Setting a host name using the `setProperty()` method overrides the host name set in a connection string. If this occurs, Vertica might not be able to connect to a host. For example, using the connection string above, the following overrides the `VerticaHost` name:

```
Properties props = new Properties();
props.setProperty("dataSource", dataSourceURL);
props.setProperty("database", database);
props.setProperty("user", user);
props.setProperty("password", password);
ps.setProperty("jdbcDriver", jdbcDriver);
props.setProperty("hostName", "NonVertica_host");
```

However, if a new connection or override connection is needed, you can enter a valid host name in the `hostName` properties object.

The `NonVertica_host` hostname overrides `VerticaHost` name in the connection string. To avoid this issue, comment out the `props.setProperty("hostName", "NonVertica_host");` line:

```
//props.setProperty("hostName", "NonVertica_host");
```

Properties Object

To set connection properties with the `Properties` object passed to the `getConnection()` call:

1. Import the `java.util.Properties` class to instantiate a `Properties` object.
2. Use the `put()` method to add name-value pairs to the object.
Properties myProp = new Properties();
myProp.put("user", "ExampleUser");
myProp.put("password", "password123");
myProp.put("LoginTimeout", "35");
Connection conn;
try {
    conn = DriverManager.getConnection(
        "jdbc:vertica://VerticaHost:/ExampleDB", myProp);
} catch (SQLException e) {
    e.printStackTrace();
}

Note:
The data type of all of the values you set in the Properties object are strings, regardless of the property value's data type.

Getting and Setting Properties After Connecting

After you establish a connection with Vertica, you can use the VerticaConnection methods getProperty() and setProperty() to set the values of some connection properties, respectively.

The VerticaConnection.getProperty() method lets you get the value of some connection properties. Use this method to change the value for properties that can be set after you establish a connection with Vertica.

Because these methods are Vertica-specific, you must cast your Connection object to the VerticaConnection interface with one of the following methods:

- Import the Connection object into your client application.

The following example demonstrates getting and setting the value of the ReadOnly property.

```java
import java.sql.*;
import java.util.Properties;
import com.vertica.jdbc.*;

public class SetConnectionProperties {
    public static void main(String[] args) {
        // Note: If your application needs to run under Java 5, you need to
        // load the JDBC driver using Class.forName() here.
        Properties myProp = new Properties();
        myProp.put("user", "ExampleUser");
        myProp.put("password", "password123");
        // Set ReadOnly to true initially
myProp.put("ReadOnly", "true");
Connection conn;
try {
    conn = DriverManager.getConnection(
        "jdbc:vertica://VerticaHost:5433/ExampleDB",
        myProp);
    // Show state of the ReadOnly property. This was set at the
    // time the connection was created.
    System.out.println("ReadOnly state: "
                        + ((VerticaConnection) conn).getProperty( 
                            "ReadOnly");
    // Change it and show it again
    ((VerticaConnection) conn).setProperty("ReadOnly", false);
    System.out.println("ReadOnly state is now: " +
                       ((VerticaConnection) conn).getProperty(
                           "ReadOnly");
    conn.close();
} catch (SQLException e) {
    e.printStackTrace();
}
}

When run, the example prints the following on the standard output:

ReadOnly state: true
ReadOnly state is now: false

## Configuring TLS for JDBC Clients

To configure TLS for JDBC clients:

- Set the keystore and truststore properties.
- Set the TLSmode parameter.
- (Optional) Run the SSL debug utility to test your configuration.

## Setting Keystore/Truststore properties

You can set the keystore and truststore properties in the following ways, each with their own pros and cons:

- At the driver level.
- At the JVM level.
Driver-level Configuration

If you use tools like DbVizualizer with many connections, configure the keystore and truststore with the JDBC connection properties. This does, however, expose these values in the connection string:

- KeyStorePath
- KeyStorePassword
- TrustStorePath
- TrustStorePassword

For example:

```java
Properties props = new Properties();
props.setProperty("KeyStorePath", keystorepath);
props.setProperty("KeyStorePassword", keystorepassword);
props.setProperty("TrustStorePath", truststorepath);
props.setProperty("TrustStorePassword", truststorepassword);
```

JVM-level Configuration

Setting keystore and truststore parameters at the JVM level excludes them from the connection string, which may be more accommodating for environments with more stringent security requirements:

- javax.net.ssl.keyStore
- javax.net.ssl.trustStore
- javax.net.ssl.keyStorePassword
- javax.net.ssl.trustStorePassword

For example:

```java
System.setProperty("javax.net.ssl.keyStore", "clientKeyStore.key");
System.setProperty("javax.net.ssl.trustStore", "clientTrustStore.key");
System.setProperty("javax.net.ssl.keyStorePassword", "new_keystore_password");
System.setProperty("javax.net.ssl.trustStorePassword", "new_truststore_password");
```
Set the TLSmode Connection Property

You can set the TLSmode connection property to determine how certificates are handled. TLSmode is disabled by default.

TLSmode identifies the security level that Vertica applies to the JDBC connection. Vertica must be configured to handle TLS connections before you can establish an encrypted connection to it. See TLS Protocol for details. Valid values are:

- **disable**: JDBC connects using plain text and implements no security measures.
- **require**: JDBC connects using TLS without verifying the CA certificate.
- **verify-ca**: JDBC connects using TLS and confirms that the server certificate has been signed by the certificate authority. This setting is equivalent to the deprecated `ssl=true` property.
- **verify-full**: JDBC connects using TLS, confirms that the server certificate has been signed by the certificate authority, and verifies that the host name matches the name provided in the server certificate.

If this property and the SSL property are set, this property takes precedence.

For example, to configure JDBC to connect to the server with TLS without verifying the CA certificate, you can set the TLSmode property to 'require' with the method `VerticaConnection.setProperty()`:

```java
Properties props = new Properties();
props.setProperty("TLSmode", "verify-full");
```

Run the SSL Debug Utility

After configuring TLS, you can run the following for a debugging utility:

```
$ java -Djavax.net.debug=ssl
```

You can use several debug specifiers (options) with the debug utility. The specifiers help narrow the scope of the debugging information that is returned. For example, you could specify one of the options that prints handshake messages or session activity.

For information on the debug utility and its options, see Debugging Utilities in the Oracle document, [JSSE Reference Guide](https://docs.oracle.com/javase/7/docs/technotes/guides/security/JSSE/index.html).
For information on interpreting debug information, refer to the Oracle document, [Debugging SSL/TLS Connections](#).

## Setting and Returning a Client Connection Label

The JDBC Client has a method to set and return the client connection label: `getClientInfo()` and `setClientInfo()`. You can use these methods with the SQL Functions `GET_CLIENT_LABEL` and `SET_CLIENT_LABEL`.

When you use these two methods, make sure you pass the string value `APPLICATIONNAME` to both the setter and getter methods.

Use `setClientInfo()` to create a client label, and use `getClientInfo()` to return the client label:

```java
import java.sql.*;
import java.util.Properties;

public class ClientLabelJDBC {
    public static void main(String[] args) {
        Properties myProp = new Properties();
        myProp.put("user", "dbadmin");
        myProp.put("password", "");
        myProp.put("loginTimeout", "35");
        Connection conn;
        try {
            conn = DriverManager.getConnection("jdbc:vertica://docc05.verticacorp.com:5433/doccdb", myProp);
            System.out.println("Connected!");
            conn.setClientInfo("APPLICATIONNAME", "JDBC Client - Data Load");
            System.out.println("New Conn label: "+ conn.getClientInfo("APPLICATIONNAME"));
            conn.close();
        } catch (SQLTransientConnectionException connException) {
            // There was a potentially temporary network error
            // Could automatically retry a number of times here, but
            // instead just report error and exit.
            System.out.println("Network connection issue: ");
            System.out.println(connException.getMessage());
            System.out.println(" Try again later!");
            return;
        } catch (SQLInvalidAuthorizationSpecException authException) {
            // Either the username or password was wrong
            System.out.println("Could not log into database: ");
            System.out.println(authException.getMessage());
            System.out.println(" Check the login credentials and try again.");
            return;
        } catch (SQLException e) {
            // Catch-all for other exceptions
            e.printStackTrace();
        }
    }
}
```

When you run this method, it prints the following result to the standard output:

```
Connected!
New Conn label: CLIENT-Data-Load
```
**Setting the Locale for JDBC Sessions**

You set the locale for a connection while opening it by including a `SET LOCALE` statement in the ConnSettings property, or by executing a `SET LOCALE` statement at any time after opening the connection. Changing the locale of a Connection object affects all of the Statement objects you instantiated using it.

You can get the locale by executing a `SHOW LOCALE` query. The following example demonstrates setting the locale using ConnSettings and executing a statement, as well as getting the locale:

```java
import java.sql.*;
import java.util.Properties;

public class GetAndSetLocale {
    public static void main(String[] args) {
        // If running under a Java 5 JVM, you need to load the JDBC driver
        // using Class.forName here

        Properties myProp = new Properties();
        myProp.put("user", "ExampleUser");
        myProp.put("password", "password123");

        // Set Locale to true en_GB on connection. After the connection
        // is established, the JDBC driver runs the statements in the
        // ConnSettings property.
        myProp.put("ConnSettings", "SET LOCALE TO en_GB");
        Connection conn;
        try {
            conn = DriverManager.getConnection("jdbc:vertica://VerticaHost:5433/ExampleDB", myProp);

            // Execute a query to get the locale. The results should
            // show "en_GB" as the locale, since it was set by the
            // conn settings property.
            Statement stmt = conn.createStatement();
            ResultSet rs = null;
            rs = stmt.executeQuery("SHOW LOCALE");
            System.out.println("Query reports that Locale is set to: ");
            while (rs.next()) {
                System.out.println(rs.getString(2).trim());
            }

            // Now execute a query to set locale.
            stmt.execute("SET LOCALE TO en_US");
        }
    }
}
```
// Run query again to get locale.
rs = stmt.executeQuery("SHOW LOCALE");
System.out.print("Query now reports that Locale is set to: ");
while (rs.next()) {
    System.out.println(rs.getString(2).trim());
}
// Clean up
conn.close();
} catch (SQLException e) {
    e.printStackTrace();
}
}

Running the above example displays the following on the system console:

Query reports that Locale is set to: en_GB (LEN)
Query now reports that Locale is set to: en_US (LEN)

Notes:

- JDBC applications use a UTF-16 character set encoding and are responsible for converting any non-UTF-16 encoded data to UTF-16. Failing to convert the data can result in errors or the data being stored incorrectly.
- The JDBC driver converts UTF-16 data to UTF-8 when passing to the Vertica server and converts data sent by Vertica server from UTF-8 to UTF-16.

**Changing the Transaction Isolation Level**

Changing the transaction isolation level lets you choose how transactions prevent interference from other transactions. By default, the JDBC driver matches the transaction isolation level of the Vertica server. The Vertica default transaction isolation level is READ_COMMITTED, which means any changes made by a transaction cannot be read by any other transaction until after they are committed. This prevents a transaction from reading data inserted by another transaction that is later rolled back.

Vertica also supports the SERIALIZABLE transaction isolation level. This level locks tables to prevent queries from having the results of their WHERE clauses changed by other transactions. Locking tables can have a performance impact, since only one transaction is able to access the table at a time.

A transaction retains its isolation level until it completes, even if the session's isolation level changes during the transaction. Vertica internal processes (such as the Tuple Mover and
refresh operations) and DDL operations always run at the SERIALIZABLE isolation level to ensure consistency.

You can change the transaction isolation level connection property after the connection has been established using the Connection object's setter (setTransactionIsolation()) and getter (getTransactionIsolation()). The value for transaction isolation property is an integer. The Connection interface defines constants to help you set the value in a more intuitive manner:

<table>
<thead>
<tr>
<th>Constant</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Connection.TRANSACTION_READ_COMMITTED</td>
<td>2</td>
</tr>
<tr>
<td>Connection.TRANSACTION_SERIALIZABLE</td>
<td>8</td>
</tr>
</tbody>
</table>

**Note:**
The Connection interface also defines several other transaction isolation constants (READ_UNCOMMITTED and REPEATABLE_READ). Since Vertica does not support these isolation levels, they are converted to READ_COMMITTED and SERIALIZABLE, respectively.

The following example demonstrates setting the transaction isolation level to SERIALIZABLE.

```java
import java.sql.*;
import java.util.Properties;

public class SetTransactionIsolation {
    public static void main(String[] args) {
        Properties myProp = new Properties();
        myProp.put("user", "ExampleUser");
        myProp.put("password", "password123");
        Connection conn;
        try {
            conn = DriverManager.getConnection("jdbc:vertica://VerticaHost:5433/ExampleDB", myProp);
            // Get default transaction isolation
            System.out.println("Transaction Isolation Level: ", conn.getTransactionIsolation());
            // Set transaction isolation to SERIALIZABLE
            conn.setTransactionIsolation(Connection.TRANSACTION_SERIALIZABLE);
            // Get the transaction isolation again
            System.out.println("Transaction Isolation Level: ", conn.getTransactionIsolation());
            conn.close();
        } catch (SQLException e) {
            e.printStackTrace();
        }
    }
}
```

Running the example results in the following being printed out to the console:
**Using a Pooling Data Source**

A pooling data source uses a collection of persistent connections in order to reduce the overhead of repeatedly opening network connections between the client and server. Opening a new connection for each request is more costly for both the server and the client than keeping a small pool of connections open constantly, ready to be used by new requests. When a request comes in, one of the pre-existing connections in the pool is assigned to it. Only if there are no free connections in the pool is a new connection created. Once the request is complete, the connection returns to the pool and waits to service another request.

The Vertica JDBC driver supports connection pooling as defined in the JDBC 4.0 standard. If you are using a J2EE-based application server in conjunction with Vertica, it should already have a built-in data pooling feature. All that is required is that the application server work with the `PooledConnection` interface implemented by Vertica's JDBC driver. An application server's pooling feature is usually well-tuned for the works loads that the server is designed to handle. See your application server's documentation for details on how to work with pooled connections. Normally, using pooled connections should be transparent in your code—you will just open connections and the application server will worry about the details of pooling them.

If you are not using an application server, or your application server does not offer connection pooling that is compatible with Vertica, you can use a third-party pooling library, such as the open-source c3p0 or DBCP libraries, to implement connection pooling.

**Note:**
The Vertica Analytic Database client driver's native connection load balancing feature works with third-party connection pooling supplied by application servers and third-party pooling libraries. See [Load Balancing in JDBC](#) for more information.
Load Balancing in JDBC

Native Connection Load Balancing

Native connection load balancing helps spread the overhead caused by client connections on the hosts in the Vertica database. Both the server and the client must enable native connection load balancing. If enabled by both, then when the client initially connects to a host in the database, the host picks a host to handle the client connection from a list of the currently up hosts in the database, and informs the client which host it has chosen.

If the initially-contacted host does not choose itself to handle the connection, the client disconnects, then opens a second connection to the host selected by the first host. The connection process to this second host proceeds as usual—if SSL is enabled, then SSL negotiations begin, otherwise the client begins the authentication process. See About Native Connection Load Balancing for details.

To enable native load balancing on your client, set the ConnectionLoadBalance connection parameter to true. The following example demonstrates:

- Connecting to the database several times with native connection load balancing enabled.
- Fetching the name of the node handling the connection from the V_MONITOR.CURRENT_SESSION system table.

```java
import java.sql.*;
import java.util.Properties;
import java.sql.*;
import java.util.Properties;

public class JDBCLoadingBalanceExample {
    public static void main(String[] args) {
        Properties myProp = new Properties();
        myProp.put("user", "dbadmin");
        myProp.put("password", "example_password123");
        myProp.put("loginTimeout", "35");
        myProp.put("ConnectionLoadBalance", "1");
        Connection conn;
        for (int x = 1; x <= 4; x++) {
            try {
                System.out.print("Connect attempt #" + x + "...");
                conn = DriverManager.getConnection("jdbc:vertica://node01.example.com:5433/vmart", myProp);
                Statement stmt = conn.createStatement();
                // Set the load balance policy to round robin before testing the database's load
```
Running the previous example produces the following output:

Connect attempt #1...Connected to node v_vmart_node0002
Connect attempt #2...Connected to node v_vmart_node0003
Connect attempt #3...Connected to node v_vmart_node0001
Connect attempt #4...Connected to node v_vmart_node0002

Hostname-based Load Balancing

You can load balance workloads by resolving a single hostname to multiple IP addresses. When you specify the hostname for the DriverManager.getConnection() method, the hostname resolves to a random listed IP address from the each connection.

For example, the hostname verticahost.example.com has the following entries in etc/hosts:

192.0.2.0 verticahost.example.com
192.0.2.1 verticahost.example.com
192.0.2.2 verticahost.example.com
Specifying `verticahost.example.com` as the connection for `DriverManager.getConnection()` randomly resolves to one of the listed IP address.

**JDBC Connection Failover**

If a client application attempts to connect to a host in the Vertica cluster that is down, the connection attempt fails when using the default connection configuration. This failure usually returns an error to the user. The user must either wait until the host recovers and retry the connection or manually edit the connection settings to choose another host.

Due to Vertica Analytic Database's distributed architecture, you usually do not care which database host handles a client application's connection. You can use the client driver's connection failover feature to prevent the user from getting connection errors when the host specified in the connection settings is unreachable. The JDBC driver gives you several ways to let the client driver automatically attempt to connect to a different host if the one specified in the connection parameters is unreachable:

- Configure your DNS server to return multiple IP addresses for a host name. When you use this host name in the connection settings, the client attempts to connect to the first IP address from the DNS lookup. If the host at that IP address is unreachable, the client tries to connect to the second IP, and so on until it either manages to connect to a host or it runs out of IP addresses.
- Supply a list of backup hosts for the client driver to try if the primary host you specify in the connection parameters is unreachable.
- (JDBC only) Use driver-specific connection properties to manage timeouts before attempting to connect to the next node.

For all methods, the process of failover is transparent to the client application (other than specifying the list of backup hosts, if you choose to use the list method of failover). If the primary host is unreachable, the client driver automatically tries to connect to other hosts.

Failover only applies to the initial establishment of the client connection. If the connection breaks, the driver does not automatically try to reconnect to another host in the database.

**Choosing a Failover Method**

You usually choose to use one of the two failover methods. However, they do work together. If your DNS server returns multiple IP addresses and you supply a list of backup hosts, the client first tries all of the IPs returned by the DNS server, then the hosts in the backup list.
Note: If a host name in the backup host list resolves to multiple IP addresses, the client does not try all of them. It just tries the first IP address in the list.

The DNS method of failover centralizes the configuration client failover. As you add new nodes to your Vertica Analytic Database cluster, you can choose to add them to the failover list by editing the DNS server settings. All client systems that use the DNS server to connect to Vertica Analytic Database automatically use connection failover without having to change any settings. However, this method does require administrative access to the DNS server that all clients use to connect to the Vertica Analytic Database cluster. This may not be possible in your organization.

Using the backup server list is easier than editing the DNS server settings. However, it decentralizes the failover feature. You may need to update the application settings on each client system if you make changes to your Vertica Analytic Database cluster.

Using DNS Failover

To use DNS failover, you need to change your DNS server's settings to map a single host name to multiple IP addresses of hosts in your Vertica Analytic Database cluster. You then have all client applications use this host name to connect to Vertica Analytic Database.

You can choose to have your DNS server return as many IP addresses for the host name as you want. In smaller clusters, you may choose to have it return the IP addresses of all of the hosts in your cluster. However, for larger clusters, you should consider choosing a subset of the hosts to return. Otherwise there can be a long delay as the client driver tries unsuccessfully to connect to each host in a database that is down.

Using the Backup Host List

To enable backup list-based connection failover, your client application has to specify at least one IP address or host name of a host in the BackupServerNode parameter. The host name or IP can optionally be followed by a colon and a port number. If not supplied, the driver defaults to the standard Vertica port number (5433). To list multiple hosts, separate them by a comma.

The following example demonstrates setting the BackupServerNode connection parameter to specify additional hosts for the connection attempt. The connection string intentionally has a non-existent node, so that the initial connection fails. The client driver has to resort to trying the backup hosts to establish a connection to Vertica.
import java.sql.*;
import java.util.Properties;

public class ConnectionFailoverExample {
    public static void main(String[] args) {
        // Assume using JDBC 4.0 driver on JVM 6+. No driver loading needed.
        Properties myProp = new Properties();
        myProp.put("user", "dbadmin");
        myProp.put("password", "vertica");
        // Set two backup hosts to be used if connecting to the first host
        // fails. All of these hosts will be tried in order until the connection
        // succeeds or all of the connections fail.
        myProp.put("BackupServerNode", "VerticaHost02,VerticaHost03");
        Connection conn;
        try {
            // The connection string is set to try to connect to a known
            // bad host (in this case, a host that never existed).
            conn = DriverManager.getConnection("jdbc:vertica://BadVerticaHost:5433/vmart", myProp);
            System.out.println("Connected!");
            // Query system to table to see what node we are connected to.
            // Assume a single row in response set.
            Statement stmt = conn.createStatement();
            ResultSet rs = stmt.executeQuery("SELECT node_name FROM v_monitor.current_session;");
            rs.next();
            System.out.println("Connected to node " + rs.getString(1).trim());
            // Done with connection.
            conn.close();
        } catch (SQLException e) {
            // Catch-all for other exceptions
            e.printStackTrace();
        }
    }
}

When run, the example outputs output similar to the following on the system console:

Connected!
Connected to node v_vmart_node0002

Notice that the connection was made to the first node in the backup list (node 2).

**Specifying Connection Timeouts**

[LoginTimeout](#) controls the timeout for JDBC to establish establish a TCP connection with a node and log in to Vertica.

[LoginNodeTimeout](#) controls the timeout for JDBC to log in to the Vertica database. After the specified timeout, JDBC attempts to connect to the "next" node, which is determined by either the connection property BackupServerNode or DNS resolution. This is useful if the node is up, but something is wrong with the Vertica process.
**LoginNetworkTimeout** controls the timeout for JDBC to establish a TCP connection to a Vertica node. If you do not set this connection property, if the node to which the JDBC client attempts to connect is down, the JDBC client will wait "indefinitely," but practically, the system default timeout of 70 seconds is used. A typical use case for LoginNetworkTimeout is to let JDBC connect to another node if the current Vertica node is down for maintenance and modifying the JDBC application's connection string is infeasible.

**NetworkTimeout** controls the timeout for Vertica to respond to a request from a client after it has established a connection and logged in to the database.

To set these parameters in a connection string:

```java
# LoginTimeout is 30 seconds, LoginNodeTimeout is 10 seconds, LoginNetworkTimeout is 2 seconds, NetworkTimeout is 0.5 seconds
Connection conn = DriverManager.getConnection(
    "jdbc:vertica://VerticaHost:5433/verticadb?user=dbadmin&loginTimeout=30&loginNodeTimeout=10&loginNetworkTimeout=2&networkTimeout=500");
```

To set these parameters as a connection property:

```java
Properties myProp = new Properties();
myProp.put("user", "dbadmin");
myProp.put("loginTimeout", "30"); // overall connection timeout is 30 seconds to make sure it is not too small for failover
myProp.put("loginNodeTimeout", "10"); // JDBC waits 10 seconds before attempting to connect to the next node if the Vertica process is running but does not respond
myProp.put("loginNetworkTimeout", "2"); // node connection timeout is 2 seconds
myProp.put("networkTimeout", "500"); // after the client has logged in, Vertica has 0.5 seconds to respond to each request
Connection conn = DriverManager.getConnection("jdbc:vertica://VerticaHost:5433/verticadb", myProp);
```

### Interaction with Load Balancing

When native connection load balancing is enabled, the additional servers specified in the BackupServerNode connection parameter are only used for the initial connection to a Vertica host. If host redirects the client to another host in the database cluster to handle its connection request, the second connection does not use the backup node list. This is rarely an issue, since native connection load balancing is aware of which nodes are currently up in the database.

See Load Balancing in JDBC for more information.
JDBC Data Types

The JDBC driver transparently converts most Vertica data types to the appropriate Java data type. In a few cases, a Vertica data type cannot be directly translated to a Java data type; these exceptions are explained in this section.

The VerticaTypes Class

JDBC does not support all of the data types that Vertica supports. The Vertica JDBC client driver contains an additional class named VerticaTypes that helps you handle identifying these Vertica-specific data types. It contains constants that you can use in your code to specify Vertica data types. This class defines two different categories of data types:

- Vertica's 13 types of interval values. This class contains constant properties for each of these types. You can use these constants to select a specific interval type when instantiating members of the VerticaDayTimeInterval and VerticaYearMonthInterval classes:

  ```java
  // Create a day to second interval.
  VerticaDayTimeInterval dayInt = new VerticaDayTimeInterval(
      VerticaTypes.INTERVAL_DAY_TO_SECOND, 10, 0, 5, 40, 0, 0, false);
  // Create a year to month interval.
  VerticaYearMonthInterval monthInt = new VerticaYearMonthInterval(
      VerticaTypes.INTERVAL_YEAR_TO_MONTH, 10, 6, false);
  ```

- Vertica UUID data type. One way you can use the VerticaTypes.UUID is to query a table's metadata to see if a column is a UUID. See UUID Values for an example.

See the JDBC Documentation for more information on this class.

Numeric Data Alias Conversion

The Vertica server supports data type aliases for integer, float and numeric types. The JDBC driver reports these as its basic data types (BIGINT, DOUBLE PRECISION, and NUMERIC), as follows:
<table>
<thead>
<tr>
<th>Vertica Server Types and Aliases</th>
<th>Vertica JDBC Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>INTEGER</td>
<td>BIGINT</td>
</tr>
<tr>
<td>INT</td>
<td></td>
</tr>
<tr>
<td>INT8</td>
<td>BIGINT</td>
</tr>
<tr>
<td>BIGINT</td>
<td></td>
</tr>
<tr>
<td>SMALLINT</td>
<td></td>
</tr>
<tr>
<td>TINYINT</td>
<td></td>
</tr>
<tr>
<td>DOUBLE PRECISION</td>
<td>DOUBLE PRECISION</td>
</tr>
<tr>
<td>FLOAT5</td>
<td></td>
</tr>
<tr>
<td>FLOAT8</td>
<td></td>
</tr>
<tr>
<td>REAL</td>
<td>NUMERIC</td>
</tr>
<tr>
<td>DECIMAL</td>
<td></td>
</tr>
<tr>
<td>NUMERIC</td>
<td></td>
</tr>
<tr>
<td>NUMBER</td>
<td>NUMERIC</td>
</tr>
<tr>
<td>MONEY</td>
<td></td>
</tr>
</tbody>
</table>

If a client application retrieves the values into smaller data types, Vertica JDBC driver does not check for overflows. The following example demonstrates the results of this overflow.

```java
import java.sql.*;
import java.util.Properties;

public class JDBCDataTypes {
    public static void main(String[] args) {
        // If running under a Java 5 JVM, use you need to load the JDBC driver
        // using Class.forName here

        Properties myProp = new Properties();
        myProp.put("user", "ExampleUser");
        myProp.put("password", "password123");
        Connection conn;
        try {
            conn = DriverManager.getConnection("jdbc:vertica://VerticaHost:5433/VMart", myProp);
            Statement statement = conn.createStatement();
            // Create a table that will hold a row of different types of numeric data.
        }
    }
}
```
statement.executeUpdate("DROP TABLE IF EXISTS test_all_types cascade");
statement.executeUpdate("CREATE TABLE test_all_types (" + "c0 INTEGER, c1 TINYINT, c2 DECIMAL, " + "c3 MONEY, c4 DOUBLE PRECISION, c5 REAL")

// Add a row of values to it.
statement.executeUpdate("INSERT INTO test_all_types VALUES(" + "111111111111, 444, 5555555555.5555, " + "77777777.77, 88888888888888888.88, " + "10101010.10101010101010")

// Query the new table to get the row back as a result set.
ResultSet rs = statement.executeQuery("SELECT * FROM test_all_types");
ResultSetMetaData md = rs.getMetaData();
while (rs.next()) {
    // Print out the data type used to defined the column, followed
    // by the values retrieved using several different retrieval
    // methods.

    String[] vertTypes = new String[] {"INTEGER", "TINYINT", "DECIMAL", "MONEY", "DOUBLE PRECISION", "REAL"};

    for (int x=1; x<7; x++) {
        System.out.println("Column "+ x + " (" + vertTypes[x-1] + ")");
        System.out.println("getColumnType()" + md.getColumnType(x));
        System.out.println("getColumnTypeName()" + md.getColumnTypeName(x));
        System.out.println("getShort()" + rs.getShort(x));
        System.out.println("getLong()" + rs.getLong(x));
        System.out.println("getInt()" + rs.getInt(x));
        System.out.println("getByte()" + rs.getByte(x));
    }
}
rs.close();
statement.executeUpdate("drop table test_all_types cascade");
statement.close();
}
}

The above example prints the following on the console when run:

<table>
<thead>
<tr>
<th>Column 1 (INTEGER)</th>
<th>getColumnType()</th>
<th>5</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>getColumnType()</td>
<td>BIGINT</td>
</tr>
<tr>
<td></td>
<td>getShort()</td>
<td>455</td>
</tr>
<tr>
<td></td>
<td>getLong()</td>
<td>111111111111</td>
</tr>
<tr>
<td></td>
<td>getInt()</td>
<td>-558038585</td>
</tr>
<tr>
<td></td>
<td>getByte()</td>
<td>-57</td>
</tr>
<tr>
<td>Column 2 (TINYINT)</td>
<td>getColumnType()</td>
<td>5</td>
</tr>
</tbody>
</table>
### Using Intervals with JDBC

The JDBC standard does not contain a data type for intervals (the duration between two points in time). To handle Vertica's `INTERVAL` data type, you must use JDBC's database-specific object type.

When reading an interval value from a result set, use the `ResultSet.getObject()` method to retrieve the value, and then cast it to one of the Vertica interval classes: `VerticaDayTimeInterval` (which represents all ten types of day/time intervals) or `VerticaYearMonthInterval` (which represents all three types of year/month intervals).

**Note:**

The units interval style is not supported. Do not use the `SET INTERVALSTYLE` statement to change the interval style in your client applications.
Using Intervals in Batch Inserts

When inserting batches into tables that contain interval data, you must create instances of the VerticaDayTimeInterval or VerticaYearMonthInterval classes to hold the data you want to insert. You set values either when calling the class's constructor, or afterwards using setters. You then insert your interval values using the PreparedStatement.setObject() method. You can also use the .setString() method, passing it a string in "DD HH:MM:SS" or "YY-MM" format.

The following example demonstrates inserting data into a table containing a day/time interval and a year/month interval:

```java
import java.sql.*;
import java.util.Properties;

// You need to import the Vertica JDBC classes to be able to instantiate
// the interval classes.
import com.vertica.jdbc.*;

public class IntervalDemo {
    public static void main(String[] args) {
        // If running under a Java 5 JVM, use you need to load the JDBC driver
        // using Class.forName here
        Properties myProp = new Properties();
        myProp.put("user", "ExampleUser");
        myProp.put("password", "password123");
        Connection conn;
        try {
            conn = DriverManager.getConnection(
                "jdbc:vertica://VerticaHost:5433/VMart", myProp);
            // Create table for interval values
            Statement stmt = conn.createStatement();
            stmt.executeUpdate("DROP TABLE IF EXISTS interval_demo");
            stmt.executeUpdate("CREATE TABLE interval_demo ("
                + "DayInt INTERVAL DAY TO SECOND, 
                + "MonthInt INTERVAL YEAR TO MONTH);";
            // Insert data into interval columns using
            // VerticaDayTimeInterval and VerticaYearMonthInterval
            // classes.
            PreparedStatement pstmt = conn.prepareStatement(
                "INSERT INTO interval_demo VALUES(?,?)");
            // Create instances of the Vertica classes that represent
            // intervals.
            VerticaDayTimeInterval dayInt = new VerticaDayTimeInterval(10, 0, 5, 40, 0, 0, false);
            VerticaYearMonthInterval monthInt = new VerticaYearMonthInterval(10, 6, false);
            // These objects can also be manipulated using setters.
            dayInt.setHour(7);
            // Add the interval values to the batch
            ((VerticaPreparedStatement) pstmt).setObject(1, dayInt);
            ((VerticaPreparedStatement) pstmt).setObject(2, monthInt);
            pstmt.addBatch();
```
// Set another row from strings.
// Set day interval in "days HH:MM:SS" format
pstmt.setString(1, "10 10:10:10");
// Set year to month value in "MM-YY" format
pstmt.setString(2, "12-09");
pstmt.addBatch();
// Execute the batch to insert the values.
try {
    pstmt.executeBatch();
} catch (SQLException e) {
    System.out.println("Error message: " + e.getMessage());
}

Reading Interval Values

You read an interval value from a result set using the ResultSet.getObject() method, and cast the object to the appropriate Vertica object class: VerticaDayTimeInterval for day/time intervals or VerticaYearMonthInterval for year/month intervals. This is easy to do if you know that the column contains an interval, and you know what type of interval it is. If your application cannot assume the structure of the data in the result set it reads in, you can test whether a column contains a database-specific object type, and if so, determine whether the object belongs to either the VerticaDayTimeInterval or VerticaYearMonthInterval classes.

// Retrieve the interval values inserted by previous demo.
// Query the table to get the row back as a result set.
ResultSet rs = stmt.executeQuery("SELECT * FROM interval_demo");
// If you do not know the types of data contained in the result set,
// you can read its metadata to determine the type, and use
// additional information to determine the interval type.
ResultSetMetaData md = rs.getMetaData();
while (rs.next()) {
    for (int x = 1; x <= md.getColumnCount(); x++) {
        // Get data type from metadata
        int colDataType = md.getColumnType(x);
        // You can get the type in a string:
        System.out.println("Column " + x + " is a "
            + md.getColumnName(x));
        // Normally, you’d have a switch statement here to
        // handle all sorts of column types, but this example is
        // simplified to just handle database-specific types
        if (colDataType == Types.OTHER) {
            // Column contains a database-specific type. Determine
            // what type of interval it is. Assuming it is an
            // interval...
            Object columnVal = rs.getObject(x);
            if (columnVal instanceof VerticaDayTimeInterval) {
                // We know it is a date time interval
                VerticaDayTimeInterval interval =
                    (VerticaDayTimeInterval) columnVal;
// You can use the getters to access the interval's data
System.out.print("Column " + x + "'s value is ");
System.out.print(interval.getDay() + " Days ");
System.out.print(interval.getHour() + " Hours ");
System.out.println(interval.getMinute() + " Minutes");
} else if (columnVal instanceof VerticaYearMonthInterval) {
    VerticaYearMonthInterval interval = (VerticaYearMonthInterval) columnVal;
    System.out.print("Column " + x + "'s value is ");
    System.out.print(interval.getYear() + " Years ");
    System.out.print(interval.getMonth() + " Months");
} else {
    System.out.println("Not an interval.");
}
}
} catch (SQLException e) {
    e.printStackTrace();
}
}

The example prints the following to the console:

Column 1 is a INTERVAL DAY TO SECOND
Column 1's value is 10 Days 7 Hours 5 Minutes
Column 2 is a INTERVAL YEAR TO MONTH
Column 2's value is 10 Years 6 Months
Column 1 is a INTERVAL DAY TO SECOND
Column 1's value is 10 Days 10 Hours 10 Minutes
Column 2 is a INTERVAL YEAR TO MONTH
Column 2's value is 12 Years 9 Months

Another option is to use database metadata to find columns that contain intervals.

// Determine the interval data types by examining the database metadata.
DatabaseMetaData dbmd = conn.getMetaData();
ResultSet dbMeta = dbmd.getColumns(null, null, "interval_demo", null);
int colcount = 0;
while (dbMeta.next()) {

// Get the metadata type for a column.
int javaType = dbMeta.getInt("DATA_TYPE");
System.out.println("Column " + ++colcount + " Type name is " +
    dbMeta.getString("TYPE_NAME"));

if(javaType == Types.OTHER) {
    // The SQL_DATETIME_SUB column in the metadata tells you
    // Specifically which subtype of interval you have.
    // The VerticaDayTimeInterval.isDayTimeInterval()
    // methods tells you if that value is a day time.
    //}
int intervalType = dbMeta.getInt("SQL_DATETIME_SUB");
if(VerticaDayTimeInterval.isDayTimeInterval(intervalType)) {
    // Now you know it is one of the 10 day/time interval types.
    // When you select this column you can cast to
    // VerticaDayTimeInterval.
    // You can get more specific by checking intervalType
    // against each of the 10 constants directly, but
    // they all are represented by the same object.
    System.out.println("column " + colcount + " is a " +
        "VerticaDayTimeInterval intervalType = "
        + intervalType);
} else if(VerticaYearMonthInterval.isYearMonthInterval(intervalType)) {
    // now you know it is one of the 3 year/month intervals,
    // and you can select the column and cast to
    // VerticaYearMonthInterval
    System.out.println("column " + colcount + " is a " +
        "VerticaDayTimeInterval intervalType = "
        + intervalType);
} else {
    System.out.println("Not an interval type.");
}
}

**UUID Values**

**UUID** is a core data type in Vertica. However, it is not a core Java data type. You must use the `java.util.UUID` class to represent UUID values in your Java code. The JDBC driver does not translate values from Vertica to non-core Java data types. Therefore, you must send UUID values to Vertica using generic object methods such as `PreparedStatement.setObject()`. You also use generic object methods (such as `ResultSet.getObject()`) to retrieve UUID values from Vertica. You then cast the retrieved objects as a member of the `java.util.UUID` class.

The following example code demonstrates inserting UUID values into and retrieving UUID values from Vertica.

```java
package jdbc_uuid_example;
import java.sql.*;
import java.util.Properties;
public class VerticaUUIDExample {
    public static void main(String[] args) {
        Properties myProp = new Properties();
        myProp.put("user", "dbadmin");
        myProp.put("password", "");
```
Connection conn;

try {
    conn = DriverManager.getConnection("jdbc:vertica://doch01:5433/VMart", myProp);
    Statement stmt = conn.createStatement();

    // Create a table with a UUID column and a VARCHAR column.
    stmt.execute("DROP TABLE IF EXISTS UUID_TEST CASCADE");
    stmt.execute("CREATE TABLE UUID_TEST (id UUID, description VARCHAR(25))");

    // Prepare a statement to insert a UUID and a string into the table.
    PreparedStatement ps = conn.prepareStatement("INSERT INTO UUID_TEST VALUES(?,?)");

    java.util.UUID uuid; // Holds the UUID value.
    for (Integer x = 0; x < 10; x++) {
        // Generate a random uuid
        uuid = java.util.UUID.randomUUID();
        // Set the UUID value by calling setObject.
        ps.setObject(1, uuid);
        // Set the String value to indicate which UUID this is.
        ps.setString(2, "UUID #" + x);
        ps.execute();
    }

    // Query the uuid
    ResultSet rs = stmt.executeQuery("SELECT * FROM UUID_TEST ORDER BY description ASC");
    while (rs.next()) {
        // Cast the object from the result set as a UUID.
        uuid = (java.util.UUID) rs.getObject(1);
        System.out.println(rs.getString(2) + " : " + uuid.toString());
    }
}
catch (SQLException e) {
    e.printStackTrace();
}

The previous example prints output similar to the following:

UUID #0: 67b6dc86-c28c-4965-b9f7-5c830a04664d
UUID #1: 485d3835-2887-4233-b003-39225fa97e0
UUID #2: 81421f51-c803-473d-8cfc-2c1848582a117
UUID #3: be8b86a-b650-47b0-852c-8229155332d9
UUID #4: 8ae53ec-d1d3-4ef7-8901-24f6d0483abf
UUID #5: 669f96ce-5e86-4e87-b8d0-a937f5f9c18d7
UUID #6: 19e09ec9-ec56-4444-9cfe-ad2b8de537dd
UUID #7: 97182ed1-5c7e-4da1-9922-67e804fde173
UUID #8: c763a2b-a9ef-4d65-b2fb-7c63f872b3c
UUID #9: 3cb26c26-c177-4277-b3df-b4d9389f69d
Determining Whether a Column has a UUID Data Type

JDBC does not support the UUID data type. This limitation means you cannot use the usual ResultSetMetaData.getColumnType() method to determine column's data type is UUID. Calling this method on a UUID column returns Types.OTHER. This value is also to identify interval columns. You can use two ways to determine if a column contains UUIDs:

- Use ResultSetMetaData.getColumnTypeName() to get the name of the column's data type. For UUID columns, this method returns the value "Uuid" as a String.
- Query the table's metadata to get the SQL data type of the column. If this value is equal to VerticaTypes.UUID, the column's data type is UUID.

The following example demonstrates both of these techniques:

```java
// This example assumes you already have a database connection
// and result set from a query on a table that may contain a UUID.

// Get the metadata of the result set to get the column definitions
ResultSetMetaData meta = rs.getMetaData();
int colcount;
int maxcol = meta.getColumnCount();

System.out.println("Using column metadata:");
for (colcount = 1; colcount < maxcol; colcount++) {
    // .getColumnType() always returns "OTHER" for UUID columns.
    if (meta.getColumnType(colcount) == Types.OTHER) {
        // To determine that it is a UUID column, test the name of the column type.
        if (meta.getColumnTypeName(colcount).equalsIgnoreCase("uuid")) {
            // It's a UUID column
            System.out.println("Column "+ colcount + " is UUID");
        }
    }
}

// You can also query the table's metadata to find its column types and compare
// it to the VerticaType.UUID constant to see if it is a UUID column.
System.out.println("Using table metadata:");
DatabaseMetaData dbmd = conn.getMetaData();
// Get the metadata for the previously-created test table.
ResultSet tableMeta = dbmd.getColumns(null, null, "UUID_TEST", null);
colcount = 0;
// Each row in the result set has metadata that describes a single column.
while (tableMeta.next()) {
    colcount++;
    // The SQL_DATA_TYPE column holds the Vertica database data type. You compare
    // this value to the VerticaTypes.UUID constant to see if it is a UUID.
    if (tableMeta.getInt("SQL_DATA_TYPE") == VerticaTypes.UUID) {
        // Column is a UUID data type...
        System.out.println("Column "+ colcount + " is a UUID column.");
    }
}
```
This example prints the following to the console if it is run after running the prior example:

Using column metadata:
Column 1 is UUID
Using table metadata:
Column 1 is a UUID column.

**Complex Types in JDBC**

The results of a `java.sql` query are stored in a ResultSet. If the ResultSet contains a column of complex type, you can retrieve it with one of the following:

- For columns of type `ARRAY`, `SET`, or `MAP`, use `getArray()`, which returns a `java.sql.Array`.
- For columns of type `ROW`, use `getObject()`, which returns a `java.sql.Struct`.

**Type Conversion Table**

The objects `java.sql.Array` and `java.sql.Struct` each have their own API for accessing complex type data. In each case, the data is returned as `java.lang.Object` and will need to be type cast to a Java type. The exact Java type to expect depends on the Vertica type used in the complex type definition, as shown in this type conversion table:

<table>
<thead>
<tr>
<th>Java.sql Type</th>
<th>Vertica Type</th>
<th>Java Type</th>
</tr>
</thead>
<tbody>
<tr>

</tbody>
</table>

### ARRAY, SET, and MAP Columns

For example, the following methods run queries that return an ARRAY of some Vertica type, which is then type cast to an array of its corresponding Java type by the JDBC driver when retrieved with `getArray()`. This particular example starts with `ARRAY[INT]` and `ARRAY`
[FLOAT], so they are type cast to Long[] and Double[], respectively, as determined by
the type conversion table.

- `getArrayResultSetExample()` shows how the ARRAY can be processed as a
  java.sql.ResultSet. This example uses `getResultSet()` which returns the
  underlying array as another ResultSet. You can use this underlying ResultSet to:
  - Retrieve the parent ResultSet.
  - Treat it as an Object array or ResultSet.
- `getArrayObjectExample()` shows how the ARRAY can be processed as a native
  Java array. This example uses `getArray()` which returns the underlying array as an
  Object array rather than a ResultSet. This has the following implications:
  - You cannot use an underlying Object array to retrieve its parent array.
  - All underlying arrays are treated as Object arrays (rather than ResultSets).

```java
package com.vertica.jdbc.test.samples;
import java.sql.Connection;
import java.sql.SQLException;
import java.sql.Statement;
import java.sql.ResultSet;
import java.sql.Array;
import java.sql.Struct;
public class ComplexTypesArraySamples {
    /**
     * Executes a query and gets a java.sql.Array from the ResultSet. It then uses the
     * Array#getResultSet method to get a ResultSet containing the contents of the array.
     * @param conn A Connection to a Vertica database
     * @throws SQLException
     */
    public static void getArrayResultSetExample (Connection conn)
        throws SQLException {
        Statement stmt = conn.createStatement();
        final String queryText = "SELECT ARRAY[ARRAY[1,2,3],ARRAY[4,5,6],ARRAY[7,8,9]]::ARRAY[INT]] as array";
        final String targetColumnName = "array";
        System.out.println ("queryText: " + queryText);
        ResultSet rs = stmt.executeQuery(queryText);
        int targetColumnId = rs.findColumn (targetColumnName);
        while (rs.next () ) {
            Array currentSqlArray = rs.getArray (targetColumnId);
            ResultSet level1ResultSet = currentSqlArray.getResultSet();
            if (level1ResultSet != null) {
                while (level1ResultSet.next () ) {
                    // The first column of the result set holds the row index
                    int i = level1ResultSet.getInt(1) - 1;
                    Array level2SqlArray = level1ResultSet.getArray (2);
                    Object level2Object = level2SqlArray.getArray () ;
                    // For this ARRAY[INT], the driver returns a Long[]
                    assert (level2Object instanceof Long[]);
                }
            }
        }
    }
}
```
Long [] level2Array = (Long [])level2Object;
System.out.println(" level1Object [" + i + "]: " + level2SqlArray.toString() + " (" + level2SqlArray.getClass() + ")");

for (int j = 0; j < level2Array.length; j++) {
    System.out.println(" Value [" + i + ", " + j + "]: " + level2Array[j] + " (" + level2Array[j].getClass() + ")");
}

/**
 * Executes a query and gets a java.sql.Array from the ResultSet. It then uses the Array#getArray
 * method to get the contents of the array as a Java Object []..
 * @param conn A Connection to a Vertica database
 * @throws SQLException */
public static void getArrayObjectExample (Connection conn) throws SQLException {
    Statement stmt = conn.createStatement();

    final String queryText = "SELECT ARRAY[ARRAY[0.0,0.1,0.2],ARRAY[1.0,1.1,1.2],ARRAY[2.0,2.1,2.2]]::ARRAY[ARRAY[FLOAT]] as array";
    final String targetColumnName = "array";

    System.out.println("queryText: " + queryText);
    ResultSet rs = stmt.executeQuery(queryText);
    int targetColumnId = rs.findColumn(targetColumnName);

    while (rs.next ()) {
        // Get the java.sql.Array from the result set
        Array currentSqlArray = rs.getArray(targetColumnId);
        // Get the internal Java Object implementing the array
        Object level1ArrayObject = currentSqlArray.getArray();
        if (level1ArrayObject != null) {
            // All returned instances are Object[]
            assert (level1ArrayObject instanceof Object[]);
            Object[] level1Array = (Object [])level1ArrayObject;
            System.out.println("Vertica driver returned: " + level1Array.getClass());

            for (int i = 0; i < level1Array.length; i++) {
                Object level2Object = level1Array[i];
                // For this ARRAY[FLOAT], the driver returns a Double[]
                assert (level2Object instanceof Double[]);
                Double[] level2Array = (Double [])level2Object;
                for (int j = 0; j < level2Array.length; j++) {
                    System.out.println(" Value [" + i + ", " + j + "]: " + level2Array[j] + " (" + level2Array[j].getClass() + ")");
                }
            }
        }
    }
}

The output of getArrayResultSetExample() shows that the Vertica column type ARRAY[INT] is type cast to Long[]:
The output of `getArrayObjectExample()` shows that the Vertica column type `ARRAY [FLOAT]` is type cast to `Double[]`:

```
queryText: SELECT ARRAY[ARRAY[0.0,0.1,0.2],ARRAY[1.0,1.1,1.2],ARRAY[2.0,2.1,2.2]]::ARRAY [FLOAT] as array
Vertica driver returned a: class [Ljava.lang.Object;
    Value [0, 0]: 0.0 (class java.lang.Double)
    Value [0, 1]: 0.1 (class java.lang.Double)
    Value [0, 2]: 0.2 (class java.lang.Double)
    Value [1, 0]: 1.0 (class java.lang.Double)
    Value [1, 1]: 1.1 (class java.lang.Double)
    Value [1, 2]: 1.2 (class java.lang.Double)
    Value [2, 0]: 2.0 (class java.lang.Double)
    Value [2, 1]: 2.1 (class java.lang.Double)
    Value [2, 2]: 2.2 (class java.lang.Double)
```

**ROW Columns**

Calling `getObject()` on a `java.sql.ResultSet` that contains a column of type `ROW` retrieves the column as a `java.sql.Struct` which contains an `Object[]` (itself retrievable with `getAttributes()`).

Each element of the `Object[]` represents an attribute from the struct, and each attribute has a corresponding Java type shown in the type conversion table above.

This example defines a ROW with the following attributes:

<table>
<thead>
<tr>
<th>Name</th>
<th>Value</th>
<th>Vertica Type</th>
<th>Java Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>Amy</td>
<td>VARCHAR</td>
<td>String</td>
</tr>
<tr>
<td>date</td>
<td>'07/10/2021'</td>
<td>DATE</td>
<td>java.sql.Date</td>
</tr>
<tr>
<td>id</td>
<td>5</td>
<td>INT</td>
<td>java.lang.Long</td>
</tr>
<tr>
<td>current</td>
<td>false</td>
<td>BOOLEAN</td>
<td>java.lang.Boolean</td>
</tr>
</tbody>
</table>
The output of `getRowExample()` shows the attribute of each element and its corresponding Java type:
Using **LONG VARCHAR** and **LONG VARBINARY** Data Types with **JDBC**

Using LONG VARCHAR and LONG VARBINARY data types in a JDBC client application is similar to using VARCHAR and VARBINARY data types. The JDBC driver transparently handles the conversion (for example, between a Java String object and a LONG VARCHAR).

The following example code demonstrates inserting and retrieving a LONG VARCHAR string. It uses the JDBC Types class to determine the data type of the string returned by Vertica, although it does not actually need to know whether the database column is a LONG VARCHAR or just a VARCHAR in order to retrieve the value.

```java
import java.sql.*;
import java.util.Properties;

public class LongVarcharExample {
    public static void main(String[] args) {
        try {
            Class.forName("com.vertica.jdbc.Driver");
        } catch (ClassNotFoundException e) {
            System.err.println("Could not find the JDBC driver class.");
            e.printStackTrace();
            return;
        }
        Properties myProp = new Properties();
        myProp.put("user", "ExampleUser");
        myProp.put("password", "password123");
        Connection conn;
        try {
            conn = DriverManager.getConnection(
                "jdbc:vertica://VerticaHost:5433/ExampleDB",
                myProp);
            // establish connection and make a table for the data.
            Statement stmt = conn.createStatement();

            // How long we want the example string to be. This is
            // larger than can fit into a traditional VARCHAR (which is limited
            // to 65000.
            int length = 100000;

            // Create a table with a LONG VARCHAR column that can store
            // the string we want to insert.
            stmt.execute("DROP TABLE IF EXISTS longtable CASCADE");
```
stmt.executeUpdate("CREATE TABLE longtable (text LONG VARCHAR(" + length + "))");

// Build a long string by appending an integer to a string builder
// until we hit the size limit. Will result in a string
// containing 01234567890123....
StringBuilder sb = new StringBuilder(length);
for (int i = 0; i < length; i++)
{
    sb.append(i % 10);
}
String value = sb.toString();

System.out.println("String value is " + value.length() + ", characters long.");

// Create the prepared statement
PreparedStatement pstmt = conn.prepareStatement("INSERT INTO longtable (text) VALUES (?)");
try {
    // Insert LONG VARCHAR value
    System.out.println("Inserting LONG VARCHAR value");
    pstmt.setString(1, value);
    pstmt.addBatch();
    pstmt.executeBatch();

    // Query the table we created to get the value back.
    ResultSet rs = null;
    rs = stmt.executeQuery("SELECT * FROM longtable");

    // Get metadata about the result set.
    ResultSetMetaData rsmd = rs.getMetaData();
    // Print the type of the first column. Should be
    // LONG VARCHAR. Also check it against the Types class, to
    // recognize it programmatically.
    System.out.println("Column #1 data type is: " +
                       rsmd.getColumnTypeName(1));
    if (rsmd.getColumnType(1) == Types.LONGVARCHAR) {
        System.out.println("It is a LONG VARCHAR");
    } else {
        System.out.println("It is NOT a LONG VARCHAR");
    }

    // Print out the string length of the returned value.
    while (rs.next()) {
        // Use the same getString method to get the value that you
        // use to get the value of a VARCHAR.
        System.out.println("Returned string length: " +
                           rs.getString(1).length());
    }
} catch (SQLException e) {
    System.out.println("Error message: " + e.getMessage());
    return; // Exit if there was an error
}

// Cleanup
conn.close();
} catch (SQLException e) {
    e.printStackTrace();
}
}
Note:
Do not use inefficient encoding formats for LONG VARBINARY and LONG VARCHAR values. Vertica cannot load encoded values larger than 32MB, even if the decoded value is less than 32 MB in size. For example, Vertica returns an error if you attempt to load a 32MB LONG VARBINARY value encoded in octal format, since the octal encoding quadruples the size of the value (each byte is converted into a backslash followed by three digits).

Date Types in JDBC

Converting a Date to a String

For the purposes of this page, a large date is defined as a date with a year that exceeds 9999.

If your database doesn't contain any large dates, then you can reliably call `toString()` to convert the dates to strings.

Otherwise, if your database contains large dates, you should use `java.text.SimpleDateFormat` and its `format()` method:

1. Define a String format with `java.text.SimpleDateFormat`. The number of characters in `yyyy` in the format defines the minimum number of characters to use in the date.
2. Call `SimpleDateFormat.format()` to convert the `java.sql.Date` object to a String.

Examples

For example, the following method returns a string when passed a `java.sql.Date` object as an argument. Here, the year part of the format, `YYYY` indicates that this format is compatible with all dates with at least four characters in its year.

