional "tweak" value to add to the key used by VoltageSecureProtect to create unique ciphertexts from the same plaintext. This "tweaked" ciphertext can then only be decrypted by passing the same format and "tweak" value to VoltageSecureAccess. Support for this feature is set in the SDA.

The following example uses the custom format `ssn-tweak` and the value `tweakvalue123` to tweak the ciphertext.

```
=> SELECT VoltageSecureProtect('681-09-2913', 'tweakvalue123' USING PARAMETERS
    format='ssn-tweak');
VoltageSecureProtect
----------------------
721-21-2913

=> SELECT VoltageSecureAccess('721-21-2913', 'tweakvalue123' USING PARAMETERS
    format='ssn-tweak');
```
Tweaking an Entire Column

A common use case is to use the values from one column to tweak the ciphertext in another.

The following example loads the data in a similar manner to the previous section, but uses the values from the last_name column to tweak the dates of birth of each customer.

```sql
=> CREATE TABLE customers (id INTEGER, first_name VARCHAR, last_name VARCHAR, ssn VARCHAR(11),
    cc_num VARCHAR(25), cvv VARCHAR(5), dob DATE);
CREATE TABLE

=> COPY customers (id, first_name, last_name, ssn_raw FILLER VARCHAR(11),
    cc_num_raw FILLER VARCHAR(25), cvv,
    dob_raw FILLER DATE, ssn AS VoltageSecureProtect(ssn_raw USING PARAMETERS format='ssn',
    config_dfs_path='voltage.conf'),
    /* cast the dob_raw to VARCHAR and tweak with last_name, then cast back to DATE */
    dob AS VoltageSecureProtect(dob_raw::VARCHAR , last_name USING PARAMETERS format='date-tweak',
    config_dfs_path='voltage.conf')::DATE,
    cc_num AS VoltageSecureProtect(cc_num_raw USING PARAMETERS format='cc', config_dfs_path='voltage.conf'))
    FROM 'customers.csv' DELIMITER ',';
Rows Loaded
-----------
100
(1 row)

=> SELECT id, first_name, last_name, dob FROM customers ORDER BY id;
   id  | first_name | last_name | dob
-----------------------------------------
 5345 | Thane      | Ross      | 2086-03-07
 5346 | Talon      | Wilkins   | 1936-06-09
 5347 | Daquan     | Phelps    | 1953-12-01
 5348 | Basia      | Lopez     | 1979-11-30
 5349 | Kaseem     | Hendrix   | 2090-01-07
 5350 | Omar       | Lott      | 1984-07-27
 5351 | Nell       | Cooke     | 2053-03-20
 5352 | Illana     | Middleton | 1988-03-06
 5353 | Garrett    | Williamson| 1927-03-03
 5354 | Hanna      | Ware      | 1998-08-28
 5355 | James      | May       | 1941-10-24
(11 rows)
```

To decrypt the column, include the tweak column in the call to VoltageSecureAccess. The tweak column must contain the same data it did when it was used to encrypt the column.

```sql
=> SELECT id, first_name, last_name,
   VoltageSecureAccess(dob::VARCHAR , last_name USING PARAMETERS format='date-tweak',
```
Tweaking Columns with Stored Procedures

Since tweak values become part of the encryption key, a tweak column's contents must be the same at the time of both encryption and decryption. To avoid losing access to the plaintext, when modifying a tweak column, you must:

1. decrypt the ciphertext
2. modify the tweak column
3. re-encrypt the plaintext data with the contents of the modified tweak column

You can automate this process by using stored procedures. For example, a stored procedure to update a customer's date of birth when tweaked with their last name might be:

```sql
=> CREATE PROCEDURE update_dob (employee_id INT, tweak_value VARCHAR) AS $$
    BEGIN
      PERFORM UPDATE customers
        SET dob = (  
          WITH dob AS (SELECT VoltageSecureAccess(dob::VARCHAR, last_name
              USING PARAMETERS format='date-tweak', config_dfs_path='voltage.conf')::DATE AS dob
            FROM customers
            WHERE id = employee_id)
          SELECT VoltageSecureProtect(dob::VARCHAR, tweak_value
              USING PARAMETERS format='date-tweak', config_dfs_path='voltage.conf')::DATE
            FROM dob)
          WHERE ID = employee_id;

      PERFORM UPDATE customers SET last_name = tweak_value WHERE ID = employee_id;

      COMMIT;
    $$;

You can then call the procedure to update the encrypted value and the tweak value:

=> CALL update_dob(5349, 'Henderson');
```
Hashing Data

VoltageSecureProtect can also hash your data while preserving its format, which can be useful in contexts where you need to anonymize data to comply with privacy standards while retaining accessibility for client code.

You should keep in mind the following:

- hashing is a one way operation, so the original plaintext is unrecoverable
- the nature of format-preserving hash functions and plaintexts with low entropy (names, dates, SSNs, etc.) mean that collisions are much more likely than with standard hashing functions

The following example encrypts an SSN using a customFPH format, ssnHash.

```
=> SELECT VoltageSecureProtect('681-09-2913' USING PARAMETERS
    format='ssnHash',
    config_dfs_path='voltage.conf');
```

Encapsulating Encryption Business Logic with SQL Macros

The VoltageSecureProtect and VoltageSecureAccess functions are fairly low-level functions and require a lot of preparation to use correctly. This includes, but is not limited to, information on the data type you're decrypting/encrypting, which Voltage format to use, casting the input to VARCHAR and then back to your desired data type, and identity management. Writing queries with this many moving parts can be tedious.

To streamline this process, you can encapsulate this information in SQL macros and decide its behavior in a more dynamic way with case expressions. This approach offers several benefits:

- You can associate a Voltage format with the data's purpose and Vertica will automatically encrypt and decrypt the value accordingly.
- You can automate the required type casting to and from your desired data type to VARCHAR.
- The THROW_ERROR function can provide a form of input validation for your macros.
You can specify an identity for a given case expression during encryption which restricts decryption privileges to the same identity.

Note:
SQL macros are incompatible with User-Defined Transform Functions, such as VoltageSecureProtectAllKeys.

To view your macros, query the USER_FUNCTIONS system table.

Encryption and Decryption Macro Templates

In the following macros, the data_purpose parameter describes what the data is used for (e.g. temperature) and the value parameter indicates value being encrypted and its data_type (e.g. INT). The data_type must be the same across the entire macro.

The data_purpose parameter is also associated with both the voltage_format and voltage_identity parameters, which control how the data is encrypted/decrypted and which identity has access to it, respectively.

If you pass into the function a data_purpose without a corresponding case expression, the THROW_ERROR function will return a user-specified error, which itself must be casted to the function's return data_type.

Note that the standard casting operator :: will terminate the query entirely if it encounters types incompatible with the specified cast, which can be problematic when casting larger datasets. To prevent the query from terminating, you can use the ::! operator to first attempt the specified cast, but to return a NULL value for incompatible types. For more information, see Cast Failures.

Encryption Macro with VoltageSecureProtect

```sql
=> CREATE FUNCTION encryptDataType(data_purpose VARCHAR, value data_type) RETURN data_type
AS BEGIN
RETURN(CASE
WHEN (data_purpose='data_purpose')
then VoltageSecureProtect(value::VARCHAR USING PARAMETERS
format='voltage_format',
identity='voltage_identity'):data_type
ELSE
THROW_ERROR('no matching data_purpose'):data_type
END);
END;
```

Decryption Macro with VoltageSecureAccess
CREATE FUNCTION decryptDataType(data_purpose VARCHAR, value data_type) RETURN data_type AS BEGIN RETURN (CASE WHEN (data_purpose='data_purpose')
    then VoltageSecureAccess(value::VARCHAR USING PARAMETERS
        format='voltage_format',
        identity='voltage_identity')::data_type
    ELSE
    THROW_ERROR('no matching data_purpose')::data_type
    END);
END;

Example

The following example shows how to manage encryption and decryption for a column with dates of birth. In this case, you might want to define a separate identity for encrypting customer and employee data.

SELECT * FROM customer_dob;
---
1955-11-04
1991-12-01
1977-07-07
(3 rows)

For encryption, define the following macro.

CREATE FUNCTION encryptDOB(data_purpose VARCHAR, value DATE) RETURN DATE AS BEGIN RETURN (CASE --The data_purpose parameter controls which identity is used during encryption;
    WHEN (data_purpose='customer')
        --Format, identities, and casting from DATE to VARCHAR and back to DATE are all
    encapsulated in the case expression;
    then VoltageSecureProtect(value::VARCHAR USING PARAMETERS
        format='birthday',
        identity='customer_data@example.com')::DATE
    WHEN (data_purpose='employee')
    then VoltageSecureProtect(value::VARCHAR USING PARAMETERS
        format='birthday',
        identity='employee_data@example.com')::DATE
    ELSE
    THROW_ERROR('Unsupported data_purpose -- You must pass ''customer'' when
        encrypting customer data or ''employee'' when encrypting employee data')::DATE
    --Because the return type of this macro is DATE, THROW_ERROR must also be casted to
    type DATE;
    END);
END;

To encrypt the dates column in the customer_dob table:
To encrypt a value individually:

```sql
-> SELECT encryptDOB('customer', '1955-11-04');
encryptDOB
----------
2048-08-09
```

You can define a matching macro for decryption. Since encrypted data can only be decrypted with matching identities, these case expressions use the same `data_purpose` and identities for decryption.

For decryption, define the following macro:

```sql
-> CREATE FUNCTION decryptDOB(data_purpose VARCHAR, value DATE) RETURN DATE
AS BEGIN
  RETURN (CASE
    -- The case expressions and parameters must match the ones for encryption;
    WHEN (data_purpose='customer')
      then VoltageSecureAccess(value::VARCHAR USING PARAMETERS
        format='birthday',
        identity='customer_data@example.com')::DATE
    WHEN (data_purpose='employee')
      then VoltageSecureAccess(value::VARCHAR USING PARAMETERS
        format='birthday',
        identity='employee_data@example.com')::DATE
    ELSE
      THROW_ERROR('Unsupported data_purpose -- You must pass "customer" when decrypting customer data or "employee" when decrypting employee data')::DATE
  END);
END;
```

To decrypt an encrypted column in a nested call:

```sql
-> SELECT decryptDOB('customer', encryptDOB('customer', dates)) FROM customer_dob;
decryptDOB
----------
1955-11-04
1991-12-01
1977-07-07
(3 rows)
```

To decrypt a value individually:

```sql
-> SELECT decryptDOB('customer', '2048-08-09');
decryptDOB
```
To drop these macros:

```sql
=> DROP FUNCTION encryptDOB(VARCHAR, DATE);
DROP FUNCTION
=> DROP FUNCTION decryptDOB(VARCHAR, DATE);
DROP FUNCTION
```

## Granting Users Access to the Voltage SecureData Integration Functions

By default, Vertica users do not have access to the Voltage SecureData Integration Functions. Users attempting to call the integration functions without the correct privileges will receive the following error:

```sql
=> SELECT id,
       first_name,
       last_name,
       VoltageSecureAccess(ssn USING PARAMETERS format='ssn',
                            config_dfs_path='/voltagesecure/conf') AS ssn,
       dob
FROM customers
WHERE dob < '1970-1-1'
ORDER BY id ASC
LIMIT 10;
ERROR 6482: Failed to parse Access Policies for table "customers" [Function public.VoltageSecureProtect(varchar) does not exist, or permission is denied for public.VoltageSecureProtect(varchar)]
```

Users must have EXECUTE access to the integration functions in order to use them. These functions are part of the PUBLIC schema. The functions in the Voltage SecureData integration library are:

<table>
<thead>
<tr>
<th>Function Signature</th>
<th>Function Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>VoltageSecureAccess(VARCHAR)</td>
<td>Function</td>
</tr>
<tr>
<td>VoltageSecureConfigure()</td>
<td>Transform Function</td>
</tr>
<tr>
<td>VoltageSecureProtect(VARCHAR)</td>
<td>Function</td>
</tr>
<tr>
<td>VoltageSecureProtectAllKeys(VARCHAR)</td>
<td>Transform Function</td>
</tr>
</tbody>
</table>
The following example demonstrates granting the user named Alice access to the VoltageSecureAccess function to be able to decrypt data.

```sql
=> \c vmart dbadmin
You are now connected to database "vmart" as user "dbadmin".
=> GRANT EXECUTE ON FUNCTION public.VoltageSecureProtect(VARCHAR) TO alice;
GRANT PRIVILEGE
=> \c vmart alice
You are now connected to database "vmart" as user "alice".
=> SELECT id, first_name, last_name,
    VoltageSecureAccess(ssn USING PARAMETERS format='ssn',
        config_dfs_path='/voltagesecure/conf')
    AS ssn,
    dob
FROM customers
WHERE dob < '1970-1-1'
ORDER BY id ASC
LIMIT 10;
```

<table>
<thead>
<tr>
<th>id</th>

(10 rows)

See GRANT (User Defined Extension) for a detailed explanation of granting access to U Dx s to users.

### Creating Roles for SecureData Users

Instead of granting access to each function to individual users, you can create roles that you grant access to the functions. Then you can grant users who need to access the SecureData functions access to these roles.

Consider creating at least two roles: one for access to the VoltageSecureConfigure function and another for access to the other functions. In most cases, not all users need to access VoltageSecureConfigure, especially if you choose to create a single, global configuration file. See Configuring Access to SecureData for more information about using VoltageSecureConfigure.

The following example:
• Creates two roles: secure_data_users, who are granted access to the protect and access functions, and secure_dataadmins, who are granted access to the SecureDataConfigure function.
• Grants the secure_data_user role to a user named Alice
• Sets the new role as her default role.
• Switches to Alice
• Calls several of the SecureData functions.

=> \c vmart dbadmin
You are now connected to database "vmart" as user "dbadmin".
=> CREATE ROLE secure_data_users;
CREATE ROLE
=> GRANT EXECUTE ON FUNCTION public.VoltageSecureAccess(varchar)
  TO secure_data_users;
GRANT PRIVILEGE
=> GRANT EXECUTE ON FUNCTION public.VoltageSecureProtect(varchar)
  TO secure_data_users;
GRANT PRIVILEGE
=> GRANT EXECUTE ON TRANSFORM FUNCTION
  public.VoltageSecureProtectAllKeys(varchar)
  TO secure_data_users;
GRANT PRIVILEGE
=> CREATE ROLE secure_dataadmins;
CREATE ROLE
=> GRANT EXECUTE ON TRANSFORM FUNCTION public.VoltageSecureConfigure() 
  TO secure_dataadmins;
GRANT PRIVILEGE
=> GRANT secure_data_users TO ALICE;
GRANT ROLE
=> ALTER USER alice DEFAULT ROLE secure_data_users;
ALTER USER
=> \c vmart alice
You are now connected to database "vmart" as user "alice".
=> SET ROLE secure_data_users;
SET
=> SELECT VoltageSecureProtect('123-45-6789' 
  USING PARAMETERS format='ssn',
  config_dfs_path='/voltagesecure/conf');
  
VoltageSecureProtect
--------------------
376-69-6789
(1 row)
=> SELECT VoltageSecureAccess('376-69-6789' 
  USING PARAMETERS format='ssn',
  config_dfs_path='/voltagesecure/conf');

VoltageSecureAccess
--------------------
123-45-6789
(1 row)

=> SELECT VoltageSecureConfigure(USING PARAMETERS config_dfs_path='voltage.conf',
  username='alice', identity='alice@example.com',
  ) OVER ();
ERROR 3457: Function VoltageSecureConfigure() does not exist, or permission is denied for VoltageSecureConfigure()
HINT: No function matches the given name and argument types. You may need to
Note that Alice can use the global configuration file, despite not being able to access the VoltageSecureConfigure function.

In the previous example, the global configuration file includes the shared secret or password. See Configuring Access to SecureData for a discussion of the security implications of saving sensitive information to a SecureData configuration file.

**Automating Encryption and Decryption with Access Policies**

You can automate encryption and decryption by creating access policies. These policies let you show users with specific roles unencrypted values while users without those roles see encrypted ones. Alternatively, you can create an access policy that masks unencrypted data stored in the database when queried by users who lack a specific role.

Users do not explicitly call the SecureData integration functions when you create access policies to automatically encrypt and decrypt data. However, they still must have access to the SecureData functions and have any necessary session variables set. See Configuring Access to SecureData and Granting Users Access to the Voltage SecureData Integration Functions for the necessary configuration for the access policies to work. If a user who does not have access to the SecureData integration functions queries a table with an access policy that calls these functions, the query generates an error.

**Automatically Decrypting Table Columns for Privileged Users**

To decrypt an encrypted column automatically, create an access policy for the encrypted column that calls VoltageSecureAccess if the user has a role enabled. If the user does not have the role enabled, just return the encrypted value.

The following example:

1. Creates a role named see_ssn and grants it to the user named Alice, as well as granting Alice access to the customers table.
2. Creates an access policy on the customers table's ssn column that decrypts the column's value if the user has the see_ssn role enabled.
3. Switches to the user named Alice.
4. Queries the customers table, without the see_ssn role enabled.
5. Enables the see_ssn role and queries the table again.

```sql
=> CREATE ROLE see_ssn;
CREATE ROLE

=> GRANT see_ssn TO alice;
GRANT ROLE

=> GRANT ALL ON TABLE customers TO alice;
GRANT PRIVILEGE

=> CREATE ACCESS POLICY ON customers FOR COLUMN ssn
  CASE
    WHEN enabled_role('see_ssn') THEN VoltageSecureAccess(ssn USING PARAMETERS format='ssn',
      config_dfs_path='/voltagesecure/conf')
  ELSE ssn
  END ENABLE;
CREATE ACCESS POLICY

=> \c vmart alice;
Password:
You are now connected to database "vmart" as user "alice".

=> SELECT first_name, last_name, ssn FROM customers WHERE id < 5355 ORDER BY id ASC;
first_name | last_name | ssn
---------------------------------------------------------
Gil        | Reeves    | 997-92-0657
Robert     | Moran     | 715-02-0455
Hall       | Rice      | 938-83-0659
Micah      | Trevino   | 495-57-0860
(4 rows)

=> SET ROLE see_ssn;
SET
=> SELECT first_name, last_name, ssn FROM customers WHERE id < 5355 ORDER BY id ASC;
first_name | last_name | ssn
---------------------------------------------------------
Gil        | Reeves    | 232-28-0657
Robert     | Moran     | 725-79-0455
Hall       | Rice      | 285-90-0659
Micah      | Trevino   | 853-60-0860
(4 rows)
```

In the above example, you could combine the see_ssn role with a role that grants users access to the SecureData integration functions. Users who do not have the see_ssn role do not need to have access to the SecureData functions in order to see the encrypted values.

**Note:**
The above example assumes that the shared configuration file...
(/voltagesecure/conf) contains all of the credentials necessary to authenticate with the SecureData Appliance, including the password or shared secret. This configuration may not be secure enough to meet your requirements. See the caution in VoltageSecureConfigure for more information. In production use, consider having each privileged user set their identity, username, and password or shared secret in session variables. Unprivileged users do not need to set these values.

Automatically Encrypting Columns for Unprivileged Users

You can also create access policies that encrypt values. Use this technique to prevent some users from seeing values in columns that aren't sensitive enough to require encryption in the database, but should not be seen by all users. This technique is the opposite of the encryption-on-the-fly: users that have a specific role enabled get the value from the table; if they do not have the role, the access policy encrypts the value.

The following example:

1. Creates a role named see_dob and assigns it to the user Alice.
2. Creates an access policy on the dob column of the customers table. It returns the value in the column if the user has the see_dob role active and encrypts the value if not.
3. Switches to the user named Alice.
4. Queries the customers table including the dob column.
5. Sets the see_dob role and queries customers again.

```sql
=> CREATE ROLE see_dob;
CREATE ROLE

=> GRANT see_dob TO alice;
GRANT ROLE

=> CREATE ACCESS POLICY ON customers FOR COLUMN dob
CASE
  WHEN enabled_role('see_dob') THEN dob
  ELSE VoltageSecureProtect(dob::varchar USING PARAMETERS format='birthday',
                              config_dfs_path='/voltagesecure/conf')::date
END ENABLE;
CREATE ACCESS POLICY

=> \c vmart alice
Password:
```
You are now connected to database "vmart" as user "alice".

```sql
=> SELECT first_name, last_name, dob FROM customers ORDER BY id ASC LIMIT 10;
first_name | last_name | dob
-------------+-----------+--------
Gil Reeves  | 2048-08-09
Robert Moran | 1917-03-05
Hall Rice   | 2022-01-07
Micah Trevino | 2018-06-01
Kuame Stephenson | 2053-02-13
Hedda Cooper | 2002-03-12
MacKenzie Burks | 2061-10-30
Anne Marquez | 2078-08-02
Dominic Avery | 1940-08-10
Alfreda McDaniel | 1904-04-27
(10 rows)
```

```sql
=> SET ROLE see_dob;
```

```sql
=> SELECT first_name, last_name, dob FROM customers ORDER BY id ASC LIMIT 10;
first_name | last_name | dob
-------------+-----------+--------
Gil Reeves  | 1955-11-04
Robert Moran | 1991-12-01
Hall Rice   | 1977-07-07
Micah Trevino | 1980-12-05
Kuame Stephenson | 1979-09-12
Hedda Cooper | 1987-05-02
MacKenzie Burks | 1982-11-07
Anne Marquez | 1949-07-09
Dominic Avery | 1976-12-02
Alfreda McDaniel | 1975-02-08
(10 rows)
```

Note:
The values you pass to VoltageSecureProtect and VoltageSecureAccess must be VARCHARs. In the previous example, the dob column's data type is DATE, so its value has to be cast to VARCHAR when passed to VoltageSecureProtect. The encrypted value has to be cast back to a DATE value because its output needs to match the table schema.

In the previous example, users who do not have the see_dob role enabled must have access to the SecureData functions in order to see the masked values. If they do not have access to the SecureData functions, querying the customers table results in an error message. The following example creates a new user named Bob and grants him access to the customers table, without any access to the SecureData functions.

```sql
=> CREATE USER bob;  
CREATE USER  
=> GRANT ALL ON TABLE customers TO bob;  
GRANT PRIVILEGE
```
Querying eFPE Encrypted Columns

You can use a feature in Voltage SecureData called Embedded Format Preserving Encryption to encrypt your data. You choose to use eFPE when you define the format in your SecureData Appliance. This format is slightly different than the standard FPE format. It uses key rotation, and embeds identification information in the encrypted value. Due to these factors, calls to VoltageSecureProtect using an eFPE format may not result in the same encrypted value, depending on key rotation schedules and the identity of the caller. This feature makes querying columns encrypted using an eFPE format more challenging.

When you want to search a standard FPE encrypted column for a value, you can just encrypt the plain text with VoltageSecureProtect and use the output in your query. For example, suppose you want to search for the customers table for an entry with the social security number 559-32-0670. Then you could use the following query:

```sql
=> SELECT id, first_name, last_name FROM customers
    WHERE ssn = VoltageSecureProtect('559-32-0670' USING PARAMETERS
        format='ssn',
        config_dfs_path='voltage.conf');
```

<table>
<thead>
<tr>
<th>id</th>
<th>first_name</th>
<th>last_name</th>
</tr>
</thead>
<tbody>
<tr>
<td>5345</td>
<td>Thane</td>
<td>Ross</td>
</tr>
</tbody>
</table>

(1 row)

Querying a column that uses eFPE format encryption is not as simple, as you do not know which embedded key was used to encrypt the data. You could just use the VoltageSecureAccess function to decrypt the entire contents of the table column and search the result for the value you need. However, this is inefficient, as the SecureData function has to be called for every row of data in the table.

A better solution is to use the VoltageSecureProtectAllKeys function. This function is similar to VoltageSecureProtect. However, instead of returning a single encrypted value, it returns a table containing the value encrypted with each of the keys defined for the eFPE format.

```sql
=> SELECT VoltageSecureProtectAllKeys('376765616314013' USING PARAMETERS
    format='cc_num',
    config_dfs_path='/voltagesecure/conf')
```

OVER ();
In the previous example, the cc_num column is encrypted using an eFPE format. The output from VoltageSecureProtectAllKeys shows that this eFPE format has 5 keys defined. The content of the protected column contains the same value encrypted with each of the keys.

To use this function in a query for a value in an eFPE column, use a JOIN on the table you are searching and the result table from VoltageSecureProtectAllKeys. The following example demonstrates querying the customers table to find all rows that have a cc_num value that matches the unencrypted credit card value 376765616314013.

```sql
=> SELECT id, first_name, last_name FROM customers3 u
   JOIN (SELECT VoltageSecureProtectAllKeys('376765616314013' USING PARAMETERS
                                                   format='cc_num',
                                                   config_dfs_path='/voltagesecure/conf')
       OVER ()
       pak
       ON u.cc_num = pak.protected;
```

<table>
<thead>
<tr>
<th>id</th>
<th>first_name</th>
<th>last_name</th>
</tr>
</thead>
<tbody>
<tr>
<td>5345</td>
<td>Thane</td>
<td>Ross</td>
</tr>
</tbody>
</table>

(1 row)

**Voltage SecureData Integration Function Reference**

The functions in this section are part of the Vertica voltagesecure library for integrating with Voltage SecureData. These functions are automatically installed when you install or upgrade Vertica. However, you must re-install the voltagesecure library to distribute the CA certificate to all nodes in the Vertica cluster. See Verifying the Vertica Server's Access to the SecureData CA Certificate for instructions.

**VoltageSecureAccess**

Calls SecureData to decrypt ciphertexts encrypted with VoltageSecureProtect.
Syntax

VoltageSecureAccess('ciphertext' [, 'tweak'] USING PARAMETERS
  format='format_name'
  [, mask=is_masked]
  [, config_dfs_path='config_file']
  [, identity=sd_identity]);

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ciphertext</td>
<td>A VARCHAR value that was encrypted using SecureData. You must cast other data types (for example DATE values) to VARCHAR when calling this function.</td>
</tr>
<tr>
<td>tweak</td>
<td>VARCHAR value analogous to a salt that allows equivalent plaintexts to produce different ciphertexts. The same tweak value must for encryption and decryption of a given plaintext. When encrypting or hashing an entire column, you can pass another column for a set of tweak values.</td>
</tr>
<tr>
<td>Caution:</td>
<td>Never use two columns as tweak values for each other or else the original plaintext for both columns will be unrecoverable.</td>
</tr>
<tr>
<td>format_name</td>
<td>A string specifying the original FPE format used to generate the ciphertext. Note that SecureData has no way to tell if the value passed to it was actually encrypted or not, or what FPE format was used.</td>
</tr>
<tr>
<td>is_masked</td>
<td>A boolean, whether to mask the value when decrypting the ciphertext. Masking is defined on a per-format basis on the SecureData Appliance. Note that since masking is optional, you must specify whether to decrypt with masking enabled. If you omit the masking parameter, the plaintext will be unmasked by default:</td>
</tr>
<tr>
<td>config_file</td>
<td>String containing the file name of the configuration file to use when authenticating with the SecureData appliance. You must create this file using VoltageSecureConfigure. If you do not supply this parameter, you must set session parameters to configure access to SecureData. See Configuring Access to SecureData. Any values set in session parameters override the values in this file.</td>
</tr>
</tbody>
</table>
A string containing the identity to use when decrypting the data. Because SecureData uses the identity to determine encryption keys, this identity must match the identity used to encrypt the data. If supplied, this value overrides any identity value set in the configuration file or session parameter.

**Examples**

The following example decrypts a Social Security Number (SSN) originally encrypted with a predefined format.

```
=> SELECT VoltageSecureAccess('376-69-6789' USING PARAMETERS format='ssn');
```

<table>
<thead>
<tr>
<th>id</th>
<th>first_name</th>
<th>last_name</th>
<th>ssn</th>
<th>dob</th>
</tr>
</thead>
<tbody>
<tr>
<td>5346</td>
<td>Talon</td>
<td>Wilkins</td>
<td>540-48-0784</td>
<td>1941-09-17</td>
</tr>
<tr>
<td>5347</td>
<td>Daquan</td>
<td>Phelps</td>
<td>785-34-0092</td>
<td>1963-05-08</td>
</tr>
<tr>
<td>5348</td>
<td>Basia</td>
<td>Lopez</td>
<td>011-85-0705</td>
<td>1940-04-29</td>
</tr>
<tr>
<td>5349</td>
<td>Kaseem</td>
<td>Hendrix</td>
<td>672-57-0309</td>
<td>1942-03-11</td>
</tr>
<tr>
<td>5350</td>
<td>Omar</td>
<td>Lott</td>
<td>825-45-0131</td>
<td>1956-02-17</td>
</tr>
<tr>
<td>5352</td>
<td>Illana</td>
<td>Middleton</td>
<td>831-47-0929</td>
<td>1949-12-29</td>
</tr>
<tr>
<td>5353</td>
<td>Garrett</td>
<td>Williamson</td>
<td>408-73-0207</td>
<td>1955-11-06</td>
</tr>
<tr>
<td>5354</td>
<td>Hanna</td>
<td>Ware</td>
<td>694-97-0394</td>
<td>1967-08-08</td>
</tr>
<tr>
<td>5355</td>
<td>Quinn</td>
<td>Pruitt</td>
<td>818-91-0359</td>
<td>1965-11-14</td>
</tr>
<tr>
<td>5356</td>
<td>Clayton</td>
<td>Santiago</td>
<td>102-56-0010</td>
<td>1958-02-02</td>
</tr>
</tbody>
</table>

This example demonstrates decrypting an encrypted column within a query.

```
=> SELECT id,
       first_name,
       last_name,
       VoltageSecureAccess(ssn USING PARAMETERS format='ssn',
                             config_dfs_path='/voltagesecure/conf') AS ssn,
       dob
FROM customers
WHERE dob < '1970-1-1'
ORDER BY id ASC
LIMIT 10;
```

<table>
<thead>
<tr>
<th>id</th>
<th>first_name</th>
<th>last_name</th>
<th>ssn</th>
<th>dob</th>
</tr>
</thead>
<tbody>
<tr>
<td>5346</td>
<td>Talon</td>
<td>Wilkins</td>
<td>540-48-0784</td>
<td>1941-09-17</td>
</tr>
<tr>
<td>5347</td>
<td>Daquan</td>
<td>Phelps</td>
<td>785-34-0092</td>
<td>1963-05-08</td>
</tr>
<tr>
<td>5348</td>
<td>Basia</td>
<td>Lopez</td>
<td>011-85-0705</td>
<td>1940-04-29</td>
</tr>
<tr>

</table>

The following example decrypts Unicode using a predefined format. For a full list of predefined formats, consult the Voltage SecureData documentation.

```
=> SELECT VoltageSecureAccess('607-Ödiçç-ぷびねら' using parameters format='PREDEFINED::JU_AUTO_TYPE');
```
Decrypt a SSN ciphertext with the original FPE format and tweak value:

```sql
=> SELECT VoltageSecureAccess('721-21-2913', 'tweakvalue123' USING PARAMETERS
   format='ssn-tweak',
   config_dfs_path='voltage.conf');
```

Decrypt a ciphertext that was encrypted with a masking format. This format obscures all but the last two characters of the decrypted plaintext.

```sql
=> SELECT VoltageSecureAccess('g3kbx6ru19', USING PARAMETERS
   format='maskedFormat',
   config_dfs_path='voltage.conf');
```

```sql
=> SELECT VoltageSecureAccess('g3kbx6ru19', USING PARAMETERS
   format='maskedFormat',
   config_dfs_path='voltage.conf',
   mask=true);
```

VoltageSecureConfigure

Saves SecureData user access configuration parameters to a file in the Vertica Distributed File System (DFS). You then pass the file's name to the other SecureData integration functions. This function can store the configuration file in the user's own DFS directory or in a globally-accessible file named /voltagesecure/conf.
**Syntax**

```
VoltageSecureConfigure(USING PARAMETERS config_dfs_path='filename'
    [, identity=sd_identity]
    [, store_password=Boolean]
    [, store_shared_secret=Boolean]
    [, username=sd_user]
) OVER ();
```

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
</table>
| config_dfs_path='filename' | Required. A string containing the path for the configuration file in DFS. This is either:  
  - A file name (without any path information). The function automatically stores the file in a DFS directory named for the user. Creating this directory prevents different user's files from overwriting one another.  
  - The absolute path `/voltagesecure/conf`. All users can use this file in calls to the other functions in the SecureData library. This path is the only absolute one that VoltageSecureConfigure allows for this parameter. |
| identity=sd_identity    | A string containing identity to use with the SecureData Appliance. This is usually in the form of an email address. When SecureData uses LDAP authentication, it uses this value to authenticate the user. |
| store_password=Boolean  | A Boolean value. When set to true, Vertica stores the LDAP password stored in the password session parameter in the configuration file. Defaults to false. |
| store_shared_secret=Boolean | A Boolean value. When set to true, Vertica stores the shared secret set in the shared_secret session parameter in the configuration file. Defaults to false. |
| username=sd_user        | A string containing the user name for authenticating with SecureData. |
Notes

- Any SecureData session variables that are set override values from the configuration file. See Configuring Access to SecureData for more information.
- The SecureData integration only supports one configuration for the SecureData Appliance at a time.
- Under normal circumstances, users are not able to directly read data from files stored in DFS. However, all users who have access to UDx functions that read from the DFS could access these files from within Vertica. In addition, these files are stored as plain text in every node's file system. Anyone with the proper file system access on the nodes can read the file's contents. You should take both of these facts into consideration when deciding whether to store sensitive information such as passwords or shared secrets in either the shared or per-user configuration files.

Example

The following example demonstrates saving configuration information to a configuration file named voltage.conf in the user's own Vertica DFS directory.

```
=> \x
Expanded display is on.
=> SELECT VoltageSecureConfigure(USING PARAMETERS config_dfs_path='voltage.conf',
                                        username='alice', identity='alice@example.com', store_
                                        password=false ) OVER ();

- [ RECORD 1 ]-========================================================================
config_dfs_path | voltage.conf
identity        | alice@example.com
username        | alice
```

VoltageSecureConfigureGlobal

Saves global SecureData access configuration parameters for all users to a file in the Vertica Distributed File System (DFS). This function stores the configuration file file named /voltagesecure/conf.global in the distributed file system (DFS). You must use this function to configure at least the SecureData policy URL before you can use any of the other Voltage SecureData integration functions.

To refresh the client policy, see VoltageSecureRefreshPolicy.
Syntax

VoltageSecureConfigureGlobal(USING PARAMETERS policy_url=url
    [, allow_short_fpe=Boolean]
    [, allow_file_cache=Boolean]
    [, network_timeout=Integer]
) OVER ();

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>policy_url=url</td>
<td>A string containing the URL of the SecureData policy file. The Vertica SecureData library uses the contents of this file, such as the formats that the SecureData Appliance supports. It also uses the URL of this file to determine the location of the SecureData Appliance.</td>
</tr>
<tr>
<td>allow_short_fpe=Boolean</td>
<td>A Boolean value. When set to True, SecureData ignores the lower length limit for encoding FPE values. Usually, SecureData does not use FPE to encrypt data shorter than a lower limit (usually, 8 bits). See the SecureData Architecture Guide's section on Data Length Restrictions for more information.</td>
</tr>
<tr>
<td>enable_file_cache=Boolean</td>
<td>A Boolean value. When set to True, Vertica caches the SecureData policy file and encryption keys to disk, rather than just to memory. Defaults to false.</td>
</tr>
<tr>
<td>network_timeout=Integer</td>
<td>An Integer value. Configures the network timeout in seconds. Defaults to its maximum value of 300 seconds.</td>
</tr>
</tbody>
</table>

Example

Set the policy URL to https://voltage-pp-0000.example.com/policy/clientPolicy.xml and set the network timeout to 200 seconds.

```
=> SELECT VoltageSecureConfigureGlobal(USING PARAMETERS
    policy_url='https://voltage-pp-0000.example.com/policy/clientPolicy.xml',
    NETWORK_TIMEOUT=200)
OVER ();
```
Manually refresh the client policy across the nodes:

```sql
=> SELECT VoltageSecureRefreshPolicy() OVER ();
  PolicyRefresh
```

Successfully refreshed policy on node [v_sandbox_node001]. Policy on other nodes will be refreshed the next time a Voltage operation is run on them.

(1 row)

---

### VoltageSecureProtect

Calls SecureData to encrypt or hash a value while preserving the structure of the original plaintext.

#### Syntax

```
VoltageSecureProtect('plaintext' [, 'tweak'] USING PARAMETERS
  format='format_name'
  [, config_dfs_path='config_file']
  [, identity=sd_identity]);
```

#### Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>plaintext</code></td>
<td>VARCHAR value to encrypt. You must cast other data types (for example DATE values) to VARCHAR when calling this function. NULL values return NULL.</td>
</tr>
<tr>
<td><code>tweak</code></td>
<td>VARCHAR value analogous to a salt that allows equivalent plaintexts to produce different ciphertexts. The same <code>tweak</code> value must for encryption and decryption of a given plaintext. When encrypting or hashing an entire column, you can pass another column for a set of <code>tweak</code> values.</td>
</tr>
</tbody>
</table>
Caution: Never use two columns as tweak values for each other or else the original plaintext for both columns will be unrecoverable.

`format_name` String specifying a format-preserving encryption (FPE) or format-preserving hash (FPH) format to encrypt or hash the plaintext.

To encrypt your data, pass an FPE format defined in your SecureData Appliance.

To hash your data, pass an FPH format defined in your SecureData Appliance (version 6.6+). Note that hashing operations are one-way and cannot be reversed with VoltageSecureAccess.

Caution: Always use the same FPE format to encrypt data in a column. If you use different FPE formats in the same column (such as loading some data using `ssn` and other data using `auto`) there is no way to tell which format was used for any particular row, and properly and improperly encrypted ciphertexts will be indistinguishable.

`config_file` String containing the file name of the configuration file to use when authenticating with the SecureData appliance. You must create this file using VoltageSecureConfigure. If you do not supply this parameter, you must set session parameters to configure access to SecureData. See Configuring Access to SecureData. Any values set in session parameters override the values in this file.

`sd_identity` String containing the identity to use when authenticating with SecureData. SecureData uses this value as a basis for the encryption key. This value usually takes the form of an email address. If supplied, it overrides any values set in the configuration file or session parameters.