```java
import java.sql.Date;
```
private String convertDate (Date date) {
    SimpleDateFormat dateFormat = new SimpleDateFormat("yyyy-MM-dd");
    return dateFormat.format(date);
}

### Executing Queries Through JDBC

To run a query through JDBC:

2. Run the query.

The method you use to run the query depends on the type of query you want to run:

- a DDL query that does not return a result set.
- a DDL query that returns a result set.
- a DML query

### Executing DDL (Data Definition Language) Queries

To run DDL queries, such as `CREATE TABLE` and `COPY`, use the `Statement.executeQuery()` method. You get an instance of this class by calling the `createStatement` method of your connection object.

The following example creates an instance of the `Statement` class and uses it to execute a `CREATE TABLE` and a `COPY` query:

```java
Statement stmt = conn.createStatement();
stmt.executeUpdate("CREATE TABLE address_book (Last_Name char(50) default '','First_Name char(50),Email char(50),Phone_Number char(50))");
stmt.executeUpdate("COPY address_book FROM 'address.dat' DELIMITER ',' NULL 'null'");
```

### Executing Queries That Return Result Sets

Use the `Statement` class's `executeQuery` method to execute queries that return a result set, such as `SELECT`. To get the data from the result set, use methods such as `getInt`, `getString`, and `getDouble` to access column values depending upon the data types of columns in the result set. Use `ResultSet.next` to advance to the next row of the data set.
ResultSet rs = null;
rs = stmt.executeQuery("SELECT First_Name, Last_Name FROM address_book");
int x = 1;
while(rs.next()){
    System.out.println(x + ". " + rs.getString(1).trim() + " "
        + rs.getString(2).trim());
    x++;
}

Note:
The Vertica JDBC driver does not support scrollable cursors. You can only read forwards through the result set.

**Executing DML (Data Manipulation Language) Queries Using executeUpdate**

Use the executeUpdate method for DML SQL queries that change data in the database, such as **INSERT**, **UPDATE** and **DELETE** which do not return a result set.

```java
stmt.executeUpdate("INSERT INTO address_book " +
    "VALUES ('Ben-Shachar', 'Tamar', 'tamarrow@example.com'," +
    "'555-380-6466')");
stmt.executeUpdate("INSERT INTO address_book (First_Name, Email) " +
    "VALUES ('Pete','pete@example.com')");
```

Note:
The Vertica JDBC driver's Statement class supports executing multiple statements in the SQL string you pass to the execute method. The PreparedStatement class does not support using multiple statements in a single execution.
Loading Data Through JDBC

You can use any of the following methods to load data via the JDBC interface:

- Executing a SQL INSERT statement to insert a single row directly.
- Batch loading data using a prepared statement.
- Bulk loading data from files or streams using COPY.

The following sections explain in detail how you load data using JDBC.

Using a Single Row Insert

The simplest way to insert data into a table is to use the SQL INSERT statement. You can use this statement by instantiating a member of the Statement class, and use its executeUpdate() method to run your SQL statement.

The following code fragment demonstrates how you can create a Statement object and use it to insert data into a table named address_book:

```java
Statement stmt = conn.createStatement();
stmt.executeUpdate("INSERT INTO address_book " +
                   "VALUES ('Smith', 'John', 'jsmith@example.com', " +
                   "'555-123-4567')");
```

This method has a few drawbacks: you need convert your data to string and escape any special characters in your data. A better way to insert data is to use prepared statements. See Batch Inserts Using JDBC Prepared Statements.
**Batch Inserts Using JDBC Prepared Statements**

You can load batches of data into Vertica using prepared `INSERT` statements—server-side statements that you set up once, and then call repeatedly. You instantiate a member of the `PreparedStatement` class with a SQL statement that contains question mark placeholders for data. For example:

```java
PreparedStatement pstmt = conn.prepareStatement(
    "INSERT INTO customers(last, first, id) VALUES(?,?,?)";
```

You then set the parameters using data-type-specific methods on the `PreparedStatement` object, such as `setString()` and `setInt()`. Once your parameters are set, call the `addBatch()` method to add the row to the batch. When you have a complete batch of data ready, call the `executeBatch()` method to execute the insert batch.

Behind the scenes, the batch insert is converted into a `COPY` statement. When the connection’s `AutoCommit` parameter is disabled, Vertica keeps the `COPY` statement open and uses it to load subsequent batches until the transaction is committed, the cursor is closed, or your application executes anything else (or executes any statement using another `Statement` or `PreparedStatement` object). Using a single `COPY` statement for multiple batch inserts makes loading data more efficient. If you are loading multiple batches, you should disable the `AutoCommit` property of the database to take advantage of this increased efficiency.

When performing batch inserts, experiment with various batch and row sizes to determine the settings that provide the best performance.

The following example demonstrates using a prepared statement to batch insert data.

```java
import java.sql.*;
import java.util.Properties;

public class BatchInsertExample {
    public static void main(String[] args) {
        Properties myProp = new Properties();
        myProp.put("user", "ExampleUser");
        myProp.put("password", "password123");

        //Set streamingBatchInsert to True to enable streaming mode for batch inserts.
        //myProp.put("streamingBatchInsert", "True");

        Connection conn;
        try {
            conn = DriverManager.getConnection(
```
"jdbc:vertica://VerticaHost:5433/ExampleDB",
myProp);

// establish connection and make a table for the data.
Statement stmt = conn.createStatement();

// Set AutoCommit to false to allow Vertica to reuse the same
// COPY statement
conn.setAutoCommit(false);

// Drop table and recreate.
stmt.executeUpdate("DROP TABLE IF EXISTS customers CASCADE");
stmt.executeUpdate("CREATE TABLE customers (CustID int,
    Last_Name char(50), First_Name char(50), Email char(50), "
    + "Phone_Number char(12))");

// Some dummy data to insert.
String[] firstNames = new String[] { "Anna", "Bill", "Cindy",
    "Don", "Eric" };
String[] lastNames = new String[] { "Allen", "Brown", "Chu",
    "Dodd", "Estavez" };
String[] emails = new String[] { "aang@example.com",
    "b.brown@example.com", "cindy@example.com",
    "d.d@example.com", "e.estavez@example.com" };
String[] phoneNumbers = new String[] { "123-456-7890",
    "555-444-3333", "555-867-5309",
    "555-555-1212", "781-555-0000" };

// Create the prepared statement
PreparedStatement pstmt = conn.prepareStatement(
    "INSERT INTO customers (CustID, Last_Name, "
    + "First_Name, Email, Phone_Number)"
    + "VALUES(?,?,?,?))");

// Add rows to a batch in a loop. Each iteration adds a
// new row.
for (int i = 0; i < firstNames.length; i++) {
    // Add each parameter to the row.
    pstmt.setInt(1, i + 1);
    pstmt.setString(2, lastNames[i]);
    pstmt.setString(3, firstNames[i]);
    pstmt.setString(4, emails[i]);
    pstmt.setString(5, phoneNumbers[i]);
    // Add row to the batch.
    pstmt.addBatch();
}

try {
    // Batch is ready, execute it to insert the data
    pstmt.executeBatch();
} catch (SQLException e) {
    System.out.println("Error message: " + e.getMessage());
    return; // Exit if there was an error
}

// Commit the transaction to close the COPY command
conn.commit();

// Print the resulting table.
ResultSet rs = null;
rs = stmt.executeQuery("SELECT CustID, First_Name, "
+ "Last_Name FROM customers ORDER BY CustID";
while (rs.next()) {
    System.out.println(rs.getInt(1) + " - 
                        + rs.getString(2).trim() + " 
                        + rs.getString(3).trim());
}
// Cleanup
conn.close();
} catch (SQLException e) {
    e.printStackTrace();
}
}

The result of running the example code is:

1 - Anna Allen
2 - Bill Brown
3 - Cindy Chu
4 - Don Dodd
5 - Eric Estavez

Streaming Batch Inserts

By default, Vertica performs batch inserts by caching each row and inserting the cache when the user calls the executeBatch() method. Vertica also supports streaming batch inserts. A streaming batch insert adds a row to the database each time the user calls addBatch(). Streaming batch inserts improve database performance by allowing parallel processing and reducing memory demands.

*Note:* Once you begin a streaming batch insert, you cannot make other JDBC calls that require client-server communication until you have executed the batch or closed or rolled back the connection.

To enable streaming batch inserts, set the streamingBatchInsert property to True. The preceding code sample includes a line enabling streamingBatchInsert mode. Remove the // comment marks to enable this line and activate streaming batch inserts.

The following table explains the various batch insert methods and how their behavior differs between default batch insert mode and streaming batch insert mode.

<table>
<thead>
<tr>
<th>Method</th>
<th>Default Batch Insert</th>
<th>Streaming Batch Insert Behavior</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Behavior</td>
<td></td>
</tr>
</tbody>
</table>

Vertica Analytic Database (11.0.x)
### Notes

- Using the `PreparedStatement.setFloat()` method can cause rounding errors. If precision is important, use the `setDouble()` method instead.
- The `PreparedStatement` object caches the connection's `AutoCommit` property when the statement is prepared. Later changes to the `AutoCommit` property have no effect on the prepared statement.

### Error Handling During Batch Loads

When loading individual batches, you can find how many rows were accepted and what rows were rejected (see [Identifying Accepted and Rejected Rows](#) for details). If you have disabled the `AutoCommit` connection setting, other errors (such as disk space errors, for example) do not occur while inserting individual batches. This behavior is caused by having a single SQL `COPY` statement perform the loading of multiple consecutive batches (which makes the load process more efficient). It is only when the `COPY` statement closes that the batched data is committed and Vertica reports other types of errors.

Therefore, your bulk loading application should be prepared to check for errors when the `COPY` statement closes. You can trigger the `COPY` statement to close by:

- ending the batch load transaction by calling `Connection.commit()`
- closing the statement using `Statement.close()`
- setting the connection's `AutoCommit` property to true before inserting the last batch in the load
### Note:

The COPY statement also closes if you execute any non-insert statement or execute any statement using a different Statement or PreparedStatement object. Ending the COPY statement using either of these methods can lead to confusion and a harder-to-maintain application, since you would need to handle batch load errors in a non-batch load statement. You should explicitly end the COPY statement at the end of your batch load and handle any errors at that time.

### Identifying Accepted and Rejected Rows (JDBC)

The return value of `PreparedStatement.executeBatch` is an integer array containing the success or failure status of inserting each row. A value 1 means the row was accepted and a value of -3 means that the row was rejected. In the case where an exception occurred during the batch execution, you can also get the array using `BatchUpdateException.getUpdateCounts()`.

The following example extends the example shown in [Batch Inserts Using JDBC Prepared Statements](#) to retrieve this array and display the results the batch load.

```java
import java.sql.*;
import java.util.Arrays;
import java.util.Properties;

public class BatchInsertErrorHandlingExample {
    public static void main(String[] args) {
        Properties myProp = new Properties();
        myProp.put("user", "ExampleUser");
        myProp.put("password", "password123");
        Connection conn;

        try {
            conn = DriverManager.getConnection(
                "jdbc:vertica://VerticaHost:5433/ExampleDB",
                myProp);

            // Disable auto commit
            conn.setAutoCommit(false);

            // Create a statement
            Statement stmt = conn.createStatement();
            // Drop table and recreate.
            stmt.execute("DROP TABLE IF EXISTS customers CASCADE");
            stmt.execute("CREATE TABLE customers (CustID int, Last_Name" + 
                "char(50), First_Name char(50), Email char(50), " + 
                "Phone_Number char(12))");
        }
    }
}
```
// Some dummy data to insert. The one row won't insert because // the phone number is too long for the phone column.
String[] firstNames = new String[] { "Anna", "Bill", "Cindy", "Don", "Eric"};
String[] lastNames = new String[] { "Allen", "Brown", "Chu", "Dodd", "Estavez"};
String[] emails = new String[] { "aang@example.com", "b.brown@example.com", "cindy@example.com", "d.d@example.com", "e.estavez@example.com"};

// Create the prepared statement
PreparedStatement pstmt = conn.prepareStatement("INSERT INTO customers (CustID, Last_Name, " + "First_Name, Email, Phone_Number) " + "VALUES(?,?,?,?,?)");

// Add rows to a batch in a loop. Each iteration adds a // new row.
for (int i = 0; i < firstNames.length; i++) {
    // Add each parameter to the row.
pstmt.setInt(1, i + 1);
pstmt.setString(2, lastNames[i]);
pstmt.setString(3, firstNames[i]);
pstmt.setString(4, emails[i]);
pstmt.setString(5, phoneNumbers[i]);
    // Add row to the batch.
pstmt.addBatch();
}

// Integer array to hold the results of inserting // the batch. Will contain an entry for each row, // indicating success or failure.
int[] batchResults = null;

try {
    // Batch is ready, execute it to insert the data
    batchResults = pstmt.executeBatch();
} catch (BatchUpdateException e) {
    // We expect an exception here, since one of the // inserted phone numbers is too wide for its column. All of the // rest of the rows will be inserted.
    System.out.println("Error message: " + e.getMessage());

    // Batch results isn't set due to exception, but you // can get it from the exception object.
    //
    // In your own code, you shouldn't assume the a batch // exception occurred, since exceptions can be thrown // by the server for a variety of reasons.
    batchResults = e.getUpdateCounts();
}

// You should also be prepared to catch SQLExceptions in your own // application code, to handle dropped connections and other general // problems.

// Commit the transaction
conn.commit();

// Print the array holding the results of the batch insertions.
System.out.println("Return value from inserting batch: "
    + Arrays.toString(batchResults));
// Print the resulting table.
ResultSet rs = null;
rs = stmt.executeQuery("SELECT CustID, First_Name, "
    + "Last_Name FROM customers ORDER BY CustID");
while (rs.next()) {
    System.out.println(rs.getInt(1) + " - "
        + rs.getString(2).trim() + " "
        + rs.getString(3).trim());
}
// Cleanup
conn.close();
} catch (SQLException e) {
    e.printStackTrace();
}
}

Running the above example produces the following output on the console:

Error message: [Vertica][VJDBC](100172) One or more rows were rejected by the server.
Return value from inserting batch: [1, 1, -3, 1, 1]
1 - Anna Allen
2 - Bill Brown
4 - Don Dodd
5 - Eric Estavez

Notice that the third row failed to insert because its phone number is too long for the Phone_Number column. All of the rest of the rows in the batch (including those after the error) were correctly inserted.

Note:
It is more efficient for you to ensure that the data you are inserting is the correct data type and width for the table column you are inserting it into than to handle exceptions after the fact.

Rolling Back Batch Loads on the Server

Batch loads always insert all of their data, even if one or more rows is rejected. Only the rows that caused errors in a batch are not loaded. When the database connection's AutoCommit property is true, batches automatically commit their transactions when they complete, so once the batch finishes loading, the data is committed.
In some cases, you may want all of the data in a batch to be successfully inserted—none of the data should be committed if an error occurs. The best way to accomplish this is to turn off the database connection’s AutoCommit property to prevent batches from automatically committing themselves. Then, if a batch encounters an error, you can roll back the transaction after catching the BatchUpdateException caused by the insertion error.

The following example demonstrates performing a rollback if any error occurs when loading a batch.

```java
import java.sql.*;
import java.util.Arrays;
import java.util.Properties;

public class RollbackBatchOnError {
    public static void main(String[] args) {
        Properties myProp = new Properties();
        myProp.put("user", "ExampleUser");
        myProp.put("password", "password123");
        Connection conn;
        try {
            conn = DriverManager.getConnection("jdbc:vertica://VerticaHost:5433/ExampleDB", myProp);
            // Disable auto-commit. This will allow you to roll back a
            // a batch load if there is an error.
            conn.setAutoCommit(false);
            // establish connection and make a table for the data.
            Statement stmt = conn.createStatement();
            // Drop table and recreate.
            stmt.execute("DROP TABLE IF EXISTS customers CASCADE");
            stmt.execute("CREATE TABLE customers (CustID int,
                    Last_Name char(50), First_Name char(50), Email char(50),
                    Phone_Number char(12))");

            // Some dummy data to insert. The one row won't insert because
            // the phone number is too long for the phone column.
            String[] firstNames = new String[] { "Anna", "Bill", "Cindy",
                    "Don", "Eric" };
            String[] lastNames = new String[] { "Allen", "Brown", "Chu",
                    "Dodd", "Estavez" };
            String[] emails = new String[] { "aang@example.com",
                    "b.brown@example.com", "cindy@example.com",
                    "d.d@example.com", "e.estavez@example.com" };
            String[] phoneNumbers = new String[] { "123-456-789",
                    "555-444-3333", "555-867-53094535", "555-555-1212",
                    "781-555-0000" };

            // Create the prepared statement
            PreparedStatement pstmt = conn.prepareStatement("INSERT INTO customers (CustID, Last_Name, " +
                    "First_Name, Email, Phone_Number) " +
                    "VALUES(?,?,?,?,?)");

            // Add rows to a batch in a loop. Each iteration adds a
            // new row.
            for (int i = 0; i < firstNames.length; i++) {
                // Add each parameter to the row.
                pstmt.setInt(1, i + 1);
                pstmt.setString(2, lastNames[i]);
            }
        } catch (Exception e) {
            e.printStackTrace();
        } finally {
            if (conn != null) {
                try {
                    conn.close();
                } catch (Exception e) {
                    e.printStackTrace();
                }
            }
        }
    }
}
```
Running the above example prints the following on the system console:
Error message: [Vertica][VJDBC](100172) One or more rows were rejected by the server. Rolling back batch insertion

Return value from inserting batch: [1, 1, -3, 1, 1]

Customers table contains:

The return values indicate whether each row was successfully inserted. The value 1 means the row inserted without any issues, and a -3 indicates the row failed to insert.

The customers table is empty since the batch insert was rolled back due to the error caused by the third column.

**Bulk Loading Using the COPY Statement**

One of the fastest ways to load large amounts of data into Vertica at once (bulk loading) is to use the **COPY statement**. This statement loads data from a file stored on a Vertica host (or in a data stream) into a table in the database. You can pass the COPY statement parameters that define the format of the data in the file, how the data is to be transformed as it is loaded, how to handle errors, and how the data should be loaded. See the **COPY** documentation in the SQL Reference Manual for details.

**Important:**

In databases that were created in versions of Vertica ≤ 9.2, COPY supports the DIRECT option, which specifies to load data directly into **ROS** rather than WOS. Use this option when loading large (>100MB) files into the database; otherwise, the load is liable to fill the WOS. When this occurs, the **Tuple Mover** must perform a moveout operation on the WOS data. It is more efficient to directly load into ROS and avoid forcing a moveout.

In databases created in Vertica 9.3, Vertica ignores load options and hints and always uses a load method of DIRECT. Databases created in versions ≥ 10.0 no longer support WOS and moveout operations; all data is always loaded directly into ROS.

Only a **superuser** can use COPY to copy a file stored on a host, so you must connect to the database with a superuser account. If you want to have a non-superuser user bulk-load data, you can use COPY to load from a stream on the host (such as STDIN) rather than a file or stream data from the client (see **Streaming Data Via JDBC**). You can also perform a standard **batch insert using a prepared statement**, which uses the COPY statement in the background to load the data.
when using COPY parameter ON ANY NODE, confirm that the source file is identical on all nodes. Using different files can produce inconsistent results.

the following example demonstrates using the COPY statement through the JDBC to load a file name customers.txt into a new database table. This file must be stored on the database host to which your application connects—in this example, a host named VerticaHost.

```java
class COPYFromFile {
    public static void main(String[] args) {
        Properties myProp = new Properties();
        myProp.put("user", "ExampleAdmin"); // Must be superuser
        myProp.put("password", "password123");
        Connection conn;
        try {
            conn = DriverManager.getConnection("jdbc:vertica://VerticaHost:5433/ExampleDB", myProp);
            // Disable AutoCommit
            conn.setAutoCommit(false);
            Statement stmt = conn.createStatement();
            // Create a table to hold data.
            stmt.execute("DROP TABLE IF EXISTS customers");
            stmt.execute("CREATE TABLE IF NOT EXISTS customers (Last_Name char(50) "
                + "NOT NULL, First_Name char(50), Email char(50), "
                + "Phone_Number char(15))");

            // Use the COPY command to load data. Use ENFORCELENGTH to reject
            // strings too wide for their columns.
            boolean result = stmt.execute("COPY customers FROM "
                + "/data/customers.txt" ENFORCELENGTH");

            // Determine if execution returned a count value, or a full result
            // set.
            if (result) {
                System.out.println("Got result set");
            } else {
                // Count will usually return the count of rows inserted.
                System.out.println("Got count");
                int rowCount = stmt.getUpdateCount();
                System.out.println("Number of accepted rows = " + rowCount);
            }

            // Commit the data load
            conn.commit();
        } catch (SQLException e) {
            System.out.print("Error: ");
            System.out.println(e.toString());
        }
    }
}
The example prints the following out to the system console when run (assuming that the customers.txt file contained two million valid rows):

| Number of accepted rows | 2000000 |

**Streaming Data Via JDBC**

There are two options to stream data from a file on the client to your Vertica database:

- Use the VerticaCopyStream class to stream data in an object-oriented manner - details on the class are available in the JDBC Documentation
- Execute a **COPY LOCAL** SQL statement to stream the data

The topics in this section explain how to use these options.

**Using VerticaCopyStream**

The VerticaCopyStream class lets you stream data from the client system to a Vertica database. It lets you use **COPY** directly without first copying the data to a host in the database cluster. Using COPY to load data from the host requires superuser privileges to access the host's file system. The COPY statement used to load data from a stream does not require superuser privileges, so your client can connect with any user account that has INSERT privileges on the target table.

To copy streams into the database:

1. Disable the database connections AutoCommit connection parameter.
2. Instantiate a VerticaCopyStreamObject, passing it at least the database connection objects and a string containing a COPY statement to load the data. This statement must copy data from the STDIN into your table. You can use any parameters that are appropriate for your data load.

**Note:**

The VerticaCopyStreamObject constructor optionally takes a single **InputStream** object, or a List of **InputStream** objects. This option lets you pre-populate the list of streams to be copied into the database.
3. Call `VerticaCopyStreamObject.start()` to start the COPY statement and begin streaming the data in any streams you have already added to the `VerticaCopyStreamObject`.

4. Call `VerticaCopyStreamObject.addStream()` to add additional streams to the list of streams to send to the database. You can then call `VerticaCopyStreamObject.execute()` to stream them to the server.

5. Optionally, call `VerticaCopyStreamObject.getRejects()` to get a list of rejected rows from the last `.execute()` call. The list of rejects is reset by each call to `.execute()` or `.finish()`.

   **Note:**
   If you used either the REJECTED DATA or EXCEPTIONS options in the COPY statement you passed to `VerticaCopyStreamObject` the object in step 2, `.getRejects()` returns an empty list. You can only use one method of tracking the rejected rows at a time.

6. When you are finished adding streams, call `VerticaCopyStreamObject.finish()` to send any remaining streams to the database and close the COPY statement.

7. Call `Connection.commit()` to commit the loaded data.

## Getting Rejected Rows

The `VerticaCopyStreamObject.getRejects()` method returns a List containing the row numbers of rows that were rejected after the previous `.execute()` method call. Each call to `.execute()` clears the list of rejected rows, so you need to call `.getRejects()` after each call to `.execute()`. Since `.start()` and `.finish()` also call `.execute()` to send any pending streams to the server, you should also call `.getRejects()` after these methods as well.

The following example demonstrates loading the content of five text files stored on the client system into a table.

```java
import java.io.File;
import java.io.FileInputStream;
import java.sql.Connection;
import java.sql.DriverManager;
import java.sql.Statement;
import java.util.Iterator;
import java.util.List;
import java.util.Properties;
import com.vertica.jdbc.VerticaConnection;
import com.vertica.jdbc.VerticaCopyStream;

public class CopyMultipleStreamsExample {
```
public static void main(String[] args) {
    // Note: If running on Java 5, you need to call Class.forName
    // to manually load the JDBC driver.
    // Set up the properties of the connection
    Properties myProp = new Properties();
    myProp.put("user", "ExampleUser"); // Must be superuser
    myProp.put("password", "password123");
    // When performing bulk loads, you should always disable the
    // connection's AutoCommit property to ensure the loads happen as
    // efficiently as possible by reusing the same COPY command and
    // transaction.
    myProp.put("AutoCommit", "false");
    Connection conn;
    try {
        conn = DriverManager.getConnection(  
            "jdbc:vertica://VerticaHost:5433/ExampleDB", myProp);
        Statement stmt = conn.createStatement();

        // Create a table to receive the data
        stmt.execute("DROP TABLE IF EXISTS customers");
        stmt.execute("CREATE TABLE customers (Last_Name char(50), "
            + "First_Name char(50),Email char(50), "
            + "Phone_Number char(15))");

        // Prepare the query to insert from a stream. This query must use
        // the COPY statement to load data from STDIN. Unlike copying from
        // a file on the host, you do not need superuser privileges to
        // copy a stream. All your user account needs is INSERT privileges
        // on the target table.
        String copyQuery = "COPY customers FROM STDIN "
            + "DELIMITER '|' ENFORCELENGTH";

        // Create an instance of the stream class. Pass in the
        // connection and the query string.
        VerticaCopyStream stream = new VerticaCopyStream(  
            (VerticaConnection) conn, copyQuery);

        // Keep running count of the number of rejects
        int totalRejects = 0;

        // start() starts the stream process, and opens the COPY command.
        stream.start();

        // If you added streams to VerticaCopyStream before calling start(),
        // You should check for rejects here (see below). The start() method
        // calls execute() to send any pre-queued streams to the server
        // once the COPY statement has been created.

        // Simple for loop to load 5 text files named customers-1.txt to
        // customers-5.txt
        for (int loadNum = 1; loadNum <= 5; loadNum++) {
            // Prepare the input file stream. Read from a local file.
            String filename = "C:\Data\customers-" + loadNum + ".txt";
            System.out.println("\n\nLoading file: "+ filename);
            File inputfile = new File(filename);
            FileInputStream inputStream = new FileInputStream(inputfile);

            // Add stream to the VerticaCopyStream
            stream.addStream(inputStream);
// call execute() to load the newly added stream. You could
// add many streams and call execute once to load them all.
// Which method you choose depends mainly on whether you want
// the ability to check the number of rejections as the load
// progresses so you can stop if the number of rejects gets too
// high. Also, high numbers of InputStreams could create a
// resource issue on your client system.
stream.execute();

// Show any rejects from this execution of the stream load
// getRejects() returns a List containing the
// row numbers of rejected rows.
List<Long> rejects = stream.getRejects();

// The size of the list gives you the number of rejected rows.
int numRejects = rejects.size();
totalRejects += numRejects;
System.out.println("Number of rows rejected in load "+
    loadNum + ": " + numRejects);

// List all of the rows that were rejected.
Iterator<Long> rejit = rejects.iterator();
long linecount = 0;
while (rejit.hasNext()) {
    System.out.print("Rejected row "+++linecount);
    System.out.println(" is row "+rejit.next());
}

// Finish closes the COPY command. It returns the number of
// rows inserted.
long results = stream.finish();
System.out.println("Finish returned " + results);

// If you added any streams that hadn't been executed(),
// you should also check for rejects here, since finish()
// calls execute() to

// You can also get the number of rows inserted using
// getRowCount().
System.out.println("Number of rows accepted: "+
    stream.getRowCount());
System.out.println("Total number of rows rejected: "+totalRejects);

// Commit the loaded data
conn.commit();

} catch (Exception e) {
    e.printStackTrace();
}

Running the above example on some sample data results in the following output:

Loading file: C:\Data\customers-1.txtNumber of rows rejected in load #1: 3
Rejected row #1 is row 3
Rejected row #2 is row 7
Rejected row #3 is row 51
**Loading file: C:\Data\customers-2.txt**
Number of rows rejected in load #2: 5
Rejected row #1 is row 4143
Rejected row #2 is row 6132
Rejected row #3 is row 9998
Rejected row #4 is row 10000
Rejected row #5 is row 10050

**Loading file: C:\Data\customers-3.txt**
Number of rows rejected in load #3: 9
Rejected row #1 is row 14142
Rejected row #2 is row 16131
Rejected row #3 is row 19999
Rejected row #4 is row 20001
Rejected row #5 is row 20005
Rejected row #6 is row 20049
Rejected row #7 is row 20056
Rejected row #8 is row 20144
Rejected row #9 is row 20236

**Loading file: C:\Data\customers-4.txt**
Number of rows rejected in load #4: 8
Rejected row #1 is row 23774
Rejected row #2 is row 24141
Rejected row #3 is row 25906
Rejected row #4 is row 26130
Rejected row #5 is row 27317
Rejected row #6 is row 28121
Rejected row #7 is row 29321
Rejected row #8 is row 29998

**Loading file: C:\Data\customers-5.txt**
Number of rows rejected in load #5: 1
Rejected row #1 is row 39997
Finish returned 39995
Number of rows accepted: 39995
Total number of rows rejected: 26

---

**Note:**
The above example shows a simple load process that targets one node in the Vertica cluster. It is more efficient to simultaneously load multiple streams to multiple database nodes. Doing so greatly improves performance because it spreads the processing for the load across the cluster.

---

**Using COPY LOCAL with JDBC**

To use COPY LOCAL with JDBC, just execute a `COPY LOCAL` statement with the path to the source file on the client system. This method is simpler than using the `VerticaCopyStream` class (details on the class are available in the JDBC Documentation). However, you may prefer using `VerticaCopyStream` if you have many files to copy to the database or if your data comes from a source other than a file (streamed over a network connection, for example).
You can use COPY LOCAL in a multiple-statement query. However, you should always make it the first statement in the query. You should not use it multiple times in the same query.

The following example code demonstrates using COPY LOCAL to copy a file from the client to the database. It is the same as the code shown in Bulk Loading Using the COPY Statement, except for the use of the LOCAL option in the COPY statement, and the path to the data file is on the client system, rather than on the server.

**Note:**
The exceptions/rejections files are created on the client machine when the exceptions and rejected data modifiers are specified on the copy local command. Specify a local path and filename for these modifiers when executing a COPY LOCAL query from the driver.

```java
import java.sql.*;
import java.util.Properties;

public class COPYLocal {
    public static void main(String[] args) {
        // Note: If using Java 5, you must call Class.forName to load the // JDBC driver.
        Properties myProp = new Properties();
        myProp.put("user", "ExampleUser"); // Do not need to superuser
        myProp.put("password", "password123");
        Connection conn;
        try {
            conn = DriverManager.getConnection("jdbc:vertica://VerticaHost:5433/ExampleDB",myProp);
            // Disable AutoCommit
            conn.setAutoCommit(false);
            Statement stmt = conn.createStatement();
            // Create a table to hold data.
            stmt.execute("DROP TABLE IF EXISTS customers;");
            stmt.execute("CREATE TABLE IF NOT EXISTS customers (Last_Name char(50) "
                          + " NOT NULL, First_Name char(50),Email char(50), "
                          + " Phone_Number char(15))");

            // Use the COPY command to load data. Load directly into ROS, since // this load could be over 100MB. Use ENFORCELENGTH to reject // strings too wide for their columns.
            boolean result = stmt.execute("COPY customers FROM LOCAL "
                                         + " 'C:\Data\customers.txt' DIRECT ENFORCELENGTH");

            // Determine if execution returned a count value, or a full result // set.
            if (result) {
                System.out.println("Got result set");
            } else {
                // Count will usually return the count of rows inserted.
                System.out.println("Got count");
                int rowCount = stmt.getUpdateCount();
                System.out.println("Number of accepted rows = "+rowCount);
            }
        }
    }
}
```
The result of running this code appears below. In this case, the customers.txt file contains 10000 rows, seven of which get rejected because they contain data too wide to fit into their database columns.

Got countNumber of accepted rows = 9993
Handling Errors

When the Vertica JDBC driver encounters an error, it throws a SQLException or one of its subclasses. The specific subclass it throws depends on the type of error that has occurred. Most of the JDBC method calls can result in several different types of errors, in response to which the JDBC driver throws a specific SQLException subclass. Your client application can choose how to react to the error based on the specific exception that the JDBC driver threw.

Note:
The specific SQLException subclasses were introduced in the JDBC 4.0 standard. If your client application runs in a Java 5 JVM, it will use the older JDBC 3.0-compliant driver which lacks these subclasses. In that case, all errors throw a SQLException.

The hierarchy of SQLException subclasses is arranged to help your client application determine what actions it can take in response to an error condition. For example:

- The JDBC driver throws SQLTransientException subclasses when the cause of the error may be a temporary condition, such as a timeout error (SQLException) or a connection issue (SQLException). Your client application can choose to retry the operation without making any sort of attempt to remedy the error, since it may not reoccur.
- The JDBC driver throws SQLNonTransientException subclasses when the client needs to take some action before it could retry the operation. For example, executing a statement with a SQL syntax error results in the JDBC driver throwing the a SQLSyntaxErrorException (a subclass of SQLNonTransientException). Often, your client application just has to report these errors back to the user and have him or her resolve them. For example, if the user supplied your application with a SQL statement that triggered a SQLSyntaxErrorException, it could prompt the user to fix the SQL error.

See SQLState Mapping to Java Exception Classes for a list Java exceptions thrown by the JDBC driver.
### SQLState Mapping to Java Exception Classes

<table>
<thead>

### Routing JDBC Queries Directly to a Single Node

The JDBC driver has the ability to route queries directly to a single node using a special connection called a Routable Connection. This feature is ideal for high-volume "short" requests that return a small number of results that all exist on a single node. The common scenario for using this feature is to do high-volume lookups on data that is identified with a unique key. Routable queries typically provide lower latency and use less system resources than distributed queries. However, the data being queried must be segmented in such a way that the JDBC client can determine on which node the data resides.

**Vertica Typical Analytic Query**
Typical analytic queries require dense computation on data across all nodes in the cluster and benefit from having all nodes involved in the planning and execution of the queries.

**Vertica Routable Query API Query**

For high-volume queries that return a single or a few rows of data, it is more efficient to execute the query on the single node that contains the data.

To effectively route a request to a single node, the client must determine the specific node on which the data resides. For the client to be able to determine the correct node, the table must be [segmented](#) by one or more columns. For example, if you segment a table on a Primary Key (PK) column, then the client can determine on which node the data resides based on the Primary Key and directly connect to that node to quickly fulfill the request.
The Routable Query API provides two classes for performing routable queries: VerticaRoutableExecutor and VGet. VerticaRoutableExecutor provides a more expressive SQL-based API while VGet provides a more structured API for programmatic access.

- The VerticaRoutableExecutor class allows you to use traditional SQL with a reduced feature set to query data on a single node.
  
  For joins, the table must be joined on a key column that exists in each table you are joining, and the tables must be segmented on that key. However, this is not true for unsegmented tables, which can always be joined (since all the data in an unsegmented table is available on all nodes).

- The VGet class does not use traditional SQL syntax. Instead, it uses a data structure that you build by defining predicates and predicate expressions and outputs and output expressions. This class is ideal for doing Key/Value type lookups on single tables.

  The data structure used for querying the table must provide a predicate for each segmented column defined in the projection for the table. You must provide, at a minimum, a predicate with a constant value for each segmented column. For example, an id with a value of 12234 if the table is segmented only on the id column. You can also specify additional predicates for the other, non-segmented, columns in the table. Predicates act like a SQL WHERE clause and multiple predicates/predicate expressions apply together with a SQL AND modifier. Predicates must be defined with a constant value. Predicate expressions can be used to refine the query and can contain any arbitrary SQL expressions (such as less than, greater than, and so on) for any of the non-segmented columns in the table.

Java documentation for all classes and methods in the JDBC Driver is available in the Vertica JDBC Documentation.

**Note:**
The JDBC Routable Query API is read-only and requires JDK 1.6 or greater.

**Creating Tables and Projections for use with the Routable Query API**

For routable queries, the client must determine the appropriate node to get the data. The client does this by comparing all projections available for the table, and determining the best projection to use to find the single node that contains data. You must create a projection segmented by the key column(s) on at least one table to take full advantage of
the routable query API. Other tables that join to this table must either have an unsegmented projection, or a projection segmented as described below.

**Note:**
Tables must be segmented by hash for routable queries. See Hash Segmentation Clause. Other segmentation types are not supported.

## Creating Tables for use with Routable Queries

To create a table that can be used with the routable query API, segment (by hash) the table on a uniformly distributed column. Typically, you segment on a primary key. For faster lookups, sort the projection on the same columns on which you segmented. For example, to create a table that is well suited to routable queries:

```
CREATE TABLE users (  
id INT NOT NULL PRIMARY KEY,  
username VARCHAR(32),  
email VARCHAR(64),  
business_unit VARCHAR(16))  
ORDER BY id  
SEGMENTED BY HASH(id)  
ALL NODES;
```

This table is segmented based on the `id` column (and ordered by `id` to make lookups faster). To build a query for this table using the routable query API, you only need to provide a single predicate for the `id` column which returns a single row when queried.

However, you might add multiple columns to the segmentation clause. For example:

```
CREATE TABLE users2 (  
id INT NOT NULL PRIMARY KEY,  
username VARCHAR(32),  
email VARCHAR(64),  
business_unit VARCHAR(16))  
ORDER BY id, business_unit  
SEGMENTED BY HASH(id, business_unit)  
ALL NODES;
```

In this case, you need to provide two predicates when querying the `users2` table, as it is segmented on two columns, `id` and `business_unit`. However, if you know both `id` and `business_unit` when you perform the queries, then it is beneficial to segment on both columns, as it makes it easier for the client to determine that this projection is the best projection to use to determine the correct node.
Designing Tables for Single-node JOINs

If you plan to use the VerticaRoutableExecutor class and join tables during routable queries, then you must segment all tables being joined by the same segmentation key. Typically this key is a primary/foreign key on all the tables being joined. For example, the customer_key may be the primary key in a customers dimension table, and the same key is a foreign key in a sales fact table. Projections for a VerticaRoutableExecutor query using these tables must be segmented by hash on the customer key in each table.

If you want to join with small dimension tables, such as date dimensions, then it may be appropriate to make those tables unsegmented so that the date_dimension data exists on all nodes. It is important to note that when joining unsegmented tables, you still must specify a segmented table in the createRoutableExecutor() call.

Verifying Existing Projections for Tables

If tables are already segmented by hash (for example, on an ID column), then you can determine what predicates are needed to query the table by using the Vertica function GET_PROJECTIONS to view that table's projections. For example:

```sql
=> SELECT GET_PROJECTIONS ('users');
...
Projection Name: [Segmented] [Seg Cols] [# of Buddies] [Buddy Projections] [Safe] [UptoDate] [Stats]
---
public.users_b1 [Segmented: Yes] [Seg Cols: "public.users.id"] [K: 1] [public.users_b0] [Safe: Yes] [UptoDate: Yes] [Stats: RowCounts]
public.users_b0 [Segmented: Yes] [Seg Cols: "public.users.id"] [K: 1] [public.users_b1] [Safe: Yes] [UptoDate: Yes] [Stats: RowCounts]
```

For each projection, only the public.users.id column is specified, indicating your query predicate should include this column.

If the table is segmented on multiple columns, for example id and business_unit, then you need to provide both columns as predicates to the routable query.

Creating a Connection for Routable Queries

The JDBC Routable Query API provides the VerticaRoutableConnection (details are available in the JDBC Documentation) interface to connect to a cluster and allow for Routable Queries. This interface provides advanced routing capabilities beyond those of a normal VerticaConnection. The VerticaRoutableConnection provides access to the
VerticaRoutableExecutor and VGet classes. See Defining the Query for Routable Queries Using the VerticaRoutableExecutor Class and Defining the Query for Routable Queries Using the VGet Class respectively.

You enable access to this class by setting the EnableRoutableQueries JDBC connection property to true.

The VerticaRoutableConnection maintains an internal pool of connections and a cache of table metadata that is shared by all VerticaRoutableExecutor/VGet objects that are produced by the connection's `createRoutableExecutor()`/`prepareGet()` method. It is also a fully-fledged JDBC connection on its own and supports all the functionality that a VerticaConnection supports. When this connection is closed, all pooled connections managed by this VerticaRoutableConnection and all child objects are closed too. The connection pool and metadata is only used by child Routable Query operations.

**Example:**

You can create the connection using a JDBC DataSource:

```java
com.vertica.jdbc.DataSource jdbcSettings = new com.vertica.jdbc.DataSource();
jdbcSettings.setDatabase("exampleDB");
jdbcSettings.setHost("v_vmart_node0001.example.com");
jdbcSettings.setUserID("dbadmin");
jdbcSettings.setPassword("password");
jdbcSettings.setEnableRoutableQueries(true);
jdbcSettings.setPort((short)5433);

VerticaRoutableConnection conn;
conn = (VerticaRoutableConnection)jdbcSettings.getConnection();
```

You can also create the connection using a connection string and the `DriverManager.getConnection()` method:

```java
String connectionString = "jdbc:vertica://v_vmart_
node0001.example.com:5433/exampleDB?user=dbadmin&password=&EnableRoutableQueries=true";
VerticaRoutableConnection conn = (VerticaRoutableConnection) DriverManager.getConnection
(connectionString);
```

Both methods result in a conn connection object that is identical.

**Note:**

Avoid opening many VerticaRoutableConnection connections because this connection maintains its own private pool of connections which are not shared with other connections. Instead, your application should use a single connection and issue multiple queries through that connection.
In addition to the `setEnableRoutableQueries` property that the Routable Query API adds to the Vertica JDBC connection class, the API also adds additional properties. The complete list is below.

- **EnableRoutableQueries**: Enables Routable Query lookup capability. Default is false.
- **FailOnMultiNodePlans**: If the plan requires more than one node, and `FailOnMultiNodePlans` is true, then the query fails. If it is set to false then a warning is generated and the query continues. However, latency is greatly increased as the Routable Query must first determine the data is on multiple nodes, then a normal query is run using traditional (all node) execution and execution. Defaults to true. Note that this failure cannot occur on simple calls using only predicates and constant values.
- **MetadataCacheLifetime**: The time in seconds to keep projection metadata. The API caches metadata about the projection used for the query (such as projections). The cache is used on subsequent queries to reduce response time. The default is 300 seconds.
- **MaxPooledConnections**: Cluster-wide maximum number of connections to keep in the VerticaRoutableConnection’s internal pool. Default 20.
- **MaxPooledConnectionsPerNode**: Per-node maximum number of connections to keep in the VerticaRoutableConnection’s internal pool. Default 5.

**Defining the Query for Routable Queries Using the VerticaRoutableExecutor Class**

Use the `VerticaRoutableExecutor` class to access table data directly from a single node. `VerticaRoutableExecutor` directly queries Vertica only on the node that has all the data needed for the query, avoiding the distributed planning and execution costs associated with Vertica query execution. You can use `VerticaRoutableExecutor` to join tables or use a `GROUP BY` clause, as these operations are not possible using `VGet`.

When using the `VerticaRoutableExecutor` class, the following rules apply:

- If joining tables, all tables being joined must be segmented (by hash) on the same set of columns referenced in the join predicate, unless the table to join is unsegmented.

- Multiple conditions in a join `WHERE` clause must be `AND`d together. Using `OR` in the `WHERE` clause causes the query to degenerate to a multi-node plan. You can specify `OR`, `IN` list, or range conditions on columns outside the join condition if the data exists on the same node.
You can only execute a single statement per request. Chained SQL statements are not permitted.

Your query can be used in a driver-generated subquery to help determine whether the query can execute on a single node. Therefore, you cannot include the semi-colon at the end of the statement and you cannot include SQL comments using double-dashes (--), as these cause the driver-generated query to fail.

You create a VerticaRoutableExecutor by calling the createRoutableExecutor method on a connection object:

```java
createRoutableExecutor( schema-name, table-name )
```

For example:

```java
VerticaRoutableConnection conn;
    Map<String, Object> map = new HashMap<String, Object>();
    map.put("customer_key", 1);
try {
    conn = (VerticaRoutableConnection)
        jdbcSettings.getConnection();
    String table = "customers";
    VerticaRoutableExecutor q = conn.createRoutableExecutor(null, table);
    ...
}...
```

If `schema-name` is set to null, then the search path is used to find the table.

**VerticaRoutableExecutor Methods**

VerticaRoutableExecutor has the following methods:

- `execute`
- `close`
- `getWarnings`

For details on this class, see the JDBC Documentation.

**execute**

```java
execute( query-string, { column, value | map } )
```

Runs the query.
### query-string
The query to execute

### column, value
The column and value when the lookup is done on a single value. For example:

```java
String column = "customer_key";
Integer value = 1;
ResultSet rs = q.execute(query, column, value)
```

### map
A Java map of the column names and corresponding values if the lookup is done on one or more columns. For example: `ResultSet rs = q.execute(query, map);`. The table must have at least one projection segmented by a set of columns that exactly match the columns in the map. Each column defined in the map can have only one value. For example:

```java
Map<String, Object> map = new HashMap<String, Object>();
map.put("customer_key", 1);
map.put("another_key", 42);
ResultSet rs = q.execute(query, map);
```

The following requirements apply:

- The query to execute must use regular SQL that complies with the rules of the `VerticaRouteableExecutor` class. For example, you can add limits and sorts, or use aggregate functions, provided the data exists on a single node.

- The JDBC client uses the `column/value` or `map` arguments to determine on which node to execute the query. The content of the query must use the same values that you provide in the column/value or map arguments.

- The following data types cannot be used as column values:
  - `INTERVAL`
  - `TIMETZ`
  - `TIMESTAMPTZ`

  Also, if a table is segmented on any columns with the following data types then the table cannot be queried with the routable query API:

The driver does not verify the syntax of the query before it sends the query to the server. If your expression is incorrect, then the query fails.
close

close()

Closes this VerticaRoutableExecutor by releasing resources used by this VerticaRoutableExecutor. It does not close the parent JDBC connection to Vertica.

getWarnings

getWarnings()

Retrieves the first warning reported by calls on this VerticaRoutableExecutor. Additional warnings are chained and can be accessed with the JDBC method getNextWarning().

Example

The following example shows how to use VerticaRoutableExecutor to execute a query using both a JOIN clause and an aggregate function with a GROUP BY clause. The example also shows how to create a customer and sales table, and segment the tables so they can be joined using the VerticaRoutableExecutor class. This example uses the date_dimension table in the VMart schema to show how to join data on unsegmented tables.

1. Create the customers table to store customer details, and then create projections that are segmented on the table's customer_key column:

   ```
   => CREATE TABLE customers (customer_key INT, customer_name VARCHAR(128), customer_email VARCHAR(128));
   => CREATE PROJECTION cust_proj_b0 AS SELECT * FROM customers SEGMENTED BY HASH (customer_key) ALL NODES;
   => CREATE PROJECTION cust_proj_b1 AS SELECT * FROM customers SEGMENTED BY HASH (customer_key) ALL NODES OFFSET 1;
   => CREATE PROJECTION cust_proj_b2 AS SELECT * FROM customers SEGMENTED BY HASH (customer_key) ALL NODES OFFSET 2;
   => SELECT start_refresh();
   ```

2. Create the sales table, then create projections that are segmented on its customer_key column. Because the customer and sales tables are segmented on the same key, you can join them later with the VerticaRoutableExecutor routable query lookup.
3. Add some sample data:

```sql
CREATE TABLE sales (sale_key INT, customer_key INT, date_key INT, sales_amount FLOAT);
CREATE PROJECTION sales_proj_b0 AS SELECT * FROM sales SEGMENTED BY HASH (customer_key) ALL NODES;
CREATE PROJECTION sales_proj_b1 AS SELECT * FROM sales SEGMENTED BY HASH (customer_key) ALL NODES OFFSET 1;
CREATE PROJECTION sales_proj_b2 AS SELECT * FROM sales SEGMENTED BY HASH (customer_key) ALL NODES Offset 2;
SELECT start_refresh();
```

```sql
INSERT INTO customers VALUES (1, 'Fred', 'fred@example.com');
INSERT INTO customers VALUES (2, 'Sue', 'Sue@example.com');
INSERT INTO customers VALUES (3, 'Dave', 'Dave@example.com');
INSERT INTO customers VALUES (4, 'Ann', 'Ann@example.com');
INSERT INTO customers VALUES (5, 'Jamie', 'Jamie@example.com');
COMMIT;
```

```sql
INSERT INTO sales VALUES(1, 1, 1, '100.00');
INSERT INTO sales VALUES(2, 2, 2, '200.00');
INSERT INTO sales VALUES(3, 3, 3, '300.00');
INSERT INTO sales VALUES(4, 4, 4, '400.00');
INSERT INTO sales VALUES(5, 5, 5, '400.00');
INSERT INTO sales VALUES(6, 1, 15, '500.00');
INSERT INTO sales VALUES(7, 1, 35, '300.00');
INSERT INTO sales VALUES(8, 1, 35, '200.00');
COMMIT;
```

4. Create an unsegmented projection of the VMart date_dimension table for use in this example. Call the meta-function START_REFRESH to unsegment the existing data:

```sql
CREATE PROJECTION date_dim AS SELECT * FROM date_dimension UNSEGMENTED ALL NODES;
SELECT start_refresh();
```

Using the customer, sales, and date_dimension data, you can now create a routable query lookup that uses joins and a group by to query the customers table and return the total number of purchases per day for a given customer:

```java
import java.sql.*;
import java.util.HashMap;
import java.util.Map;
import com.vertica.jdbc.kv.*;

public class verticaKV_doc {
    public static void main(String[] args) {
        com.vertica.jdbc.DataSource jdbcSettings = new com.vertica.jdbc.DataSource();
        jdbcSettings.setDatabase("VMart");
        jdbcSettings.setHost("vertica.example.com");
        jdbcSettings.setUserID("dbadmin");
        jdbcSettings.setPassword("password");
        jdbcSettings.setEnableRoutableQueries(true);
```
jdbcSettings.setFailOnMultiNodePlans(true);
jdbcSettings.setPort((short) 5433);
VerticaRoutableConnection conn;
    Map<String, Object> map = new HashMap<String, Object>();
    map.put("customer_key", 1);
    try {
        conn = (VerticaRoutableConnection) jdbcSettings.getConnection();
        String table = "customers";
        VerticaRoutableExecutor q = conn.createRoutableExecutor(null, table);
        String query = "select d.date, SUM(s.sales_amount) as Total ";
            query += " from customers as c";
            query += " join sales as s ";
            query += " on s.customer_key = c.customer_key ";
            query += " join date_dimension as d ";
            query += " on d.date_key = s.date_key ";
            query += " where c.customer_key = " + map.get("customer_key");
            query += " group by (d.date) order by Total DESC";
        ResultSet rs = q.execute(query, map);
        while(rs.next()) {
            System.out.print("Date: " + rs.getString("date") + ": ");
            System.out.println("Amount: " + rs.getString("Total"));
        }
        conn.close();
    } catch (SQLException e) {
        e.printStackTrace();
    }
}

The example code produces output like this:

Date: 2012-01-15:  Amount: 900.0
Date: 2012-02-04:  Amount: 500.0
Date: 2012-01-01:  Amount: 100.0

Note:
Your output might be different, because the VMart schema randomly generates dates in the date_dimension table.

Defining the Query for Routable Queries Using the VGet Class

The VGet class is used to access table data directly from a single node when you do not need to join the data or use a group by clause. Like VerticaRoutableExecutor, VGet directly queries Vertica nodes that have the data needed for the query, avoiding the distributed planning and execution costs associated with a normal Vertica execution. However, VGet does not use SQL. Instead, you define predicates and values to perform key/value type lookups on a single table. VGet is especially suited to key/value-type lookups on single tables.
You create a VGet by calling the prepareGet method on a connection object:

```java
prepareGet( schema-name, { table-name | projection-name } )
```

For example:

```java
VerticaRoutableConnection conn;
try {
    conn = (VerticaRoutableConnection) jdbcSettings.getConnection();
    System.out.println("Connected.");
    VGet get = conn.prepareGet("public", "users");
    ...
}
```

VGet operations span multiple JDBC connections (and multiple Vertica sessions) and do not honor the parent connection's transaction semantics. If consistency is required across multiple executions, the parent VerticaRoutableConnection's consistent read API can be used to guarantee all operations occur at the same epoch.

VGet is thread safe, but all methods are synchronized, so threads that share a VGet instance are never run in parallel. For better parallelism, each thread should have its own VGet instance. Different VGet instances that operate on the same table share pooled connections and metadata in a manner that enables a high degree of parallelism.

**VGet Methods**

VGet has the following methods:

- `addPredicate`
- `addPredicateExpression`
- `addOutputColumn`
- `addOutputExpression`
- `addSortColumn`
- `setLimit`
- `clearPredicates`
- `clearOutputs`
- `clearSortColumns`
- `execute`
- `close`
- `getWarnings`

By default, VGet fetches all columns of all rows that satisfy the logical AND of predicates passed via the `addPredicate` method. You can further customize the get operation with the following methods: `addOutputColumn`, `addOutputExpression`, `addPredicateExpression`, `addSortColumn`, and `setLimit`. 
**addPredicate**

`addPredicate(string, object)`

Adds a predicate column and a constant value to the query. You must include a predicate for each column on which the table is segmented. The predicate acts as the query WHERE clause. Multiple addPredicate method calls are joined by AND modifiers. The VGet retains this value after each call to execute. To remove it, use `clearPredicates`.

The following data types cannot be used as column values. Also, if a table is segmented on any columns with these data types then the table cannot be queried with the Routable Query API:

- INTERVAL
- TIMETZ
- TIMESTAMPTZ

**addPredicateExpression**

`addPredicateExpression(string)`

Accepts arbitrary SQL expressions that operate on the table's columns as input to the query. Predicate expressions and predicates are joined by AND modifiers. You can use segmented columns in predicate expressions, but they must also be specified as a regular predicate with `addPredicate`. The VGet retains this value after each call to execute. To remove it, use `clearPredicates`.

The driver does not verify the syntax of the expression before it sends it to the server. If your expression is incorrect then the query fails.

**addOutputColumn**

`addOutputColumn(string)`

Adds a column to be included in the output. By default the query runs as `SELECT *` and you do not need to define any output columns to return the data. If you add output columns then you must add all the columns to be returned. The VGet retains this value after each call to execute. To remove it, use `clearOutputs`. 
addOutputExpression

addOutputExpression(string)

Accepts arbitrary SQL expressions that operate on the table's columns as output. The VGet retains this value after each call to execute. To remove it, use ClearOutputs.

The following restrictions apply:

- The driver does not verify the syntax of the expression before it sends it to the server. If your expression is incorrect then the query fails.
- addOutputExpression is not supported when querying flex tables. If you use addOutputExpression on a flex table query, then a SQLFeatureNotSupportedException is thrown.

addSortColumn

addSortColumn(string, SortOrder)

Adds a sort order to an output column. The output column can be either the one returned by the default query (SELECT *) or one of the columns defined in addSortColumn or addOutputExpression. You can defined multiple sort columns.

setLimit

setLimit(int)

Sets a limit on the number of results returned. A limit of 0 is unlimited.

clearPredicates

clearPredicates()

Removes predicates that were added by addPredicate and addPredicateExpression.
clearOutputs
clearOutputs()
Removes outputs added by addOutputColumn and addOutputExpression.

clearSortColumns
clearSortColumns()
Removes sort columns previously added by addSortColumn.

execute
execute()
Runs the query. Care must be taken to ensure that the predicate columns exist on the table and projection used by VGet, and that the expressions do not require multiple nodes to execute. If an expression is sufficiently complex as to require more than one node to execute, execute throws a SQLException if the FailOnMultiNodePlans connection property is true.

close
close()
Closes this VGet by releasing resources used by this VGet. It does not close the parent JDBC connection to Vertica.

getWarnings
getWarnings()
Retrieves the first warning reported by calls on this VGet. Additional warnings are chained and can be accessed with the JDBC method getNextWarning.
The following code queries the `users` table that is defined in Creating Tables and Projections for use with the Routable Query API. The table defines an `id` column that is segmented by hash.

```java
import java.sql.*;
import com.vertica.jdbc.kv.*;

public class verticaKV2 {
    public static void main(String[] args) {
        com.vertica.jdbc.DataSource jdbcSettings =
            new com.vertica.jdbc.DataSource();
        jdbcSettings.setDatabase("exampleDB");
        jdbcSettings.setHost("v_vmart_node0001.example.com");
        jdbcSettings.setUserID("dbadmin");
        jdbcSettings.setPassword("password");
        jdbcSettings.setEnableRoutableQueries(true);
        jdbcSettings.setPort((short) 5433);
        VerticaRoutableConnection conn;
        try {
            conn = (VerticaRoutableConnection) jdbcSettings.getConnection();
            System.out.println("Connected. ");
            VGet get = conn.prepareGet("public", "users");
            get.addPredicate("id", 5);
            ResultSet rs = get.execute();
            rs.next();
            System.out.println("ID: " +
                rs.getString("id"));
            System.out.println("Username: " +
                rs.getString("username"));
            System.out.println("Email: " +
                rs.getString("email"));
            System.out.println("Closing Connection.");
            conn.close();
        } catch (SQLException e) {
            System.out.println("Error! Stacktrace:");
            e.printStackTrace();
        }
    }
}
```

This code produces the following output:

```
Connected.
ID: 5
Username: userE
Email: usere@example.com
Closing Connection.
```
**Routable Query Performance and Troubleshooting**

This topic details performance considerations and common issues you might encounter when using the routable query API.

**Using Resource Pools with Routable Queries**

Individual routable queries are serviced quickly since they directly access a single node and return only one or a few rows of data. However, by default, Vertica resource pools use an AUTO setting for the `execution parallelism` parameter. When set to AUTO, the setting is determined by the number of CPU cores available and generally results in multi-threaded execution of queries in the resource pool. It is not efficient to create parallel threads on the server because routable query operations return data so quickly and routable query operations only use a single thread to find a row. To prevent the server from opening unneeded processing threads, you should create a specific resource pool for routable query clients. Consider the following settings for the resource pool you use for routable queries:

- Set execution parallelism to 1 to force single-threaded queries. This setting improves routable query performance.
- Use CPU affinity to limit the resource pool to a specific CPU or CPU set. The setting ensures that the routable queries have resources available to them, but it also prevents routable queries from significantly impacting performance on the system for other general queries.
- If you do not set a CPU affinity for the resource pool, consider setting the maximum concurrency value of the resource pool to a setting that ensures good performance for routable queries, but does not negatively impact the performance of general queries.

**Performance Considerations for Routable Query Connections**

Because a `VerticaRoutableConnection` opens an internal pool of connections, it is important to configure `MaxPooledConnections` and `MaxPooledConnectionsPerNode`
appropriately for your cluster size and the amount of simultaneous client connections. It is possible to impact normal database connections if you are overloading the cluster with VerticaRoutableConnections.

The initial connection to the initiator node discovers all other nodes in the cluster. The internal-pool connections are not opened until a VerticaRoutableExecutor or VGet query is sent. All VerticaRoutableExecutors/VGets in a connection object use connections from the internal pool and are limited by the MaxPooledConnections settings. Connections remain open until they are closed so a new connection can be opened elsewhere if the connection limit has been reached.

**Troubleshooting Routable Queries**

Routable query issues generally fall into two categories:

- Not providing enough predicates.
- Queries having to span multiple nodes.

**Predicate Requirements**

You must provide the same number of predicates that correspond to the columns of the table segmented by hash. To determine the segmented columns, call the Vertica function `GET_PROJECTIONS`. You must provide a predicate for each column displayed in the Seg Cols field.

For VGet, this means you must use `addPredicate()` to add each of the columns. For VerticaRoutableExecutor, this means you must provide all of the predicates and values in the map sent to `execute()`.

**Multi-node Failures**

It is possible to define the correct number of predicates, but still have a failure because multiple nodes contain the data. This failure occurs because the projection's data is not segmented in such a way that the data being queried is contained on a single node. Enable logging for the connection and view the logs to verify the projection being used. If the client is not picking the correct projection, then try to query the projection directly by specifying the projection instead of the table in the create/prepare statement, for example:

- Using VerticaRoutableExecutor:
  ```
  conn.createRoutableExecutor(schema, table/projection);
  ```

- Using VGet:
  ```
  conn.prepareGet('schema','table/projection')
  ```
Additionally, you can use the EXPLAIN command in vsql to help determine if your query can run in single node. EXPLAIN can help you understand why the query is being run as single or multi-node.

**Pre-Segmenting Data Using VHash**

The VHash class is an implementation of the Vertica hash function for use with JDBC client applications.

Hash segmentation in Vertica allows you to segment a projection based on a built-in hash function. The built-in hash function provides even data distribution across some or all nodes in a cluster, resulting in optimal query execution.

Suppose you have several million rows of values spread across thousands of CSV files. Assume that you already have a table segmented by hash. Before you load the values into your database, you probably want to know to which node a particular value loads. For this reason, using VHash can be particularly helpful, by allowing you to pre-segment your data before loading.

The following example shows the VHash class hashing the first column of a file named "testFile.csv". The name of the first column in this file is *meterId*.

**Segment the Data Using VHash**

This example demonstrates how you can read the testFile.csv file from the local file system and run a hash function on the meterId column. Using the database metadata from a projection, you can then pre-segment the individual rows in the file based on the hash value of meterId.

```java
import java.io.BufferedReader;
import java.io.FileNotFoundException;
import java.io.FileOutputStream;
import java.io.FileReader;
import java.io.UnsupportedEncodingException;
import java.util.*;
import java.io.IOException;
import java.sql.*;
import com.vertica.jdbc.kv.VHash;

public class VerticaKVDoc {
    final Map<String, FileOutputStream> files;
    final Map<String, List<Long>> nodeToHashList;
    String segmentationMetadata;
```
List<String> lines;

public static void main(String[] args) throws Exception {
    try {
        Class.forName("com.vertica.jdbc.Driver");
    } catch (ClassNotFoundException e) {
        System.err.println("Could not find the JDBC driver class.");
        e.printStackTrace();
        return;
    }

    Properties myProp = new Properties();
    myProp.put("user", "username");
    myProp.put("password", "password");

    VerticaKVDoc ex = new VerticaKVDoc();

    // Read in the data from a CSV file.
    ex.readLinesFromFile("C:\testFile.csv");

    try (Connection conn = DriverManager.getConnection(
        "jdbc:vertica://VerticaHost:portNumber/databaseName", myProp)) {

        // Compute the hashes and create FileOutputStreams.
        ex.prepareForHashing(conn);
    }

    // Write to files.
    ex.writeLinesToFiles();
}

public VerticaKVDoc() {
    files = new HashMap<String, FileOutputStream>();
    nodeToHashList = new HashMap<String, List<Long>>();
}

public void prepareForHashing(Connection conn) throws SQLException,
                                    FileNotFoundException {

    // Send a query to Vertica to return the projection segments.
    try (ResultSet rs = conn.createStatement().executeQuery(
        "SELECT get_projection_segments('public.projectionName')") {
        rs.next();
        segmentationMetadata = rs.getString(1);
    }

    // Initialize the data files.
    try (ResultSet rs = conn.createStatement().executeQuery(
        "SElECT node_name FROM nodes") {
        while (rs.next()) {
            String node = rs.getString(1);
            files.put(node, new FileOutputStream(node + ".csv"));
        }
    }
}

public void writeLinesToFiles() throws UnsupportedEncodingException,
                                         IOException {
    for (String line : lines) {

long hashedValue = VHash.hashLong(getMeterIdFromLine(line));

// Write the row data to that node’s data file.
String node = VHash.getNodeFor(segmentationMetadata, hashedValue);

FileOutputStream fos = files.get(node);
fos.write(line.getBytes("UTF-8"));
}

private long getMeterIdFromLine(String line) {
    // In our file, "meterId" is the name of the first column in the file.
    return Long.parseLong(line.split(",")[0]);
}

public void readLinesFromFile(String filename) throws IOException {
    lines = new ArrayList<String>();
    String line;
    try (BufferedReader reader = new BufferedReader(
        new FileReader(filename))) {
        while ((line = reader.readLine()) != null) {
            lines.add(line);
        }
    }
}
}
Programming ADO.NET Applications

The Vertica driver for ADO.NET allows applications written in C# to read data from, update, and load data into Vertica databases. It provides a data adapter (Vertica Data Adapter) that facilitates reading data from a database into a data set, and then writing changed data from the data set back to the database. It also provides a data reader (VerticaDataReader) for reading data. The driver requires the .NET framework version 3.5+.

For more information about ADO.NET, see:

- Overview of ADO.NET
- .NET Framework Developer Guide

Note: All of the examples provided in this section are in C#.

ADO.NET Data Types

This table details the mapping between Vertica data types and .NET and ADO.NET data types.

<table>
<thead>
<tr>
<th>.NET Framework Type</th>
<th>ADO.NET DbType</th>
<th>VerticaType</th>
<th>Vertica Data Type</th>
<th>VerticaDataReader getter</th>
</tr>
</thead>
<tbody>
<tr>

<td>Binary</td>
<td>GetBytes()</td>
</tr>
<tr>
<td></td>
<td></td>
<td>VarBinary</td>
<td>VarBinary</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>LongVarBinary</td>
<td>LongVarBinary</td>
<td></td>
</tr>
</tbody>
</table>

Note: The limit for LongVarBinary is 32 Million bytes. If you
<table>
<thead>
<tr>
<th>.NET Framework Type</th>
<th>ADO.NET DbType</th>
<th>VerticaType</th>
<th>Vertica Data Type</th>
<th>VerticaDataReader getter</th>
</tr>
</thead>
<tbody>
<tr>
<td>Datetime</td>
<td>Date</td>
<td>Date</td>
<td>Date</td>
<td>GetDateTime()</td>

<tr>
<td></td>
<td>Time</td>
<td>Time</td>
<td>Time</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Timestamp</td>
<td>Timestamp</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Note:**
The Time portion of the DateTime object for vertica dates is set to DateTime.

If you attempt to insert more than the limit during a batch transfer for any one row, then the entire batch fails. Verify the size of the data before attempting to insert a `LongVarBinary` during a batch.
<table>
<thead>
<tr>

</tr>
</tbody>
</table>

### UUID Backwards Compatibility

Vertica version 9.0.0 introduced the UUID data type, including JDBC support for UUIDs. The Vertica ADO.NET, ODBC, and OLE DB clients added full support for UUIDs in version 9.0.1. Vertica maintains backwards compatibility with older supported client driver versions that do not support the UUID data type, as follows:

<table>
<thead>
<tr>
<th>When an older client...</th>
<th>Vertica...</th>
</tr>
</thead>
<tbody>
<tr>
<td>Queries tables with UUID columns</td>
<td>Translates the native UUID values to CHAR values.</td>
</tr>
<tr>
<td>Inserts data into a UUID column</td>
<td>Converts the CHAR value sent by the client into a native UUID value.</td>
</tr>
<tr>
<td>Queries a UUID column's metadata</td>
<td>Reports its data type as CHAR.</td>
</tr>
</tbody>
</table>

### Setting the Locale for ADO.NET Sessions

- ADO.NET applications use a UTF-16 character set encoding and are responsible for converting any non-UTF-16 encoded data to UTF-16. The same cautions as for ODBC apply if this encoding is violated.
- The ADO.NET driver converts UTF-16 data to UTF-8 when passing to the Vertica server and converts data sent by Vertica server from UTF-8 to UTF-16.
ADO.NET applications should set the correct server session locale by executing the `SET LOCALE TO` command in order to get expected collation and string functions behavior on the server.

If there is no default session locale at the database level, ADO.NET applications need to set the correct server session locale by executing the `SET LOCALE TO` command in order to get expected collation and string functions behavior on the server. See the `SET LOCALE` command in the SQL Reference Manual.

**Connecting to the Database**

**Using TLS: Installing Certificates on Windows**

You can optionally secure communication between your ADO.NET application and Vertica using TLS. The Vertica ADO.NET driver uses the default Windows key store when looking for TLS certificates. This is the same key store that Internet Explorer uses.

Before you can use TLS on the client side, you must implement TLS on the server. See TLS Protocol in the Administrator's Guide, perform those steps, then return to this topic to install the TLS certificate on Windows.

To use TLS for ADO.NET connections to Vertica:

- Import the server and client certificates into the Windows Key Store.
- If required by your certificates, import the public certificate of your Certifying Authority.

**Import the Server and Client Certificates into the Windows Key Store:**

1. Copy the server.crt file you generated when you enabled TLS on the server to your Windows Machine.
2. Double-click the certificate.
3. Let Windows determine the key type, and click Install.
Import the Public Certificate of Your CA:

You must establish a chain of trust for the certificates. You may need to import the public certificate for your Certifying Authority (CA) (especially if it is a self-signed certificate).

1. Using the same certificate as above, double-click the certificate.
2. Select Place all certificates in the following store.
3. Click Browse, select Trusted Root Certification Authorities and click Next.
4. Click Install.

Enable SSL in Your ADO.NET Applications

In your connection string, be sure to enable SSL by setting the SSL property in VerticaConnectionStringBuilder to true, for example:

```csharp
//configure connection properties
VerticaConnectionStringBuilder builder = new
    builder.Host = "192.168.17.10";
    builder.Database = "VMart";
    builder.User = "dbadmin";
    builder.SSL = true;
//open the connection
VerticaConnection _conn = new VerticaConnection(builder.ToString());
_conn.Open();
```

Opening and Closing the Database Connection (ADO.NET)

Before you can access data in Vertica through ADO.NET, you must create a connection to the database using the VerticaConnection class which is an implementation of System.Data.DbConnection. The VerticaConnection class takes a single argument that contains the connection properties as a string. You can manually create a string of property keywords to use as the argument, or you can use the VerticaConnectionStringBuilder class to build a connection string for you.

To download the ADO.NET driver, go to the Client Drivers Downloads page.

This topic details the following:
Manually building a connection string and connecting to Vertica
Using VerticaConnectionStringBuilder to create the connection string and connecting to Vertica
Closing the connection

To Manually Create a Connection string:

See ADO.NET Connection Properties for a list of available properties to use in your connection string. At a minimum, you need to specify the Host, Database, and User.

1. For each property, provide a value and append the properties and values one after the other, separated by a semicolon. Assign this string to a variable. For example:

```csharp
String connectionString = "DATABASE=VMart;HOST=v_vmart_node0001;USER=dbadmin";
```

2. Build a Vertica connection object that specifies your connection string.

```csharp
VerticaConnection _conn = new VerticaConnection(connectionString);
```

3. Open the connection.

```csharp
_conn.Open();
```

4. Create a command object and associate it with a connection. All VerticaCommand objects must be associated with a connection.

```csharp
VerticaCommand command = _conn.CreateCommand();
```

To Use the VerticaConnectionStringBuilder Class to Create a Connection String and Open a connection:

1. Create a new object of the VerticaConnectionStringBuilder class.

```csharp
VerticaConnectionStringBuilder builder = new VerticaConnectionStringBuilder();
```

2. Update your VerticaConnectionStringBuilder object with property values. See ADO.NET Connection Properties for a list of available properties to use in your connection string. At a minimum, you need to specify the Host, Database, and User.
3. Build a Vertica connection object that specifies your connection
   VerticaConnectionStringBuilder object as a string.

   ```csharp
   VerticaConnectionStringBuilder builder = new VerticaConnectionStringBuilder();
   builder.Host = “v_vmart_node0001”;
   builder.Database = “VMart”;
   builder.User = “dbadmin”;
   ```

4. Open the connection.

   ```csharp
   _conn.Open();
   ```

5. Create a command object and associate it with a connection. All VerticaCommand
   objects must be associated with a connection.

   ```csharp
   VerticaCommand command = _conn.CreateCommand;
   ```

   **Note:**
   If your database is not in compliance with your Vertica license, the call to
   `VerticaConnection.open()` returns a warning message to the console
   and the log. See Managing Licenses in the Administrator's Guide for more
   information.

**To Close the connection:**

When you're finished with the database, close the connection. Failure to close the
connection can deteriorate the performance and scalability of your application. It can also
prevent other clients from obtaining locks.

   ```csharp
   _conn.Close();
   ```

**Example Usage:**

```csharp
using System;
using System.Collections.Generic;
using System.Linq;
using System.Text;
using System.Data;
using Vertica.Data.VerticaClient;
```
namespace ConsoleApplication
{
    class Program
    {
        static void Main(string[] args)
        {
            VerticaConnectionStringBuilder builder = new VerticaConnectionStringBuilder();
            builder.Host = "192.168.1.10";
            builder.Database = "VMart";
            builder.User = "dbadmin";
            VerticaConnection _conn = new VerticaConnection(builder.ToString());
            _conn.Open();
            //Perform some operations
            _conn.Close();
        }
    }
}

**ADO.NET Connection Properties**

To download the ADO.NET driver, go to the [Client Drivers Downloads page](#).

You use connection properties to configure the connection between your ADO.NET client application and your Vertica database. The properties provide the basic information about the connections, such as the server name and port number, needed to connect to your database.

You can set a connection property in two ways:

- Include the property name and value as part of the connection string you pass to a `VerticaConnection`.
- Set the properties in a `VerticaConnectionStringBuilder` object, and then pass the object as a string to a `VerticaConnection`.

<table>
<thead>
<tr>
<th>Property</th>
<th>Description</th>
<th>Default Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Database</td>
<td>Name of the Vertica database to which you want to connect. For example, if you installed the example VMart database, the database is &quot;VMart&quot;.</td>
<td>none</td>
</tr>
<tr>
<td>User</td>
<td>Name of the user to log into Vertica.</td>
<td>none</td>
</tr>
<tr>
<td>Property</td>
<td>Description</td>
<td>Default Value</td>

<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
<td>-----------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Port</td>
<td>Port on which Vertica is running.</td>
<td>5433</td>
</tr>
<tr>
<td>Host</td>
<td>The host name or IP address of the server on which Vertica is running. You can provide an IPv4 address, IPv6 address, or host name. In mixed IPv4/IPv6 networks, the DNS server configuration determines which IP version address is sent first. Use the PreferredAddressFamily option to force the connection to use either IPv4 or IPv6.</td>
<td>none</td>
</tr>
</tbody>
</table>
| PreferredAddressFamily | The IP version to use if the client and server have both IPv4 and IPv6 addresses and you have provided a host name. Valid values are:  
  - Ipv4—Connect to the server using IPv4.  
  - Ipv6—Connect to the server using IPv6.  
  - None—Use the IP address provided by the DNS server. | Vertica.Data.VerticaClient.AddressFamilyPreference.None                                                                                                 |
| Password             | The password associated with the user connecting to the server.                                                                                                                                                                                                                                                                                                                                                                   | string.Empty                                                                                       |
| BinaryTransfer       | Provides a Boolean value                                                                                                                                                                                                                                                                                                                                                                                                            | true                                                                                                |
that, when set to true, uses binary transfer instead of text transfer. When set to false, the ADO.NET connection uses text transfer. Binary transfer provides faster performance in reading data from a server to an ADO.NET client. Binary transfer also requires less bandwidth than text transfer, although it sometimes uses more when transferring a large number of small values.

Binary transfer mode is not backwards compatible to ADO.NET versions earlier than 3.8. If you are using an earlier version, set this value to false.

The data output by both modes is identical with the following exceptions for certain data types:

- **FLOAT**: Binary transfer has slightly better precision.
- **TIMESTAMPTZ**: Binary transfer can fail to get the session time zone and default to the local time zone, while text transfer reliably uses the session time zone.
<table>
<thead>
<tr>
<th>Property</th>
<th>Description</th>
<th>Default Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>NUMERIC: Binary transfer is forcibly disabled for NUMERIC data by the server for Vertica 11.0.2+</td>
<td>String.Empty</td>
<td></td>
</tr>
<tr>
<td>ConnSettings</td>
<td>SQL commands to run upon connection. Uses %3B for semicolons.</td>
<td></td>

Load Balancing in ADO.NET

Native Connection Load Balancing

Native connection load balancing helps spread the overhead caused by client connections on the hosts in the Vertica database. Both the server and the client must enable native connection load balancing. If enabled by both, then when the client initially connects to a host in the database, the host picks a host to handle the client connection from a list of the currently up hosts in the database, and informs the client which host it has chosen. If the initially-contacted host does not choose itself to handle the connection, the client disconnects, then opens a second connection to the host selected by the first host. The connection process to this second host proceeds as usual—if SSL is enabled, then SSL negotiations begin, otherwise the client begins the authentication process. See About Native Connection Load Balancing for details.

To enable native load balancing on your client, set the ConnectionLoadBalance connection parameter to true either in the connection string or using the ConnectionStringBuilder(). The following example demonstrates connecting to the database several times with native connection load balancing enabled, and fetching the name of the node handling the connection from the V_MONITOR.CURRENT_SESSION system table.

```csharp
using System;
using System.Text;
using System.Data;
using Vertica.Data.VerticaClient;

namespace ConsoleApplication1 {
    class Program {
        static void Main(string[] args) {
            VerticaConnectionStringBuilder builder = new VerticaConnectionStringBuilder();
            builder.Host = "v_vmart_node0001.example.com";
            builder.Database = "VMart";
            builder.User = "dbadmin";
            // Enable native client load balancing in the client,
            // must also be enabled on the server!
            builder.ConnectionLoadBalance = true;

            // Connect 3 times to verify a new node is connected
            // for each connection.
            for (int i = 1; i <= 4; i++) {
                try {
                    VerticaConnection _conn = new VerticaConnection(builder.ToString());
                    _conn.Open();
                    if (i == 1) {
```
Running the above example produces the following output:

Status of load balancing policy on server: roundrobin

Connect attempt #1... Connected to node v_vmart_node0001
Disconnecting.

Connect attempt #2... Connected to node v_vmart_node0002
Disconnecting.

Connect attempt #3... Connected to node v_vmart_node0003
Disconnecting.

Connect attempt #4... Connected to node v_vmart_node0001
Disconnecting.

Hostname-based Load Balancing

You can also balance workloads by resolving a single hostname to multiple IP addresses. The ADO.NET client driver load balances by automatically resolving the hostname to one of the specified IP addresses at random.

For example, suppose the hostname verticahost.example.com has the following entries in C:\Windows\System32\drivers\etc\hosts:
Specifying the hostname `verticahost.example.com` randomly resolves to one of the listed IP addresses.

**ADO.NET Connection Failover**

If a client application attempts to connect to a host in the Vertica cluster that is down, the connection attempt fails when using the default connection configuration. This failure usually returns an error to the user. The user must either wait until the host recovers and retry the connection or manually edit the connection settings to choose another host.

Due to Vertica Analytic Database's distributed architecture, you usually do not care which database host handles a client application's connection. You can use the client driver's connection failover feature to prevent the user from getting connection errors when the host specified in the connection settings is unreachable. The JDBC driver gives you several ways to let the client driver automatically attempt to connect to a different host if the one specified in the connection parameters is unreachable:

- Configure your DNS server to return multiple IP addresses for a host name. When you use this host name in the connection settings, the client attempts to connect to the first IP address from the DNS lookup. If the host at that IP address is unreachable, the client tries to connect to the second IP, and so on until it either manages to connect to a host or it runs out of IP addresses.
- Supply a list of backup hosts for the client driver to try if the primary host you specify in the connection parameters is unreachable.
- (JDBC only) Use driver-specific connection properties to manage timeouts before attempting to connect to the next node.

For all methods, the process of failover is transparent to the client application (other than specifying the list of backup hosts, if you choose to use the list method of failover). If the primary host is unreachable, the client driver automatically tries to connect to other hosts.

Failover only applies to the initial establishment of the client connection. If the connection breaks, the driver does not automatically try to reconnect to another host in the database.
Choosing a Failover Method

You usually choose to use one of the two failover methods. However, they do work together. If your DNS server returns multiple IP addresses and you supply a list of backup hosts, the client first tries all of the IPs returned by the DNS server, then the hosts in the backup list.

**Note:**
If a host name in the backup host list resolves to multiple IP addresses, the client does not try all of them. It just tries the first IP address in the list.

The DNS method of failover centralizes the configuration client failover. As you add new nodes to your Vertica Analytic Database cluster, you can choose to add them to the failover list by editing the DNS server settings. All client systems that use the DNS server to connect to Vertica Analytic Database automatically use connection failover without having to change any settings. However, this method does require administrative access to the DNS server that all clients use to connect to the Vertica Analytic Database cluster. This may not be possible in your organization.

Using the backup server list is easier than editing the DNS server settings. However, it decentralizes the failover feature. You may need to update the application settings on each client system if you make changes to your Vertica Analytic Database cluster.

Using DNS Failover

To use DNS failover, you need to change your DNS server's settings to map a single host name to multiple IP addresses of hosts in your Vertica Analytic Database cluster. You then have all client applications use this host name to connect to Vertica Analytic Database.

You can choose to have your DNS server return as many IP addresses for the host name as you want. In smaller clusters, you may choose to have it return the IP addresses of all of the hosts in your cluster. However, for larger clusters, you should consider choosing a subset of the hosts to return. Otherwise there can be a long delay as the client driver tries unsuccessfully to connect to each host in a database that is down.
Using the Backup Host List

To enable backup list-based connection failover, your client application has to specify at least one IP address or host name of a host in the BackupServerNode parameter. The host name or IP can optionally be followed by a colon and a port number. If not supplied, the driver defaults to the standard Vertica port number (5433). To list multiple hosts, separate them by a comma.

The following example demonstrates setting the BackupServerNode connection parameter to specify additional hosts for the connection attempt. The connection string intentionally has a non-existent node, so that the initial connection fails. The client driver has to resort to trying the backup hosts to establish a connection to Vertica.

```csharp
using System;
using System.Text;
using System.Data;
using Vertica.Data.VerticaClient;

namespace ConsoleApplication1
{
    class Program
    {
        static void Main(string[] args)
        {
            VerticaConnectionStringBuilder builder =
                new VerticaConnectionStringBuilder();
            builder.Host = "not.a.real.host:5433";
            builder.Database = "VMart";
            builder.User = "dbadmin";
            builder.BackupServerNode =
                "another.broken.node:5433,v_vmart_node0002.example.com:5433";
            try
            {
                VerticaConnection _conn =
                    new VerticaConnection(builder.ToString());
                _conn.Open();
                VerticaCommand sqlcom = _conn.CreateCommand();
                sqlcom.CommandText = "SELECT node_name FROM current_session";
                var returnValue = sqlcom.ExecuteScalar();
                Console.WriteLine("Connected to node: " +
                    returnValue.ToString() + "\n");
                _conn.Close();
                Console.WriteLine("Disconnecting.\n");
            }
            catch (Exception e)
            {
                Console.WriteLine(e.Message);
            }
        }
    }
}
```
Notes

- When native connection load balancing is enabled, the additional servers specified in the BackupServerNode connection parameter are only used for the initial connection to a Vertica host. If host redirects the client to another host in the database cluster to handle its connection request, the second connection does not use the backup node list. This is rarely an issue, since native connection load balancing is aware of which nodes are currently up in the database. See Load Balancing in ADO.NET.
- Connections to a host taken from the BackupServerNode list are not pooled for ADO.NET connections.

Configuring Log Properties (ADO.Net)

Log properties for ADO.Net are configured differently than they are other client drivers. On the other client drivers, log properties can be configured as one of the connection properties. The ADO.Net driver user the VerticaLogProperties class to configure the properties.

VerticaLogProperties

VerticaLogProperties is a static class that allows you to set and get the log settings for the ADO.net driver. You can control the log level, log path, and log namespace using this class.

The log is created when the first connection is opened. Once the connection is opened, you cannot change the log path. It must be set prior to opening the connection. You can change the log level and log namespace at any time.

Setting Log Properties

Setting the log properties is done using the three methods in the VerticaLogProperties class. The three methods are:

- SetLogPath(String path, bool persist)
- SetLogNamespace(String lognamespace, bool persist)
- SetLogLevel(VerticaLogLevel loglevel, bool persist)
Each of the methods requires a boolean persist argument. When set to true, the persist argument causes the setting to be written to the client's Windows Registry, where it is used for all subsequent connections. If set to false, then the log property only applies to the current session.

**SetLogPath**

The `SetLogPath` method takes as its arguments a string containing the path to the log file and the persist argument. If the path string contains only a directory path, then the log file is created with the name vdp-driver-MM-dd_HH.mm.ss.log (where MM-dd_HH.mm.ss is the date and time the log was created). If the path ends in a filename, such as log.txt or log.log, then the log is created with that filename.

If `SetLogPath` is called with an empty string for the path argument, then the client executable's current directory is used as the log path.

If `SetLogPath` is not called and no registry entry exists for the log path, and you have called any of the other `VerticaLogProperties` methods, then the client executable's current directory is used as the log path.

When the persist argument is set to true, the path specified is copied to the registry verbatim. If no filename was specified, then the filename is not saved to the registry.

**Note:**

- Note: The path must exist on the client system prior to calling this method.
- The method does not create directories.

Example Usage:

```csharp
// set the log path
string path = "C:\\log";
VerticaLogProperties.SetLogPath(path, false);
```

**SetLogNamespace**

The `SetLogNamespace` method takes as its arguments a string containing the namespace to log and the persist argument. The namespace string to log can be one of the following:

- Vertica
- Vertica.Data.VerticaClient
- Vertica.Data.Internal.IO
Vertica.Data.Internal.DataEngine
Vertica.Data.Internal.Core

Namespaces can be truncated to include multiple child namespaces. For example, you can specify "Vertica.Data.Internal" to log for all of the Vertica.Data.Internal namespaces.

If a log namespace is not set, and no value is stored in the registry, then the "Vertica" namespace is used for logging.

Example Usage:

```csharp
//set namespace to log
string lognamespace = "Vertica.Data.VerticaClient";
VerticaLogProperties.SetLogNamespace(lognamespace, false);
```

## SetLogLevel

The `SetLogLevel` method takes as its arguments a `VerticaLogLevel` type and the `persist` argument. The `VerticaLogLevel` argument can be one of:

- `VerticaLogLevel.None`
- `VerticaLogLevel.Fatal`
- `VerticaLogLevel.Error`
- `VerticaLogLevel.Warning`
- `VerticaLogLevel.Info`
- `VerticaLogLevel.Debug`
- `VerticaLogLevel.Trace`

If a log level is not set, and no value is stored in the registry, then `VerticaLogLevel.None` is used.

Example Usage:

```csharp
//set log level
VerticaLogLevel level = VerticaLogLevel.Debug;
VerticaLogProperties.SetLogLevel(level, false);
```

## Getting Log Properties

You can get the log property values using the getters included in the `VerticaLogProperties` class. The properties are:
**LogPath**
**LogNamespace**
**LogLevel**

**Example Usage:**

```csharp
//get current log settings
string logpath = VerticaLogProperties.LogPath;
VerticaLogLevel loglevel = VerticaLogProperties.LogLevel;
string logns = VerticaLogProperties.LogNamespace;
Console.WriteLine("Current Log Settings:");
Console.WriteLine("Log Path: " + logpath);
Console.WriteLine("Log Level: " + loglevel);
Console.WriteLine("Log Namespace: " + logns);
```

**Setting and Getting Log Properties Example**

This complete example shows how to set and get log properties:

```csharp
using System;
using System.Collections.Generic;
using System.Linq;
using System.Text;
using System.Data;
using Vertica.Data.VerticaClient;
namespace ConsoleApplication
{
    class Program
    {
        static void Main(string[] args)
        {

            //configure connection properties
            VerticaConnectionStringBuilder builder = new VerticaConnectionStringBuilder();
            builder.Host = "192.168.1.10";
            builder.Database = "VMart";
            builder.User = "dbadmin";

            //get current log settings
            string logpath = VerticaLogProperties.LogPath;
            VerticaLogLevel loglevel = VerticaLogProperties.LogLevel;
            string logns = VerticaLogProperties.LogNamespace;
            Console.WriteLine("Old Log Settings:");
            Console.WriteLine("Log Path: " + logpath);
            Console.WriteLine("Log Level: " + loglevel);
            Console.WriteLine("Log Namespace: " + logns);

            //set the log path
```
string path = "C:\log";
VerticaLogProperties.SetLogPath(path, false);

//set log level

VerticaLogLevel level = VerticaLogLevel.Debug;
VerticaLogProperties.SetLogLevel(level, false);

//set namespace to log

string lognamespace = "Vertica";
VerticaLogProperties.SetLogNamespace(lognamespace, false);

//open the connection

VerticaConnection _conn = new VerticaConnection(builder.ToString());
_conn.Open();

//get new log settings

logpath = VerticaLogProperties.LogPath;
loglevel = VerticaLogProperties.LogLevel;
logns = VerticaLogProperties.LogNamespace;
Console.WriteLine("\nNew Log Settings:");
Console.WriteLine("Log Path: " + logpath);
Console.WriteLine("Log Level: " + loglevel);
Console.WriteLine("Log Namespace: " + logns);

//close the connection

_conn.Close();
}
}

The example produces the following output:

Old Log Settings:
Log Path:
Log Level: None
Log Namespace:
New Log Settings:
Log Path: C:\log
Log Level: Debug
Log Namespace: Vertica

Querying the Database Using ADO.NET

This section describes how to create queries to do the following:
Inserting data into the database
Read data from the database
Load data into the database

Note:
The ExecuteNonQuery() method used to query the database returns an int32 with the number of rows affected by the query. The maximum size of an int32 type is a constant and is defined to be 2,147,483,547. If your query returns more results than the int32 max, then ADO.NET throws an exception because of the overflow of the int32 type. However the query is still processed by Vertica even when the reporting of the return value fails. This is a limitation in .NET, as ExecuteNonQuery() is part of the standard ADO.NET interface.

Inserting Data (ADO.NET)

Inserting data can done using the VerticaCommand class. VerticaCommand is an implementation of DbCommand. It allows you to create and send a SQL statement to the database. Use the CommandText method to assign a SQL statement to the command and then execute the SQL by calling the ExecuteNonQuery method. The ExecuteNonQuery method is used for executing statements that do not return result sets.

To Insert a Single Row of data:

1. Create a connection to the database.
2. Create a command object using the connection.

   ```csharp
   VerticaCommand command = _conn.CreateCommand();
   ```

3. Insert data using an INSERT statement. The following is an example of a simple insert. Note that is does not contain a COMMIT statement because the Vertica ADO.NET driver operates in autocommit mode.

   ```csharp
   command.CommandText = 
   "INSERT into test values(2, 'username', 'email', 'password');"
   ```

4. Execute the query. The rowsAdded variable contains the number of rows added by the insert statement.
Int32 rowsAdded = command.ExecuteNonQuery();

The `ExecuteNonQuery()` method returns the number of rows affected by the command for UPDATE, INSERT, and DELETE statements. For all other types of statements it returns -1. If a rollback occurs then it is also set to -1.

**Example Usage:**

```csharp
using System;
using System.Collections.Generic;
using System.Linq;
using System.Text;
using System.Data;
using Vertica.Data.VerticaClient;

namespace ConsoleApplication
{
    class Program
    {
        static void Main(string[] args)
        {
            VerticaConnectionStringBuilder builder = new VerticaConnectionStringBuilder();
            builder.Host = "192.168.1.10";
            builder.Database = "VMart";
            builder.User = "dbadmin";
            VerticaConnection _conn = new VerticaConnection(builder.ToString());
            _conn.Open();
            VerticaCommand command = _conn.CreateCommand();
            command.CommandText = "INSERT into test values(2, 'username', 'email', 'password')";
            Int32 rowsAdded = command.ExecuteNonQuery();
            Console.WriteLine( rowsAdded + " rows added!");
            _conn.Close();
        }
    }
}
```

**Using Parameters**

You can use parameters to execute similar SQL statements repeatedly and efficiently.

**Using Parameters**

VerticaParameters are an extension of the System.Data.DbParameter base class in ADO.NET and are used to set parameters in commands sent to the server. Use Parameters in all queries (SELECT/INSERT/UPDATE/DELETE) for which the values in the WHERE clause are not
static; that is for all queries that have a known set of columns, but whose filter criteria is set dynamically by an application or end user. Using parameters in this way greatly decreases the chances of a SQL injection issue that can occur when simply creating a SQL query from a number of variables.

Parameters require that a valid DbType, VerticaDbType, or System type be assigned to the parameter. See SQL Data Types and ADO.NET Data Types for a mapping of System, Vertica, and DbTypes.

To create a parameter placeholder, place either the at sign (@) or a colon (:) character in front of the parameter name in the actual query string. Do not insert any spaces between the placeholder indicator (@ or :) and the placeholder.

![Note:](image)

The @ character is the preferred way to identify parameters. The colon (:) character is supported for backward compatibility.

For example, the following typical query uses the string 'MA' as a filter.

```sql
SELECT customer_name, customer_address, customer_city, customer_state
FROM customer_dimension WHERE customer_state = 'MA';
```

Instead, the query can be written to use a parameter. In the following example, the string MA is replaced by the parameter placeholder @STATE.

```sql
SELECT customer_name, customer_address, customer_city, customer_state
FROM customer_dimension WHERE customer_state = @STATE;
```

For example, the ADO.net code for the prior example would be written as:

```csharp
VerticaCommand command = _conn.CreateCommand();
command.CommandText = "SELECT customer_name, customer_address, customer_city, customer_state
FROM customer_dimension WHERE customer_state = @STATE";
command.Parameters.Add(new VerticaParameter( "STATE", VerticaType.VarChar));
command.Parameters["STATE"].Value = "MA";
```

![Note:](image)

Although the VerticaCommand class supports a Prepare() method, you do not need to call the Prepare() method for parameterized statements because Vertica automatically prepares the statement for you.
Creating and Rolling Back Transactions

Creating Transactions

Transactions in Vertica are atomic, consistent, isolated, and durable. When you connect to a database using the Vertica ADO.NET Driver, the connection is in autocommit mode and each individual query is committed upon execution. You can collect multiple statements into a single transaction and commit them at the same time by using a transaction. You can also choose to rollback a transaction before it is committed if your code determines that a transaction should not commit.

Transactions use the VerticaTransaction object, which is an implementation of DbTransaction. You must associate the transaction with the VerticaCommand object.

The following code uses an explicit transaction to insert one row each into to tables of the VMart schema.

To Create a Transaction in Vertica Using the ADO.NET driver:

1. Create a connection to the database.
2. Create a command object using the connection.

```csharp
VerticaCommand command = _conn.CreateCommand();
```

3. Start an explicit transaction, and associate the command with it.

```csharp
VerticaTransaction txn = _conn.BeginTransaction();
command.Connection = _conn;
command.Transaction = txn;
```

4. Execute the individual SQL statements to add rows.

```csharp
command.CommandText = "insert into product_dimension values( ... )";
command.ExecuteNonQuery();
command.CommandText = "insert into store_orders_fact values( ... )";
```
5. Commit the transaction.

```csharp
txn.Commit();
```

## Rolling Back Transactions

If your code checks for errors, then you can catch the error and rollback the entire transaction.

```csharp
VerticaTransaction txn = _conn.BeginTransaction();
VerticaCommand command = new
    VerticaCommand("insert into product_dimension values( 838929, 5, 'New item 5')", _conn);
// execute the insert
command.ExecuteNonQuery();
command.CommandText = "insert into product_dimension values( 838929, 6, 'New item 6')";
// try insert and catch any errors
bool error = false;
try
{
    command.ExecuteNonQuery();
}
catch (Exception e)
{
    Console.WriteLine(e.Message);
    error = true;
}
if (error)
{
    txn.Rollback();
    Console.WriteLine("Errors. Rolling Back.");
}
else
{
    txn.Commit();
    Console.WriteLine("Queries Successful. Committing.");
}
```

## Commit and Rollback Example

This example details how you can commit or rollback queries during a transaction.

```csharp
using System;
using System.Collections.Generic;
using System.Linq;
using System.Text;
using System.Data;
using Vertica.Data.VerticaClient;
namespace ConsoleApplication
{
    class Program
    {
```
```csharp
{ static void Main(string[] args) {
    VerticaConnectionStringBuilder builder = new VerticaConnectionStringBuilder();
    builder.Host = "192.168.1.10";
    builder.Database = "VMart";
    builder.User = "dbadmin";
    VerticaConnection _conn = new VerticaConnection(builder.ToString());
    _conn.Open();
    bool error = false;
    VerticaCommand command = _conn.CreateCommand();
    VerticaCommand command2 = _conn.CreateCommand();
    VerticaTransaction txn = _conn.BeginTransaction();
    command.Connection = _conn;
    command.Transaction = txn;
    command.CommandText = "insert into test values(1, 'test', 'test', 'test')";
    Console.WriteLine(command.CommandText);
    try {
        command.ExecuteNonQuery();
    } catch (Exception e) {
        Console.WriteLine(e.Message);
        error = true;
    }
    command.CommandText = "insert into test values(2, 'ear', 'eye', 'nose', 'extra')";
    Console.WriteLine(command.CommandText);
    try {
        command.ExecuteNonQuery();
    } catch (Exception e) {
        Console.WriteLine(e.Message);
        error = true;
    }
    if (error) {
        txn.Rollback();
        Console.WriteLine("Errors. Rolling Back.");
    } else {
        txn.Commit();
        Console.WriteLine("Queries Successful. Committing.");
    }
    _conn.Close();
}
}

The example displays the following output on the console:

insert into test values(1, 'test', 'test', 'test')  
insert into test values(2, 'ear', 'eye', 'nose', 'extra')
```
[42601]ERROR: INSERT has more expressions than target columns
Errors. Rolling Back.

See Also

- Setting the Transaction Isolation Level
Setting the Transaction Isolation Level

You can set the transaction isolation level on a per-connection and per-transaction basis. See Transaction for an overview of the transaction isolation levels supported in Vertica. To set the default transaction isolation level for a connection, use the IsolationLevel keyword in the VerticaConnectionStringBuilder string (see Connection String Keywords for details). To set the isolation level for an individual transaction, pass the isolation level to the VerticaConnection.BeginTransaction() method call to start the transaction.

To set the Isolation Level on a connection-basis:

1. Use the VerticaConnectionStringBuilder to build the connection string.
2. Provide a value for the IsolationLevel builder string. It can take one of two values: IsolationLevel.ReadCommitted (default) or IsolationLevel.Serializeable. For example:

```
VerticaConnectionStringBuilder builder = new VerticaConnectionStringBuilder();
builder.Host = "192.168.1.100";
builder.Database = "VMart";
builder.User = "dbadmin";
VerticaConnection _conn1 = new VerticaConnection(builder.ToString());
_conn1.Open();
```

To set the Isolation Level on a Transaction basis:

1. Set the IsolationLevel on the BeginTransaction method, for example

```
VerticaTransaction txn = _conn.BeginTransaction(IsolationLevel.Serializable);
```

Example usage:

The following example demonstrates:
getting the connection's transaction isolation level.
setting the connection's isolation level using connection property.
setting the transaction isolation level for a new transaction.

```csharp
using System;
using System.Collections.Generic;
using System.Linq;
using System.Text;
using System.Data;
Vertica.Data.VerticaClient;
namespace ConsoleApplication
{
    class Program
    {
        static void Main(string[] args)
        {
            VerticaConnectionStringBuilder builder = new VerticaConnectionStringBuilder();
            builder.Host = "192.168.1.10";
            builder.Database = "VMart";
            builder.User = "dbadmin";
            VerticaConnection _conn1 = new VerticaConnection(builder.ToString());
            _conn1.Open();
            VerticaTransaction txn1 = _conn1.BeginTransaction();
            Console.WriteLine("Transaction 1 Transaction Isolation Level: " +
                txn1.IsolationLevel.ToString());
            txn1.Rollback();
            VerticaTransaction txn2 = _conn1.BeginTransaction(IsolationLevel.Serializable);
            Console.WriteLine("Transaction 2 Transaction Isolation Level: " +
                txn2.IsolationLevel.ToString());
            txn2.Rollback();
            VerticaTransaction txn3 = _conn1.BeginTransaction(IsolationLevel.ReadCommitted);
            Console.WriteLine("Transaction 3 Transaction Isolation Level: " +
                txn3.IsolationLevel.ToString());
            _conn1.Close();
        }
    }
}
```

When run, the example code prints the following to the system console:

- Transaction 1 Transaction Isolation Level: ReadCommitted
- Transaction 2 Transaction Isolation Level: Serializable
- Transaction 3 Transaction Isolation Level: ReadCommitted

**Reading Data (ADO.Net)**

To read data from the database use VerticaDataReader, an implementation of DbDataReader. This implementation is useful for moving large volumes of data quickly off the server where it can be run through analytic applications.
Note:
A VerticaCommand cannot execute anything else while it has an open VerticaDataReader associated with it. To execute something else, close the data reader or use a different VerticaCommand object.

To Read Data From the Database Using VerticaDataReader:

1. [Create a connection to the database](#).
2. Create a command object using the connection.
   ```csharp
   VerticaCommand command = _conn.CreateCommand();
   ```
3. Create a query. This query works with the example VMart database.
   ```csharp
   command.CommandText = "SELECT fat_content, product_description " + 
   "FROM (SELECT DISTINCT fat_content, product_description" + 
   " FROM product_dimension " + 
   " WHERE department_description " + " IN ('Dairy') " + 
   " ORDER BY fat_content) AS food " + 
   "LIMIT 10;";
   ```
4. Execute the reader to return the results from the query. The following command calls the ExecuteReader method of the VerticaCommand object to obtain the VerticaDataReader object.
   ```csharp
   VerticaDataReader dr = command.ExecuteReader();
   ```
5. Read the data. The data reader returns results in a sequential stream. Therefore, you must read data from tables row-by-row. The following example uses a while loop to accomplish this:
   ```csharp
   Console.WriteLine("\n\n Fat Content\t Product Description\n-------\t-------------------");
   int rows = 0;
   while (dr.Read())
   {
       Console.WriteLine(" + dr[0] + " \t " + dr[1]);
       ++rows;
   }
   Console.WriteLine("-------\n ( + rows + " rows)\n");
   ```
6. When you’re finished, close the data reader to free up resources.
   ```csharp
   dr.Close();
   ```
Example Usage:

using System;
using System.Collections.Generic;
using System.Linq;
using System.Text;
using System.Data;
using Vertica.Data.VerticaClient;
namespace ConsoleApplication
{
    class Program
    {
        static void Main(string[] args)
        {
            VerticaConnectionStringBuilder builder = new VerticaConnectionStringBuilder();
            builder.Host = "192.168.1.10";
            builder.Database = "VMart";
            builder.User = "dbadmin";
            VerticaConnection _conn = new VerticaConnection(builder.ToString());
            _conn.Open();
            VerticaCommand command = _conn.CreateCommand();
            command.CommandText = "SELECT fat_content, product_description 
FROM (SELECT DISTINCT fat_content, product_description 
    FROM product_dimension 
    WHERE department_description 
    IN ('Dairy') 
    ORDER BY fat_content) AS food 
LIMIT 10;";
            VerticaDataReader dr = command.ExecuteReader();
            Console.WriteLine("\n\nFat Content	Product Description");
            Console.WriteLine("-------------	----------------");
            int rows = 0;
            while (dr.Read())
            {
                Console.WriteLine("  	" + dr[0] + "  	" + dr[1]);
                ++rows;
            }
            Console.WriteLine("-------------\n( " + rows + " rows)\n");
            dr.Close();
            _conn.Close();
        }
    }
}

Loading Data Through ADO.Net

This section details the different ways that you can load data in Vertica using the ADO.NET client driver:
Using the Vertica Data Adapter

The Vertica data adapter (VerticaDataAdapter) enables a client to exchange data between a data set and a Vertica database. It is an implementation of DbDataAdapter. You can use VerticaDataAdapter to simply read data, or, for example, read data from a database into a data set, and then write changed data from the data set back to the database.

**Batching Updates**

When using the Update() method to update a dataset, you can optionally use the UpdateBatchSize() method prior to calling Update() to reduce the number of times the client communicates with the server to perform the update. The default value of UpdateBatchSize is 1. If you have multiple rows.Add() commands for a data set, then you can change the batch size to an optimal size to speed up the operations your client must perform to complete the update.

**Reading Data From Vertica Using the Data adapter:**

The following example details how to perform a select query on the VMart schema and load the result into a DataTable, then output the contents of the DataTable to the console.

```csharp
using System;
using System.Collections.Generic;
using System.Linq;
using System.Text;
using System.Data;
using System.Data.SqlClient;
Vertica.Data.VerticaClient;
namespace ConsoleApplication
{
    class Program
    {
        static void Main(string[] args)
        {
            VerticaConnectionStringBuilder builder = new VerticaConnectionStringBuilder();
```
builder.Host = "192.168.1.10";
builder.Database = "VMart";
builder.User = "dbadmin";
VerticaConnection _conn = new VerticaConnection(builder.ToString());
_conn.Open();

// Try/Catch any exceptions
try{
    using (_conn)
    {
        // Create the command
        VerticaCommand command = _conn.CreateCommand();
        command.CommandText = "select product_key, product_description " +
            "from product_dimension where product_key < 10";

        // Associate the command with the connection
        command.Connection = _conn;

        // Create the DataAdapter
        VerticaDataAdapter adapter = new VerticaDataAdapter();
        adapter.SelectCommand = command;

        // Fill the DataTable
        DataTable table = new DataTable();
        adapter.Fill(table);

        // Display each row and column value.
        int i = 1;
        foreach (DataRow row in table.Rows)
        {
            foreach (DataColumn column in table.Columns)
            {
                Console.Write(row[column] + "\t");
            }
            Console.WriteLine();
            i++;
        }
        Console.WriteLine(i + " rows returned.");
    }
} catch (Exception e)
{
    Console.WriteLine(e.Message);
    _conn.Close();
}
}
**Reading Data From Vertica into a Data set and Changing data:**

The following example shows how to use a data adapter to read from and insert into a dimension table of the VMart schema.

```csharp
using System;
using System.Collections.Generic;
using System.Linq;
using System.Text;
using System.Data;
using System.Data.SqlClient;
using Vertica.Data.VerticaClient
namespace ConsoleApplication
{
    class Program
    {
        static void Main(string[] args)
        {
            VerticaConnectionStringBuilder builder = new VerticaConnectionStringBuilder();
            builder.Host = "192.168.1.10";
            builder.Database = "VMart";
            builder.User = "dbadmin";
            VerticaConnection _conn = new VerticaConnection(builder.ToString());
            _conn.Open();

            // Try/Catch any exceptions
            try
            {
                using (_conn)
                {
                    //Create a data adapter object using the connection
                    VerticaDataAdapter da = new VerticaDataAdapter();

                    //Create a select statement that retrieves data from the table
                    da.SelectCommand = new VerticaCommand("select * from product_dimension where product_key < 10",
                        _conn);
                    //Set up the insert command for the data adapter, and bind variables for
                    some of the columns
                    da.InsertCommand = new VerticaCommand("insert into product_dimension values( :key, :version, :desc )",
                        _conn);
                    da.InsertCommand.Parameters.Add(new VerticaParameter("key", VerticaType.BigInt));
                    da.InsertCommand.Parameters.Add(new VerticaParameter("desc", VerticaType.VarChar));
                    da.TableMappings.Add("product_key", "product_key");
                    da.TableMappings.Add("product_version", "product_version");
                    da.TableMappings.Add("product_description", "product_description");
                }
            }
        }
    }
}
Using Batch Inserts and Prepared Statements

You can load data in batches using a prepared statement with parameters. You can also use transactions to rollback the batch load if any errors are encountered.

If you are loading large batches of data (more than 100MB), then consider using a direct batch insert.

The following example details using data contained in arrays, parameters, and a transaction to batch load data.

The test table used in the example is created with the command:
Example Batch Insert Using Parameters and Transactions

```csharp
using System;
using System.Collections.Generic;
using System.Linq;
using System.Text;
using System.Data;
using Vertica.Data.VerticaClient;

namespace ConsoleApplication
{
    class Program
    {
        static void Main(string[] args)
        {
            VerticaConnectionStringBuilder builder = new VerticaConnectionStringBuilder();
            builder.Host = "192.168.1.10";
            builder.Database = "VMart";
            builder.User = "dbadmin";
            VerticaConnection _conn = new VerticaConnection(builder.ToString());
            _conn.Open();
            // Create arrays for column data
            int[] ids = {1, 2, 3, 4};
            string[] usernames = {"user1", "user2", "user3", "user4"};
            string[] emails = {"user1@example.com", "user2@example.com", "user3@example.com", "user4@example.com"};
            string[] passwords = {"pass1", "pass2", "pass3", "pass4"};
            // create counters for accepted and rejected rows
            int rows = 0;
            int rejRows = 0;
            bool error = false;
            // Create the transaction
            VerticaTransaction txn = _conn.BeginTransaction();
            // Create the parameterized query and assign parameter types
            VerticaCommand command = _conn.CreateCommand();
            command.CommandText = "insert into TEST values (@id, @username, @email, @password)";
            command.Parameters.Add(new VerticaParameter("id", VerticaType.BigInt));
            command.Parameters.Add(new VerticaParameter("username", VerticaType.VarChar));
            command.Parameters.Add(new VerticaParameter("email", VerticaType.VarChar));
            command.Parameters.Add(new VerticaParameter("password", VerticaType.VarChar));
            // Prepare the statement
            command.Prepare();
            // Loop through the column arrays and insert the data
            for (int i = 0; i < ids.Length; i++)
            {
                command.Parameters["id"].Value = ids[i];
                command.Parameters["username"].Value = usernames[i];
                command.Parameters["email"].Value = emails[i];
                command.Parameters["password"].Value = passwords[i];
                try
                {
                    rows += command.ExecuteNonQuery();
                } catch (Exception e)
                {
                    rejRows += 1;
                }
            }
           txn.Commit();
        }
    }
}
```
catch (Exception e)
{
    Console.WriteLine("\nInsert failed - \n" + e.Message + "\n");
    ++rejRows;
    error = true;
}
}
if (error)
{
    // Roll back if errors
    Console.WriteLine("Errors. Rolling Back Transaction.");
    Console.WriteLine(rejRows + " rows rejected.");
    txn.Rollback();
}
else
{
    // Commit if no errors
    Console.WriteLine("No Errors. Committing Transaction.");
    txn.Commit();
    Console.WriteLine("Inserted " + rows + " rows.");
}
_conn.Close();

---

**Streaming Data Via ADO.NET**

There are two options to stream data from a file on the client to your Vertica database through ADO.NET:

- Use the `VerticaCopyStream` ADO.NET class to stream data in an object-oriented manner
- Execute a `COPY LOCAL` SQL statement to stream the data

The topics in this section explain how to use these options.
Streaming From the Client Via VerticaCopyStream

The VerticaCopyStream class lets you stream data from the client system to a Vertica database. It lets you use the SQL COPY statement directly without having to copy the data to a host in the database cluster first by substituting one or more data stream(s) for STDIN.

Notes:

- Use Transactions and disable auto commit on the copy command for better performance.
- Disable auto commit using the copy command with the 'no commit' modifier. You must explicitly disable commits. Enabling transactions does not disable autocommit when using VerticaCopyStream.
- The copy command used with VerticaCopyStream uses copy syntax.
- VerticaCopyStream.rejects is zeroed every time execute is called. If you want to capture the number of rejects, assign the value of VerticaCopyStream.rejects to another variable before calling execute again.
- You can add multiple streams using multiple AddStream() calls.

Example usage:

The following example demonstrates using VerticaCopyStream to copy a file stream into Vertica.