### Examples

Encrypt a social security number (SSN) value using both the `ssn` and `auto` FPE formats (this example assumes that all of the necessary SecureData authentication information has been set in session variables):

```
=> SELECT VoltageSecureProtect('123-45-6789' USING PARAMETERS format='ssn');
VoltageSecureProtect
--------------------
```
Encrypt two table columns in a COPY statement, authenticating to the SecureData Appliance with the user's private configuration file saved in DFS:

```
=> COPY customers (id, first_name, last_name, ssn_raw FILLER VARCHAR(11),
  cc_num_raw FILLER VARCHAR(25), cvv, dob,
  ssn AS VoltageSecureProtect(ssn_raw USING PARAMETERS
    format='ssn',
    config_dfs_path='voltage.conf'),
  cc_num AS VoltageSecureProtect(cc_num_raw USING PARAMETERS
    format='cc',
    config_dfs_path='voltage.conf'))
  FROM '/home/dbadmin/customer_data.csv' DELIMITER ',';
```

Query for a particular value in an encrypted column:

```
=> SELECT id, first_name, last_name FROM customers
  WHERE ssn = VoltageSecureProtect('559-32-0670' USING PARAMETERS
    format='ssn',
    config_dfs_path='voltage.conf');
```

Encrypting NULL values returns NULL:

```
=> CREATE TABLE nullable(n VARCHAR (20));
=> INSERT INTO nullable VALUES (NULL);

=> SELECT VoltageSecureProtect(n USING PARAMETERS format='auto') FROM nullable;
```

Encrypt a Unicode string using a predefined format. For a full list of predefined formats, consult the Voltage SecureData documentation.

```
=> SELECT VoltageSecureProtect('123-Hello-こんにちは' USING PARAMETERS format='PREDEFINED::JU_AUTO_TYPE');
```
Encrypt a SSN with a tweak value:

```sql
=> SELECT VoltageSecureProtect('681-09-2913', 'tweakvalue123' USING PARAMETERS format='ssn-tweak');

VoltageSecureProtect
-----------------------
721-21-2913

=> SELECT VoltageSecureAccess('721-21-2913', 'tweakvalue123' USING PARAMETERS format='ssn-tweak');

VoltageSecureProtect
-----------------------
681-09-2913
```

Hash a SSN with a FPH format and a tweak value:

```sql
=> SELECT VoltageSecureProtect('681-09-2913', 'tweakvalue123' USING PARAMETERS format='ssnHash', config_dfs_path='voltage.conf');

VoltageSecureProtect
-----------------------
841-68-2913
```

VoltageSecureProtectAllKeys

This function helps you locate values in a column encrypted using an Embedded Format Preserving Encryption (eFPE) format. These formats use key rotation, so the encrypted value you get back for a piece of plain text changes over time. You pass this function an unencrypted value. It returns a table consisting of two columns: the unencrypted value and the value encrypted with each of the keys defined for the eFPE. The number of rows in the table are determined by the number of keys the eFPE format contains. Usually, you use the output of this function in a join to locate a matching encrypted value in a table.
Syntax

VoltageSecureProtectAllKeys(value USING PARAMETERS format='eFPE_format'
  [, config_dfs_path=config_file]
  [, identity=sd_identity] )

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>value</td>
<td>VARCHAR containing the value to encrypt. You must cast other data types (for example DATE values) to VARCHAR when calling this function.</td>
</tr>
<tr>
<td>format=eFPE_format</td>
<td>String containing the name of an eFPE format defined by SecureData. This format must be an eFPE format defined by your SecureData Appliance, or the function returns an error. This format must also match the format of value. VoltageSecureProtectAllKeys returns an error if value's format does not match the one you specify in eFPE_format.</td>
</tr>
<tr>
<td>config_dfs_path=</td>
<td>String containing the file name of the configuration file to use when authenticating with the SecureData appliance. You must create this file using VoltageSecureConfigure. If you do not supply this parameter, you must set session parameters to configure access to SecureData. See Configuring Access to SecureData. Any values set in session parameters override the values in this file.</td>
</tr>
<tr>
<td>config_file</td>
<td></td>
</tr>
<tr>
<td>identity=sd_identity</td>
<td>String containing the identity to use when authenticating with SecureData. SecureData uses this value as a basis for the encryption key. This value usually takes the form of an email address. If supplied, it overrides any values set in the configuration file or session parameters.</td>
</tr>
</tbody>
</table>

Examples

The following example demonstrates a simple call to VoltageSecureProtectAllKeys.

```sql
=> SELECT VoltageSecureProtectAllKeys('376765616314013' USING PARAMETERS
  format='cc_num',
  config_dfs_path='/voltagesecure/conf')
OVER ();
```

<table>
<thead>
<tr>
<th>data</th>
<th>protected</th>
</tr>
</thead>
<tbody>
<tr>
<td>376765616314013</td>
<td>XMVMRU9RJU4013</td>
</tr>
<tr>
<td>376765616314013</td>
<td>X5FD4K01UE4013</td>
</tr>
</tbody>
</table>

Vertica Analytic Database (11.0.x)  Page 6200 of 6730
In this example, the cc_num eFPE format has five keys defined for it, so the return value is a table containing five rows.

The following example shows a more common use: querying a table column that is encrypted using an eFPE format.

```sql
=> SELECT id, first_name, last_name FROM customers3 u
JOIN (SELECT VoltageSecureProtectAllKeys('376765616314013' USING PARAMETERS format='cc_num',
config_dfs_path='/voltagesecure/conf')
OVER () ) pak
ON u.cc_num = pak.protected;
```

<table>
<thead>
<tr>
<th>id</th>
<th>first_name</th>
<th>last_name</th>
</tr>
</thead>
<tbody>
<tr>
<td>5345</td>
<td>Thane</td>
<td>Ross</td>
</tr>
</tbody>
</table>

(1 row)

In the previous example, the customers3 table is joined to the output from VoltageSecureProtectAllKeys. Any rows in the customers3 table where the encrypted cc_num column value matches values from the protected column of VoltageSecureProtectAllKeys matches appear in the output.

This function returns an error if you use it on a non-eFPE format:

```sql
=> SELECT first_name, last_name, ssn FROM customers u
JOIN ( SELECT VoltageSecureProtectAllKeys('232-28-0657' USING PARAMETERS format='ssn',
config_dfs_path='/voltagesecure/conf')
OVER ()
) pak ON u.ssn = pak.protected;
```

ERROR 5861: Error calling processPartition() in User Function VoltageSecureProtectAllKeys at [ProtectAllKeys.cpp:21], error code: 1711, message: Error getting key numbers: eFPE format required

**VoltageSecureRefreshPolicy**

Immediately refreshes the client policy on the initiator node. Policies on non-initiator nodes are refreshed the next time a Voltage function is called on them.

**Syntax**

```sql
VoltageSecureRefreshPolicy()
```

**Parameters**

None

**Example**

Manually refresh the client policy across the nodes:

```sql
=> SELECT VoltageSecureRefreshPolicy() OVER ();
    | PolicyRefresh |
    +--------------+
   | PolicyRefresh |

Successfully refreshed policy on node [v_sandbox_node001]. Policy on other nodes will be refreshed the next time a Voltage operation is run on them.

(1 row)

The Vertica Glossary defines terms that are common and specific to Vertica.

**Access Rank**

Determines the speed at which a column can be accessed. Columns are stored on disk from the highest ranking to the lowest ranking in which the highest ranking columns are placed on the fastest disks and the lowest ranking columns are placed on the slowest disks.

**Administration Host**

The host on which the Vertica rpm package was manually installed. Always run the Administration Tools on this host if possible.

**Administration Tools**

One of the ways you can manage a Vertica database is provided in the form of a graphical user interface, called Administration Tools.

This tool allows you to perform various tasks quickly and easily, some of which are:

- View the state of the database cluster
- Create a database
- Start a database
- Stop a database
- Run Database Designer
- Connect to a database using `vsql`

Using the following command, always run the Administration Tools on the Administration Host if possible.

```
$ /opt/vertica/bin/adminTools
```

**Note:** Throughout the Vertica documentation, you might see Administration Tools referred to as Admin Tools or admintools or adminTools. They all refer to the same utility.

For more information, see Administration Tools.

**Agent**

A daemon process that runs on each Vertica cluster node. The agent is used by certain clients, such as Management Console, to administer Vertica.

Agents monitor Vertica database clusters and communicate with their clients to provide the following functionality:

- Provide local access, command, and control over database instances on a given node, using functionality similar to Administration Tools
- Report log-level data from the Administration Tools and Vertica log files
- Cache details from long-running jobs—such as create/start/stop database operations—that you can view through your browser
- Track changes to data-collection and monitoring utilities and communicate updates to clients
- Specifically for MC, communicate between all cluster nodes and MC through a webhook subscription, which automates information sharing and reports on cluster-specific issues like node state, alerts, events, and so on

The agent runs on port 5444, which must be accessible to agent clients.

**Anchor Table**

Database table that is the source for data in a projection. The anchor table and its projection must be in the same schema. The privileges to create, access, or alter a
projection are based on the anchor tables that the projection references, as well as the schemas that contain them.

In the following simple statement, public data is the anchor table:

```
=> CREATE PROJECTION publicdataproj AS (SELECT * FROM publicdata);
```

## Ancient History Mark (AHM)

Also known as AHM, the ancient history mark is the oldest epoch whose data is accessible to historical queries. Any data that precedes the AHM is eligible to be purged.

For detailed information, see Understanding Vertica Epochs in the Vertica Knowledge Base.

## Apportioned Load

An apportioned load is a divisible load, such that you can load a single data file on more than one node. Apportioned load divides the load at planning time, based on available nodes and cores on each node. Each load starts at a different offset, requiring a parser that supports apportioning. Some of the parsers built into Vertica support apportioned load. Using the SDK, you can write parsers that perform apportioned loads.

## Authentication Service (AS)

A service that usually runs on the same host as the Kerberos Key Distribution Center (KDC). The AS issues tickets for a requested service. The tickets are in turn given to users for access to the service. The AS answers requests from clients that do not send credentials with a request. The AS is generally used to gain access to the ticket-granting service (TGS) by issuing a ticket-granting ticket (TGT).

## Bitstring

A sequence of bits.

## Buddy Projection

Required for K-safety. Two projections are considered to be buddies if they contain the same columns and have the same hash segmentation, using different node ordering.

For more information, see:
- High Availability With Projections
- Designing Segmented Projections for K-Safety
- GET_PROJECTION_STATUS

Bulk Loading

A process of loading large amounts of data, such as an initial load of historic data.

C-Store

A research project at MIT, Brandeis, Brown, and the University of Massachusetts (Boston), on which Vertica is based.

Cardinality

Refers to the number of unique values for a given column in a relational table:

- **High cardinality**: Refers to columns containing values that are highly unique, such as a customer ID or an employee e-mail address. For example, in the Vertica VMart schema, the employee_dimension table contains an employee_key column. This column contains values that uniquely identify each employee. Since the values in this column are unique and could be numerous, the column’s cardinality type is referred to as high cardinality.

- **Normal cardinality**: Refers to columns containing values that are less unique, such as job titles and street addresses. An example of a normal-cardinality column would be job_title or employee_first_name in the employee_dimension table, where many employees could share the same job title or same first name.

- **Low cardinality**: Refers to a low number of unique values, relative to the overall number of records in a table. For example, in the employee_dimension table, the column called employee_gender would contain two unique values: 'Male' or 'Female'. Since there are only two values possible in this column, cardinality is low.

Catalog

A set of files that contains information (metadata) about the objects—such as nodes, tables, constraints, and projections—in a database. Vertica maintains a catalog on each node in the cluster.
Catalog Path

A storage location used to store the database catalog.

Cluster

The concept of Cluster in the Vertica Analytics Platform is a collection of hosts with the Vertica software packages (RPM or DEB) that are in one admin tools domain. You can access and manage a cluster from one admintools initiator host.

Columnar Tables

Vertica database tables consisting of structured data columns. The term differentiates these tables from Flex (or Flexible) tables, which minimally contain one column of unstructured, or semi-structured data. Flex tables can also have structured data columns, but they are not required. Compare with Flexible Tables.

Communal Storage

The shared storage location containing an Eon Mode database's data. The data within the communal storage is the canonical copy of the data—Vertica does not consider data as being committed until it has been written to communal storage.

The communal data storage location is based on an object store, such as an S3 bucket when Vertica runs in the AWS cloud, or a PureStorage FlashBlade.

Control Node

A node that connects to the Spread service to send and receive cluster-wide broadcast messages. In databases where the large cluster feature is disabled, all nodes are control nodes. In databases where the large cluster feature is enabled, a subset of nodes are control nodes. Vertica assigns non-control nodes to a control node. These dependent nodes rely on their control node to relay broadcast messages to them. See Large Cluster for more information.
Cooperative Parse

A cooperative parse occurs when a single node uses multiple threads to parse data for loading. Cooperative parse divides a load at execution time, based on how threads are scheduled, if the parser supports cooperation. Some of the parsers built into Vertica support cooperative parse. Using the SDK, you can write parsers that perform cooperative parse.

Correlated columns

Two columns are correlated if the value of one column is related to the value of the other column. For example, state name and country name columns are strongly correlated because the city name usually, but perhaps not always, identifies the state name. The city of Conshohoken is uniquely associated with Pennsylvania, whereas the city of Boston exists in Georgia, Indiana, Kentucky, New York, Virginia, and Massachusetts. In this case, city name is strongly correlated with state name.

Critical Node

A critical node is a node whose failure would cause the database to become unsafe and force a shutdown. Nodes can become critical for the following reasons:

- A node has the only copy of a particular projection.
- Fewer than half of your nodes are active. In an Eon Mode database, at least half of your primary nodes must be up to maintain data integrity.

The V_MONITOR.CRITICAL_NODES system table lists the critical nodes, if any, in your cluster.

For more information, see K-Safety in an Enterprise Mode Database for Enterprise Mode databases, and Data Integrity and High Availability in an Eon Mode Database for Eon Mode databases.

Current epoch

The epoch into which data (COPY, INSERT, UPDATE, and DELETE operations) is currently being written.
**Data Collector**

A utility that collects and retains database monitoring information. For details, see Data Collector Utility.

**Data Path**

A storage location that contains actual database data files.

**Database**

A cluster of nodes that, when active, can perform distributed data storage and SQL statement execution through administrative, interactive, and programmatic user interfaces.

**Database Designer**

A tool that analyzes a logical schema definition, sample queries, and sample data, and creates a physical schema (projections) in the form of a SQL script that you deploy automatically or manually. The script creates a minimal set of superprojections to ensure K-safety, and, optionally, non-superprojections. In most cases, the projections created by the Database Designer provide excellent query performance within physical constraints.

The Database Designer can create two distinct design types. The design you choose depends on what you are trying to accomplish:

- Comprehensive Design
- Incremental Design

You can also create custom designs if the Database Designer does not meet your needs.

For detailed information, see Creating a Database Design.

**Database superuser**

The automatically-created database user who has the same name as the Linux database administrator account and who can bypass all GRANT/REVOKE authorization, or any user that has been granted the PSEUDOSUPERUSER role. Do not confuse the concept of a database superuser with Linux superuser (root) privilege. A database superuser cannot have Linux superuser privilege.
Default Subcluster

The default subcluster is the subcluster Vertica adds new nodes to if you do not specify a subcluster to contain the new nodes. Your database can only have a single default subcluster. You can make a subcluster the default using the `ALTER SUBCLUSTER` statement.

DELTAVA\(L\) (delta encoding)

Stores only the differences between sequential data values instead of the values themselves.

Depot Warming

On startup, the depots of new nodes are empty, while the depots of restarted nodes often contain stale data that must be refreshed. When depot warming is enabled, a node that is undergoing startup preemptively loads its depot with frequently queried and pinned data. When the node completes startup and begins to execute queries, its depot already contains much of the data it needs to process those queries. This reduces the need to fetch data from communal storage, and expedites query performance accordingly.

**Note:**

Fetching data to a warming depot can delay node startup.

For details, see Managing Depot Caching.

Derived Column

A column whose values are calculated by an expression at load time. The expression is specified within the `COPY` statement, and the column exists in the target database.

Dimension Table

Sometimes called a lookup or reference table, a dimension table is one of a set of companion tables to a large (fact/anchor) table in a star schema. It contains the PRIMARY KEY column corresponding to the join columns in fact tables. For example, a business might use a dimension table to contain item codes and descriptions.
Dimension tables can be connected to other dimension tables to form a hierarchy of dimensions in a snowflake schema.

**Directed Query**

A saved set of instructions that direct the optimizer to generate a query plan for a given query. The query plan consists of SQL annotated with hints. A directed query pairs two components:

- **Input query**: A query that triggers use of this directed query when it is active.
- **Annotated query**: A SQL statement with embedded optimizer hints. The annotated query is used by the optimizer in creating a query plan for the specified input query.

**Encoding**

The process of converting data into a standard format. In Vertica, encoded data can be processed directly, while compressed data cannot. Vertica uses a number of different encoding strategies, depending on column data type, table cardinality, and sort order.

**Enterprise Mode**

A database mode that optimizes your database for analytic speed. This is the "original" mode of the Vertica database—the only mode it supported before Eon Mode was introduced. In this mode, data is stored by the database nodes. This proximity allows nodes to operate on locally stored data for most queries, reducing query times. An Enterprise Mode database is harder to scale up and down than an Eon Mode database, which is optimized for scalability.

**Eon Mode**

Eon Mode is the database mode that optimizes your database for scalability. This mode separates data storage from computing resources. By separating the two, you can add or remove nodes from your cluster to adjust growing or shrinking analytic workloads. Scaling the cluster size does not affect running queries. Eon Mode is especially well-suited for cloud environments. See Eon Mode Concepts for more information.

**Epoch**

A logical unit of time in which a single change is made to data in your Vertica database.
For detailed information, see Epochs in the Administrator's Guide.

**Epoch Map**

A catalog object that provides mapping between time and epochs. Specifically, an epoch map contains a list of epoch numbers and their associated timestamps.

**Executor Node**

Any node that participates in executing a specific SQL statement. The initiator node can, and usually does, also function as an executor node.

**Expression**

An expression is anything that can represent a single column in a SELECT statement.

For example, the following are all expressions:

\[
\begin{align*}
1+2 \\
\text{foo}(3) \\
x
\end{align*}
\]

**External Procedure**

A procedure external to Vertica that you create, maintain, and store on the server.

**Event Series**

Tables with a time column, most typically a timestamp data type.

**Flexible Tables**

Vertica database tables that minimally contain two columns:

- `__identity___`: A real column with an incrementing IDENTITY value for partitioning and sorting. Used if no other columns serve this purpose.

- `__raw___`: A real LONG VARBINARY column containing unstructured, or semi-structured data.
You can create Flex tables with additional real columns, but they are not required. Compare with Columnar Tables.

**Flattening (subqueries and views)**

Occurs when a subquery or named view is internally rewritten so the subquery is combined with the outer query block. The result sets of the original and flattened queries are exactly the same, but the flattened query usually benefits from significant performance improvements.

**Full Backup**

Consists of copying each catalog and all data files (ROS containers) on each node, as well as the complete /opt/vertica/config directory.

**GENERAL Pool**

A special built-in pool that represents the total amount of RAM available to the resource manager for use by queries. Other pools can borrow memory from the GENERAL pool. See also Built-In Pools.

**Grant**

Vertica defines GRANT in two ways:

1. Grant a user privileges to access database objects using any GRANT statement, except GRANT (Authentication).

2. Associate a user-defined authentication method with a user through GRANT (Authentication). This operation differs from GRANT <privileges> as authentication methods are “associated” with a user or role and privileges are “granted” to a user or role.

**Examples**

**Grant Access Privileges to a User**

This example shows how to grant a user, Joe, privileges to access the online_sales schema:
GRANT USAGE ON SCHEMA online_sales TO Joe;

**Associate an Authentication Method with a User**

This example shows how to associate the v_ldap authentication method to user jsmith:

```
=> GRANT AUTHENTICATION v_ldap TO jsmith;
```

### Grouped ROS

A grouped ROS is a highly-optimized, read-oriented physical storage structure organized by projection. A grouped ROS makes heavy use of compression and indexing. Unlike a ROS, a grouped ROS stores data for two or more grouped columns in one disk file.

### Hash Segmentation

Specifies how to segment projection data for distribution across all cluster nodes. You can specify segmentation for a table and a projection. If a table definition specifies segmentation, Vertica uses it for that table's auto-projections.

It is strongly recommended that you use Vertica's built-in HASH function, which distributes data evenly across the cluster, and facilitates optimal query execution.

For more detailed information, see [Projection Segmentation](#).

### Historical Data

Refers to any data in memory or physical storage other than the current epoch. Historical data includes all COPY, INSERT, UPDATE, and DELETE operations, including deleted rows. This allows Vertica to run a historical query on data written up to and including the epoch representing the specified date and time.

### Historical Query

A query that retrieves data from a snapshot of the database, taken at a specific timestamp or epoch. For details, see [Historical Queries](#) in Analyzing Data.
**Immutable (Invariant) Functions**

When run with a given set of arguments, immutable functions always produce the same result, regardless of environment or session settings such as locale.

**Initiator Node**

In the context of a client connection, the initiator node is the node associated with the specific host to which the connection was made. The initiator node can, and usually does, also function as an executor node, and is generally where the most descriptive log messages reside.

**K-Safety**

K-safety sets fault tolerance for the database cluster, where K can be set to 0, 1, or 2. The value of K specifies how many copies Vertica creates of segmented projection data. If K-safety for a database is set to 1 or 2, Vertica creates K+1 instances, or buddies, of each projection segment. Vertica distributes these buddies across the database cluster, such that projection data is protected in the event of node failure. If any node fails, the database can continue to process queries so long as buddies of data on the failed node remain available elsewhere on the cluster.

For more information, see Designing for K-Safety.

**Last Epoch**

The last epoch is the current epoch minus one. SELECT statements under READ COMMITTED isolation read from the last epoch.

**Last Good Epoch (LGE)**

A term used in manual recovery, LGE (Last Good Epoch) refers to the most recent epoch that can be recovered.
Live Aggregate Projection

A live aggregate projection contains columns with values that are aggregated from columns in its anchor table. When you load data into the table, Vertica aggregates the data before loading it into the live aggregate projection. On subsequent loads—for example, through INSERT or COPY—Vertica recalculate aggregations with the new data and updates the projection.

Locale

Locale specifies the user's language, country, and any special variant preferences, such as collation. Vertica uses locale to determine the behavior of certain string functions. Locale also determines the collation for various SQL commands that require ordering and comparison, such as aggregate GROUP BY and ORDER BY clauses, joins, and the analytic ORDER BY clause.

The default locale for a Vertica database is en_US@collation=binary (English US). You can define a new default locale that is used for all sessions on the database. You can also override the locale for individual sessions. However, projections are always collated using the default en_US@collation=binary collation, regardless of the session collation. Any locale-specific collation is applied at query time.

If you set the locale to null, Vertica sets the locale to en_US_POSIX. You can set the locale back to the default locale and collation by issuing the vsql meta-command \locale. For example:

```sql
=> set locale to '';
INFO 2567: Canonical locale: 'en_US_POSIX'
Standard collation: 'LEN'
English (United States, Computer)
SET
=> \locale en_US@collation=binary;
INFO 2567: Canonical locale: 'en_US'
Standard collation: 'LEN_KBINARY'
English (United States)
=> \locale
en_US@collation=binary;
```

You can set locale through ODBC, JDBC, and ADO.net.
Logical Schema

Consists of a set of tables and referential integrity constraints in a Vertica database. The objects in the logical schema are visible to SQL users. The logical schema does not include projections, which make up the physical schema.

Location Label

A label assigned to a storage location. Location labels identify the location so you can create object storage policies. The labeled location you use in a storage policy becomes the default storage location for the object.

Management Console

A database management tool that provides a unified view of your Vertica database and lets you monitor multiple clusters from a single point of access. See Management Console in Vertica Concepts.

MC Super (superuser administrator)

Called Super on the MC interface, the MC super is the Linux user account that gets created when you configure MC. See Configuring MC and SUPER Role (mc).

MC-managed Database

A Vertica database that an MC SUPER or ADMIN user creates on MC or imports into the MC interface, along with the database cluster. When MC users are granted database privileges, their privileges are defined though the MC itself and pertain only to databases managed on the MC. See About MC Privileges and Roles.

Manual Recovery

The process of recovery after an unclean shutdown of the database, where the administrator must accept recovery from the Last Good Epoch, which could lead to loss of some recently loaded data. See Failure Recovery.
**Mergeout**

Mergeout is a Tuple Mover process that consolidates ROS containers and purges deleted records.

**Meta-Functions**

Used to query or change the internal state of Vertica and are not part of the SQL standard. See Vertica Meta-Functions.

**Metadata**

Data that describes the data in a database, such as data type, compression, constraints, and so forth, for each column in the tables. Metadata is stored in the Vertica catalog.

**Mutual Mode**

When a database is configured for TLS/SSL security in *mutual mode*, incoming client requests verify the certificate of the server, and the server also requires that each client present a certificate and private key so that the server can verify the client.

**Node**

A host configured to run an instance of Vertica. It is a member of the database cluster. For a database to have the ability to recover from the failure of a node requires a database K-safety value of at least 1 (3+ nodes).

**Non-Repeatable Read**

Occurs in a READ COMMITTED isolation level when two identical queries in the same transaction produce different results. This occurs when another transaction commits changes that alter the results of the query after the first query has completed and before the second query has begun.
NUL
Represents a character whose ASCII/Unicode code is zero, sometimes qualified "ASCII NUL".

NULL
Means no value, and is true of a field (column) or constant but not of a character.

OID
An object identifier (OID) is an identifier used to name an object. Structurally, an OID consists of a node in a hierarchically-assigned namespace, formally defined using the International Telecommunication Union-Telecommunication's (ITU-T) Abstract Syntax Notation standard (ASN.1). Vertica database objects are always assigned an OID. The OID can be used directly in some statements, such as HAS_TABLE_PRIVILEGE.

Parallel Load
Parallel load is the process of loading data on any available node in the cluster (not necessarily the local node). Use this approach in combination with wildcards (such as *.dat) to load data files in parallel in a distributed manner. See COPY ON ANY NODE in COPY Parameters

Path (quality plan)
The execution strategy of the Vertica cost-based query optimizer, denoting a sub operation in the query plan.

Partitioning
Specifies how data is organized within individual nodes. Partitioning attempts to introduce hot spots within the node, providing a convenient way to drop data and reclaim the disk space.
**Note:**
Partitioning and segmentation are terms often used interchangeably for other databases, but they have completely separate goals in Vertica regarding data localization. See Partitioning and Segmentation in the Administrator's Guide for details.

**Phantom Read**

Occurs in a READ COMMITTED isolation level when two identical queries in the same transaction produce different collections of rows. This occurs because a table lock is not acquired on SELECT during the initial query.

**Physical Schema**

Consists of a set of projections used to store data on disk. The projections in the physical schema are based on the objects in the logical schema.

**Physical Schema Design**

A usable K=1 design based on an analysis of the sample data files and queries (if available). The physical schema design contains segmented (fact table) superprojections and replicated (dimension table) superprojections.

**Primary Column**

A column that is loaded from raw data, and not derived from an expression.

**Primary Node**

In Eon Mode, a primary node is a node that is a member of a primary subcluster. Primary nodes are the only nodes in the database that Vertica considers when determining whether the database is able to maintain data integrity. Vertica requires that more than half of the primary nodes in the database be up. Also, all shards must have at least one primary node as a subscriber. If either of these conditions are not met, Vertica shuts the database down to prevent potential data corruption.
Primary Subcluster

In Eon Mode, a primary subcluster is a type of subcluster that is intended to form the core of your database. Vertica only considers the nodes in primary subclusters when determining the K-Safety of your database. Your database can remain running as long as half the nodes in your primary subclusters are up, and all shards have at least one node in a primary subcluster as a subscriber. See Subcluster Types and Elastic Scaling for more information.

Primary Subscriber

In an Eon Mode database, each shard has a primary subscriber node. This node is responsible for running Tuple Mover processes that maintain the data in the shard.

Projection

Optimized collections of table columns that provide physical storage for data. A projection can contain some or all of the columns of one or more tables.

For conceptual information about Vertica projections, see Physical Schema (Projections) in Vertica Concepts. For information about using and managing projections, see Working with Projections in the Administrator's Guide.

Projection set

A group of buddy projections that are safe for a given level of K-safety. When K=1, there are two buddies in a set; when K=2, there are three buddies. The Database Designer assigns all projections in a projection set the same base name so they can be identified as a group.

A projection must be part of a projection set before it is refreshed. Once a projection set is created (by creating buddies), the set is refreshed in a single transaction.

Query Cluster Level

Determines the number of sets used to group similar queries. The query cluster level can be any integer from one (1) to the number of queries to be included in the physical schema design.
Queries are generally grouped based on the columns they access and the way in which they are used. The following work loads typically use different types of queries and are placed in different query clusters: drill downs, large aggregations, and large joins. For example, if a reporting tool and dashboard both access the same database, the reporting tool is likely to use a drill down to access a subset of data and the dashboard is likely to use a large aggregation to look across a large range of data. In this case, there would be at least two (2) query clusters.

**Query Optimizer**

The component that evaluates different strategies for running a query and picks the best one.

**Recovery**

Vertica can restore the database to a fully functional state after one or more nodes in the system experiences a software- or hardware-related failure. Vertica recovers nodes by querying replicas of the data stored on other nodes. For example, a hardware failure can cause a node to lose database objects or to miss changes made to the database (INSERTs, UPDATEs, and so on) while offline. When the node comes back online, queries other nodes in the cluster to recover lost objects and catch up with database changes.

**Referential Integrity**

Consists of a set of constraints (logical schema objects) that define primary key and foreign key columns.

- Each small table must have a PRIMARY KEY constraint.
- The large table must contain columns that can be used to join the large table to smaller tables.
- Outer join queries produce the same results as the corresponding inner join query if there is a FOREIGN KEY constraint on the outer table. Note that the inner table of the outer join query must always have a PRIMARY KEY constraint on its join columns.

**Refresh (projections)**

Ensures that all projections on a node are up-to-date (can participate in query execution). This process could take a long time, depending on how much data is in the table(s).

For more information, see Refreshing Projections.
**Resegmentation**

A process that Vertica performs automatically during query execution that distributes the rows of an existing projection or intermediate relation evenly to each node in the cluster. At the end of resegmentation, every row from the input relation is on exactly one node. Vertica resegments data when the input does not have the segmentation required to compute the requested result efficiently and correctly.

**Resource Pool**

A resource pool comprises a pre-allocated subset of the system resources, with an associated queue. A resource pool is created using the `CREATE RESOURCE POOL` command as described in the SQL Reference Manual.

**Resource Manager**

In a single-user environment, the system can devote all resources to a single query and get the most efficient execution for that one query. However, in an environment where several concurrent queries are expected to run at once, there is tension between providing each query the maximum amount of resources (thereby getting fastest run time for that query) and serving multiple queries simultaneously with a reasonable run time. The Resource Manager provides options and controls for resolving this tension, while ensuring that every query eventually gets serviced and that true system limits are respected at all times.

**Role**

A role groups together a set of privileges that can be assigned to a user or another role. You can use roles to quickly grant or revoke privileges on multiple tables, schemas, functions or other database entities to one or more users with a single command.

Vertica's implementation of roles conforms to the SQL Standard T331 for basic roles.

**Rollback**

Transaction rollbacks restore a database to an earlier state by discarding changes made by that transaction. Statement-level rollbacks discard only the changes initiated by the
reverted statements. Transaction-level rollbacks discard all changes made by the transaction.

With a **ROLLBACK** statement, you can explicitly roll back to a named savepoint within the transaction, or discard the entire transaction. Vertica can also initiate automatic rollbacks in two cases:

- An individual statement returns an **ERROR** message. In this case, Vertica rolls back the statement.
- DDL errors, systemic failures, dead locks, and resource constraints return a **ROLLBACK** message. In this case, Vertica rolls back the entire transaction.

Explicit and automatic rollbacks always release any locks that the transaction holds.

**ROS (Read Optimized Store)**

Read Optimized Store (ROS) is a highly optimized, read-oriented, disk storage structure, organized by projection. ROS makes heavy use of compression and indexing.

The Tuple Mover is the Vertica database optimizer component that moves data from memory (WOS) to disk (ROS). The Tuple Mover runs in the background, performing tasks automatically at time intervals determined by its configuration parameters.

For more information, see [Loading Batches Directly into ROS](#).

**Savepoint**

A **savepoint** is a special marker inside a transaction that allows commands that execute after the savepoint to be rolled back. The transaction is restored to the state that preceded the savepoint.

Vertica supports two types of savepoints:

- An **implicit savepoint** is automatically established after each successful command within a transaction. This savepoint is used to roll back the next statement if it returns an error. A transaction maintains one implicit savepoint, which it rolls forward with each successful command. Implicit savepoints are available to Vertica only and cannot be referenced directly.
- **Named savepoints** are labeled markers within a transaction that you set through **SAVEPOINT** statements. A named savepoint can later be referenced in the same transaction through **RELEASE SAVEPOINT**, which destroys it, and **ROLLBACK TO SAVEPOINT**, which rolls back all operations that followed the savepoint. Named
savepoints can be especially useful in nested transactions: a nested transaction that begins with a savepoint can be rolled back entirely, if necessary.

**Secondary Subcluster**

A secondary subcluster is a type of subcluster that is easy to start and shutdown on demand. In Eon Mode, Vertica does not consider the nodes in a secondary subcluster when determining whether the database has shard coverage or a quorum of nodes. You can stop or remove secondary subclusters without triggering a safety shutdown of your database. See Subcluster Types and Elastic Scaling for more information.

**Segmentation**

Defines how physical data storage (projections) is stored in a database cluster using the CREATE PROJECTION statement. The goal is to distribute data evenly across multiple nodes in the database so that all nodes can participate in query execution.

**Note:**

Partitioning and segmentation are terms often used interchangeably for other databases, but they have completely separate goals in Vertica regarding data localization. See Partitioning and Segmentation in the Administrator’s Guide for details.

**Server Mode**

When a database is configured for TLS/SSL security in server mode, incoming client requests do verify the certificate of the server, but the server does not verify the clients. In Vertica, the server is the Vertica database server, and the client is any Vertica user who logs into the database. The Vertica client user may log in to the database directly in a command window, or may connect to the Vertica database server via the Management Console running in a browser.

**Session**

An occurrence of a user interacting with a database through the use of SQL statements. You can start a session using vsql or a JDBC application. In Vertica, the scope of a session is the same as that of a connection. Connecting to the database starts a session, and exiting ends it.
Session-scoped data is preserved beyond the lifetime of a single transaction. Terminating a session truncates a table and deletes all rows.

**Shard**

A subset of the data and associated metadata stored in an Eon Mode database. Shards are how Vertica divides the work of processing queries, data loads, and data maintenance between the nodes in a subcluster. Nodes **subscribe** to one or more shards. When processing a query, each node is responsible for processing the data in the shard or shards to which it subscribes.

You set the number of shards for the database during the database creation process. The number of shards cannot be changed after creating the database.

Shards have a single **primary subscriber** in the database cluster. The primary subscriber node maintains the data in the shard by running **Tuple Mover** processes on it.

**Snapshot Isolation**

An **historical query** that gets data from the latest epoch (AT LATEST EPOCH). For details, see **Historical Queries**.

**Spread**

An open source toolkit used in Vertica to provide a high performance messaging service that is resilient to network faults. Spread daemons start automatically when a database starts up for the first time, and the spread process runs on **control nodes** in the cluster.

**Sort-Merge Join**

If both inputs are pre-sorted, merge joins do not have to do any pre-processing. Vertica uses the term sort-merge join to refer to the case when one of the inputs must be sorted prior to the merge join. Vertica sorts the inner input side but only if the outer input side is already sorted on the join keys.

**Stable functions**

When run with a given set of arguments, stable functions produce the same result within a single query or scan operation. However, a stable function can produce different results
when issued under different environments or at different times, such as change of locale and time zone—for example, SYSDATE.

See also Immutable (Invariant) Functions.

**Statement**

A line of SQL, excluding the semicolon. For example, the following are all statements:

```sql
SELECT * FROM foo WHERE bar = 6
CREATE TABLE t1 (i INT);
INSERT INTO t1 VALUES(3)
```

**Storage Location**

A directory path used by Vertica to store catalog, actual data files, and temporary data files. You can also create storage locations for users, and then grant one or more users access to the storage. You can also create a storage location with a location label, for use in storage policies.

**Storage Policy**

A database object you create to associate a labeled location as the default storage location for the object. Database object can be a database, schema, table, or min- and max- ranges of a partition.

**Strict**

Indicates that a function always returns null when any of its input arguments is null.

**Subcluster**

A subset of a cluster in an Eon Mode database. Subclusters isolate workloads to a group of nodes, letting you separate tasks such as load and query.

Subclusters come in two types:

- **Primary subclusters** count when Vertica determines whether the database can continue to run safely. Your database shuts down if less than half the primary nodes in your database are up, or does not have a primary node as a subscriber. Primary
subclusters are best used for data loading and DDE workloads.

- **Secondary subclusters** do not count towards maintaining data integrity. You can shut them down without impacting the stability of the database. Secondary subclusters are best used for query workloads. They cannot commit transactions directly, so they are less efficient at performing data loads and DDE statements.

**Superprojection**

A projection that includes all columns in an anchor table. Vertica uses superprojections to ensure support for all queries and other DML operations.

Under certain conditions, Vertica **automatically creates a table's superprojection** immediately on table creation. Vertica also creates a superprojection when you first load data into that table, if none already exists. `CREATE PROJECTION` can create a superprojection if it specifies to include all table columns. A table can have multiple superprojections.

For more information, see Designing Projections.

**Temp Location**

A storage location used as **temp space** by Vertica.

**Temp Space**

Disk space temporarily occupied by temporary files created by certain query execution operations, such as hash joins and sorts, in the case when they have to spill to disk. Such operations might also be encountered during queries, recovery, refreshing projections, and so on. If a **temp location** is provided to the database, Vertica uses it as temp space.

**Top-K Projection**

A projection that configures the projection data for a Top-K query. A Top-K query is one that retrieves the top $k$ rows from a group of tuples.

A Top-K projection is a type of **live aggregate projection**.
Transaction

One or more operations that are executed as a unit of work. At the user level, transactions occur in the current session by a user or script running one or more SQL statements. When you commit a transaction, any changes you make to data in tables using INSERT, DELETE, UPDATE, MERGE, and COPY during the transaction become permanent. If you roll back the transaction, all changes made to table data are undone.

Vertica supports Atomicity, Consistency, Isolation, and Durability (ACID) for SQL transactions.

Tuple Mover (TM)

The Tuple Mover manages ROS data storage. On mergeout, it combines small ROS containers into larger ones and purges deleted data.

UDx

User-defined extensions (UDxs) are functions contained in external libraries that are developed in C++, Python, Java, or R using the Vertica SDK. The external libraries are defined in the Vertica catalog using the CREATE LIBRARY statement. They are best suited for analytic operations that are difficult to perform in SQL, or that need to be performed frequently enough that their speed is a major concern.

Up-To-Date (Projection)

A projection is up-to-date (or up to date) if it is eligible to participate in query execution. Projections on empty tables are up-to-date upon creation. If the table has data loaded already, newly created projections are marked not up-to-date until refreshed. If a projection is refreshed while a node is down, that projection can be marked up-to-date even though it is missing data on one of the nodes. This is because the node will build the data during the recovery process before participating in queries.

User-Defined SQL Function

User-defined SQL functions let you define and store commonly-used SQL expressions as a function. User-defined SQL functions are useful for executing complex queries and
combining Vertica built-in functions. You simply call the function name you assigned in your query.

A user-defined SQL function can be used anywhere in a query where an ordinary SQL expression can be used, except in a table partition clause or the projection segmentation clause.

**View**

A named logical relation specified by an associated query that can be accessed similarly to a table in the FROM clause of a SQL statement. The results of the query are not stored but obtained on the fly when the SQL referencing the view is executed.

**Volatile functions**

Regardless of their arguments or environment, volatile functions can return a different result with each invocation—for example, UUID_GENERATE.

**vsql**

vsql is a character-based, interactive, front-end utility that lets you type SQL statements and see the results. It also provides a number of meta-commands and various shell-like features that facilitate writing scripts and automating a variety of tasks.

For more information, see Installing the vsql Client and the more general topic, Using vsql.

**Window (analytic)**

An analytic function's OVER clause specifies how to partition, sort, and frame function input with respect to the current row. The input data is the result set that the query returns after it evaluates FROM, WHERE, GROUP BY, and HAVING clauses.

**Working Data Size**

The amount of data that most of your queries operate on. In most Vertica databases, you store more data than you regularly query. For example, suppose you are storing sales data for a corporation. You may keep many years of sales data in your database. However, the majority of queries you run may only query the last year of data to determine current sales
trends. In that case, your working data size is the amount of sales data you load into the database in a year.

Knowing your working data size is important when configuring an Eon Mode database. You want the total size of the depots in all of the nodes a subcluster to be large enough to fit the working data size. Note that the working data size may vary per subcluster. Some subclusters may only work on recently-loaded data, while others do many queries on a larger data set.

**Workload Analyzer**

An advisor tool that analyzes system information held in [SQL system tables](https://docs.vertica.com/display/PG11/SQL+System+Tables) (monitoring APIs) and returns a set of tuning recommendations. See [Analyzing Workloads](https://docs.vertica.com/display/PG11/Analyzing+Workloads) in the Administrator's Guide for details.

Description

The precise terms and conditions for copying, distribution and modification follow.

https://www.ansible.com/

Terms and Conditions

0. Definitions.

"This License" refers to version 3 of the GNU General Public License.

"Copyright" also means copyright-like laws that apply to other kinds of works, such as semiconductor masks.

"The Program" refers to any copyrightable work licensed under this License. Each licensee is addressed as "you". "Licensees" and "recipients" may be individuals or organizations.

To "modify" a work means to copy from or adapt all or part of the work in a fashion requiring copyright permission, other than the making of an exact copy. The resulting work is called a "modified version" of the earlier work or a work "based on" the earlier work.

A "covered work" means either the unmodified Program or a work based on the Program.

To "propagate" a work means to do anything with it that, without permission, would make you directly or secondarily liable for infringement under applicable copyright law, except
executing it on a computer or modifying a private copy. Propagation includes copying, distribution (with or without modification), making available to the public, and in some countries other activities as well.

To "convey" a work means any kind of propagation that enables other parties to make or receive copies. Mere interaction with a user through a computer network, with no transfer of a copy, is not conveying.

An interactive user interface displays "Appropriate Legal Notices" to the extent that it includes a convenient and prominently visible feature that (1) displays an appropriate copyright notice, and (2) tells the user that there is no warranty for the work (except to the extent that warranties are provided), that licensees may convey the work under this License, and how to view a copy of this License. If the interface presents a list of user commands or options, such as a menu, a prominent item in the list meets this criterion.

The "source code" for a work means the preferred form of the work for making modifications to it. "Object code" means any non-source form of a work.

A "Standard Interface" means an interface that either is an official standard defined by a recognized standards body, or, in the case of interfaces specified for a particular programming language, one that is widely used among developers working in that language.

The "System Libraries" of an executable work include anything, other than the work as a whole, that (a) is included in the normal form of packaging a Major Component, but which is not part of that Major Component, and (b) serves only to enable use of the work with that Major Component, or to implement a Standard Interface for which an implementation is available to the public in source code form. A "Major Component", in this context, means a major essential component (kernel, window system, and so on) of the specific operating system (if any) on which the executable work runs, or a compiler used to produce the work, or an object code interpreter used to run it.

The "Corresponding Source" for a work in object code form means all the source code needed to generate, install, and (for an executable work) run the object code and to modify the work, including scripts to control those activities. However, it does not include the work's System Libraries, or general-purpose tools or generally available free programs which are used unmodified in performing those activities but which are not part of the work. For example, Corresponding Source includes interface definition files associated with source files for the work, and the source code for shared libraries and dynamically linked subprograms that the work is specifically designed to require, such as by intimate data communication or control flow between those subprograms and other parts of the work.
The Corresponding Source need not include anything that users can regenerate automatically from other parts of the Corresponding Source.

The Corresponding Source for a work in source code form is that same work.

2. Basic Permissions.

All rights granted under this License are granted for the term of copyright on the Program, and are irrevocable provided the stated conditions are met. This License explicitly affirms your unlimited permission to run the unmodified Program. The output from running a covered work is covered by this License only if the output, given its content, constitutes a covered work. This License acknowledges your rights of fair use or other equivalent, as provided by copyright law.

You may make, run and propagate covered works that you do not convey, without conditions so long as your license otherwise remains in force. You may convey covered works to others for the sole purpose of having them make modifications exclusively for you, or provide you with facilities for running those works, provided that you comply with the terms of this License in conveying all material for which you do not control copyright. Those thus making or running the covered works for you must do so exclusively on your behalf, under your direction and control, on terms that prohibit them from making any copies of your copyrighted material outside their relationship with you.

Conveying under any other circumstances is permitted solely under the conditions stated below. Sublicensing is not allowed; section 10 makes it unnecessary.

3. Protecting Users' Legal Rights From Anti-Circumvention Law.

No covered work shall be deemed part of an effective technological measure under any applicable law fulfilling obligations under article 11 of the WIPO copyright treaty adopted on 20 December 1996, or similar laws prohibiting or restricting circumvention of such measures.

When you convey a covered work, you waive any legal power to forbid circumvention of technological measures to the extent such circumvention is effected by exercising rights under this License with respect to the covered work, and you disclaim any intention to limit operation or modification of the work as a means of enforcing, against the work's users, your or third parties' legal rights to forbid circumvention of technological measures.

You may convey verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice; keep intact all notices stating that this License and any non-permissive terms added in accord with section 7 apply to the code; keep intact all notices of
the absence of any warranty; and give all recipients a copy of this License along with the Program.

You may charge any price or no price for each copy that you convey, and you may offer support or warranty protection for a fee.

5. Conveying Modified Source Versions.

You may convey a work based on the Program, or the modifications to produce it from the Program, in the form of source code under the terms of section 4, provided that you also meet all of these conditions:

a) The work must carry prominent notices stating that you modified it, and giving a relevant date.

b) The work must carry prominent notices stating that it is released under this License and any conditions added under section 7. This requirement modifies the requirement in section 4 to "keep intact all notices".

c) You must license the entire work, as a whole, under this License to anyone who comes into possession of a copy. This License will therefore apply, along with any applicable section 7 additional terms, to the whole of the work, and all its parts, regardless of how they are packaged. This License gives no permission to license the work in any other way, but it does not invalidate such permission if you have separately received it.

d) If the work has interactive user interfaces, each must display Appropriate Legal Notices; however, if the Program has interactive interfaces that do not display Appropriate Legal Notices, your work need not make them do so.

A compilation of a covered work with other separate and independent works, which are not by their nature extensions of the covered work, and which are not combined with it such as to form a larger program, in or on a volume of a storage or distribution medium, is called an "aggregate" if the compilation and its resulting copyright are not used to limit the access or legal rights of the compilation's users beyond what the individual works permit. Inclusion of a covered work in an aggregate does not cause this License to apply to the other parts of the aggregate.

6. Conveying Non-Source Forms.

You may convey a covered work in object code form under the terms of sections 4 and 5, provided that you also convey the machine-readable Corresponding Source under the terms of this License, in one of these ways:

a) Convey the object code in, or embodied in, a physical product (including a physical distribution medium), accompanied by the Corresponding Source fixed on a durable physical medium customarily used for software interchange.
b) Convey the object code in, or embodied in, a physical product (including a physical distribution medium), accompanied by a written offer, valid for at least three years and valid for as long as you offer spare parts or customer support for that product model, to give anyone who possesses the object code either (1) a copy of the Corresponding Source for all the software in the product that is covered by this License, on a durable physical medium customarily used for software interchange, for a price no more than your reasonable cost of physically performing this conveying of source, or (2) access to copy the Corresponding Source from a network server at no charge.

c) Convey individual copies of the object code with a copy of the written offer to provide the Corresponding Source. This alternative is allowed only occasionally and noncommercially, and only if you received the object code with such an offer, in accord with subsection 6b.

d) Convey the object code by offering access from a designated place (gratis or for a charge), and offer equivalent access to the Corresponding Source in the same way through the same place at no further charge. You need not require recipients to copy the Corresponding Source along with the object code. If the place to copy the object code is a network server, the Corresponding Source may be on a different server (operated by you or a third party) that supports equivalent copying facilities, provided you maintain clear directions next to the object code saying where to find the Corresponding Source. Regardless of what server hosts the Corresponding Source, you remain obligated to ensure that it is available for as long as needed to satisfy these requirements.

e) Convey the object code using peer-to-peer transmission, provided you inform other peers where the object code and Corresponding Source of the work are being offered to the general public at no charge under subsection 6d.

A separable portion of the object code, whose source code is excluded from the Corresponding Source as a System Library, need not be included in conveying the object code work.

A "User Product" is either (1) a "consumer product", which means any tangible personal property which is normally used for personal, family, or household purposes, or (2) anything designed or sold for incorporation into a dwelling. In determining whether a product is a consumer product, doubtful cases shall be resolved in favor of coverage. For a particular product received by a particular user, "normally used" refers to a typical or common use of that class of product, regardless of the status of the particular user or of the way in which the particular user actually uses, or expects or is expected to use, the product. A product is a consumer product regardless of whether the product has substantial commercial, industrial or non-consumer uses, unless such uses represent the only significant mode of use of the product.

"Installation Information" for a User Product means any methods, procedures, authorization keys, or other information required to install and execute modified versions of a covered
work in that User Product from a modified version of its Corresponding Source. The information must suffice to ensure that the continued functioning of the modified object code is in no case prevented or interfered with solely because modification has been made.

If you convey an object code work under this section in, or with, or specifically for use in, a User Product, and the conveying occurs as part of a transaction in which the right of possession and use of the User Product is transferred to the recipient in perpetuity or for a fixed term (regardless of how the transaction is characterized), the Corresponding Source conveyed under this section must be accompanied by the Installation Information. But this requirement does not apply if neither you nor any third party retains the ability to install modified object code on the User Product (for example, the work has been installed in ROM).

The requirement to provide Installation Information does not include a requirement to continue to provide support service, warranty, or updates for a work that has been modified or installed by the recipient, or for the User Product in which it has been modified or installed. Access to a network may be denied when the modification itself materially and adversely affects the operation of the network or violates the rules and protocols for communication across the network.

Corresponding Source conveyed, and Installation Information provided, in accord with this section must be in a format that is publicly documented (and with an implementation available to the public in source code form), and must require no special password or key for unpacking, reading or copying.

7. Additional Terms.

"Additional permissions" are terms that supplement the terms of this License by making exceptions from one or more of its conditions. Additional permissions that are applicable to the entire Program shall be treated as though they were included in this License, to the extent that they are valid under applicable law. If additional permissions apply only to part of the Program, that part may be used separately under those permissions, but the entire Program remains governed by this License without regard to the additional permissions.

When you convey a copy of a covered work, you may at your option remove any additional permissions from that copy, or from any part of it. (Additional permissions may be written to require their own removal in certain cases when you modify the work.) You may place additional permissions on material, added by you to a covered work, for which you have or can give appropriate copyright permission.

Notwithstanding any other provision of this License, for material you add to a covered work, you may (if authorized by the copyright holders of that material) supplement the terms of this License with terms:
a) Disclaiming warranty or limiting liability differently from the terms of sections 15 and 16 of this License; or

b) Requiring preservation of specified reasonable legal notices or author attributions in that material or in the Appropriate Legal Notices displayed by works containing it; or

c) Prohibiting misrepresentation of the origin of that material, or requiring that modified versions of such material be marked in reasonable ways as different from the original version; or

d) Limiting the use for publicity purposes of names of licensors or authors of the material; or

e) Declining to grant rights under trademark law for use of some trade names, trademarks, or service marks; or

f) Requiring indemnification of licensors and authors of that material by anyone who conveys the material (or modified versions of it) with contractual assumptions of liability to the recipient, for any liability that these contractual assumptions directly impose on those licensors and authors.

All other non-permissive additional terms are considered "further restrictions" within the meaning of section 10. If the Program as you received it, or any part of it, contains a notice stating that it is governed by this License along with a term that is a further restriction, you may remove that term. If a license document contains a further restriction but permits relicensing or conveying under this License, you may add to a covered work material governed by the terms of that license document, provided that the further restriction does not survive such relicensing or conveying.

If you add terms to a covered work in accord with this section, you must place, in the relevant source files, a statement of the additional terms that apply to those files, or a notice indicating where to find the applicable terms.

Additional terms, permissive or non-permissive, may be stated in the form of a separately written license, or stated as exceptions; the above requirements apply either way.

8. Termination.

You may not propagate or modify a covered work except as expressly provided under this License. Any attempt otherwise to propagate or modify it is void, and will automatically terminate your rights under this License (including any patent licenses granted under the third paragraph of section 11).

However, if you cease all violation of this License, then your license from a particular copyright holder is reinstated (a) provisionally, unless and until the copyright holder explicitly and finally terminates your license, and (b) permanently, if the copyright holder
fails to notify you of the violation by some reasonable means prior to 60 days after the cessation.

Moreover, your license from a particular copyright holder is reinstated permanently if the copyright holder notifies you of the violation by some reasonable means, this is the first time you have received notice of violation of this License (for any work) from that copyright holder, and you cure the violation prior to 30 days after your receipt of the notice.

Termination of your rights under this section does not terminate the licenses of parties who have received copies or rights from you under this License. If your rights have been terminated and not permanently reinstated, you do not qualify to receive new licenses for the same material under section 10.

You are not required to accept this License in order to receive or run a copy of the Program. Ancillary propagation of a covered work occurring solely as a consequence of using peer-to-peer transmission to receive a copy likewise does not require acceptance. However, nothing other than this License grants you permission to propagate or modify any covered work. These actions infringe copyright if you do not accept this License. Therefore, by modifying or propagating a covered work, you indicate your acceptance of this License to do so.

10. Automatic Licensing of Downstream Recipients.

Each time you convey a covered work, the recipient automatically receives a license from the original licensors, to run, modify and propagate that work, subject to this License. You are not responsible for enforcing compliance by third parties with this License. An "entity transaction" is a transaction transferring control of an organization, or substantially all assets of one, or subdividing an organization, or merging organizations. If propagation of a covered work results from an entity transaction, each party to that transaction who receives a copy of the work also receives whatever licenses to the work the party's predecessor in interest had or could give under the previous paragraph, plus a right to possession of the Corresponding Source of the work from the predecessor in interest, if the predecessor has it or can get it with reasonable efforts.

You may not impose any further restrictions on the exercise of the rights granted or affirmed under this License. For example, you may not impose a license fee, royalty, or other charge for exercise of rights granted under this License, and you may not initiate litigation (including a cross-claim or counterclaim in a lawsuit) alleging that any patent claim is infringed by making, using, selling, offering for sale, or importing the Program or any portion of it.

11. Patents.
A "contributor" is a copyright holder who authorizes use under this License of the Program or a work on which the Program is based. The work thus licensed is called the contributor's "contributor version".

A contributor's "essential patent claims" are all patent claims owned or controlled by the contributor, whether already acquired or hereafter acquired, that would be infringed by some manner, permitted by this License, of making, using, or selling its contributor version, but do not include claims that would be infringed only as a consequence of further modification of the contributor version. For purposes of this definition, "control" includes the right to grant patent sublicenses in a manner consistent with the requirements of this License.

Each contributor grants you a non-exclusive, worldwide, royalty-free patent license under the contributor's essential patent claims, to make, use, sell, offer for sale, import and otherwise run, modify and propagate the contents of its contributor version.

In the following three paragraphs, a "patent license" is any express agreement or commitment, however denominated, not to enforce a patent (such as an express permission to practice a patent or covenant not to sue for patent infringement). To "grant" such a patent license to a party means to make such an agreement or commitment not to enforce a patent against the party.

If you convey a covered work, knowingly relying on a patent license, and the Corresponding Source of the work is not available for anyone to copy, free of charge and under the terms of this License, through a publicly available network server or other readily accessible means, then you must either (1) cause the Corresponding Source to be so available, or (2) arrange to deprive yourself of the benefit of the patent license for this particular work, or (3) arrange, in a manner consistent with the requirements of this License, to extend the patent license to downstream recipients. "Knowingly relying" means you have actual knowledge that, but for the patent license, your conveying the covered work in a country, or your recipient's use of the covered work in a country, would infringe one or more identifiable patents in that country that you have reason to believe are valid.

If, pursuant to or in connection with a single transaction or arrangement, you convey, or propagate by procuring conveyance of, a covered work, and grant a patent license to some of the parties receiving the covered work authorizing them to use, propagate, modify or convey a specific copy of the covered work, then the patent license you grant is automatically extended to all recipients of the covered work and works based on it.

A patent license is "discriminatory" if it does not include within the scope of its coverage, prohibits the exercise of, or is conditioned on the non-exercise of one or more of the rights that are specifically granted under this License. You may not convey a covered work if you are a party to an arrangement with a third party that is in the business of distributing software, under which you make payment to the third party based on the extent of your
activity of conveying the work, and under which the third party grants, to any of the parties who would receive the covered work from you, a discriminatory patent license (a) in connection with copies of the covered work conveyed by you (or copies made from those copies), or (b) primarily for and in connection with specific products or compilations that contain the covered work, unless you entered into that arrangement, or that patent license was granted, prior to 28 March 2007.

Nothing in this License shall be construed as excluding or limiting any implied license or other defenses to infringement that may otherwise be available to you under applicable patent law.

If conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot convey a covered work so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not convey it at all. For example, if you agree to terms that obligate you to collect a royalty for further conveying from those to whom you convey the Program, the only way you could satisfy both those terms and this License would be to refrain entirely from conveying the Program.

13. Use with the GNU Affero General Public License.

Notwithstanding any other provision of this License, you have permission to link or combine any covered work with a work licensed under version 3 of the GNU Affero General Public License into a single combined work, and to convey the resulting work. The terms of this License will continue to apply to the part which is the covered work, but the special requirements of the GNU Affero General Public License, section 13, concerning interaction through a network will apply to the combination as such.

14. Revised Versions of this License.

The Free Software Foundation may publish revised and/or new versions of the GNU General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies that a certain numbered version of the GNU General Public License "or any later version" applies to it, you have the option of following the terms and conditions either of that numbered version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of the GNU General Public License, you may choose any version ever published by the Free Software Foundation.
If the Program specifies that a proxy can decide which future versions of the GNU General Public License can be used, that proxy's public statement of acceptance of a version permanently authorizes you to choose that version for the Program.

Later license versions may give you additional or different permissions. However, no additional obligations are imposed on any author or copyright holder as a result of your choosing to follow a later version.

15. Disclaimer of Warranty.

THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

16. Limitation of Liability.

IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MODIFIES AND/OR CONVEYS THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

17. Interpretation of Sections 15 and 16.

If the disclaimer of warranty and limitation of liability provided above cannot be given local legal effect according to their terms, reviewing courts shall apply local law that most closely approximates an absolute waiver of all civil liability in connection with the Program, unless a warranty or assumption of liability accompanies a copy of the Program in return for a fee.

END OF TERMS AND CONDITIONS

Apache-Arrow

https://arrow.apache.org/

Apache-arrow 0.2.0 is an early release and the APIs are still evolving.
License

Apache License
Version 2.0, January 2004
http://www.apache.org/licenses/

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the
Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided...
that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]"
replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

Copyright [yyyy] [name of copyright owner]

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.
"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.
4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided You do not modify the License. For example, You may add Your own license to the Source Code. You may not use additional license terms and conditions for distributions of the Work or Derivative Works. You may add Your own license to Your own version of the Work, provided You is not configured to interact with any versions of the Work that appear after Your version.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributo provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, but not limited to, the warranties of MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, and NONINFRINGEMENT. In no event shall Licensor be liable for any CLAIM, DAMAGES OR OTHER LIABILITY, WHETHER IN AN ACTION OF CONTRACT, TORT OR OTHERWISE, ARISING FROM, OUT OF OR IN CONNECTION WITH THE WORK OR THE USE OR OTHER DEALINGS IN THE WORK.
appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

Copyright [yyyy] [name of copyright owner]

Apache Avro

Version 1.7.0

Copyright © 2013 The Apache Software Foundation.
Apache Hadoop, Hadoop, HDFS, Avro, Cassandra, Chukwa, HBase, Hive, Mahout, Pig, Zookeeper are trademarks of the Apache Software Foundation.

http://avro.apache.org/

**Description**

Data serialization system: Apache Avro is a data serialization system. Avro provides:

- Rich data structures.
- A compact, fast, binary data format.
- A container file, to store persistent data.
- Remote procedure call (RPC).
- Simple integration with dynamic languages.

Code generation is not required to read or write data files nor to use or implement RPC protocols. Code generation as an optional optimization, only worth implementing for statically typed languages.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.
"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You
meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory,
whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensors" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent
to the Licensor or its representatives, including but not limited to
communication on electronic mailing lists, source code control systems,
and issue tracking systems that are managed by, or on behalf of, the
Licensor for the purpose of discussing and improving the Work, but
excluding communication that is conspicuously marked or otherwise
designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity
on behalf of whom a Contribution has been received by Licensor and
subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of
this License, each Contributor hereby grants to You a perpetual,
worldwide, non-exclusive, no-charge, royalty-free, irrevocable
copyright license to reproduce, prepare Derivative Works of,
publicly display, publicly perform, sublicense, and distribute the
Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of
this License, each Contributor hereby grants to You a perpetual,
worldwide, non-exclusive, no-charge, royalty-free, irrevocable
(except as stated in this section) patent license to make, have made,
use, offer to sell, sell, import, and otherwise transfer the Work,
where such license applies only to those patent claims licensable
by such Contributor that are necessarily infringed by their
Contribution(s) alone or by combination of their Contribution(s)
with the Work to which such Contribution(s) was submitted. If You
institute patent litigation against any entity (including a
cross-claim or counterclaim in a lawsuit) alleging that the Work
or a Contribution incorporated within the Work constitutes direct
or contributory patent infringement, then any patent licenses
granted to You under this License for that Work shall terminate
as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the
Work or Derivative Works thereof in any medium, with or without
modifications, and in Source or Object form, provided that You
meet the following conditions:

(a) You must give any other recipients of the Work or
    Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices
    stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works
    that You distribute, all copyright, patent, trademark, and
    attribution notices from the Source form of the Work,
    excluding those notices that do not pertain to any part of
    the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its
distribution, then any Derivative Works that You distribute must
include a readable copy of the attribution notices contained
within such NOTICE file, excluding those notices that do not
pertain to any part of the Derivative Works, in at least one
of the following places: within a NOTICE text file distributed
as part of the Derivative Works; within the Source form or
documentation, if provided along with the Derivative Works; or,
within a display generated by the Derivative Works, if and
wherever such third-party notices normally appear. The contents
of the NOTICE file are for informational purposes only and
do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an “AS IS” BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties of MERCHANTABILITY, NON-INFRINGEMENT, TITLE, or CONDITION OF ANY KIND, whether express or implied, unless explicitly provided by Seller. The Work as such shall not be considered a commercial product by Seller. The Work is provided “as is”, without warranty of any kind, express or implied, including, but not limited to, the warranties of merchantability, fitness for a particular purpose, non-infringement, or usage.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor or Licensor (as well as each of their employees, principals, officers, agents, and licensors) be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.
To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.
"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct
or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.
"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not
pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify,
defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.
"Licensors" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensors for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensors or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensors for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensors and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensors and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of
this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed
with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction,
and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by
the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all
other entities that control, are controlled by, or are under common
control with that entity. For the purposes of this definition,
"control" means (i) the power, direct or indirect, to cause the
direction or management of such entity, whether by contract or
otherwise, or (ii) ownership of fifty percent (50%) or more of the
outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity
exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications,
including but not limited to software source code, documentation
source, and configuration files.

"Object" form shall mean any form resulting from mechanical
transformation or translation of a Source form, including but
not limited to compiled object code, generated documentation,
and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or
Object form, made available under the License, as indicated by a
copyright notice that is included in or attached to the work
(an example is provided in the Appendix below).
"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and
attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.
9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction,
and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.
3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions.
Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the
editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of
the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing
the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent
to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and
do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition,
"control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their
Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.
7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain
separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its
distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this
License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

Description

The smallest, fastest columnar storage for Hadoop workloads.

License
1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual,
worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.
5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but
not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:
(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly
negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the
Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided...
that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]"
replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the
Licensor for the purpose of discussing and improving the Work, but
excluding communication that is conspicuously marked or otherwise
designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity
on behalf of whom a Contribution has been received by Licensor and
subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of
this License, each Contributor hereby grants to You a perpetual,
worldwide, non-exclusive, no-charge, royalty-free, irrevocable
copyright license to reproduce, prepare Derivative Works of,
publicly display, publicly perform, sublicense, and distribute the
Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of
this License, each Contributor hereby grants to You a perpetual,
worldwide, non-exclusive, no-charge, royalty-free, irrevocable
(except as stated in this section) patent license to make, have made,
use, offer to sell, sell, import, and otherwise transfer the Work,
where such license applies only to those patent claims licensable
by such Contributor that are necessarily infringed by their
Contribution(s) alone or by combination of their Contribution(s)
with the Work to which such Contribution(s) was submitted. If You
institute patent litigation against any entity (including a
cross-claim or counterclaim in a lawsuit) alleging that the Work
or a Contribution incorporated within the Work constitutes direct
or contributory patent infringement, then any patent licenses
granted to You under this License for that Work shall terminate
as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the
Work or Derivative Works thereof in any medium, with or without
modifications, and in Source or Object form, provided that You
meet the following conditions:

(a) You must give any other recipients of the Work or
Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices
stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works
that You distribute, all copyright, patent, trademark, and
attrtribution notices from the Source form of the Work,
excluding those notices that do not pertain to any part of
the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its
distribution, then any Derivative Works that You distribute must
include a readable copy of the attribution notices contained
within such NOTICE file, excluding those notices that do not
pertain to any part of the Derivative Works, in at least one
of the following places: within a NOTICE text file distributed
as part of the Derivative Works; within the Source form or
documentation, if provided along with the Derivative Works; or,
within a display generated by the Derivative Works, if and
wherever such third-party notices normally appear. The contents
of the NOTICE file are for informational purposes only and
do not modify the License. You may add Your own attribution
notices within Derivative Works that You distribute, alongside
or as an addendum to the NOTICE text from the Work, provided
that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.
"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct
or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of Your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. BLAS

Version 3.6.0, updated November 2015
Basic Linear Algebra Subprograms (BLAS) are routines that provide standard building blocks for performing basic vector and matrix operations. The Level 1 BLAS perform scalar, vector and vector-vector operations, the Level 2 BLAS perform matrix-vector operations, and the Level 3 BLAS perform matrix-matrix operations. Because the BLAS are efficient, portable, and widely available, they are commonly used in the development of high quality linear algebra software, LAPACK for example.

http://www.netlib.org/blas/

License and Acknowledgments

This material is based upon work supported by the National Science Foundation under Grant No. ASC-9313958 and DOE Grant No. DE-FG03-94ER25219. Any opinions, findings and conclusions or recommendations expressed in this material are those of the author(s) and do not necessarily reflect the views of the National Science Foundation (NSF) or the Department of Energy (DOE).

The reference BLAS is a freely-available software package. It is available from netlib via anonymous ftp and the World Wide Web. Thus, it can be included in commercial software packages (and has been). We only ask that proper credit be given to the authors.

Like all software, it is copyrighted. It is not trademarked, but we do ask the following:

- If you modify the source for these routines we ask that you change the name of the routine and comment the changes made to the original.
- We will gladly answer any questions regarding the software. If a modification is done, however, it is the responsibility of the person who modified the routine to provide support.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the
Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as “Not a Contribution.”

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided
that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]"
replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.
"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.
4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NONINFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the
appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to...
communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution
notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.
To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

**License**

Apache License  
Version 2.0, January 2004  
http://www.apache.org/licenses/

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.
"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constituting direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and
(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a
result of this License or out of the use or inability to use the
Work (including but not limited to damages for loss of goodwill,
work stoppage, computer failure or malfunction, or any and all
other commercial damages or losses), even if such Contributor
has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing
the Work or Derivative Works thereof, You may choose to offer,
and charge a fee for, acceptance of support, warranty, indemnity,
or other liability obligations and/or rights consistent with this
License. However, in accepting such obligations, You may act only
on Your own behalf and on Your sole responsibility, not on behalf
of any other Contributor, and only if You agree to indemnify,
defend, and hold each Contributor harmless for any liability
incurred by, or claims asserted against, such Contributor by reason
of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following
boilerplate notice, with the fields enclosed by brackets "[]"
replaced with your own identifying information. (Don't include
the brackets!) The text should be enclosed in the appropriate
comment syntax for the file format. We also recommend that a

**FreeMarker Subcomponents with Different Copyright Owners**

FreeMarker, both in its source code and binary form (freemarker.jar) includes a number of
files that are licensed by the Apache Software Foundation under the Apache License, Version
2.0. This is the same license as the license of FreeMarker, but the copyright owner is the
Apache Software Foundation. These files are:
Historical Notes

FreeMarker 1.x was released under the LGPL license. Later, by community consensus, we have switched over to a BSD-style license. As of FreeMarker 2.2pre1, the original author, Benjamin Geer, has relinquished the copyright in behalf of Visigoth Software Society. With FreeMarker 2.3.21 the license has changed to Apache License, Version 2.0, and the owner has changed from Visigoth Software Society to three of the FreeMarker 2.x developers, Attila Szegedi, Daniel Dekany, and Jonathan Revusky.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the
License for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided
that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages, arising out of or related to the Work or the use, of or the inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the
Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.
8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the
Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided
that such additional attribution notices cannot be construed
as modifying the License.

You may add Your own copyright statement to Your modifications and
may provide additional or different license terms and conditions
for use, reproduction, or distribution of Your modifications, or
for any such Derivative Works as a whole, provided Your use,
reproduction, and distribution of the Work otherwise complies with
the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,
any Contribution intentionally submitted for inclusion in the Work
by You to the Licensor shall be under the terms and conditions of
this License, without any additional terms or conditions.
Notwithstanding the above, nothing herein shall supersede or modify
the terms of any separate license agreement you may have executed
with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade
names, trademarks, service marks, or product names of the Licensor,
except as required for reasonable and customary use in describing the
origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or
agreed to in writing, Licensor provides the Work (and each
Contributor provides its Contributions) on an "AS IS" BASIS,
WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
implied, including, without limitation, any warranties or conditions
of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
PARTICULAR PURPOSE. You are solely responsible for determining the
appropriateness of using or redistributing the Work and assume any
risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory,
whether in tort (including negligence), contract, or otherwise,
unless required by applicable law (such as deliberate and grossly
negligent acts) or agreed to in writing, shall any Contributor be
liable to You for damages, including any direct, indirect, special,
incidental, or consequential damages of any character arising as a
result of this License or out of the use or inability to use the
Work (including but not limited to damages for loss of goodwill,
work stoppage, computer failure or malfunction, or any and all
other commercial damages or losses), even if such Contributor
has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing
the Work or Derivative Works thereof, You may choose to offer,
and charge a fee for, acceptance of support, warranty, indemnity,
or other liability obligations and/or rights consistent with this
License. However, in accepting such obligations, You may act only
on Your own behalf and on Your sole responsibility, not on behalf
of any other Contributor, and only if You agree to indemnify,
defend, and hold each Contributor harmless for any liability
incurred by, or claims asserted against, such Contributor by reason
of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.
"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.
4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the
appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all
other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work,
where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor,
except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

Apache License
Version 2.0, January 2004