```csharp
using System;
using System.Collections.Generic;
using System.Linq;
using System.Text;
using System.Data;
using System.IO;
using Vertica.Data.VerticaClient;
namespace ConsoleApplication
{
    class Program
    {
        static void Main(string[] args)
        {
            // Configure connection properties
            VerticaConnectionStringBuilder builder = new VerticaConnectionStringBuilder();
            builder.Host = "192.168.1.10";
            builder.Database = "VMart";
            builder.User = "dbadmin";
```
//open the connection
VerticaConnection _conn = new VerticaConnection(builder.ToString());
_conn.Open();
try
{
    using (_conn)
    {
        // Start a transaction
        VerticaTransaction txn = _conn.BeginTransaction();

        // Create a table for this example
        VerticaCommand command = new VerticaCommand("DROP TABLE IF EXISTS copy_table", _conn);
        command.ExecuteNonQuery();
        command.CommandText = "CREATE TABLE copy_table (Last_Name char(50), "
                               + "First_Name char(50), Email char(50), "
                               + "Phone_Number char(15))";
        command.ExecuteNonQuery();

        // Create a new filestream from the data file
        string filename = "C:/customers.txt";
        Console.WriteLine("\n\nLoading File: " + filename);
        FileStream inputfile = File.OpenRead(filename);

        // Define the copy command
        string copy = "copy copy_table from stdin record terminator E'\n' delimiter '|' + " enforcelength "
                        + " no commit";
        // Create a new copy stream instance with the connection and copy statement
        VerticaCopyStream vcs = new VerticaCopyStream(_conn, copy);

        // Start the VerticaCopyStream process
        vcs.Start();
        // Add the file stream
        vcs.AddStream(inputfile, false);

        // Execute the copy
        vcs.Execute();

        // Finish stream and write out the list of inserted and rejected rows
        long rowsInserted = vcs.Finish();
        IList<long> rowsRejected = vcs.Rejects;
        // Does not work when rejected or exceptions defined
        Console.WriteLine("Number of Rows inserted: " + rowsInserted);
        Console.WriteLine("Number of Rows rejected: " + rowsRejected.Count);
        if (rowsRejected.Count > 0)
        {
            for (int i = 0; i < rowsRejected.Count; i++)
            {
                Console.WriteLine("Rejected row #\{0\} is row \{1\}", i, rowsRejected[i]);
            }
        }

        // Commit the changes
        txn.Commit();
    }
}
catch (Exception e)
{
    Console.WriteLine(e.Message);
}
//close the connection
_conn.Close();
}
}
Using Copy with ADO.NET

To use COPY with ADO.NET, just execute a COPY statement and the path to the source file on the client system. This method is simpler than using the VerticaCopyStream class. However, you may prefer using VerticaCopyStream if you have many files to copy to the database or if your data comes from a source other than a local file (streamed over a network connection, for example).

The following example code demonstrates using COPY to copy a file from the client to the database. It is the same as the code shown in Bulk Loading Using the COPY Statement and the path to the data file is on the client system, rather than on the server.

To load data that is stored on a database node, use a VerticaCommand object to create a COPY command:

1. Create a connection to the database through the node on which the data file is stored.
2. Create a command object using the connection.

```csharp
VerticaCommand command = _conn.CreateCommand();
```

3. Copy data. The following is an example of using the COPY command to load data. It uses the LOCAL modifier to copy a file local to the client issuing the command.

```csharp
command.CommandText = "copy lcopy_table from '/home/dbadmin/customers.txt'" + " record terminator E'\n' delimiter '|'" + " enforce length ";
Int32 insertedRows = command.ExecuteNonQuery();
Console.WriteLine(insertedRows + " inserted.");
```

Example Usage:

```csharp
using System;
using System.Collections.Generic;
using System.Linq;
using System.Text;
using System.Data;
using System.IO;
using Vertica.Data.VerticaClient;
namespace ConsoleApplication
{
    class Program
    {
        static void Main(string[] args)
        {
```
// Configure connection properties
VerticaConnectionStringBuilder builder = new VerticaConnectionStringBuilder();
builder.Host = "192.168.1.10";
builder.Database = "VMart";
builder.User = "dbadmin";

// Open the connection
VerticaConnection _conn = new VerticaConnection(builder.ToString());
try {
   using (_conn)
   {
      // Start a transaction
      VerticaTransaction txn = _conn.BeginTransaction();

      // Create a table for this example
      VerticaCommand command = new VerticaCommand("DROP TABLE IF EXISTS lcopy_table");
      command.ExecuteNonQuery();
      command.CommandText = "CREATE TABLE IF NOT EXISTS lcopy_table (Last_Name char (50),
      " + "First_Name char(50), Email char(50), " + "Phone_Number char(15))"
      command.ExecuteNonQuery();

      // Define the copy command
      command.CommandText = "copy lcopy_table from
      '/home/dbadmin/customers.txt'" + " record terminator E'\n' delimiter '|'" + " enforce length " + " no commit"
      // Execute the copy
      Int32 insertedRows = command.ExecuteNonQuery();
      Console.WriteLine(insertedRows + " inserted.");
      // Commit the changes
      txn.Commit();
   }
} catch (Exception e)
{
   Console.WriteLine("Exception: " + e.Message);
}

   // Close the connection
   _conn.Close();
} }

Handling Messages (ADO.NET)

You can capture info and warning messages that Vertica provides to the ADO.NET driver by using the InfoMessage event on the VerticaConnection delegate class. This class captures
messages that are not severe enough to force an exception to be triggered, but might still provide information that can benefit your application.

**To Use the VerticalInfoMessageEventHandler class:**

1. Create a method to handle the message sent from the even handler:

   ```csharp
   static void conn_InfoMessage(object sender, VerticaInfoMessageEventArgs e)
   {
       Console.WriteLine(e.SqlState + "": " + e.Message);
   }
   ``

2. Create a `connection` and register a new VerticalInfoMessageEventHandler delegate for the InfoMessage event:

   ```csharp
   _conn.InfoMessage += new VerticaInfoMessageEventHandler(conn_InfoMessage);
   ```

3. Execute your queries. If a message is generated, then the event handle function is run.

4. You can unsubscribe from the event with the following command:

   ```csharp
   _conn.InfoMessage -= new VerticaInfoMessageEventHandler(conn_InfoMessage);
   ```

**Example usage:**

```csharp
using System;
using System.Collections.Generic;
using System.Linq;
using System.Text;
using System.Data;
using Vertica.Data.VerticaClient;

namespace ConsoleApplication
{
    class Program
    {
        // define message handler to deal with messages
        static void conn_InfoMessage(object sender, VerticaInfoMessageEventArgs e)
        {
            Console.WriteLine(e.SqlState + "": " + e.Message);
        }
        static void Main(string[] args)
        {
            //configure connection properties
        }
    }
}
```
VerticaConnectionStringBuilder builder = new VerticaConnectionStringBuilder();
builder.Host = "192.168.1.10";
builder.Database = "VMart";
builder.User = "dbadmin";

//open the connection

VerticaConnection _conn = new VerticaConnection(builder.ToString());
_conn.Open();

//create message handler instance by subscribing it to the InfoMessage event of the connection

_conn.InfoMessage += new VerticaInfoMessageEventHandler(conn_InfoMessage);

//create and execute the command

VerticaCommand cmd = _conn.CreateCommand();
cmd.CommandText = "drop table if exists fakeTable";
cmd.ExecuteNonQuery();

//close the connection

_conn.Close();
}
}

This examples displays the following when run:

00000: Nothing was dropped

Getting Table Metadata (ADO.Net)

You can get the table metadata by using the GetSchema() method on a connection and loading the metadata into a DataTable:

DataTable table = _conn.GetSchema("Tables", new string[] { database_name, schema_name, table_name, table_type });

For example:

DataTable table = _conn.GetSchema("Tables", new string[] { null, null, null, "SYSTEM TABLE" });
*database_name, schema_name, table_name* can be set to *null*, be a specific name, or use a LIKE pattern.

*table_type* can be one of:

- "SYSTEM TABLE"
- "TABLE"
- "GLOBAL TEMPORARY"
- "LOCAL TEMPORARY"
- "VIEW"
- null

If *table_type* is set to *null*, then the metadata for all metadata tables is returned.

**Example Usage:**

```csharp
using System;
using System.Collections.Generic;
using System.Linq;
using System.Text;
using System.Data;
using Vertica.Data.VerticaClient;

namespace ConsoleApplication
{
    class Program
    {
        static void Main(string[] args)
        {
            //configure connection properties
            VerticaConnectionStringBuilder builder = new VerticaConnectionStringBuilder();
            builder.Host = "192.168.1.10";
            builder.Database = "VMart";
            builder.User = "dbadmin";

            //open the connection
            VerticaConnection _conn = new VerticaConnection(builder.ToString());
            _conn.Open();

            //create a new data table containing the schema
            DataTable table = _conn.GetSchema("Tables", new string[] { null, null, null, "SYSTEM TABLE" });

            //print out the schema
        }
    }
}
```
foreach (DataRow row in table.Rows) {
    foreach (DataColumn col in table.Columns) {
        Console.WriteLine("{0} = {1}", col.ColumnName, row[col]);
    }
    Console.WriteLine("=-----------------------------");
}

//close the connection

_conn.Close();
}
}
Programming Python Client Applications

To use Python with Vertica, you must either install the Vertica Open Source Python Client or install the pyodbc module and a Vertica ODBC driver on the machine where Python is installed. See Python Prerequisites.

Python on Linux

Most Linux distributions come with Python preinstalled. If you want a more recent version, you can download and build it from the source code, though sometimes RPMs are also available. See the Python Web site and click an individual release for details. See also Python documentation.

To determine the Python version on your Linux operating systems, type the following at a command prompt:

```
# python -V
```

The system returns the version; for example:

```
Python 3.3.4
```

Python on Windows

Windows operating systems do not include Python by default. There are several different distributions of Python for windows:

- The ActiveState Web site distributes a free Windows installer for Python called ActivePython.
- The official Python.org site has installer packages for several versions of Python.

If you need installation instructions for Windows, see Using Python on Windows at python.org.
Python and Unicode

When you are using Python, be sure that all of your components are using the same unicode text encoding. By default, the DSN Parameter `ColumnsAsChar` causes the ODBC driver to report CHAR and VARCHAR values as SQL_WCHAR. The driver returns these values to the driver manager in the encoding expected by the driver manager, as controlled by the `DriverManagerEncoding` parameter in vertica.ini. Similarly, your Python application must use the encoding expected by the driver manager. If any of these components use different encodings, your output can become garbled.

The Vertica Python Client

The Vertica Python client is open source and available at https://github.com/vertica/vertica-python.

Using pyodbc and Vertica

Before you can connect to Vertica using pyodbc, you need to download the pyodbc module, which communicates with iODBC/unixODBC driver on UNIX operating systems and the ODBC Driver Manager for Windows operating systems.

The pyodbc module is an open source, MIT-licensed Python module, letting you use ODBC to connect to almost any database from Windows, Linux, Mac OS/X, and other operating systems.

Vertica supports multiple versions of pyodbc. See Python Prerequisites for additional details.

Download the source distribution from the pyodbc Web site, unpack it and build it. Note that you need the unixODBC development package (in addition to the regular build tools) to build pyodbc. For example, on RedHat/CentOS run: `yum install unixODBC-devel`, and on Ubuntu run: `sudo apt-get install unixodbc-dev`. See the pyodbc wiki for detailed instructions.
Python Clients and the UUID Data Type

Both the Vertica Python client and Vertica ODBC driver (that pyodbc interacts with) do not support Vertica's native UUID data type. Values retrieved using these drivers from a UUID column are converted to strings. When your client queries the metadata for a UUID column, the drivers report its data type as a string. Convert any UUID values that you want to insert into a UUID column to strings. Vertica automatically converts these values into the native UUID data type before inserting them into a table.

External Resources

- Python Database API Specification v2.0
- Python documentation

Open Source Python Client

The Vertica Python client is now open source. You can download it at https://github.com/vertica/vertica-python.

Configuring the ODBC Run-Time Environment on Linux

To configure the ODBC run-time environment on Linux:

1. Create the odbc.ini file if it does not already exist.
2. Add the ODBC driver directory to the LD_LIBRARY_PATH system environment variable:

   ```
   export LD_LIBRARY_PATH=/path-to-vertica-odbc-driver:$LD_LIBRARY_PATH
   ```

   **Important:**
   If you skip Step 2, the ODBC manager cannot find the driver in order to load it.

These steps are relevant only for unixODBC and iODBC. See their respective documentation for details on odbc.ini.
Querying the Database Using Python and pyodbc

The example session below uses pyodbc with the Vertica ODBC driver to connect Python to the Vertica database.

**Note:** SQLFetchScroll and SQLFetch functions cannot be mixed together in iODBC code. When using pyodbc with the iODBC driver manager, skip cannot be used with the fetchall, fetchone, and fetchmany functions.

**Example Script**

The following example script shows how to query Vertica using Python 3, pyodbc, and an ODBC DSN.

```python
import pyodbc

cnxn = pyodbc.connect("DSN=VerticaDSN", ansi=True)
cursor = cnxn.cursor()
# create table
cursor.execute("CREATE TABLE TEST (" "C_ID INT," "C_FP Float," "C_VARCHAR VARCHAR(100)," "C_DATE DATE, C_TIME TIME," "C_TS TIMESTAMP," "C_BOOL BOOL")")
cursor.execute("INSERT INTO test VALUES(1,1.1,'abcdefg1234567890','1901-01-01','23:12:34','1901-01-01 00:00:09','t')")
cursor.execute("INSERT INTO test VALUES(2,3.4,'zxcasdqwe09876543','1991-11-11','00:00:01','1981-12-31 19:19:19','f')")
cursor.execute("SELECT * FROM TEST")
rows = cursor.fetchall()
for row in rows:
    print(row, end='\n')
cursor.execute("DROP TABLE TEST CASCADE")
cnxn.close()
cnxn.close()
```

The resulting output displays:
Notes

SQLPrimaryKeys returns the table name in the primary (pk_name) column for unnamed primary constraints. For example:

- Unnamed primary key:

```sql
CREATE TABLE schema.test(c INT PRIMARY KEY);
```

```plaintext
SQLPrimaryKeys
"TABLE_CAT", "TABLE_SCHEMA", "TABLE_NAME", "COLUMN_NAME", "KEY_SEQ", "PK_NAME" <Null>, "SCHEMA", "TEST", "C", 1, "TEST"
```

- Named primary key:

```sql
CREATE TABLE schema.test(c INT CONSTRAINT pk_1 PRIMARY KEY);
```

```plaintext
SQLPrimaryKeys
"TABLE_CAT", "TABLE_SCHEMA", "TABLE_NAME", "COLUMN_NAME", "KEY_SEQ", "PK_NAME" <Null>, "SCHEMA", "TEST", "C", 1, "PK_1"
```

OpenText recommends that you name your constraints.

Programming Perl Client Applications

The Perl programming language has a Database Interface module (DBI) that creates a standard interface for Perl scripts to interact with databases. The interface module relies on Database Driver modules (DBDs) to handle all of the database-specific communication tasks. The result is an interface that provides a consistent way for Perl scripts to interact with many different types of databases.
Your Perl script can interact with Vertica using the Perl DBI module along with the DBD::ODBC database driver to interface to Vertica's ODBC driver. See the CPAN pages for Perl's DBI and DBD::ODBC modules for detailed documentation.

**Important:**
With Perl ODBC clients, Vertica allows a forked process (a child process) to drop the parent connection to the Vertica server when the child process completes and exits. Vertica allows this behavior regardless of the setting of the Perl DBI AutoInactiveDestroy attribute. To change the default setting so that Vertica honors the setting of the Perl DBI AutoInactiveDestroy attribute, add the parameter CleanupInForkChild to your vertica.ini file, and set its value to 1. When the Perl DBI AutoInactiveDestroy attribute is set to 1, and the Vertica parameter CleanupInForkChild is set to 1, Vertica does not drop the parent connection upon child process completion.

## Perl Client Prerequisites

In order run a Perl client script that connects to Vertica, your client system must have:

- The Vertica ODBC drivers installed and configured. See [Installing the Vertica Client Drivers](#) for details.
- A Data Source Name (DSN) containing the connection parameters for your Vertica. See [Creating an ODBC Data Source Name](#). (Optionally, your Perl script can connect to Vertica without using a DSN as described in [Connecting From Perl Without a DSN](#).)
- A supported version of Perl installed
- The DBI and DBD::ODBC Perl modules (see below)
**Supported Perl Versions**

Vertica supports Perl versions 5.8 and 5.10. Versions later than 5.10 may also work.

**Perl on Linux**

Most Linux distributions come with Perl preinstalled. See your Linux distribution's documentation for details of installing and configuring its Perl package is it is not already installed.

To determine the Perl version on your Linux operating systems, type the following at a command prompt:

```
# perl -v
```

The system returns the version; for example:

```
This is perl, v5.10.0 built for x86_64-linux-thread-multi
```

**Perl on Windows**

Perl is not installed by default on Windows platforms. There are several different Perl packages you can download and install on your Windows system:

- [ActivePerl](https://www.activestate.com/) by Activestate is a commercially-supported version of Perl for Windows platforms.
- [Strawberry Perl](https://strawberryperl.com/) is an open-source port of Perl for Windows.

**The Perl Driver Modules (DBI and DBD::ODBC)**

Before you can connect to Vertica using Perl, your Perl installation needs to have the Perl Database Interface module (DBI) and the Database Driver for ODBC (DBD::ODBC). These modules communicate with iODBC/unixODBC driver on UNIX operating systems or the ODBC Driver Manager for Windows operating systems.

Vertica supports the following Perl modules:
- DBI version 1.609 (DBI-1.609.tar.gz)
- DBD::ODBC version 1.22 (DBD-ODBC-1.22.tar.gz)

Later versions of DBI and DBD::ODBC may also work.

DBI is installed by default with many Perl installations. You can test whether it is installed by executing the following command on the Linux or Windows command line:

```
# perl -e "use DBI;"
```

If the command exits without printing anything, then DBI is installed. If it prints an error, such as:

```
Can't locate DBI.pm in @INC (@INC contains: /usr/local/lib64/perl5/usr/local/share/perl5
 /usr/lib64/perl5/vendor_perl /usr/share/perl5/vendor_perl
 /usr/lib64/perl5 /usr/share/perl5 .) at -e line 1.
BEGIN failed--compilation aborted at -e line 1.
```

then DBI is not installed.

Similarly, you can see if DBD::ODBC is installed by executing the command:

```
# perl -e "use DBD::ODBC;"
```

You can also run the following Perl script to determine if DBI and DBD::ODBC are installed. If they are, the script lists any available DSNs.

```
#!/usr/bin/perl
use strict;
# Attempt to load the DBI module in an eval using require. Prevents
# script from erroring out if DBI is not installed.
eval {
    require DBI;
    DBI->import();
};
if ($@) {
    # The eval failed, so DBI must not be installed
    print "DBI module is not installed\n";
} else {
    # Eval was successful, so DBI is installed
    print "DBI Module is installed\n";
    # List the drivers that DBI knows about.
    my @drivers = DBI->available_drivers;
    print "Available Drivers: \n";
    foreach my $driver (@drivers) {
        print "\t$driver\n";
    }
    # See if DBD::ODBC is installed by searching driver array.
    if (grep {/ODBC/} @drivers) {
        print "nDBD::ODBC is installed.\n";
        # List the ODBC data sources (DSNs) defined on the system
```
print "Defined ODBC Data Sources:\n";
my @dsns = DBI->data_sources('ODBC');
foreach my $dsn (@dsns) {
    print "\t$dsn\n";
}
else {
    print "DBD::ODBC is not installed\n";
}
}

The exact output of the above code will depend on the configuration of your system. The following is an example of running the code on a Windows computer:

DBI Module is installed
Available Drivers:
    ADO
    DBM
    ExampleP
    File
    Gofer
    ODBC
    Pg
    Proxy
    SQLite
    Sponge
    mysql
DBD::ODBC is installed.
Defined ODBC Data Sources:
dbi:ODBC:dBASE Files
dbi:ODBC:Excel Files
dbi:ODBC:MS Access Database
dbi:ODBC:VerticaDSN

**Installing Missing Perl Modules**

If Perl's DBI or DBD::ODBC modules are not installed on your client system, you must install them before your Perl scripts can connect to Vertica. How you install modules depends on your Perl configuration:

- For most Perl installations, you use the cpan command to install modules. If the cpan command alias isn't installed on your system, you can try to start CPAN by using the command:

  ```perl
  perl -MC PAN -e shell
  ```

- Some Linux distributions provide Perl modules as packages that can be installed with the system package manager (such as yum or apt). See your Linux distribution's documentation for details.
On ActiveState Perl for Windows, you use the Perl Package Manager (PPM) program to install Perl modules. See the Activestate's PPM documentation for details.

Note:
Installing Perl modules usually requires administrator or root privileges. If you do not have these permissions on your client system, you need to ask your system administrator to install these modules for you.

Connecting to Vertica Using Perl

You use the Perl DBI module's connect function to connect to Vertica. This function takes a required data source string argument and optional arguments for the username, password, and connection attributes.

The data source string must start with "dbi:ODBC:", which tells the DBI module to use the DBD::ODBC driver to connect to Vertica. The remainder of the string is interpreted by the DBD::ODBC driver. It usually contains the name of a DSN that contains the connection information needed to connect to your Vertica database. For example, to tell the DBD::ODBC driver to use the DSN named VerticaDSN, you use the data source string:

```
"dbi:ODBC:VerticaDSN"
```

The username and password parameters are optional. However, if you do not supply them (or just the username for a passwordless account) and they are not set in the DSN, attempting to connect always fails.

The connect function returns a database handle if it connects to Vertica. If it does not, it returns undef. In that case, you can access the DBI module's error string property ($DBI::errstr) to get the error message.

Note:
By default, the DBI module prints an error message to STDERR whenever it encounters an error. If you prefer to display your own error messages or handle errors in some other manner, you may want to disable these automatic messages by setting DBI's PrintError connection attribute to false. See Setting Perl DBI Connection Attributes for details. Otherwise, users may see two error messages: the one that DBI prints automatically, and the one that your script prints on its own.
The following example demonstrates connecting to Vertica using a DSN named VerticaDSN. The call to connect supplies a username and password. After connecting, it calls the database handle's disconnect function, which closes the connection.

```perl
#!/usr/bin/perl -w
use strict;
use DBI;
# Open a connection using a DSN. Supply the username and password.
my $dbh = DBI->connect("dbi:ODBC:VerticaDSN","ExampleUser","password123");
unless (defined $dbh) {
    # Connection failed.
    die "Failed to connect: $DBI::errstr";
}
print "Connected!\n";
$dbh->disconnect();
```

## Setting ODBC Connection Parameters in Perl

To set ODBC connection parameters, replace the DSN name with a semicolon delimited list of parameter name and value pairs in the source data string. Use the DSN parameter to tell DBD::ODBC which DSN to use, then add in other the other ODBC parameters you want to set. For example, the following code connects using a DSN named VerticaDSN and sets the connection's locale to en_GB.

```perl
#!/usr/bin/perl -w
use strict;
use DBI;
# Instead of just using the DSN name, use name and value pairs.
my $dbh = DBI->connect("dbi:ODBC:DSN=VerticaDSN;Locale=en_GB@collation=binary","ExampleUser","password123");
unless (defined $dbh) {
    # Connection failed.
    die "Failed to connect: $DBI::errstr";
}
print "Connected!\n";
$dbh->disconnect();
```

See Data Source Name (DSN) Connection Properties for a list of the connection parameters you can set in the source data string.

## Setting Perl DBI Connection Attributes

The Perl DBI module has attributes that you can use to control the behavior of its database connection. These attributes are similar to the ODBC connection parameters (in several cases, they duplicate each other's functionality). The DBI connection attributes are a cross-platform way of controlling the behavior of the database connection.
You can set the DBI connection attributes when establishing a connection by passing the DBI `connect` function a hash containing attribute and value pairs. For example, to set the DBI connection attribute AutoCommit to false, you would use:

```perl
#!/usr/bin/perl
use strict;
use DBI;
# Create a hash that holds attributes for the connection
my $attr = {AutoCommit => 0};
# Open a connection using a DSN. Supply the username and password.
my $dbh = DBI->connect("dbi:ODBC:VerticaDSN","ExampleUser","password123", $attr);

if (defined $dbh->err) {
    # Connection failed.
    die "Failed to connect: $DBI::errstr"
}
print "Connected!\n";
```

See the DBI documentation's [Database Handle Attributes](#) section for a full description of the attributes you can set on the database connection.

After your script has connected, it can access and modify the connection attributes through the database handle by using it as a hash reference. For example:

```perl
print "The AutoCommit attribute is: " . $dbh->{AutoCommit} . "\n";
```

The following example demonstrates setting two connection attributes:

- **RaiseError** controls whether the DBI driver generates a Perl error if it encounters a database error. Usually, you set this to true (1) if you want your Perl script to exit if there is a database error.
- **AutoCommit** controls whether statements automatically commit their transactions when they complete. DBI defaults to Vertica’s default AutoCommit value of true. Always set AutoCommit to false (0) when bulk loading data to increase database efficiency.

```perl
# Create a hash that holds attributes for the connection
my $attr = {
    RaiseError => 1, # Make database errors fatal to script
    AutoCommit => 0, # Prevent statements from committing their transactions.
};
# Open a connection using a DSN. Supply the username and password.
my $dbh = DBI->connect("dbi:ODBC:VerticaDSN","ExampleUser","password123", $attr);

if (defined $dbh->err) {
    # Connection failed.
    die "Failed to connect: $DBI::errstr"
}
print "Connected!\n";
# The database handle lets you access the connection attributes directly:
print "The AutoCommit attribute is: " . $dbh->{AutoCommit} . "\n";
print "The RaiseError attribute is: " . $dbh->{RaiseError} . "\n";
# And you can change values, too...
$dbh->{AutoCommit} = 1;
print "The AutoCommit attribute is now: " . $dbh->{AutoCommit} . "\n";
```
The example outputs the following when run:

Connected! The AutoCommit attribute is: 0
The RaiseError attribute is: 1
The AutoCommit attribute is now: 1

## Connecting From Perl Without a DSN

If you do not want to set up a Data Source Name (DSN) for your database, you can supply all of the information Perl's DBD::ODBC driver requires to connect to your Vertica database in the data source string. This source string must the DRIVER= parameter that tells DBD::ODBC which driver library to use in order to connect. The value for this parameter is the name assigned to the driver by the client system's driver manager:

- On Windows, the name assigned to the Vertica ODBC driver by the driver manager is Vertica.
- On Linux and other UNIX-like operating systems, the Vertica ODBC driver's name is assigned in the system's odbcinst.ini file. For example, if your /etc/odbcinst.ini contains the following:

```plaintext
[Vertica]
Description = Vertica ODBC Driver
Driver = /opt/vertica/lib64/libverticaodbc.so
```

you would use the name Vertica. See [Creating an ODBC DSN for Linux](#) for more information about the odbcinst.ini file.

You can take advantage of Perl's variable expansion within strings to use variables for most of the connection properties as the following example demonstrates.

```perl
#!/usr/bin/perl
use strict;
use DBI;
my $server='VerticaHost';
my $port = '5433';
my $database = 'VMart';
my $user = 'ExampleUser';
my $password = 'password123';

# Connect without a DSN by supplying all of the information for the connection.
# The DRIVER value on UNIX platforms depends on the entry in the odbcinst.ini file.
my $dbh = DBI->connect("dbi:ODBC:DRIVER={Vertica};Server=$server;" .
    "Port=$port;Database=$database;UID=$user;PWD=$password") .
or die "Could not connect to database: " . DBI::errstr;
```
print "Connected\n";
$dbh->disconnect();

Note:
Surrounding the driver name with braces ({ and }) in the source string is optional.

Executing Statements Using Perl

Once your Perl script has connected to Vertica (see Connecting to Vertica Using Perl), it can execute simple statements that return a value rather than a result set by using the Perl DBI module's do function. You usually use this function to execute DDL statements or data loading statements such as COPY (see Using COPY LOCAL to Load Data in Perl).

#!/usr/bin/perl
use strict;
use DBI;

# Disable autocommit
my $attr = {AutoCommit => 0};

# Open a connection using a DSN.
my $dbh = DBI->connect("dbi:ODBC:VerticaDSN","ExampleUser","password123", $attr);

unless (defined $dbh) {
    # Connection failed.
    die "Failed to connect: $DBI::errstr";
}

# You can use the do function to perform DDL commands.
# Drop any existing table.
$dbh->do("DROP TABLE IF EXISTS TEST CASCADE;")

# Create a table to hold data.
$dbh->do("CREATE TABLE TEST( 
    C_ID INT, 
    C_FP FLOAT, 
    CVARCHAR VARCHAR(100), 
    C_DATE DATE, C_TIME TIME, 
    C_TS TIMESTAMP, 
    C_BOOL BOOL")");

# Commit changes and exit.
$dbh->commit();
$dbh->disconnect();

Note:
The do function returns the number of rows that were affected by the statement (or -1 if the count of rows doesn't apply or is unavailable).
Usually, the only time you need to consult this value is after you deleted a number of rows or if you used a bulk load command such as COPY. You use other DBI functions instead of do to perform batch inserts and selects (see
Batch Loading Data Using Perl

To load large batches of data into Vertica using Perl:

1. Set DBI's AutoCommit connection attribute to false to improve the batch load speed. See Setting Perl DBI Connection Attributes for an example of disabling AutoCommit.
2. Call the database handle's prepare function to prepare a SQL INSERT statement that contains placeholders for the data values you want to insert. For example:

   ```perl
   # Prepare an INSERT statement for the test table
   $sth = $dbh->prepare("INSERT into test values(?,?,?,?,?,?,?)");
   ``

   The prepare function returns a statement handle that you will use to insert the data.

3. Assign data to the placeholders. There are several ways to do this. The easiest is to populate an array with a value for each placeholder in your INSERT statement.

4. Call the statement handle's execute function to insert a row of data into Vertica. The return value of this function call lets you know whether Vertica accepted or rejected the row.

5. Repeat steps 3 and 4 until you have loaded all of the data you need to load.

6. Call the database handle's commit function to commit the data you inserted.

The following example demonstrates inserting a small batch of data by populating an array of arrays with data, then looping through it and inserting each row.

```perl
#!/usr/bin/perl
use strict;
use DBI;

# Create a hash reference that holds a hash of parameters for the # connection.
my $attr = {
   AutoCommit => 0, # Turn off autocommit
   PrintError => 0 # Turn off automatic error printing.
   # This is handled manually.
};
# Open a connection using a DSN. Supply the username and password.
my $dbh = DBI->connect("dbi:ODBC:VerticaDSN","ExampleUser","password123",
   $attr);
if (defined DBI::err) {
   # Connection failed.
   die "Failed to connect: $DBI::errstr";
}
print "Connection AutoCommit state is: " . $dbh->{AutoCommit} . "\n";
# Create table to hold inserted data
$dbh->do("DROP TABLE IF EXISTS TEST CASCADE;") or die "Could not drop table";
$dbh->do("CREATE TABLE TEST ( \
   C_ID INT, \
   ... other columns ... ")
```
C_FP FLOAT,
CVARCHAR VARCHAR(100),
C_DATE DATE, C_TIME TIME,
C_TS TIMESTAMP,
C_BOOL BOOL)"
} or die "Could not create table";

# Populate an array of arrays with values. One of these rows contains 
# data that will not be successfully inserted. Another contains an 
# undef value, which gets inserted into the database as a NULL.
my @data = (  
[1,1.111,'Hello World!','2001-01-01','01:01:01' ,
   '2001-01-01 01:01:01','t'],
[2,2.22222,'How are you?','2002-02-02','02:02:02' ,
   '2002-02-02 02:02:02','f'],
['bad value',2.22222,'How are you?','2002-02-02','02:02:02' ,
   '2002-02-02 02:02:02','f'],
[4,4.22222,undef,'2002-02-02','02:02:02' ,
   '2002-02-02 02:02:02','f'],
);  

# Create a prepared statement to use parameters for inserting values.
my $sth = $dbh->prepare_cached("INSERT into test values (?,?,?,?,?,?,?)");
my $rowcount = 0;  
# Count # of rows 
# Loop through the arrays to insert values
foreach my $tuple (@data) {  
    $rowcount++;  
    # Insert the row
    my $retval = $sth->execute(@$tuple);  
    # See if the row was successfully inserted.
    if ($retval == 1) {  
        # Value of 1 means the row was inserted (1 row was affected by insert)
        print "Row $rowcount successfully inserted\n";
    } else {  
        print "Inserting row $rowcount failed";
        # Error message is not set on some platforms/versions of DBUI. Check to
        # ensure a message exists to avoid getting an uninitialized var warning.
        if ($sth->err()) {
            print "": " . $sth->errstr();
        }
        print "\n";
    }
}

# Commit changes. With AutoCommit off, you need to use commit for batched 
# data to actually be committed into the database. If your Perl script exits 
# without committing its data, Vertica rolls back the transaction and the 
# data is not committed.
$dbh->commit();
$dbh->disconnect();

The previous example displays the following when successfully run:

Connection AutoCommit state is: 0
Row 1 successfully inserted
Row 2 successfully inserted
Inserting row 3 failed with error 01000 [Vertica][VerticaDSII] (20) An error occurred during query execution: Row rejected by server; see
server log for details (SQL-01000)
Row 4 successfully inserted
Note that one of the rows was not inserted because it contained a string value that could not be stored in an integer column. See Conversions Between Perl and Vertica Data Types for details of data type handling in Perl scripts that communicate with Vertica.

Using COPY LOCAL to Load Data in Perl

You can use COPY LOCAL to load delimited files on your client system—for example, a file with comma-separated values—into Vertica. Rather than use Perl to read, parse, and then batch insert the file data, COPY LOCAL directly loads the file data from the local file system into Vertica. When execution completes, COPY LOCAL returns the number of rows that it successfully inserted.

Note: COPY LOCAL must be the first statement in a query, otherwise Vertica returns an error.

The following example uses COPY LOCAL to load into Vertica local file data.txt, which is located in the same directory as the Perl file.

```perl
#!/usr/bin/perl
use strict;
use DBI;

# Filesystem path handling module
use File::Spec;

# Create a hash reference that holds a hash of parameters for the connection.
my $attr = {AutoCommit => 0}; # Turn off AutoCommit

# Open a connection using a DSN. Supply the username and password.
my $dbh = DBI->connect("dbi:ODBC:VerticaDSN","ExampleUser","password123",
    $attr) or die "Failed to connect: $DBI::errstr"
;

# Drop any existing table.
$dbh->do("DROP TABLE IF EXISTS Customers CASCADE;");

# Create a table to hold data.
$dbh->do("CREATE TABLE Customers( 

    ID INT, 
    FirstName VARCHAR(100),\n    LastName VARCHAR(100),\n    Email VARCHAR(100),\n    Birthday DATE)";

# Find the absolute path to the data file located in the current working directory and named data.txt
my $currDir = File::Spec->rel2abs(File::Spec->curdir());

my $dataFile = File::Spec->catfile($currDir, 'data.txt');

print "Loading file $dataFile\n";

# Load local file using copy local. Return value is the # of rows affected # which equates to the number of rows inserted.
my $rows = $dbh->do("COPY Customers FROM LOCAL '$dataFile' DIRECT")
    or die $dbh->errstr;

print "Copied $rows rows into database.\n";
```
Prepare a query to get the first 15 rows of the results

```perl
my $sth = $dbh->prepare("SELECT * FROM Customers WHERE ID < 15 \ ORDER BY ID");
```

Use Perl formats to pretty print the output. Declare the heading for the `format`.

```perl
format STDOUT_TOP = ID First Last EMail Birthday == ===== ===== ===== ======
```

Loop through result rows while we have them

```perl
while (@row = $sth->fetchrow_array()) {
    write; # Format command does the work of extracting the columns from
    # the @row array and writing them out to STDOUT.
}
```

Call commit to prevent Perl from complaining about uncommitted transactions

```perl
$dbh->commit();
$dbh->disconnect();
```

data.txt is a text file with a row of data on each line. The columns are delimited by pipe (`|`) characters. This is the default COPY delimiter for command accepts, which simplifies the COPY LOCAL statement.

Here is an example of the file content:

<table>
<thead>
<tr>
<th>ID</th>
<th>First</th>
<th>Last</th>
<th>EMail</th>
<th>Birthday</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>

</tbody>
</table>

**Note:**

Loading a single, large data file into Vertica through a single data connection is less efficient than loading a number of smaller files onto multiple nodes in parallel. Loading onto multiple nodes prevents any one node from becoming a bottleneck.

### Querying Using Perl

To query Vertica using Perl:

1. Prepare a query statement using the Perl DBI module's `prepare` function. This function returns a statement handle that you use to execute the query and get the result set.
2. Execute the prepared statement by calling the `execute` function on the statement handle.
3. Retrieve the results of the query from the statement handle using one of several methods, such as calling the statement handle's `fetchrow_array` function to retrieve a row of data, or `fetchall_array` to get an array of arrays containing the entire result set (not a good idea if your result set may be very large!).

The following example demonstrates querying the table created by the example shown in **Batch Loading Data Using Perl**. It executes a query to retrieve all of the content of the table, then repeatedly calls the statement handle's `fetchrow_array` function to get rows of data in an array. It repeats this process until `fetchrow_array` returns `undef`, which means that there are no more rows to be read.

```perl
#!/usr/bin/perl
use strict;
```
use DBI;
my $attr = {RaiseError => 1 }; # Make errors fatal to the Perl script.
# Open a connection using a DSN. Supply the username and password.
my $dbh = DBI->connect("dbi:ODBC:VerticaDSN32","ExampleUser","password123", $attr);
# Prepare a query to get the content of the table
my $sth = $dbh->prepare("SELECT * FROM TEST ORDER BY C_ID ASC");
# Execute the query by calling execute on the statement handle
$sth->execute();
# Loop through result rows while we have them, getting each row as an array
while (my @row = $sth->fetchrow_array()) {
    # The @row array contains the column values for this row of data
    # Loop through the column values
    foreach my $column (@row) {
        if (!defined $column) {
            # NULLs are signaled by undefs. Set to NULL for clarity
            $column = "NULL";
        }
        print "$column\t"; # Output the column separated by a tab
    }
    print "\n";
}
$dbh->disconnect();

The example prints the following when run:

<p>| | | | | | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>1.111</td>
<td>Hello World!</td>
<td>2001-01-01</td>
<td>01:01:01</td>
<td>2001-01-01 01:01:01 1</td>
</tr>
<tr>
<td>2</td>
<td>2.22222</td>
<td>How are you?</td>
<td>2002-02-02</td>
<td>02:02:02</td>
<td>2002-02-02 02:02:02 0</td>
</tr>
<tr>
<td>4</td>
<td>4.22222</td>
<td>NULL</td>
<td>2002-02-02</td>
<td>02:02:02</td>
<td>2002-02-02 02:02:02 0</td>
</tr>
</tbody>
</table>

**Binding Variables to Column Values**

Another method of retrieving the query results is to bind variables to columns in the result set using the statement handle's bind_columns function. You may find this method convenient if you need to perform extensive processing on the returned data, since your code can use variables rather than array references to access the data. The following example demonstrates binding variables to the result set, rather than looping through the row and column values.

#!/usr/bin/perl
use strict;
use DBI;
my $attr = {RaiseError => 1 }; # Make SQL errors fatal to the Perl script.
# Open a connection using a DSN. Supply the username and password.
my $dbh = DBI->connect("dbi:ODBC:VerticaDSN32","ExampleUser","password123", $attr);
# Prepare a query to get the content of the table
my $sth = $dbh->prepare("SELECT * FROM TEST ORDER BY C_ID ASC");
$sth->execute();
# Create a set of variables to bind to the column values.
my ($C_ID, $C_FP, $C_VARCHAR, $C_DATE, $C_TIME, $C_TS, $C_BOOL);
# Bind the variable references to the columns in the result set.
$sth->bind_columns("$C_ID, $C_FP, $CVARCHAR, $C_DATE, $C_TIME, $C_TS, $C_BOOL");

# Now, calling fetch() to get a row of data updates the values of the bound
# variables. Continue calling fetch until it returns undefined.
while ($sth->fetch()) {
    # Note, you should always check that values are defined before using them,
    # since NULL values are translated into Perl as undefined. For this
    # example, just check the VARCHAR column for undefined values.
    if (!defined $CVARCHAR) {
        $CVARCHAR = "NULL";
    }  
    # Just print values separated by tabs.
    print "$C_ID\t$C_FP\t$CVARCHAR\t$C_DATE\t$C_TIME\t$C_TS\t$C_BOOL\n";
}
$dbh->disconnect();

The output of this example is identical to the output of the previous example.

**Preparing, Querying, and Returning a Single Row**

If you expect a single row as the result of a query (for example, when you execute a `COUNT` (*) query), you can use the DBI module's `selectrow_array` function to combine executing a statement and retrieving an array as a result.

The following example shows using `selectrow_array` to execute and get the results of the `SHOW LOCALE` statement. It also demonstrates changing the locale using the `do` function.

```perl
#!/usr/bin/perl
use strict;
use DBI;
my $attr = {RaiseError => 1}; # Make SQL errors fatal to the Perl script.
# Open a connection using a DSN. Supply the username and password.
my $dbh = DBI->connect("dbi:ODBC:VerticaDSN","ExampleUser","password123", $attr);
# Demonstrate setting/getting locale.
# Use selectrow_array to combine preparing a statement, executing it, and
# getting an array as a result.
my @localerv = $dbh->selectrow_array("SHOW LOCALE;--");
# The locale name is the 2nd column (array index 1) in the result set.
print "Locale: @localerv[1]\n";
# Use do() to execute a SQL statement to set the locale.
$dbh->do("SET LOCALE TO en_GB");
# Get the locale again.
@localerv = $dbh->selectrow_array("SHOW LOCALE;--");
print "Locale is now: @localerv[1]\n";
$dbh->disconnect();
```

The result of running the example is:
**Executing Queries and ResultBufferSize Settings**

When you call the `execute()` function on a prepared statement, the client library retrieves results up to the size of the result buffer. The result buffer size is set using ODBC's `ResultBufferSize` setting.

Vertica does not allow multiple active queries per connection. However, you can simulate multiple active queries by setting the result buffer to be large enough to accommodate the entire results from the first query. To ensure that the ODBC client driver's buffer is large enough to store result set for first query you can set `ResultBufferSize` to 0. Setting this parameter to 0 makes the result buffer size unlimited. The ODBC driver allocates enough memory to read the entire result set. With the entire result set from the first query stored in the result set buffer, the database connection is free to perform another query. Your client can execute this second query even though it has not processed the entire result set from the first query.

However, if you set the `ResultBufferSize` to 0, you may find that your calls to `execute()` result in the operating system killing your Perl client script. The operating system may terminate your script if the ODBC driver allocates too much memory to store a large result set.

A workaround for this behavior is limit the number of rows returned by your query. Then you can set the `ResultBufferSize` to a value that accommodates this limited result set. For example, you can estimate the amount of memory needed to store a single row of your query result. Then use the `LIMIT` and `OFFSET` clauses to get a specific number of rows that will fit into the space you allocated using `ResultBufferSize`. If the results of your query is able to fit within the limited result set buffer, you can then perform additional queries with the same database connection. This solution makes your code more complex as you will need to perform multiple queries to get the entire result set. Also, it is not appropriate in cases where you need to operate on an entire result set at once, rather than just a portion of it at a time.

A better solution is to use separate database connections for each query you want to perform. The overhead of the additional database connection is small compared to the resources needed to process large data sets.
Conversions Between Perl and Vertica Data Types

Perl is a loosely-typed programming language that does not assign specific data types to values. It converts between string and numeric values based on the operations being performed on the values. For this reason, Perl has little problem extracting most string and numeric data types from Vertica. All interval data types (DATE, TIMESTAMP, etc.) are converted to strings. You can use several different date and time handling Perl modules to manipulate these values in your scripts.

Vertica NULL values translate to Perl's undefined (undef) value. When reading data from columns that can contain NULL values, you should always test whether a value is defined before using it.

When inserting data into Vertica, Perl's DBI module attempts to coerce the data into the correct format. By default, it assumes column values are VARCHAR unless it can determine that they are some other data type. If given a string value to insert into a column that has an integer or numeric data type, DBI attempts to convert the string’s contents to the correct data type. If the entire string can be converted to a value of the appropriate data type, it inserts the value into the column. If not, inserting the row of data fails.

DBI transparently converts integer values into numeric or float values when inserting into column of FLOAT, NUMERIC, or similar data types. It converts numeric or floating values to integers only when there would be no loss of precision (the value to the right of the decimal point is 0). For example, it can insert the value 3.0 into an INTEGER column since there is no loss of precision when converting the value to an integer. It cannot insert 3.1 into an INTEGER column, since that would result in a loss of precision. It returns an error instead of truncating the value to 3.

The following example demonstrates some of the conversions that the DBI module performs when inserting data into Vertica.

```perl
#!/usr/bin/perl
use strict;
use DBI;
# Create a hash reference that holds a hash of parameters for the # connection.
my $attr = {AutoCommit => 0, # Turn off autocommit
            PrintError => 0, # Turn off print error. Manually handled
};
# Open a connection using a DSN. Supply the username and password.
my $dbh = DBI->connect("dbi:ODBC:VerticaDSN","ExampleUser","password123",
                       $attr);
if (defined DBI::err) {
    # Connection failed.
```

die "Failed to connect: $DBI::errstr"
;
}  
print "Connection AutoCommit state is: " . $dbh->{AutoCommit} . "\n";
# Create table to hold inserted data
$dbh->do("DROP TABLE IF EXISTS TEST CASCADE;");
$dbh->do("CREATE TABLE TEST(
  C_ID INT,
  C_FP FLOAT,
  C_VARCHAR VARCHAR(100),
  C_DATE DATE, C_TIME TIME,
  C_TS TIMESTAMP,
  C_BOOL BOOL)");
# Populate an array of arrays with values.
my @data =
  # Start with matching data types
  [1,1.111,'Matching datatypes','2001-01-01','01:01:01'
   ,'2001-01-01 01:01:01','t'],
  # Force floats -> int and int -> float.
  [2,0.2,"Ints <-> floats","2002-02-02","02:02:02'
   ,'2002-02-02 02:02:02',1],
  # Float -> int "only" works when there is no loss of precision.
  [3,1,3,"float -> int with trunc?","2003-03-03","03:03:03'

);
# Create a prepared statement to use parameters for inserting values.
my $sth = $dbh->prepare_cached("INSERT INTO test values(?,?,?,?,?,?,?)");
my $rowcount = 0; # Count # of rows
# Loop through the arrays to insert values
foreach my $tuple (@data) {
  $rowcount++;
  # Insert the row
  my $retval = $sth->execute(@$tuple);

  # See if the row was successfully inserted.
  if ($retval == 1) {
    # Value of 1 means the row was inserted (1 row was affected by insert)
    print "Row $rowcount successfully inserted\n";
  } else {
    print "Inserting row $rowcount failed with error " .
    $sths-state . " . $sth->errstr . "\n";
  }
}
# Commit the data
$dbh->commit();
# Prepare a query to get the content of the table
$sth = $dbh->prepare("SELECT * FROM TEST ORDER BY C_ID ASC");
$sth->execute() or die "Error: " . $dbh->errstr;
my @row; # Need to pre-declare to use in the format statement.
# Use Perl formats to pretty print the output.
format STDOUT_TOP =
Int Float VarChar Date Time Timestamp Bool
==== ==== =============== ====== ====== =============== =====
.
format STDOUT =
@>> @<<<< @<<<<@@@@@@@@ @<<<<<<<< @<<<<<<<< @<<<<<<<< @<<<<
@row
.
# Loop through result rows while we have them
while (@row = $sth->fetchrow_array()) {
    write; # Format command does the work of extracting the columnn from
    # the array.
}
# Commit to stop Perl complaining about in-progress transactions.
$dbh->commit();
$dbh->disconnect();

The example produces the following output when run:

Connection AutoCommit state is: 0
Row 1 successfully inserted
Row 2 successfully inserted
Inserting row 3 failed with error 01000 [Vertica][VerticaDSII] (20) An error
occurred during query execution: Row rejected by server; see server log for
details (SQL-01000)
Row 4 successfully inserted
Inserting row 5 failed with error 01000 [Vertica][VerticaDSII] (20) An error

Perl Unicode Support

Perl supports Unicode data with some caveats. See the perlunicode and the perlunitut (Perl
Unicode tutorial) manual pages for details. (Be sure to see the copies of these manual
pages included with the version of Perl installed on your client system, as the support for
Unicode has changed in recent versions of Perl.) Perl DBI and DBD::ODBC also support
Unicode, however DBD::ODBC must be compiled with Unicode support. See the DBD::ODBC
documentation for details. You can check the DBD::ODBC-specific connection attribute
named odbc_has_unicode to see if Unicode support is enabled in the driver.
The following example Perl script demonstrates directly inserting UTF-8 strings into Vertica and then reading them back. The example writes a text file with the output, since there are may problems displaying Unicode characters in terminal windows or consoles.

```
#!/usr/bin/perl
use strict;
use DBI;
# Open a connection using a DSN.
my $dbh = DBI->connect("dbi:ODBC:VerticaDSN","ExampleUser","password123");
unless (defined $dbh) {
  # Connection failed.
  die "Failed to connect: $DBI::errstr";
}

# Output to a file. Displaying Unicode characters to a console or terminal
# window has many problems. This outputs a UTF-8 text file that can
# be handled by many Unicode-aware text editors:
open OUTFILE, '>:utf8', "unicodeout.txt";
# See if the DBD::ODBC driver was compiled with Unicode support. If this returns
# 1, your Perl script will get get strings from the driver with the UTF-8
# flag set on them, ensuring that Perl handles them correctly.
print OUTFILE "Was DBD::ODBC compiled with Unicode support? ". "\n";
$dbh->>(odbc_has_unicode) . "\n";

# Create a table to hold VARCHARs
$dbh->>("DROP TABLE IF EXISTS TEST CASCADE;");
$dbh->>("CREATE TABLE example ( C VARCHAR, C VARCHAR(100) )");
print OUTFILE "Inserting data...\n";
# Use Do to perform simple inserts
$dbh->>("INSERT INTO test VALUES('Hello')");
# This string contains several non-latin accented characters and symbols, encoded
# with Unicode escape notation. They are converted by Perl into UTF-8 characters
$dbh->>("INSERT INTO test VALUES('My favorite band is " .
  "\N{U+00DC}\N{U+00E4}\N{U+00FC}\t\N{U+00FB}\N{U+00D6}\N{U+00EB}\r\n\N{U+00EF}\l" .
  " \N{U+263A}'");
# Some Chinese (Simplified) characters. This again uses escape sequence
# that Perl translates into UTF-8 characters.
$dbh->>("INSERT INTO test VALUES('x{4F60}\x{597D}')");
print OUTFILE "Getting data...\n";
# Prepare a query to get the content of the table
my $sth = $dbh->prepare_cached("SELECT * FROM test");
# Execute the query by calling execute on the statement handle
$sth->execute();
# Loop through result rows while we have them
while ($row = $sth->fetchrow_array()) {
  # Loop through the column values
  foreach my $column (@row) {
    print OUTFILE "$column\t";
  }
  print OUTFILE "\n";
}
close OUTFILE;
$dbh->>disconnect();
```

Viewing the unicodeout.txt file in a UTF-8-capable text editor or viewer displays:
Was DBD::ODBC compiled with Unicode support? 1
Inserting data...
Getting data...
My favorite band is Ümläüt Övërkill §
你好
Hello

**Note:**
Terminal windows and consoles often have problems properly displaying Unicode characters. That is why the example writes the output to a text file. With some text editors, you may need to manually set the encoding of the text file to UTF-8 in order for the characters to properly appear (and the font used to display text must have a full Unicode character set). If the character still do not show up, it may be that your version of DBD::ODBC was not compiled with UTF-8 support.

- [Unicode Character Encoding](#)
- [Required ODBC Driver Configuration Settings for Linux and UNIX](#)
Programming PHP Client Applications

You can connect to Vertica through PHP-ODBC using the Unix ODBC or iODBC library.

In order to use PHP with Vertica, you must install the following packages (and their dependencies):

- php
- php-odbc
- php-pdo
- UnixODBC (if you are using the Unix ODBC driver)
- libiodbc (if you are using the iODBC driver)

PHP on Linux

PHP is available with most Linux operating systems as a module for the Apache web server. Check your particular Linux repository for PHP RPMs or Debian packages. You can also build PHP from source. See the PHP web site for documentation and source downloads.

PHP on Windows

PHP is available for windows for both the Apache and IIS web servers. You can download PHP for Windows and view installation instructions at the PHP web site.

The PHP ODBC Drivers

PHP supports both the UnixODBC drivers and iODBC drivers. Both drivers use PHP's ODBC database abstraction layer.

Setup

You must read Programming ODBC Client Applications before connecting to Vertica through PHP. The following example ODBC configuration entries detail the typical settings required
for PHP ODBC connections. The driver location assumes you have copied the Vertica drivers to /usr/lib64.

**Example odbc.ini**

```ini
[ODBC Data Sources]
VerticaDSNunixodbc = exampledb
VerticaDNSiodbc = exampledb2

[VerticaDSNunixodbc]
Description = VerticaDSN Unix ODBC driver
Driver = /usr/lib64/libverticaodbc.so
Database = Telecom
Servername = localhost
UserName = dbadmin
Password =
Port = 5433

[VerticaDNSiodbc]
Description = VerticaDSN iODBC driver
Driver = /usr/lib64/libverticaodbc.so
Database = Telecom
Servername = localhost
UserName = dbadmin
Password =
Port = 5433
```

**Example odbcinst.ini**

```ini
# Vertica
[VerticaDSNunixodbc]
Description = VerticaDSN Unix ODBC driver
Driver = /usr/lib64/libverticaodbc.so
[VerticaDNSiodbc]
Description = VerticaDSN iODBC driver
Driver = /usr/lib64/libverticaodbc.so
[ODBC]
Threading = 1
```

**Verify the Vertica UnixODBC or iODBC Library**

Verify the Vertica UnixODBC library can load all dependant libraries with the following command (assuming you have copies the libraries to /usr/lib64):

For example:

```bash
ldd /usr/lib64/libverticaodbc.so
```
You must resolve any "not found" libraries before continuing.

**Test Your ODBC Connection**

Test your ODBC connection with the following.

```shell
isql -v VerticaDSN
```

**PHP Unicode Support**

PHP does not offer native Unicode support. PHP only supports a 256-character set. However, PHP provides the UTF-8 functions `utf8_encode()` and `utf8_decode()` to provide some basic Unicode functionality.

**Querying the Database Using PHP**

The example script below details the use of PHP ODBC functions to connect to the Vertica Analytics Platform.

```php
<?php

# Turn on error reporting
error_reporting(E_ERROR | E_WARNING | E_PARSE | E_NOTICE);
# A simple function to trap errors from queries
function errortrap_odbc($conn, $sql) {
    if(!$rs = odbc_exec($conn,$sql)) {
        echo "<br/>Failed to execute SQL: $sql<br/>". odbc_errormsg($conn);
    } else {
        echo "<br/>Success: " . $sql;
    }
    return $rs;
}
# Connect to the Database
$dsn = "VerticaDSNunixodbc";
$conn = odbc_connect($dsn,''','') or die("<br/>CONNECTION ERROR");
echo "<p>Connected with DSN: $dsn</p>";
# Create a table
$sql = "CREATE TABLE TEST("
    .
    C_ID INT,
    C_FP FLOAT,
    C_VARCHAR VARCHAR(100),
    C_DATE DATE, C_TIME TIME,
    C_TS TIMESTAMP,
    
```
Example Output

The following is the example output from the script.

```
Success: CREATE TABLE TEST (C_ID INT, C_FP FLOAT, C_VARCHAR VARCHAR(100), C_DATE DATE, C_TIME TIME, C_TS TIMESTAMP, C_BOOL BOOL)
Success: INSERT into test values(1,1.1,'abcdefg1234567890','1901-01-01','23:12:34 ','1901-01-01 09:00:09','t')
Success: odbc_execute.
Success: SELECT * FROM TEST
Array
  ( [C_ID] => 1
    [C_FP] => 1.1
    [C_VARCHAR] => abcdefg1234567890
    [C_DATE] => 1901-01-01
    [C_TIME] => 23:12:34
    [C_TS] => 1901-01-01 09:00:09
    [C_BOOL] => 1
  )
Array
  ( [C_ID] => 2
    [C_FP] => 2.28
    [C_VARCHAR] => abcdefg1234567890
```

Vertica Analytic Database (11.0.x)  Page 5588 of 6776
Managing Query Execution Between the Client and Vertica

The following topics describe techniques that help you manage query execution between your client and your Vertica database.

**ResultBufferSize**

By default, Vertica uses the ResultBufferSize parameter to determine the maximum size (in bytes) of a result set that a client can retrieve from a server. When ResultBufferSize is enabled, Vertica sends rows of data directly to the client making the query. The number of rows returned to the client at each fetch of data depends on the size (in bytes) of the ResultBufferSize parameter.

Sometimes, the size of the result set requested by the client is greater than what the ResultBufferSize parameter allows. In such cases, Vertica retrieves only a portion of the result set at a time. Each fetch of data returns the amount of data equal to the size set by the ResultBufferSize parameter. Ultimately, as the client iterates over the individual fetches of data, the entire result set is returned.

**Benefits of ResultBufferSize**

If you are concerned with the effect of your queries on network latency, ResultBufferSize may provide an advantage over MARS. MARS requires that the client wait until all rows of data are written to the server before the client can retrieve the data. This delay may cause latency issues for your network while waiting for the results to be stored.

In addition, MARS requires that you send two separate requests to return rows of data. The first request performs the query execution which stores the result set on the server. The second request retrieves the data rows that are stored on the server. With
ResultBufferSize, you only need to send one request. This request both executes and retrieves the data rows of interest.

**Query Execution with ResultBufferSize**

The following graphic shows how Vertica returns rows of data from a database to the client with ResultBufferSize enabled:
The query execution performs the following steps:

1. The client sends a query, such as a `SELECT` statement, to the server. In the preceding graphic, the first query is named Query 1.
2. The server receives the client's request and begins to send both a description of the result set and the requested rows of data back to the client.
3. After all possible rows are returned to the client, the execution is complete. The size of the data set returned equals either that of the data that was requested or the maximum amount of data that ResultBufferSize parameter can retrieve. If the ResultBufferSize maximum size is not yet reached, Vertica can execute Query 2.

The server can accept Query 2 and perform the same steps that it did for Query 1. If the results for Query 1 had reached the maximum ResultBufferSize allowable, Vertica could not execute Query 2 until the client freed the results from Query 1.

After Query 2 runs, you cannot view the results you retrieved for Query 1, unless you execute Query 1 again.

**Setting an Unlimited Buffer Size**

Setting ResultBufferSize to 0 tells the client driver to use an unlimited result set buffer. With this setting, the client library allocates as much memory as it needs to read the entire result set of a query. You may choose to set ResultBufferSize to 0 if you want to simulate having multiple active queries over a single database connection at the same time. With an unlimited buffer size, your client can run a query and have its entire result set stored in memory. This ends the first query, so your client can execute a second query before it fully processes the results of the first query.

A drawback of this method is that your query may consume too much memory if your queries return large result sets. This over-allocation of memory can result in the operating system terminating your client. Due to this risk, consider using multiple database connections instead of trying to reuse a single connection for multiple queries. The overhead of multiple database connections is small compared to the overall amount of resources required to process a large data set.

**Multiple Active Result Sets (MARS)**

You can only enable MARS when you connect to Vertica using a JDBC client connection. MARS allows the execution of multiple queries on a single connection. While ResultBufferSize sends the results of a query directly to the client, MARS stores the results first on the server. Once query execution has finished and all of the results have been stored, you can make a retrieval request to the server to have rows returned to the client.
MARS is set at the session level and must be enabled for every new session. When MARS is enabled, ResultBufferSize is disabled. No error is returned, however the ResultBufferSize parameter is ignored.

**Benefits of MARS**

In comparison with ResultBufferSize, MARS enables you to store multiple result sets from different queries at the same time. You can also send new queries before all of the results of a previous result set have been returned to the client. This allows applications to decouple query execution from result retrieval so that, on a single connection, you can process different results at the same time.

When you enable ResultBufferSize, you must wait until all result sets have been returned to the client before a new query can be executed.

Another benefit of MARS is that it allows you to free up query resources faster than ResultBufferSize allows. While a query is running, resources are held by that query session. When ResultBufferSize is enabled, a client that is performing slowly might read a single row of a result set and then have to stop to retrieve the next row. This prevents the query from finishing quickly and, therefore, prevents the resources used from being freed up for other applications. With MARS, the speed of the client is irrelevant to the reading of rows. As soon as the results are written to the MARS storage, the resources are freed and the speed at which the client retrieves rows no longer matters.

**Query Execution with MARS**

The following graphic demonstrates how multiple queries to the server are handled when MARS is enabled:
Query 1:

1. Query 1 is sent to the server.
2. Query 1's row description and the status of its result set are returned to the client. However, no results are returned to the client at this time.
3. Query 1 completes and its results are saved on the server.
   1. You can now send commands to retrieve the rows of Query 1's result set. These rows are stored on the server. Retrieved rows are sent to the client along with the status of the result set. By keeping track of the status of the result set,
Vertica is able to keep track of which rows have been retrieved from the server.

4. Now that Query 1 has successfully completed, and its result sets are being stored on the server, Query 2 can be executed.

**Query 2:**

1. Query 2 is sent to the server.
2. Query 2's row description and the status of its result set are returned to the client. However, no results are returned to the client at this time.
3. Query 2 completes and its results are stored on the server. Both Query 1 and Query 2 now have result sets stored on the server.
4. You can now send retrieval requests to both Query 1 and Query 2's result sets that are stored on the server. Whenever a retrieval request is made for rows from Query 1, the request is sent and rows and the result set status are sent to the client. The same occurs for Query 2.

Once all rows have been read by the client, the MARS storage on the server closes the active results session. The MARS storage on the server is then freed to store more data. The MARS storage also closes and frees once your session is finished.

**Enabling and Disabling MARS**

You can enable and disable MARS in two different ways:

1. To enable MARS using the JDBC client connection properties, see JDBC Connection Properties.
2. To enable MARS using the SET SESSION command, see SET SESSION MULTIPLEACTIVERESULTSETS.

- SESSION_MARS_STORE
- CLOSE_RESULTSET
- CLOSE_ALL_RESULTSETS

**Management API**

The Management API is a REST API that you can use to view and manage Vertica databases with scripts or applications that accept REST and JSON. The response format for all requests is JSON.
cURL

cURL is a command-line tool and application library used to transfer data to or from a server. It uses URL syntax, such as HTTP and HTTPS. All API requests sent to a Vertica server must be made using HTTPS. A request made using HTTP will fail.

There are four HTTP requests that can be passed using cURL to call API methods:

<table>
<thead>
<tr>
<th>Request</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>GET</td>
<td>Retrieves data.</td>
</tr>
<tr>
<td>PUT</td>
<td>Updates data.</td>
</tr>
<tr>
<td>POST</td>
<td>Creates new data.</td>
</tr>
<tr>
<td>DELETE</td>
<td>Deletes data.</td>
</tr>
</tbody>
</table>

Syntax

curl https://<NODE>:5444/

Options

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>-h --help</td>
<td>Lists all available command-line options.</td>
</tr>
<tr>
<td>-H --header</td>
<td>Allows you to use custom headers in your command. This is useful for sending a request that requires a VerticaAPIKEY.</td>
</tr>
<tr>
<td>-k --insecure</td>
<td>Allows SSL connections without certificate validation.</td>
</tr>
<tr>
<td>-x --request</td>
<td>Specifies the custom request used when communicating with a server.</td>
</tr>
</tbody>
</table>
curl -X REQUEST https://<NODE>:5444/

Can be one of the following values:

- GET
- PUT
- POST
- DELETE

**Note:**
If no request is specified, cURL automatically defaults to the GET request.

There are many more options available to add to your cURL query. For a comprehensive list with descriptions, visit the [cURL Documentation Website](#).

### General API Information

These API calls can interact with either standard Vertica nodes or Management Console nodes.

| GET / | Returns the agent-specific information useful for version checking and service discovery. |
| GET api | Returns a list of api objects and properties. |
GET /

Returns API version information and a list of links to child resources for the Management API.

**Resource URL**

https://<NODE>:5444/

**Authentication**

Not required.

**Parameters**

None.

**Example Request**

| GET | https://<NODE>:5444/ |

**Response:**

```json
{
  "body": {
    "mime-types": [
      "default",
      "application/vertica.database.configuration.json-v2",
      "application/json",
      "application/vertica.nodes.json-v2",
      "default",
      "application/json",
      "default",
      "application/json",
      "default",
      "application/json",
      "application/vertica.jobs.json-v2",
      "default",
      "application/vertica.hosts.json-v2",
      "application/json",
      "default",
      "application/vertica.hosts.json-v2",
      "default",
      "application/vertica.hosts.json-v2"
    ]
  }
}
```
GET api

Lists all Management API commands, with a brief description of each one and its parameters.

Resource URL

https://node-ip-address:5444/api

Authentication

None

<td>DELETE</td>
<td>webhooks/:subscriber_id</td>
<td>Deletes an existing webhook.</td>
</tr>
</tbody>
</table>
VerticaAPIKey

The Management API requires an authentication key, named VerticaAPIKEY, to access some API resources. You can manage API keys by using the `apikeymgr` command-line tool.

**usage:** apikeymgr [-h] [-user REQUESTOR] [-app APPLICATION] [-delete] [-create] [-update] [-migrate] [-secure {restricted,normal,admin}] [-list]

API key management tool

optional arguments:
- -h, --help    show this help message and exit
- --user REQUESTOR The name of the person requesting the key
- --app APPLICATION The name of the application that will use the key
- --delete     Delete the key for the given R & A
- --create     Create a key for the given R & A
- --update     Update a key for the given R & A
- --migrate    migrate the keyset to the latest format
- --secure {restricted,normal,admin} Set the keys security level
- --list       List all the keys known

Example Request

To create a new VerticaAPIKEY for the dbadmin user with admin access, enter the following:

```
$ apikeymgr --user dbadmin --app vertica --create --secure admin
```

Response:

```
Requestor : dbadmin
Application: vertica
API Key : ValidAPIKey
Synchronizing cluster...
```

Backup and Restore

You can use these API calls to perform backup and restore tasks for your database.

<p>| GET backups | Returns all the backups that have been created for all vbr configuration files ( *.ini ) that are located in the |</p>
<table>
<thead>
<tr>
<th>Method</th>
<th>Endpoint</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>POST</td>
<td>backups/:config_script_base</td>
<td>Creates a new backup as defined by the given vbr configuration script base (filename without the .ini extension).</td>
</tr>
<tr>
<td>GET</td>
<td>backups/:config_script_base/:archive_id</td>
<td>Returns details for a specific backup archive.</td>
</tr>
<tr>
<td>POST</td>
<td>restore/:archive_id</td>
<td>Restores a backup.</td>
</tr>
</tbody>
</table>
**GET backups**

Returns a list of all backups created for vbr configuration (*.ini) files that reside in `/opt/vertica/config` and provides details about each backup.

**Resource URL**

https://<NODE>:5444/backups

**Authentication**

Requires a VerticaAPIKey in the request header.

The API key must have **restricted** level security or higher.

**Parameters**

None.

**Example Request**

```
GET
http://<NODE>:5444/backups

Response:
{
  "data": [ 
    {}
  ]
}
"backups": [
    {
      "archive_id": "v_vdb_bk_snapshot_20190305_174428",

    }
],
"config_file": "/opt/vertica/config/fullbk.ini",
"config_script_base": "fullbk",
"num_backups": 2
]}
"href": "/backups",
"mime-type": "application/vertica.databases.json-v2"}
POST backups/:config_script_base

Creates a new backup job for the backup defined in the vbr configuration script :config_script_base. The vbr configuration script must reside in /opt/vertica/configuration. The :config_script_base value does not include the .ini filename extension.

To determine valid :config_script_base values, see GET backups.

Returns a job ID that you can use to determine the status of the job.

Resource URL

https://<NODE>:5444/backups/:config_script_base

Authentication

Requires a VerticaAPIKey in the request header.

The API key must have restricted level security or higher.

Parameters

None.

Example Request

| POST | https://<NODE>:5444/backups/backup3 |

Response:

```json
{
    "id": "CreateBackup-VMart-1404750602.03",
    "url": "/jobs/CreateBackup-VMart-1404750602.03"
}
```
GET backups/:config_script_base/:archive_id

Returns details on a specific backup. You must provide the :config_script_base. This value is the name of a vbr config file (without the .ini filename extension) that resides in /opt/vertica/config. The :archive_id is the value of the backup field that the GET backups command returns.

Resource URL

https://<NODE>:5444/backups/:config_script_base/:archive_id

Authentication

Requires a VerticaAPIKey in the request header.

The API key must have restricted level security or higher.

Parameters

None.

Example Request

<table>
<thead>
<tr>
<th>GET</th>
</tr>
</thead>
<tbody>
<tr>
<td>https://&lt;NODE&gt;:5444/backups/fullbk/v_vdb_bk_snapshot_20190304_204814</td>
</tr>
</tbody>
</table>

Response:

```json
{
    "archive_id": "v_vdb_bk_snapshot_20190304_204814",
    "config_file": "/opt/vertica/config/fullbk.ini",
    "objects": "",
    "href": "/backups/fullbk/v_vdb_bk_snapshot_20190304_204814",
    "exclude_patterns": "",
    "epoch": "16",
    "include_patterns": "",
    "backup_type": "full",
    "version": "v9.2.1-20190304",
    "hosts": "v_vdb_bk_node0001(10.20.91.240),
```
v_vdb bk_node0002(10.20.91.241),
v_vdb bk_node0003(10.20.91.242),
v_vdb bk_node0004(10.20.91.243),
v_vdb bk_node0005(10.20.91.244)"
**POST restore/:archive_id**

Creates a new restore job to restore the database from the backup archive identified by :archive_id. The :archive_id is the value of a backup field that the GET backups command returns.

Returns a job ID that you can use to determine the status of the job. See GET jobs.

**Resource URL**

https://<NODE>:5444/restore/:archive_id

**Authentication**

Requires a VerticaAPIKey in the request header.

The API key must have restricted level security or higher.

**Parameters**

None.

**Example Request**

```
POST https://<NODE>:5444/restore/backup3_20140707_132904
```

**Response:**

```
{
  "id": "RestoreBackup-VMart-1404760113.71",
  "url": "/jobs/RestoreBackup-VMart-1404760113.71"
}
```
# Databases

You can use these API calls to interact with your database.

<table>

</tr>
</tbody>
</table>
GET databases

Returns a list of databases, their current status, and database properties.

Resource URL

https://<NODE>:5444/databases

Authentication

Requires a VerticaAPIKey in the request header.

The API key must have restricted level security or higher.

Parameters

None.

Example Request

GET
https://<NODE>:5444/databases

An example of the full request using cURL:

curl -H "VerticaApiKey: ValidAPIKey" https://<NODE>:5444/databases

Response:

```json
{
  "body": [
    {
      "href": "/databases/VMart",
      "mime-type": [
        "application/vertica.database.json-v2"
      ],
      "name": "VMart",
      "port": "5433",
      "status": "UP"
    }
  ]
}
```
{  "href": "/databases/testDB",
  "mime-type": [  
    "application/vertica.database.json-v2"
  ],
  "name": "testDB",
  "port": "5433",
  "status": "DOWN"
}

"href": "/databases",
"links": [
  "/:database_name"
],
"mime-type": "application/vertica.databases.json-v2"}
**POST databases**

Creates a job to create a new database with the provided parameters.

**Important:**
You must stop any running databases on the nodes on which you want to create the new database. If you do not, database creation fails.

Returns a job ID that can be used to determine the status of the job. See [GET jobs](#).

**Resource URL**

https://<NODE>:5444/databases

**Authentication**

Requires a [VerticaAPIKey](#) in the request header.

The API key must have **admin** level security.

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>Name of the database to create.</td>
</tr>
<tr>
<td>passwd</td>
<td>Password for the new database.</td>
</tr>
<tr>
<td>only</td>
<td>Optional list of hostnames to include in the database. By default, all nodes in the cluster are added to the database.</td>
</tr>
<tr>
<td>exclude</td>
<td>Optional list of hostnames to exclude from the database.</td>
</tr>
<tr>
<td>catalog</td>
<td>Path of the catalog directory.</td>
</tr>
<tr>
<td>data</td>
<td>Path of the data directory.</td>
</tr>
<tr>
<td>port</td>
<td>Port where the database listens for client connections. Default is 5433.</td>
</tr>
</tbody>
</table>
Example Request

```
```
Response:

```json
{
    "userid": "dbadmin"
}
```
**GET databases/:database_name**

Returns details about a specific database. The :database_name is the value of the *name* field that the GET databases command returns.

**Resource URL**

https://<NODE>:5444/databases/:database_name

**Authentication**

Requires a VerticaAPIKey in the request header.

The API key must have restricted level security or higher.

**Parameters**

None.

**Example Request**

| GET | https://<NODE>:5444/databases/VMart |

Response:

```json
{
    "body": {
        "database_id": "VMart",
        "id": "VMart",
        "nodes": "v_vmart_node0001,v_vmart_node0002,v_vmart_node0003",
        "nodes_new": [
            {
                "catalog_base": "/home/dbadmin",
                "data_base": "/home/dbadmin",
                "host": "10.20.100.247",
                "id": "v_vmart_node0001"
            },
            {
                "catalog_base": "/home/dbadmin",
                "data_base": "/home/dbadmin",
```
"host": "10.20.100.248",
"id": "vmart_node002"
],
{
"catalog_base": "/home/dbadmin",
"data_base": "/home/dbadmin",
"host": "10.20.100.249",
"id": "vmart_node003"
}
],
"path": "/home/dbadmin/VMart",

"/nodes",
"/process",
"/rebalance/process",
"/status",
"/Workload Analyzer/process"
],
"mime-type": "application/vertica.database.json-v2"}
**PUT databases/:database_name**

Creates a job to run the action specified by the *action* parameter against the database identified by :database_name. The :database_name is the value of the *name* field that the GET databases command returns.

Returns a job ID that you can use to determine the status of the job. See GET jobs.

**Resource URL**

https://<NODE>:5444/databases/:database_name

**Authentication**

Requires a VerticaAPIKey in the request header.

The API key must have normal level security or higher.

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>user_id</td>
<td>A database username.</td>
</tr>
<tr>
<td>passwd</td>
<td>A password for the username.</td>
</tr>
</tbody>
</table>
| action    | Can be one of the following values:  
  - start — Start the database.  
  - stop — Stop the database.  
  - rebalance — Rebalance the database.  
  - Workload Analyzer — Run Work Load Analyzer against the database. |

**Example Request**

PUT  

Response:

{
    "id": "StopDatabase-testDB-2014-07-20 13:28:49.321744",
    "url": "/jobs/StopDatabase-testDB-2014-07-20 13:28:49.321744"
}
**DELETE databases/:database_name**

Creates a job to delete (drop) an existing database on the cluster. To perform this operation, you must first stop the database. The :database_name is the value of the name field that the GET databases command returns.

Returns a job ID that you can use to determine the status of the job. See GET jobs.

**Resource URL**

https://<NODE>:5444/databases/:database_name

**Authentication**

Requires a VerticaAPIKey in the request header.

The API key must have admin level security.

**Parameters**

None.

**Example Request**

```
DELETE https://<NODE>:5444/databases/TestDB
```

**Response:**

```
{
  "id": "DropDatabase-TestDB-2014-07-18 12:50:33.332383",
  "url": "/jobs/DropDatabase-TestDB-2014-07-18 12:50:33.332383"
}
```
**GET databases/:database_name/configuration**

Returns a list of configuration parameters for the database identified by :database_name. The :database_name is the value of the name field that the GET databases command returns.

**Resource URL**

https://<NODE>:5444/databases/:database_name/configuration

**Authentication**

Requires a VerticaAPIKey in the request header.

The API key must have restricted level security or higher.

**Parameters**

<table>
<thead>
<tr>
<th>parameter</th>
<th>description</th>
</tr>
</thead>
<tbody>
<tr>
<td>user_id</td>
<td>A database username.</td>
</tr>
<tr>
<td>passwd</td>
<td>The password for the username.</td>
</tr>
</tbody>
</table>

**Example Request**

```
GET https://<NODE>:5444/databases/testDB/configuration?user_id=username&passwd=username_password
```

**Response:**

This API call returns over 100 configuration parameters. The following response is a small subset of the total amount returned.

```json

**PUT databases/:database_name/configuration**

Sets one or more configuration parameters for the database identified by :database_name. The :database_name is the value of the name field that the GET databases command returns.

Returns the parameter name, the requested value, and the result of the attempted change (Success or Failed).

**Resource URL**

https://<NODE>:5444/databases/:database_name/configuration

**Authentication**

Requires a VerticaAPIKey in the request header.

The API key must have admin level security.

**Parameters**

<table>
<thead>
<tr>
<th>parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>user_id</td>
<td>A database username.</td>
</tr>
<tr>
<td>passwd</td>
<td>The password for the username.</td>
</tr>
<tr>
<td>parameter_name</td>
<td>A parameter name and value combination for the parameter to be changed. Values must be URL encoded. You can include multiple name/value pairs to set multiple parameters with a single API call.</td>
</tr>
</tbody>
</table>

**Example Request**

```
PUT https://<NODE>:5444/databases/testDB/configuration?user_id=username&passwd=username_password&JavaBinaryForUDx=%2Fusr%2F
```
Response:

```json
[
    {
        "key": "JavaBinaryForUDX",
        "result": "Success",
        "value": "/usr/bin/java"
    },
    {
        "key": "TransactionIsolationLevel",
        "result": "Success",
        "value": "SERIALIZABLE"
    }
]
```
GET databases/:database_name/hosts

Returns the hostname/IP address, node name, and UP/DOWN status of each host associated with the database identified by :database_name. The :database_name is the value of the name field that the GET databases command returns.

Resource URL

https://<NODE>:5444/databases/:database_name/hosts

Authentication

Requires a VerticaAPIKey in the request header.

The API key must have restricted level security or higher.

Parameters

None.

Example Request

GET

https://<NODE>:5444/databases/VMart/hosts

Response:

{
    "body": [
        {
            "hostname": "10.20.100.247",
            "nodename": "v_vmart_node0001",
            "status": "UP",
        },
        {
            "hostname": "10.20.100.248",
            "nodename": "v_vmart_node0002",
            "status": "UP",
            "ts": "2014-07-18T13:12:31.904209"
        }
    ]
}
POST databases/:database_name/hosts

Creates a job to add a host to the database identified by :database_name. This host must already be part of the cluster. The :database_name is the value of the name field that the GET databases command returns.

Returns a job ID that you can use to determine the status of the job. See GET jobs.

Resource URL

https://<NODE>:5444/databases/:database_name/hosts

Authentication

Requires a VerticaAPIKey in the request header.

The API key must have admin level security.

Parameters

<table>
<thead>
<tr>
<th>parameter</th>
<th>description</th>
</tr>
</thead>
<tbody>
<tr>
<td>user_id</td>
<td>A database username.</td>
</tr>
<tr>
<td>passwd</td>
<td>The password for the username.</td>
</tr>
<tr>
<td>hostname</td>
<td>The hostname to add to the database. This host must already be part of the cluster.</td>
</tr>
</tbody>
</table>

Example Request

<table>
<thead>
<tr>
<th>method</th>
<th>request</th>
</tr>
</thead>
<tbody>
<tr>
<td>POST</td>
<td>https://&lt;NODE&gt;:5444/databases/:database_name/hosts</td>
</tr>
</tbody>
</table>
Response:

```json
{
  "id": "AddHostToDatabase-testDB-2014-07-20 12:24:04.088812",
  "url": "/jobs/AddHostToDatabase-testDB-2014-07-20 12:24:04.088812"
}
```
**DELETE databases/:database_name/hosts/:host_id**

Creates a job to remove the host identified by :host_id from the database identified by :database_name. The :database_name is the value of the name field that the GET databases command returns. The :host_id is the value of the host field returned by GET databases/:database_name.

Returns a job ID that you can use to determine the status of the job. See GET jobs.

**Resource URL**

https://<NODE>:5444/databases/:database_name/hosts/:host_id

**Authentication**

Requires a VerticaAPIKey in the request header.

The API key must have admin level security.

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>user_id</td>
<td>A database username.</td>
</tr>
<tr>
<td>passwd</td>
<td>A password for the username.</td>
</tr>
</tbody>
</table>

**Example Request**

```plaintext
```

**Response:**

```json
{
    "id": "RemoveHostFromDatabase-testDB-2014-07-20 13:41:15.646235",
    "url": "/jobs/RemoveHostFromDatabase-testDB-2014-07-20 13:41:15.646235"
}
```
**POST databases/:database_name/hosts/:host_id/process**

Creates a job to start the vertica process for the database identified by :database_name on the host identified by :host_id. The :database_name is the value of the name field that the GET databases command returns. The :host_id is the value of the host field returned by GET databases/:database_name.

Returns a job ID that you can use to determine the status of the job. See GET jobs.

**Resource URL**

https://<NODE>:5444/databases/:database_name/hosts/:host_id/process

**Authentication**

Requires a VerticaAPIKey in the request header.

The API key must have restricted level security or higher.

**Parameters**

None.

**Example Request**

```
POST https://<NODE>:5444/databases/:database_name/hosts/:host_id/process
```
Response:

```json
{
  "id": "StartDatabase-testDB-2014-07-20 13:14:03.968340",
  "url": "/jobs/StartDatabase-testDB-2014-07-20 13:14:03.968340"
}
```
GET databases/:database_name/license

Returns details about the database license being used by the database identified by :database_name. The :database_name is the value of the name field that the GET databases command returns.

Resource URL

https://<NODE>:5444/:database_name/license

Authentication

Requires a VerticaAPIKey in the request header.

The API key must have restricted level security or higher.

Parameters

<table>
<thead>
<tr>
<th>user_id</th>
<th>A database username.</th>
</tr>
</thead>
<tbody>
<tr>
<td>passwd</td>
<td>The password for the username.</td>
</tr>
</tbody>
</table>

Example Request

GET https://<NODE>:5444/VMart/license?user_id=username&passwd=username_password

Response:

```json
{
  "body": {
    "details": {
      "assigned_to": "Vertica Systems, Inc.",
      "grace_period": 0,
      "is_ce": false,
      "is_unlimited": false,
      "name": "vertica",
```
"not_after": "Perpetual",
"not_before": "2007-08-03"
},

}
},
"href": "/databases/VMart/license",
"links": [],
"mime-type": "application/vertica.license.json-v2"}
**GET databases/:database_name/licenses**

Returns details about all license being used by the database identified by :database_name. The :database_name is the value of the name field that the GET databases command returns.

**Resource URL**

https://<NODE>:5444/:database_name/licenses

**Authentication**

Requires a VerticaAPIKey in the request header.

The API key must have restricted level security or higher.

**Parameters**

<table>
<thead>
<tr>
<th>user_id</th>
<th>A database username.</th>
</tr>
</thead>
<tbody>
<tr>
<td>passwd</td>
<td>The password for the username.</td>
</tr>
</tbody>
</table>

**Example Request**

GET

https://<NODE>:5444/VMart/licenses?user_id=username&passwd=username_password

**Response:**

```
{
  "body": [
    {
      "details": {
        "assigned_to": "Vertica Systems, Inc.",

"mime-type": "application/vertica.features.json-v2"}
DELETE databases/:database_name/hosts/:host_id/process

Creates a job to stop the vertica process for the database identified by :database_name on the host identified by :host_id. The :database_name is the value of the name field that the GET databases command returns. The :host_id is the value of the host field returned by GET databases/:database_name.

Returns a job ID that can be used to determine the status of the job. See GET jobs.

**Note:**
If stopping the database on the hosts causes the database to no longer be k-safe, then the all database nodes may shut down.

**Resource URL**

https://<NODE>:5444/databases/:database_name/hosts/:host_id/process

**Authentication**

Requires a VerticaAPIKey in the request header.

The API key must have restricted level security or higher.

**Parameters**

None.

**Example Request**

**Response:**

```
{
  "id": "StopDatabase-testDB-2014-07-20 13:02:08.453547",
```
**POST databases/:database_name/hosts/:host_id/replace_with/:host_id_new**

Creates a job to replace the host identified by `hosts/:host_id` with the host identified by `replace_with/:host_id`. Vertica performs these operations for the database identified by `:database_name`. The `:database_name` is the value of the `name` field that the `GET databases` command returns. The `:host_id` is the value of the `host` field as returned by `GET databases/:database_name`. You can find valid replacement hosts using `GET hosts`. The replacement host cannot already be part of the database. You must stop the vertica process on the host being replaced.

Returns a job ID that you can use to determine the status of the job. See `GET jobs`.

**Resource URL**

`https://<NODE>:5444/databases/:database_name/hosts/:host_id/replace_with/:host_id_new`

**Authentication**

Requires a VerticaAPIKey in the request header.

The API key must have admin level security.

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>user_id</td>
<td>A database username.</td>
</tr>
<tr>
<td>passwd</td>
<td>A password for the username.</td>
</tr>
</tbody>
</table>

**Example Request**

```
```
Response:

```json
{
}
```
GET databases/:database_name/nodes

Returns a comma-separated list of node IDs for the database identified by :database_name. The :database_name is the value of the name field that the GET databases command returns.

Resource URL

https://<NODE>:5444/:database_name/nodes

Authentication

Requires a VerticaAPIKey in the request header.

The API key must have restricted level security or higher.

Parameters

None.

Example Request

| GET                  | https://<NODE>:5444/VMart/nodes |

Response:

```json
[
  {
    "database_id": "VMart",
    "node_id": "v_vmart_node0001,v_vmart_node0002,v_vmart_node0003",
    "status": "Unknown"
  }
]
```
GET `databases/:database_name/nodes/:node_id`

Returns details about the node identified by :node_id. The :node_id is one of the node IDs returned by GET `databases/:database_name/nodes`.

**Resource URL**

https://<NODE>:5444/:database_name/nodes/:node_id

**Authentication**

Requires a VerticaAPIKey in the request header.

The API key must have restricted level security or higher.

**Parameters**

None.

**Example Request**

```
GET
https://<NODE>:5444/databases/VMart/nodes/v_vmart_node0001
```

**Response:**

```
{
  "db": "VMart",
  "host": "10.20.100.247",
  "name": "v_vmart_node0001",
  "state": "UP"
}
```
**POST databases/:database_name/process**

Creates a job to start the database identified by :database_name. The :database_name is the value of the name field that the GET databases command returns.

Returns a job ID that can be used to determine the status of the job. See GET jobs.

**Resource URL**

https://<NODE>:5444/databases/:database_name/process

**Authentication**

Requires a VerticaAPIKey in the request header.

The API key must have restricted level security or higher.

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>epoch</td>
<td>Start the database from this epoch.</td>
</tr>
<tr>
<td>include</td>
<td>Include only these hosts when starting the database. Use a comma-separated list of hostnames.</td>
</tr>
</tbody>
</table>

**Example Request**

POST https://<NODE>:5444/databases/:testDB/process

An example of the full request using cURL:

```bash
curl -d "epoch=epoch_number&include=host1,host2" -X POST -H "VerticaApiKey: ValidAPIKey"
https://<NODE>:5444/:testDB/process
```

**Response:**

```json
{
  "id": "StartDatabase-testDB-2014-07-20 12:41:46.061408",
  "url": "/jobs/StartDatabase-testDB-2014-07-20 12:41:46.061408"
}
```
GET databases/:database_name/process

Returns a state of UP or DOWN for the database identified by :database_name. The :database_name is the value of the name field that the GET databases command returns.

Resource URL

https://<NODE>:5444/databases/:database_name/process

Authentication

Requires a VerticaAPIKey in the request header.

The API key must have restricted level security or higher.

Parameters

None.

Example Request

GET

https://<NODE>:5444/databases/VMart/process

Response:

{
   "state": "UP"
}
DELETE databases/:database_name/process

Creates a job to stop the database identified by :database_name. The :database_name is the value of the name field that the GET databases command returns.

Returns a job ID that you can use to determine the status of the job. See GET jobs.

Resource URL

https://<NODE>:5444/databases/:database_name/process

Authentication

Requires a VerticaAPIKey in the request header.

The API key must have restricted level security or higher.

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>user_id</td>
<td>A database username.</td>
</tr>
<tr>
<td>passwd</td>
<td>The password for the username.</td>
</tr>
</tbody>
</table>

Example Request

An example of the full request using cURL:

Response:
**POST databases/:database_name/rebalance/process**

Creates a job to run a rebalance on the database identified by host identified by :database_name. The :database_name is the value of the name field that the GET databases command returns.

Returns a job ID that you can use to determine the status of the job. See GET jobs.

**Resource URL**

https://<NODE>:5444/databases/:database_name/rebalance/process

**Authentication**

Requires a VerticaAPIKey in the request header.

The API key must have restricted level security or higher.

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>user_id</td>
<td>A database username.</td>
</tr>
<tr>
<td>passwd</td>
<td>A password for the username.</td>
</tr>
</tbody>
</table>

**Example Request**

**Response:**

```json
{
  "id": "RebalanceData-testDB-2014-07-20 21:42:45.731038",
  "url": "/jobs/RebalanceData-testDB-2014-07-20 21:42:45.731038"
}
```
**POST databases/:database_name/Workload Analyzer/process**

Creates a job to run Workload Analyzer on the database identified by host identified by :database_name. The :database_name is the value of the name field that the GET databases command returns.

Returns a job ID that you can use to determine the status of the job. See GET jobs.

**Resource URL**

https://<NODE>:5444/databases/:database_name/Workload Analyzer/process

**Authentication**

Requires a VerticaAPIKey in the request header.

The API key must have restricted level security or higher.

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>user_id</td>
<td>A database username.</td>
</tr>
<tr>
<td>passwd</td>
<td>A password for the username.</td>
</tr>
</tbody>
</table>

**Example Request**

<table>
<thead>
<tr>
<th>Request Type</th>
<th>URL</th>
</tr>
</thead>
<tbody>
<tr>
<td>POST</td>
<td>https://&lt;NODE&gt;:5444/databases/testDB/Workload Analyzer/process?user_id=username&amp;passwd=username_password</td>
</tr>
</tbody>
</table>

**Response:**

```
{
}
```
Hosts

You can use these API calls to get information on the hosts in your cluster.

<table>
<thead>
<tr>
<th>GET hosts</th>
<th>Returns a list of hosts in this cluster.</th>
</tr>
</thead>
<tbody>
<tr>
<td>GET hosts/:hostid</td>
<td>Returns details for a specific host in this cluster.</td>
</tr>
</tbody>
</table>
**GET hosts**

Returns a list of the hosts in the cluster and the hardware, software, and network details about each host.

**Resource URL**

https://<NODE>:5444/hosts

**Authentication**

Requires a VerticaAPIKey in the request header.

The API key must have **restricted** level security or higher.

**Parameters**

None.

**Example Request**

| GET | https://<NODE>:5444/hosts |

Response:

```

GET hosts/:hostid

Returns hardware, software, and network details about the host identified by :host_id. You can find :host_id for each host using GET hosts.

Resource URL

https://<NODE>:5444/hosts/:hostid

Authentication

Requires a VerticaAPIKey in the request header.

The API key must have restricted level security or higher.

Parameters

None.

Example Request

| GET | https://<NODE>:5444/hosts/:10.20.100.247 |

Response:

```json
{
   "body": {
      "cpu_info": {
         "cpu_type": "Intel(R) Xeon(R) CPU E5-2695 v2 @ 2.40GHz",
         "number_of_cpus": 2
      },
      "hostname": "v_vmart_node0001.example.com",
      "max_user_proc": "3833",
      "nics": [
         {
            "broadcast": "10.20.100.255",
            "ipaddr": "10.20.100.247",
            "name": "eth0",
            "netmask": "255.255.255.0",
            "speed": "unknown"
         }
      ]
   }
}
```
Jobs

You can use these API calls to get information on your database's jobs.

| GET jobs | Returns a list of jobs the agent is tracking, along with their current status and exit codes. |
| GET jobs/:id | Returns the details (the saved output) for a specific job. |
**GET jobs**

Returns a list of jobs being tracked by the agent and job details.

Jobs always start immediately. The **is_running** field is a Boolean value. If **is_running** is false, then the job is complete.

The **exit_code** details the status of the job. The **exit_code** is different for certain types of jobs:

- For Backup jobs:
  - 0 indicates success.
  - Any other number indicates a failure.
- For all other jobs:
  - -9 indicates success.
  - Any other number indicates a failure.

You can see details about failures in `/opt/vertica/log/agentStdMsg.log`.

**Resource URL**

https://<NODE>:5444/jobs

**Authentication**

Requires a **VerticaAPIKey** in the request header.

The API key must have **restricted** level security or higher.

**Parameters**

None.

**Example Request**

```
GET https://<NODE>:5444/jobs
```
Response:

```json
{
  "body": [
    {
      "exit_code": 0,
      "id": "CreateBackup-VMart-1405012447.75",
      "is_running": false,
      "status": "unused",
      "ts": "1405012461.18"
    },
    {
      "exit_code": 1,
      "id": "CreateBackup-VMart-1405012454.88",
      "is_running": false,
      "status": "unused",
      "ts": "1405012455.18"
    }
  ],
  "href": "/jobs",
  "links": [
    "/:jobid"
  ],
  "mime-type": "application/vertica.jobs.json-v2"
}
```
**GET jobs/:id**

Gets the details for a specific job with the provided :id. You can determine the list of job :ids using GET jobs.

Details for a specific job are the same as the details provided for all jobs by GET jobs.

**Note:**
You must URL encode the :id as some IDs may contain spaces or other special characters.

**Resource URL**

https://<NODE>:5444/jobs/:id

**Authentication**

Requires a VerticaAPIKey in the request header.

The API key must have restricted level security or higher.

**Parameters**

None.

**Example Request**

| GET | https://<NODE>:5444/jobs/CreateBackup-VMart-1405012454.88 |

**Licenses**

You can use these API calls to manage licenses for your database.
| POST licenses | Uploads and applies a new license to this cluster. |
| GET licenses | Returns the license field that databases created on this cluster use. |
**POST licenses**

Uploads and applies a license file to this cluster.

You must provide the license file as an HTTP POST form upload, identified by the name `license`. For example, you can use `cURL`:

```bash
curl -k --request POST -H "VerticaApiKey:ValidAPIKey" \
https://v_vmart_node001:5444/licenses --form "license=@vlicense.dat"
```

**Resource URL**

https://<NODE>:5444/licenses

**Authentication**

Requires a `VerticaApiKey` in the request header.

The API key must have `admin` level security.

**Parameters**

None.

**Example Request**

| POST | https://<NODE>:5444/licenses |

**Response:**

There is no HTTP body response for successful uploads. A successful upload returns an HTTP 200/OK header.
**GET licenses**

Returns any license files that are used by this cluster when creating databases. License files must reside in /opt/vertica/config/share.

**Resource URL**

https://<NODE>:5444/licenses

**Authentication**

Requires a VerticaAPIKey in the request header.

The API key must have restricted level security or higher.

**Parameters**

None.

**Example Request**

```
GET
https://<NODE>:5444/licenses
```

**Response:**

```
{
   "body": [ 
   {
       "comment": "Vertica license is valid",
       "end": "Perpetual",
       "grace": "0",
       "size": "1TB CE Nodes 3",
       "start": "2011-11-22",
       "status": true,
       "vendor": "Vertica Community Edition"
   },
   "href": "/license",
   "links": [],
   "mime-type": "application/vertica.license.json-v2"
}
```
## Nodes

You can use these API calls to retrieve information on the nodes in your cluster.

<table>
<thead>
<tr>
<th>GET nodes</th>
<th>Returns a list of nodes in this cluster.</th>
</tr>
</thead>
<tbody>
<tr>
<td>GET nodes/:nodeid</td>
<td>Returns details for a specific node in this cluster.</td>
</tr>
</tbody>
</table>
**GET nodes**

Returns a list of nodes associated with this cluster.

**Resource URL**

https://<NODE>:5444/nodes

**Authentication**

Requires a VerticaAPIKey in the request header.

The API key must have restricted level security or higher.

**Parameters**

None.

**Example Request**

| GET | https://<NODE>:5444/nodes |

**Response:**

```json
{
   "body": [
      "node0001",
      "node0002",
      "node0003",
      "v_testdb_node0001",
      "v_testdb_node0002",
      "v_testdb_node0003",
      "v_vmart_node0001",
      "v_vmart_node0002",
      "v_vmart_node0003"
   ],
   "href": "/nodes",
   "links": [
      "./nodeid"
   ]
}
```
"mime-type": "application/vertica.nodes.json-v2"
}
**GET nodes/:nodeid**

Returns details about the node identified by :node_id. You can find the :node_id for each node using GET nodes.

In the body field, the following information is detailed in comma-separated format:

- Node Name
- Host Address
- Catalog Directory
- Data Directory

**Resource URL**

https://<NODE>:5444/nodes/:node_id

**Authentication**

Requires a VerticaAPIKey in the request header.

The API key must have restricted level security or higher.

**Parameters**

None.

**Example Request**

| GET | https://<NODE>:5444/nodes/v_vmart_node0001 |

**Response:**

```
{
  "body": [
    "v_vmart_node0001",
    "10.20.100.247,/home/dbadmin,/home/dbadmin"
  ],
  "href": "/nodes/v_vmart_node0001",
}  ```
Webhooks

You can use these API calls to obtain information on, create, or delete webhooks.

<table>
<thead>
<tr>
<th>Method</th>
<th>Endpoint</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>GET</td>
<td>webhooks</td>
<td>Returns a list of active webhooks.</td>
</tr>
<tr>
<td>POST</td>
<td>webhooks/subscribe</td>
<td>Creates a new webhook.</td>
</tr>
<tr>
<td>DELETE</td>
<td>webhooks/:subscriber_id</td>
<td>Deletes an existing webhook.</td>
</tr>
</tbody>
</table>
**GET webhooks**

Returns a list of active webhooks for this cluster.

### Resource URL

https://<NODE>:5444/webhooks

### Authentication

Requires a [VerticaAPIKey](#) in the request header.

The API key must have **restricted** level security or higher.

### Parameters

None.

### Example Request

**GET**  
https://<NODE>:5444/webhooks

**Response:**

```json
{
    "body": [
        {
            "host": "192.168.232.1",
            "id": "79c1c8a18be02804b3d2f48ea6462909",
            "port": 80,
            "timestamp": "2014-07-20 22:54:09.829642",
            "url": "/gettest.htm"
        },
        {
            "host": "192.168.232.1",
            "id": "9c32cb0f3d2f9a7cb10835f1732fd4a7",
            "port": 80,
            "timestamp": "2014-07-20 22:54:09.829707",
            "url": "/getwebhook.php"
        }
    ]
}
```
},
  "href": "/webhooks",
  "links": [
    "/subscribe",
    "/:subscriber_id"
  ],
  "mime-type": "application/vertica.webhooks.json-v2"
}
**POST webhooks/subscribe**

Creates a subscription for a webhook.

**Resource URL**

https://<NODE>:5444/webhooks/subscribe

**Authentication**

Requires a VerticaAPIKey in the request header.

The API key must have restricted level security or higher.

**Parameters**

<table>
<thead>
<tr>
<th>url</th>
<th>A URL to an application that accepts JSON messages from this cluster.</th>
</tr>
</thead>
</table>

**Example Request**

**Response:**

The response is not JSON encoded. The only text response is the ID of the webhook subscription. Additionally, an HTTP 200/OK header indicates success.

| 79c1c8a18be02804b3d2f48ea6462909 |
DELETE *webhooks/:subscriber_id*

Deletes the webhook identified by :subscriber_id. The :subscriber_id is the value of the *id* field that the *GET webhooks* command returns.

**Resource URL**

https://<NODE>:5444/webhooks/:subscriber_id

**Authentication**

Requires a *VerticaAPIKey* in the request header.

The API key must have *restricted* level security or higher.

**Parameters**

None.

**Example Request**

| DELETE | https://<NODE>:5444/webhooks/79c1c8a18be82804b3d2f48ea6462990 |

**Response:**

There is no HTTP body response for successful deletes. A successful delete returns an HTTP 200/OK header.
Rest APIs for the Management Console

These API calls interact with Management Console nodes.

Alerts

| GET alerts | Returns alerts for the current user. |

Time Information

| GET mcTimeInfo | Returns the current time for the MC server and the timezone of the location where the MC server is located. |

MC-User-ApIKey

The MC-User-ApIKey is a user-specific key used with Management Console. Users must have an MC-User-ApIKey to interact with MC using the Rest API. All users with roles other than None automatically receive an MC-User-ApIKey.

This key grants users the same rights through the API that they have available through their MC roles. To interact with the MC, users pass the key in the request header for the API.

View the MC-User-ApIKey

If you are the database administrator, you can view the MC-User-ApIKey for all users. Individual users can view their own keys.

1. Connect to MC and go to MC Settings > User Management.
2. Select the user to view and click Edit. The user's key appears in the User API Key field.
GET alerts

Returns a list of MC alerts, their current status, and database properties.

Resource URL

https://<MC_NODE>:5450/webui/api/alerts

Authentication

Requires an MC-User-Apikey in the request header.

Filter Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
</table>
| types     | The type of alert to retrieve. Valid values are:  
  * info  
  * notice  
  * warning  
  * error  
  * critical  
  * alert  
  * emergency |
| category  | For information, see Thresholds Category Filter. |
| db_name   | For information, see Database Name Category Filter. |
| limit     | The maximum number of alerts to retrieve. If the limit is lower than the number of existing alerts, Vertica retrieves the most recent alerts. Used with the type parameter, Vertica retrieves up to the limit for each type. For example, for a limit of five and types of critical and emergency, you could receive up to ten total alerts. |
| time_from | The timestamp start point from which to retrieve alerts. You can use this parameter in combination with the time_to parameter to retrieve alerts for a specific time range. Values must be passed in the following format: yyyy- |
If you provide only the `time_from` parameter, and omit the `time_to` parameter, the response contains all alerts generated from the `time_from` parameter to the current time.

**Example Request**

**GET**  
https://<MC_NODE>:5450/webui/api/alerts?types=critical

**Request Alerts Using cURL**

This example shows how you can request alerts using cURL. In this example, the `limit` parameter is set to '2' and the `types` parameters is set to `info` and `notice`:

```
```

**Response:**

```
[
  {
    "alerts": [  
      
      {  
        "id": 5502,
        "markedRead": false,
        "eventTypeCode": 0,
        "create_time": "2016-02-02 05:12:10.0",
        "updated_time": "2016-02-02 15:50:20.511",
        "severity": "warning",
        "status": 1,
        "nodeName": "v_vmart_node0001",
        "databaseName": "VMart",
```
Request Alerts Within a Time Range

These examples show various ways in which you can request the same alert as in the preceding example, but within specified time ranges.

Request the alert within a specific time range, using the time_from and time_to parameters:

```
```

Request the alert from a specific start time to the present using the time_from parameter:

```
```

Request the alert to a specific end point using the time_to parameter. When you use the time_to parameter without the time_from parameter, the time_from parameter defaults to the oldest alerts your MC contains:
GET mcTimeInfo

Returns the current time for the MC server and the timezone where the MC server is located.

Resource URL

https://<MC_NODE>:5450/webui/api/mcTimeInfo

Authentication

Requires an MC-User-Apkey in the request header.

Parameters

None.

Example Request

GET
https://<MC_NODE>:5450/webui/api/mcTimeInfo

This example shows how you can request MC time information using cURL:

Response:

{"mc_current_time":"Tue, 2000-01-01 01:02:03 -0500","mc_timezone":"US/Eastern"}

Thresholds Category Filter

Returns a list of alerts related to threshold settings in MC.
Resource URL

https://<MC_NODE>:5450/webui/api/alerts?category=thresholds

Authentication

Requires an MC-User-Apikey in the request header.

Example Request

GET

```
GET https://<MC_NODE>:5450/webui/api/alerts?category=thresholds
```

This example shows how you can request alerts on thresholds using cURL:

```
```

Response:
[{
    "alerts": [
        {
            "id": 33,
            "markedRead": false,
            "eventTypeCode": 2,
            "create_time": "2015-11-10 10:28:41.332",
            "updated_time": "2015-11-10 10:28:41.332",
            "severity": "warning",
            "status": 1,
            "databaseName": "mydb",
            "databaseId": 1,
            "clusterName": "144668057043_cluster",
            "description": "Database: mydb Lower than threshold Node Disk I/O 10 % v_mydb_node0002 ;1.6% v_mydb_node0002 ;1.4% v_mydb_node0002 ;2.3% v_mydb_node0002 ;1.3% v_mydb_node0002 ;1.39% v_mydb_node0001 ;3.78% v_mydb_node0001 ;1.79% ",
            "summary": "Threshold : Node Disk I/O < 10 %",
            "internal": false,
            "count": 1
        },
        {
            "id": 32,
            "markedRead": false,
            "eventTypeCode": 2,
            "create_time": "2015-11-10 10:28:40.975",
            "updated_time": "2015-11-10 10:28:40.975",

See Also

- Combining Sub-Category Filters with Category Filters

Database Name Category Filter

Returns a list of MC alerts for a specific database.

Resource URL

https://<MC_NODE>:5450/webui/api/alerts?db_name=<database_name>

Authentication

Requires an MC-User-Apikey in the request header.