http://www.apache.org/licenses/

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of,
the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must
include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only
on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or
Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices
stating that You changed the files; and

c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the
Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation.
source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the
Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribute notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.
8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of Your accepting any such warranty or additional liability.

javex.el.el-api

COMMON DEVELOPMENT AND DISTRIBUTION LICENSE (CDDL) Version 1.0

https://mvnrepository.com/artifact/javax.el/el-api
License

1. Definitions.

1.1. “Contributor” means each individual or entity that creates or contributes to the creation of Modifications.

1.2. “Contributor Version” means the combination of the Original Software, prior Modifications used by a Contributor (if any), and the Modifications made by that particular Contributor.

1.3. “Covered Software” means (a) the Original Software, or (b) Modifications, or (c) the combination of files containing Original Software with files containing Modifications, in each case including portions thereof.

1.4. “Executable” means the Covered Software in any form other than Source Code.

1.5. “Initial Developer” means the individual or entity that first makes Original Software available under this License.

1.6. “Larger Work” means a work which combines Covered Software or portions thereof with code not governed by the terms of this License.

1.7. “License” means this document.

1.8. “Licensable” means having the right to grant, to the maximum extent possible, whether at the time of the initial grant or subsequently acquired, any and all of the rights conveyed herein.

1.9. “Modifications” means the Source Code and Executable form of any of the following:

A. Any file that results from an addition to, deletion from or modification of the contents of a file containing Original Software or previous Modifications;

B. Any new file that contains any part of the Original Software or previous Modification; or

C. Any new file that is contributed or otherwise made available under the terms of this License.

1.10. “Original Software” means the Source Code and Executable form of computer software code that is originally released under this License.

1.11. “Patent Claims” means any patent claim(s), now owned or hereafter acquired, including without limitation, method, process, and apparatus claims, in any patent Licensable by grantor.
1.12. “Source Code” means (a) the common form of computer software code in which modifications are made and (b) associated documentation included in or with such code.

1.13. “You” (or “Your”) means an individual or a legal entity exercising rights under, and complying with all of the terms of, this License. For legal entities, “You” includes any entity which controls, is controlled by, or is under common control with You. For purposes of this definition, “control” means (a) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (b) ownership of more than fifty percent (50%) of the outstanding shares or beneficial ownership of such entity.

2. License Grants.

2.1. The Initial Developer Grant.

Conditioned upon Your compliance with Section 3.1 below and subject to third party intellectual property claims, the Initial Developer hereby grants You a world-wide, royalty-free, non-exclusive license:

(a) under intellectual property rights (other than patent or trademark) Licensable by Initial Developer, to use, reproduce, modify, display, perform, sublicense and distribute the Original Software (or portions thereof), with or without Modifications, and/or as part of a Larger Work; and

(b) under Patent Claims infringed by the making, using or selling of Original Software, to make, have made, use, practice, sell, and offer for sale, and/or otherwise dispose of the Original Software (or portions thereof).

(c) The licenses granted in Sections 2.1(a) and (b) are effective on the date Initial Developer first distributes or otherwise makes the Original Software available to a third party under the terms of this License.

(d) Notwithstanding Section 2.1(b) above, no patent license is granted: (1) for code that You delete from the Original Software, or (2) for infringements caused by: (i) the modification of the Original Software, or (ii) the combination of the Original Software with other software or devices.

2.2. Contributor Grant.

Conditioned upon Your compliance with Section 3.1 below and subject to third party intellectual property claims, each Contributor hereby grants You a world-wide, royalty-free, non-exclusive license:

(a) under intellectual property rights (other than patent or trademark) Licensable by Contributor to use, reproduce, modify, display, perform, sublicense and distribute the Modifications created by such Contributor (or portions thereof), either on an unmodified basis, with other Modifications, as Covered Software and/or as part of a Larger Work; and
(b) under Patent Claims infringed by the making, using, or selling of Modifications made by that Contributor either alone and/or in combination with its Contributor Version (or portions of such combination), to make, use, sell, offer for sale, have made, and/or otherwise dispose of: (1) Modifications made by that Contributor (or portions thereof); and (2) the combination of Modifications made by that Contributor with its Contributor Version (or portions of such combination).

(c) The licenses granted in Sections 2.2(a) and 2.2(b) are effective on the date Contributor first distributes or otherwise makes the Modifications available to a third party.

(d) Notwithstanding Section 2.2(b) above, no patent license is granted: (1) for any code that Contributor has deleted from the Contributor Version; (2) for infringements caused by: (i) third party modifications of Contributor Version, or (ii) the combination of Modifications made by that Contributor with other software (except as part of the Contributor Version) or other devices; or (3) under Patent Claims infringed by Covered Software in the absence of Modifications made by that Contributor.

3. Distribution Obligations.

3.1. Availability of Source Code.

Any Covered Software that You distribute or otherwise make available in Executable form must also be made available in Source Code form and that Source Code form must be distributed only under the terms of this License. You must include a copy of this License with every copy of the Source Code form of the Covered Software You distribute or otherwise make available. You must inform recipients of any such Covered Software in Executable form as to how they can obtain such Covered Software in Source Code form in a reasonable manner on or through a medium customarily used for software exchange.

3.2. Modifications.

The Modifications that You create or to which You contribute are governed by the terms of this License. You represent that You believe Your Modifications are Your original creation(s) and/or You have sufficient rights to grant the rights conveyed by this License.

3.3. Required Notices.

You must include a notice in each of Your Modifications that identifies You as the Contributor of the Modification. You may not remove or alter any copyright, patent or trademark notices contained within the Covered Software, or any notices of licensing or any descriptive text giving attribution to any Contributor or the Initial Developer.

3.4. Application of Additional Terms.

You may not offer or impose any terms on any Covered Software in Source Code form that alters or restricts the applicable version of this License or the recipients’ rights hereunder.
You may choose to offer, and to charge a fee for, warranty, support, indemnity or liability obligations to one or more recipients of Covered Software. However, you may do so only on Your own behalf, and not on behalf of the Initial Developer or any Contributor. You must make it absolutely clear that any such warranty, support, indemnity or liability obligation is offered by You alone, and You hereby agree to indemnify the Initial Developer and every Contributor for any liability incurred by the Initial Developer or such Contributor as a result of warranty, support, indemnity or liability terms You offer.

3.5. Distribution of Executable Versions.

You may distribute the Executable form of the Covered Software under the terms of this License or under the terms of a license of Your choice, which may contain terms different from this License, provided that You are in compliance with the terms of this License and that the license for the Executable form does not attempt to limit or alter the recipient’s rights in the Source Code form from the rights set forth in this License. If You distribute the Covered Software in Executable form under a different license, You must make it absolutely clear that any terms which differ from this License are offered by You alone, not by the Initial Developer or Contributor. You hereby agree to indemnify the Initial Developer and every Contributor for any liability incurred by the Initial Developer or such Contributor as a result of any such terms You offer.

You may create a Larger Work by combining Covered Software with other code not governed by the terms of this License and distribute the Larger Work as a single product. In such a case, You must make sure the requirements of this License are fulfilled for the Covered Software.

4. Versions of the License.

4.1. New Versions.

Sun Microsystems, Inc. is the initial license steward and may publish revised and/or new versions of this License from time to time. Each version will be given a distinguishing version number. Except as provided in Section 4.3, no one other than the license steward has the right to modify this License.

4.2. Effect of New Versions.

You may always continue to use, distribute or otherwise make the Covered Software available under the terms of the version of the License under which You originally received the Covered Software. If the Initial Developer includes a notice in the Original Software prohibiting it from being distributed or otherwise made available under any subsequent version of the License, You must distribute and make the Covered Software available under the terms of the version of the License under which You originally received the Covered
Software. Otherwise, You may also choose to use, distribute or otherwise make the Covered Software available under the terms of any subsequent version of the License published by the license steward.

4.3 Modified Versions.

When You are an Initial Developer and You want to create a new license for Your Original Software, You may create and use a modified version of this License if You: (a) rename the license and remove any references to the name of the license steward (except to note that the license differs from this License); and (b) otherwise make it clear that the license contains terms which differ from this License.

5. DISCLAIMER OF WARRANTY.

COVERED SOFTWARE IS PROVIDED UNDER THIS LICENSE ON AN “AS IS” BASIS, WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, WITHOUT LIMITATION, WARRANTIES THAT THE COVERED SOFTWARE IS FREE OF DEFECTS, MERCHANTABLE, FIT FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE COVERED SOFTWARE IS WITH YOU. SHOULD ANY COVERED SOFTWARE PROVE DEFECTIVE IN ANY RESPECT, YOU (NOT THE INITIAL DEVELOPER OR ANY OTHER CONTRIBUTOR) ASSUME THE COST OF ANY NECESSARY SERVICING, REPAIR OR CORRECTION. THIS DISCLAIMER OF WARRANTY CONSTITUTES AN ESSENTIAL PART OF THIS LICENSE. NO USE OF ANY COVERED SOFTWARE IS AUTHORIZED HEREUNDER EXCEPT UNDER THIS DISCLAIMER.

6. TERMINATION.

6.1. This License and the rights granted hereunder will terminate automatically if You fail to comply with terms herein and fail to cure such breach within 30 days of becoming aware of the breach. Provisions which, by their nature, must remain in effect beyond the termination of this License shall survive.

6.2. If You assert a patent infringement claim (excluding declaratory judgment actions) against Initial Developer or a Contributor (the Initial Developer or Contributor against whom You assert such claim is referred to as “Participant”) alleging that the Participant Software (meaning the Contributor Version where the Participant is a Contributor or the Original Software where the Participant is the Initial Developer) directly or indirectly infringes any patent, then any and all rights granted directly or indirectly to You by such Participant, the Initial Developer (if the Initial Developer is not the Participant) and all Contributors under Sections 2.1 and/or 2.2 of this License shall, upon 60 days notice from Participant terminate prospectively and automatically at the expiration of such 60 day notice period, unless if within such 60 day period You withdraw Your claim with respect to the Participant Software against such Participant either unilaterally or pursuant to a written agreement with Participant.
6.3. In the event of termination under Sections 6.1 or 6.2 above, all end user licenses that have been validly granted by You or any distributor hereunder prior to termination (excluding licenses granted to You by any distributor) shall survive termination.

7. LIMITATION OF LIABILITY.

UNDER NO CIRCUMSTANCES AND UNDER NO LEGAL THEORY, WHETHER TORT (INCLUDING NEGLIGENCE), CONTRACT, OR OTHERWISE, SHALL YOU, THE INITIAL DEVELOPER, ANY OTHER CONTRIBUTOR, OR ANY DISTRIBUTOR OF COVERED SOFTWARE, OR ANY SUPPLIER OF ANY OF SUCH PARTIES, BE LIABLE TO ANY PERSON FOR ANY INDIRECT, SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES OF ANY CHARACTER INCLUDING, WITHOUT LIMITATION, DAMAGES FOR LOST PROFITS, LOSS OF GOODWILL, WORK STOPPAGE, COMPUTER FAILURE OR MALFUNCTION, OR ANY AND ALL OTHER COMMERCIAL DAMAGES OR LOSSES, EVEN IF SUCH PARTY SHALL HAVE BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. THIS LIMITATION OF LIABILITY SHALL NOT APPLY TO LIABILITY FOR DEATH OR PERSONAL INJURY RESULTING FROM SUCH PARTY'S NEGLIGENCE TO THE EXTENT APPLICABLE LAW PROHIBITS SUCH LIMITATION. SOME JURISDICTIONS DO NOT ALLOW THE EXCLUSION OR LIMITATION OF INCIDENTAL OR CONSEQUENTIAL DAMAGES, SO THIS EXCLUSION AND LIMITATION MAY NOT APPLY TO YOU.

8. U.S. GOVERNMENT END USERS.

The Covered Software is a “commercial item,” as that term is defined in 48 C.F.R. 2.101 (Oct. 1995), consisting of “commercial computer software” (as that term is defined at 48 C.F.R. § 252.227-7014(a)(1)) and “commercial computer software documentation” as such terms are used in 48 C.F.R. 12.212 (Sept. 1995). Consistent with 48 C.F.R. 12.212 and 48 C.F.R. 227.7202-1 through 227.7202-4 (June 1995), all U.S. Government End Users acquire Covered Software with only those rights set forth herein. This U.S. Government Rights clause is in lieu of, and supersedes, any other FAR, DFAR, or other clause or provision that addresses Government rights in computer software under this License.

9. MISCELLANEOUS.

This License represents the complete agreement concerning subject matter hereof. If any provision of this License is held to be unenforceable, such provision shall be reformed only to the extent necessary to make it enforceable. This License shall be governed by the law of the jurisdiction specified in a notice contained within the Original Software (except to the extent applicable law, if any, provides otherwise), excluding such jurisdiction’s conflict-of-law provisions. Any litigation relating to this License shall be subject to the jurisdiction of the courts located in the jurisdiction and venue specified in a notice contained within the Original Software, with the losing party responsible for costs, including, without limitation, court costs and reasonable attorneys’ fees and expenses. The application of the United Nations Convention on Contracts for the International Sale of Goods is expressly excluded. Any law or regulation which provides that the language of a contract shall be construed
against the drafter shall not apply to this License. You agree that You alone are responsible for compliance with the United States export administration regulations (and the export control laws and regulation of any other countries) when You use, distribute or otherwise make available any Covered Software.

10. RESPONSIBILITY FOR CLAIMS.

As between Initial Developer and the Contributors, each party is responsible for claims and damages arising, directly or indirectly, out of its utilization of rights under this License and You agree to work with Initial Developer and Contributors to distribute such responsibility on an equitable basis. Nothing herein is intended or shall be deemed to constitute any admission of liability.

NOTICE PURSUANT TO SECTION 9 OF THE COMMON DEVELOPMENT AND DISTRIBUTION LICENSE (CDDL)

The code released under CDDL shall be governed by the laws of the State of California (excluding conflict-of-law provisions). Any litigation relating to this License shall be subject to the jurisdiction of the Federal Courts of the Northern District of California and the state courts of the State of California, with venue lying in Santa Clara County, California.

The GNU General Public License (GPL)
Version 2, June 1991

Copyright (C) 1989, 1991 Free Software Foundation, Inc. 59 Temple Place, Suite 330, Boston, MA 02111-1307 USA

Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

Preamble

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change free software--to make sure the software is free for all its users. This General Public License applies to most of the Free Software Foundation's software and to any other program whose authors commit to using it. (Some other Free Software Foundation software is covered by the GNU Library General Public License instead.) You can apply it to your programs, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish), that you receive source code or can
get it if you want it, that you can change the software or use pieces of it in new free programs; and that you know you can do these things.

To protect your rights, we need to make restrictions that forbid anyone to deny you these rights or to ask you to surrender the rights. These restrictions translate to certain responsibilities for you if you distribute copies of the software, or if you modify it.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must give the recipients all the rights that you have. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

We protect your rights with two steps: (1) copyright the software, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the software.

Also, for each author's protection and ours, we want to make certain that everyone understands that there is no warranty for this free software. If the software is modified by someone else and passed on, we want its recipients to know that what they have is not the original, so that any problems introduced by others will not reflect on the original authors' reputations.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that redistributors of a free program will individually obtain patent licenses, in effect making the program proprietary. To prevent this, we have made it clear that any patent must be licensed for everyone's free use or not licensed at all.

The precise terms and conditions for copying, distribution and modification follow.

TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License applies to any program or other work which contains a notice placed by the copyright holder saying it may be distributed under the terms of this General Public License. The "Program", below, refers to any such program or work, and a "work based on the Program" means either the Program or any derivative work under copyright law: that is to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another language. (Hereinafter, translation is included without limitation in the term "modification".) Each licensee is addressed as "you".

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running the Program is not restricted, and the output from the Program is covered only if its contents constitute a work based on the Program (independent of having been made by running the Program). Whether that is true depends on what the Program does.
1. You may copy and distribute verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and give any other recipients of the Program a copy of this License along with the Program.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Program or any portion of it, thus forming a work based on the Program, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

a) You must cause the modified files to carry prominent notices stating that you changed the files and the date of any change.

b) You must cause any work that you distribute or publish, that in whole or in part contains or is derived from the Program or any part thereof, to be licensed as a whole at no charge to all third parties under the terms of this License.

c) If the modified program normally reads commands interactively when run, you must cause it, when started running for such interactive use in the most ordinary way, to print or display an announcement including an appropriate copyright notice and a notice that there is no warranty (or else, saying that you provide a warranty) and that users may redistribute the program under these conditions, and telling the user how to view a copy of this License. (Exception: if the Program itself is interactive but does not normally print such an announcement, your work based on the Program is not required to print an announcement.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Program, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Program, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Program.

In addition, mere aggregation of another work not based on the Program with the Program (or with a work based on the Program) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.
3. You may copy and distribute the Program (or a work based on it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you also do one of the following:

a) Accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

b) Accompany it with a written offer, valid for at least three years, to give any third party, for a charge no more than your cost of physically performing source distribution, a complete machine-readable copy of the corresponding source code, to be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

c) Accompany it with the information you received as to the offer to distribute corresponding source code. (This alternative is allowed only for noncommercial distribution and only if you received the program in object code or executable form with such an offer, in accord with Subsection b above.)

The source code for a work means the preferred form of the work for making modifications to it. For an executable work, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the executable. However, as a special exception, the source code distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

If distribution of executable or object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place counts as distribution of the source code, even though third parties are not compelled to copy the source along with the object code.

4. You may not copy, modify, sublicense, or distribute the Program except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense or distribute the Program is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

5. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Program or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Program (or any work based on the Program), you indicate
your acceptance of this License to do so, and all its terms and conditions for copying,
distributing or modifying the Program or works based on it.

6. Each time you redistribute the Program (or any work based on the Program), the
recipient automatically receives a license from the original licensor to copy, distribute or
modify the Program subject to these terms and conditions. You may not impose any further
restrictions on the recipients' exercise of the rights granted herein. You are not responsible
for enforcing compliance by third parties to this License.

7. If, as a consequence of a court judgment or allegation of patent infringement or for any
other reason (not limited to patent issues), conditions are imposed on you (whether by
court order, agreement or otherwise) that contradict the conditions of this License, they do
not excuse you from the conditions of this License. If you cannot distribute so as to satisfy
simultaneously your obligations under this License and any other pertinent obligations, then
as a consequence you may not distribute the Program at all. For example, if a patent
license would not permit royalty-free redistribution of the Program by all those who receive
copies directly or indirectly through you, then the only way you could satisfy both it and this
License would be to refrain entirely from distribution of the Program.

If any portion of this section is held invalid or unenforceable under any particular
circumstance, the balance of the section is intended to apply and the section as a whole is
intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property
right claims or to contest validity of any such claims; this section has the sole purpose of
protecting the integrity of the free software distribution system, which is implemented by
public license practices. Many people have made generous contributions to the wide range
of software distributed through that system in reliance on consistent application of that
system; it is up to the author/donor to decide if he or she is willing to distribute software
through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of
the rest of this License.

8. If the distribution and/or use of the Program is restricted in certain countries either by
patents or by copyrighted interfaces, the original copyright holder who places the Program
under this License may add an explicit geographical distribution limitation excluding those
countries, so that distribution is permitted only in or among countries not thus excluded. In
such case, this License incorporates the limitation as if written in the body of this License.

9. The Free Software Foundation may publish revised and/or new versions of the General
Public License from time to time. Such new versions will be similar in spirit to the present
version, but may differ in detail to address new problems or concerns.
Each version is given a distinguishing version number. If the Program specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of this License, you may choose any version ever published by the Free Software Foundation.

10. If you wish to incorporate parts of the Program into other free programs whose distribution conditions are different, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

NO WARRANTY

11. BECAUSE THE PROGRAM IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

12. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

You are entitled to receive the source code for such software. For no less than three years from the date you obtained this software package, you may download a copy of the source code for the software in this package licensed under the GPL at no charge by visiting:

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted"
means any form of electronic, verbal, or written communication sent
to the Licensor or its representatives, including but not limited to
communication on electronic mailing lists, source code control systems,
and issue tracking systems that are managed by, or on behalf of, the
Licensor for the purpose of discussing and improving the Work, but
excluding communication that is conspicuously marked or otherwise
designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity
on behalf of whom a Contribution has been received by Licensor and
subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of
this License, each Contributor hereby grants to You a perpetual,
worldwide, non-exclusive, no-charge, royalty-free, irrevocable
copyright license to reproduce, prepare Derivative Works of,
publicly display, publicly perform, sublicense, and distribute the
Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of
this License, each Contributor hereby grants to You a perpetual,
worldwide, non-exclusive, no-charge, royalty-free, irrevocable
(except as stated in this section) patent license to make, have made,
use, offer to sell, sell, import, and otherwise transfer the Work,
where such license applies only to those patent claims licensable
by such Contributor that are necessarily infringed by their
Contribution(s) alone or by combination of their Contribution(s)
with the Work to which such Contribution(s) was submitted. If You
institute patent litigation against any entity (including a
cross-claim or counterclaim in a lawsuit) alleging that the Work
or a Contribution incorporated within the Work constitutes direct
or contributory patent infringement, then any patent licenses
granted to You under this License for that Work shall terminate
as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the
Work or Derivative Works thereof in any medium, with or without
modifications, and in Source or Object form, provided that You
meet the following conditions:

(a) You must give any other recipients of the Work or
Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices
stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works
that You distribute, all copyright, patent, trademark, and
attribution notices from the Source form of the Work,
excluding those notices that do not pertain to any part of
the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its
distribution, then any Derivative Works that You distribute must
include a readable copy of the attribution notices contained
within such NOTICE file, excluding those notices that do not
pertain to any part of the Derivative Works, in at least one
of the following places: within a NOTICE text file distributed
as part of the Derivative Works; within the Source form or
documentation, if provided along with the Derivative Works; or,
within a display generated by the Derivative Works, if and
wherever such third-party notices normally appear. The contents
of the NOTICE file are for informational purposes only and
do not modify the License. You may add Your own attribution
notices within Derivative Works that You distribute, alongside
or as an addendum to the NOTICE text from the Work, provided
that such additional attribution notices cannot be construed
as modifying the License.

You may add Your own copyright statement to Your modifications and
may provide additional or different license terms and conditions
for use, reproduction, or distribution of Your modifications, or
for any such Derivative Works as a whole, provided Your use,
reproduction, and distribution of the Work otherwise complies with
the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,
any Contribution intentionally submitted for inclusion in the Work
by You to the Licensor shall be under the terms and conditions of
this License, without any additional terms or conditions.
Notwithstanding the above, nothing herein shall supersede or modify
the terms of any separate license agreement you may have executed
with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade
names, trademarks, service marks, or product names of the Licensor,
except as required for reasonable and customary use in describing the
origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or
agreed to in writing, Licensor provides the Work (and each
Contributor provides its Contributions) on an "AS IS" BASIS,
WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
implied, including, without limitation, any warranties or conditions
of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
PARTICULAR PURPOSE. You are solely responsible for determining the
appropriateness of using or redistributing the Work and assume any
risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory,
whether in tort (including negligence), contract, or otherwise,
unless required by applicable law (such as deliberate and grossly
negligent acts) or agreed to in writing, shall any Contributor be
liable to You for damages, including any direct, indirect, special,
incidental, or consequential damages of any character arising as a
result of this License or out of the use or inability to use the
Work (including but not limited to damages for loss of goodwill,
work stoppage, computer failure or malfunction, or any and all
other commercial damages or losses), even if such Contributor
has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing
the Work or Derivative Works thereof, You may choose to offer,
and charge a fee for, acceptance of support, warranty, indemnity,
or other liability obligations and/or rights consistent with this
License. However, in accepting such obligations, You may act only
on Your own behalf and on Your sole responsibility, not on behalf
of any other Contributor, and only if You agree to indemnify,
defend, and hold each Contributor harmless for any liability
incurred by, or claims asserted against, such Contributor by reason
of Your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS
APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

License

NOTICE; LIMITED LICENSE GRANTS

Sun Microsystems, Inc. ('Sun') hereby grants you a fully-paid, non-exclusive, non-transferable, worldwide, limited license (without the right to sublicense), under the Sun's applicable intellectual property rights to view, download, use and reproduce the Specification only for the purpose of internal evaluation, which shall be understood to include developing applications intended to run on an implementation of the Specification
provided that such applications do not themselves implement any portion(s) of the Specification.

Sun also grants you a perpetual, non-exclusive, worldwide, fully paid-up, royalty free, limited license (without the right to sublicense) under any applicable copyrights or patent rights it may have in the Specification to create and/or distribute an Independent Implementation of the Specification that: (i) fully implements the Spec(s) including all its required interfaces and functionality; (ii) does not modify, subset, superset or otherwise extend the Licensor Name Space, or include any public or protected packages, classes, Java interfaces, fields or methods within the Licensor Name Space other than those required/authorized by the Specification or Specifications being implemented; and (iii) passes the TCK (including satisfying the requirements of the applicable TCK Users Guide) for such Specification. The foregoing license is expressly conditioned on your not acting outside its scope. No license is granted hereunder for any other purpose.

You need not include limitations (i)-(iii) from the previous paragraph or any other particular 'pass through' requirements in any license You grant concerning the use of your Independent Implementation or products derived from it. However, except with respect to implementations of the Specification (and products derived from them) that satisfy limitations (i)-(iii) from the previous paragraph, You may neither: (a) grant or otherwise pass through to your licensees any licenses under Sun's applicable intellectual property rights; nor (b) authorize your licensees to make any claims concerning their implementation's compliance with the Spec in question.

For the purposes of this Agreement: 'Independent Implementation' shall mean an implementation of the Specification that neither derives from any of Sun's source code or binary code materials nor, except with an appropriate and separate license from Sun, includes any of Sun's source code or binary code materials; and 'Licensor Name Space' shall mean the public class or interface declarations whose names begin with 'java', 'javax', 'com.sun' or their equivalents in any subsequent naming convention adopted by Sun through the Java Community Process, or any recognized successors or replacements thereof.

This Agreement will terminate immediately without notice from Sun if you fail to comply with any material provision of or act outside the scope of the licenses granted above.

TRADEMARKS

No right, title, or interest in or to any trademarks, service marks, or trade names of Sun or Sun's licensors is granted hereunder. Sun, Sun Microsystems, the Sun logo, Java, and the Java Coffee Cup logo are trademarks or registered trademarks of Sun Microsystems, Inc. in the U.S. and other countries.

DISCLAIMER OF WARRANTIES
THE SPECIFICATION IS PROVIDED 'AS IS'. SUN MAKES NO REPRESENTATIONS OR WARRANTIES, EITHER EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO, WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, OR NON-INFRINGEMENT, THAT THE CONTENTS OF THE SPECIFICATION ARE SUITABLE FOR ANY PURPOSE OR THAT ANY PRACTICE OR IMPLEMENTATION OF SUCH CONTENTS WILL NOT INFRINGE ANY THIRD PARTY PATENTS, COPYRIGHTS, TRADE SECRETS OR OTHER RIGHTS. This document does not represent any commitment to release or implement any portion of the Specification in any product.

THE SPECIFICATION COULD INCLUDE TECHNICAL INACCURACIES OR TYPOGRAPHICAL ERRORS. CHANGES ARE PERIODICALLY ADDED TO THE INFORMATION THEREIN; THESE CHANGES WILL BE INCORPORATED INTO NEW VERSIONS OF THE SPECIFICATION, IF ANY. SUN MAY MAKE IMPROVEMENTS AND/OR CHANGES TO THE PRODUCT(S) AND/OR THE PROGRAM(S) DESCRIBED IN THE SPECIFICATION AT ANY TIME. Any use of such changes in the Specification will be governed by the then-current license for the applicable version of the Specification.

LIMITATION OF LIABILITY

TO THE EXTENT NOT PROHIBITED BY LAW, IN NO EVENT WILL SUN OR ITS LICENSORS BE LIABLE FOR ANY DAMAGES, INCLUDING WITHOUT LIMITATION, LOST REVENUE, PROFITS OR DATA, OR FOR SPECIAL, INDIRECT, CONSEQUENTIAL, INCIDENTAL OR PUNITIVE DAMAGES, HOWEVER CAUSED AND REGARDLESS OF THE THEORY OF LIABILITY, ARISING OUT OF OR RELATED TO ANY FURNISHING, PRACTICING, MODIFYING OR ANY USE OF THE SPECIFICATION, EVEN IF SUN AND/OR ITS LICENSORS HAVE BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

You will indemnify, hold harmless, and defend Sun and its licensors from any claims arising or resulting from: (i) your use of the Specification; (ii) the use or distribution of your Java application, applet and/or clean room implementation; and/or (iii) any claims that later versions or releases of any Specification furnished to you are incompatible with the Specification provided to you under this license.

RESTRICTED RIGHTS LEGEND

U.S. Government: If this Specification is being acquired by or on behalf of the U.S. Government or by a U.S. Government prime contractor or subcontractor (at any tier), then the Government's rights in the Software and accompanying documentation shall be only as set forth in this license; this is in accordance with 48 C.F.R. 227.7201 through 227.7202-4 (for Department of Defense (DoD) acquisitions) and with 48 C.F.R. 2.101 and 12.212 (for non-DoD acquisitions).

REPORT
You may wish to report any ambiguities, inconsistencies or inaccuracies you may find in connection with your use of the Specification ('Feedback'). To the extent that you provide Sun with any Feedback, you hereby: (i) agree that such Feedback is provided on a non-proprietary and non-confidential basis, and (ii) grant Sun a perpetual, non-exclusive, worldwide, fully paid-up, irrevocable license, with the right to sublicense through multiple levels of sublicensees, to incorporate, disclose, and use without limitation the Feedback for any purpose related to the Specification and future versions, implementations, and test suites thereof.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.
"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and
(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special,
incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

License

THE ACCOMPANYING PROGRAM IS PROVIDED UNDER THE TERMS OF THIS ECLIPSE PUBLIC LICENSE ("AGREEMENT"). ANY USE, REPRODUCTION OR DISTRIBUTION OF THE PROGRAM CONSTITUTES RECIPIENT'S ACCEPTANCE OF THIS AGREEMENT.

1. DEFINITIONS

"Contribution" means:

a) in the case of the initial Contributor, the initial code and documentation distributed under this Agreement, and

b) in the case of each subsequent Contributor:

i) changes to the Program, and
ii) additions to the Program;

where such changes and/or additions to the Program originate from and are distributed by that particular Contributor. A Contribution 'originates' from a Contributor if it was added to the Program by such Contributor itself or anyone acting on such Contributor's behalf. Contributions do not include additions to the Program which: (i) are separate modules of software distributed in conjunction with the Program under their own license agreement, and (ii) are not derivative works of the Program.

"Contributor" means any person or entity that distributes the Program.

"Licensed Patents" mean patent claims licensable by a Contributor which are necessarily infringed by the use or sale of its Contribution alone or when combined with the Program.

"Program" means the Contributions distributed in accordance with this Agreement.

"Recipient" means anyone who receives the Program under this Agreement, including all Contributors.

2. GRANT OF RIGHTS

a) Subject to the terms of this Agreement, each Contributor hereby grants Recipient a non-exclusive, worldwide, royalty-free copyright license to reproduce, prepare derivative works of, publicly display, publicly perform, distribute and sublicense the Contribution of such Contributor, if any, and such derivative works, in source code and object code form.

b) Subject to the terms of this Agreement, each Contributor hereby grants Recipient a non-exclusive, worldwide, royalty-free patent license under Licensed Patents to make, use, sell, offer to sell, import and otherwise transfer the Contribution of such Contributor, if any, in source code and object code form. This patent license shall apply to the combination of the Contribution and the Program if, at the time the Contribution is added by the Contributor, such addition of the Contribution causes such combination to be covered by the Licensed Patents. The patent license shall not apply to any other combinations which include the Contribution. No hardware per se is licensed hereunder.

c) Recipient understands that although each Contributor grants the licenses to its Contributions set forth herein, no assurances are provided by any Contributor that the Program does not infringe the patent or other intellectual property rights of any other entity. Each Contributor disclaims any liability to Recipient for claims brought by any other entity based on infringement of intellectual property rights or otherwise. As a condition to exercising the rights and licenses granted hereunder, each Recipient hereby assumes sole responsibility to secure any other intellectual property rights needed, if any. For example, if a third party patent license is required to allow Recipient to distribute the Program, it is Recipient's responsibility to acquire that license before distributing the Program.
d) Each Contributor represents that to its knowledge it has sufficient copyright rights in its Contribution, if any, to grant the copyright license set forth in this Agreement.

3. REQUIREMENTS

A Contributor may choose to distribute the Program in object code form under its own license agreement, provided that:

a) it complies with the terms and conditions of this Agreement; and

b) its license agreement:

i) effectively disclaims on behalf of all Contributors all warranties and conditions, express and implied, including warranties or conditions of title and non-infringement, and implied warranties or conditions of merchantability and fitness for a particular purpose;

ii) effectively excludes on behalf of all Contributors all liability for damages, including direct, indirect, special, incidental and consequential damages, such as lost profits;

iii) states that any provisions which differ from this Agreement are offered by that Contributor alone and not by any other party; and

iv) states that source code for the Program is available from such Contributor, and informs licensees how to obtain it in a reasonable manner on or through a medium customarily used for software exchange.

When the Program is made available in source code form:

a) it must be made available under this Agreement; and

b) a copy of this Agreement must be included with each copy of the Program.

Contributors may not remove or alter any copyright notices contained within the Program.

Each Contributor must identify itself as the originator of its Contribution, if any, in a manner that reasonably allows subsequent Recipients to identify the originator of the Contribution.

4. COMMERCIAL DISTRIBUTION

Commercial distributors of software may accept certain responsibilities with respect to end users, business partners and the like. While this license is intended to facilitate the commercial use of the Program, the Contributor who includes the Program in a commercial product offering should do so in a manner which does not create potential liability for other Contributors. Therefore, if a Contributor includes the Program in a commercial product offering, such Contributor ("Commercial Contributor") hereby agrees to defend and indemnify every other Contributor ("Indemnified Contributor") against any losses, damages and costs (collectively "Losses") arising from claims, lawsuits and other legal actions
brought by a third party against the Indemnified Contributor to the extent caused by the acts or omissions of such Commercial Contributor in connection with its distribution of the Program in a commercial product offering. The obligations in this section do not apply to any claims or Losses relating to any actual or alleged intellectual property infringement. In order to qualify, an Indemnified Contributor must: a) promptly notify the Commercial Contributor in writing of such claim, and b) allow the Commercial Contributor to control, and cooperate with the Commercial Contributor in, the defense and any related settlement negotiations. The Indemnified Contributor may participate in any such claim at its own expense.

For example, a Contributor might include the Program in a commercial product offering, Product X. That Contributor is then a Commercial Contributor. If that Commercial Contributor then makes performance claims, or offers warranties related to Product X, those performance claims and warranties are such Commercial Contributor’s responsibility alone. Under this section, the Commercial Contributor would have to defend claims against the other Contributors related to those performance claims and warranties, and if a court requires any other Contributor to pay any damages as a result, the Commercial Contributor must pay those damages.

5. NO WARRANTY

EXCEPT AS EXPRESSLY SET FORTH IN THIS AGREEMENT, THE PROGRAM IS PROVIDED ON AN "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, EITHER EXPRESS OR IMPLIED INCLUDING, WITHOUT LIMITATION, ANY WARRANTIES OR CONDITIONS OF TITLE, NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. Each Recipient is solely responsible for determining the appropriateness of using and distributing the Program and assumes all risks associated with its exercise of rights under this Agreement, including but not limited to the risks and costs of program errors, compliance with applicable laws, damage to or loss of data, programs or equipment, and unavailability or interruption of operations.

6. DISCLAIMER OF LIABILITY

EXCEPT AS EXPRESSLY SET FORTH IN THIS AGREEMENT, NEITHER RECIPIENT NOR ANY CONTRIBUTORS SHALL HAVE ANY LIABILITY FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING WITHOUT LIMITATION LOST PROFITS), HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE USE OR DISTRIBUTION OF THE PROGRAM OR THE EXERCISE OF ANY RIGHTS GRANTED HEREUNDER, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

7. GENERAL
If any provision of this Agreement is invalid or unenforceable under applicable law, it shall not affect the validity or enforceability of the remainder of the terms of this Agreement, and without further action by the parties hereto, such provision shall be reformed to the minimum extent necessary to make such provision valid and enforceable.

If Recipient institutes patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Program itself (excluding combinations of the Program with other software or hardware) infringes such Recipient's patent(s), then such Recipient's rights granted under Section 2(b) shall terminate as of the date such litigation is filed.

All Recipient's rights under this Agreement shall terminate if it fails to comply with any of the material terms or conditions of this Agreement and does not cure such failure in a reasonable period of time after becoming aware of such noncompliance. If all Recipient's rights under this Agreement terminate, Recipient agrees to cease use and distribution of the Program as soon as reasonably practicable. However, Recipient's obligations under this Agreement and any licenses granted by Recipient relating to the Program shall continue and survive.

Everyone is permitted to copy and distribute copies of this Agreement, but in order to avoid inconsistency the Agreement is copyrighted and may only be modified in the following manner. The Agreement Steward reserves the right to publish new versions (including revisions) of this Agreement from time to time. No one other than the Agreement Steward has the right to modify this Agreement. The Eclipse Foundation is the initial Agreement Steward. The Eclipse Foundation may assign the responsibility to serve as the Agreement Steward to a suitable separate entity. Each new version of the Agreement will be given a distinguishing version number. The Program (including Contributions) may always be distributed subject to the version of the Agreement under which it was received. In addition, after a new version of the Agreement is published, Contributor may elect to distribute the Program (including its Contributions) under the new version. Except as expressly stated in Sections 2(a) and 2(b) above, Recipient receives no rights or licenses to the intellectual property of any Contributor under this Agreement, whether expressly, by implication, estoppel or otherwise. All rights in the Program not expressly granted under this Agreement are reserved.

This Agreement is governed by the laws of the State of New York and the intellectual property laws of the United States of America. No party to this Agreement will bring a legal action under this Agreement more than one year after the cause of action arose. Each party waives its rights to a jury trial in any resulting litigation.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.
2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with
the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or
Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices
stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the
Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes
of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and
(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity,
or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only
on Your own behalf and on Your sole responsibility, not on behalf
of any other Contributor, and only if You agree to indemnify,
defend, and hold each Contributor harmless for any liability
incurred by, or claims asserted against, such Contributor by reason
of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following
boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include
the brackets!) The text should be enclosed in the appropriate
comment syntax for the file format. We also recommend that a
file or class name and description of purpose be included on the
same "printed page" as the copyright notice for easier
identification within third-party archives.

Notice

Copyright (C) 1985-2015 by the Massachusetts Institute of Technology.

All rights reserved.

Redistribution and use in source and binary forms, with or without modification, are permitted provided that the following conditions are met:

- Redistributions of source code must retain the above copyright notice, this list of conditions and the following disclaimer.
- Redistributions in binary form must reproduce the above copyright notice, this list of conditions and the following disclaimer in the documentation and/or other materials provided with the distribution.

THIS SOFTWARE IS PROVIDED BY THE COPYRIGHT HOLDERS AND CONTRIBUTORS "AS IS" AND ANY EXPRESS OR IMPLIED WARRANTIES, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE ARE DISCLAIMED. IN NO EVENT SHALL THE COPYRIGHT HOLDER OR CONTRIBUTORS BE LIABLE FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING, BUT NOT LIMITED TO, PROCUREMENT OF SUBSTITUTE GOODS OR SERVICES; LOSS OF USE, DATA, OR PROFITS; OR BUSINESS INTERRUPTION) HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE USE OF THIS SOFTWARE, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGE.

Downloading of this software may constitute an export of cryptographic software from the United States of America that is subject to the United States Export Administration Regulations (EAR), 15 CFR 730-774.
Additional laws or regulations may apply. It is the responsibility of the person or entity contemplating export to comply with all applicable export laws and regulations, including obtaining any required license from the U.S. government.

The U.S. government prohibits export of encryption source code to certain countries and individuals, including, but not limited to, the countries of Cuba, Iran, North Korea, Sudan, Syria, and residents and nationals of those countries.

Documentation components of this software distribution are licensed under a Creative Commons Attribution-ShareAlike 3.0 Unported License.
(http://creativecommons.org/licenses/by-sa/3.0/)

Individual source code files are copyright MIT, Cygnus Support, Novell, OpenVision Technologies, Oracle, Red Hat, Sun Microsystems, FundsXpress, and others.

Project Athena, Athena, Athena MUSE, Discuss, Hesiod, Kerberos, Moira, and Zephyr are trademarks of the Massachusetts Institute of Technology (MIT). No commercial use of these trademarks may be made without prior written permission of MIT. "Commercial use" means use of a name in a product or other for-profit manner. It does NOT prevent a commercial firm from referring to the MIT trademarks in order to convey information (although in doing so, recognition of their trademark status should be given).