Example Request

| GET | htp |
This example shows how you can view alerts on a specific database using cURL:

```bash
curl -H "MC-User-ApiKey: ValidUserKey" https://<MC_NODE>:5450/webui/api/alerts?db_name="mydb"
```

**Response:**

```json
[
    {
        "alerts": [
            {
                "id": 9,
                "markedRead": false,
                "eventTypeCode": 2,
                "create_time": "2015-11-05 15:10:53.391",
                "updated_time": "2015-11-05 15:10:53.391",
                "severity": "notice",
                "status": 1,
                "databaseName": "mydb",

            }
        ]
    }
]```

Vertica Analytic Database (11.0.x)
Combining Sub-Category Filters with Category Filters

You can combine category filters with sub-category filters, to obtain alert messages for specific thresholds you set in MC. You can also use sub-category filters to obtain information about alerts on specific resource pools in your database.

Sub-Category Filters

You can use the following sub-category filters with the category filters. Sub-category filters are case sensitive and must be lowercase.

<table>
<thead>
<tr>
<th>Sub-Category Filter</th>
<th>Alerts Related to Threshold Value Set For:</th>
</tr>
</thead>
<tbody>
<tr>
<td>threshold_node_cpu</td>
<td>Node CPU</td>
</tr>
<tr>
<td>threshold_node_memory</td>
<td>Node Memory</td>
</tr>
<tr>
<td>threshold_node_disk_usage</td>
<td>Node Disk Usage</td>
</tr>
<tr>
<td>threshold_node_diskio</td>
<td>Node Disk I/O</td>
</tr>
<tr>
<td>threshold_node_cpuio</td>
<td>Node CPU I/O Wait</td>
</tr>
<tr>
<td>threshold_node_rebootrate</td>
<td>Node Reboot Rate</td>
</tr>
<tr>
<td>threshold_netio</td>
<td>Network I/O Error</td>
</tr>
<tr>
<td>Sub-Category Filter</td>
<td>Alerts Related to Threshold Value Set For</td>
</tr>
<tr>
<td>--------------------------</td>
<td>--------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>threshold_rp_query_max_time</td>
<td>Queries reaching the maximum allowed execution time.</td>
</tr>
<tr>
<td>threshold_rp_query_resource_reject</td>
<td>The number of queries with resource rejections.</td>
</tr>
<tr>
<td>threshold_rp_query_queue_time</td>
<td>The number of queries that ended because of queue time exceeding a limit.</td>
</tr>
<tr>
<td>threshold_rp_query_run_time</td>
<td>The number of queries that ended because of run time exceeding a limit.</td>
</tr>
<tr>
<td>threshold_rp_memory</td>
<td>The minimum allowed resource pool size.</td>
</tr>
<tr>
<td>threshold_rp_max_memory</td>
<td>The maximum allowed resource pool size.</td>
</tr>
</tbody>
</table>

**Resource Pool-Specific Sub-Category Filters**

To retrieve alerts for a specific resource pool, you can use sub-category filters in combination with the following category filters:

- thresholds
- rp_name

If you use these sub-category filters without the rp_name filter, the query retrieves alerts for all resource pools in your database.

**Authentication**

Requires an **MC-User-Apikey** in the request header.
## Example Request

| GET | `http` | `//` | `<MC_NODE>`:5450/webui/api/alerts?category=hours&subcategory=filter> |
Combine the Thresholds Category Filter with a Sub-Category Filter

This example shows how you can request alerts using cURL with the thresholds category filter and a sub-category filter. You apply the following filters:

- thresholds
- threshold_node_cpu

```
```

Response:

```
[
  {
    "alerts": [
      {
        "id": 11749,
        "markedRead": false,

Using Eon Mode

You can operate your Vertica database in Eon Mode instead of in Enterprise Mode. The two modes differ primarily in how they store data:

- Eon Mode databases use communal storage for their data.
- Enterprise Mode databases store data locally in the file system of nodes that make up the database.

These different storage methods lead to a number of important differences between the two modes. In Enterprise Mode, each database node stores a portion of the data and performs a portion of the computation. In Eon Mode, computational processes are separated from a communal (shared) storage layer, which enables rapid scaling of computational resources as demand changes.

For more on how these two modes compare, see Vertica Architecture: Eon Versus Enterprise Mode.

Creating a Database in Eon Mode

Creating an Eon Mode Database in a Cloud Environment

The easiest way to create an Eon Mode database in the cloud is to use the MC. The MC can create your database and provision the nodes to run the database at the same time. See Creating a Database using MC for details. For specific instructions for your cloud environment, see:

- Creating an Eon Mode Database in AWS with MC
- Deploying an Eon Mode Database On GCP

On AWS, you can also create a database using admintools:

1. Provision nodes for the new database manually. See Deploy AWS Instances for your Vertica Database Cluster for instructions.
2. Create your database using admintools. See Create an Eon Mode Database for steps.
Creating an On-Premises Eon Mode Database

If you have an on-premises install, you create an Eon Mode database using admintools. For more information see the Create Database step in the installation instructions for your communal storage backend:

- Installing an Eon Mode Database on Premises with FlashBlade
- Installing Eon Mode On-Premises with Communal Storage on MinIO
- Installing Eon Mode On-Premises with Communal Storage on HDFS

Configuring Your Vertica Cluster for Eon Mode

Running Vertica in Eon Mode decouples the cluster size from the data volume and lets you configure for your compute needs independently from your storage needs. There are a number of factors you must consider when deciding what sorts of instances to use and how large your Eon Mode cluster will be.

Before You Begin

Vertica Eon Mode works both in the cloud and on-premises. As a Vertica administrator setting up your production cluster running in Eon Mode, you must make decisions about the virtual or physical hardware you will use to meet your needs. This topic provides guidelines and best practices for selecting server types and cluster sizes for a Vertica database running in Eon Mode. It assumes that you have a basic understanding of the Eon Mode architecture and concepts such as communal storage, depot, and shards. If you need to refresh your understanding, see Eon Mode Architecture.

Cluster Size Overview

Because Eon Mode separates data storage from the computing power of your nodes, choosing a cluster size is more complex than for an Enterprise Mode database. Usually, you choose a base number of nodes that will form one or more primary subclusters. These
subclusters contain nodes that are always running in your database. You usually use them for workloads such as data loading and executing DDL statements. You rarely alter the size of these subclusters dynamically. As you need additional compute resources to execute queries, you add one or more subclusters (usually secondary subclusters) of nodes to your database.

When choosing your instances and sizing your cluster for Eon Mode, consider the working data size that your database will be dealing with. This is the amount of data that most of your queries operate on. For example, suppose your database stores sales data. If most of the queries running on your database analyze the last month or two of sales to create reports on sales trends, then your working data size is the amount of data you typically load over a few months.

## Choosing Instances or Physical Hardware

Depending on the complexity of your workload and expected concurrency, choose physical or virtual hardware that has sufficient CPU and memory. For production clusters Vertica recommends the following minimum configuration for either virtual or physical nodes in an Eon Mode database:

- 16 cores
- 128 GB RAM
- 2 TB of local storage

### Note:

The above specifications are just a minimum recommendation. You should consider increasing these specifications based on your workloads and the amount of data you are processing.

You must have a minimum of 3 nodes in the an Eon Mode database cluster.

For specific recommendations of instances for cloud-based Eon Mode database, see:

- Choosing AWS Eon Mode Instance Types
- GCP Eon Mode Instance Recommendations
Determining Local Storage Requirements

For both virtual and physical hardware, you must decide how much local storage your nodes need. In Eon Mode, the definitive copy of your database's data resides in the communal storage. This storage is provided by either a cloud-based object store such as AWS S3, or by an on-premises object store, such as a Pure Storage FlashBlade appliance.

Even though your database's data is stored in communal storage, your nodes still need some local storage. A node in an Eon Mode database uses local storage for three purposes:

- **Depot storage**: To get the fastest response time for frequently executed queries, provision a depot large enough to hold your working data set after data compression. Divide the working data size by the number of nodes you will have in your subcluster to estimate the size of the depot you need for each node in a subcluster. See Choosing the Number of Shards and the Initial Node Count below to get an idea of how many nodes you want in your initial database subcluster. In cases where you expect to dynamically scale your cluster up, estimate the depot size based on the minimum number of nodes you anticipate having in the subcluster.

  Also consider how much data you will load at once when sizing your depot. When loading data, Vertica defaults to writing uncommitted ROS files into the depot before uploading the files to communal storage. If the free space in the depot is not sufficient, Vertica evicts files from the depot to make space for new files.

  Your data load fails if the amount of data you try to load in a single transaction is larger than the total sizes of all the depots in the subcluster. To load more data than there is space in the subcluster's combined depots, set UseDepotForWrites to 0. This configuration parameter tells Vertica to load the data directly into communal storage.

- **Data storage**: The data storage location holds files that belong to temporary tables and temporary data from sort operators that spill to disk. When loading data into Vertica, the sort operator may spill to disk. Depending on the size of the load, Vertica may perform the sort in multiple merge phases. The amount of data concurrently loaded into Vertica cannot be larger than the sum of temporary storage location sizes across all nodes divided by 2.

- **Catalog storage**: The catalog size depends on the number of database objects per shard and the number of shard subscriptions per node.

Vertica recommends a minimum local storage capacity of 2 TB per node, out of which 60% is reserved for the depot and the other 40% is shared between the catalog and data location. If you determine that you need a depot larger than 1.2TB per node (which is 60%
of 2TB) then add more storage than this minimum recommendation. You can calculate the space you need using this equation:

For example, suppose you have a compressed working data size of 24TB, and you want to have a initial primary subcluster of 3 nodes. Using these values in the equation results in 13.33TB:

### Choosing the Number of Shards and the Initial Node Count

Shards are how Vertica divides the responsibility for the data in communal storage among nodes. Each node in a subcluster subscribes to at least one shard in communal storage. During queries, data loads, and other database tasks, each node is responsible for the data in the shards it subscribes to. See Shards and Subscriptions for more information.

The relation between shards and nodes means that when picking the number of shards for your database, you must consider the number of nodes you will have in your database, and how you expect to expand your database in the future.

You set the number of shards when you create your database. Once created, you cannot change the number shards. Therefore, choose a shard count that will allow your database to grow over time.

The following table shows the recommended shard count and initial node count base on the working data size. The initial node count is the number of nodes you will have in your core primary subcluster. Note that the number of shards is always a multiple of the node count. This ensures that the shards are evenly divided between the nodes. For best performance, always make the number of shards a multiple or even divisor of the number of nodes in a subcluster.

<table>
<thead>
<tr>
<th>Cluster Type</th>
<th>Working Data Size</th>
<th>Number of Shards</th>
<th>Initial Node Count</th>
</tr>
</thead>
<tbody>
<tr>
<td>Small</td>
<td>Up to 24 TB</td>
<td>6</td>
<td>3</td>
</tr>
<tr>
<td>Medium</td>
<td>Up to 48 TB</td>
<td>12</td>
<td>6</td>
</tr>
<tr>
<td>Large</td>
<td>Up to 96 TB</td>
<td>24</td>
<td>12</td>
</tr>
</tbody>
</table>
### How Shard Count Affects Scaling Your Cluster

The number of shards you choose for your database impacts your ability to scale your database in the future. If you have too few shards, your ability to efficiently scale your database can be limited. If you have too many shards, your database performance can suffer. A larger number of shards increases inter-node communication and catalog complexity.

One key factor in deciding your shard count is determining how you want to scale your database. There are two strategies you can use when adding nodes to your database. Each of these strategies let you improve different types of database performance:

- To increase the performance of complex, long-running queries, add nodes to an existing subcluster. These additional nodes improve the overall performance of these complex queries by splitting the load across more compute nodes. You can add more nodes to a subcluster than you have shards in the database. In this case, nodes in the subcluster that subscribe to the same shard will split up the data in the shard when performing a query. See [Elasticity](#) for more information.
- To increase the throughput of multiple short-term queries (often called "dashboard queries"), improve your cluster's parallelism by adding additional subclusters. Subclusters work independently and in parallel on these shorter queries. See [Subclusters](#) for more information.

These two approaches have an impact on the number of shards you choose to start your database with. Complex analytic queries perform better on subclusters with more nodes, which means that 6 nodes with 6 shards perform better than 3 nodes and 6 shards. Having more nodes than shards can increase performance further, but the performance gain is not linear. For example, a subcluster containing 12 nodes in a 6-shard database is not quite as efficient as as 12-node subcluster in a 12-shard database. Dashboard-type queries...
operating on smaller data sets may not see much difference between a 3-node subcluster in a 6-shard database and 6-node subcluster in a 6-shard database.

In general, choose a shard count that matches your expected working data size 6–12 months in the future. For more information about scaling your database, see Elasticity.

### Use Cases

Let’s look at some use cases to learn how to size your Eon Mode cluster to meet your own particular requirements.

**Use Case 1: Save Compute by Provisioning When Needed, Rather than for Peak Times**

This use case highlights increasing query throughput in Eon Mode by scaling a cluster from 6 to 18 nodes with 3 subclusters of 6 nodes each. In this use case, you need to support a high concurrent, short query workload on a 24 TB or less working data set. You create an initial database with 6 nodes and 6 shards. You scale your database for concurrent throughput on demand by adding one or more subclusters during certain days of the week or for specific date ranges when you are expecting a peak load. You can then shut down or terminate the additional subclusters when your database experiences lower demand. With Vertica in Eon Mode, you save money by provisioning on demand, rather than provisioning for the peak times.

**Use Case 2: Complex Analytic Workload Requires More Compute Nodes**

This use case showcases the idea that complex analytic workloads on large working data sets benefit from high shard count and node count. You create an initial subcluster with 24 nodes and 24 shards. As needed, you can add an additional 24 nodes to your initial subcluster. These additional nodes enable the subcluster to use elastic crunch scaling to reduce the time it takes to complete complex analytic queries.
Use Case 3: Workload Isolation

This use case showcases the idea of having separate subclusters to isolate ETL and report workloads. You create an initial primary subcluster with 6 nodes and 6 shards for servicing ETL workloads. Then add another 6-node secondary subcluster for executing query workloads. To separate the two workloads, you can configure a network load balancer or create connection load balancing policies in Vertica to direct clients to the correct subcluster based on the type of workloads they need to execute.

Migrating an Enterprise Database to Eon Mode

Vertica meta-function MIGRATE_ENTERPRISE_TO_EON migrates an Enterprise database to Eon Mode. The migration process includes the following stages:

1. Check migration prerequisites
2. Verify compliance
3. Execute the migration
4. Check migration results
5. Activate the Eon database

Migration Prerequisites

The following conditions must be true; otherwise, MIGRATE_ENTERPRISE_TO_EON returns with an error:

- The source Enterprise database version must be ≥10.0.
- All nodes in the source database must be in an UP state and of type PERMANENT or EPHEMERAL. Verify by querying system table NODES:

```
=> SELECT node_name, node_type, node_state FROM nodes;
   node_name | node_type | node_state
-----------------------------
 v_vmart_node0001 | PERMANENT | UP
 v_vmart_node0002 | PERMANENT | UP
 v_vmart_node0003 | PERMANENT | UP
(3 rows)
```
Tip:
When planning how to provision the target Eon database, consider that MIGRATE.ENTERPRISE_TO_EON creates the same number of nodes as on the original Enterprise database, and an equal number of segmented shards. Choose the appropriate instance type accordingly.

- The source database must be configured as an elastic cluster. By default, any database created since Vertica release 9.2.1 is configured as an elastic cluster. To verify whether an Enterprise database is configured as an elastic cluster, query system table ELASTIC_CLUSTER:

```sql
=> SELECT is_enabled FROM elastic_cluster;
   is_enabled
   ----------
    t
   (1 row)
```

If the query returns false, call meta-function ENABLE ELASTIC_CLUSTER on the Enterprise database.

- The source Enterprise database must configure Eon parameters as required by the target Eon object store (see Configuration Requirements below).
- The database must not contain projections that are unsupported by Eon.

Unsupported Projections

Eon databases do not support four types of projections, as described below. If MIGRATE.ENTERPRISE_TO_EON finds any of these projection types in the Enterprise database, it rolls back the migration and reports the offending projections or their anchor tables in the migration error log. For example:

The following projections are inconsistent with cluster segmentation. Rebalance them with REBALANCE_CLUSTER() or REBALANCE_TABLE():
Projection(Anchor Table): public.incon1_p1_b0(public.incon1)

<table>
<thead>
<tr>
<th>Why projection is invalid</th>
<th>Notes</th>
<th>Resolution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Inconsistent with cluster segmentation.</td>
<td>For example, nodes were added to the cluster, so current distribution of projection data is</td>
<td>Rebalance cluster or table. The error log file lists the names of all tables with problematic projections. You</td>
</tr>
</tbody>
</table>
### Configuration Requirements

Before migration, set the following configuration parameters on the source database.

**Important:**
All parameters must be set at the database level.

<table>
<thead>
<tr>
<th>Target Eon environment</th>
<th>Configuration requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>S3: AWS, Pure Storage, MinIO</td>
<td>The following requirements apply to all supported cloud and non-cloud (on-premises) environments: AWS, Pure Storage, and MinIO. One exception applies: migration from an Enterprise Mode</td>
</tr>
</tbody>
</table>
### Target Eon environment

<table>
<thead>
<tr>
<th>Configuration requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>database on AWS.</td>
</tr>
<tr>
<td>- <strong>AWSEndpoint</strong> (Pure Storage, MinIO only)</td>
</tr>
<tr>
<td>- <strong>AWSRegion</strong> (AWS only)</td>
</tr>
<tr>
<td>- <strong>AWSAuth / IAM role</strong></td>
</tr>
<tr>
<td>- <strong>AWSEnableHttps</strong></td>
</tr>
</tbody>
</table>

**Important:**

If migrating to on-premises communal storage with Pure Storage and MinIO, set configuration parameter **AWSEnableHttps** to be compatible with the database TLS encryption setup: **AWSEnableHttps=1** if using TLS, otherwise **0**. If settings are incompatible, the migration returns with an error.

### Azure

- You must use an azb:// schema URI to set the Azure Blob Storage location for communal data storage. See [Azure Blob Storage Object Store](#) for the format of this URI.
- Select one of the following authentication methods to grant Vertica access to the storage location:
  - Configure managed identities to grant your Azure VMs access to the storage location. This option does not require any configuration within Vertica.
  - Set the **AzureStorageCredentials** and **AzureStorageEndpointConfig** configuration parameters at the database level to have Vertica authenticate with the storage location.

See [Azure Blob Storage Object Store](#) for more about the two authentication methods.

### GCP

- **GCSEndpoint**
- **GCSAuth**
- **GCSEnableHttp**

### HDFS

The following requirements apply:

- The source database must be configured to access HDFS, including (as applicable) high-availability (HA) and Kerberos authentication settings.
**Target Eon environment**  

<table>
<thead>
<tr>
<th>Configuration requirements</th>
</tr>
</thead>
</table>
| **Tip:**  
If using Kerberos authentication, record settings for the following [Kerberos configuration parameters](#).  
You will need to apply these settings to the migrated Eon database:  

KerberosServiceName  
KerberosRealm  
KerberosKeytabFile  

| **Important:**  
The following restrictions apply to Kerberos authentication:  

- Migration only supports [Vertica authentication](#). User authentication through [delegation tokens or proxy users](#) is not supported.  
- Migration does not support authentication of [multiple Kerberos realms](#).  

- Set configuration parameter `HadoopConfDir` at the database level (not required for non-HA environments).  

---

## Compliance Verification

Before running migration, check whether the Enterprise source database complies with all migration requirements. You do so by setting the last Boolean argument of `MIGRATE_ENTERPRISE_TO_EON` to true. This optional argument—by default set to false—specifies whether the meta-function only performs a compliance check. For example:

```
=> SELECT migrate_enterprise_to_eon('s3://verticadbbucket', '/vertica/depot', true);
```

If the meta-function discovers any compliance issues, it writes these to the migration error log `migrate_enterprise_to_eon_error.log` in the database directory.
Migration Execution

MIGRATE_ENTERPRISE_TO_EON migrates an Enterprise database to an Eon Mode database. For example:

```sql
=> SELECT migrate_enterprise_to_eon('s3://verticadbbucket', '/vertica/depot', false);
```

If the meta-function's last Boolean argument is omitted or set to false, it executes the migration. MIGRATE_ENTERPRISE_TO_EON runs in the foreground, and until it returns—either with success or an error—it blocks all operations in the same session on the source Enterprise database. If successful, MIGRATE_ENTERPRISE_TO_EON returns with a list of nodes in the migrated database. You can then proceed to revive the migrated Eon database.

Handling Interrupted Migration

If migration is interrupted before the meta-function returns—for example, the client disconnects, or a network outage occurs—the migration errors out. In this case, call MIGRATE_ENTERPRISE_TO_EON to restart migration.

Communal storage of the target database retains data that was already copied before the error occurred. When you call MIGRATE_ENTERPRISE_TO_EON to resume migration, the meta-function first checks the data on communal storage and only copies unprocessed data from the source database.

Important:
When migrating to an Eon database with HDFS communal storage, migration interruptions are liable to leave files in an incomplete state that is visible to users. When you call MIGRATE_ENTERPRISE_TO_EON to resume migration, the meta-function first compares source and target file sizes. If it finds inconsistent sizes for a given file, it truncates the target cluster file and repeats the entire transfer.
Repeating Migration

You can repeat migration multiple times to the same communal storage location. This can be useful for backfilling changes that occurred in the source database during the previous migration.

The following constraints apply:

- You can migrate from only one database to the same communal storage location.
- After reviving the newly migrated Eon database, you cannot migrate again to its communal storage, unless you first drop the database and then clean up storage.

Monitoring Migration

System table `DATABASE_MIGRATION_STATUS` displays the progress of a migration in real time, and also stores data from previous migrations. The following example shows data of a migration that is in progress:

```sql
=> SELECT node_name, phase, status, bytes_to_transfer, bytes_transfered, communal_storage_location 
    FROM database_migration_status ORDER BY node_name, start_time;
```

```
<table>
<thead>
<tr>
<th>node_name</th>
<th>phase</th>
<th>status</th>
<th>bytes_to_transfer</th>
<th>bytes_transfered</th>
<th>communal_storage_location</th>
</tr>
</thead>
<tbody>
<tr>
<td>v_vmart_node0001</td>
<td>Catalog Conversion</td>
<td>COMPLETED</td>
<td>0</td>
<td>0</td>
<td>s3://verticadbbucket/</td>
</tr>
<tr>
<td>v_vmart_node0001</td>
<td>Data Transfer</td>
<td>COMPLETED</td>
<td>1134</td>
<td>1134</td>
<td>s3://verticadbbucket/</td>
</tr>
<tr>
<td>v_vmart_node0001</td>
<td>Catalog Transfer</td>
<td>COMPLETED</td>
<td>3765</td>
<td>3765</td>
<td>s3://verticadbbucket/</td>
</tr>
<tr>
<td>v_vmart_node0002</td>
<td>Catalog Conversion</td>
<td>COMPLETED</td>
<td>0</td>
<td>0</td>
<td>s3://verticadbbucket/</td>
</tr>
<tr>
<td>v_vmart_node0002</td>
<td>Data Transfer</td>
<td>COMPLETED</td>
<td>1140</td>
<td>1140</td>
<td>s3://verticadbbucket/</td>
</tr>
<tr>
<td>v_vmart_node0002</td>
<td>Catalog Transfer</td>
<td>COMPLETED</td>
<td>3766</td>
<td>3766</td>
<td>s3://verticadbbucket/</td>
</tr>
<tr>
<td>v_vmart_node0003</td>
<td>Catalog Conversion</td>
<td>COMPLETED</td>
<td>0</td>
<td>0</td>
<td>s3://verticadbbucket/</td>
</tr>
<tr>
<td>v_vmart_node0003</td>
<td>Data Transfer</td>
<td>RUNNING</td>
<td>5272616</td>
<td>183955</td>
<td>s3://verticadbbucket/</td>
</tr>
</tbody>
</table>
```
Error Logging

MIGRATE ENTERPRISE TO EON logs migration-related warnings, errors, and hints in migrate.enterprise.to.eon.error.log in the database directory. During execution, the meta-function also prints messages to standard output, together with the error log's pathname.

Conversion Results

The following table shows how migration handles visible objects in the source Enterprise database:

<table>
<thead>
<tr>
<th>From source Enterprise database...</th>
<th>To new Eon Mode database...</th>
</tr>
</thead>
<tbody>
<tr>
<td>Global catalog objects</td>
<td>Synced to communal storage</td>
</tr>
<tr>
<td>Multiple segmented projections in identical buddy projection group</td>
<td>One projection in the group</td>
</tr>
<tr>
<td>Unsegmented projection replicated on only one node</td>
<td>Distributed across all nodes</td>
</tr>
<tr>
<td>Number of nodes</td>
<td>Same number of nodes, and an equal number of segmented shards</td>
</tr>
<tr>
<td>Depot location</td>
<td>As specified in MIGRATE ENTERPRISE TO EON. Default depot size is set to 80% of local file system after revive.</td>
</tr>
<tr>
<td>USER and TEMP storage locations</td>
<td>Migrated</td>
</tr>
</tbody>
</table>

Tip:
Consider evaluating all migrated storage locations for their relevance in an Eon Mode database. For details, see S3 Storage of Temporary Data in Eon Mode.
<table>
<thead>
<tr>
<th>From source Enterprise database...</th>
<th>To new Eon Mode database...</th>
</tr>
</thead>
<tbody>
<tr>
<td>DATA and TEMP,DATA storage locations</td>
<td>Not migrated. New default DATA and TEMP,DATA storage locations are on the same path as the depot.</td>
</tr>
<tr>
<td>Fault groups and storage policies</td>
<td>Not migrated</td>
</tr>
<tr>
<td>External procedures</td>
<td></td>
</tr>
<tr>
<td>Catalog objects related to network settings—load balance groups, network addresses, routing rules, subnets, etc.</td>
<td></td>
</tr>
</tbody>
</table>

**Eon Database Activation**

After migration is complete and the Eon database is ready for use, perform these steps:

1. If migrating to an Eon database with HDFS communal storage, create a bootstrapping file to use when you revive the new Eon database. The bootstrapping file must be on the same node where the revive operation is launched, and readable by the user who launches the revive operation.

A bootstrapping file is required only if the new Eon database uses one or both of the following:

- **High Availability (HA) NameNodes**
  Set HadoopConfDir to the location of configuration file hdfs-site.xml—typically, /etc/hadoop/conf. This file defines parameter hdfs.nameservices and individual NameNodes, and must be distributed across all cluster nodes. For details, see Configuring HDFS Access.

- **Kerberos authentication**
  Set the following Kerberos configuration parameters:
  
  *KerberosServiceName*
  *KerberosRealm*
  *KerberosKeytabFile*

  For example, the bootstrapping file for an Eon database with HA and Kerberos authentication must have the following settings:
2. Revive the database from communal storage on S3 or GCP with Management Console, or with admintools. In the following example, the admintools revive_db command revives a three-node database that uses S3 communal storage:

```bash
admintools -t revive_db 
-x auth_params.conf \ 
  --communal-storage-location=s3://verticadbbucket \ 
  -d VMart \ 
  -s 172.16.116.27,172.16.116.28,172.16.116.29 \ 
  --force
```

In the next example, revive_db revives an three-node database that uses HDFS communal storage:

```bash
admintools -t revive_db 
-x bootstrap_params.conf \ 
  --communal-storage-location=webhdfs://mycluster/verticadb \ 
  -d verticadb \ 
  -s vnode01,vnode02,vnode03
```

3. Check the controlmode setting in /opt/vertica/config/admintools.conf. This setting must be compatible with the network messaging requirements of your Eon implementation. For example, S3/AWS (Amazon Cloud) relies on unicast messaging, which is compatible with a controlmode setting of point-to-point (pt2pt). If the source database controlmode setting was broadcast and you migrate to S3/AWS communal storage, you must change controlmode with admintools:

```
$ admintools -t re_ip -d dbname -T
```

**Important:**
If controlmode is set incorrectly, attempts to start the migrated Eon database will fail.

4. Start the Eon Mode database.
5. Call CLEAN_COMMUNAL_STORAGE to remove unneeded data files that might be left over from the migration.
6. If migrating to S3 on-premises communal storage—Pure Storage or MinIO—set configuration parameter AWSStreamingConnectionPercentage to 0 with ALTER DATABASE...SET PARAMETER.
7. Review the depot storage location size and adjust as needed.
Managing Subclusters

Subclusters help you organize the nodes in your clusters to isolate workloads and make elastic scaling easier. See Subclusters for an overview of how subclusters can help you.

See Also

Creating Subclusters

By default, new Eon Mode databases contain a single primary subcluster named default_subcluster. This subcluster contains all of the nodes that are part of your database when you create it. You will often want to create subclusters to separate and manage workloads. You have three options to create new subclusters in your database:

- Use the admintools command line to add a new subcluster from nodes in your database cluster
- Use admintools to create a duplicate of an existing subcluster
- Use the Management Console to provision and create a new subcluster

Create a Subcluster Using admintools

To create a new subcluster, use the admintools db_add_subcluster tool:

```
$ admintools -t db_add_subcluster --help
Usage: db_add_subcluster [options]

Options:
  -h, --help            show this help message and exit
  -d DB, --database=DB  Name of database to be modified
  -s HOSTS, --hosts=HOSTS  Comma separated list of hosts to add to the subcluster
  -p DBPASSWORD, --password=DBPASSWORD  Database password in single quotes
  -c SCNAME, --subcluster=SCNAME  Name of the new subcluster for the new node
  --is-primary  Create primary subcluster
  --is-secondary Create secondary subcluster
  --control-set-size=CONTROLSETSIZ  Set the number of nodes that will run spread within
```
the subcluster

```
--like=CLONESUBCLUSTER
Name of an existing subcluster from which to clone
properties for the new subcluster

--timeout=NONINTERACTIVE_TIMEOUT
set a timeout (in seconds) to wait for actions to
complete ('never') will wait forever (implicitly sets
-i)
-i, --noprompts
do not stop and wait for user input (default false).
Setting this implies a timeout of 20 min.
```

The simplest command adds an empty subcluster. It requires the database name, password, and name for the new subcluster. This example adds a subcluster named `analytics_cluster` to the database named `verticadb`:

```
$ adminTools -t db_add_subcluster -d verticadb -p 'password' -c analytics_cluster
Creating new subcluster 'analytics_cluster'
Subcluster added to verticadb successfully.
```

By default, admintools creates the new subcluster as a secondary subcluster. You can have it create a primary subcluster instead by supplying the --is-primary argument.

**Adding Nodes While Creating a Subcluster**

You can also specify one or more hosts for admintools to add to the subcluster as new nodes. These hosts must be part of the cluster but not already part of the database. For example, you can use hosts that you added to the cluster using the MC or admintools, or hosts that remain part of the cluster after you dropped nodes from the database. This example creates a subcluster named `analytics_cluster` and uses the -s option to specify the available hosts in the cluster:

```
$ adminTools -t db_add_subcluster -c analytics_cluster -d verticadb -p 'password' -s 10.0.33.77,10.0.33.181,10.0.33.85
```

View the subscription status of all nodes in your database with the following query that joins the `V_CATALOG.NODES` and `V_CATALOG.NODE_SUBSCRIPTIONS` system tables:

```
=> SELECT subcluster_name, n.node_name, shard_name, subscription_state FROM
  v_catalog.nodes n LEFT JOIN v_catalog.node_subscriptions ns ON (n.node_name
  = ns.node_name) ORDER BY 1,2,3;
```

```
<table>
<thead>
<tr>
<th>subcluster_name</th>
<th>node_name</th>
<th>shard_name</th>
<th>subscription_state</th>
</tr>
</thead>
<tbody>
<tr>
<td>analytics_cluster</td>
<td>v_verticadb_node0004</td>
<td>replica</td>
<td>ACTIVE</td>
</tr>
<tr>
<td>analytics_cluster</td>
<td>v_verticadb_node0004</td>
<td>segment001</td>
<td>ACTIVE</td>
</tr>
<tr>
<td>analytics_cluster</td>
<td>v_verticadb_node0004</td>
<td>segment003</td>
<td>ACTIVE</td>
</tr>
<tr>
<td>analytics_cluster</td>
<td>v_verticadb_node0005</td>
<td>replica</td>
<td>ACTIVE</td>
</tr>
</tbody>
</table>
```
If you do not include hosts when you create the subcluster, you must manually rebalance the shards in the subcluster when you add nodes at a later time. For more information, see Updating Shard Subscriptions After Adding Nodes

### Subclusters and Large Cluster

Vertica has a feature named large cluster that helps manage broadcast messages as the database cluster grows. It has several impacts on adding new subclusters:

- If you create a new subcluster with 16 or more nodes, Vertica automatically enables the large cluster feature. It sets the number of control nodes to the square root of the number of nodes in your subcluster. See Planning a Large Cluster.
- You can set the number of control nodes in a subcluster by using the `--control-set-size` option in the admintools command line.
- If your database cluster has 120 control nodes, Vertica returns an error if you try to add a new subcluster. Every subcluster must have at least one control node. Your database cannot have more than 120 control nodes. When your database reaches this limit, you must reduce the number of control nodes in other subclusters before you can add a new subcluster. See Changing the Number of Control Nodes and Realigning for more information.
- If you attempt to create a subcluster with a number of control nodes that would exceed the 120 control node limit, Vertica warns you and creates the subcluster with fewer control nodes. It adds as many control nodes as it can to the subcluster, which is 120 minus the current count of control nodes in the cluster. For example, suppose you create a 16-node subcluster in a database cluster that already has 118 control nodes. In this case, Vertica warns you and creates your subcluster with just 2 control nodes rather than the default 4.

See Large Cluster for more information about the large cluster feature.
Duplicating a Subcluster

Subclusters have many settings you can tune to get them to work just the way you want. After you have tuned a subcluster, you may want additional subclusters that are configured the same way. For example, suppose you have a subcluster that you have tuned to perform analytics workloads. To improve query throughput, you can create several more subclusters configured exactly like it. Instead of creating the new subclusters and then manually configuring them from scratch, you can duplicate the existing subcluster (called the source subcluster) to a new subcluster (the target subcluster).

When you create a new subcluster based on another subcluster, Vertica copies most of the source subcluster’s settings. See below for a list of the settings that Vertica copies. These settings are both on the node level and the subcluster level.

**Note:**
After you duplicate a subcluster, the target is not connected to the source in any way. Any changes you make to the source subcluster's settings after duplication are not copied to the target. The subclusters are completely independent after duplication.

Requirements for the Target Subcluster

You must have a set of hosts in your database cluster that you will use as the target of the subcluster duplication. Vertica forms these hosts into a target subcluster that receives most of the settings of the source subcluster. The hosts for the target subcluster must meet the following requirements:

- They must be part of your database cluster but not part of your database. For example, you can use hosts you have dropped from a subcluster or whose subcluster you have removed. Vertica returns an error if you attempt to duplicate a subcluster onto one or more nodes that are currently participating in the database.

**Tip:**
If you want to duplicate the settings of a subcluster to another subcluster, remove the target subcluster (see Removing Subclusters). Then duplicate the source subcluster onto the hosts of the now-
• The number of nodes you supply for the target subcluster must equal the number of nodes in the source subcluster. When duplicating the subcluster, Vertica performs a 1:1 copy of some node-level settings from each node in the source subcluster to a corresponding node in the target.

• The RAM and disk allocation for the hosts in the target subcluster should be at least the same as the source nodes. Technically, your target nodes can have less RAM or disk space than the source nodes. However, you will usually see performance issues in the new subcluster because the settings of the original subcluster will not be tuned for the resources of the target subcluster.

You can duplicate a subcluster even if some of the nodes in the source subcluster or hosts in the target are down. If nodes in the target are down, they use the catalog Vertica copied from the source node when they recover.

## Duplication of Subcluster-level Settings

The following table lists the subcluster-level settings that Vertica copies from the source subcluster to the target.

<table>
<thead>
<tr>
<th>Setting Type</th>
<th>Setting Details</th>
</tr>
</thead>
<tbody>
<tr>
<td>Basic subcluster settings</td>
<td>Whether the subcluster is a primary or secondary subcluster.</td>
</tr>
<tr>
<td>Large cluster settings</td>
<td>The number of control nodes in the subcluster.</td>
</tr>
<tr>
<td>Resource pool settings</td>
<td>• Vertica creates a new resource pool for every subcluster-specific resource pool in the source subcluster.</td>
</tr>
<tr>
<td></td>
<td><strong>Note:</strong> Duplicating a subcluster can fail due to subcluster-specific resource pools. If creating the subcluster-specific resource pools leave less than 25% of the total memory free for the general pool, Vertica stops the duplication and reports an error.</td>
</tr>
<tr>
<td></td>
<td>• Subcluster-specific resource pool cascade settings are copied from</td>
</tr>
</tbody>
</table>
the source subcluster and are applied to the newly-created resource pool for the target subcluster.
- Subcluster-level overrides on global resource pools settings such as MEMORYSIZE. See Managing Workload Resources in an Eon Mode Database for more information.
- Grants on resource pools are copied from the source subcluster.

### Connection load balancing settings
If the source subcluster is part of a subcluster-based load balancing group (you created the load balancing group using CREATE LOAD BALANCE GROUP...WITH SUBCLUSTER) the new subcluster is added to the group. See Creating Connection Load Balance Groups

**Important:**
Vertica adds the new subcluster to the subcluster-based load balancing group. However, it does not create network addresses for the nodes in the target subcluster. Load balancing policies cannot direct connections to the new subcluster until you create network addresses for the nodes in the target subcluster. See Creating Network Addresses for the steps you must take.

### Storage policy settings
Table and table partition pinning policies are copied from the source to the target subcluster. See Pinning Depot Objects for more information. Any existing storage policies on the target subcluster are dropped before the policies are copied from the source.

Vertica **does not** copy the following subcluster settings:

### Basic subcluster settings
- Subcluster name (you must provide a new name for the target subcluster).
- If the source is the default subcluster, the setting is not copied to the target. Your Vertica database has a single default subcluster. If Vertica copied this value, the source subcluster could no longer be the default.

### Connection load balancing settings
Address-based load balancing groups are not duplicated for the target subcluster.
For example, suppose you created a load balancing group for the source subcluster by adding the network addresses of all subcluster’s nodes. In
### Duplication of Node-level Settings

When Vertica duplicates a subcluster, it maps each node in the source subcluster to a node in the destination subcluster. Then it copies relevant node-level settings from each individual source node to the corresponding target node.

For example, suppose you have a three-node subcluster consisting of nodes named node01, node02, and node03. The target subcluster has nodes named node04, node05, and node06. In this case, Vertica copies the settings from node01 to node04, from node02 to node05, and from node03 to node06.

The node-level settings that Vertica copies from the source nodes to the target nodes are:

<table>
<thead>
<tr>
<th>Setting Type</th>
<th>Setting Details</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Configuration parameters</strong></td>
<td>Vertica copies the value of configuration parameters that you have set at the node level in the source node to the target node. For example, suppose you set CompressCatalogOnDisk on the source node using the statement:</td>
</tr>
<tr>
<td></td>
<td>ALTER NODE node01 SET CompressCatalogOnDisk = 0;</td>
</tr>
<tr>
<td></td>
<td>If you then duplicated the subcluster containing node01, the setting is copied to the target node.</td>
</tr>
</tbody>
</table>
| Eon Mode settings     | - Shard subscriptions are copied from the source node to the target.  
- Whether the node is the participating primary node for the shard.                                                                                          |
| Storage location settings | The DATA, TEMP, DEPOT, and USER storage location paths on the source node are duplicated on the target node. When duplicating node-specific paths (such as DATA or DEPOT) the path names are adjusted for the new node name. For example, suppose node 1 has a depot path of /vertica/depot/vmart/v_vmart_node0001_depot. If Vertica |
Setting Type | Setting Details
--- | ---
 | duplicates node 1 to node 4, it adjusts the path to /vertica/depot/vmart/v_vmart_node0004_depot.

**Important:**
The directories for these storage locations on the target node must be empty. They must also have the correct file permissions to allow Vertica to read and write to them.

Vertica does not duplicate a storage location if it cannot access its directory on the target node or if the directory is not empty. In this case, the target node will not have the location defined after the duplication process finishes. Admintools does not warn you if any locations were not duplicated.

If you find that storage locations have not been duplicated on one or more target nodes, you must fix the issues with the directories on the target nodes. Then re-run the duplication command.

<table>
<thead>
<tr>
<th>Large cluster settings</th>
<th><strong>Control node</strong> assignments are copied from the source node to the target node:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• If the source node is a control node, then the target node is made into a control node.</td>
</tr>
<tr>
<td></td>
<td>• If the source node depends on a control node, then the target node becomes a dependent of the corresponding control node in the new subcluster.</td>
</tr>
</tbody>
</table>

Vertica **does not** copy the following node-level settings:

<table>
<thead>
<tr>
<th>Setting Type</th>
<th>Setting Details</th>
</tr>
</thead>
<tbody>
<tr>
<td>Connection load balancing settings</td>
<td>Network Addresses are not copied. The destination node's network addresses do not depend on the settings of the source node. Therefore, Vertica cannot determine what the target node's addresses should be.</td>
</tr>
<tr>
<td>Depot settings</td>
<td>Depot-related configuration parameters that can be set on a node level (such as FileDeletionServiceInterval) are not copied from the source node to the target node.</td>
</tr>
</tbody>
</table>
Using admintools to Duplicate a Subcluster

To duplicate a subcluster, you use the same admintools db_add_subcluster tool that you use to create a new subcluster (see Creating Subclusters). In addition to the required options to create a subcluster (the list of hosts, name for the new subcluster, database name, and so on), you also pass the --like option with the name of the source subcluster you want to duplicate.

**Important:**
When you use the --like option, you cannot use the --is-secondary or --control-set-size options. Vertica determines whether the new subcluster is secondary and the number of control nodes it contains based on the source subcluster. If you supply these options along with the --like option, admintools returns an error.

The following examples demonstrate duplicating a three-node subcluster named analytics_1. The first example examines some of the settings in the analytics_1 subcluster:

- An override of the global TM resource pool's memory size.
- Its own resource pool named analytics
- Its membership in a subcluster-based load balancing group named analytics

```sql
=> SELECT name, subcluster_name, memorysize FROM SUBCLUSTER_RESOURCE_POOL_OVERRIDES;
name | subcluster_name | memorysize
-------------------------+------------------
 tm | analytics_1 | 0%
(1 row)

=> SELECT name, subcluster_name, memorysize, plannedconcurrency 
   FROM resource_pools WHERE subcluster_name IS NOT NULL;
name | subcluster_name | memorysize | plannedconcurrency
----------------------------------------+------------------
analytics_pool | analytics_1 | 70% | 8
(1 row)

=> SELECT * FROM LOAD_BALANCE_GROUPS;
name | policy | filter | type | object_name
-------------------------+--------+--------+-------+----------------
 analytics | ROUNDROBIN | 0.0.0/0 | Subcluster | analytics_1
(1 row)
```

The following example calls admintools's db_add_subcluster tool to duplicate the analytics_1 subcluster onto a set of three hosts to create a subcluster named analytics_2.
$ admintools -t db_add_subcluster -d verticadb \
    -s 10.11.12.13,10.11.12.14,10.11.12.15 \
    -p mypassword --like=analytics_1 -c analytics_2

Creating new subcluster 'analytics_2'

    estimated from depot location on initiator. As soon as the node comes
    up, its depot size might be altered depending on its disk size
Eon database detected, creating new depot locations for newly added nodes
Creating depot locations for 1 nodes
Warning when creating depot location for node: v_verticadb_node0009
WARNING: Target node v_verticadb_node0009 is down, so depot size has been
    estimated from depot location on initiator. As soon as the node comes
    up, its depot size might be altered depending on its disk size
Cloning subcluster properties
NOTICE: Nodes in subcluster analytics_1 have network addresses, you
    might need to configure network addresses for nodes in subcluster
    analytics_2 in order to get load balance groups to work correctly.

Replicating configuration to all nodes
Generating new configuration information and reloading spread
Starting nodes:
    v_verticadb_node0007 (10.11.12.81)
    v_verticadb_node0008 (10.11.12.209)
    v_verticadb_node0009 (10.11.12.186)
Starting Vertica on all nodes. Please wait, databases with a large catalog
    may take a while to initialize.
Checking database state for newly added nodes
Node Status: v_verticadb_node0007: (DOWN) v_verticadb_node0008: (DOWN) v_verticadb_node0009: (DOWN)
Node Status: v_verticadb_node0007: (INITIALIZING) v_verticadb_node0008: (INITIALIZING) v_verticadb_node0009: (INITIALIZING)
Node Status: v_verticadb_node0007: (UP) v_verticadb_node0008: (UP) v_verticadb_node0009: (UP)
Syncing catalog on verticadb with 2000 attempts.
Multi-node DB add completed
Nodes added to subcluster analytics_2 successfully.
Subcluster added to verticadb successfully.

Re-running the queries in the first part of the example shows that the settings from
analytics_1 have been duplicated in analytics_2:

=> SELECT name, subcluster_name, memorysize FROM SUBCLUSTER_RESOURCE_POOL_OVERRIDES;

<table>
<thead>
<tr>
<th>name</th>
<th>subcluster_name</th>
<th>memorysize</th>
</tr>
</thead>
<tbody>
<tr>
<td>tm</td>
<td>analytics_1</td>
<td>0%</td>
</tr>
<tr>
<td>tm</td>
<td>analytics_2</td>
<td>0%</td>
</tr>
</tbody>
</table>

(2 rows)
As noted earlier, even though analytics_2 subcluster is part of the analytics load balancing group, its nodes do not have network addresses defined for them. Until you define network addresses for the nodes, Vertica cannot redirect client connections to them.

## Adding and Removing Nodes From Subclusters

You will often want to add new nodes to and remove existing nodes from a subcluster. This ability lets you scale your database to respond to changing analytic needs. For more information on how adding nodes to a subcluster affects your database's performance, see [Scaling Your Eon Mode Database](#).

### Adding New Nodes to a Subcluster

You can add nodes to a subcluster to meet additional workloads. The nodes that you add to the subcluster must already be part of your cluster. These can be:

- Nodes that you removed from other subclusters.
- Nodes you added following the steps in [Add Nodes to a Running Cluster on the Cloud](#).
- Nodes you created using your cloud provider's interface, such as the AWS EC2 "Launch more like this" feature.

To add new nodes to a subcluster, use the `db_add_node` command of admintools:

```sql
$ adminTools -t db_add_node -h
Usage: db_add_node [options]
```
Options:
- `-h`, `-help` show this help message and exit
- `-d DB`, `--database=DB` Name of the database
- `-s HOSTS`, `--hosts=HOSTS` Comma separated list of hosts to add to database
- `-p DBPASSWORD`, `--password=DBPASSWORD` Database password in single quotes
- `-a AHOSTS`, `--add=AHOSTS` Comma separated list of hosts to add to database
- `-c SCNAME`, `--subcluster=SCNAME` Name of subcluster for the new node
- `--timeout=NONINTERACTIVE_TIMEOUT` set a timeout (in seconds) to wait for actions to complete (`'never'`) will wait forever (implicitly sets `-i`)
- `-i`, `--noprompts` do not stop and wait for user input (default false). Setting this implies a timeout of 20 min.
- `--compat21` (deprecated) Use Vertica 2.1 method using node names instead of hostnames

If you do not use the `-c` option, Vertica adds new nodes to the default subcluster (set to default_subcluster in new databases). This example adds a new node without specifying the subcluster:

```
$ adminTools -t db_add_node -p 'password' -d verticadb -s 10.11.12.117
Subcluster not specified, validating default subcluster
Nodes will be added to subcluster 'default_subcluster'
    Verifying database connectivity...10.11.12.10
    Eon database detected, creating new depot locations for newly added nodes
Creating depots for each node
    Generating new configuration information and reloading spread
    Replicating configuration to all nodes

Communal storage detected: syncing catalog

Multi-node DB add completed
Nodes added to verticadb successfully.
You will need to redesign your schema to take advantage of the new nodes.

## Updating Shard Subscriptions After Adding Nodes

After you add nodes to a subcluster they do not yet subscribe to shards. You can view the subscription status of all nodes in your database using the following query that joins the **V_CATALOG.NODES** and **V_CATALOG.NODE_SUBSCRIPTIONS** system tables:

```sql
=> SELECT subcluster_name, n.node_name, shard_name, subscription_state FROM
   v_catalog.nodes n LEFT JOIN v_catalog.node_subscriptions ns ON (n.node_name
   = ns.node_name) ORDER BY 1,2,3;
```

<table>
<thead>
<tr>
<th>subcluster_name</th>
<th>node_name</th>
<th>shard_name</th>
<th>subscription_state</th>
</tr>
</thead>
<tbody>
<tr>
<td>analytics_subcluster</td>
<td>v_verticadb_node0004</td>
<td></td>
<td></td>
</tr>
<tr>
<td>analytics_subcluster</td>
<td>v_verticadb_node0005</td>
<td></td>
<td></td>
</tr>
<tr>
<td>analytics_subcluster</td>
<td>v_verticadb_node0006</td>
<td></td>
<td></td>
</tr>
<tr>
<td>default_subcluster</td>
<td>v_verticadb_node0001</td>
<td>replica</td>
<td>ACTIVE</td>
</tr>
<tr>
<td>default_subcluster</td>
<td>v_verticadb_node0001</td>
<td>segment0001</td>
<td>ACTIVE</td>
</tr>
<tr>
<td>default_subcluster</td>
<td>v_verticadb_node0001</td>
<td>segment0003</td>
<td>ACTIVE</td>
</tr>
<tr>
<td>default_subcluster</td>
<td>v_verticadb_node0002</td>
<td>replica</td>
<td>ACTIVE</td>
</tr>
<tr>
<td>default_subcluster</td>
<td>v_verticadb_node0002</td>
<td>segment0001</td>
<td>ACTIVE</td>
</tr>
<tr>
<td>default_subcluster</td>
<td>v_verticadb_node0002</td>
<td>segment0002</td>
<td>ACTIVE</td>
</tr>
<tr>
<td>default_subcluster</td>
<td>v_verticadb_node0003</td>
<td>replica</td>
<td>ACTIVE</td>
</tr>
<tr>
<td>default_subcluster</td>
<td>v_verticadb_node0003</td>
<td>segment0003</td>
<td>ACTIVE</td>
</tr>
</tbody>
</table>

(12 rows)

You can see that none of the nodes in the newly-added analytics_subcluster have subscriptions.
To update the subscriptions for new nodes, call the `REBALANCE_SHARDS` function. You can limit the rebalance to the subcluster containing the new nodes by passing its name to the `REBALANCE_SHARDS` function call. The following example runs rebalance shards to update the analytics_subcluster’s subscriptions:

```sql
=> SELECT REBALANCE_SHARDS('analytics_subcluster');
REBALANCE_SHARDS
-------------------
REBALANCED_SHARDS (1 row)
=> SELECT subcluster_name, n.node_name, shard_name, subscription_state FROM v_catalog.nodes n LEFT JOIN v_catalog.node_subscriptions ns ON (n.node_name = ns.node_name) ORDER BY 1,2,3;

<table>
<thead>
<tr>
<th>subcluster_name</th>

### Removing Nodes

Your database must meet these requirements before you can remove a node from a subcluster:

- To remove a node from a **primary subcluster**, all of the **primary nodes** in the subcluster must be up, and the database must be able to maintain quorum after the primary node is removed (see Data Integrity and High Availability in an Eon Mode Database). These requirements are necessary because Vertica calls `REBALANCE_SHARDS` to redistribute shard subscriptions among the remaining nodes in the subcluster. If you attempt to remove a primary node when the database does not meet the requirements, the rebalance shards process waits until either the down
nodes recover or a timeout elapses. While it waits, you periodically see a message "Rebalance shards polling iteration number [nn]" indicating that the rebalance process is waiting to complete.

You can remove nodes from a secondary subcluster even when nodes in the subcluster are down.

- If your database has the large cluster feature enabled, you cannot remove a node if it is the subcluster's last control node and there are nodes that depend on it. See Large Cluster for more information.

If there are other control nodes in the subcluster, you can drop a control node. Vertica reassigns the nodes that depend on the node being dropped to other control nodes.

To remove one or more nodes, use admintools's db_remove_node tool:

```
$ adminTools -t db_remove_node -p 'password' -d verticadb -s 10.11.12.117
connecting to 10.11.12.10
Waiting for rebalance shards. We will wait for at most 36000 seconds.
Rebalance shards polling iteration number [0], started at [14:56:41], time out at [00:56:41]
Attempting to drop node v_verticadb_node0004 ( 10.11.12.117 )
Shutting down node v_verticadb_node0004
Sending node shutdown command to [ 'v_verticadb_node0004', '10.11.12.117', '/vertica/data', '/vertica/data']
Deleting catalog and data directories
Update admintools metadata for v_verticadb_node0004
Eon mode detected. The node v_verticadb_node0004 has been removed from host 10.11.12.117. To remove the node metadata completely, please clean up the files corresponding to this node, at the communal location: s3://eonbucket/metadata/verticadb/nodes/v_verticadb_node0004
Reload spread configuration
Replicating configuration to all nodes
Checking database state
Node Status: v_verticadb_node0001: (UP) v_verticadb_node0002: (UP) v_verticadb_node0003: (UP)
Communal storage detected: syncing catalog
```

When you remove one or more nodes from a subcluster, Vertica automatically rebalances shards in the subcluster. You do not need to manually rebalance shards after removing nodes.

**Moving Nodes Between Subclusters**

To move a node from one subcluster to another:

1. Remove the node or nodes from the subcluster it is currently a part of.
2. Add the node to the subcluster you want to move it to.
Managing Workloads with Subclusters

By default, queries are limited to executing on the nodes in the subcluster that contains the initiator node (the node the client is connected to). This example demonstrates executing an explain plan for a query when connected to node 4 of a cluster. Node 4 is part of a subcluster containing nodes 4 through 6. You can see that only the nodes in the subcluster will participate in a query:

```sql
=> EXPLAIN SELECT customer_name, customer_state FROM customer_dimension LIMIT 10;

QUERY PLAN

QUERY PLAN DESCRIPTION:

EXPLAIN SELECT customer_name, customer_state FROM customer_dimension LIMIT 10;

Access Path:
+--SELECT LIMIT 10 [Cost: 442, Rows: 10 (NO STATISTICS)] (PATH ID: 0)
  | Output Only: 10 tuples
  | Execute on: Query Initiator
  | ----> STORAGE ACCESS for customer_dimension [Cost: 442, Rows: 10K (NO STATISTICS)] (PATH ID: 1)
    | | Projection: public.customer_dimension_b0
    | | Materialize: customer_dimension.customer_name,
    | | customer_dimension.customer_state
    | | Output Only: 10 tuples
    | | Execute on: v_verticadb_node0004, v_verticadb_node0005,
    | | v_verticadb_node0006
```

In Eon Mode, you can override the MEMORYSIZE, MAXMEMORYSIZE, and MAXQUERYMEMORYSIZE settings for built-in global resource pools to fine-tune workloads within a subcluster. See Managing Workload Resources in an Eon Mode Database for more information.

What Happens When a Subcluster Cannot Run a Query

In order to process queries, each subcluster's nodes must have full coverage of all shards in the database. If the nodes do not have full coverage (which can happen if nodes are down), the subcluster can no longer process queries. This state does not cause the subcluster to shut down. Instead, if you attempt to run a query on a subcluster in this state, you receive error messages telling you that not enough nodes are available to complete the query.
Once the down nodes have recovered and the subcluster has full shard coverage, it will be able to process queries.

### Controlling Where a Query Runs

You can control where specific types of queries run by controlling which subcluster the clients connect to. The best way to enforce restrictions is to create a set of connection load balancing policies to steer clients from specific IP address ranges to clients in the correct subcluster.

For example, suppose you have the following database with two subclusters: one for performing data loading, and one for performing analytics.

![Diagram showing two subclusters: Load_subcluster and Analytics_subcluster](image)

The data load tasks come from a set of ETL systems in the IP 10.20.0.0/16 address range. Analytics tasks can come from any other IP address. In this case, you can create set of
connection load balance policies that ensure that the ETL systems connect to the data load subcluster, and all other connections go to the analytics subcluster.

```sql
=> SELECT node_name, node_address, node_address_family, subcluster_name
FROM v_catalog.nodes;

<table>
<thead>
<tr>
<th>node_name</th>
<th>node_address</th>
<th>node_address_family</th>
<th>subcluster_name</th>
</tr>
</thead>
<tbody>
<tr>
<td>v_verticadb_node0001</td>
<td>10.11.12.10</td>
<td>ipv4</td>
<td>load_subcluster</td>
</tr>
<tr>
<td>v_verticadb_node0002</td>
<td>10.11.12.20</td>
<td>ipv4</td>
<td>load_subcluster</td>
</tr>
<tr>
<td>v_verticadb_node0003</td>
<td>10.11.12.30</td>
<td>ipv4</td>
<td>load_subcluster</td>
</tr>
<tr>
<td>v_verticadb_node0004</td>
<td>10.11.12.40</td>
<td>ipv4</td>
<td>load_subcluster</td>
</tr>
<tr>
<td>v_verticadb_node0005</td>
<td>10.11.12.50</td>
<td>ipv4</td>
<td>analytics_subcluster</td>
</tr>
<tr>
<td>v_verticadb_node0006</td>
<td>10.11.12.60</td>
<td>ipv4</td>
<td>analytics_subcluster</td>
</tr>
</tbody>
</table>
(6 rows)

=> CREATE NETWORK ADDRESS node01 ON v_verticadb_node0001 WITH '10.11.12.10';
=> CREATE NETWORK ADDRESS node02 ON v_verticadb_node0002 WITH '10.11.12.20';
=> CREATE NETWORK ADDRESS node03 ON v_verticadb_node0003 WITH '10.11.12.30';
=> CREATE NETWORK ADDRESS node04 ON v_verticadb_node0004 WITH '10.11.12.40';
=> CREATE NETWORK ADDRESS node05 ON v_verticadb_node0005 WITH '10.11.12.50';
=> CREATE NETWORK ADDRESS node06 ON v_verticadb_node0006 WITH '10.11.12.60';

=> CREATE LOAD BALANCE GROUP load_subcluster WITH SUBCLUSTER load_subcluster
    FILTER '0.0.0.0/0';
=> CREATE LOAD BALANCE GROUP
=> CREATE LOAD BALANCE GROUP analytics_subcluster WITH SUBCLUSTER
    analytics_subcluster FILTER '0.0.0.0/0';
=> CREATE LOAD BALANCE GROUP
=> CREATE ROUTING RULE etl_systems ROUTE '10.20.0.0/16' TO load_subcluster;
=> CREATE ROUTING RULE
=> CREATE ROUTING RULE analytic_clients ROUTE '0.0.0.0/0' TO analytics_subcluster;
```

Once you have created the load balance policies, you can test them using the **DESCRIBE_LOAD_BALANCE_DECISION** function.

```sql
=> SELECT describe_load_balance_decision('192.168.1.1');

describe_load_balance_decision
--------------------------
Describing load balance decision for address [192.168.1.1]
Load balance cache internal version id (node-local): [1]
Considered rule [etl_systems] source ip filter [10.20.0.0/16]...
    input address does not match source ip filter for this rule.
Considered rule [analytic_clients] source ip filter [0.0.0.0/0]...
    input address matches this rule
Matched to load balance group [analytics_cluster] the group has
    policy [ROUNDROBIN] number of addresses [3]
(0) LB Address: [10.11.12.181]:5433
(1) LB Address: [10.11.12.205]:5433
(2) LB Address: [10.11.12.192]:5433
```
Chose address at position [1]
Routing table decision: Success. Load balance redirect to: [10.11.12.205]
port [5433]

(1 row)

=> SELECT describe_load_balance_decision('10.20.1.1');

<table>
<thead>
<tr>
<th>describe_load_balance_decision</th>
</tr>
</thead>
<tbody>
<tr>
<td>Describing load balance decision for address [10.20.1.1]</td>
</tr>
<tr>
<td>Load balance cache internal version id (node-local): [1]</td>
</tr>
<tr>
<td>Considered rule [etl_systems] source ip filter [10.20.0.0/16]...</td>
</tr>
<tr>
<td>input address matches this rule</td>
</tr>
<tr>
<td>Matched to load balance group [default_cluster] the group has policy [ROUNDROBIN] number of addresses [3]</td>
</tr>
<tr>
<td>(0) LB Address: [10.11.12.10]:5433</td>
</tr>
<tr>
<td>(1) LB Address: [10.11.12.20]:5433</td>
</tr>
<tr>
<td>(2) LB Address: [10.11.12.30]:5433</td>
</tr>
<tr>
<td>Chose address at position [1]</td>
</tr>
<tr>
<td>Routing table decision: Success. Load balance redirect to: [10.11.12.20] port [5433]</td>
</tr>
</tbody>
</table>

(1 row)

Normally, with these policies, all queries run by the ETL system will run on the load subcluster. All other queries will run on the analytics subcluster. There are some cases (especially if a subcluster is down) where a client may connect to a node in another subcluster. For this reason, clients should always verify they are connected to the correct subcluster. See Connection Load Balancing Policies for more information about load balancing policies.

### Starting and Stopping Subclusters

Subclusters make it convenient to start and stop a group of nodes as needed. You start and stop them using the admintools command line.

### Starting a Subcluster

To start a subcluster, use the `restart_subcluster` tool:

```
$ adminTools -t restart_subcluster -h
Usage: restart_subcluster [options]

Options:
  -h, --help               show this help message and exit
```
Stopping a Subcluster

**Important:**
Stopping a subcluster does not warn you if there are active user sessions connected to the subcluster. This behavior is the same as stopping an individual node. Before stopping a subcluster, verify that no users are connected to it.

To stop a subcluster, use the `stop_subcluster` tool:
This example stops the subcluster named analytics_cluster:

```bash
$ adminTools -t stop_subcluster -c analytics_cluster -d verticadb -p password
*** Forcing subcluster shutdown ***
Verifying subcluster 'analytics_cluster'
    Node 'v_verticadb_node0004' will shutdown
    Node 'v_verticadb_node0005' will shutdown
    Node 'v_verticadb_node0006' will shutdown
Shutdown subcluster command sent to the database
```

You can also use the SHUTDOWN_SUBCLUSTER function to stop a subcluster. See SHUTDOWN_SUBCLUSTER for details.

## Altering Subcluster Settings

There are several settings you can alter on a subcluster using the ALTER SUBCLUSTER statement. You can also switch a subcluster from a primary to a secondary subcluster, or from a secondary to a primary.

## Renaming a Subcluster

To rename an existing subcluster, use the ALTER SUBCLUSTER statement's RENAME TO clause:

```sql
=> ALTER SUBCLUSTER default_subcluster RENAME TO load_subcluster;
=> ALTER SUBCLUSTER
=> SELECT DISTINCT subcluster_name FROM subclusters;
```

Vertica Analytic Database (11.0.x)
Changing the Default Subcluster

The default subcluster designates which subcluster Vertica adds nodes to if you do not explicitly specify a subcluster when adding nodes to the database. When you create a new database (or when a database is upgraded from a version prior to 9.3.0) the default_subcluster is the default. You can find the current default subcluster by querying the is_default column of the SUBCLUSTERS system table.

The following example demonstrates finding the default subcluster, and then changing it to the subcluster named analytics_cluster:

```sql
=> SELECT DISTINCT subcluster_name FROM SUBCLUSTERS WHERE is_default = true;
   subcluster_name
   ---------------------
   default_subcluster
   (1 row)

=> ALTER SUBCLUSTER analytics_cluster SET DEFAULT;
ALTER SUBCLUSTER
=> SELECT DISTINCT subcluster_name FROM SUBCLUSTERS WHERE is_default = true;
   subcluster_name
   ---------------------
   analytics_cluster
   (1 row)
```

Converting a Subcluster from Primary to Secondary, or Secondary to Primary

You usually choose whether a subcluster is primary or secondary when creating it (see Creating Subclusters for more information). However, you can switch a subcluster between the two settings after you have created it. You may want to change whether a subcluster is primary or secondary to impact the K-Safety of your database. For example, if you have a single primary subcluster that has down nodes that you cannot easily replace, you can promote a secondary subcluster to primary to ensure losing another primary node will not cause your database to shut down. On the other hand, you may choose to convert a primary subcluster to a secondary before eventually shutting it down. This conversion can
prevent the database from losing K-Safety if the subcluster you are shutting down contains half or more of the total number of primary nodes in the database.

**Note:**
You cannot promote or demote a subcluster containing the **initiator node**. You must be connected to a node in a subcluster other than the one you want to promote or demote.

To make a secondary subcluster into a primary subcluster, use the **PROMOTE_SUBCLUSTER_TO_PRIMARY** function:

```sql
=> SELECT DISTINCT subcluster_name, is_primary from subclusters;
  subcluster_name | is_primary
-----------------+-------------
  analytics_cluster | f
  load_subcluster   | t
(2 rows)

=> SELECT PROMOTE_SUBCLUSTER_TO_PRIMARY('analytics_cluster');
PROMOTE_SUBCLUSTER_TO_PRIMARY
-----------------------------
PROMOTE SUBCLUSTER TO PRIMARY
(1 row)

=> SELECT DISTINCT subcluster_name, is_primary from subclusters;
  subcluster_name | is_primary
-----------------+-------------
  analytics_cluster | t
  load_subcluster   | t
(2 rows)
```

Making a primary subcluster into a secondary subcluster is similar. Unlike converting a secondary subcluster to a primary, there are several issues that may prevent you from making a primary into a secondary. Vertica prevents you from making a primary into a secondary if any of the following is true:

- The subcluster contains a **critical node**.
- The subcluster is the only primary subcluster in the database. You must have at least one primary subcluster.
- The **initiator node** is a member of the subcluster you are trying to demote. You must call **DEMOTE_SUBCLUSTER_TO_SECONDARY** from another subcluster.

To convert a primary subcluster to secondary, use the **DEMOTE_SUBCLUSTER_TO_SECONDARY** function:

```sql
=> SELECT DISTINCT subcluster_name, is_primary from subclusters;
  subcluster_name | is_primary
-----------------+-------------
```

Removing Subclusters

Removing a subcluster from the database deletes the subcluster from the Vertica catalog. During the removal, Vertica removes any nodes in the subcluster from the database. These nodes are still part of the database cluster, but are no longer part of the database. If you view your cluster in the MC, you will see these nodes with the status STANDBY. They can be added back to the database by adding them to another subcluster. See Creating Subclusters and Adding New Nodes to a Subcluster.

Vertica places several restrictions on removing a subcluster:

- You cannot remove the default subcluster. If you want to remove the subcluster that is set as the default, you must make another subcluster the default. See Changing the Default Subcluster for details.
- You cannot remove the last primary subcluster in the database. Your database must always have at least one primary subcluster.

**Note:** Removing a subcluster can fail if the database is repartitioning. If this happens, you will see the error message "Transaction commit aborted because session subscriptions do not match catalog." Wait until the repartitioning is done before removing a subcluster.

To remove a subcluster, use the admintools command line db_remove_subcluster tool:

```
$ adminTools -t db_remove_subcluster -h
Usage: db_remove_subcluster [options]
```
This example removes the subcluster named analytics_cluster:

```
$ adminTools -t db_remove_subcluster -d verticadb -c analytics_cluster -p 'password'
Found node v_verticadb_node0004 in subcluster analytics_cluster
Found node v_verticadb_node0005 in subcluster analytics_cluster
Found node v_verticadb_node0006 in subcluster analytics_cluster
Found node v_verticadb_node0007 in subcluster analytics_cluster
Waiting for rebalance shards. We will wait for at most 36000 seconds.

```
Depot Management

The nodes of an Eon Mode database fetch data from communal storage as needed to process queries, and cache that data locally on disk. The cached data of all nodes within a subcluster comprise that cluster's depot. Vertica uses depots to facilitate query execution: when processing a query, Vertica first checks the current depot for the required data. If the data is unavailable, Vertica fetches it from communal storage and saves a copy in the depot to expedite future queries. Vertica also uses the depot for load operations, caching newly-loaded data in the depot before uploading it to communal storage.

Managing Depot Caching

You can control depot caching in several ways:

- Configure gateway parameters so a depot caches only queried data or loaded data.
- Control fetching of queried data from communal storage.
- Manage eviction of cached data.
- Enable depot warming on new and restarted nodes.

You can monitor depot activity and settings with several V_MONITOR system tables, or with the Management Console.

Note:
Depot caching is supported only on primary shard subscriber nodes.
**Depot Gateway Parameters**

Vertica depots can cache two types of data:

- **Queried data**: The depot facilitates query execution by fetching queried data from communal storage and caching it in the depot. The cached data remains available until it is evicted to make room for fresher data, or for data that is fetched for more recent queries.
- **Loaded data**: The depot expedites load operations such as COPY by temporarily caching data until it is uploaded to communal storage.

By default, depots are configured to cache both types of data.

Two configuration parameters determine whether a depot caches queried or loaded data:

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Settings</th>
</tr>
</thead>
<tbody>
<tr>
<td>UseDepotForReads</td>
<td>Boolean:</td>
</tr>
<tr>
<td></td>
<td>1 (default): Search the depot for the queried data; if not found, fetch the data from communal storage.</td>
</tr>
<tr>
<td></td>
<td>0: Bypass the depot and get queried data from communal storage.</td>
</tr>
<tr>
<td>UseDepotForWrites</td>
<td>Boolean:</td>
</tr>
<tr>
<td></td>
<td>1 (default): Write loaded data to the depot, then upload files to communal storage.</td>
</tr>
<tr>
<td></td>
<td>0: Bypass the depot and write directly to communal storage.</td>
</tr>
</tbody>
</table>

Both parameters can be set at session, user and database levels.

If set on the session or user levels, these parameters can be used to segregate read and write activity on the depots of different subclusters. For example, parameters `UseDepotForReads` and `UseDepotForWrites` might be set as follows for users `joe` and `rhonda`:

```
=> SHOW USER joe ALL;

name | setting
------------------------
UseDepotForReads | 1
UseDepotForWrites  | 0
```
Given these user settings, when joe connects to a Vertica subcluster, his session only uses the current depot to process queries; all load operations are uploaded to communal storage. Conversely, rhonda’s sessions only use the depot to process load operations; all queries must fetch their data from communal storage.

### Depot Fetching

If a depot is enabled to cache queried data (UseDepotForReads = 1), you can configure how it fetches data from communal storage with configuration parameter `DepotOperationsForQuery`. This parameter has three settings:

- **ALL** (default): Fetch file data from communal storage, if necessary displace existing files by evicting them from the depot.
- **FETCHES**: Fetch file data from communal storage only if space is available; otherwise, read the queried data directly from communal storage.
- **NONE**: Do not fetch file data to the depot, read the queried data directly from communal storage.

You can set fetching behavior at four levels, in ascending levels of precedence:

- **Database**: `ALTER DATABASE...SET PARAMETER`  
- **Per user**: `ALTER USER...SET PARAMETER`  
- **Per session**: `ALTER SESSION...SET PARAMETER`  
- **Per query**: `DEPOT_FETCH` hint

For example, you can set `DepotOperationsForQuery` at the database level as follows:

```sql
=> ALTER DATABASE default SET PARAMETER DepotOperationsForQuery = FETCHES;
```

This setting applies to all database depots unless overridden at other levels. For example, the following `ALTER USER` statement specifies fetching behavior for a depot when it processes queries from user Joe:

```sql
=> ALTER DATABASE default SET PARAMETER DepotOperationsForQuery = FETCHES;
```
ALTER USER joe SET PARAMETER DepotOperationsForQuery = ALL;
ALTER USER

Finally, joe can override his own DepotOperationsForQuery setting by including the DEPOT_FETCH hint in individual queries:

SELECT /*+DEPOT_FETCH(NONE)*/ count(*) FROM bar;

## Evicting Depot Data

In general, Vertica evicts data from the depot as needed to provide room for new data, and expedite request processing. Before writing new data to the depot, Vertica evaluates it as follows:

- Data fetched from communal storage: Vertica sizes the download and evicts data from the depot accordingly.
- Data uploaded from a DML operation such as COPY: Vertica cannot estimate the total size of the upload before it is complete, so it sizes individual buffers and evicts data from the depot as needed.

In both cases, Vertica assesses existing depot data and determines which objects to evict from the depot as follows, in descending order of precedence (most to least vulnerable):

1. Least recently used unpinned object evicted for any new object, pinned or unpinned.
2. Least recently used pinned object evicted for a new pinned object.

## Pinning Depot Objects

You can set depot pinning policies on database objects to reduce their exposure to eviction. Pinning policies can be set on individual subclusters, or on the entire database, and at different levels of granularity—table, projection, and partitions:

<table>
<thead>
<tr>
<th>Pinning of...</th>
<th>Supported by...</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tables</td>
<td>SET_DEPOT_PIN_POLICY_TABLE</td>
</tr>
<tr>
<td>Projections</td>
<td>SET_DEPOT_PIN_POLICY_PROJECTION</td>
</tr>
<tr>
<td>Partitions</td>
<td>SET_DEPOT_PIN_POLICY_PARTITION</td>
</tr>
</tbody>
</table>
By default, pinned objects are queued for download from communal storage as needed to execute a query or DML operation. SET_DEPOT_PIN_POLICY functions can specify to override this behavior and immediately queue newly pinned objects for download: set the last Boolean argument of the function to true.

In the following example, SET_DEPOT_PIN_POLICY_TABLE pins the data of table foo and specifies to queue the data immediately for download:

```sql
=> SELECT SET_DEPOT_PIN_POLICY_TABLE ('foo', 'default_subcluster', true);
```

**Tip:**
How soon Vertica downloads a pinned object from communal storage depends on a number of factors, including space availability and precedence of other pinned objects that are queued for download. You can force immediate download of queued objects by calling `FINISH_FETCHING_FILES`.

**Usage Guidelines**

Pinning one or more objects on a depot affects its retention of fetched (queried) data and uploaded (newly loaded) data. If too much depot space is claimed by pinned objects, the depot might be unable to handle load operations on unpinned objects. In this case, set configuration parameter `UseDepotForWrites` to 0, so load operations are routed directly to communal storage for processing. Otherwise, load operations are liable to return with an error.

To minimize contention over depot usage, consider the following guidelines:

- Pin only those objects that are most active in DML operations and queries.
- Minimize the size of pinned data by setting policies at the smallest effective level—for example, pin only the data of a table's active partition.

**Depot Warming**

On startup, the depots of new nodes are empty, while the depots of restarted nodes often contain stale data that must be refreshed. When depot warming is enabled, a node that is undergoing startup preemptively loads its depot with frequently queried and pinned data. When the node completes startup and begins to execute queries, its depot already contains much of the data it needs to process those queries. This reduces the need to fetch data from communal storage, and expedites query performance accordingly.
**Note:**
Fetching data to a warming depot can delay node startup.

By default, depot warming is disabled (EnableDepotWarmingFromPeers = 0). A node executes depot warming as follows:

1. The node checks configuration parameter PreFetchPinnedObjectsToDepotAtStartup. If enabled (set to 1), the node:
   - Gets from the database catalog a list of all objects that are pinned on this node's subcluster.
   - Queues the pinned objects for fetching and calculates their total size.

2. The node checks configuration parameter EnableDepotWarmingFromPeers. If enabled (set to 1), the node:
   - Identifies a peer node in the same subcluster whose depot contents it can copy.
   - After taking into account all pinned objects, calculates how much space remains available in the warming depot.
   - Gets from the peer node a list of the most recently used objects that can fit in the depot.
   - Queues the objects for fetching.

3. If BackgroundDepotWarming is enabled (set to 1, default), the node loads queued objects into its depot while it is warming, and continues to do so in the background after the node becomes active and starts executing queries. Otherwise (BackgroundDepotWarming = 0), node activation is deferred until the depot fetches and loads all queued objects.

### Monitoring the Depot

You can monitor depot activity and settings with several V_MONITOR system tables.

**Tip:**
You can also use the Management Console to monitor depot activity. For details, see Monitoring Depot Activity in MC

### Resizing Depot Caching Capacity

Each node in an Eon database caches depot data in a predefined storage location. The storage location path depends on your Vertica installation's filesystem. By default, each node in a cluster can use up to 60 percent of disk space on the storage location's filesystem to cache depot data. You can change caching capacity with `ALTER_LOCATION_SIZE`, by specifying to a fixed size or a percentage of total disk space. The function can specify a single node, a subcluster, or all nodes in the database cluster. You can increase depot caching capacity for each node up to 80 percent.

In the following example, `ALTER_LOCATION_SIZE` increases depot caching capacity to 80 percent of disk space on the storage location's filesystem. The function supplies an empty string as the second (`node-name`) argument, so the change applies to all nodes:

```
$> SELECT node_name, location_label, location_path, max_size, disk_percent FROM storage_locations
WHERE location_usage = 'DEPOT' ORDER BY node_name;
```

```
+------------+------------+----------------+---------+----------+
<table>
<thead>
<tr>
<th>node_name</th>
<th>location_label</th>
<th>location_path</th>
<th>max_size</th>
<th>disk_percent</th>

<td></td>
<td></td>
</tr>
</tbody>
</table>
```

(3 rows)

```
$> SELECT alter_location_size('depot', '', '80%');
alter_location_size
-------------------
```

---

**Important:**

By default, depot caching capacity cannot exceed 80 percent of disk space on the store location file system; attempts to set it to a higher value return an error. Vertica requires at least 20 percent of disk space for the catalog, Data Collector tables, and temp files.
Rescaling Depot Capacity

When a database is revived on an instance with greater or lesser disk space than it had previously, Vertica evaluates the depot size settings that were previously in effect. If depot size was specified as a percentage of available disk space, Vertica proportionately rescales depot capacity. For example, if depot caching capacity for a given node was set to 70 percent, the revived node applies that setting to the new disk space and adjusts depot caching capacity accordingly. If depot capacity was set to a fixed size, Vertica applies that setting, unless doing so will consume more than 80 percent of available disk space. In that case, Vertica automatically adjusts depot size as needed.

Scaling Your Eon Mode Database

One of the strengths of an Eon Mode database is its ability to grow or shrink to meet your workload demands. You can add nodes to and remove nodes from your database to meet changing workload demands. For an overview of why you would scale your database and how it affects queries, see Elasticity.

Scaling Up Your Database by Starting Stopped Nodes

The easiest way to scale up your database is to start any stopped nodes:

- To start individual nodes, see Stopping and Starting Nodes on MC.
- To start an entire subcluster that has been stopped, see Starting and Stopping Subclusters.
Scaling Up Your Database by Adding Nodes

If you do not have stopped nodes in your database, or the stopped nodes are not in the subclusters where you want to add new nodes, then you can add new nodes to the database. In supported environments, you can use the MC to provision and add new nodes to your database in a single step. See Viewing and Managing Your Cluster for more information.

You can also manually add new nodes:

- For databases running on AWS, see Add Nodes to a Running Cluster on the Cloud
- For databases running on-premises, or in other environments:
  1. Provision the hardware for your new nodes. Be sure to follow the steps in Before You Install Vertica to verify your hardware is configured correctly.
  2. Follow the steps in Adding Hosts to a Cluster to add the new nodes to the database cluster.
  3. Add the node to your database by following the steps in Adding New Nodes to a Subcluster.

Controlling How Vertica Uses Your New Nodes

New nodes can improve your database's performance in one of two ways:

- Increase the query throughput (the number of queries your database processes at the same time).
- Increase individual query performance (how fast each query runs).

See Elasticity for details on these performance improvements. You control how the new nodes improve your database's performance by choosing what subclusters you add them to. The following topics explain how to use scaling to improve throughput and query performance.
Improving Query Throughput Using Subclusters

Improving query throughput increases the number of queries your Eon Mode database processes at the same time. You are usually concerned about your database's throughput when your workload consists of many short-running queries. They are often referred to as "dashboard queries." This term describes type of workload you see when a large number of users have web-based dashboard pages open to monitor some sort of status. These dashboards tend to update frequently, using simpler, short-running queries instead of analytics-heavy long running queries.

The best way to improve your database's throughput is to add new subclusters to the database or start any stopped subclusters. Then distribute the client connections among these subclusters using connection load balancing policies. Subclusters independently process queries. By adding more subclusters, you improve your database's parallelism.

For the best performance, make the number of nodes in your subcluster the same as the number of shards in your database. If you choose to have less nodes than the number of shards, make the number of nodes an even divisor of the number of shards. When the number of shards is divisible by the number of nodes, the data in your database is equally divided among the nodes in the subcluster.

The easiest way of adding subclusters is to use the MC:

1. From the MC home page, click the database you want to add subclusters to.
2. Click Manage.
3. Click Add Subcluster.
4. Follow the steps in the wizard to add the subcluster. Normally, the only items you need to fill in are the subcluster name and the number of instances to add to it.

**Note:**
The MC currently does not support creating instances on all platforms. For those platforms where the MC does not support instances, you can manually add subclusters. See Creating Subclusters for more information.
Distributing Clients Among the Throughput Subclusters

To gain benefits from the added subclusters, you must have clients that will execute short-running queries connect to the nodes that the subclusters contain. Queries run only on the subcluster that contains the initiator node (the node that the client is connected to). Use connection load balancing policies to spread the connections across all of the subclusters you created to increase query throughput. See Connection Load Balancing Policies for details.

The following example creates a load balancing policy that spreads client connections across two three-node subclusters named query_pool_a and query_pool_b. This example:

- Creates network addresses on the six nodes that are in the two subclusters.
- Creates a load balance group from all the nodes in the two subclusters.
- Creates the routing rule to redirect all incoming connections to the two subclusters.

```sql
=> CREATE NETWORK ADDRESS node04 ON v_verticadb_node0004 WITH '203.0.113.1';
CREATE NETWORK ADDRESS
=> CREATE NETWORK ADDRESS node05 ON v_verticadb_node0005 WITH '203.0.113.2';
CREATE NETWORK ADDRESS
=> CREATE NETWORK ADDRESS node06 ON v_verticadb_node0006 WITH '203.0.113.3';
CREATE NETWORK ADDRESS
=> CREATE NETWORK ADDRESS node07 ON v_verticadb_node0007 WITH '203.0.113.4';
CREATE NETWORK ADDRESS
=> CREATE NETWORK ADDRESS node08 ON v_verticadb_node0008 WITH '203.0.113.5';
CREATE NETWORK ADDRESS
=> CREATE NETWORK ADDRESS node09 ON v_verticadb_node0009 WITH '203.0.113.6';
CREATE NETWORK ADDRESS

=> CREATE LOAD BALANCE GROUP query_subclusters WITH SUBCLUSTER query_pool_a,
query_pool_b FILTER '0.0.0.0/0';
CREATE LOAD BALANCE GROUP
=> CREATE ROUTING RULE query_clients ROUTE '0.0.0.0/0' TO query_subclusters;
CREATE ROUTING RULE
```

Important:

In cloud environments where clients will be connecting from outside the private network, use the external IP address for each node when creating the network addresses. Otherwise, external clients will not be able to connect to the nodes.

If you have a mix of internal and external clients, set up two network addresses for each node and add them to two separate load balancing groups: one for internal clients and another for external. Then create two routing rules one that routes the internal clients to the internal group, and
another that routes the external clients to the external group. Make the routing rule for internal clients only apply to the virtual private networks where your internal clients will connect from (for example, 10.0.0.0/8). The routing rule for the external clients can use the 0.0.0.0/0 CIDR range (all IP addresses) as the incoming connection address range. The rules will work correctly together because the more-specific internal client routing rule takes precedence over the less-restrictive external client rule.

After creating the policy, any client that opts into load balancing is redirected to one of the nodes in the two subclusters. For example, when you connect to node 1 in the cluster (with the IP address 203.0.113.1) using vsq1 with the -C flag, you see output similar to this:

```
$ vsq1 -h 203.0.113.1 -U dbadmin -w mypassword -C
Welcome to vsq1, the Vertica Analytic Database interactive terminal.
Type: \h or \? for help with vsq1 commands
\g or terminate with semicolon to execute query
\q to quit

INFO: Connected using a load-balanced connection.
INFO: Connected to 203.0.113.7 at port 5433.
=>
```

Connection load balancing policies take into account nodes that are stopped when picking a node to handle a client connection. If you shut down one or more subclusters to save money during low-demand periods, you do not need to adjust your load balancing policy as long as some of the nodes are still up.

**Using Elastic Crunch Scaling to Improve Query Performance**

You can choose to add nodes to your database to improve the performance of complex long-running analytic queries. Adding nodes helps these queries run faster.

When you have more nodes in a subcluster than you have shards in your database, multiple nodes subscribe to each shard. To involve all of the nodes in the subcluster in queries, the Vertica query optimizer automatically uses a feature called Elastic Crunch Scaling (ECS). This feature splits the responsibility for processing the data in each shard among the nodes that subscribe to it. During a query, each node has less data to process and usually finishes the query faster.
For example, suppose you have a six-node subcluster in a three-shard database. In this subcluster, two nodes subscribe to each shard. When you execute a query, Vertica assigns each node roughly half of the data in the shard it subscribes to. Because all nodes in the subcluster participate in the query, the query usually finishes faster than if only half the nodes had participated.

ECS lets a subcluster that has more nodes than shards act as if the shard count in the database were higher. In a three-shard database, a six-node subcluster acts as if the database has six shards by splitting each shard in half. However, using ECS isn't as efficient as having a higher shard count. In practice, you will see slightly slower query performance on a six-node subcluster in a three shard database than you would see from a six-node subcluster in a six-shard database.

You can determine when the optimizer will use ECS in a subcluster by querying the `V_CATALOG.SESSION_SUBSCRIPTIONS` system table and look for nodes whose `is_collaborating` column is TRUE. Subclusters whose node count is less than or equal to the number of shards in the database only have participating nodes. Subclusters that have more nodes than the database's shard count assign the "extra" nodes the role of collaborators. The differences between the two types of nodes are not important for when you are executing queries. The two types just relate to how Vertica organizes the nodes to execute ECS-enabled queries.

This example shows how to get the list of nodes that are participating or collaborating in resolving queries for the current session:

```sql
=> SELECT node_name, shard_name, is_collaborating, is_participating
FROM V_CATALOG.SESSION_SUBSCRIPTIONS
WHERE is_participating = TRUE OR is_collaborating = TRUE
ORDER BY shard_name, node_name;
```

<table>
<thead>
<tr>
<th>node_name</th>
<th>shard_name</th>
<th>is_collaborating</th>
<th>is_participating</th>
</tr>
</thead>
<tbody>
<tr>
<td>v_verticadb_node0004</td>
<td>replica</td>
<td>f</td>
<td>t</td>
</tr>
<tr>
<td>v_verticadb_node0005</td>
<td>replica</td>
<td>f</td>
<td>t</td>
</tr>
<tr>
<td>v_verticadb_node0006</td>
<td>replica</td>
<td>t</td>
<td>f</td>
</tr>
<tr>
<td>v_verticadb_node0007</td>
<td>replica</td>
<td>f</td>
<td>t</td>
</tr>
<tr>
<td>v_verticadb_node0008</td>
<td>replica</td>
<td>t</td>
<td>f</td>
</tr>
<tr>
<td>v_verticadb_node0009</td>
<td>replica</td>
<td>t</td>
<td>f</td>
</tr>
<tr>
<td>v_verticadb_node0010</td>
<td>segment0001</td>
<td>f</td>
<td>t</td>
</tr>
<tr>
<td>v_verticadb_node0011</td>
<td>segment0001</td>
<td>t</td>
<td>f</td>
</tr>
<tr>
<td>v_verticadb_node0012</td>
<td>segment0002</td>
<td>f</td>
<td>t</td>
</tr>
<tr>
<td>v_verticadb_node0013</td>
<td>segment0002</td>
<td>t</td>
<td>f</td>
</tr>
<tr>
<td>v_verticadb_node0014</td>
<td>segment0003</td>
<td>f</td>
<td>t</td>
</tr>
<tr>
<td>v_verticadb_node0015</td>
<td>segment0003</td>
<td>t</td>
<td>f</td>
</tr>
</tbody>
</table>

(12 rows)

You can see that nodes 4, 5, and 7 are participating, and nodes 6, 8, and 9 are collaborating.

You can also see that ECS is enabled by looking at an `EXPLAIN` plan for a query. At the top of the plan for an ECS-enabled query is the statement "this query involves non-participating
nodes. These non-participating nodes are the collaborating nodes that are splitting the data in the shard with the participating nodes. The plan also lists the nodes taking part in the query.

This example shows an explain plan for an ECS-enabled query in a six-node subcluster in a three-shard database:

```sql
=> EXPLAIN SELECT sales_quantity, sales_dollar_amount, transaction_type, cc_name
   FROM online_sales.online_sales_fact
   INNER JOIN online_sales.call_center_dimension
   ON (online_sales.online_sales_fact.call_center_key
       = online_sales.call_center_dimension.call_center_key
       AND sale_date_key = 156)
   ORDER BY sales_dollar_amount DESC;
```

```

Vertica Analytic Database (11.0.x)
Taking Advantage of ECS

To take advantage of ECS, create a secondary subcluster where the number of nodes is a multiple of the number of shards in your database. For example, in a 12-shard database, create a subcluster that contains a multiple of 12 nodes such as 24 or 36. The number of nodes must be a multiple of the number of shards to evenly distribute the data across the nodes in the subcluster. You create a secondary subcluster because secondary subclusters are better at performing queries. See Subclusters for more information.

**Note:**
Instead of creating a new subcluster, you can add more nodes to an existing secondary subcluster. Just be sure that the number of nodes in the subcluster is a multiple of the shard count.

Once you have created the subcluster, have users connect to it and run their analytic queries. Vertica automatically enables ECS in the subcluster because it has more nodes than there are shards in the database.

How the Optimizer Assigns Data Responsibilities to Nodes

The optimizer has two strategies to choose from when dividing the data in a shard among its subscribing nodes. One strategy is optimized for queries that use data segmentation. Queries that contain a JOIN or GROUP BY clause rely on data segmentation. The other strategy is for queries that do not need segmentation.

By default, the optimizer automatically chooses the strategy to use. For most queries, the automatically-chosen strategy results in faster query performance. For some queries, you may want to manually override the strategy using hints. In a small number of queries, ECS does not help performance. In these cases, you can disable ECS. See Manually Choosing an ECS Strategy for details.
Manually Choosing an ECS Strategy

When the number of nodes in a subcluster is greater than the number of database shards, the Vertica query optimizer uses elastic crunch scaling (ECS) to involve all nodes in processing queries. For each shard, the optimizer divides responsibility for processing shard data among its subscribing nodes, using one of the following strategies:

<table>
<thead>
<tr>
<th>Strategy</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>I/O-optimized</td>
<td>Optimizer divides the list of ROS containers in the shard among the subscribing nodes. Use this strategy when nodes must fetch the data for the query from communal storage, rather than the depot. Nodes only fetch the ROS containers they need to resolve the query from communal storage, reducing the amount of data each needs to transfer from communal storage. Due to the arbitrary division of data among the nodes, this strategy does not support query optimizations that rely on data segmentation.</td>
</tr>
<tr>
<td>Compute-optimized</td>
<td>Optimizer uses data segmentation to assign portions to each subscribing node. The nodes scan the entire shard, but use sub-segment filtering to find their assigned segments of the data. Use this strategy when most data for the query is in the depot, because nodes must scan the entire contents of the shard. Because this strategy uses data segmentation, it supports optimizations such as local joins that the I/O-optimized strategy cannot.</td>
</tr>
</tbody>
</table>

Optimizer chooses one of these two strategies according to the query’s use of JOIN and GROUP BY clauses:

1. If the query does not contain a JOIN or a GROUP BY clause, the optimizer chooses the I/O-optimized strategy because the query does not use segmentation.
2. If the query does not contain a JOIN or GROUP BY, the optimizer begins planning the query with the assumption that it will use the compute-optimized strategy.
3. If the optimizer does not use a LOCAL JOIN or LOCAL GROUP BY in the final query plan, it chooses the I/O optimized strategy. This strategy is the best option because the plan does not need to use segmentation.
4. If the final query plan contains a LOCAL JOIN or GROUP BY, it will benefit from using segmentation. Therefore, the optimizer picks the compute-optimized strategy.
The optimizer automatically chooses a strategy based on whether the query can take advantage of data segmentation. You can tell which strategy the optimizer chooses for a query by using EXPLAIN. The top of the plan explanation states whether ECS is preserving segmentation. For example, this simple query on a single table does not need to use segmentation, so it uses the I/O-optimized strategy:

```sql
=> EXPLAIN SELECT employee_last_name, 
    employee_first_name, employee_age 
FROM employee_dimension 
ORDER BY employee_age DESC;
```

```
QUERY PLAN
-----------------------------------------------------------------------------------

QUERY PLAN DESCRIPTION:
The execution of this query involves non-participating nodes.
Crunch scaling strategy does not preserve data segmentation

...
```

A more complex query using a JOIN results in ECS preserving data segmentation by using the compute-optimized strategy. The query plan tells you that segmentation is preserved:

```sql
=> EXPLAIN SELECT sales_quantity, sales_dollar_amount, transaction_type, cc_name 
FROM online_sales.online_sales_fact 
INNER JOIN online_sales.call_center_dimension 
ON (online_sales.online_sales_fact.call_center_key 
    = online_sales.call_center_dimension.call_center_key 
    AND sale_date_key = 156) 
ORDER BY sales_dollar_amount DESC;
```

```
QUERY PLAN
-----------------------------------------------------------------------------------

QUERY PLAN DESCRIPTION:
The execution of this query involves non-participating nodes.
Crunch scaling strategy preserves data segmentation

...
```

In most cases, the optimizer chooses the best strategy to use to split the data among the nodes subscribing to the same shard. However, you might occasionally find that some queries perform poorly. In these cases, the query can embed the ECSMODE hint to specify which strategy to use, or even disable ECS.

### Setting the ECS Strategy for Individual Queries

You can use the **ECSMODE** hint in a query to force the optimizer to use a specific ECS strategy (or disable ECS entirely). The ECSMODE hint takes one of the following arguments:
- **AUTO:** The optimizer chooses the strategy to use, useful only if ECS mode is set at the session level (see Setting the ECS Strategy for the Session or Database).
- **IO_OPTIMIZED:** Use I/O-optimized strategy.
- **COMPUTE_OPTIMIZED:** Use compute-optimized strategy.
- **NONE:** Disable use of ECS for this query. Only participating nodes are involved in query execution; collaborating nodes are not.

The following example shows the query plan for a simple single-table query that is forced to use the compute-optimized strategy:

```sql
=> EXPLAIN SELECT /*+ECSMode(COMPUTE_OPTIMIZED)*/ employee_last_name,
   employee_first_name, employee_age
FROM employee_dimension
ORDER BY employee_age DESC;

QUERY PLAN

QUERY PLAN DESCRIPTION:
The execution of this query involves non-participating nodes.
Crunch scaling strategy preserves data segmentation

This example disable ECS in a six-node cluster in a three-shard database:

```sql
=> EXPLAIN SELECT /*+ECSMode(NONE)*/ employee_last_name,
   employee_first_name, employee_age
FROM employee_dimension
ORDER BY employee_age DESC;

QUERY PLAN

QUERY PLAN DESCRIPTION:

EXPLAIN SELECT /*+ECSMode(NONE)*/ employee_last_name,
   employee_first_name, employee_age
FROM employee_dimension
ORDER BY employee_age DESC;

Access Path:
+-SORT [Cost: 243, Rows: 10K] (PATH ID: 1)
  | Order: employee_dimension.employee_age DESC
  | Execute on: v_verticadb_node0007, v_verticadb_node0004, v_verticadb_node0005
  | +----> STORAGE ACCESS for employee_dimension [Cost: 71, Rows: 10K] (PATH ID: 2)
  |  | Projection: public.employee_dimension_DB0_8_segment_0
  |  | Materialize: employee_dimension.employee_first_name,
  |  | employee_dimension.employee_last_name, employee_dimension.employee_age
  |  | Execute on: v_verticadb_node0007, v_verticadb_node0004,
  |  |  v_verticadb_node0005
  ...
```
Note that this query plan lacks the "this query involves non-participating nodes" statement, indicating that it does not use ECS. It also lists just three participating nodes. These nodes are marked as participating in the `V_CATALOG.SESSION_SUBSCRIPTIONS` system table.

### Setting the ECS Strategy for the Session or Database

You can use the `ECSMode` configuration parameter to set the ECS strategy for the current session. This parameter accepts the same values as the ECSMODE hint except NONE, which is valid only for individual queries.

The following example demonstrates using the configuration parameter to force a simple query to use the `COMPUTE_OPTIMIZED` strategy. It then sets the parameter back to its default value of AUTO:

```
=> EXPLAIN SELECT employee_first_name,employee_age
   FROM employee_dimension ORDER BY employee_age DESC;

QUERY PLAN
-------------------------------------------------------------

QUERY PLAN DESCRIPTION:
The execution of this query involves non-participating nodes.
Crunch scaling strategy does not preserve data segmentation

```

```
=> ALTER SESSION SET ECSMode = 'COMPUTE_OPTIMIZED';
ALTER SESSION
=> EXPLAIN SELECT employee_first_name,employee_age
   FROM employee_dimension ORDER BY employee_age DESC;

QUERY PLAN
-------------------------------------------------------------

QUERY PLAN DESCRIPTION:
The execution of this query involves non-participating nodes.
Crunch scaling strategy preserves data segmentation

```

```
=> ALTER SESSION SET ECSMode = 'AUTO';
ALTER SESSION
```

Individual query hints override the session-level settings. This example sets the session default to use `COMPUTE_OPTIMIZED`, then restores the default behavior for a query by using the ECSMode hint with the value AUTO:

```
=> ALTER SESSION SET ECSMode = 'COMPUTE_OPTIMIZED';
ALTER SESSION
```
=> EXPLAIN SELECT /*+ECSMode(AUTO)*/ employee_first_name,employee_age FROM employee_dimension ORDER BY employee_age DESC;

QUERY PLAN

---------------------------------------------------------------

QUERY PLAN DESCRIPTION:
The execution of this query involves non-participating nodes.
Crunch scaling strategy does not preserve data segmentation

Note that setting the ECSMode hint to AUTO let the optimizer pick the I/O-optimized strategy (which does not preserve segmentation) instead of using the compute-optimized strategy set at the session level.

You can also set the ECS strategy at the database level using ALTER DATABASE. However, doing so overrides the Vertica optimizer's settings for all users in all subclusters that use ECS. Before setting the ECS strategy at the database level, verify that the majority of the queries run by all users of the ECS-enabled subclusters must have the optimizer's default behavior overridden. If not, then use the session or query-level settings to override the optimizer for just the queries that benefit from a specific strategy.

Local Caching of Storage Containers

The Vertica execution engine uses the StorageMerge operator to read data from storage containers in cases where it is important to read container data in its projection-specified sort order. This is particularly useful for operations that must preserve the sort order of the data that is read from multiple storage containers, before merging it into a single storage container. Common operations that enforce sort order include mergeout, and some queries with ORDER BY clauses—for example CREATE TABLE...AS, where the query includes an ORDER BY clause.

The execution engine typically allocates multiple threads to the StorageMerge operator. Each thread is assigned a single Scan operator to open and read container contents. If the number of containers to read is greater than the number of available threads, the execution engine is likely to assign individual Scan operators to multiple containers. In this case, Scan operators might need to switch among different containers and reopen them multiple times before all required data is fetched and assembled. Doing so is especially problematic when reading storage containers on remote filesystems such as S3. The extra overhead incurred by reopening and reading remote storage containers can significantly impact performance and usage costs.

You can configure your database so the execution engine caches on local disk the data of S3 storage containers that require multiple opens. The size of temp space allocated per query
to the StorageMerge operator for caching is set by configuration parameter `StorageMergeMaxTempCacheMB`. By default, this configuration parameter is set to -1 (unlimited). If caching requests exceed temp space limits or available disk space, Vertica caches as much container data as it can, and then reads from S3.

**Note:**
The actual temp space that is allocated is the lesser of these settings:

- `StorageMergeMaxTempCacheMB`
- A user's `TEMPSPACECAP` setting
- The session `TEMPSPACECAP` setting

To turn off caching, set `StorageMergeMaxTempCacheMB` to 0.

## Managing an Eon Mode Database in MC

Vertica Management Console (MC), a database health and activity monitoring tool, provides in-browser wizards you can follow to deploy Vertica cluster instances and create an Eon Mode database on them. You can also use MC to manage and monitor resources that are specific to Eon Mode:

- [Node and shard subscriptions](https://www.vertica.com/docs/11.x/Vertica-Documentation-11.x Page 5759 of 6776)
- Depot [storage](https://www.vertica.com/docs/11.x/Vertica-Documentation-11.x Page 5759 of 6776) and [activity](https://www.vertica.com/docs/11.x/Vertica-Documentation-11.x Page 5759 of 6776)

**See Also**

- [Using Management Console](https://www.vertica.com/docs/11.x/Vertica-Documentation-11.x Page 5759 of 6776)
- [Fast Tasks](https://www.vertica.com/docs/11.x/Vertica-Documentation-11.x Page 5759 of 6776)
Stopping and Starting an Eon Mode Cluster

Stopping Your Eon Mode Database and Cluster Using the MC

When running an Eon Mode database in the cloud, you usually want to stop the nodes running your database when you stop the database. Stopping your nodes avoids wasting money. The nodes aren't needed while the database is down.

**Note:**
Instead of shutting down your entire database, you can still save money by shutting down subclusters that aren't being used. This technique lets your database continue to run and load data, while reducing the hourly cost. See Starting and Stopping Subclusters for more information.

The easiest way to stop both your database and the nodes that run it is to use the MC:

1. From the MC home page, click View Your Infrastructure.
2. In row labeled Databases, click the database you want to stop.
3. In the popup, click Stop.
4. Click OK to confirm you want to stop the database.
5. Once your database has stopped, in the row labeled Clusters, click the entry for the cluster running the database you just stopped.
6. In the popup, click Manage.
7. In the ribbon at the top of the cluster view, click Stop Cluster.
8. In the dialog box, check the I would like to stop all instances in the cluster box and click Stop Cluster.

Manually Stopping the Database and Cluster

To manually stop your database and cluster, first stop your database using one of the following methods:
Use admintools to stop the database. See Stopping the Database. 
Use the SHUTDOWN function to stop the database.

Once you have stopped the database, you can stop your nodes. If you are in a cloud environment, see your cloud provider's documentation for instruction on stopping nodes.

Starting Your Cluster and Database Using the MC

To start your database cluster and database:

1. From the MC home, click View Infrastructure.
2. In the Clusters row, click the cluster that runs the database you want to start.
3. In the pop-up, click Manage.
4. In the ribbon at the top of the cluster's page, click Start Cluster.
5. Check the I would like to start all instances in the cluster box and click Start Cluster.

Starting the cluster automatically starts the database.

Manually Starting Your Cluster and Database

To manually start your cluster and database:

1. Start the nodes in your database cluster. If you are running in the cloud, see your cloud provider's documentation on how to start instances.
2. Connect to one of the nodes in the cluster and use the admintools menus or command line to start your database. See Starting the Database for instructions.

Terminating an Eon Mode Database Cluster

When you terminate an Eon Mode database's cluster, you free its resources. In a cloud environment, terminating the cluster deletes the instances that ran the database's nodes. In an on-premises database, terminating the cluster usually means repurposing physical hardware for other uses. See Stopping, Starting, Terminating, and Reviving Eon Mode Database Clusters for more information.
Terminating an Eon Mode database's cluster does not affect the data it stores. The data remains stored in the communal storage location. As long as you do not delete the communal storage location, you can revive the database onto a new Eon Mode cluster. See Reviving an Eon Mode Database Cluster for more information.

**Important:**
Vertica persists catalog data in communal storage, updating it every few minutes. Nonetheless, before shutting down your database you should make sure your metadata is up to date on communal storage. To do so, see Synchronizing Metadata.

### Terminating an Eon Mode Cluster Using Management Console

Management Console provides the easiest way to terminate an Eon Mode cluster. You must follow a two-step process: first stop the database, then terminate the cluster:

1. If you have not yet synchronized the database's catalog, follow the steps in Synchronizing Metadata.
2. From the Management Console home page, click View Your Infrastructure.
3. In the row labeled Databases, click the database whose cluster you want to terminate.
4. In the popup, click Stop.
5. Click OK to confirm you want to stop the database.
6. After the database stops, in the row labeled Clusters, click the entry for the cluster you want to terminate.
7. In the popup, click Manage.
8. In the ribbon at the top of the cluster view, click Advanced and then select Terminate Cluster.
9. In the dialog box:
   - Check I understand that terminating a cluster will terminate all instances in the cluster
   - Click Terminate Cluster.

### Manually Terminating an Eon Mode Cluster

To manually terminate your Eon Mode cluster:
1. If you have not yet synchronized the database's catalog, follow the steps in Synchronizing Metadata.

2. Stop the database using one of the following methods:
   - Use admintools.
   - Use the SHUTDOWN meta-function.

3. Terminate the database node instances. If you are in a cloud environment, see your cloud provider's documentation for instructions on terminating instances. For on-premises database clusters, you can repurpose the systems that were a part of the cluster.

See Also

Reviving an Eon Mode Database Cluster

If you have terminated your Eon Mode database's cluster, but have not deleted the database's communal storage, you can revive your database. Reviving the database restores it to its pre-shutdown state. The revival process requires creating a new database cluster and configuring it to use the database's communal storage location. See Stopping, Starting, Terminating, and Reviving Eon Mode Database Clusters for more information.

You can also use the revive process to restart a database when its nodes do not have persistent local storage. You may choose to configure your node's instances in your cloud-based Eon Mode cluster with non-persistent local storage to reduce cost. Cloud providers such as AWS and GCP charge less for instances when they are not required to retain data when you shut them down.

You revive a database using either the Management Console or admintools. The MC and admintools offer different revival methods:

- The MC always revives onto a newly-provision cluster that it creates itself. It cannot revive onto an existing cluster. Use the MC to revive a database when you do not have a cluster already provisioned for your database.
- admintools only revives onto an existing database cluster. You can manually create a cluster to revive your database. See Installing Manually.

You can also revive a database whose hosts use instance storage where data is not persistently stored between shutdowns. In this case, admintools treats the existing
database cluster as a new cluster, because the hosts do not contain the database's catalog data.

- Currently, only admintools lets you revive just the primary subclusters in a database cluster. This option is useful if you want to revive the minimum number of nodes necessary to start your database. See Reviving Only Primary Subclusters below.

The MC always revives the entire database cluster.

**Note:**

You cannot revive a database from a communal storage location that is currently running on another cluster. The revive process fails if it detects that there is a cluster already running the database. Having two instances of a database running on separate clusters using the same communal storage location leads to data corruption.

---

**Reviving Using the Management Console**

You can use a wizard in the Management Console to provision a new cluster and revive a database onto it from a browser. For details, see:

- Reviving an Eon Mode Database on AWS in MC
- Reviving an Eon Mode Database on GCP in MC

---

**Revive Using admintools**

You can use admintools to revive your Eon Mode database on an existing cluster.

---

**Cluster Requirements**

This existing cluster must:

- Have the same version (or later version) of Vertica installed on it. You can repurpose an existing Vertica cluster whose database you have shut down. Another option is to create a cluster from scratch by manually installing Vertica (see Installing Manually).
• Contain a number of hosts in the cluster that is equal to or greater than either:
  • The total number of nodes that the database cluster had when it shut down.
  • The total number of primary nodes the database cluster had when it shut down. When you supply a cluster that matches the number of primary nodes in the database, admintools revives just the primary nodes.

When reviving, you supply admintools with a list of the hosts in the cluster to revive the database onto. The number of hosts in this list must match either the total number of nodes or the number of primary nodes in the database when it shut down. If the number of nodes you supply does not match either of these values, admintools returns an error.

You do not need to use all of the hosts in the cluster to revive the database. You can revive a database onto a subset of the hosts in the cluster. But you must have at least enough hosts to revive all of the primary nodes.

For example, suppose you want to revive a database that had 16 nodes when it was shut down, with four of those nodes being primary nodes. In that case, you can revive:

• Just the primary nodes onto a cluster that contains at least four nodes.
• All of the 16 nodes onto a cluster that contains at least 16 nodes.

You may choose to revive your database onto a cluster with more nodes that is necessary in cases where you want to quickly add new nodes. You may also want to revive just the primary nodes in a database onto a larger cluster. In this case, you can use the extra nodes in the cluster to start one or more secondary subclusters.

**Required Database Information**

To revive the database, you must know:

• The name of the database to revive (note that the database name is case sensitive)
• The version of Vertica that created the database, so you can use the same or later version
• The total number of all nodes or the number of primary nodes in the database when it shut down
• The URL and credentials for the database's communal storage location
• The user name and password of the database administrator
• The IP addresses of all hosts in the cluster you want to revive onto

If you do not know what version of Vertica created the database or are unsure how many nodes it had, see [Getting Database Details From a Communal Storage Location](#) below.
# Required Database Settings

Before starting the revive process, verify the following conditions are true for your Eon Mode environment:

<table>
<thead>
<tr>
<th>Eon environment</th>
<th>Revived database requirements</th>
</tr>
</thead>
</table>
| All             | - The uppermost directories of the catalog, data, and depot directories on all nodes exist and are owned by the database dbadmin  
|                 | - The cluster has no other database running on it |
| Azure           | If your database does not use Azure managed identities to authenticate with the communal storage blob container, the following values must be set:  
|                 | - AzureStorageCredentials  
|                 | - AzureStorageEndpointConfig |

See [Azure Blob Storage Object Store](#) for details.

| S3: AWS, on-premises | The following configuration parameters are set:  
|----------------------|---------------------------------------------------|
|                      | - [AWSEndpoint](#)  
|                      | - [AWSRegion](#) (AWS only)  
|                      | - [AWSAuth](#) / IAM role  
|                      | - [AWSEnableHttps](#) |

**Important:**

If migrating to an on-premises database, set configuration parameter AWSEnableHttps to be compatible with the database TLS setup: AWSEnableHttps=1 if using TLS, otherwise 0. If settings are incompatible, the migration returns with an error.

| GCP | The following configuration parameters are set:  
|-----|---------------------------------------------------|
|     | - [GCSAuth](#)  
|     | - [GCSEnableHttps](#) (if not using the default value)  
|     | - [GCSEndpoint](#) (if not using the default value) |
Getting Database Details From a Communal Storage Location

To revive a database, you must know:

- The version of Vertica that created it (so you can use the same or a later version)
- The total number of nodes (when reviving both primary and secondary nodes) or primary nodes (when just reviving the primary nodes) in the database's cluster when it shut down.