======================================================================

The following copyright and permission notice applies to the OpenVision Kerberos Administration system located in "kadmin/create", "kadmin/dbutil", "kadmin/passwd", "kadmin/server", "lib/kadm5", and portions of "lib/rpc":

WARNING: Retrieving the OpenVision Kerberos Administration system source code, as described below, indicates your acceptance of the following terms. If you do not agree to the following terms, do not retrieve the OpenVision Kerberos administration system. You may freely use and distribute the Source Code and Object Code compiled from it, with or without modification, but this Source Code is provided to you "AS IS" EXCLUSIVE OF ANY WARRANTY, INCLUDING, WITHOUT LIMITATION, ANY WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE, OR ANY OTHER WARRANTY, WHETHER EXPRESS OR IMPLIED. IN NO EVENT WILL OPENVISION HAVE ANY LIABILITY FOR ANY LOST PROFITS, LOSS OF DATA OR COSTS OF PROCUREMENT OF SUBSTITUTE GOODS OR SERVICES, OR FOR ANY SPECIAL, INDIRECT, OR CONSEQUENTIAL DAMAGES ARISING OUT OF THIS AGREEMENT, INCLUDING, WITHOUT LIMITATION, THOSE RESULTING FROM THE USE OF THE SOURCE CODE, OR THE FAILURE OF THE SOURCE CODE TO PERFORM, OR FOR ANY OTHER REASON.

OpenVision retains all copyrights in the donated Source Code.
OpenVision also retains copyright to derivative works of the Source Code, whether created by OpenVision or by a third party. The OpenVision copyright notice must be preserved if derivative works are made based on the donated Source Code.

OpenVision Technologies, Inc. has donated this Kerberos Administration system to MIT for inclusion in the standard Kerberos 5 distribution. This donation underscores our commitment to continuing Kerberos technology development and our gratitude for the valuable work which has been performed by MIT and the Kerberos community.

======================================================================
Portions contributed by Matt Crawford "crawdad@fnal.gov" were work performed at Fermi National Accelerator Laboratory, which is operated by Universities Research Association, Inc., under contract DE-AC02-76CHO3000 with the U.S. Department of Energy.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the
outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a
cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each
Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

See the License for the specific language governing permissions and limitations under the License.
LAPACK

Version: 3.4.0

Updated November 11, 2011

https://github.com/Reference-LAPACK

LAPACK is written in Fortran77 and provides routines for solving systems of simultaneous linear equations, least-squares solutions of linear systems of equations, eigenvalue problems, and singular value problems. The associated matrix factorizations (LU, Cholesky, QR, SVD, Schur, generalized Schur) are also provided, as are related computations such as reordering of the Schur factorizations and estimating condition numbers. Dense and banded matrices are handled, but not general sparse matrices. In all areas, similar functionality is provided for real and complex matrices, in both single and double precision. Vertica statically links this to other code (compiled code co-mingled in the same binary files).

libgfortran

Open source component version 4.8.2

Description

The libgfortran contains a Fortran shared library, needed to run Fortran dynamically-linked programs, required for the Vertica LAPACK library addition.

https://github.com/gcc-mirror/gcc/tree/master/libgfortran
License

The GNU General Public License (GPL) with Special Library Exception

The author has provided an exception to the GPL allowing the library to be linked with other programs provided that some specific conditions are met. Refer to the license text.

Preamble

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change free software--to make sure the software is free for all its users. This General Public License applies to most of the Free Software Foundation's software and to any other program whose authors commit to using it. (Some other Free Software Foundation software is covered by the GNU Library General Public License instead.) You can apply it to your programs, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs; and that you know you can do these things.

To protect your rights, we need to make restrictions that forbid anyone to deny you these rights or to ask you to surrender the rights. These restrictions translate to certain responsibilities for you if you distribute copies of the software, or if you modify it.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must give the recipients all the rights that you have. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

We protect your rights with two steps: (1) copyright the software, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the software.

Also, for each author's protection and ours, we want to make certain that everyone understands that there is no warranty for this free software. If the software is modified by someone else and passed on, we want its recipients to know that what they have is not the original, so that any problems introduced by others will not reflect on the original authors' reputations.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that redistributors of a free program will individually obtain patent licenses, in
effect making the program proprietary. To prevent this, we have made it clear that any patent must be licensed for everyone's free use or not licensed at all.

The precise terms and conditions for copying, distribution and modification follow.

TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License applies to any program or other work which contains a notice placed by the copyright holder saying it may be distributed under the terms of this General Public License. The "Program", below, refers to any such program or work, and a "work based on the Program" means either the Program or any derivative work under copyright law: that is to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another language. (Hereinafter, translation is included without limitation in the term "modification".) Each licensee is addressed as "you".

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running the Program is not restricted, and the output from the Program is covered only if its contents constitute a work based on the Program (independent of having been made by running the Program). Whether that is true depends on what the Program does.

1. You may copy and distribute verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and give any other recipients of the Program a copy of this License along with the Program.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Program or any portion of it, thus forming a work based on the Program, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

a) You must cause the modified files to carry prominent notices stating that you changed the files and the date of any change.

b) You must cause any work that you distribute or publish, that in whole or in part contains or is derived from the Program or any part thereof, to be licensed as a whole at no charge to all third parties under the terms of this License.

c) If the modified program normally reads commands interactively when run, you must cause it, when started running for such interactive use in the most ordinary way, to print or display an announcement including an appropriate copyright notice and a notice that there is no warranty (or else, saying that you provide a warranty) and that users may redistribute
the program under these conditions, and telling the user how to view a copy of this License. (Exception: if the Program itself is interactive but does not normally print such an announcement, your work based on the Program is not required to print an announcement.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Program, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Program, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Program.

In addition, mere aggregation of another work not based on the Program with the Program (or with a work based on the Program) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may copy and distribute the Program (or a work based on it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you also do one of the following:

a) Accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

b) Accompany it with a written offer, valid for at least three years, to give any third party, for a charge no more than your cost of physically performing source distribution, a complete machine-readable copy of the corresponding source code, to be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

c) Accompany it with the information you received as to the offer to distribute corresponding source code. (This alternative is allowed only for noncommercial distribution and only if you received the program in object code or executable form with such an offer, in accord with Subsection b above.)

The source code for a work means the preferred form of the work for making modifications to it. For an executable work, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the executable. However, as a special exception, the source code distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the
operating system on which the executable runs, unless that component itself accompanies the executable.

If distribution of executable or object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place counts as distribution of the source code, even though third parties are not compelled to copy the source along with the object code.

4. You may not copy, modify, sublicense, or distribute the Program except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense or distribute the Program is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

5. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Program or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Program (or any work based on the Program), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Program or works based on it.

6. Each time you redistribute the Program (or any work based on the Program), the recipient automatically receives a license from the original licensor to copy, distribute or modify the Program subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties to this License.

7. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Program at all. For example, if a patent license would not permit royalty-free redistribution of the Program by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Program.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system, which is implemented by
public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

8. If the distribution and/or use of the Program is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Program under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

9. The Free Software Foundation may publish revised and/or new versions of the General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of this License, you may choose any version ever published by the Free Software Foundation.

10. If you wish to incorporate parts of the Program into other free programs whose distribution conditions are different, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

NO WARRANTY

11. BECAUSE THE PROGRAM IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

12. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR
REDISTRIBUTE THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

libio

Version 1.0

Copyright (c) 2013 Joos Kiener <Joos.Kiener@gmail.com>

Description

IO: Classe(s) for improving IO in Java. Currently there is only 1 class in this library.

OptimizedRandomAccessFile: java.io.RandomAccessFile has a readLine() method with terrible performance. It reads files byte per byte and that is very slow.
OptimizedRandomAccessFile wraps java.io.RandomAccessFile and exposes all methods while having a readLine() method that performs similar to java.io.BufferedReader and hence about 100 times faster than that of java.io.RandomAccessFile while preserving correct random access.

This software consists of voluntary contributions made by many individuals (AUTHORS.txt, http://jqueryui.com/about) For exact contribution history, see the revision history and logs, available at http://jquery-ui.googlecode.com/svn/

Apache License
Version 2.0, January 2004
http://www.apache.org/licenses/

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain
separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its
distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this
License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

GNU GENERAL PUBLIC LICENSE Version 3, 29 June 2007

TERMS AND CONDITIONS

0. Definitions.

"This License" refers to version 3 of the GNU General Public License. "Copyright" also means copyright-like laws that apply to other kinds of works, such as semiconductor masks.

"The Program" refers to any copyrightable work licensed under this License. Each licensee is addressed as "you".

"Licensees" and "recipients" may be individuals or organizations. To "modify" a work means to copy from or adapt all or part of the work in a fashion requiring copyright permission, other than the making of an exact copy. The resulting work is called a "modified version" of the earlier work or a work "based on" the earlier work.

A "covered work" means either the unmodified Program or a work based on the Program.

To "propagate" a work means to do anything with it that, without permission, would make you directly or secondarily liable for infringement under applicable copyright law, except executing it on a computer or modifying a private copy. Propagation includes copying, distribution (with or without modification), making available to the public, and in some countries other activities as well.

To "convey" a work means any kind of propagation that enables other parties to make or receive copies. Mere interaction with a user through a computer network, with no transfer of a copy, is not conveying.

An interactive user interface displays "Appropriate Legal Notices" to the extent that it includes a convenient and prominently visible feature that (1) displays an appropriate copyright notice, and (2) tells the user that there is no warranty for the work (except to the extent that warranties are provided), that licensees may convey the work under this License, and how to view a copy of this License. If the interface presents a list of user commands or options, such as a menu, a prominent item in the list meets this criterion.

The "source code" for a work means the preferred form of the work for making modifications to it. "Object code" means any non-source form of a work.

A "Standard Interface" means an interface that either is an official standard defined by a recognized standards body, or, in the case of interfaces specified for a particular programming language, one that is widely used among developers working in that language.

The "System Libraries" of an executable work include anything, other than the work as a whole, that (a) is included in the normal form of packaging a Major Component, but which is not part of that Major Component, and (b) serves only to enable use of the work with that Major Component, or to implement a Standard Interface for which an implementation is available to the public in source code form. A "Major Component", in this context, means a major essential component (kernel, window system, and so on) of the specific operating system (if any) on which the executable work runs, or a compiler used to produce the work, or an object code interpreter used to run it.

The "Corresponding Source" for a work in object code form means all the source code needed to generate, install, and (for an executable work) run the object code and to modify the work, including scripts to control those activities. However, it does not include the work's System Libraries, or general-purpose tools or generally available free programs which are used unmodified in performing those activities but which are not part of the work. For example, Corresponding Source includes interface definition files associated with source files for he work, and the source code for shared libraries and dynamically linked subprograms that the work is specifically designed to require, such as by intimate data communication or control flow between those subprograms and other parts of the work.

The Corresponding Source need not include anything that users can regenerate automatically from other parts of the Corresponding Source. The Corresponding Source for a work in source code form is that same work.

2. Basic Permissions.

All rights granted under this License are granted for the term of copyright on the Program, and are irrevocable provided the stated conditions are met. This License explicitly affirms your unlimited permission to run the unmodified Program. The output from running a covered work is covered by this License only if the output, given its content, constitutes a covered work. This License acknowledges your rights of fair use or other equivalent, as provided by copyright law.

You may make, run and propagate covered works that you do not convey, without conditions so long as your license otherwise remains in force. You may convey covered works to others for the sole purpose of having them make modifications exclusively for you, or provide you with facilities for running those works, provided that you comply with the
terms of this License in conveying all material for which you do not control copyright. Those
thus making or running the covered works for you must do so exclusively on your behalf,
under your direction and control, on terms that prohibit them from making any copies of
your copyrighted material outside their relationship with you.

Conveying under any other circumstances is permitted solely under the conditions stated
below. Sublicensing is not allowed; section 10 makes it unnecessary.

3. Protecting Users' Legal Rights From Anti-Circumvention Law.

No covered work shall be deemed part of an effective technological measure under any
applicable law fulfilling obligations under article 11 of the WIPO copyright treaty adopted
on 20 December 1996, or similar laws prohibiting or restricting circumvention of such
measures. When you convey a covered work, you waive any legal power to forbid
circumvention of technological measures to the extent such circumvention is effected by
exercising rights under this License with respect to the covered work, and you disclaim any
intention to limit operation or modification of the work as a means of enforcing, against the
work's users, your or third parties' legal rights to forbid circumvention of technological
measures.

You may convey verbatim copies of the Program's source code as you receive it, in any
medium, provided that you conspicuously and appropriately publish on each copy an
appropriate copyright notice; keep intact all notices stating that this License and any non-
permissive terms added in accord with section 7 apply to the code; keep intact all notices of
the absence of any warranty; and give all recipients a copy of this License along with the
Program.

You may charge any price or no price for each copy that you convey, and you may offer
support or warranty protection for a fee.

5. Conveying Modified Source Versions.

You may convey a work based on the Program, or the modifications to produce it from the
Program, in the form of source code under the terms of section 4, provided that you also
meet all of these conditions:

a) The work must carry prominent notices stating that you modified it, and giving a relevant
date.

b) The work must carry prominent notices stating that it is released under this License and
any conditions added under section 7. This requirement modifies the requirement in section
4 to "keep intact all notices"
c) You must license the entire work, as a whole, under this License to anyone who comes into possession of a copy. This License will therefore apply, along with any applicable section 7 additional terms, to the whole of the work, and all its parts, regardless of how they are packaged. This License gives no permission to license the work in any other way, but it does not invalidate such permission if you have separately received it.

d) If the work has interactive user interfaces, each must display Appropriate Legal Notices; however, if the Program has interactive interfaces that do not display Appropriate Legal Notices, your work need not make them do so.

A compilation of a covered work with other separate and independent works, which are not by their nature extensions of the covered work, and which are not combined with it such as to form a larger program, in or on a volume of a storage or distribution medium, is called an "aggregate" if the compilation and its resulting copyright are not used to limit the access or legal rights of the compilation's users beyond what the individual works permit. Inclusion of a covered work in an aggregate does not cause this License to apply to the other parts of the aggregate.

6. Conveying Non-Source Forms.

You may convey a covered work in object code form under the terms of sections 4 and 5, provided that you also convey the machine-readable Corresponding Source under the terms of this License, in one of these ways:

a) Convey the object code in, or embodied in, a physical product (including a physical distribution medium), accompanied by the Corresponding Source fixed on a durable physical medium customarily used for software interchange.

b) Convey the object code in, or embodied in, a physical product (including a physical distribution medium), accompanied by a written offer, valid for at least three years and valid for as long as you offer spare parts or customer support for that product model, to give anyone who possesses the object code either (1) a copy of the Corresponding Source for all the software in the product that is covered by this License, on a durable physical medium customarily used for software interchange, for a price no more than your reasonable cost of physically performing this conveying of source, or (2) access to copy the Corresponding Source from a network server at no charge.

c) Convey individual copies of the object code with a copy of the written offer to provide the Corresponding Source. This alternative is allowed only occasionally and noncommercially, and only if you received the object code with such an offer, in accord with subsection 6b.

d) Convey the object code by offering access from a designated place (gratis or for a charge), and offer equivalent access to the Corresponding Source in the same way through the same place at no further charge. You need not require recipients to copy the Corresponding Source along with the object code. If the place to copy the object code is a
network server, the Corresponding Source may be on a different server (operated by you or a third party) that supports equivalent copying facilities, provided you maintain clear directions next to the object code saying where to find the Corresponding Source. Regardless of what server hosts the Corresponding Source, you remain obligated to ensure that it is available for as long as needed to satisfy these requirements.

e) Convey the object code using peer-to-peer transmission, provided you inform other peers where the object code and Corresponding Source of the work are being offered to the general public at nocharge under subsection 6d. A separable portion of the object code, whose source code is excluded from the Corresponding Source as a System Library, need not be included in conveying the object code work.

A "User Product" is either (1) a "consumer product", which means any tangible personal property which is normally used for personal, family, or household purposes, or (2) anything designed or sold for incorporation into a dwelling. In determining whether a product is a consumer product, doubtful cases shall be resolved in favor of coverage. For a particular product received by a particular user, "normally used" refers to a typical or common use of that class of product, regardless of the status of the particular user or of the way in which the particular user actually uses, or expects or is expected to use, the product. A product is a consumer product regardless of whether the product has substantial commercial, industrial or non-consumer uses, unless such uses represent the only significant mode of use of the product.

"Installation Information" for a User Product means any methods, procedures, authorization keys, or other information required to install and execute modified versions of a covered work in that User Product from a modified version of its Corresponding Source. The information must suffice to ensure that the continued functioning of the modified object code is in no case prevented or interfered with solely because modification has been made.

If you convey an object code work under this section in, or with, or specifically for use in, a User Product, and the conveying occurs as part of a transaction in which the right of possession and use of the User Product is transferred to the recipient in perpetuity or for a fixed term (regardless of how the transaction is characterized), the Corresponding Source conveyed under this section must be accompanied by the Installation Information. But this requirement does not apply if neither you nor any third party retains the ability to install modified object code on the User Product (for example, the work has been installed in ROM). The requirement to provide Installation Information does not include a requirement to continue to provide support service, warranty, or updates for a work that has been modified or installed by the recipient, or for the User Product in which it has been modified or installed. Access to a network may be denied when the modification itself materially and adversely affects the operation of the network or violates the rules and protocols for communication across the network.
Corresponding Source conveyed, and Installation Information provided, in accord with this section must be in a format that is publicly documented (and with an implementation available to the public in source code form), and must require no special password or key for unpacking, reading or copying.

7. Additional Terms.

"Additional permissions" are terms that supplement the terms of this License by making exceptions from one or more of its conditions. Additional permissions that are applicable to the entire Program shall be treated as though they were included in this License, to the extent that they are valid under applicable law. If additional permissions apply only to part of the Program, that part may be used separately under those permissions, but the entire Program remains governed by this License without regard to the additional permissions.

When you convey a copy of a covered work, you may at your option remove any additional permissions from that copy, or from any part of it. (Additional permissions may be written to require their own removal in certain cases when you modify the work.) You may place additional permissions on material, added by you to a covered work, for which you have or can give appropriate copyright permission. Notwithstanding any other provision of this License, for material you add to a covered work, you may (if authorized by the copyright holders of that material) supplement the terms of this License with terms.

a) Disclaiming warranty or limiting liability differently from the terms of sections 15 and 16 of this License; or

b) Requiring preservation of specified reasonable legal notices or author attributions in that material or in the Appropriate Legal Notices displayed by works containing it; or

c) Prohibiting misrepresentation of the origin of that material, or requiring that modified versions of such material be marked in reasonable ways as different from the original version; or

d) Limiting the use for publicity purposes of names of licensors or authors of the material; or

e) Declining to grant rights under trademark law for use of some trade names, trademarks, or service marks; or

f) Requiring indemnification of licensors and authors of that material by anyone who conveys the material (or modified versions of it) with contractual assumptions of liability to the recipient, for any liability that these contractual assumptions directly impose on those licensors and authors.

All other non-permissive additional terms are considered "further restrictions" within the meaning of section 10. If the Program as you received it, or any part of it, contains a notice
stating that it is governed by this License along with a term that is a further restriction, you may remove that term. If a license document contains a further restriction but permits relicensing or conveying under this License, you may add to a covered work material governed by the terms of that license document, provided that the further restriction does not survive such relicensing or conveying.

If you add terms to a covered work in accord with this section, you must place, in the relevant source files, a statement of the additional terms that apply to those files, or a notice indicating where to find the applicable terms.

Additional terms, permissive or non-permissive, may be stated in the form of a separately written license, or stated as exceptions; the above requirements apply either way.

8. Termination.

You may not propagate or modify a covered work except as expressly provided under this License. Any attempt otherwise to propagate or modify it is void, and will automatically terminate your rights under this License (including any patent licenses granted under the third paragraph of section 11).

However, if you cease all violation of this License, then your license from a particular copyright holder is reinstated (a) provisionally, unless and until the copyright holder explicitly and finally terminates your license, and (b) permanently, if the copyright holder fails to notify you of the violation by some reasonable means prior to 60 days after the cessation.

Moreover, your license from a particular copyright holder is reinstated permanently if the copyright holder notifies you of the violation by some reasonable means, this is the first time you have received notice of violation of this License (for any work) from that copyright holder, and you cure the violation prior to 30 days after your receipt of the notice.

Termination of your rights under this section does not terminate the licenses of parties who have received copies or rights from you under this License. If your rights have been terminated and not permanently reinstated, you do not qualify to receive new licenses for the same material under section 10.

You are not required to accept this License in order to receive or run a copy of the Program. Ancillary propagation of a covered work occurring solely as a consequence of using peer-to-peer transmission to receive a copy likewise does not require acceptance. However, nothing other than this License grants you permission to propagate or modify any covered work. These actions infringe copyright if you do not accept this License. Therefore, by modifying or propagating a covered work, you indicate your acceptance of this License to do so.
10. Automatic Licensing of Downstream Recipients.

Each time you convey a covered work, the recipient automatically receives a license from the original licensors, to run, modify and propagate that work, subject to this License. You are not responsible for enforcing compliance by third parties with this License.

An "entity transaction" is a transaction transferring control of an organization, or substantially all assets of one, or subdividing an organization, or merging organizations. If propagation of a covered work results from an entity transaction, each party to that transaction who receives a copy of the work also receives whatever licenses to the work the party's predecessor in interest had or could give under the previous paragraph, plus a right to possession of the Corresponding Source of the work from the predecessor in interest, if the predecessor has it or can get it with reasonable efforts.

You may not impose any further restrictions on the exercise of the rights granted or affirmed under this License. For example, you may not impose a license fee, royalty, or other charge for exercise of rights granted under this License, and you may not initiate litigation (including a cross-claim or counterclaim in a lawsuit) alleging that any patent claim is infringed by making, using, selling, offering for sale, or importing the Program or any portion of it.

11. Patents.

A "contributor" is a copyright holder who authorizes use under this License of the Program or a work on which the Program is based. The work thus licensed is called the contributor's "contributor version".

A contributor's "essential patent claims" are all patent claims owned or controlled by the contributor, whether already acquired or hereafter acquired, that would be infringed by some manner, permitted by this License, of making, using, or selling its contributor version, but do not include claims that would be infringed only as a consequence of further modification of the contributor version. For purposes of this definition, "control" includes the right to grant patent sublicenses in a manner consistent with the requirements of this License.

Each contributor grants you a non-exclusive, worldwide, royalty-free patent license under the contributor's essential patent claims, to make, use, sell, offer for sale, import and otherwise run, modify and propagate the contents of its contributor version.

In the following three paragraphs, a "patent license" is any express agreement or commitment, however denominated, not to enforce a patent (such as an express permission to practice a patent or covenant not to sue for patent infringement). To "grant" such a patent license to a party means to make such an agreement or commitment not to enforce a patent against the party.
If you convey a covered work, knowingly relying on a patent license, and the Corresponding Source of the work is not available for anyone to copy, free of charge and under the terms of this License, through a publicly available network server or other readily accessible means, then you must either (1) cause the Corresponding Source to be so available, or (2) arrange to deprive yourself of the benefit of the patent license for this particular work, or (3) arrange, in a manner consistent with the requirements of this License, to extend the patent license to downstream recipients. "Knowingly relying" means you have actual knowledge that, but for the patent license, your conveying the covered work in a country, or your recipient's use of the covered work in a country, would infringe one or more identifiable patents in that country that you have reason to believe are valid.

If, pursuant to or in connection with a single transaction or arrangement, you convey, or propagate by procuring conveyance of, a covered work, and grant a patent license to some of the parties receiving the covered work authorizing them to use, propagate, modify or convey a specific copy of the covered work, then the patent license you grant is automatically extended to all recipients of the covered work and works based on it.

A patent license is "discriminatory" if it does not include within the scope of its coverage, prohibits the exercise of, or is conditioned on the non-exercise of one or more of the rights that are specifically granted under this License. You may not convey a covered work if you are a party to an arrangement with a third party that is in the business of distributing software, under which you make payment to the third party based on the extent of your activity of conveying the work, and under which the third party grants, to any of the parties who would receive the covered work from you, a discriminatory patent license (a) in connection with copies of the covered work conveyed by you (or copies made from those copies), or (b) primarily for and in connection with specific products or compilations that contain the covered work, unless you entered into that arrangement, or that patent license was granted, prior to 28 March 2007.

Nothing in this License shall be construed as excluding or limiting any implied license or other defenses to infringement that may otherwise be available to you under applicable patent law.

If conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot convey a covered work so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not convey it at all. For example, if you agree to terms that obligate you to collect a royalty for further conveying from those to whom you convey the Program, the only way you could satisfy both those terms and this License would be to refrain entirely from conveying the Program.
13. Use with the GNU Affero General Public License.

Notwithstanding any other provision of this License, you have permission to link or combine any covered work with a work licensed under version 3 of the GNU Affero General Public License into a single combined work, and to convey the resulting work. The terms of this License will continue to apply to the part which is the covered work, but the special requirements of the GNU Affero General Public License, section 13, concerning interaction through a network will apply to the combination as such.

14. Revised Versions of this License.

The Free Software Foundation may publish revised and/or new versions of the GNU General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies that a certain numbered version of the GNU General Public License "or any later version" applies to it, you have the option of following the terms and conditions either of that numbered version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of the GNU General Public License, you may choose any version ever published by the Free Software Foundation. If the Program specifies that a proxy can decide which future versions of the GNU General Public License can be used, that proxy's public statement of acceptance of a version permanently authorizes you to choose that version for the Program. Later license versions may give you additional or different permissions. However, no additional obligations are imposed on any author or copyright holder as a result of your choosing to follow a later version.

15. Disclaimer of Warranty.

THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

16. Limitation of Liability.

IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MODIFIES AND/OR CONVEYS THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR
DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

17. Interpretation of Sections 15 and 16.

If the disclaimer of warranty and limitation of liability provided above cannot be given local legal effect according to their terms, reviewing courts shall apply local law that most closely approximates an absolute waiver of all civil liability in connection with the Program, unless a warranty or assumption of liability accompanies a copy of the Program in return for a fee.

Libopencsv-Java

Copyright © 1999-2012 The Apache Software Foundation. All Rights Reserved.

Version 2.3

https://packages.debian.org/sid/libopencsv-java

Description

opencsv - Library for reading and writing CSV in Java
Opencsv is a very simple csv (comma-separated values) parser library for Java. It supports all the basic csv-type things you're likely to want to do:

- Arbitrary numbers of values per line
- Ignoring commas in quoted elements
- Handling quoted entries with embedded carriage returns (ie entries that span multiple lines)
- Configurable separator and quote characters (or use sensible defaults)
- Read all the entries at once, or use an Iterator style model
- Creating csv files from String[] (ie. automatic escaping of embeddedquote chars)

License

Apache License
Version 2.0, January 2004
http://www.apache.org/licenses/

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes
of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and
(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NONINFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity,
or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

librdkafka-dev

Version 0.11.6

Copyright (c) 2012-2018, Magnus Edenhill

https://packages.debian.org/sid/librdkafka-dev

Description

Library implementing the Apache Kafka protocol (development headers), librdkafka is a C implementation of the Apache Kafka protocol. It currently implements the 0.8 version of the protocol and can be used to develop both Producers and Consumers.

More information about Apache Kafka can be found at http://kafka.apache.org/

This package contains the development headers.

libsnappy1

Version 1.1.2

Copyright (c) 2015

https://packages.debian.org/search?keywords=libsnappy1

Description

Snappy (libsnappy1) is a compression/decompression library. It does not aim for maximum compression, or compatibility with any other compression library; instead, it aims for very high speeds and reasonable compression. For instance, compared to the fastest mode of zlib, Snappy is an order of magnitude faster for most inputs, but the resulting compressed files are anywhere from 20% to 100% bigger. On a single core of a Core i7 processor in 64-bit mode, Snappy compresses at about 250 MB/sec or more and decompresses at about 500 MB/sec or more.
Snappy is widely used inside Google, in everything from BigTable and MapReduce to our internal RPC systems. (Snappy has previously been referred to as “Zippy” in some presentations and the likes.)

**Libhttpclient-Java**

Copyright © 1999-2012 The Apache Software Foundation. All Rights Reserved

Version 4.1.2

**License**

Apache License
Version 2.0, January 2004
[http://www.apache.org/licenses/](http://www.apache.org/licenses/)
1. Definitions.

“License” shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

“Licensor” shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

“Legal Entity” shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, “control” means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

“You” (or “Your”) shall mean an individual or Legal Entity exercising permissions granted by this License.

“Source” form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

“Object” form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

“Work” shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

“Derivative Works” shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

“Contribution” shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, “submitted” means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as “Not a Contribution.”

“Contributor” shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.
2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with
the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, and not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.
"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and
(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, OR FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special,
incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the
Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided
that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an “AS IS” BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, but not limited to, the warranties of MERCHANTABILITY, suitability, title, non-infringement, and the work is provided as-is without warranty of any kind, including but not limited to the warranties of merchantability, fitness for a particular purpose, and non-infringement. In no event unless required by applicable law or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or the use of the Work, even if such Contributor has been advised of the possibility of such damages.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental or consequential damages of any character arising as a result of this License or the use of the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "["]
libuv

Copyright 2015 Joyent, Inc, Node.js is a trademark of Joyent, Inc.

Version 1.0.0

Description

Platform layer for node.js.

libuv is a new platform layer for Node. Its purpose is to abstract IOCP on Windows and libev on Unix systems. We intend to eventually contain all platform differences in this library.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.
"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct
or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of Your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "["] replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to
communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution

notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of Your accepting any such warranty or additional liability.

Licenses

This repository uses 2 different licenses:

- all files in the `lib` directory use a BSD 2-Clause license
- all other files use a GPLv2 license, unless explicitly stated otherwise

Relevant license is reminded at the top of each source file, and with presence of COPYING or LICENSE file in associated directories.

This model is selected to emphasize that files in the `lib` directory are designed to be included into 3rd party applications, while all other files, in `programs`, `tests` or `examples`, receive more limited attention and support for such scenario.

BSD 2-clause "Simplified" License

All rights reserved.

The GNU General Public License (GPL) Version 2, June 1991

Copyright (C) 1989, 1991 Free Software Foundation, Inc. 59 Temple Place, Suite 330, Boston, MA 02111-1307 USA

Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

Preamble

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change free software--to make sure the software is free for all its users. This General Public License applies to most of the Free Software Foundation’s software and to any other program whose authors commit to using it. (Some other Free Software Foundation software is covered by the GNU Library General Public License instead.) You can apply it to your programs, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs; and that you know you can do these things.

To protect your rights, we need to make restrictions that forbid anyone to deny you these rights or to ask you to surrender the rights. These restrictions translate to certain responsibilities for you if you distribute copies of the software, or if you modify it.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must give the recipients all the rights that you have. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.
We protect your rights with two steps: (1) copyright the software, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the software.

Also, for each author's protection and ours, we want to make certain that everyone understands that there is no warranty for this free software. If the software is modified by someone else and passed on, we want its recipients to know that what they have is not the original, so that any problems introduced by others will not reflect on the original authors' reputations.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that redistributors of a free program will individually obtain patent licenses, in effect making the program proprietary. To prevent this, we have made it clear that any patent must be licensed for everyone's free use or not licensed at all.

The precise terms and conditions for copying, distribution and modification follow.

TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License applies to any program or other work which contains a notice placed by the copyright holder saying it may be distributed under the terms of this General Public License. The "Program", below, refers to any such program or work, and a "work based on the Program" means either the Program or any derivative work under copyright law: that is to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another language. (Hereinafter, translation is included without limitation in the term "modification".) Each licensee is addressed as "you".

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running the Program is not restricted, and the output from the Program is covered only if its contents constitute a work based on the Program (independent of having been made by running the Program). Whether that is true depends on what the Program does.

1. You may copy and distribute verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and give any other recipients of the Program a copy of this License along with the Program.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Program or any portion of it, thus forming a work based on the Program, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:
a) You must cause the modified files to carry prominent notices stating that you changed the files and the date of any change.

b) You must cause any work that you distribute or publish, that in whole or in part contains or is derived from the Program or any part thereof, to be licensed as a whole at no charge to all third parties under the terms of this License.

c) If the modified program normally reads commands interactively when run, you must cause it, when started running for such interactive use in the most ordinary way, to print or display an announcement including an appropriate copyright notice and a notice that there is no warranty (or else, saying that you provide a warranty) and that users may redistribute the program under these conditions, and telling the user how to view a copy of this License. (Exception: if the Program itself is interactive but does not normally print such an announcement, your work based on the Program is not required to print an announcement.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Program, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Program, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Program.

In addition, mere aggregation of another work not based on the Program (or with a work based on the Program) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may copy and distribute the Program (or a work based on it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you also do one of the following:

a) Accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

b) Accompany it with a written offer, valid for at least three years, to give any third party, for a charge no more than your cost of physically performing source distribution, a complete machine-readable copy of the corresponding source code, to be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,
c) Accompany it with the information you received as to the offer to distribute
    corresponding source code. (This alternative is allowed only for noncommercial distribution
    and only if you received the program in object code or executable form with such an offer,
    in accord with Subsection b above.)

    The source code for a work means the preferred form of the work for making modifications
    to it. For an executable work, complete source code means all the source code for all
    modules it contains, plus any associated interface definition files, plus the scripts used to
    control compilation and installation of the executable. However, as a special exception, the
    source code distributed need not include anything that is normally distributed (in either
    source or binary form) with the major components (compiler, kernel, and so on) of the
    operating system on which the executable runs, unless that component itself accompanies
    the executable.

    If distribution of executable or object code is made by offering access to copy from a
    designated place, then offering equivalent access to copy the source code from the same
    place counts as distribution of the source code, even though third parties are not compelled
    to copy the source along with the object code.

4. You may not copy, modify, sublicense, or distribute the Program except as expressly
    provided under this License. Any attempt otherwise to copy, modify, sublicense or distribute
    the Program is void, and will automatically terminate your rights under this License.
    However, parties who have received copies, or rights, from you under this License will not
    have their licenses terminated so long as such parties remain in full compliance.

5. You are not required to accept this License, since you have not signed it. However,
    nothing else grants you permission to modify or distribute the Program or its derivative
    works. These actions are prohibited by law if you do not accept this License. Therefore, by
    modifying or distributing the Program (or any work based on the Program), you indicate
    your acceptance of this License to do so, and all its terms and conditions for copying,
    distributing or modifying the Program or works based on it.

6. Each time you redistribute the Program (or any work based on the Program), the
    recipient automatically receives a license from the original licensor to copy, distribute or
    modify the Program subject to these terms and conditions. You may not impose any further
    restrictions on the recipients' exercise of the rights granted herein. You are not responsible
    for enforcing compliance by third parties to this License.

7. If, as a consequence of a court judgment or allegation of patent infringement or for any
    other reason (not limited to patent issues), conditions are imposed on you (whether by
    court order, agreement or otherwise) that contradict the conditions of this License, they do
    not excuse you from the conditions of this License. If you cannot distribute so as to satisfy
    simultaneously your obligations under this License and any other pertinent obligations, then
    as a consequence you may not distribute the Program at all. For example, if a patent
license would not permit royalty-free redistribution of the Program by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Program.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system, which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

8. If the distribution and/or use of the Program is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Program under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

9. The Free Software Foundation may publish revised and/or new versions of the General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of this License, you may choose any version ever published by the Free Software Foundation.

10. If you wish to incorporate parts of the Program into other free programs whose distribution conditions are different, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

NO WARRANTY
11. BECAUSE THE PROGRAM IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

12. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

Math-Atlas

Open source component version: 3.11.30

Vertica LAPACK library addition. ATLAS (Automatically Tuned Linear Algebra Software) provides optimized Linear Algebra kernels for arbitrary cache-based architectures. ATLAS provides ANSI C and Fortran77 interfaces for the entire BLAS API, and a small portion of the LAPACK AP.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or
otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You
institute patent litigation against any entity (including a
cross-claim or counterclaim in a lawsuit) alleging that the Work
or a Contribution incorporated within the Work constitutes direct
or contributory patent infringement, then any patent licenses
granted to You under this License for that Work shall terminate
as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the
Work or Derivative Works thereof in any medium, with or without
modifications, and in Source or Object form, provided that You
meet the following conditions:

(a) You must give any other recipients of the Work or
Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices
stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works
that You distribute, all copyright, patent, trademark, and
attribution notices from the Source form of the Work,
excluding those notices that do not pertain to any part of
the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its
distribution, then any Derivative Works that You distribute must
include a readable copy of the attribution notices contained
within such NOTICE file, excluding those notices that do not
pertain to any part of the Derivative Works, in at least one
of the following places: within a NOTICE text file distributed
as part of the Derivative Works; within the Source form or
documentation, if provided along with the Derivative Works; or,
within a display generated by the Derivative Works, if and
wherever such third-party notices normally appear. The contents
of the NOTICE file are for informational purposes only and
do not modify the License. You may add Your own attribution
notices within Derivative Works that You distribute, alongside
or as an addendum to the NOTICE text from the Work, provided
that such additional attribution notices cannot be construed
as modifying the License.

You may add Your own copyright statement to Your modifications and
may provide additional or different license terms and conditions
for use, reproduction, or distribution of Your modifications, or
for any such Derivative Works as a whole, provided Your use,
reproduction, and distribution of the Work otherwise complies with
the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,
any Contribution intentionally submitted for inclusion in the Work
by You to the Licensor shall be under the terms and conditions of
this License, without any additional terms or conditions.
Notwithstanding the above, nothing herein shall supersede or modify
the terms of any separate license agreement you may have executed
with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade
names, trademarks, service marks, or product names of the Licensor,
except as required for reasonable and customary use in describing
the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or
agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NONINFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation
source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the
Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.
8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the
Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided
that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

Copyright (c) 2013-2018 Azul Systems

https://www.azul.com/downloads/zulu/

OpenJDK Trademark Notice

Version 1.21, 2017/12/19

OpenJDK (the "Name") is a trademark of Oracle America, Inc. ("Oracle") (the "Trademark Owner").

Trademark Owner publishes source code (the "Original Software") at several World Wide Web locations (each a "Website"). These locations include:

http://download.java.net/openjdk/jdk6
http://download.java.net/openjdk/jdk7
http://download.java.net/openjdk/jdk8
http://hg.openjdk.java.net/jdk6
http://hg.openjdk.java.net/jdk7
http://hg.openjdk.java.net/jdk8u
http://hg.openjdk.java.net/jdk9
http://hg.openjdk.java.net/jdk10
as well as any successor locations designated by Trademark Owner in future revisions of this Notice.

Each Website provides Original Software in two parts: A Java virtual machine (the "Virtual Machine") and an API library and tools (the "Library and Tools").

Trademark Owner permits any person obtaining a copy of this software (the "Software") that is based on Original Software to use the Name in the package names and version strings of the Software subject to the following conditions:

(1) The Software is a substantially complete implementation of the OpenJDK development kit or runtime environment source code retrieved from a single Website, and the vast majority of the Software code is identical to that upstream Original Software, except that:

(a) Changes required to port Original Software to new operating systems or hardware architectures are permitted, so long as that work takes place in the context of an approved Project hosted in the OpenJDK Community; and

(b) A Virtual Machine from one Website may be combined with the Library and Tools of another Website, so long as the vast majority of the code in each is identical to the corresponding upstream Virtual Machine or Library and Tools component.

(2) No permission is hereby granted to use the Name in any other manner, unless such use constitutes "fair use", for example "based on the OpenJDK source code" or "DistroXYZ's packaging of the OpenJDK 6 code".

(3) Trademark Owner makes no warranties of any kind respecting the Name, and all representations and warranties, including any implied warranty of merchantability, fitness for a particular purpose or non-infringement are hereby disclaimed.

(4) Finally, this notice and the following legend are included in all copies of the Software or portions of it:

Java and OpenJDK are trademarks or registered trademarks of Oracle and/or its affiliates.

Trademark Owner intends to revise this Notice as necessary in order to meet the needs of the OpenJDK Community. Revisions to this notice will be announced on the public mailing list announce at openjdk.java.net, to which you may subscribe by visiting http://mail.openjdk.java.net. Please send questions or comments about this Notice to the discuss list at the same location.

Version 2.3

**License**

Apache License  
Version 2.0, January 2004  
http://www.apache.org/licenses/

**TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION**

1. **Definitions.**

   "License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

   "Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

   "Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

   "You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

   "Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

   "Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

   "Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

   "Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.
"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not
pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify,
defend, and hold each Contributor harmless for any liability
incurred by, or claims asserted against, such Contributor by reason
of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following
boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include
the brackets!) The text should be enclosed in the appropriate
comment syntax for the file format. We also recommend that a
file or class name and description of purpose be included on the
same "printed page" as the copyright notice for easier
identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.
"Licenser" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licenser for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licenser or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licenser for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licenser and any individual or Legal Entity on behalf of whom a Contribution has been received by Licenser and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of
this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed
with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of Your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction,
and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by
the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all
other entities that control, are controlled by, or are under common
control with that entity. For the purposes of this definition,
"control" means (i) the power, direct or indirect, to cause the
direction or management of such entity, whether by contract or
otherwise, or (ii) ownership of fifty percent (50%) or more of the
outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity
exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications,
including but not limited to software source code, documentation
source, and configuration files.

"Object" form shall mean any form resulting from mechanical
transformation or translation of a Source form, including but
not limited to compiled object code, generated documentation,
and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or
Object form, made available under the License, as indicated by a
copyright notice that is included in or attached to the work
(an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object
form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work,
excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided You do not modify the License. For example, You may add Your own copyright statement to works made available under the License, along with a statement as to who You modified the Work and the date of any modification. You may provide Your own notice along with the Original Software, or you may copy and add to the end of the license text of the Original Software an additional notice as to location where the Original Software is found.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.
9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by
the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual,
worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.
6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of Your accepting any such warranty or additional liability.

Unless required by applicable law or agreed to in writing, software distributed under the License is distributed on an "AS IS" BASIS,
License

THE ACCOMPANYING PROGRAM IS PROVIDED UNDER THE TERMS OF THIS ECLIPSE PUBLIC LICENSE ("AGREEMENT"). ANY USE, REPRODUCTION OR DISTRIBUTION OF THE PROGRAM CONSTITUTES RECIPIENT'S ACCEPTANCE OF THIS AGREEMENT.

1. DEFINITIONS

"Contribution" means:

a) in the case of the initial Contributor, the initial code and documentation distributed under this Agreement, and

b) in the case of each subsequent Contributor:

i) changes to the Program, and

ii) additions to the Program;

where such changes and/or additions to the Program originate from and are distributed by that particular Contributor. A Contribution 'originates' from a Contributor if it was added to the Program by such Contributor itself or anyone acting on such Contributor's behalf. Contributions do not include additions to the Program which: (i) are separate modules of software distributed in conjunction with the Program under their own license agreement, and (ii) are not derivative works of the Program.

"Contributor" means any person or entity that distributes the Program.

"Licensed Patents" mean patent claims licensable by a Contributor which are necessarily infringed by the use or sale of its Contribution alone or when combined with the Program.

"Program" means the Contributions distributed in accordance with this Agreement.

"Recipient" means anyone who receives the Program under this Agreement, including all Contributors.

2. GRANT OF RIGHTS
a) Subject to the terms of this Agreement, each Contributor hereby grants Recipient a non-exclusive, worldwide, royalty-free copyright license to reproduce, prepare derivative works of, publicly display, publicly perform, distribute and sublicense the Contribution of such Contributor, if any, and such derivative works, in source code and object code form.

b) Subject to the terms of this Agreement, each Contributor hereby grants Recipient a non-exclusive, worldwide, royalty-free patent license under Licensed Patents to make, use, sell, offer to sell, import and otherwise transfer the Contribution of such Contributor, if any, in source code and object code form. This patent license shall apply to the combination of the Contribution and the Program if, at the time the Contribution is added by the Contributor, such addition of the Contribution causes such combination to be covered by the Licensed Patents. The patent license shall not apply to any other combinations which include the Contribution. No hardware per se is licensed hereunder.

c) Recipient understands that although each Contributor grants the licenses to its Contributions set forth herein, no assurances are provided by any Contributor that the Program does not infringe the patent or other intellectual property rights of any other entity. Each Contributor disclaims any liability to Recipient for claims brought by any other entity based on infringement of intellectual property rights or otherwise. As a condition to exercising the rights and licenses granted hereunder, each Recipient hereby assumes sole responsibility to secure any other intellectual property rights needed, if any. For example, if a third party patent license is required to allow Recipient to distribute the Program, it is Recipient’s responsibility to acquire that license before distributing the Program.

d) Each Contributor represents that to its knowledge it has sufficient copyright rights in its Contribution, if any, to grant the copyright license set forth in this Agreement.

3. REQUIREMENTS

A Contributor may choose to distribute the Program in object code form under its own license agreement, provided that:

a) it complies with the terms and conditions of this Agreement; and

b) its license agreement:

i) effectively disclaims on behalf of all Contributors all warranties and conditions, express and implied, including warranties or conditions of title and non-infringement, and implied warranties or conditions of merchantability and fitness for a particular purpose;

ii) effectively excludes on behalf of all Contributors all liability for damages, including direct, indirect, special, incidental and consequential damages, such as lost profits;

iii) states that any provisions which differ from this Agreement are offered by that Contributor alone and not by any other party; and
iv) states that source code for the Program is available from such Contributor, and informs licensees how to obtain it in a reasonable manner on or through a medium customarily used for software exchange.

When the Program is made available in source code form:

a) it must be made available under this Agreement; and

b) a copy of this Agreement must be included with each copy of the Program.

Contributors may not remove or alter any copyright notices contained within the Program.

Each Contributor must identify itself as the originator of its Contribution, if any, in a manner that reasonably allows subsequent Recipients to identify the originator of the Contribution.

4. COMMERCIAL DISTRIBUTION

Commercial distributors of software may accept certain responsibilities with respect to end users, business partners and the like. While this license is intended to facilitate the commercial use of the Program, the Contributor who includes the Program in a commercial product offering should do so in a manner which does not create potential liability for other Contributors. Therefore, if a Contributor includes the Program in a commercial product offering, such Contributor ("Commercial Contributor") hereby agrees to defend and indemnify every other Contributor ("Indemnified Contributor") against any losses, damages and costs (collectively "Losses") arising from claims, lawsuits and other legal actions brought by a third party against the Indemnified Contributor to the extent caused by the acts or omissions of such Commercial Contributor in connection with its distribution of the Program in a commercial product offering. The obligations in this section do not apply to any claims or Losses relating to any actual or alleged intellectual property infringement. In order to qualify, an Indemnified Contributor must: a) promptly notify the Commercial Contributor in writing of such claim, and b) allow the Commercial Contributor to control, and cooperate with the Commercial Contributor in, the defense and any related settlement negotiations. The Indemnified Contributor may participate in any such claim at its own expense.

For example, a Contributor might include the Program in a commercial product offering, Product X. That Contributor is then a Commercial Contributor. If that Commercial Contributor then makes performance claims, or offers warranties related to Product X, those performance claims and warranties are such Commercial Contributor’s responsibility alone. Under this section, the Commercial Contributor would have to defend claims against the other Contributors related to those performance claims and warranties, and if a court requires any other Contributor to pay any damages as a result, the Commercial Contributor must pay those damages.

5. NO WARRANTY
EXCEPT AS EXPRESSLY SET FORTH IN THIS AGREEMENT, THE PROGRAM IS PROVIDED ON AN "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, EITHER EXPRESS OR IMPLIED INCLUDING, WITHOUT LIMITATION, ANY WARRANTIES OR CONDITIONS OF TITLE, NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. Each Recipient is solely responsible for determining the appropriateness of using and distributing the Program and assumes all risks associated with its exercise of rights under this Agreement, including but not limited to the risks and costs of program errors, compliance with applicable laws, damage to or loss of data, programs or equipment, and unavailability or interruption of operations.

6. DISCLAIMER OF LIABILITY

EXCEPT AS EXPRESSLY SET FORTH IN THIS AGREEMENT, NEITHER RECIPIENT NOR ANY CONTRIBUTORS SHALL HAVE ANY LIABILITY FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING WITHOUT LIMITATION LOST PROFITS), HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE USE OR DISTRIBUTION OF THE PROGRAM OR THE EXERCISE OF ANY RIGHTS GRANTED HEREUNDER, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

7. GENERAL

If any provision of this Agreement is invalid or unenforceable under applicable law, it shall not affect the validity or enforceability of the remainder of the terms of this Agreement, and without further action by the parties hereto, such provision shall be reformed to the minimum extent necessary to make such provision valid and enforceable.

If Recipient institutes patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Program itself (excluding combinations of the Program with other software or hardware) infringes such Recipient's patent(s), then such Recipient's rights granted under Section 2(b) shall terminate as of the date such litigation is filed.

All Recipient's rights under this Agreement shall terminate if it fails to comply with any of the material terms or conditions of this Agreement and does not cure such failure in a reasonable period of time after becoming aware of such noncompliance. If all Recipient's rights under this Agreement terminate, Recipient agrees to cease use and distribution of the Program as soon as reasonably practicable. However, Recipient's obligations under this Agreement and any licenses granted by Recipient relating to the Program shall continue and survive.

Everyone is permitted to copy and distribute copies of this Agreement, but in order to avoid inconsistency the Agreement is copyrighted and may only be modified in the following
manner. The Agreement Steward reserves the right to publish new versions (including revisions) of this Agreement from time to time. No one other than the Agreement Steward has the right to modify this Agreement. The Eclipse Foundation is the initial Agreement Steward. The Eclipse Foundation may assign the responsibility to serve as the Agreement Steward to a suitable separate entity. Each new version of the Agreement will be given a distinguishing version number. The Program (including Contributions) may always be distributed subject to the version of the Agreement under which it was received. In addition, after a new version of the Agreement is published, Contributor may elect to distribute the Program (including its Contributions) under the new version. Except as expressly stated in Sections 2(a) and 2(b) above, Recipient receives no rights or licenses to the intellectual property of any Contributor under this Agreement, whether expressly, by implication, estoppel or otherwise. All rights in the Program not expressly granted under this Agreement are reserved.

This Agreement is governed by the laws of the State of New York and the intellectual property laws of the United States of America. No party to this Agreement will bring a legal action under this Agreement more than one year after the cause of action arose. Each party waives its rights to a jury trial in any resulting litigation.

i) changes to the Program, and

ii) additions to the Program;
where such changes and/or additions to the Program originate from and are distributed by that particular Contributor. A Contribution 'originates' from a Contributor if it was added to the Program by such Contributor itself or anyone acting on such Contributor's behalf. Contributions do not include additions to the Program which: (i) are separate modules of software distributed in conjunction with the Program under their own license agreement, and (ii) are not derivative works of the Program.

"Contributor" means any person or entity that distributes the Program.

"Licensed Patents" mean patent claims licensable by a Contributor which are necessarily infringed by the use or sale of its Contribution alone or when combined with the Program.

"Program" means the Contributions distributed in accordance with this Agreement.

"Recipient" means anyone who receives the Program under this Agreement, including all Contributors.

2. GRANT OF RIGHTS

a) Subject to the terms of this Agreement, each Contributor hereby grants Recipient a non-exclusive, worldwide, royalty-free copyright license to reproduce, prepare derivative works of, publicly display, publicly perform, distribute and sublicense the Contribution of such Contributor, if any, and such derivative works, in source code and object code form.

b) Subject to the terms of this Agreement, each Contributor hereby grants Recipient a non-exclusive, worldwide, royalty-free patent license under Licensed Patents to make, use, sell, offer to sell, import and otherwise transfer the Contribution of such Contributor, if any, in source code and object code form. This patent license shall apply to the combination of the Contribution and the Program if, at the time the Contribution is added by the Contributor, such addition of the Contribution causes such combination to be covered by the Licensed Patents. The patent license shall not apply to any other combinations which include the Contribution. No hardware per se is licensed hereunder.

c) Recipient understands that although each Contributor grants the licenses to its Contributions set forth herein, no assurances are provided by any Contributor that the Program does not infringe the patent or other intellectual property rights of any other entity. Each Contributor disclaims any liability to Recipient for claims brought by any other entity based on infringement of intellectual property rights or otherwise. As a condition to exercising the rights and licenses granted hereunder, each Recipient hereby assumes sole responsibility to secure any other intellectual property rights needed, if any. For example, if a third party patent license is required to allow Recipient to distribute the Program, it is Recipient's responsibility to acquire that license before distributing the Program.

d) Each Contributor represents that to its knowledge it has sufficient copyright rights in its Contribution, if any, to grant the copyright license set forth in this Agreement.
3. REQUIREMENTS

A Contributor may choose to distribute the Program in object code form under its own license agreement, provided that:

a) it complies with the terms and conditions of this Agreement; and

b) its license agreement:

i) effectively disclaims on behalf of all Contributors all warranties and conditions, express and implied, including warranties or conditions of title and non-infringement, and implied warranties or conditions of merchantability and fitness for a particular purpose;

ii) effectively excludes on behalf of all Contributors all liability for damages, including direct, indirect, special, incidental and consequential damages, such as lost profits;

iii) states that any provisions which differ from this Agreement are offered by that Contributor alone and not by any other party; and

iv) states that source code for the Program is available from such Contributor, and informs licensees how to obtain it in a reasonable manner on or through a medium customarily used for software exchange.

When the Program is made available in source code form:

a) it must be made available under this Agreement; and

b) a copy of this Agreement must be included with each copy of the Program.

Contributors may not remove or alter any copyright notices contained within the Program.

Each Contributor must identify itself as the originator of its Contribution, if any, in a manner that reasonably allows subsequent Recipients to identify the originator of the Contribution.

4. COMMERCIAL DISTRIBUTION

Commercial distributors of software may accept certain responsibilities with respect to end users, business partners and the like. While this license is intended to facilitate the commercial use of the Program, the Contributor who includes the Program in a commercial product offering should do so in a manner which does not create potential liability for other Contributors. Therefore, if a Contributor includes the Program in a commercial product offering, such Contributor ("Commercial Contributor") hereby agrees to defend and indemnify every other Contributor ("Indemnified Contributor") against any losses, damages and costs (collectively "Losses") arising from claims, lawsuits and other legal actions brought by a third party against the Indemnified Contributor to the extent caused by the acts or omissions of such Commercial Contributor in connection with its distribution of the
Program in a commercial product offering. The obligations in this section do not apply to any claims or Losses relating to any actual or alleged intellectual property infringement. In order to qualify, an Indemnified Contributor must: a) promptly notify the Commercial Contributor in writing of such claim, and b) allow the Commercial Contributor to control, and cooperate with the Commercial Contributor in, the defense and any related settlement negotiations. The Indemnified Contributor may participate in any such claim at its own expense.

For example, a Contributor might include the Program in a commercial product offering, Product X. That Contributor is then a Commercial Contributor. If that Commercial Contributor then makes performance claims, or offers warranties related to Product X, those performance claims and warranties are such Commercial Contributor’s responsibility alone. Under this section, the Commercial Contributor would have to defend claims against the other Contributors related to those performance claims and warranties, and if a court requires any other Contributor to pay any damages as a result, the Commercial Contributor must pay those damages.

5. NO WARRANTY

EXCEPT AS EXPRESSLY SET FORTH IN THIS AGREEMENT, THE PROGRAM IS PROVIDED ON AN "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, EITHER EXPRESS OR IMPLIED INCLUDING, WITHOUT LIMITATION, ANY WARRANTIES OR CONDITIONS OF TITLE, NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. Each Recipient is solely responsible for determining the appropriateness of using and distributing the Program and assumes all risks associated with its exercise of rights under this Agreement, including but not limited to the risks and costs of program errors, compliance with applicable laws, damage to or loss of data, programs or equipment, and unavailability or interruption of operations.

6. DISCLAIMER OF LIABILITY

EXCEPT AS EXPRESSLY SET FORTH IN THIS AGREEMENT, NEITHER RECIPIENT NOR ANY CONTRIBUTORS SHALL HAVE ANY LIABILITY FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING WITHOUT LIMITATION LOST PROFITS), HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE USE OR DISTRIBUTION OF THE PROGRAM OR THE EXERCISE OF ANY RIGHTS GRANTED HEREUNDER, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

7. GENERAL

If any provision of this Agreement is invalid or unenforceable under applicable law, it shall not affect the validity or enforceability of the remainder of the terms of this Agreement,
and without further action by the parties hereto, such provision shall be reformed to the minimum extent necessary to make such provision valid and enforceable.

If Recipient institutes patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Program itself (excluding combinations of the Program with other software or hardware) infringes such Recipient's patent(s), then such Recipient's rights granted under Section 2(b) shall terminate as of the date such litigation is filed.

All Recipient's rights under this Agreement shall terminate if it fails to comply with any of the material terms or conditions of this Agreement and does not cure such failure in a reasonable period of time after becoming aware of such noncompliance. If all Recipient's rights under this Agreement terminate, Recipient agrees to cease use and distribution of the Program as soon as reasonably practicable. However, Recipient's obligations under this Agreement and any licenses granted by Recipient relating to the Program shall continue and survive.

Everyone is permitted to copy and distribute copies of this Agreement, but in order to avoid inconsistency the Agreement is copyrighted and may only be modified in the following manner. The Agreement Steward reserves the right to publish new versions (including revisions) of this Agreement from time to time. No one other than the Agreement Steward has the right to modify this Agreement. The Eclipse Foundation is the initial Agreement Steward. The Eclipse Foundation may assign the responsibility to serve as the Agreement Steward to a suitable separate entity. Each new version of the Agreement will be given a distinguishing version number. The Program (including Contributions) may always be distributed subject to the version of the Agreement under which it was received. In addition, after a new version of the Agreement is published, Contributor may elect to distribute the Program (including its Contributions) under the new version. Except as expressly stated in Sections 2(a) and 2(b) above, Recipient receives no rights or licenses to the intellectual property of any Contributor under this Agreement, whether expressly, by implication, estoppel or otherwise. All rights in the Program not expressly granted under this Agreement are reserved.

This Agreement is governed by the laws of the State of New York and the intellectual property laws of the United States of America. No party to this Agreement will bring a legal action under this Agreement more than one year after the cause of action arose. Each party waives its rights to a jury trial in any resulting litigation.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the
Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided
that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]"
replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.
"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate. 
as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

License

THE ACCOMPANYING PROGRAM IS PROVIDED UNDER THE TERMS OF THIS ECLIPSE PUBLIC LICENSE ("AGREEMENT"). ANY USE, REPRODUCTION OR DISTRIBUTION OF THE PROGRAM CONSTITUTES RECIPIENT'S ACCEPTANCE OF THIS AGREEMENT.

1. DEFINITIONS

"Contribution" means:

a) in the case of the initial Contributor, the initial code and documentation distributed under this Agreement, and

b) in the case of each subsequent Contributor:

i) changes to the Program, and

ii) additions to the Program;

where such changes and/or additions to the Program originate from and are distributed by that particular Contributor. A Contribution 'originates' from a Contributor if it was added to the Program by such Contributor itself or anyone acting on such Contributor's behalf. Contributions do not include additions to the Program which: (i) are separate modules of software distributed in conjunction with the Program under their own license agreement, and (ii) are not derivative works of the Program.

"Contributor" means any person or entity that distributes the Program.

"Licensed Patents" mean patent claims licensable by a Contributor which are necessarily infringed by the use or sale of its Contribution alone or when combined with the Program.

"Program" means the Contributions distributed in accordance with this Agreement.

"Recipient" means anyone who receives the Program under this Agreement, including all Contributors.

2. GRANT OF RIGHTS

a) Subject to the terms of this Agreement, each Contributor hereby grants Recipient a non-exclusive, worldwide, royalty-free copyright license to reproduce, prepare derivative works of, publicly display, publicly perform, distribute and sublicense the Contribution of such Contributor, if any, and such derivative works, in source code and object code form.

b) Subject to the terms of this Agreement, each Contributor hereby grants Recipient a non-exclusive, worldwide, royalty-free patent license under Licensed Patents to make, use, sell,
offer to sell, import and otherwise transfer the Contribution of such Contributor, if any, in source code and object code form. This patent license shall apply to the combination of the Contribution and the Program if, at the time the Contribution is added by the Contributor, such addition of the Contribution causes such combination to be covered by the Licensed Patents. The patent license shall not apply to any other combinations which include the Contribution. No hardware per se is licensed hereunder.

c) Recipient understands that although each Contributor grants the licenses to its Contributions set forth herein, no assurances are provided by any Contributor that the Program does not infringe the patent or other intellectual property rights of any other entity. Each Contributor disclaims any liability to Recipient for claims brought by any other entity based on infringement of intellectual property rights or otherwise. As a condition to exercising the rights and licenses granted hereunder, each Recipient hereby assumes sole responsibility to secure any other intellectual property rights needed, if any. For example, if a third party patent license is required to allow Recipient to distribute the Program, it is Recipient's responsibility to acquire that license before distributing the Program.

d) Each Contributor represents that to its knowledge it has sufficient copyright rights in its Contribution, if any, to grant the copyright license set forth in this Agreement.

3. REQUIREMENTS

A Contributor may choose to distribute the Program in object code form under its own license agreement, provided that:

a) it complies with the terms and conditions of this Agreement; and

b) its license agreement:

i) effectively disclaims on behalf of all Contributors all warranties and conditions, express and implied, including warranties or conditions of title and non-infringement, and implied warranties or conditions of merchantability and fitness for a particular purpose;

ii) effectively excludes on behalf of all Contributors all liability for damages, including direct, indirect, special, incidental and consequential damages, such as lost profits;

iii) states that any provisions which differ from this Agreement are offered by that Contributor alone and not by any other party; and

iv) states that source code for the Program is available from such Contributor, and informs licensees how to obtain it in a reasonable manner on or through a medium customarily used for software exchange.

When the Program is made available in source code form:

a) it must be made available under this Agreement; and
b) a copy of this Agreement must be included with each copy of the Program.

Contributors may not remove or alter any copyright notices contained within the Program.

Each Contributor must identify itself as the originator of its Contribution, if any, in a manner that reasonably allows subsequent Recipients to identify the originator of the Contribution.

4. COMMERCIAL DISTRIBUTION

Commercial distributors of software may accept certain responsibilities with respect to end users, business partners and the like. While this license is intended to facilitate the commercial use of the Program, the Contributor who includes the Program in a commercial product offering should do so in a manner which does not create potential liability for other Contributors. Therefore, if a Contributor includes the Program in a commercial product offering, such Contributor ("Commercial Contributor") hereby agrees to defend and indemnify every other Contributor ("Indemnified Contributor") against any losses, damages and costs (collectively "Losses") arising from claims, lawsuits and other legal actions brought by a third party against the Indemnified Contributor to the extent caused by the acts or omissions of such Commercial Contributor in connection with its distribution of the Program in a commercial product offering. The obligations in this section do not apply to any claims or Losses relating to any actual or alleged intellectual property infringement. In order to qualify, an Indemnified Contributor must: a) promptly notify the Commercial Contributor in writing of such claim, and b) allow the Commercial Contributor to control, and cooperate with the Commercial Contributor in, the defense and any related settlement negotiations. The Indemnified Contributor may participate in any such claim at its own expense.

For example, a Contributor might include the Program in a commercial product offering, Product X. That Contributor is then a Commercial Contributor. If that Commercial Contributor then makes performance claims, or offers warranties related to Product X, those performance claims and warranties are such Commercial Contributor’s responsibility alone. Under this section, the Commercial Contributor would have to defend claims against the other Contributors related to those performance claims and warranties, and if a court requires any other Contributor to pay any damages as a result, the Commercial Contributor must pay those damages.

5. NO WARRANTY

EXCEPT AS EXPRESSLY SET FORTH IN THIS AGREEMENT, THE PROGRAM IS PROVIDED ON AN "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, EITHER EXPRESS OR IMPLIED INCLUDING, WITHOUT LIMITATION, ANY WARRANTIES OR CONDITIONS OF TITLE, NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. Each Recipient is solely responsible for determining the appropriateness of using and distributing

Vertica Analytic Database (11.0.x)
the Program and assumes all risks associated with its exercise of rights under this Agreement, including but not limited to the risks and costs of program errors, compliance with applicable laws, damage to or loss of data, programs or equipment, and unavailability or interruption of operations.

6. DISCLAIMER OF LIABILITY

EXCEPT AS EXPRESSLY SET FORTH IN THIS AGREEMENT, NEITHER RECIPIENT NOR ANY CONTRIBUTORS SHALL HAVE ANY LIABILITY FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING WITHOUT LIMITATION LOST PROFITS), HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE USE OR DISTRIBUTION OF THE PROGRAM OR THE EXERCISE OF ANY RIGHTS GRANTED HEREUNDER, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

7. GENERAL

If any provision of this Agreement is invalid or unenforceable under applicable law, it shall not affect the validity or enforceability of the remainder of the terms of this Agreement, and without further action by the parties hereto, such provision shall be reformed to the minimum extent necessary to make such provision valid and enforceable. If Recipient institutes patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Program itself (excluding combinations of the Program with other software or hardware) infringes such Recipient's patent(s), then such Recipient's rights granted under Section 2(b) shall terminate as of the date such litigation is filed.

All Recipient's rights under this Agreement shall terminate if it fails to comply with any of the material terms or conditions of this Agreement and does not cure such failure in a reasonable period of time after becoming aware of such noncompliance. If all Recipient's rights under this Agreement terminate, Recipient agrees to cease use and distribution of the Program as soon as reasonably practicable. However, Recipient's obligations under this Agreement and any licenses granted by Recipient relating to the Program shall continue and survive.

Everyone is permitted to copy and distribute copies of this Agreement, but in order to avoid inconsistency the Agreement is copyrighted and may only be modified in the following manner. The Agreement Steward reserves the right to publish new versions (including revisions) of this Agreement from time to time. No one other than the Agreement Steward has the right to modify this Agreement. The Eclipse Foundation is the initial Agreement Steward. The Eclipse Foundation may assign the responsibility to serve as the Agreement Steward to a suitable separate entity. Each new version of the Agreement will be given a
distinguishing version number. The Program (including Contributions) may always be distributed subject to the version of the Agreement under which it was received. In addition, after a new version of the Agreement is published, Contributor may elect to distribute the Program (including its Contributions) under the new version. Except as expressly stated in Sections 2(a) and 2(b) above, Recipient receives no rights or licenses to the intellectual property of any Contributor under this Agreement, whether expressly, by implication, estoppel or otherwise. All rights in the Program not expressly granted under this Agreement are reserved.

This Agreement is governed by the laws of the State of New York and the intellectual property laws of the United States of America. No party to this Agreement will bring a legal action under this Agreement more than one year after the cause of action arose. Each party waives its rights to a jury trial in any resulting litigation.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work.
(an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and
(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided You use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all
other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

Copyright [yyyy] [name of copyright owner]

Perl Artistic License

Copyright © August 15, 1997

https://www.perlfoundation.org/artistic-license-20.html

License

Preamble

The intent of this document is to state the conditions under which a Package may be copied, such that the Copyright Holder maintains some semblance of artistic control over the development of the package, while giving the users of the package the right to use and distribute the Package in a more-or-less customary fashion, plus the right to make reasonable modifications.

Definitions

"Package" refers to the collection of files distributed by the Copyright Holder, and derivatives of that collection of files created through textual modification.

"Standard Version" refers to such a Package if it has not been modified, or has been modified in accordance with the wishes of the Copyright Holder as specified below.

"Copyright Holder" is whoever is named in the copyright or copyrights for the package.

"You" is you, if you're thinking about copying or distributing this Package.

"Reasonable copying fee" is whatever you can justify on the basis of media cost, duplication charges, time of people involved, and so on. (You will not be required to justify it to the Copyright Holder, but only to the computing community at large as a market that must bear the fee.)
"Freely Available" means that no fee is charged for the item itself, though there may be fees involved in handling the item. It also means that recipients of the item may redistribute it under the same conditions they received it.

1. You may make and give away verbatim copies of the source form of the Standard Version of this Package without restriction, provided that you duplicate all of the original copyright notices and associated disclaimers.
2. You may apply bug fixes, portability fixes and other modifications derived from the Public Domain or from the Copyright Holder. A Package modified in such a way shall still be considered the Standard Version.
3. You may otherwise modify your copy of this Package in any way, provided that you insert a prominent notice in each changed file stating how and when you changed that file, and provided that you do at least ONE of the following:
4. place your modifications in the Public Domain or otherwise make them Freely Available, such as by posting said modifications to Usenet or an equivalent medium, or placing the modifications on a major archive site such as uunet.uu.net, or by allowing the Copyright Holder to include your modifications in the Standard Version of the Package.

   1. use the modified Package only within your corporation or organization.
   2. rename any nonstandard executables so the names do not conflict with standard executables, which must also be provided, and provide a separate manual page for each nonstandard executable that clearly documents how it differs from the Standard Version.
   3. make other distribution arrangements with the Copyright Holder.
5. You may distribute the programs of this Package in object code or executable form, provided that you do at least ONE of the following:

   1. distribute a Standard Version of the executables and library files, together with instructions (in the manual page or equivalent) on where to get the Standard Version.
   2. accompany the distribution with the machine-readable source of the Package with your modifications.
   3. give nonstandard executables nonstandard names, and clearly document the differences in manual pages (or equivalent), together with instructions on where to get the Standard Version.
   4. make other distribution arrangements with the Copyright Holder.
6. You may charge a reasonable copying fee for any distribution of this Package. You may charge any fee you choose for support of this Package. You may not charge a fee for this Package itself. However, you may distribute this Package in aggregate with other (possibly commercial) programs as part of a larger (possibly commercial) software distribution provided that you do not advertise this Package as a product of your own. You may embed this Package's interpreter within an executable of yours
(by linking); this shall be construed as a mere form of aggregation, provided that the complete Standard Version of the interpreter is so embedded.

7. The scripts and library files supplied as input to or produced as output from the programs of this Package do not automatically fall under the copyright of this Package, but belong to whomever generated them, and may be sold commercially, and may be aggregated with this Package. If such scripts or library files are aggregated with this Package via the so-called "undump" or "unexec" methods of producing a binary executable image, then distribution of such an image shall neither be construed as a distribution of this Package nor shall it fall under the restrictions of Paragraphs 3 and 4, provided that you do not represent such an executable image as a Standard Version of this Package.

8. C subroutines (or comparably compiled subroutines in other languages) supplied by you and linked into this Package in order to emulate subroutines and variables of the language defined by this Package shall not be considered part of this Package, but are the equivalent of input as in Paragraph 6, provided these subroutines do not change the language in any way that would cause it to fail the regression tests for the language.

9. Aggregation of this Package with a commercial distribution is always permitted provided that the use of this Package is embedded; that is, when no overt attempt is made to make this Package's interfaces visible to the end user of the commercial distribution. Such use shall not be construed as a distribution of this Package.

10. The name of the Copyright Holder may not be used to endorse or promote products derived from this software without specific prior written permission.

THIS PACKAGE IS PROVIDED "AS IS" AND WITHOUT ANY EXPRESS OR IMPLIED WARRANTIES, INCLUDING, WITHOUT LIMITATION, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.

The End

protobuf

Copyright 2008 Google Inc. All rights reserved.

Version 2.4.1, 2.6.0

https://github.com/protocolbuffers/protobuf

Description

Protocol Buffers - Google's data interchange format.

Protocol Buffers are a way of encoding structured data in an efficient yet extensible format. Google uses Protocol Buffers for almost all of its internal RPC protocols and file formats. Protocol buffers are a flexible, efficient, automated mechanism for serializing structured data—think XML, but smaller, faster, and simpler. You define how you want your data to be structured once, then you can use special generated source code to easily write and read your structured data to and from a variety of data streams and using a variety of languages. You can even update your data structure without breaking deployed programs that are compiled against the "old" format.

Python

Copyright © 2001- 2012 Python Software Foundation; All Rights Reserved

This is the official license for the Python 2.7.* release.
Description

Interactive high-level object-oriented language (default version).

Python, the high-level, interactive object oriented language, includes an extensive class library with lots of goodies for network programming, system administration, sounds and graphics.

This package is a dependency package, which depends on Debian's default Python version (currently v2.7).

History of the Software

Python was created in the early 1990s by Guido van Rossum at Stichting Mathematisch Centrum (CWI, see http://www.cwi.nl/) in the Netherlands as a successor of a language called ABC. Guido remains Python's principal author, although it includes many contributions from others.

In 1995, Guido continued his work on Python at the Corporation for National Research Initiatives (CNRI, see http://www.cnri.reston.va.us/) in Reston, Virginia where he released several versions of the software.

In May 2000, Guido and the Python core development team moved to BeOpen.com to form the BeOpen PythonLabs team. In October of the same year, the PythonLabs team moved to Digital Creations (now Zope Corporation; see http://www.zope.com/). In 2001, the Python Software Foundation (PSF, see http://www.python.org/psf/) was formed, a non-profit organization created specifically to own Python-related Intellectual Property. Zope Corporation is a sponsoring member of the PSF.

All Python releases are Open Source (see http://www.opensource.org/ for the Open Source Definition). Historically, most, but not all, Python releases have also been GPL-compatible; the table below summarizes the various releases.

### Terms and Conditions for Accessing or Otherwise Using Python

**PYTHON SOFTWARE FOUNDATION LICENSE VERSION 2**

1. This LICENSE AGREEMENT is between the Python Software Foundation ("PSF"), and the Individual or Organization ("Licensee") accessing and otherwise using this software ("Python") in source or binary form and its associated documentation.

2. Subject to the terms and conditions of this License Agreement, PSF hereby grants Licensee a nonexclusive, royalty-free, world-wide license to reproduce, analyze, test, perform and/or display publicly, prepare derivative works, distribute, and otherwise use Python alone or in any derivative version, provided, however, that PSF's License
Agreement and PSF’s notice of copyright, i.e., "Copyright (c) 2001, 2002, 2003, 2004, 2005, 2006 Python Software Foundation; All Rights Reserved" are retained in Python alone or in any derivative version prepared by Licensee.

3. In the event Licensee prepares a derivative work that is based on or incorporates Python or any part thereof, and wants to make the derivative work available to others as provided herein, then Licensee hereby agrees to include in any such work a brief summary of the changes made to Python.

4. PSF is making Python available to Licensee on an "AS IS" basis. PSF MAKES NO REPRESENTATIONS OR WARRANTIES, EXPRESS OR IMPLIED. BY WAY OF EXAMPLE, BUT NOT LIMITATION, PSF MAKES NO AND DISCLAIMS ANY REPRESENTATION OR WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OR THAT THE USE OF PYTHON WILL NOT INFRINGE ANY THIRD PARTY RIGHTS.

5. PSF SHALL NOT BE LIABLE TO LICENSEE OR ANY OTHER USERS OF PYTHON FOR ANY INCIDENTAL, SPECIAL, OR CONSEQUENTIAL DAMAGES OR LOSS AS A RESULT OF MODIFYING, DISTRIBUTING, OR OTHERWISE USING PYTHON, OR ANY DERIVATIVE THEREOF, EVEN IF ADVISED OF THE POSSIBILITY THEREOF.

6. This License Agreement will automatically terminate upon a material breach of its terms and conditions.

7. Nothing in this License Agreement shall be deemed to create any relationship of agency, partnership, or joint venture between PSF and Licensee. This License Agreement does not grant permission to use PSF trademarks or trade name in a trademark sense to endorse or promote products or services of Licensee, or any third party.

8. By copying, installing or otherwise using Python, Licensee agrees to be bound by the terms and conditions of this License Agreement.

**BEOPEN.COM LICENSE AGREEMENT**

**FOR PYTHON 2.0**

**BEOPEN PYTHON OPEN SOURCE LICENSE AGREEMENT VERSION 1**

1. This LICENSE AGREEMENT is between BeOpen.com (“BeOpen”), having an office at 160 Saratoga Avenue, Santa Clara, CA 95051, and the Individual or Organization (“Licensee”) accessing and otherwise using this software in source or binary form and its associated documentation (“the Software”).

2. Subject to the terms and conditions of this BeOpen Python License Agreement, BeOpen hereby grants Licensee a non-exclusive, royalty-free, world-wide license to reproduce, analyze, test, perform and/or display publicly, prepare derivative works, distribute, and otherwise use the Software alone or in any derivative version,
provided, however, that the BeOpen Python License is retained in the Software, alone or in any derivative version prepared by Licensee.

3. BeOpen is making the Software available to Licensee on an “AS IS” basis. BEOPEN MAKES NO REPRESENTATIONS OR WARRANTIES, EXPRESS OR IMPLIED. BY WAY OF EXAMPLE, BUT NOT LIMITATION, BEOPEN MAKES NO AND DISCLAIMS ANY REPRESENTATION OR WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OR THAT THE USE OF THE SOFTWARE WILL NOT INFRINGE ANY THIRD PARTY RIGHTS.

4. BEOPEN SHALL NOT BE LIABLE TO LICENSEE OR ANY OTHER USERS OF THE SOFTWARE FOR ANY INCIDENTAL, SPECIAL, OR CONSEQUENTIAL DAMAGES OR LOSS AS A RESULT OF USING, MODIFYING OR DISTRIBUTING THE SOFTWARE, OR ANY DERIVATIVE THEREOF, EVEN IF ADVISED OF THE POSSIBILITY THEREOF.

5. This License Agreement will automatically terminate upon a material breach of its terms and conditions.

6. This License Agreement shall be governed by and interpreted in all respects by the law of the State of California, excluding conflict of law provisions. Nothing in this License Agreement shall be deemed to create any relationship of agency, partnership, or joint venture between BeOpen and Licensee. This License Agreement does not grant permission to use BeOpen trademarks or trade names in a trademark sense to endorse or promote products or services of Licensee, or any third party. As an exception, the “BeOpen Python” logos available at http://www.pythonlabs.com/logos.html may be used according to the permissions granted on that web page.

7. By copying, installing or otherwise using the software, Licensee agrees to be bound by the terms and conditions of this License Agreement.

**CNRI LICENSE AGREEMENT FOR PYTHON 1.6.1**

1. This LICENSE AGREEMENT is between the Corporation for National Research Initiatives, having an office at 1895 Preston White Drive, Reston, VA 20191 (“CNRI”), and the Individual or Organization (“Licensee”) accessing and otherwise using Python 1.6.1 software in source or binary form and its associated documentation.

2. Subject to the terms and conditions of this License Agreement, CNRI hereby grants Licensee a nonexclusive, royalty-free, world-wide license to reproduce, analyze, test, perform and/or display publicly, prepare derivative works, distribute, and otherwise use Python 1.6.1 alone or in any derivative version, provided, however, that CNRI’s License Agreement and CNRI’s notice of copyright, i.e., “Copyright © 1995-2001 Corporation for National Research Initiatives; All Rights Reserved” are retained in
Python 1.6.1 alone or in any derivative version prepared by Licensee. Alternately, in lieu of CNRI’s License Agreement, Licensee may substitute the following text (omitting the quotes): “Python 1.6.1 is made available subject to the terms and conditions in CNRI’s License Agreement. This Agreement together with Python 1.6.1 may be located on the Internet using the following unique, persistent identifier (known as a handle): 1895.22/1013. This Agreement may also be obtained from a proxy server on the Internet using the following URL: http://hdl.handle.net/1895.22/1013.”

3. In the event Licensee prepares a derivative work that is based on or incorporates Python 1.6.1 or any part thereof, and wants to make the derivative work available to others as provided herein, then Licensee hereby agrees to include in any such work a brief summary of the changes made to Python 1.6.1.

4. CNRI is making Python 1.6.1 available to Licensee on an “AS IS” basis. CNRI MAKES NO REPRESENTATIONS OR WARRANTIES, EXPRESS OR IMPLIED. BY WAY OF EXAMPLE, BUT NOT LIMITATION, CNRI MAKES NO AND DISCLAIMS ANY REPRESENTATION OR WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OR THAT THE USE OF PYTHON 1.6.1 WILL NOT INFRINGE ANY THIRD PARTY RIGHTS.

5. CNRI SHALL NOT BE LIABLE TO LICENSEE OR ANY OTHER USERS OF PYTHON 1.6.1 FOR ANY INCIDENTAL, SPECIAL, OR CONSEQUENTIAL DAMAGES OR LOSS AS A RESULT OF MODIFYING, DISTRIBUTING, OR OTHERWISE USING PYTHON 1.6.1, OR ANY DERIVATIVE THEREOF, EVEN IF ADVISED OF THE POSSIBILITY THEREOF.

6. This License Agreement will automatically terminate upon a material breach of its terms and conditions.

7. This License Agreement shall be governed by the federal intellectual property law of the United States, including without limitation the federal copyright law, and, to the extent such U.S. federal law does not apply, by the law of the Commonwealth of Virginia, excluding Virginia’s conflict of law provisions. Notwithstanding the foregoing, with regard to derivative works based on Python 1.6.1 that incorporate non-separable material that was previously distributed under the GNU General Public License (GPL), the law of the Commonwealth of Virginia shall govern this License Agreement only as to issues arising under or with respect to Paragraphs 4, 5, and 7 of this License Agreement. Nothing in this License Agreement shall be deemed to create any relationship of agency, partnership, or joint venture between CNRI and Licensee. This License Agreement does not grant permission to use CNRI trademarks or trade name in a trademark sense to endorse or promote products or services of Licensee, or any third party.

8. By clicking on the “ACCEPT” button where indicated, or by copying, installing or otherwise using Python 1.6.1, Licensee agrees to be bound by the terms and conditions of this License Agreement.

Python3

A. HISTORY OF THE SOFTWARE

Python was created in the early 1990s by Guido van Rossum at Stichting Mathematisch Centrum (CWI, see http://www.cwi.nl) in the Netherlands as a successor of a language called ABC. Guido remains Python's principal author, although it includes many contributions from others.

In 1995, Guido continued his work on Python at the Corporation for National Research Initiatives (CNRI, see http://www.cnri.reston.va.us) in Reston, Virginia where he released several versions of the software.

In May 2000, Guido and the Python core development team moved to BeOpen.com to form the BeOpen PythonLabs team. In October of the same year, the PythonLabs team moved to Digital Creations (now Zope Corporation, see http://www.zope.com). In 2001, the Python Software Foundation (PSF, see http://www.python.org/psf/) was formed, a non-profit...
organization created specifically to own Python-related Intellectual Property. Zope Corporation is a sponsoring member of the PSF.

All Python releases are Open Source (see http://www.opensource.org for the Open Source Definition). Historically, most, but not all, Python releases have also been GPL-compatible; the table below summarizes the various releases.

</tr>
</tbody>
</table>

Footnotes:

(1) GPL-compatible doesn't mean that we're distributing Python under the GPL. All Python licenses, unlike the GPL, let you distribute a modified version without making your changes open source. The GPL-compatible licenses make it possible to combine Python with other software that is released under the GPL; the others don't.

(2) According to Richard Stallman, 1.6.1 is not GPL-compatible, because its license has a choice of law clause. According to CNRI, however, Stallman's lawyer has told CNRI's lawyer that 1.6.1 is "not incompatible" with the GPL.

Thanks to the many outside volunteers who have worked under Guido's direction to make these releases possible.

B. TERMS AND CONDITIONS FOR ACCESSING OR OTHERWISE USING PYTHON

===============================================

PYTHON SOFTWARE FOUNDATION LICENSE VERSION 2
1. This LICENSE AGREEMENT is between the Python Software Foundation ("PSF"), and the Individual or Organization ("Licensee") accessing and otherwise using this software ("Python") in source or binary form and its associated documentation.

3. In the event Licensee prepares a derivative work that is based on or incorporates Python or any part thereof, and wants to make the derivative work available to others, Licensee agrees to include in any such work a brief summary of the changes made to Python.

4. PSF is making Python available to Licensee on an "AS IS" basis. PSF MAKES NO REPRESENTATIONS OR WARRANTIES, EXPRESS OR IMPLIED. BY WAY OF EXAMPLE, BUT NOT LIMITATION, PSF MAKES NO AND DISCLAIMS ANY REPRESENTATION OR WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OR THAT THE USE OF PYTHON WILL NOT INFRINGE ANY THIRD PARTY RIGHTS.

5. PSF SHALL NOT BE LIABLE TO LICENSEE OR ANY OTHER USERS OF PYTHON FOR ANY INCIDENTAL, SPECIAL, OR CONSEQUENTIAL DAMAGES OR LOSS AS A RESULT OF MODIFYING, DISTRIBUTING, OR OTHERWISE USING PYTHON, OR ANY DERIVATIVE THEREOF, EVEN IF ADVISED OF THE POSSIBILITY THEREOF.

6. This License Agreement will automatically terminate upon a material breach of its terms and conditions.

7. Nothing in this License Agreement shall be deemed to create any relationship of agency, partnership, or joint venture between PSF and Licensee. This License Agreement does not grant permission to use PSF trademarks or trade name in a trademark sense to endorse or promote products or services of Licensee, or any third party.

8. By copying, installing or otherwise using Python, Licensee agrees to be bound by the terms and conditions of this License Agreement.

BEOPEN.COM LICENSE AGREEMENT FOR PYTHON 2.0

----------------------------------

BEOPEN PYTHON OPEN SOURCE LICENSE AGREEMENT VERSION 1
1. This LICENSE AGREEMENT is between BeOpen.com ("BeOpen"), having an office at 160 Saratoga Avenue, Santa Clara, CA 95051, and the Individual or Organization ("Licensee") accessing and otherwise using this software in source or binary form and its associated documentation ("the Software").

2. Subject to the terms and conditions of this BeOpen Python License Agreement, BeOpen hereby grants Licensee a non-exclusive, royalty-free, world-wide license to reproduce, analyze, test, perform and/or display publicly, prepare derivative works, distribute, and otherwise use the Software alone or in any derivative version, provided, however, that the BeOpen Python License is retained in the Software, alone or in any derivative version prepared by Licensee.

3. BeOpen is making the Software available to Licensee on an "AS IS" basis. BEOPEN MAKES NO REPRESENTATIONS OR WARRANTIES, EXPRESS OR IMPLIED. BY WAY OF EXAMPLE, BUT NOT LIMITATION, BEOPEN MAKES NO AND DISCLAIMS ANY REPRESENTATION OR WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OR THAT THE USE OF THE SOFTWARE WILL NOT INFRINGE ANY THIRD PARTY RIGHTS.

4. BEOPEN SHALL NOT BE LIABLE TO LICENSEE OR ANY OTHER USERS OF THE SOFTWARE FOR ANY INCIDENTAL, SPECIAL, OR CONSEQUENTIAL DAMAGES OR LOSS AS A RESULT OF USING, MODIFYING OR DISTRIBUTING THE SOFTWARE, OR ANY DERIVATIVE THEREOF, EVEN IF ADVISED OF THE POSSIBILITY THEREOF.

5. This License Agreement will automatically terminate upon a material breach of its terms and conditions.

6. This License Agreement shall be governed by and interpreted in all respects by the law of the State of California, excluding conflict of law provisions. Nothing in this License Agreement shall be deemed to create any relationship of agency, partnership, or joint venture between BeOpen and Licensee. This License Agreement does not grant permission to use BeOpen trademarks or trade names in a trademark sense to endorse or promote products or services of Licensee, or any third party. As an exception, the "BeOpen Python" logos available at http://www.pythonlabs.com/logos.html may be used according to the permissions granted on that web page.

7. By copying, installing or otherwise using the software, Licensee agrees to be bound by the terms and conditions of this License Agreement.

CNRI LICENSE AGREEMENT FOR PYTHON 1.6.1

--------------------------------------

1. This LICENSE AGREEMENT is between the Corporation for National Research Initiatives, having an office at 1895 Preston White Drive, Reston, VA 20191 ("CNRI"), and the Individual
or Organization ("Licensee") accessing and otherwise using Python 1.6.1 software in source or binary form and its associated documentation.

2. Subject to the terms and conditions of this License Agreement, CNRI hereby grants Licensee a nonexclusive, royalty-free, world-wide license to reproduce, analyze, test, perform and/or display publicly, prepare derivative works, distribute, and otherwise use Python 1.6.1 alone or in any derivative version, provided, however, that CNRI's License Agreement and CNRI's notice of copyright, i.e., "Copyright (c) 1995-2001 Corporation for National Research Initiatives; All Rights Reserved" are retained in Python 1.6.1 alone or in any derivative version prepared by Licensee. Alternately, in lieu of CNRI's License Agreement, Licensee may substitute the following text (omitting the quotes): "Python 1.6.1 is made available subject to the terms and conditions in CNRI's License Agreement. This Agreement together with Python 1.6.1 may be located on the Internet using the following unique, persistent identifier (known as a handle): 1895.22/1013. This Agreement may also be obtained from a proxy server on the Internet using the following URL: http://hdl.handle.net/1895.22/1013".

3. In the event Licensee prepares a derivative work that is based on or incorporates Python 1.6.1 or any part thereof, and wants to make the derivative work available to others as provided herein, then Licensee hereby agrees to include in any such work a brief summary of the changes made to Python 1.6.1.

4. CNRI is making Python 1.6.1 available to Licensee on an "AS IS" basis. CNRI MAKES NO REPRESENTATIONS OR WARRANTIES, EXPRESS OR IMPLIED. BY WAY OF EXAMPLE, BUT NOT LIMITATION, CNRI MAKES NO AND DISCLAIMS ANY REPRESENTATION OR WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OR THAT THE USE OF PYTHON 1.6.1 WILL NOT INFRINGE ANY THIRD PARTY RIGHTS.

5. CNRI SHALL NOT BE LIABLE TO LICENSEE OR ANY OTHER USERS OF PYTHON 1.6.1 FOR ANY INCIDENTAL, SPECIAL, OR CONSEQUENTIAL DAMAGES OR LOSS AS A RESULT OF MODIFYING, DISTRIBUTING, OR OTHERWISE USING PYTHON 1.6.1, OR ANY DERIVATIVE THEREOF, EVEN IF ADVISED OF THE POSSIBILITY THEREOF.

6. This License Agreement will automatically terminate upon a material breach of its terms and conditions.

7. This License Agreement shall be governed by the federal intellectual property law of the United States, including without limitation the federal copyright law, and, to the extent such U.S. federal law does not apply, by the law of the Commonwealth of Virginia, excluding Virginia's conflict of law provisions. Notwithstanding the foregoing, with regard to derivative works based on Python 1.6.1 that incorporate non-separable material that was previously distributed under the GNU General Public License (GPL), the law of the Commonwealth of Virginia shall govern this License Agreement only as to issues arising
under or with respect to Paragraphs 4, 5, and 7 of this License Agreement. Nothing in this License Agreement shall be deemed to create any relationship of agency, partnership, or joint venture between CNRI and Licensee. This License Agreement does not grant permission to use CNRI trademarks or trade name in a trademark sense to endorse or promote products or services of Licensee, or any third party.

8. By clicking on the "ACCEPT" button where indicated, or by copying, installing or otherwise using Python 1.6.1, Licensee agrees to be bound by the terms and conditions of this License Agreement.

ACCEPT

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition,
"control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their
Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.
7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or distributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of Your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of,
the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must
include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NONINFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only
on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

License

GNU GENERAL PUBLIC LICENSE Version 3, 29 June 2007

TERMS AND CONDITIONS

0. Definitions.

"This License" refers to version 3 of the GNU General Public License. "Copyright" also means copyright-like laws that apply to other kinds of works, such as semiconductor masks.

"The Program" refers to any copyrightable work licensed under this License. Each licensee is addressed as "you".

"Licensees" and "recipients" may be individuals or organizations. To "modify" a work means to copy from or adapt all or part of the work in a fashion requiring copyright permission, other than the making of an exact copy. The resulting work is called a "modified version" of the earlier work or a work "based on" the earlier work.

A "covered work" means either the unmodified Program or a work based on the Program.

To "propagate" a work means to do anything with it that, without permission, would make you directly or secondarily liable for infringement under applicable copyright law, except executing it on a computer or modifying a private copy. Propagation includes copying,
distribution (with or without modification), making available to the public, and in some countries other activities as well.

To "convey" a work means any kind of propagation that enables other parties to make or receive copies. Mere interaction with a user through a computer network, with no transfer of a copy, is not conveying.

An interactive user interface displays "Appropriate Legal Notices" to the extent that it includes a convenient and prominently visible feature that (1) displays an appropriate copyright notice, and (2) tells the user that there is no warranty for the work (except to the extent that warranties are provided), that licensees may convey the work under this License, and how to view a copy of this License. If the interface presents a list of user commands or options, such as a menu, a prominent item in the list meets this criterion.

The "source code" for a work means the preferred form of the work for making modifications to it. "Object code" means any non-source form of a work.

A "Standard Interface" means an interface that either is an official standard defined by a recognized standards body, or, in the case of interfaces specified for a particular programming language, one that is widely used among developers working in that language.

The "System Libraries" of an executable work include anything, other than the work as a whole, that (a) is included in the normal form of packaging a Major Component, but which is not part of that Major Component, and (b) serves only to enable use of the work with that Major Component, or to implement a Standard Interface for which an implementation is available to the public in source code form. A "Major Component", in this context, means a major essential component (kernel, window system, and so on) of the specific operating system (if any) on which the executable work runs, or a compiler used to produce the work, or an object code interpreter used to run it.

The "Corresponding Source" for a work in object code form means all the source code needed to generate, install, and (for an executable work) run the object code and to modify the work, including scripts to control those activities. However, it does not include the work's System Libraries, or general-purpose tools or generally available free programs which are used unmodified in performing those activities but which are not part of the work. For example, Corresponding Source includes interface definition files associated with source files for the work, and the source code for shared libraries and dynamically linked subprograms that the work is specifically designed to require, such as by intimate data communication or control flow between those subprograms and other parts of the work.
The Corresponding Source need not include anything that users can regenerate automatically from other parts of the Corresponding Source. The Corresponding Source for a work in source code form is that same work.

2. Basic Permissions.

All rights granted under this License are granted for the term of copyright on the Program, and are irrevocable provided the stated conditions are met. This License explicitly affirms your unlimited permission to run the unmodified Program. The output from running a covered work is covered by this License only if the output, given its content, constitutes a covered work. This License acknowledges your rights of fair use or other equivalent, as provided by copyright law.

You may make, run and propagate covered works that you do not convey, without conditions so long as your license otherwise remains in force. You may convey covered works to others for the sole purpose of having them make modifications exclusively for you, or provide you with facilities for running those works, provided that you comply with the terms of this License in conveying all material for which you do not control copyright. Those thus making or running the covered works for you must do so exclusively on your behalf, under your direction and control, on terms that prohibit them from making any copies of your copyrighted material outside their relationship with you.

Conveying under any other circumstances is permitted solely under the conditions stated below. Sublicensing is not allowed; section 10 makes it unnecessary.

3. Protecting Users' Legal Rights From Anti-Circumvention Law.

No covered work shall be deemed part of an effective technological measure under any applicable law fulfilling obligations under article 11 of the WIPO copyright treaty adopted on 20 December 1996, or similar laws prohibiting or restricting circumvention of such measures. When you convey a covered work, you waive any legal power to forbid circumvention of technological measures to the extent such circumvention is effected by exercising rights under this License with respect to the covered work, and you disclaim any intention to limit operation or modification of the work as a means of enforcing, against the work's users, your or third parties' legal rights to forbid circumvention of technological measures.

You may convey verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice; keep intact all notices stating that this License and any non-permissive terms added in accord with section 7 apply to the code; keep intact all notices of
the absence of any warranty; and give all recipients a copy of this License along with the Program.

You may charge any price or no price for each copy that you convey, and you may offer support or warranty protection for a fee.

5. Conveying Modified Source Versions.

You may convey a work based on the Program, or the modifications to produce it from the Program, in the form of source code under the terms of section 4, provided that you also meet all of these conditions:

a) The work must carry prominent notices stating that you modified it, and giving a relevant date.

b) The work must carry prominent notices stating that it is released under this License and any conditions added under section 7. This requirement modifies the requirement in section 4 to "keep intact all notices".

c) You must license the entire work, as a whole, under this License to anyone who comes into possession of a copy. This License will therefore apply, along with any applicable section 7 additional terms, to the whole of the work, and all its parts, regardless of how they are packaged. This License gives no permission to license the work in any other way, but it does not invalidate such permission if you have separately received it.

d) If the work has interactive user interfaces, each must display Appropriate Legal Notices; however, if the Program has interactive interfaces that do not display Appropriate Legal Notices, your work need not make them do so.

A compilation of a covered work with other separate and independent works, which are not by their nature extensions of the covered work, and which are not combined with it such as to form a larger program, in or on a volume of a storage or distribution medium, is called an "aggregate" if the compilation and its resulting copyright are not used to limit the access or legal rights of the compilation's users beyond what the individual works permit. Inclusion of a covered work in an aggregate does not cause this License to apply to the other parts of the aggregate.

6. Conveying Non-Source Forms.

You may convey a covered work in object code form under the terms of sections 4 and 5, provided that you also convey the machine-readable Corresponding Source under the terms of this License, in one of these ways:

a) Convey the object code in, or embodied in, a physical product (including a physical distribution medium), accompanied by the Corresponding Source fixed on a durable physical medium customarily used for software interchange.
b) Convey the object code in, or embodied in, a physical product (including a physical distribution medium), accompanied by a written offer, valid for at least three years and valid for as long as you offer spare parts or customer support for that product model, to give anyone who possesses the object code either (1) a copy of the Corresponding Source for all the software in the product that is covered by this License, on a durable physical medium customarily used for software interchange, for a price no more than your reasonable cost of physically performing this conveying of source, or (2) access to copy the Corresponding Source from a network server at no charge.

c) Convey individual copies of the object code with a copy of the written offer to provide the Corresponding Source. This alternative is allowed only occasionally and noncommercially, and only if you received the object code with such an offer, in accord with subsection 6b.

d) Convey the object code by offering access from a designated place (gratis or for a charge), and offer equivalent access to the Corresponding Source in the same way through the same place at no further charge. You need not require recipients to copy the Corresponding Source along with the object code. If the place to copy the object code is a network server, the Corresponding Source may be on a different server (operated by you or a third party) that supports equivalent copying facilities, provided you maintain clear directions next to the object code saying where to find the Corresponding Source. Regardless of what server hosts the Corresponding Source, you remain obligated to ensure that it is available for as long as needed to satisfy these requirements.

e) Convey the object code using peer-to-peer transmission, provided you inform other peers where the object code and Corresponding Source of the work are being offered to the general public at no charge under subsection 6d.A separable portion of the object code, whose source code is excluded from the Corresponding Source as a System Library, need not be included in conveying the object code work.

A "User Product" is either (1) a "consumer product", which means any tangible personal property which is normally used for personal, family, or household purposes, or (2) anything designed or sold for incorporation into a dwelling. In determining whether a product is a consumer product, doubtful cases shall be resolved in favor of coverage. For a particular product received by a particular user, "normally used" refers to a typical or common use of that class of product, regardless of the status of the particular user or of the way in which the particular user actually uses, or expects or is expected to use, the product. A product is a consumer product regardless of whether the product has substantial commercial, industrial or non-consumer uses, unless such uses represent the only significant mode of use of the product.

"Installation Information" for a User Product means any methods, procedures, authorization keys, or other information required to install and execute modified versions of a covered work in that User Product from a modified version of its Corresponding Source. The
information must suffice to ensure that the continued functioning of the modified object code is in no case prevented or interfered with solely because modification has been made.

If you convey an object code work under this section in, or with, or specifically for use in, a User Product, and the conveying occurs as part of a transaction in which the right of possession and use of the User Product is transferred to the recipient in perpetuity or for a fixed term (regardless of how the transaction is characterized), the Corresponding Source conveyed under this section must be accompanied by the Installation Information. But this requirement does not apply if neither you nor any third party retains the ability to install modified object code on the User Product (for example, the work has been installed in ROM). The requirement to provide Installation Information does not include a requirement to continue to provide support service, warranty, or updates for a work that has been modified or installed by the recipient, or for the User Product in which it has been modified or installed. Access to a network may be denied when the modification itself materially and adversely affects the operation of the network or violates the rules and protocols for communication across the network.

Corresponding Source conveyed, and Installation Information provided, in accord with this section must be in a format that is publicly documented (and with an implementation available to the public in source code form), and must require no special password or key for unpacking, reading or copying.

7. Additional Terms.

"Additional permissions" are terms that supplement the terms of this License by making exceptions from one or more of its conditions. Additional permissions that are applicable to the entire Program shall be treated as though they were included in this License, to the extent that they are valid under applicable law. If additional permissions apply only to part of the Program, that part may be used separately under those permissions, but the entire Program remains governed by this License without regard to the additional permissions.

When you convey a copy of a covered work, you may at your option remove any additional permissions from that copy, or from any part of it. (Additional permissions may be written to require their own removal in certain cases when you modify the work.) You may place additional permissions on material, added by you to a covered work, for which you have or can give appropriate copyright permission. Notwithstanding any other provision of this License, for material you add to a covered work, you may (if authorized by the copyright holders of that material) supplement the terms of this License with terms.

a) Disclaiming warranty or limiting liability differently from the terms of sections 15 and 16 of this License; or

b) Requiring preservation of specified reasonable legal notices or author attributions in that material or in the Appropriate Legal Notices displayed by works containing it; or
c) Prohibiting misrepresentation of the origin of that material, or requiring that modified versions of such material be marked in reasonable ways as different from the original version; or

d) Limiting the use for publicity purposes of names of licensors or authors of the material; or

e) Declining to grant rights under trademark law for use of some trade names, trademarks, or service marks; or

f) Requiring indemnification of licensors and authors of that material by anyone who conveys the material (or modified versions of it) with contractual assumptions of liability to the recipient, for any liability that these contractual assumptions directly impose on those licensors and authors.

All other non-permissive additional terms are considered "further restrictions" within the meaning of section 10. If the Program as you received it, or any part of it, contains a notice stating that it is governed by this License along with a term that is a further restriction, you may remove that term. If a license document contains a further restriction but permits relicensing or conveying under this License, you may add to a covered work material governed by the terms of that license document, provided that the further restriction does not survive such relicensing or conveying.

If you add terms to a covered work in accord with this section, you must place, in the relevant source files, a statement of the additional terms that apply to those files, or a notice indicating where to find the applicable terms.

Additional terms, permissive or non-permissive, may be stated in the form of a separately written license, or stated as exceptions; the above requirements apply either way.

8. Termination.

You may not propagate or modify a covered work except as expressly provided under this License. Any attempt otherwise to propagate or modify it is void, and will automatically terminate your rights under this License (including any patent licenses granted under the third paragraph of section 11).

However, if you cease all violation of this License, then your license from a particular copyright holder is reinstated (a) provisionally, unless and until the copyright holder explicitly and finally terminates your license, and (b) permanently, if the copyright holder fails to notify you of the violation by some reasonable means prior to 60 days after the cessation.

Moreover, your license from a particular copyright holder is reinstated permanently if the copyright holder notifies you of the violation by some reasonable means, this is the first
time you have received notice of violation of this License (for any work) from that copyright
holder, and you cure the violation prior to 30 days after your receipt of the notice.

Termination of your rights under this section does not terminate the licenses of parties who
have received copies or rights from you under this License. If your rights have been
terminated and not permanently reinstated, you do not qualify to receive new licenses for
the same material under section 10.

You are not required to accept this License in order to receive or run a copy of the
Program. Ancillary propagation of a covered work occurring solely as a consequence of
using peer-to-peer transmission to receive a copy likewise does not require acceptance.
However, nothing other than this License grants you permission to propagate or modify any
covered work. These actions infringe copyright if you do not accept this License. Therefore,
by modifying or propagating a covered work, you indicate your acceptance of this License
to do so.

10. Automatic Licensing of Downstream Recipients.

Each time you convey a covered work, the recipient automatically receives a license from
the original licensors, to run, modify and propagate that work, subject to this License. You
are not responsible for enforcing compliance by third parties with this License.

An "entity transaction" is a transaction transferring control of an organization, or
substantially all assets of one, or subdivide an organization, or merging organizations. If
propagation of a covered work results from an entity transaction, each party to that
transaction who receives a copy of the work also receives whatever licenses to the work the
party's predecessor in interest had or could give under the previous paragraph, plus a right
to possession of the Corresponding Source of the work from the predecessor in interest, if
the predecessor has it or can get it with reasonable efforts.

You may not impose any further restrictions on the exercise of the rights granted or
affirmed under this License. For example, you may not impose a license fee, royalty, or
other charge for exercise of rights granted under this License, and you may not initiate
litigation (including a cross-claim or counterclaim in a lawsuit) alleging that any patent
claim is infringed by making, using, selling, offering for sale, or importing the Program or
any portion of it

11. Patents.

A "contributor" is a copyright holder who authorizes use under this License of the Program
or a work on which the Program is based. The work thus licensed is called the contributor's
"contributor version".
A contributor's "essential patent claims" are all patent claims owned or controlled by the contributor, whether already acquired or hereafter acquired, that would be infringed by some manner, permitted by this License, of making, using, or selling its contributor version, but do not include claims that would be infringed only as a consequence of further modification of the contributor version. For purposes of this definition, "control" includes the right to grant patent sublicenses in a manner consistent with the requirements of this License.

Each contributor grants you a non-exclusive, worldwide, royalty-free patent license under the contributor's essential patent claims, to make, use, sell, offer for sale, import and otherwise run, modify and propagate the contents of its contributor version.

In the following three paragraphs, a "patent license" is any express agreement or commitment, however denominated, not to enforce a patent (such as an express permission to practice a patent or covenant not to sue for patent infringement). To "grant" such a patent license to a party means to make such an agreement or commitment not to enforce a patent against the party.

If you convey a covered work, knowingly relying on a patent license, and the Corresponding Source of the work is not available for anyone to copy, free of charge and under the terms of this License, through a publicly available network server or other readily accessible means, then you must either (1) cause the Corresponding Source to be so available, or (2) arrange to deprive yourself of the benefit of the patent license for this particular work, or (3) arrange, in a manner consistent with the requirements of this License, to extend the patent license to downstream recipients. "Knowingly relying" means you have actual knowledge that, but for the patent license, your conveying the covered work in a country, or your recipient's use of the covered work in a country, would infringe one or more identifiable patents in that country that you have reason to believe are valid.

If, pursuant to or in connection with a single transaction or arrangement, you convey, or propagate by procuring conveyance of, a covered work, and grant a patent license to some of the parties receiving the covered work authorizing them to use, propagate, modify or convey a specific copy of the covered work, then the patent license you grant is automatically extended to all recipients of the covered work and works based on it.

A patent license is "discriminatory" if it does not include within the scope of its coverage, prohibits the exercise of, or is conditioned on the non-exercise of one or more of the rights that are specifically granted under this License. You may not convey a covered work if you are a party to an arrangement with a third party that is in the business of distributing software, under which you make payment to the third party based on the extent of your activity of conveying the work, and under which the third party grants, to any of the parties who would receive the covered work from you, a discriminatory patent license (a) in connection with copies of the covered work conveyed by you (or copies made from those
copies), or (b) primarily for and in connection with specific products or compilations that contain the covered work, unless you entered into that arrangement, or that patent license was granted, prior to 28 March 2007.

Nothing in this License shall be construed as excluding or limiting any implied license or other defenses to infringement that may otherwise be available to you under applicable patent law.

If conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot convey a covered work so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not convey it at all. For example, if you agree to terms that obligate you to collect a royalty for further conveying from those to whom you convey the Program, the only way you could satisfy both those terms and this License would be to refrain entirely from conveying the Program.

13. Use with the GNU Affero General Public License.

Notwithstanding any other provision of this License, you have permission to link or combine any covered work with a work licensed under version 3 of the GNU Affero General Public License into a single combined work, and to convey the resulting work. The terms of this License will continue to apply to the part which is the covered work, but the special requirements of the GNU Affero General Public License, section 13, concerning interaction through a network will apply to the combination as such.

14. Revised Versions of this License.

The Free Software Foundation may publish revised and/or new versions of the GNU General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies that a certain numbered version of the GNU General Public License "or any later version" applies to it, you have the option of following the terms and conditions either of that numbered version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of the GNU General Public License, you may choose any version ever published by the Free Software Foundation. If the Program specifies that a proxy can decide which future versions of the GNU General Public License can be used, that proxy's public statement of acceptance of a version permanently authorizes you to choose that version for the Program. Later license versions may give you additional or different permissions. However, no additional obligations are imposed on any author or copyright holder as a result of your choosing to follow a later version.
15. Disclaimer of Warranty.

THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

16. Limitation of Liability.

IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MODIFIES AND/OR CONVEYS THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

17. Interpretation of Sections 15 and 16.

If the disclaimer of warranty and limitation of liability provided above cannot be given local legal effect according to their terms, reviewing courts shall apply local law that most closely approximates an absolute waiver of all civil liability in connection with the Program, unless a warranty or assumption of liability accompanies a copy of the Program in return for a fee.

Version 0.9.5
License

GNU GENERAL PUBLIC LICENSE Version 3, 29 June 2007

TERMS AND CONDITIONS

0. Definitions.

"This License" refers to version 3 of the GNU General Public License. "Copyright" also means copyright-like laws that apply to other kinds of works, such as semiconductor masks.

"The Program" refers to any copyrightable work licensed under this License. Each licensee is addressed as "you".

"Licensees" and "recipients" may be individuals or organizations. To "modify" a work means to copy from or adapt all or part of the work in a fashion requiring copyright permission, other than the making of an exact copy. The resulting work is called a "modified version" of the earlier work or a work "based on" the earlier work.

A "covered work" means either the unmodified Program or a work based on the Program.

To "propagate" a work means to do anything with it that, without permission, would make you directly or secondarily liable for infringement under applicable copyright law, except executing it on a computer or modifying a private copy. Propagation includes copying, distribution (with or without modification), making available to the public, and in some countries other activities as well.

To "convey" a work means any kind of propagation that enables other parties to make or receive copies. Mere interaction with a user through a computer network, with no transfer of a copy, is not conveying.

An interactive user interface displays "Appropriate Legal Notices" to the extent that it includes a convenient and prominently visible feature that (1) displays an appropriate copyright notice, and (2) tells the user that there is no warranty for the work (except to the extent that warranties are provided), that licensees may convey the work under this License, and how to view a copy of this License. If the interface presents a list of user commands or options, such as a menu, a prominent item in the list meets this criterion.

The "source code" for a work means the preferred form of the work for making modifications to it. "Object code" means any non-source form of a work.
A "Standard Interface" means an interface that either is an official standard defined by a recognized standards body, or, in the case of interfaces specified for a particular programming language, one that is widely used among developers working in that language.

The "System Libraries" of an executable work include anything, other than the work as a whole, that (a) is included in the normal form of packaging a Major Component, but which is not part of that Major Component, and (b) serves only to enable use of the work with that Major Component, or to implement a Standard Interface for which an implementation is available to the public in source code form. A "Major Component", in this context, means a major essential component (kernel, window system, and so on) of the specific operating system (if any) on which the executable work runs, or a compiler used to produce the work, or an object code interpreter used to run it.

The "Corresponding Source" for a work in object code form means all the source code needed to generate, install, and (for an executable work) run the object code and to modify the work, including scripts to control those activities. However, it does not include the work's System Libraries, or general-purpose tools or generally available free programs which are used unmodified in performing those activities but which are not part of the work. For example, Corresponding Source includes interface definition files associated with source files for he work, and the source code for shared libraries and dynamically linked subprograms that the work is specifically designed to require, such as by intimate data communication or control flow between those subprograms and other parts of the work.

The Corresponding Source need not include anything that users can regenerate automatically from other parts of the Corresponding Source. The Corresponding Source for a work in source code form is that same work.

2. Basic Permissions.

All rights granted under this License are granted for the term of copyright on the Program, and are irrevocable provided the stated conditions are met. This License explicitly affirms your unlimited permission to run the unmodified Program. The output from running a covered work is covered by this License only if the output, given its content, constitutes a covered work. This License acknowledges your rights of fair use or other equivalent, as provided by copyright law.

You may make, run and propagate covered works that you do not convey, without conditions so long as your license otherwise remains in force. You may convey covered works to others for the sole purpose of having them make modifications exclusively for you, or provide you with facilities for running those works, provided that you comply with the terms of this License in conveying all material for which you do not control copyright. Those thus making or running the covered works for you must do so exclusively on your behalf,
under your direction and control, on terms that prohibit them from making any copies of your copyrighted material outside their relationship with you.

Conveying under any other circumstances is permitted solely under the conditions stated below. Sublicensing is not allowed; section 10 makes it unnecessary.

3. Protecting Users' Legal Rights From Anti-Circumvention Law.

No covered work shall be deemed part of an effective technological measure under any applicable law fulfilling obligations under article 11 of the WIPO copyright treaty adopted on 20 December 1996, or similar laws prohibiting or restricting circumvention of such measures. When you convey a covered work, you waive any legal power to forbid circumvention of technological measures to the extent such circumvention is effected by exercising rights under this License with respect to the covered work, and you disclaim any intention to limit operation or modification of the work as a means of enforcing, against the work's users, your or third parties' legal rights to forbid circumvention of technological measures.

You may convey verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice; keep intact all notices stating that this License and any non-permissive terms added in accord with section 7 apply to the code; keep intact all notices of the absence of any warranty; and give all recipients a copy of this License along with the Program.

You may charge any price or no price for each copy that you convey, and you may offer support or warranty protection for a fee.

5. Conveying Modified Source Versions.

You may convey a work based on the Program, or the modifications to produce it from the Program, in the form of source code under the terms of section 4, provided that you also meet all of these conditions:

a) The work must carry prominent notices stating that you modified it, and giving a relevant date.

b) The work must carry prominent notices stating that it is released under this License and any conditions added under section 7. This requirement modifies the requirement in section 4 to "keep intact all notices"

c) You must license the entire work, as a whole, under this License to anyone who comes into possession of a copy. This License will therefore apply, along with any applicable
section 7 additional terms, to the whole of the work, and all its parts, regardless of how they are packaged. This License gives no permission to license the work in any other way, but it does not invalidate such permission if you have separately received it.

d) If the work has interactive user interfaces, each must display Appropriate Legal Notices; however, if the Program has interactive interfaces that do not display Appropriate Legal Notices, your work need not make them do so.

A compilation of a covered work with other separate and independent works, which are not by their nature extensions of the covered work, and which are not combined with it such as to form a larger program, in or on a volume of a storage or distribution medium, is called an "aggregate" if the compilation and its resulting copyright are not used to limit the access or legal rights of the compilation's users beyond what the individual works permit. Inclusion of a covered work in an aggregate does not cause this License to apply to the other parts of the aggregate.

6. Conveying Non-Source Forms.

You may convey a covered work in object code form under the terms of sections 4 and 5, provided that you also convey the machine-readable Corresponding Source under the terms of this License, in one of these ways:

a) Convey the object code in, or embodied in, a physical product (including a physical distribution medium), accompanied by the Corresponding Source fixed on a durable physical medium customarily used for software interchange.

b) Convey the object code in, or embodied in, a physical product (including a physical distribution medium), accompanied by a written offer, valid for at least three years and valid for as long as you offer spare parts or customer support for that product model, to give anyone who possesses the object code either (1) a copy of the Corresponding Source for all the software in the product that is covered by this License, on a durable physical medium customarily used for software interchange, for a price no more than your reasonable cost of physically performing this conveying of source, or (2) access to copy the Corresponding Source from a network server at no charge.

c) Convey individual copies of the object code with a copy of the written offer to provide the Corresponding Source. This alternative is allowed only occasionally and noncommercially, and only if you received the object code with such an offer, in accord with subsection 6b.

d) Convey the object code by offering access from a designated place (gratis or for a charge), and offer equivalent access to the Corresponding Source in the same way through the same place at no further charge. You need not require recipients to copy the Corresponding Source along with the object code. If the place to copy the object code is a network server, the Corresponding Source may be on a different server (operated by you or a third party) that supports equivalent copying facilities, provided you maintain clear
directions next to the object code saying where to find the Corresponding Source. Regardless of what server hosts the Corresponding Source, you remain obligated to ensure that it is available for as long as needed to satisfy these requirements.

e) Convey the object code using peer-to-peer transmission, provided you inform other peers where the object code and Corresponding Source of the work are being offered to the general public at no charge under subsection 6d. A separable portion of the object code, whose source code is excluded from the Corresponding Source as a System Library, need not be included in conveying the object code work.

A "User Product" is either (1) a "consumer product", which means any tangible personal property which is normally used for personal, family, or household purposes, or (2) anything designed or sold for incorporation into a dwelling. In determining whether a product is a consumer product, doubtful cases shall be resolved in favor of coverage. For a particular product received by a particular user, "normally used" refers to a typical or common use of that class of product, regardless of the status of the particular user or of the way in which the particular user actually uses, or expects or is expected to use, the product. A product is a consumer product regardless of whether the product has substantial commercial, industrial or non-consumer uses, unless such uses represent the only significant mode of use of the product.

"Installation Information" for a User Product means any methods, procedures, authorization keys, or other information required to install and execute modified versions of a covered work in that User Product from a modified version of its Corresponding Source. The information must suffice to ensure that the continued functioning of the modified object code is in no case prevented or interfered with solely because modification has been made.

If you convey an object code work under this section in, or with, or specifically for use in, a User Product, and the conveying occurs as part of a transaction in which the right of possession and use of the User Product is transferred to the recipient in perpetuity or for a fixed term (regardless of how the transaction is characterized), the Corresponding Source conveyed under this section must be accompanied by the Installation Information. But this requirement does not apply if neither you nor any third party retains the ability to install modified object code on the User Product (for example, the work has been installed in ROM). The requirement to provide Installation Information does not include a requirement to continue to provide support service, warranty, or updates for a work that has been modified or installed by the recipient, or for the User Product in which it has been modified or installed. Access to a network may be denied when the modification itself materially and adversely affects the operation of the network or violates the rules and protocols for communication across the network.

Corresponding Source conveyed, and Installation Information provided, in accord with this section must be in a format that is publicly documented (and with an implementation
available to the public in source code form), and must require no special password or key for unpacking, reading or copying.

7. Additional Terms.

"Additional permissions" are terms that supplement the terms of this License by making exceptions from one or more of its conditions. Additional permissions that are applicable to the entire Program shall be treated as though they were included in this License, to the extent that they are valid under applicable law. If additional permissions apply only to part of the Program, that part may be used separately under those permissions, but the entire Program remains governed by this License without regard to the additional permissions.

When you convey a copy of a covered work, you may at your option remove any additional permissions from that copy, or from any part of it. (Additional permissions may be written to require their own removal in certain cases when you modify the work.) You may place additional permissions on material, added by you to a covered work, for which you have or can give appropriate copyright permission. Notwithstanding any other provision of this License, for material you add to a covered work, you may (if authorized by the copyright holders of that material) supplement the terms of this License with terms.

a) Disclaiming warranty or limiting liability differently from the terms of sections 15 and 16 of this License; or

b) Requiring preservation of specified reasonable legal notices or author attributions in that material or in the Appropriate Legal Notices displayed by works containing it; or

c) Prohibiting misrepresentation of the origin of that material, or requiring that modified versions of such material be marked in reasonable ways as different from the original version; or

d) Limiting the use for publicity purposes of names of licensors or authors of the material; or

e) Declining to grant rights under trademark law for use of some trade names, trademarks, or service marks; or

f) Requiring indemnification of licensors and authors of that material by anyone who conveys the material (or modified versions of it) with contractual assumptions of liability to the recipient, for any liability that these contractual assumptions directly impose on those licensors and authors.

All other non-permissive additional terms are considered "further restrictions" within the meaning of section 10. If the Program as you received it, or any part of it, contains a notice stating that it is governed by this License along with a term that is a further restriction, you may remove that term. If a license document contains a further restriction but permits
relicensing or conveying under this License, you may add to a covered work material
governed by the terms of that license document, provided that the further restriction does
not survive such relicensing or conveying.

If you add terms to a covered work in accord with this section, you must place, in the
relevant source files, a statement of the additional terms that apply to those files, or a
notice indicating where to find the applicable terms.

Additional terms, permissive or non-permissive, may be stated in the form of a separately
written license, or stated as exceptions; the above requirements apply either way.

8. Termination.

You may not propagate or modify a covered work except as expressly provided under this
License. Any attempt otherwise to propagate or modify it is void, and will automatically
terminate your rights under this License (including any patent licenses granted under the
third paragraph of section 11).

However, if you cease all violation of this License, then your license from a particular
copyright holder is reinstated (a) provisionally, unless and until the copyright holder
explicitly and finally terminates your license, and (b) permanently, if the copyright holder
fails to notify you of the violation by some reasonable means prior to 60 days after the
cessation.

Moreover, your license from a particular copyright holder is reinstated permanently if the
copyright holder notifies you of the violation by some reasonable means, this is the first
time you have received notice of violation of this License (for any work) from that copyright
holder, and you cure the violation prior to 30 days after your receipt of the notice.

Termination of your rights under this section does not terminate the licenses of parties who
have received copies or rights from you under this License. If your rights have been
terminated and not permanently reinstated, you do not qualify to receive new licenses for
the same material under section 10.

You are not required to accept this License in order to receive or run a copy of the
Program. Ancillary propagation of a covered work occurring solely as a consequence of
using peer-to-peer transmission to receive a copy likewise does not require acceptance.
However, nothing other than this License grants you permission to propagate or modify any
covered work. These actions infringe copyright if you do not accept this License. Therefore,
by modifying or propagating a covered work, you indicate your acceptance of this License
to do so.

10. Automatic Licensing of Downstream Recipients.
Each time you convey a covered work, the recipient automatically receives a license from the original licensors, to run, modify and propagate that work, subject to this License. You are not responsible for enforcing compliance by third parties with this License.

An "entity transaction" is a transaction transferring control of an organization, or substantially all assets of one, or subdividing an organization, or merging organizations. If propagation of a covered work results from an entity transaction, each party to that transaction who receives a copy of the work also receives whatever licenses to the work the party's predecessor in interest had or could give under the previous paragraph, plus a right to possession of the Corresponding Source of the work from the predecessor in interest, if the predecessor has it or can get it with reasonable efforts.

You may not impose any further restrictions on the exercise of the rights granted or affirmed under this License. For example, you may not impose a license fee, royalty, or other charge for exercise of rights granted under this License, and you may not initiate litigation (including a cross-claim or counterclaim in a lawsuit) alleging that any patent claim is infringed by making, using, selling, offering for sale, or importing the Program or any portion of it

11. Patents.

A "contributor" is a copyright holder who authorizes use under this License of the Program or a work on which the Program is based. The work thus licensed is called the contributor's "contributor version".

A contributor's "essential patent claims" are all patent claims owned or controlled by the contributor, whether already acquired or hereafter acquired, that would be infringed by some manner, permitted by this License, of making, using, or selling its contributor version, but do not include claims that would be infringed only as a consequence of further modification of the contributor version. For purposes of this definition, "control" includes the right to grant patent sublicenses in a manner consistent with the requirements of this License.

Each contributor grants you a non-exclusive, worldwide, royalty-free patent license under the contributor's essential patent claims, to make, use, sell, offer for sale, import and otherwise run, modify and propagate the contents of its contributor version.

In the following three paragraphs, a "patent license" is any express agreement or commitment, however denominated, not to enforce a patent (such as an express permission to practice a patent or covenant not to sue for patent infringement). To "grant" such a patent license to a party means to make such an agreement or commitment not to enforce a patent against the party.

If you convey a covered work, knowingly relying on a patent license, and the Corresponding Source of the work is not available for anyone to copy, free of charge and under the terms
of this License, through a publicly available network server or other readily accessible means, then you must either (1) cause the Corresponding Source to be so available, or (2) arrange to deprive yourself of the benefit of the patent license for this particular work, or (3) arrange, in a manner consistent with the requirements of this License, to extend the patent license to downstream recipients. "Knowingly relying" means you have actual knowledge that, but for the patent license, your conveying the covered work in a country, or your recipient's use of the covered work in a country, would infringe one or more identifiable patents in that country that you have reason to believe are valid.

If, pursuant to or in connection with a single transaction or arrangement, you convey, or propagate by procuring conveyance of, a covered work, and grant a patent license to some of the parties receiving the covered work authorizing them to use, propagate, modify or convey a specific copy of the covered work, then the patent license you grant is automatically extended to all recipients of the covered work and works based on it.

A patent license is "discriminatory" if it does not include within the scope of its coverage, prohibits the exercise of, or is conditioned on the non-exercise of one or more of the rights that are specifically granted under this License. You may not convey a covered work if you are a party to an arrangement with a third party that is in the business of distributing software, under which you make payment to the third party based on the extent of your activity of conveying the work, and under which the third party grants, to any of the parties who would receive the covered work from you, a discriminatory patent license (a) in connection with copies of the covered work conveyed by you (or copies made from those copies), or (b) primarily for and in connection with specific products or compilations that contain the covered work, unless you entered into that arrangement, or that patent license was granted, prior to 28 March 2007.

Nothing in this License shall be construed as excluding or limiting any implied license or other defenses to infringement that may otherwise be available to you under applicable patent law.

If conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot convey a covered work so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not convey it at all. For example, if you agree to terms that obligate you to collect a royalty for further conveying from those to whom you convey the Program, the only way you could satisfy both those terms and this License would be to refrain entirely from conveying the Program.

13. Use with the GNU Affero General Public License.
Notwithstanding any other provision of this License, you have permission to link or combine any covered work with a work licensed under version 3 of the GNU Affero General Public License into a single combined work, and to convey the resulting work. The terms of this License will continue to apply to the part which is the covered work, but the special requirements of the GNU Affero General Public License, section 13, concerning interaction through a network will apply to the combination as such.

14. Revised Versions of this License.

The Free Software Foundation may publish revised and/or new versions of the GNU General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies that a certain numbered version of the GNU General Public License "or any later version" applies to it, you have the option of following the terms and conditions either of that numbered version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of the GNU General Public License, you may choose any version ever published by the Free Software Foundation. If the Program specifies that a proxy can decide which future versions of the GNU General Public License can be used, that proxy's public statement of acceptance of a version permanently authorizes you to choose that version for the Program. Later license versions may give you additional or different permissions. However, no additional obligations are imposed on any author or copyright holder as a result of your choosing to follow a later version.

15. Disclaimer of Warranty.

THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

16. Limitation of Liability.

IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MODIFIES AND/OR CONVEYS THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR
A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

17. Interpretation of Sections 15 and 16.

If the disclaimer of warranty and limitation of liability provided above cannot be given local legal effect according to their terms, reviewing courts shall apply local law that most closely approximates an absolute waiver of all civil liability in connection with the Program, unless a warranty or assumption of liability accompanies a copy of the Program in return for a fee.

Apache License
Version 2.0, January 2004
http://www.apache.org/licenses/

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications,
including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.
4. Redistribution. You may reproduce and distribute copies of the
Work or Derivative Works thereof in any medium, with or without
modifications, and in Source or Object form, provided that You
meet the following conditions:

(a) You must give any other recipients of the Work or
Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices
stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works
that You distribute, all copyright, patent, trademark, and
attribution notices from the Source form of the Work,
excluding those notices that do not pertain to any part of
the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its
distribution, then any Derivative Works that You distribute must
include a readable copy of the attribution notices contained
within such NOTICE file, excluding those notices that do not
pertain to any part of the Derivative Works, in at least one
of the following places: within a NOTICE text file distributed
as part of the Derivative Works; within the Source form or
documentation, if provided along with the Derivative Works; or,
within a display generated by the Derivative Works, if and
wherever such third-party notices normally appear. The contents
of the NOTICE file are for informational purposes only and
do not modify the License. You may add Your own attribution
notices within Derivative Works that You distribute, alongside
or as an addendum to the NOTICE text from the Work, provided
that such additional attribution notices cannot be construed
as modifying the License.

You may add Your own copyright statement to Your modifications and
may provide additional or different license terms and conditions
for use, reproduction, or distribution of Your modifications, or
for any such Derivative Works as a whole, provided Your use,
reproduction, and distribution of the Work otherwise complies with
the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,
any Contribution intentionally submitted for inclusion in the Work
by You to the Licensor shall be under the terms and conditions of
this License, without any additional terms or conditions.
Notwithstanding the above, nothing herein shall supersede or modify
the terms of any separate license agreement You may have executed
with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade
names, trademarks, service marks, or product names of the Licensor,
except as required for reasonable and customary use in describing
the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or
agreed to in writing, Licensor provides the Work (and each
Contributor provides its Contributions) on an "AS IS" BASIS,
WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
implied, including, without limitation, any warranties or conditions
of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
PARTICULAR PURPOSE. You are solely responsible for determining the
appropriateness of using or redistributing the Work and assume any
risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

Copyright [yyyy] [name of copyright owner]

The GNU General Public License (GPL)
Version 2, June 1991

Copyright (C) 1989, 1991 Free Software Foundation, Inc. 59 Temple Place, Suite 330, Boston, MA 02111-1307 USA

Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

Preamble

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change free software--to make sure the software is free for all its users. This General Public License applies to most of the Free Software Foundation's software and to any other program whose authors commit to using it. (Some other Free Software Foundation software is covered by the GNU Library General Public License instead.) You can apply it to your programs, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs; and that you know you can do these things.

To protect your rights, we need to make restrictions that forbid anyone to deny you these rights or to ask you to surrender the rights. These restrictions translate to certain responsibilities for you if you distribute copies of the software, or if you modify it.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must give the recipients all the rights that you have. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

We protect your rights with two steps: (1) copyright the software, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the software.
Also, for each author's protection and ours, we want to make certain that everyone understands that there is no warranty for this free software. If the software is modified by someone else and passed on, we want its recipients to know that what they have is not the original, so that any problems introduced by others will not reflect on the original authors' reputations.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that redistributors of a free program will individually obtain patent licenses, in effect making the program proprietary. To prevent this, we have made it clear that any patent must be licensed for everyone's free use or not licensed at all.

The precise terms and conditions for copying, distribution and modification follow.

TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License applies to any program or other work which contains a notice placed by the copyright holder saying it may be distributed under the terms of this General Public License. The "Program", below, refers to any such program or work, and a "work based on the Program" means either the Program or any derivative work under copyright law: that is to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another language. (Hereinafter, translation is included without limitation in the term "modification".) Each licensee is addressed as "you".

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running the Program is not restricted, and the output from the Program is covered only if its contents constitute a work based on the Program (independent of having been made by running the Program). Whether that is true depends on what the Program does.

1. You may copy and distribute verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and give any other recipients of the Program a copy of this License along with the Program.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Program or any portion of it, thus forming a work based on the Program, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

a) You must cause the modified files to carry prominent notices stating that you changed the files and the date of any change.
b) You must cause any work that you distribute or publish, that in whole or in part contains or is derived from the Program or any part thereof, to be licensed as a whole at no charge to all third parties under the terms of this License.

c) If the modified program normally reads commands interactively when run, you must cause it, when started running for such interactive use in the most ordinary way, to print or display an announcement including an appropriate copyright notice and a notice that there is no warranty (or else, saying that you provide a warranty) and that users may redistribute the program under these conditions, and telling the user how to view a copy of this License. (Exception: if the Program itself is interactive but does not normally print such an announcement, your work based on the Program is not required to print an announcement.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Program, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Program, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Program.

In addition, mere aggregation of another work not based on the Program with the Program (or with a work based on the Program) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may copy and distribute the Program (or a work based on it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you also do one of the following:

a) Accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

b) Accompany it with a written offer, valid for at least three years, to give any third party, for a charge no more than your cost of physically performing source distribution, a complete machine-readable copy of the corresponding source code, to be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

c) Accompany it with the information you received as to the offer to distribute corresponding source code. (This alternative is allowed only for noncommercial distribution
and only if you received the program in object code or executable form with such an offer, in accord with Subsection b above.)

The source code for a work means the preferred form of the work for making modifications to it. For an executable work, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the executable. However, as a special exception, the source code distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

If distribution of executable or object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place counts as distribution of the source code, even though third parties are not compelled to copy the source along with the object code.

4. You may not copy, modify, sublicense, or distribute the Program except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense or distribute the Program is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

5. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Program or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Program (or any work based on the Program), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Program or works based on it.

6. Each time you redistribute the Program (or any work based on the Program), the recipient automatically receives a license from the original licensor to copy, distribute or modify the Program subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties to this License.

7. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Program at all. For example, if a patent license would not permit royalty-free redistribution of the Program by all those who receive
copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Program.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system, which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

8. If the distribution and/or use of the Program is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Program under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

9. The Free Software Foundation may publish revised and/or new versions of the General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of this License, you may choose any version ever published by the Free Software Foundation.

10. If you wish to incorporate parts of the Program into other free programs whose distribution conditions are different, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

NO WARRANTY

11. BECAUSE THE PROGRAM IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN
OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

12. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

FLOSS License Exception

(Adapted from http://www.mysql.com/company/legal/licensing/foss-exception.html)

I want specified Free/Libre and Open Source Software ("FLOSS") applications to be able to use specified GPL-licensed RRDtool libraries (the "Program") despite the fact that not all FLOSS licenses are compatible with version 2 of the GNU General Public License (the "GPL").

As a special exception to the terms and conditions of version 2.0 of the GPL:

You are free to distribute a Derivative Work that is formed entirely from the Program and one or more works (each, a "FLOSS Work") licensed under one or more of the licenses listed below, as long as:

1. You obey the GPL in all respects for the Program and the Derivative Work, except for identifiable sections of the Derivative Work which are not derived from the Program, and which can reasonably be considered independent and separate works in themselves.
2. All identifiable sections of the Derivative Work which are not derived from the Program, and which can reasonably be considered independent and separate works in themselves,
   - are distributed subject to one of the FLOSS licenses listed below, and
   - the object code or executable form of those sections are accompanied by the complete corresponding machine-readable source code for those sections on the same medium and under the same FLOSS license as the corresponding object code or executable forms of those sections.
3. Any works which are aggregated with the Program or with a Derivative Work on a volume of a storage or distribution medium in accordance with the GPL, can reasonably be considered independent and separate works in themselves which are not derivatives of either the Program, a Derivative Work or a FLOSS Work.

If the above conditions are not met, then the Program may only be copied, modified, distributed or used under the terms and conditions of the GPL.

FLOSS License List

License name Version(s)/Copyright Date

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object
form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work,
excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NONINFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.
9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

Copyright [yyyy] [name of copyright owner]

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the
Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided
that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.
"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.
4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the
appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "subscribed" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the...
Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided
that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of Your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all
other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work,
where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor,
except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use of or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of,
the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must...
include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only
on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"license" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of
this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.
5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties of merchantability, fitness for a particular purpose. Licensor and each Contributor disclaim all representations and warranties as to theight or accuracy of information provided by a third party or included with the Work.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing
the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only in Your own behalf and on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a
copyright notice that is included in or attached to the work
(an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object
form, that is based on (or derived from) the Work and for which the
editorial revisions, annotations, elaborations, or other modifications
represent, as a whole, an original work of authorship. For the purposes
of this License, Derivative Works shall not include works that remain
separable from, or merely link (or bind by name) to the interfaces of,
the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including
the original version of the Work and any modifications or additions
to that Work or Derivative Works thereof, that is intentionally
submitted to Licensor for inclusion in the Work by the copyright owner
or by an individual or Legal Entity authorized to submit on behalf of
the copyright owner. For the purposes of this definition, "submitted"
means any form of electronic, verbal, or written communication sent
to the Licensor or its representatives, including but not limited to
communication on electronic mailing lists, source code control systems,
and issue tracking systems that are managed by, or on behalf of, the
Licensor for the purpose of discussing and improving the Work, but
excluding communication that is conspicuously marked or otherwise
designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity
on behalf of whom a Contribution has been received by Licensor and
subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of
this License, each Contributor hereby grants to You a perpetual,
worldwide, non-exclusive, no-charge, royalty-free, irrevocable
copyright license to reproduce, prepare Derivative Works of,
publicly display, publicly perform, sublicense, and distribute the
Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of
this License, each Contributor hereby grants to You a perpetual,
worldwide, non-exclusive, no-charge, royalty-free, irrevocable
(except as stated in this section) patent license to make, have made,
use, offer to sell, sell, import, and otherwise transfer the Work,
where such license applies only to those patent claims licensable
by such Contributor that are necessarily infringed by their
Contribution(s) alone or by combination of their Contribution(s)
with the Work to which such Contribution(s) was submitted. If You
institute patent litigation against any entity (including a
cross-claim or counterclaim in a lawsuit) alleging that the Work
or a Contribution incorporated within the Work constitutes direct
or contributory patent infringement, then any patent licenses
granted to You under this License for that Work shall terminate
as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the
Work or Derivative Works thereof in any medium, with or without
modifications, and in Source or Object form, provided that You
meet the following conditions:

(a) You must give any other recipients of the Work or
   Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices
   stating that You changed the files; and
(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties of or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill,
work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed between brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the.
Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided
that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "["]
replaced with your own identifying information. (Don't include
the brackets!) The text should be enclosed in the appropriate
comment syntax for the file format. We also recommend that a
file or class name and description of purpose be included on the
same "printed page" as the copyright notice for easier
identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction,
and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by
the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all
other entities that control, are controlled by, or are under common
control with that entity. For the purposes of this definition,
"control" means (i) the power, direct or indirect, to cause the
direction or management of such entity, whether by contract or
otherwise, or (ii) ownership of fifty percent (50%) or more of the
outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity
exercising permissions granted by this License.
"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.
4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the
appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution
notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an “AS IS” BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of Your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.
SNMP

Various copyrights apply to this package, listed in various separate parts below. Please make sure that you read all the parts. Up until 2001, the project was based at UC Davis, and the first part covers all code written during this time. From 2001 onwards, the project has been based at SourceForge, and Networks Associates Technology, Inc hold the copyright on behalf of the wider Net-SNMP community, covering all derivative work done since then. An additional copyright section has been added as Part 3 below also under a BSD license for the work contributed by Cambridge Broadband Ltd. to the project since 2001. An additional copyright section has been added as Part 4 below also under a BSD license for the work contributed by Sun Microsystems, Inc. to the project since 2003.

Code has been contributed to this project by many people over the years it has been in development, and a full list of contributors can be found in the README file under the THANKS section.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.
"Legal Entity" shall mean the union of the acting entity and all
other entities that control, are controlled by, or are under common
control with that entity. For the purposes of this definition,
"control" means (i) the power, direct or indirect, to cause the
direction or management of such entity, whether by contract or
otherwise, or (ii) ownership of fifty percent (50%) or more of the
outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity
exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications,
including but not limited to software source code, documentation
source, and configuration files.

"Object" form shall mean any form resulting from mechanical
transformation or translation of a Source form, including but
not limited to compiled object code, generated documentation,
and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or
Object form, made available under the License, as indicated by a
copyright notice that is included in or attached to the work
(an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object
form, that is based on (or derived from) the Work and for which the
editorial revisions, annotations, elaborations, or other modifications
represent, as a whole, an original work of authorship. For the purposes
of this License, Derivative Works shall not include works that remain
separable from, or merely link (or bind by name) to the interfaces of,
the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including
the original version of the Work and any modifications or additions
to that Work or Derivative Works thereof, that is intentionally
submitted to Licensor for inclusion in the Work by the copyright owner
or by an individual or Legal Entity authorized to submit on behalf of
the copyright owner. For the purposes of this definition, "submitted"
means any form of electronic, verbal, or written communication sent
to the Licensor or its representatives, including but not limited to
communication on electronic mailing lists, source code control systems,
and issue tracking systems that are managed by, or on behalf of, the
Licensor for the purpose of discussing and improving the Work, but
excluding communication that is conspicuously marked or otherwise
designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity
on behalf of whom a Contribution has been received by Licensor and
subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of
this License, each Contributor hereby grants to You a perpetual,
worldwide, non-exclusive, no-charge, royalty-free, irrevocable
copyright license to reproduce, prepare Derivative Works of,
publicly display, publicly perform, sublicense, and distribute the
Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of
this License, each Contributor hereby grants to You a perpetual,
worldwide, non-exclusive, no-charge, royalty-free, irrevocable
(except as stated in this section) patent license to make, have made,
use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade
names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties of merchantability, non-infringement, and/or implied warranties of title, non-interference with your use and enjoyment of the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the
Licensors for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensors and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided
that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your own responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.
"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without
modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided You do not modify the License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties of or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.
8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

History of the Software

Python was created in the early 1990s by Guido van Rossum at Stichting Mathematisch Centrum (CWI, see http://www.cwi.nl/) in the Netherlands as a successor of a language called ABC. Guido remains Python’s principal author, although it includes many contributions from others.

In 1995, Guido continued his work on Python at the Corporation for National Research Initiatives (CNRI, see http://www.cnri.reston.va.us/) in Reston, Virginia where he released several versions of the software.

In May 2000, Guido and the Python core development team moved to BeOpen.com to form the BeOpen PythonLabs team. In October of the same year, the PythonLabs team moved to Digital Creations (now Zope Corporation; see http://www.zope.com/). In 2001, the Python Software Foundation (PSF, see http://www.python.org/psf/) was formed, a non-profit
organization created specifically to own Python-related Intellectual Property. Zope Corporation is a sponsoring member of the PSF.

All Python releases are Open Source (see http://www.opensource.org/ for the Open Source Definition). Historically, most, but not all, Python releases have also been GPL-compatible; the table below summarizes the various releases.

**Note:**

1. GPL-compatible doesn’t mean that we’re distributing Python under the GPL. All Python licenses, unlike the GPL, let you distribute a modified version without making your changes open source. The GPL-compatible licenses make it possible to combine Python with other software that is released under the GPL; the others don’t.

2. According to Richard Stallman, 1.6.1 is not GPL-compatible, because its license has a choice of law clause. According to CNRI, however, Stallman's lawyer has told CNRI's lawyer that 1.6.1 is "not incompatible" with the GPL.

Thanks to the many outside volunteers who have worked under Guido’s direction to make these releases possible.
Terms and Conditions for Accessing or Otherwise Using Python

PYTHON SOFTWARE FOUNDATION LICENSE VERSION 2

1. This LICENSE AGREEMENT is between the Python Software Foundation ("PSF"), and the Individual or Organization ("Licensee") accessing and otherwise using this software ("Python") in source or binary form and its associated documentation.

2. Subject to the terms and conditions of this License Agreement, PSFhereby grants Licensee a nonexclusive, royalty-free, world-wide license to reproduce, analyze, test, perform and/or display publicly, prepare derivative works, distribute, and otherwise use Python alone or in any derivative version, provided, however, that PSF's License Agreement and PSF's notice of copyright, i.e., "Copyright (c) 2001, 2002, 2003, 2004, 2005, 2006 Python Software Foundation; All Rights Reserved" are retained in Python alone or in any derivative version prepared by Licensee.

3. In the event Licensee prepares a derivative work that is based on or incorporates Python or any part thereof, and wants to make the derivative work available to others as provided herein, then Licensee hereby agrees to include in any such work a brief summary of the changes made to Python.

4. PSF is making Python available to Licensee on an "AS IS" basis. PSF MAKES NO REPRESENTATIONS OR WARRANTIES, EXPRESS OR IMPLIED. BY WAY OF EXAMPLE, BUT NOT LIMITATION, PSF MAKES NO AND DISCLAIMS ANY REPRESENTATION OR WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OR THAT THE USE OF PYTHON WILL NOT INFRINGE ANY THIRD PARTY RIGHTS.

5. PSF SHALL NOT BE LIABLE TO LICENSEE OR ANY OTHER USERS OF PYTHON FOR ANY INCIDENTAL, SPECIAL, OR CONSEQUENTIAL DAMAGES OR LOSS AS A RESULT OF MODIFYING, DISTRIBUTING, OR OTHERWISE USING PYTHON, OR ANY DERIVATIVE THEREOF, EVEN IF ADVISED OF THE POSSIBILITY THEREOF.

6. This License Agreement will automatically terminate upon a material breach of its terms and conditions.

7. Nothing in this License Agreement shall be deemed to create any relationship of agency, partnership, or joint venture between PSF and Licensee. This License Agreement does not grant permission to use PSF trademarks or trade name in a trademark sense to endorse or promote products or services of Licensee, or any third party.

8. By copying, installing or otherwise using Python, Licensee agrees to be bound by the terms and conditions of this License Agreement.
BEOPEN.COM LICENSE AGREEMENT
FOR PYTHON 2.0

BEOPEN PYTHON OPEN SOURCE LICENSE AGREEMENT VERSION 1

1. This LICENSE AGREEMENT is between BeOpen.com (“BeOpen”), having an office at 160 Saratoga Avenue, Santa Clara, CA 95051, and the Individual or Organization (“Licensee”) accessing and otherwise using this software in source or binary form and its associated documentation (“the Software”).

2. Subject to the terms and conditions of this BeOpen Python License Agreement, BeOpen hereby grants Licensee a non-exclusive, royalty-free, world-wide license to reproduce, analyze, test, perform and/or display publicly, prepare derivative works, distribute, and otherwise use the Software alone or in any derivative version, provided, however, that the BeOpen Python License is retained in the Software, alone or in any derivative version prepared by Licensee.

3. BeOpen is making the Software available to Licensee on an “AS IS” basis. BEOPEN MAKES NO REPRESENTATIONS OR WARRANTIES, EXPRESS OR IMPLIED. BY WAY OF EXAMPLE, BUT NOT LIMITATION, BEOPEN MAKES NO AND DISCLAIMS ANY REPRESENTATION OR WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OR THAT THE USE OF THE SOFTWARE WILL NOT INFRINGE ANY THIRD PARTY RIGHTS.

4. BEOPEN SHALL NOT BE LIABLE TO LICENSEE OR ANY OTHER USERS OF THE SOFTWARE FOR ANY INCIDENTAL, SPECIAL, OR CONSEQUENTIAL DAMAGES OR LOSS AS A RESULT OF USING, MODIFYING OR DISTRIBUTING THE SOFTWARE, OR ANY DERivative THEREOF, EVEN IF ADVISED OF THE POSSIBILITY THEREOF.

5. This License Agreement will automatically terminate upon a material breach of its terms and conditions.

6. This License Agreement shall be governed by and interpreted in all respects by the law of the State of California, excluding conflict of law provisions. Nothing in this License Agreement shall be deemed to create any relationship of agency, partnership, or joint venture between BeOpen and Licensee. This License Agreement does not grant permission to use BeOpen trademarks or trade names in a trademark sense to endorse or promote products or services of Licensee, or any third party. As an exception, the “BeOpen Python” logos available at http://www.pythonlabs.com/logos.html may be used according to the permissions granted on that web page.

7. By copying, installing or otherwise using the software, Licensee agrees to be bound by the terms and conditions of this License Agreement.
CNRI LICENSE AGREEMENT FOR
PYTHON 1.6.1

1. This LICENSE AGREEMENT is between the Corporation for National Research Initiatives, having an office at 1895 Preston White Drive, Reston, VA 20191 (“CNRI”), and the Individual or Organization (“Licensee”) accessing and otherwise using Python 1.6.1 software in source or binary form and its associated documentation.

2. Subject to the terms and conditions of this License Agreement, CNRI hereby grants Licensee a nonexclusive, royalty-free, world-wide license to reproduce, analyze, test, perform and/or display publicly, prepare derivative works, distribute, and otherwise use Python 1.6.1 alone or in any derivative version, provided, however, that CNRI’s License Agreement and CNRI’s notice of copyright, i.e., “Copyright © 1995-2001 Corporation for National Research Initiatives; All Rights Reserved” are retained in Python 1.6.1 alone or in any derivative version prepared by Licensee. Alternately, in lieu of CNRI’s License Agreement, Licensee may substitute the following text (omitting the quotes): “Python 1.6.1 is made available subject to the terms and conditions in CNRI’s License Agreement. This Agreement together with Python 1.6.1 may be located on the Internet using the following unique, persistent identifier (known as a handle): 1895.22/1013. This Agreement may also be obtained from a proxy server on the Internet using the following URL: http://hdl.handle.net/1895.22/1013.”

3. In the event Licensee prepares a derivative work that is based on or incorporates Python 1.6.1 or any part thereof, and wants to make the derivative work available to others as provided herein, then Licensee hereby agrees to include in any such work a brief summary of the changes made to Python 1.6.1.

4. CNRI is making Python 1.6.1 available to Licensee on an “AS IS” basis. CNRI MAKES NO REPRESENTATIONS OR WARRANTIES, EXPRESS OR IMPLIED. BY WAY OF EXAMPLE, BUT NOT LIMITATION, CNRI MAKES NO AND DISCLAIMS ANY REPRESENTATION OR WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OR THAT THE USE OF PYTHON 1.6.1 WILL NOT INFRINGE ANY THIRD PARTY RIGHTS.

5. CNRI SHALL NOT BE LIABLE TO LICENSEE OR ANY OTHER USERS OF PYTHON 1.6.1 FOR ANY INCIDENTAL, SPECIAL, OR CONSEQUENTIAL DAMAGES OR LOSS AS A RESULT OF MODIFYING, DISTRIBUTING, OR OTHERWISE USING PYTHON 1.6.1, OR ANY DERIVATIVE THEREOF, EVEN IF ADVISED OF THE POSSIBILITY THEREOF.

6. This License Agreement will automatically terminate upon a material breach of its terms and conditions.

7. This License Agreement shall be governed by the federal intellectual property law of the United States, including without limitation the federal copyright law, and, to the
extent such U.S. federal law does not apply, by the law of the Commonwealth of Virginia, excluding Virginia’s conflict of law provisions. Notwithstanding the foregoing, with regard to derivative works based on Python 1.6.1 that incorporate non-separable material that was previously distributed under the GNU General Public License (GPL), the law of the Commonwealth of Virginia shall govern this License Agreement only as to issues arising under or with respect to Paragraphs 4, 5, and 7 of this License Agreement. Nothing in this License Agreement shall be deemed to create any relationship of agency, partnership, or joint venture between CNRI and Licensee. This License Agreement does not grant permission to use CNRI trademarks or trade name in a trademark sense to endorse or promote products or services of Licensee, or any third party.

8. By clicking on the “ACCEPT” button where indicated, or by copying, installing or otherwise using Python 1.6.1, Licensee agrees to be bound by the terms and conditions of this License Agreement.

ACCEPT

CWI LICENSE AGREEMENT FOR PYTHON
0.9.0 THROUGH 1.2

Copyright © 1991 - 1995, Stichting Mathematisch Centrum Amsterdam, The Netherlands. All rights reserved.

Permission to use, copy, modify, and distribute this software and its documentation for any purpose and without fee is hereby granted, provided that the above copyright notice appear in all copies and that both that copyright notice and this permission notice appear in supporting documentation, and that the name of Stichting Mathematisch Centrum or CWI not be used in advertising or publicity pertaining to distribution of the software without specific, written prior permission.

**WiX**

Copyright 2006-2015 Microsoft

Version 3.9

Microsoft Reciprocal License (Ms-RL)

**Description**

WiX Toolset License

The WiX toolset is released under the Microsoft Reciprocal License (MS-RL). A reciprocal license is used to ensure that others who build on the effort of the WiX community give back to the WiX community. Specifically the license changes and improvements to the WiX toolset must be published using the same license.

Sometimes the reciprocal license is incorrectly interpreted to also apply to bundles, packages, custom actions built using the WiX toolset. The Outercurve Foundation has provided this statement to clarify:

The WiX toolset (WiX) is licensed under the Microsoft Reciprocal License (MS-RL). The MS-RL governs the distribution of the software licensed under it, as well as derivative works, and incorporates the definition of a derivative work provided in U.S. copyright law. OuterCurve Foundation does not view the installer packages generated by WiX as falling within the definition of a derivative work, merely because they are produced using WiX. Thus, the installer packages generated by WiX will normally fall outside the scope of the MS-RL, and any of your source code, binaries, libraries, routines or other software components that are incorporated in installer packages generated by WiX can be governed by other licensing terms.

[https://github.com/wix](https://github.com/wix)

Microsoft Reciprocal License (MS-RL)

This license governs use of the accompanying software. If you use the software, you accept this license. If you do not accept the license, do not use the software.

**Definitions**

The terms "reproduce," "reproduction," "derivative works," and "distribution" have the same meaning here as under U.S. copyright law.

A "contribution" is the original software, or any additions or changes to the software.
A "contributor" is any person that distributes its contribution under this license.

"Licensed patents" are a contributor's patent claims that read directly on its contribution.

**Grant of Rights**

(A) Copyright Grant- Subject to the terms of this license, including the license conditions and limitations in section 3, each contributor grants you a non-exclusive, worldwide, royalty-free copyright license to reproduce its contribution, prepare derivative works of its contribution, and distribute its contribution or any derivative works that you create.

(B) Patent Grant- Subject to the terms of this license, including the license conditions and limitations in section 3, each contributor grants you a non-exclusive, worldwide, royalty-free license under its licensed patents to make, have made, use, sell, offer for sale, import, and/or otherwise dispose of its contribution in the software or derivative works of the contribution in the software.

**Conditions and Limitations**

(A) Reciprocal Grants- For any file you distribute that contains code from the software (in source code or binary format), you must provide recipients the source code to that file along with a copy of this license, which license will govern that file. You may license other files that are entirely your own work and do not contain code from the software under any terms you choose.

(B) No Trademark License- This license does not grant you rights to use any contributors' name, logo, or trademarks.

(C) If you bring a patent claim against any contributor over patents that you claim are infringed by the software, your patent license from such contributor to the software ends automatically.

(D) If you distribute any portion of the software, you must retain all copyright, patent, trademark, and attribution notices that are present in the software.

(E) If you distribute any portion of the software in source code form, you may do so only under this license by including a complete copy of this license with your distribution. If you distribute any portion of the software in compiled or object code form, you may only do so under a license that complies with this license.

(F) The software is licensed "as-is." You bear the risk of using it. The contributors give no express warranties, guarantees or conditions. You may have additional consumer rights under your local laws which this license cannot change. To the extent permitted under your local laws, the contributors exclude the implied warranties of merchantability, fitness for a particular purpose and non-infringement.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner
or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or,
within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of Your accepting any such warranty or additional liability.
APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.
"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work
or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS BASIS,
WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.