If you do not know these details, you can determine them based on the contents of the communal storage location.

If you are not sure which version of Vertica created the database stored in a communal storage location, examine the cluster_config.json file. This file is stored in the communal storage location in the folder named metadata/databasename. For example, suppose you have a database named mydb stored in the communal storage location s3://mybucket/mydb. Then you can download and examine the file s3://mybucket/mydb/metadata/mydb/cluster_config.json.

In the cluster_config.json, the Vertica version that created the database is stored with the JSON key named DatabaseVersion near the top of the file:

```json
{
    "CatalogTruncationVersion" : 804,
    "Database" : {
        "branch" : "",
        "name" : "verticadb"
    },
    "DatabaseVersion" : "v10.1.0",
    "GlobalSettings" : {
        "TupleMoverServices" : -33,
        "appliedUpgrades" : [
        ...
    }
}
```

In this example, you can revive the storage location using Vertica version 10.1.0 or later.

If you do not know how many nodes or primary nodes the cluster had when it shut down, use the --display-only option of the admintools revive_db tool. Adding this option prevents admintools from reviving the database. Instead, it validates the files in the communal storage and reports details about the nodes that made up the database cluster. Parts of this report show the total number of nodes in the cluster and the number of primary nodes:
$ admintools -t revive_db --display-only --communal-storage-location \ 
    s3://mybucket/verticadb -d verticadb

Attempting to retrieve file: [s3://mybucket/verticadb/metadata/verticadb/cluster_config.json]

Validated 6-node database verticadb defined at communal storage s3://mybucket/verticadb.

Expected layout of database after reviving from communal storage: s3://mybucket/verticadb

== Communal location details: ==
{
    "communal_storage_url": "s3://mybucket/verticadb",
    "num_shards": "3",
    "depot_path": "/vertica/data",
    ...
}

Number of primary nodes: 3

You can use grep to find just the relevant lines in the report:

$ admintools -t revive_db --display-only --communal-storage-location \ 
    s3://mybucket/verticadb -d verticadb | grep 'Validated\|primary nodes'

Validated 6-node database verticadb defined at communal storage s3://mybucket/verticadb.
Number of primary nodes: 3

Creating a Parameter File

For Eon Mode deployments that are not on AWS, you must create a configuration file to pass the parameters listed in the table in the previous section to admintools. Traditionally this file is named auth_params.conf although you can choose any file name you want.

For on-premises Eon Mode databases, this parameter file is the same one you used when initially installing the database. See the following links for instructions on creating a parameter file for the communal storage solution you are using for your database:

- Pure Storage FlashBlade
- HDFS
- MinIO

For databases running on Microsoft Azure, the parameter file is only necessary if your database does not use managed identities. This file is the same format that you use to manually install an Eon Mode database. See Manually Creating an Eon Mode Database on Azure for more information.

To revive an Eon Mode database on GCP manually, create a configuration file to hold the GCSAuth parameter and optionally, the GCSEnableHttp parameter.
You must supply the GCSAuth parameter to enable Vertica to read from the communal storage location stored in GCS. The value for this parameter is the HMAC access key and secret:

\[
\text{GCSAuth} = \text{HMAC\_access\_key}:\text{HMAC\_secret\_key}
\]

See [Creating an HMAC Key](#) for more information about HMAC keys.

If your Eon Mode database does not use encryption when accessing communal storage on GCS, then disable HTTPS access by adding the following line to `auth_params.conf`:

\[
\text{GCSEnableHttps} = 0
\]

## Running the revive_db Tool

Use the admintools revive_db tool to revive the database:

1. Use SSH to access a cluster host as an administrator.
2. Depending on your environment, run one of the following admintools command lines:
   - AWS:
     ```bash
     $ admintools -t revive_db \
     --communal-storage-location=s3://communal_store_path \ 
     -s host1,... -d database_name
     ```
   - For on premises and other environments, run the command:
     ```bash
     $ admintools -t revive_db -x auth_params.conf \
     --communal-storage-location=storage-schema://communal_store_path \ 
     -s host1_ip,... -d database_name
     ```

This example revives a six-node on-premises database:

```bash
$ admintools -t revive_db -x auth_params.conf \
--communal-storage-location=s3://mybucket/mydir \ 
172.16.116.31,172.16.116.32 -d VMart
```

The following example demonstrates reviving a three-node database hosted on GCP:

```bash
$ admintools -t revive_db -x auth_params.conf \
--communal-storage-location gs://mybucket/verticadb \ 
-s 10.142.0.35,10.142.0.38,10.142.0.39 -d VerticaDB
```

Attempting to retrieve file:

```
[gs://mybucket/verticadb/metadata/VerticaDB/cluster_config.json]
```
Validated 3-node database VerticaDB defined at communal storage

gs://mybucket/verticadb.
Cluster lease has expired.
Preparation succeeded all hosts
Calculated necessary addresses for all nodes.
Starting to bootstrap nodes. Please wait, databases with a large
catalog may take a while to initialize.
>>Calling bootstrap on node v_verticadb_node0002 (10.142.0.38)
>>Calling bootstrap on node v_verticadb_node0003 (10.142.0.39)
Load Remote Catalog succeeded on all hosts
Database revived successfully.

Reviving Only Primary Subclusters

You can revive just the primary subclusters in an Eon Mode database. Make the list of hosts
you pass to the admintools revive_db tool's --hosts (or -s) argument match the number
of primary nodes that were in the database when it shut down. For example, if you have a
six-node Eon Mode database that had three primary nodes, you can revive just the primary
nodes by supplying three hosts in the --hosts argument:

$ admintools -t revive_db --communal-storage-location=s3://verticadb -d verticadb \
   --auth_params.conf --hosts node01,node02,node03
Attempting to retrieve file: [s3://verticadb/metadata/verticadb/cluster.config.json]
Consider reviving to only primary nodes: communal storage indicates 6 nodes, while
3 nodes were specified

Validated 3-node database verticadb defined at communal storage s3://verticadb.
Cluster lease has expired.
Preparation succeeded all hosts
Calculated necessary addresses for all nodes.
Starting to bootstrap nodes. Please wait, databases with a large catalog may take a
while to initialize.
>>Calling bootstrap on node v_verticadb_node0002 (192.168.56.102)
>>Calling bootstrap on node v_verticadb_node0003 (192.168.56.104)
Load Remote Catalog succeeded on all hosts
Database revived successfully.

In a database where you have revived only the primary nodes, the secondary nodes are
down. Their IP address is set to 0.0.0.0 so they are not part of the database. For example,
querying the NODES system table in the database revived in the previous example shows
the secondary nodes are all down:

<table>
<thead>
<tr>
<th>node_name</th>
<th>node_state</th>
<th>node_address</th>
<th>subcluster_name</th>
</tr>
</thead>
<tbody>
<tr>
<td>v_verticadb_node0001</td>
<td>UP</td>
<td>192.168.56.102</td>
<td>default_subcluster</td>
</tr>
<tr>
<td>v_verticadb_node0002</td>
<td>UP</td>
<td>192.168.56.103</td>
<td>default_subcluster</td>
</tr>
<tr>
<td>v_verticadb_node0003</td>
<td>UP</td>
<td>192.168.56.104</td>
<td>default_subcluster</td>
</tr>
</tbody>
</table>
Note:
Secondary nodes that have not been revived may cause error messages if your database has the large cluster feature enabled. (See Large Cluster for more information about the large cluster feature.)

For example, adding a node to a secondary subcluster can fail if the new node would be assigned a control node that has not been revived. In this case, Vertica reports that adding the node failed because the control node has an invalid IP address.

If you encounter errors involving control nodes with invalid IP addresses, consider reviving the unrevived secondary subcluster, as explained below.

Because Vertica considers these unrevived nodes to be down, it may not allow you to remove them or remove their subcluster while they are in their unrevived state. The best way to remove the nodes or the secondary subcluster is to revive them first.

**Reviving Unrevived Secondary Subclusters**

If you revived just the primary subclusters in your database, you can later choose to revive some or all of the secondary subclusters. Your cluster must have hosts that are not nodes in the database that Vertica can use to revive the unrevived nodes. If your cluster does not have enough of these non-node hosts, you can add more hosts. See Adding Hosts to a Cluster.

You revive a secondary subcluster by using the admintools' restart_subcluster tool. You supply it with the list of hosts in the --hosts argument where the nodes will be revived. The number of hosts in this list must match the number of nodes in the subcluster. You must revive all nodes in the subcluster at the same time. If you pass restart_subcluster a list with fewer or more hosts than the number of nodes defined in the subcluster, it returns an error.

The follow example demonstrates reviving the secondary subcluster named analytics shown in the previous examples.

```
$ admintools -t restart_subcluster -d verticadb --hosts node04,node05,node06 \  
  -p 'password' -c analytics
```
Updating hostnames of nodes in subcluster analytics.
   Replicating configuration to all nodes
   Generating new configuration information and reloading spread
Hostnames of nodes in subcluster analytics updated successfully.
*** Restarting subcluster for database verticadb ***

Synchronizing Metadata

An Eon Mode database maintains its catalog, which contains all database metadata, in communal storage. Vertica uses this metadata when it revives the database, so it is important that the catalog is always up to date. Vertica automatically synchronizes the catalog at regular intervals as specified by the configuration parameter CatalogSyncInterval —by default, set to five minutes.

In general, it is not necessary to monitor the synchronization process or change it. One exception applies: before shutting down a database that you intend to revive or replicate, it is good practice to verify that the catalog contains all recent changes, and if necessary synchronize it manually.

Verifying Catalog Status

You can verify the synchronization status of the database catalog in two ways, depending on whether the database is running.

If the database is running, query and compare these two system tables:
• **CATALOG_SYNC_STATE**: Shows how recently each node synchronized its catalog to communal storage, and the version that it synchronized.

• **CATALOG_TRUNCATION_STATUS**: Shows the latest synchronization status of the database catalog. Catalog synchronization is up to date when columns TRUNCATION_CATALOG_VERSION and CURRENT_CATALOG_VERSION are the same.

If the database is not currently running, check the following JSON file on communal storage:

```
/metadata/database-name/cluster_config.json
```

The catalog truncation version and timestamp in this file indicate when Vertica last synchronized the database catalog.

## Manually Synchronizing the Database Datalog

If necessary, call `SYNC_CATALOG` to synchronize the catalog immediately with all nodes or a specific node:

```
=> SELECT sync_catalog();
```

## Customizing Synchronization Intervals

By default, Vertica checks for catalog changes every five minutes. Occasionally, you might want to change this setting temporarily—for example, set it to a high value in order to take a snapshot of the current bucket contents:

```
=> ALTER DATABASE DEFAULT SET CatalogSyncInterval = 300;
```

**Important:**

If you set CatalogSyncInterval to high value for a specific task, be sure to revert it to its default setting immediately after the task is complete:

```
=> ALTER DATABASE DEFAULT CLEAR PARAMETER CatalogSyncInterval;
```
Welcome to the Vertica on the Cloud guide. This section explains how you can create Vertica clusters running on different cloud platforms. It does not cover working with existing data stored in the cloud. For information about loading data, see Getting Data into Vertica.

This document assumes that you are familiar with the cloud environment on which you will create your Vertica cluster.

Vertica on Amazon Web Services

Welcome to the Vertica on Amazon Web Services (AWS) guide. This section explains how to create and manage Vertica clusters on AWS.

When you launch a cluster on AWS resources and are ready to create your database, consider whether to run it in Eon Mode or Enterprise Mode. The differences in these two modes lay in their architecture, deployment, and scalability:
- **Enterprise Mode** stores data locally on the nodes in the database.

- **Eon Mode** stores its data in an S3 bucket.
Eon Mode separates the computational processes from the communal storage layer of your database. This separation lets you elastically vary the number of nodes in your database cluster to adjust to varying workloads.

Vertica provides CloudFormation Templates (CFTs) through the AWS Marketplace. These CFTs also deploy the Management Console.

**Note:**
For detailed information about which CFT to use, see Creating a Database in Eon Mode.

See Vertica Architecture: Eon Versus Enterprise Mode for more about the differences between the two database modes.

### In This Section

### Overview of Vertica on Amazon Web Services (AWS)

Vertica clusters on AWS can operate on EC2 instances automatically provisioned using a CloudFormation Template, or manually deployed from Amazon Machine Images (AMIs).

You can create a database in either Eon Mode or Enterprise Mode in a Vertica cluster in AWS.

For more information about Amazon cluster instances and their limitations, see the Amazon documentation.

### In This Section
CloudFormation Templates

Vertica provides Cloud Formation Templates (CFTs) through the AWS Marketplace. After you provide a few parameters to the template, create a stack to automatically provision the AWS resources for your Vertica system.

After creating the stack, in the Management Console (MC) you can create and manage your clusters and databases. See Creating an Eon Mode Database in AWS with MC or Creating an Enterprise Mode Database in AWS with MC.

Vertica Offerings on AWS

Using the license models and CFTs described in CloudFormation Template (CFT) Overview, you can install the following Vertica products:

- Vertica BYOL, Amazon Linux 2.0
- Vertica by the Hour, Amazon Linux 2.0
- Vertica BYOL, Red Hat
- Vertica by the Hour, Red Hat

See Launch MC and AWS Resources with a CloudFormation Template for information on installing these products.

Vertica AMI Operating Systems for AWS

Vertica provides Vertica and Management Console AMIs in the following operating systems.

- Red Hat 7.4 and later
- Amazon Linux 2.0 and later

You can use the AMI to deploy MC hosts or cluster hosts.

**Important:**
When using Amazon Linux 2.0, you must compile C++ UDX libraries with a gcc version 4.8. For more information see Setting Up a Development Environment.
Supported AWS Instance Types

Vertica supports a range of Amazon Web Services instance types, each optimized for different purposes. Choose the instance type that best matches your requirements. The two tables below list the AWS instance types that Vertica supports for Vertica cluster hosts, and for use in MC. For more information, see the Amazon Web Services documentation on instance types and volumes.

Instance Types for Vertica Cluster Hosts

Each Amazon EC2 Instance type natively provides one of the following storage options:

- Elastic Block Store (EBS) provides durable storage: Data files stored on instance persist after instance is stopped.
- Instance Store provides temporary storage: Data files stored on instance are lost when instance is stopped.

**Important:**
Instance types that support EBS volumes support encrypting.

<table>
<thead>
<tr>
<th>Optimization</th>
<th>Instance Types Using Only EBS Volumes (Durable)</th>
<th>Instance Types Using Instance Store Volumes (Temporary)</th>
</tr>

**More Information**

For more information about Amazon cluster instances and their limitations, see Manage Clusters in the Amazon Web Services documentation.
Choosing AWS Eon Mode Instance Types

This topic lists the recommended instance types to use in an Eon Mode database running in AWS.

Choose instance types that support ephemeral instance storage or EBS volumes for your depot, depending on cost and availability. It is not mandatory to have an EBS-backed depot, because in Eon Mode, a copy of the data is safely stored in communal storage. Vertica recommends either r4 or i3 instances for production clusters.

The following table provides information to help you make a decision on how to pick instances with ephemeral instance storage or EBS only storage. Check with AWS for the latest cost per hour.

<table>
<thead>
<tr>
<th>Storage Type</th>
<th>Instance Type</th>
<th>Pros/Cons</th>
</tr>
</thead>
<tbody>
<tr>
<td>Instance storage</td>
<td>i3.8xlarge</td>
<td>Instance storage offers better performance than EBS attached storage through multiple EBS volumes. Instance storage can be striped (RAIDed) together to increase throughput and load balance I/O. Data stored in instance-store volumes is not persistent through instance stops, terminations, or hardware failures.</td>
</tr>
<tr>
<td>EBS-only storage</td>
<td>r4.8xlarge with 600 GB EBS volume attached</td>
<td>Newer instance types from AWS have only the EBS option. In most AWS regions, it's easier to provision a large number of instances. You can terminate an instance but leave the EBS volume around for faster revive. Perserving the EBS will preserve the depot. While some of the cached files might have become stale, they will be ignored and evicted. Much of the cached data will not be stale. It will save time when the node revives and warms its depot. Take advantage of full-volume encryption.</td>
</tr>
</tbody>
</table>

**Important:**
If you select instances that use instance store, if you then terminate those instances there is the potential for data loss. For Eon mode, MC displays an
alert to inform the user of the potential data loss when terminating instances that support instance store.

Vertica AMI Sleep C-States

By default, the following instances have their processor C-states set to a value of 1 in the Vertica AMI:

- c4.8xlarge
- d2.8xlarge
- m4.10xlarge

This measure is meant to improve performance by limiting the sleep states that an instance running Vertica uses.

For more information about sleep states, visit the AWS Documentation.

AWS Features Supported by Vertica

Vertica supports the following AWS features:

- **Enhanced Networking**: Vertica recommends that you use the AWS enhanced networking for optimal performance. For more information, see Enabling Enhanced Networking on Linux Instances in a VPC in the AWS documentation.
- **Command Line Interface**: Use the Amazon command-line Interface (CLI) with your Vertica AMIs. For more information, see What Is the AWS Command Line Interface?.
- **Elastic Load Balancing**: Use elastic load balancing (ELB) for queries up to one hour. When enabling ELB, configure the timer to 3600 seconds. For more information see Elastic Load Balancing in the AWS documentation.

AWS Authentication

Amazon defines two ways to control access to AWS resources such as S3: IAM roles and the combination of id, secrets, and (optionally) session tokens. For long-term access to non-communal storage buckets, you should use IAM roles for access control centralization. You do not need to change your application's configuration if you want to change its access settings. You just alter the IAM role applied to your EC2 instances.
However, for one-time tasks like backing up and restoring the database or loading data to and from non-communal storage buckets, you should use an AWS access key.

Vertica uses both of these authentication methods to support different features and use cases:

- An Eon Mode database's access to S3 for communal and catalog storage must always use IAM role authentication. IAM roles are the default access control method for AWS resources. Vertica uses this method if you do not configure the legacy access control session parameters.
- Individual users can read data from S3 storage locations other than the ones Vertica uses for communal storage. For example, users can use COPY to load data into Vertica from an S3 bucket or query an external table stored on S3. If the IAM role assigned to the Vertica nodes does not have access to this external S3 data, the user must set an id, secret, and optionally an access token in session variables to authorize access to it. These session variables override the IAM role set on the server. See S3 Parameters for a list of these session parameters.
- Individual users can export data to S3 using the Vertica Library for AWS. This library cannot use IAM authorization. Users who want to export data to S3 using this library must set id, secret, and optionally access token values in session variables. See Configure the Vertica Library for Amazon Web Services for details.

**Important:**
If the database is running in Eon Mode, using id and secret authentication is more complex. In addition to having access to the external S3 data, any id that a user sets must be authorized to read from and write to the S3 storage locations that Vertica uses to store communal and catalog data. The queries that the user executes uses this id for all storage requests, not just those for accessing external S3 data. If the id does not have access to the catalog and communal storage, the user cannot execute queries.

**Configuring an IAM Role**

To configure an IAM role to grant Vertica to access AWS resources you must:

1. Create an IAM role to allow EC2 instances to access the specific resources.
2. Grant that role permission to access your resources.
3. Attach this IAM role to each EC2 instance in the Vertica cluster.

To see an example of IAM roles for a Vertica cluster, look at the roles defined in one of the Cloud Formation Templates provided by Vertica. You can download these templates from
any of the Vertica entries in the Amazon Marketplace. Under each entry's Usage Information section, click the View CloudFormation Template link, then click Download CloudFormation Template.

For more information about IAM roles, see IAM Roles for Amazon EC2 in the AWS documentation.

## Installing Vertica with CloudFormation Templates

Vertica provides CloudFormation Templates (CFTs) on the AWS Marketplace that allow you to get a cluster up and running quickly. Using the template allows you to automatically provision your AWS resources and launch a Vertica cluster and Management Console, with minimal configuration required.

If you prefer to deploy a VPC, instances, and related resources manually, see Install Vertica with Manually Deployed AWS Resources.

### CloudFormation Template (CFT) Overview

With Vertica on AWS, use CloudFormation Templates (CFTs) to easily manage provisioning the AWS resources with a running Vertica system.

To access Vertica CFTs, go to the AWS Marketplace. Licensing models for CFTs are:

- **Bring Your Own License (BYOL):** By default, free CE license is installed with 3 nodes and 1 TB. To extend nodes or size, you can purchase the Vertica BYOL license. Outside of the BYOL license on CFTs, you can also access the Community Edition without a license file:
  - If you are using Management Console, simply leave the license field blank.
  - If you are using a command line (see Installing Vertica with the Installation Script), specify CE in the --license parameter during installation.
- **By the Hour:** A pay-as-you-go model where you pay for only the number of hours you use for each node. One advantage of using the Paid Listing is that all charges appear on your Amazon AWS bill. This offers an alternative to purchasing a full Vertica license. This eliminates the need to compute potential storage needs in advance.

Available Vertica CFTs are:
• **Management Console with 3 Vertica nodes:** The easiest way to deploy Vertica. This CFT deploys an Eon Mode database by default. However, this environment can also be used to create an Enterprise Mode database. For more information, see [Creating a Database](#).

• **Deploy Management Console into new VPC:** This CFT deploys all required AWS resources and installs the Vertica Management Console (MC). After stack creation completes, log in to the MC to provision a Vertica database cluster.

• **Deploy Management Console into existing VPC:** This CFT deploys the Vertica Management Console (MC) in an already-existing VPC and subnet. After stack creation completes, the MC is available. Log in to MC to provision either a Vertica database cluster or an Eon Mode database cluster.

For this CFT, you must first set up the VPC, subnet, and related network resources. For more information about the correct configuration of these resources for Vertica, see the following topics in the AWS documentation:

- [Creating a Virtual Private Cloud](#)
- [Configuring the Network](#)

**For More Information**

For supported operating systems for these CFTs, see [Vertica AMI Operating Systems for AWS](#).

For Vertica products available on AWS, see [Vertica Offerings on AWS](#).

**Prerequisites for Using CFTs**

Before you can install Vertica on AWS using CloudFormation Templates (CFTs), verify that you have:

- AWS account with permissions to create a VPC, subnet, security group, EC2 instances, and IAM roles (For more information about AWS accounts, see the [AWS documentation](#))
- Amazon key pair for SSH access to an EC2 instance. (See the [AWS documentation for key pairs](#))
Launch MC and AWS Resources with a CloudFormation Template

Launch Management Console (MC) and its associated AWS resources using CloudFormation templates (CFTs) that are available through the AWS Marketplace. For a list of available CFTs, see CloudFormation Template (CFT) Overview.

Starting in the AWS Marketplace, launch the provisioning instance from which you can install Vertica:

1. Log in to the AWS Marketplace with an AWS account (see the Prerequisites section above).
2. Search for "Vertica" in the AWS Marketplace.
3. Select a Vertica CFT. Each CFT leads you to a product overview page, with pricing estimates. (Also see CloudFormation Template (CFT) Overview for an overview of available templates and products).
4. Click Continue to Subscribe.
5. On the next page, select your launch settings based on your requirements for deployment.
6. If you have not agreed to Vertica EULA terms on the AWS Marketplace before, click Accept Software Terms to subscribe.
7. Click Launch with CloudFormation Console. The CloudFormation Console opens.
8. The CloudFormation Console automatically supplies the URL in the Specify an Amazon S3 template URL field. Click Next.
9. Follow the CloudFormation workflow and enter the parameters (collectively called a stack).

   Important: Take note of the username and password you set for Management Console during this step. You cannot recover or reset these credentials after you create the stack.

10. After confirming the details you have provided for your new stack, click Create. The AWS console brings you to the Stacks page, where you can view the progress of the creation process. The process takes several minutes.
11. The Outputs tab displays information about accessing your environment after the process completes.

Next, access the Management Console (MC) to deploy your cluster instances and create a database, as described in Access Management Console.
Access Management Console

You use MC to deploy Vertica cluster instances and create a database. You can also use MC to manage and monitor your databases. You will use Management Console to provision a Vertica cluster and database on the AWS resources you just launched.

1. On the AWS CloudFormation Stacks page, select your new stack and view the Outputs tab. This tab provides information about accessing your environment, as well as documentation and licensing resources.

2. Click the Access Management Console URL. This link takes you to the MC login page.

3. To log in, enter the MC username and password that you created using the CloudFormation Console.

   After login, MC displays the home page, with options to provision a new cluster or database or import existing ones. If you chose a CFT that also creates a database, your new database is also displayed on the home page.

   This page also provides a Resources section with links to online training, blogs, community, and help resources.

You have successfully launched Management Console on AWS resources.

If you have not yet provisioned a Vertica cluster and database, complete the steps in one of the following:

- Creating an Eon Mode Database in AWS with MC
- Creating an Enterprise Mode Database in AWS with MC

Creating an Eon Mode Database in AWS with MC

After you deploy Management Console on Amazon Web Services (AWS) with a CloudFormation Template, you can provision a cluster and database. Vertica clusters are
provisioned in the same Virtual Private Cloud (VPC) as the Vertica Management Console. You can create an initial cluster of up to 60 hosts.

**Note:**
See [Creating a Cluster Using MC](#) in the Installation Guide if you installed Management Console with an RPM, or to provision an on-premises database and cluster.

**Prerequisites**

Before you begin, complete or obtain the following:

- Launch MC and AWS Resources with a CloudFormation Template
- AWS credentials and environment details
- S3 communal storage URL
- Vertica credentials
- Vertica Management Console Credentials

Choose one of the following setup options:

- **Quick Setup**: Select your cluster size based on your estimated compressed working data size. The Management Console calculates the volume size per node, and reserves part of the disk for catalog and temp storage.
- **Advanced Setup**: This option provides more granular control over configuration settings related to subnet, Node IP, and depot, temp, and catalog volume sizes.

**Quick Setup**

1. Log in to the Vertica Management Console.
2. On the Management Console home page under Provision, click Create new database.
3. On Database Storage Mode, click Eon Mode.
4. Click Next. On Vertica License, select one of the following license mode options:
   - **Community Edition**: A free Vertica license to preview Vertica functionality. This license provides limited features. If you use a Community Edition license for your deployment, you can upgrade the license later to expand your cluster load. See [Managing Licenses](#) for more information.
   - **Premium Edition**: Use your Vertica license. After you select this option, click Browse to locate and upload your Vertica license key file, or manually enter it in the field.
5. Click Next. On Setup Path, select Quick Setup.
6. Click Next. In the Vertica Settings section, select the desired Vertica database version. You can select from the latest hotfix of recent Vertica releases. For each database version, you can also select the operating system. See Vertica AMI Operating Systems for AWS for available OS and major version options.
7. In the AWS EC2 Instance Type section, select from one of the following instance types:
   - Ephemeral Depot
   - EBS Depot
8. In the Cluster Size section, select the number of instances to deploy with your cluster based on your working data size. For details about working data size, see Configuring Your Vertica Cluster for Eon Mode.
   
   If you are using a Community Edition license, your cluster size selections are limited to Small, Medium, and Large.
9. In the Database Parameters section, supply the following information:
   - Database Name: The name for your new database. See Creating a Database Name and Password for database name requirements.
   - Administrator Username: The name of the database superuser.
   - Administrator Password: The password for the database administrator user account. For details, see Password Guidelines.
   - Confirm Password: Reenter the Administrator Password.
   - Load Sample Data: Optional. Click the slider to the right to preload your database with example clickstream data. This option is useful if you are testing features and want some preloaded data in the database to query.
10. In the AWS Environment section, supply the following information:
    - AWS Key Pair: Your Amazon key pair for SSH access to EC2 instances.
    - IP Access: The cluster IP address range for SSH and client access to cluster hosts.
    - S3 Communal Storage URL: The path to a new subfolder in your existing AWS S3 bucket for Communal Storage of your Eon Mode database. Vertica creates the subfolder in the existing S3 bucket.
      
      Use an existing S3 bucket in the same region as your Management Console instance.
    - Tag EC2 Instances: Optional. Assign distinct, searchable metadata tags to the instances in this cluster. Many organizations use labels to organize, track responsibility, and assign costs for instances. To add a tag, click the slider to the right to display the Tag Name and Tag Value fields. Click Add to create the tag. Added tags are displayed below the fields.
11. Click Create Database Cluster to create a Eon Mode cluster on AWS.
Advanced Setup

1. Log in to the Vertica Management Console.
2. On the Management Console home page under Provision, click Create new database.
3. On Database Storage Mode, click Eon Mode.
4. Click Next. On Vertica License, select one of the following license mode options:
   - **Community Edition**: A free Vertica license to preview Vertica functionality. This license provides limited features. If you use a Community Edition license for your deployment, you can upgrade the license later to expand your cluster load. See Managing Licenses for more information.
   - **Premium Edition**: Use your Vertica license. After you select this option, click Browse to locate and upload your Vertica license key file, or manually enter it in the field.
5. Click Next. On Setup Path, select Advanced Setup.
6. Click Next. On AWS Environment, supply the following information:
   - **AWS Key Pair**: Your Amazon key pair for SSH access to EC2 instances.
   - **AWS Subnet**: The subnet for your cluster. By default, Vertica creates your cluster in the same subnet as your MC instance. Use security groups and network access control lists (ACLs) to secure your subnet. For details, see the Amazon documentation.
   - **IP Access**: The cluster IP address range for SSH and client access to cluster hosts.
   - **Node IP Setting**: Select Private, Public, or Elastic. For details about each option, see the Amazon documentation.
   - **S3 Communal Storage URL**: The path to a new subfolder in your existing AWS S3 bucket for Communal Storage of your Eon Mode database. Vertica creates the subfolder in the existing S3 bucket.
     Use an existing S3 bucket in the same region as your Management Console instance.
   - **Tag EC2 Instances**: Optional. Assign distinct, searchable metadata tags to the instances in this cluster. Many organizations use labels to organize, track responsibility, and assign costs for instances. To add a tag, click the slider to the right to display the Tag Name and Tag Value fields. Click Add to create the tag. Added tags are displayed below the fields.
7. Click Next. Database Parameters accepts information about your Vertica license. Supply the following information:
- **Database Name**: The name for your new database. See Creating a Database Name and Password for database name requirements.
- **Administrator Username**: The name of the database superuser.
- **Administrator Password**: The password for the database administrator user account. For details, see Password Guidelines.
- **Confirm Password**: Reenter the Administrator Password.
- **Vertica Version**: Select the desired Vertica database version. You can select from the latest hotfix of recent Vertica releases. For each database version, you can also select the operating system. See Vertica AMI Operating Systems for AWS for available OS and major version options.
- **Load Sample Data**: Optional. Click the slider to the right to preload your database with example clickstream data. This option is useful if you are testing features and want some preloaded data in the database to query.

8. Click **Next**. On AWS Configuration, supply the following information:
- **Number of Nodes**: The initial number of nodes for your database.
- **Number of Vertica Database Shards**: Sets the number of shards in your database. Vertica suggests a number of shards automatically, based on your node count. After you set this value, you cannot change it later. The shard count must be greater than or equal to the maximum subcluster count. Be sure to allow for node growth. See Configuring Your Vertica Cluster for Eon Mode for recommendations.
- **EC2 Instance Type**: The instance types used for the nodes. See Choosing AWS Eon Mode Instance Types for a list of recommended AWS instances. For details about each instance type, see the Amazon EC2 Instance Types documentation.
- **Local Storage**: Customize your cluster according to your storage needs. For guidance, see Eon Mode Volume Configuration Defaults for AWS for the Vertica default settings for each supported instance.

9. Click **Next**. On **Review**, confirm your selections. Click **Edit** to return to a previous section and make changes.

10. When you are satisfied with your selections, click the I accept the terms and conditions checkbox.

11. Click **Create Cluster** to create a Eon Mode cluster on AWS.

**After Creating the Database**

After you create the database, click Get Started to view the Fast Tasks page. To view your database, select Manage and View Your Vertica Database to go to the database Overview.

You can also view your database from the Recent Databases section of the MC home page.
For additional information about managing your cluster, instances, and database using Management Console, see Managing Database Clusters.

Creating an Enterprise Mode Database in AWS with MC

After you deploy Management Console on Amazon Web Services (AWS) with a CloudFormation Template, you can provision a cluster and database. Vertica clusters are provisioned in the same Virtual Private Cloud (VPC) as the Vertica Management Console. You can create an initial cluster of up to 60 hosts.

Note: See Creating a Cluster Using MC in the Installation Guide if you installed Management Console with an RPM, or to provision an on-premises database and cluster.

Prerequisites

Before you begin, complete or obtain the following:

- Launch MC and AWS Resources with a CloudFormation Template
- AWS credentials and environment details
- S3 communal storage URL
- Vertica credentials
- Vertica Management Console Credentials

Provisioning a Cluster and Database

1. Log in to the Vertica Management Console.
2. On the Management Console home page under Provision, click Create New Database.
3. On Database Storage Mode, click Enterprise Mode.
4. Click Next. Create a New Vertica Cluster | mode: Enterprise provides you with two workflow options for creating your database. Select one of the following:
   - Quick Create: Vertica configures your EC2 instances with default settings.
   - Custom Create: You can specify EC2 instance types and other database settings.
5. Click Next. On Enter AWS Credentials and preferences, AWS Region is filled with the region of the Management Console host. Supply the following information:
- **AWS Subnet**: Under **Show Advanced Options**. Select the subnet used to create your cluster.
- **AWS Access Key ID**: Displayed if MC was configured to use the AWS Access Keys authentication method. Enter your access key.
- **AWS Secret Access Key**: Displayed if MC was configured to use the AWS Access Keys authentication method. Enter the password associated with the **AWS Access Key ID**.
- **AWS Key Pair**: Your Amazon key pair for SSH access to EC2 instances.
- **CIDR Range**: The cluster IP address range for SSH and client access to cluster hosts.

6. Click **Next**. **Enter Vertica database name and login credentials** accepts information about your Vertica license. Supply the following information:
   - **Vertica Database Name**: The name for your new database. See [Creating a Database Name and Password](#) for database name requirements.
   - **Vertica Version**: **Custom Create** mode only. Select the desired Vertica database version. You can select from the latest hotfix of recent Vertica releases. For each database version, you can also select the operating system. See [Vertica AMI Operating Systems for AWS](#) for available OS and major version options.
   - **Vertica Database User Name**: The name of the database superuser.
   - **Password**: The password associated with the database username. For details, see [Password Guidelines](#).
   - **Confirm Password**: Reenter the **Password**.
   - **Database Node Count**: The number of nodes that you want to deploy in this cluster. **Quick Create** mode provides options for 1 or 3 database node counts.
   - **Vertica License**: **Custom Create** mode only. Click **Browse** to locate and upload your Vertica license key file. If you do not supply a license key file here, the wizard deploys your database with a Vertica Community Edition license. This license has a three node limit, so the value in the Database Size field cannot be larger than 3 if you do not supply a license. If you use a Community Edition license for your deployment, you can upgrade the license later to expand your cluster load more than 1TB of data. See [Managing Licenses](#) for more information.
   - **Load example test data**: Optional. Click the checkbox to preload your database with example clickstream data. This option is useful if you are testing features and want some preloaded data in the database to query.

7. Click **Next**. **Specify cloud instance and main data storage info** provides options to let you customize your instance configuration. In **Quick Create** mode, the options on this screen are pre-selected and read-only.

   - **Database Data Path** is filled with the path to your persistent database storage.
   - **EBS Volume Type** and **EBS Volume Size (GB) per Volume per Available Node** fields are filled with default values for the selected **EC2 Instance Type**. See [Eon Mode](#)
**Volume Configuration Defaults for AWS** for more information.

In **Custom Create** mode, supply information for the following:

- **EC2 Instance Type**: The instance type your cluster deploys. See [Supported AWS Instance Types](#) for more information.
- **EBS Volume Type**: The block-level storage type for each node in your cluster.
- **EBS Volume Size (GB) per Volume per Available Node**: The amount of disk space available on each disk attached to each node in your cluster. This field shows you the total disk space available per node in your cluster.
- **Enable EBS Volume Encryption**: Optional. Select the checkbox if you want server-level encryption on your EC2 instances. With AWS, only 4th and 5th generation instance types (c4/5, r4/5, and m4/5) support encryption.
- **Node IP setting**: Select **Private**, **Public**, or **Elastic**. For details about each option, see the [Amazon documentation](#).

8. Click **Next**. **Specify additional storage and tag info** lets you allocate additional storage for your cluster. In **Quick Create** mode, the options on this screen are pre-selected and read-only.

- **Database Catalog Path** is the location of the local copy of the database catalog.
- **Database Temp Path** is the temporary storage space for each node, if the node instance type includes the temporary storage option.
- In **Custom Create** mode, select or enter a value for **EBS Volume Type**, **EBS Volume Size (GB) per Volume per Available Node**, and **Enable EBS Volume Encryption** under each path. Each field has the same definition as described in the previous step.
- **Tag EC2 instances**: Optional. Assign distinct, searchable metadata tags to the instances in this cluster. Many organizations use labels to organize, track responsibility, and assign costs for instances.
  After you click the checkbox, the **Tag Name** and **Tag Value** fields are displayed. Click **Add** to create the tag. Added tags are displayed below the fields.

9. Click **Next**. On the **Review** screen, confirm your selections. To edit your selections, click **Back** until you reach the screen containing information that you want to edit.

10. When you are satisfied with your selections, click the **Accept terms and conditions of the "Software Only Terms" for your territory** checkbox.

11. Click **Create** to create an Enterprise Mode cluster on AWS.

After the cluster and database is successfully created, click **Get Started** to view the [Fast Tasks](#) page. To view your database, select **Manage and View Your Vertica Database** to go to the database **Overview**.

You can also view your database from the **Recent Databases** section of the MC home page.

See [Managing Database Clusters](#) for further managing your cluster, instances, and database using Management Console.
Install Vertica with Manually Deployed AWS Resources

Vertica provides an AMI that you can install on AWS resources that you manually deploy. This section will guide you through configuring your network settings on AWS, launching and preparing EC2 instances using the Vertica AMI, and creating a Vertica cluster on those EC2 instances.

Choose this method of installation if you are familiar with configuring AWS and have many specific AWS configuration needs. (To automatically deploy AWS resources and a Vertica cluster instead, see Installing Vertica with CloudFormation Templates.

Configure Your Network

Before you create your cluster, you must configure the network on which Vertica will run. Vertica requires a number of specific network configurations to operate on AWS. You may also have specific network configuration needs beyond the default Vertica settings.

Important:

You can create a Vertica database that uses IPv6 for internal communications running on AWS. However, if you do so, you must identify the hosts in your cluster using IP addresses rather than host names. The AWS DNS resolution service is incompatible with IPv6.

The following sections explain which Amazon EC2 features you need to configure for instance creation.

Create a Placement Group, Key Pair, and VPC

Part of configuring your network for AWS is to create the following:

- Placement Group
- Key Pair
- Virtual Private Cloud (VPC)
Create a Placement Group

A placement group is a logical grouping of instances in a single Availability Zone. Placement Groups are required for clusters and all Vertica nodes must be in the same Placement Group.

Vertica recommends placement groups for applications that benefit from low network latency, high network throughput, or both. To provide the lowest latency, and the highest packet-per-second network performance for your Placement Group, choose an instance type that supports enhanced networking.

For information on creating placement groups, see Placement Groups in the AWS documentation.

Create a Key Pair

You need a key pair to access your instances using SSH. Create the key pair using the AWS interface and store a copy of your key (*.pem) file on your local machine. When you access an instance, you need to know the local path of your key.

Use a key pair to:

- Authenticate your connection as dbadmin to your instances from outside your cluster.
- Install and configure Vertica on your AWS instances.

For information on creating a key pair, see Amazon EC2 Key Pairs in the AWS documentation.

Create a Virtual Private Cloud (VPC)

You create a Virtual Private Cloud (VPC) on Amazon so that you can create a network of your EC2 instances. Your instances in the VPC all share the same network and security settings.

A Vertica cluster on AWS must be logically located in the same network. Create a VPC to ensure the nodes in your cluster can communicate with each other in AWS.

Create a single public subnet VPC with the following configurations:
- Assign a Network Access Control List (ACL) that is appropriate to your situation.
- Enable DNS resolution and enable DNS hostname support for instances launched in this VPC.
- Add the required network inbound and outbound rules to the Network ACL associated to the VPC.

**Note:**
A Vertica cluster must be operated in a single availability zone.

For information on creating a VPC, see [Create a Virtual Private Cloud (VPC)](https://docs.aws.amazon.com/AmazonVPC/latest/UserGuide/VPC_Creating.html) in the AWS documentation.

---

**Network ACL Settings**

Vertica requires the following basic network access control list (ACL) settings on an AWS instance running the Vertica AMI. Vertica recommends that you secure your network with additional ACL settings that are appropriate to your situation.

**Inbound Rules**

<table>
<thead>
<tr>
<th>Type</th>
<th>Protocol</th>
<th>Port Range</th>
<th>Use</th>
<th>Source</th>
<th>Allow/Deny</th>
</tr>
</thead>
<tbody>
<tr>
<td>SSH</td>
<td>TCP (6)</td>
<td>22</td>
<td>SSH (Optional—for access to your cluster from outside your VPC)</td>
<td>User Specific</td>
<td>Allow</td>
</tr>
<tr>
<td>Custom TCP Rule</td>
<td>TCP (6)</td>
<td>5450</td>
<td>MC (Optional—for MC running outside of your VPC)</td>
<td>User Specific</td>
<td>Allow</td>
</tr>
<tr>
<td>Custom TCP Rule</td>
<td>TCP (6)</td>
<td>5433</td>
<td>SQL Clients (Optional—for access to your cluster from SQL clients)</td>
<td>User Specific</td>
<td>Allow</td>
</tr>
<tr>
<td>Custom TCP Rule</td>
<td>TCP (6)</td>
<td>50000</td>
<td>Rsync (Optional—for backup outside of your VPC)</td>
<td>User Specific</td>
<td>Allow</td>
</tr>
<tr>
<td>Custom TCP Rule</td>
<td>TCP (6)</td>
<td>1024-65535</td>
<td>Ephemeral Ports (Needed if you use any of the)</td>
<td>User Specific</td>
<td>Allow</td>
</tr>
</tbody>
</table>
### Outbound Rules

<table>
<thead>
<tr>
<th>Type</th>
<th>Protocol</th>
<th>Port Range</th>
<th>Use</th>
<th>Source</th>
<th>Allow/Deny</th>
</tr>
</thead>
<tbody>
<tr>
<td>ALL Traffic</td>
<td>ALL</td>
<td>ALL</td>
<td>N/A</td>
<td>0.0.0.0/0</td>
<td>Deny</td>
</tr>
</tbody>
</table>

You can use the entire port range specified in the previous table, or find your specific ephemeral ports by entering the following command:

```
$ cat /proc/sys/net/ipv4/ip_local_port_range
```

### More Information

For detailed information on network ACLs within AWS, refer to [Network ACLs](#) in the Amazon documentation.

For detailed information on ephemeral ports within AWS, refer to [Ephemeral Ports](#) in the Amazon documentation.

### Configure TCP keepalive with AWS Network Load Balancer

AWS supports three types of elastic load balancers (ELBs):

- [Classic Load Balancers](#)
- [Application Load Balancers](#)
- [Network Load Balancers](#)

Vertica strongly recommends the AWS Network Load Balancer (NLB), which provides the best performance with your Vertica database. The Network Load Balancer acts as a proxy between clients (such as JDBC) and Vertica servers. The Classic and Application Load Balancers do not work with Vertica, in Enterprise Mode or Eon Mode.
To avoid timeouts and hangs when connecting to Vertica through the NLB, it is important to understand how AWS NLB handles idle timeouts for connections. For the NLB, AWS sets the idle timeout value to 350 seconds and you cannot change this value. The timeout applies to both connection points.

For a long-running query, if either the client or the server fails to send a timely keepalive, that side of the connection is terminated. This can lead to situations where a JDBC client hangs waiting for results that would never be returned because the server fails to send a keepalive within 350 seconds.

To identify an idle timeout/keepalive issue, run a query like this via a client such as JDBC:

```sql
=> SELECT SLEEP(355);
```

If there’s a problem, one of the following situations occurs:

- The client connection terminates before 355 seconds. In this case, lower the JDBC keepalive setting so that keepalives are sent less than 350 seconds apart.
- The client connection doesn’t return a result after 355 seconds. In this case, you need to adjust the server keepalive settings (tcp_keepalive_time and tcp_keepalive_intvl) so that keepalives are sent less than 350 seconds apart.

For detailed information about AWS Network Load Balancers, see What is a Network Load Balancer? in the AWS documentation.

**Create and Assign an Internet Gateway**

When you create a VPC, an Internet gateway is automatically assigned to it. You can use that gateway, or you can assign your own. If you are using the default Internet gateway, continue with the procedure described in Create a Security Group.

Otherwise, create an Internet gateway specific to your needs. Associate that internet gateway with your VPC and subnet.

For information about how to create an Internet Gateway, see Internet Gateways in the AWS documentation.

**Assign an Elastic IP Address**

An elastic IP address is an unchanging IP address that you can use to connect to your cluster externally. Vertica recommends you assign a single elastic IP to a node in your cluster. You
can then connect to other nodes in your cluster from your primary node using their internal IP addresses dictated by your VPC settings.

Create an elastic IP address. For information, see Elastic IP Addresses in the AWS documentation.

Create a Security Group

The Vertica AMI has specific security group requirements. When you create a Virtual Private Cloud (VPC), AWS automatically creates a default security group and assigns it to the VPC. You can use the default security group, or you can name and assign your own.

Create and name your own security group using the following basic security group settings. You may make additional modifications based on your specific needs.

Inbound

<table>
<thead>
<tr>
<th>Type</th>
<th>Use</th>
<th>Protocol</th>
<th>Port Range</th>
<th>IP</th>
</tr>
</thead>
<tbody>
<tr>
<td>SSH</td>
<td>TCP</td>
<td>22</td>
<td>The CIDR address range of administrative systems that require SSH access to the Vertica nodes. Make this range as restrictive as possible. You can add multiple rules for separate network ranges, if necessary.</td>
<td></td>
</tr>
<tr>
<td>DNS (UDP)</td>
<td>UDP</td>
<td>53</td>
<td>Your private subnet address range (for example, 10.0.0.0/24).</td>
<td></td>
</tr>
<tr>
<td>Custom UDP</td>
<td>Spread</td>
<td>UDP</td>
<td>4803 and 4804</td>
<td>Your private subnet address range (for example, 10.0.0.0/24).</td>
</tr>
<tr>
<td>Custom TCP</td>
<td>Spread</td>
<td>TCP</td>
<td>4803</td>
<td>Your private subnet address range (for example, 10.0.0.0/24).</td>
</tr>
<tr>
<td>Custom TCP</td>
<td>VSQL/SQL</td>
<td>TCP</td>
<td>5433</td>
<td>The CIDR address range of client systems that require access to the</td>
</tr>
</tbody>
</table>
Vertica nodes. This range should be as restrictive as possible. You can add multiple rules for separate network ranges, if necessary.

<table>
<thead>
<tr>
<th>Type</th>
<th>Protocol</th>
<th>Port Range</th>
<th>Destination</th>
<th>IP</th>
</tr>
</thead>
<tbody>
<tr>
<td>Custom TCP</td>
<td>Inter-node Communication</td>
<td>TCP</td>
<td>5434</td>
<td>Your private subnet address range (for example, 10.0.0.0/24).</td>
</tr>
<tr>
<td>Custom TCP</td>
<td>TCP</td>
<td>5444</td>
<td>Your private subnet address range (for example, 10.0.0.0/24).</td>
<td></td>
</tr>
<tr>
<td>Custom TCP</td>
<td>MC</td>
<td>TCP</td>
<td>5450</td>
<td>The CIDR address of client systems that require access to the management console. This range should be as restrictive as possible. You can add multiple rules for separate network ranges, if necessary.</td>
</tr>
<tr>
<td>Custom TCP</td>
<td>Rsync</td>
<td>TCP</td>
<td>50000</td>
<td>Your private subnet address range (for example, 10.0.0.0/24).</td>
</tr>
<tr>
<td>ICMP</td>
<td>Installer</td>
<td>Echo Reply</td>
<td>N/A</td>
<td>Your private subnet address range (for example, 10.0.0.0/24).</td>
</tr>
<tr>
<td>ICMP</td>
<td>Installer</td>
<td>Traceroute</td>
<td>N/A</td>
<td>Your private subnet address range (for example, 10.0.0.0/24).</td>
</tr>
</tbody>
</table>

**Note:**
In Management Console (MC), the Java IANA discovery process uses port 7 once to detect if an IP address is reachable before the database import operation. Vertica tries port 7 first. If port 7 is blocked, Vertica switches to port 22.

### Outbound
<table>
<thead>
<tr>
<th>All TCP</th>
<th>TCP</th>
<th>0-65535</th>
<th>Anywhere</th>
<th>0.0.0.0/0</th>
</tr>
</thead>
<tbody>
<tr>
<td>All ICMP</td>
<td>ICMP</td>
<td>0-65535</td>
<td>Anywhere</td>
<td>0.0.0.0/0</td>
</tr>
<tr>
<td>All UDP</td>
<td>UDP</td>
<td>0-65535</td>
<td>Anywhere</td>
<td>0.0.0.0/0</td>
</tr>
</tbody>
</table>

For information about what a security group is, as well as how to create one, see [Amazon EC2 Security Groups for Linux Instances](https://aws.amazon.com/documentation/ec2/reference/security-groups/) in the AWS documentation.

### Deploy AWS Instances for your Vertica Database Cluster

Once you have configured your network, you are ready to create your AWS instances and install Vertica. Follow these procedures to install and run Vertica on AWS.

### Configure and Launch an Instance

After you configure your network settings on AWS, configure and launch the instances onto which you will install Vertica. An Elastic Compute Cloud (EC2) instance without a Vertica AMI is similar to a traditional host. Just like with an on-premises cluster, you must prepare and configure your cluster and network at the hardware level before you can install Vertica.

When you create an EC2 instance on AWS using a Vertica AMI, the instance includes the Vertica software and the recommended configuration. The Vertica AMI acts as a template, requiring fewer configuration steps. Vertica recommends that you use the Vertica AMI as is—withou modification.

### Configure EC2 Instances in AWS

1. Select the Vertica AMI from the AWS marketplace.
2. Select the desired fulfillment method.
3. Configure the following:
   - A supported instance type
   - The number of instances you want to launch. A Vertica cluster usually uses identically configured instances of the same type.
   - A VPC
   - Placement Group
Add Storage to Your Instances

Consider the following issues when you add storage to your instances:

- Add a number of drives equal to the number of physical cores in your instance. For example, for a c3.8xlarge instance, 16 drives. For an r3.4xlarge, add 8 drives.
- Do not store your information on the root volume.
- Amazon EBS provides durable, block-level storage volumes that you can attach to running instances. For guidance on selecting and configuring an Amazon EBS volume type, see [Amazon EBS Volume Types](#) in the Amazon Web Services documentation.

Decide Whether to Configure EBS Volumes as a RAID Array

You can choose to configure your EBS volumes into a RAID 0 array to improve disk performance. Before doing so, use the `vioperf` utility to determine whether the performance of the EBS volumes is fast enough without using them in a RAID array. Pass `vioperf` the path to a mount point for an EBS volume. In this example, an EBS volume is mounted on a directory named `/vertica/data`:

```
[dadmin@ip-10-11-12-13 ~]$ /opt/vertica/bin/vioperf /vertica/data
```

The minimum required I/O is 20 MB/s read and write per physical processor core on each node, in full duplex i.e. reading and writing at this rate simultaneously, concurrently on all nodes of the cluster. The recommended I/O is 40 MB/s per physical core on each node. For example, the I/O rate for a server node with 2 hyper-threaded six-core CPUs is 240 MB/s required minimum, 480 MB/s recommended.

Using direct io (buffer size=1048576, alignment=512) for directory "/vertica/data"

<table>

<td></td>
</tr>
</tbody>
</table>
If the EBS volume read and write performance (the entries with Read and Write in column 1 of the output) is greater than 20MB/s per physical processor core (columns 6 and 7), you do not need to configure the EBS volumes as a RAID array to meet the minimum requirements.
to run Vertica. You may still consider configuring your EBS volumes as a RAID array if the performance is less than the optimal 40MB/s per physical core (as is the case in this example).

**Note:**
If your EC2 instance has hyper-threading enabled, vioperf may incorrectly count the number of cores in your system. The 20MB/s throughput per core requirement only applies to physical cores, rather than virtual cores. If your EC2 instance has hyper-threading enabled, divide the counter value (column 4 in the output) by the number of physical cores. See CPU Cores and Threads Per CPU Core Per Instance Type section in the AWS documentation topic [Optimizing CPU Options](https://docs.aws.amazon.com/AWSEC2/latest/UserGuide/instance-types.html) for a list of physical cores in each instance type.

If you determine you need to configure your EBS volumes as a RAID 0 array, see the AWS documentation topic [RAID Configuration on Linux](https://docs.aws.amazon.com/AWSEC2/latest/UserGuide/raid-config.html) the steps you need to take.

### Security Group and Access

1. Choose between your previously configured security group or the default security group.
2. Configure S3 access for your nodes by creating and assigning an IAM role to your EC2 instance. See [AWS Authentication](https://docs.aws.amazon.com/IAM/latest/UserGuide/id_roles_best-practices.html) for more information.

### Launch Instances

Verify that your instances are running.

### Connect to an Instance

Using your private key, take these steps to connect to your cluster through the instance to which you attached an elastic IP address:

1. As the dbadmin user, type the following command, substituting your ssh key:

   ```
   $ ssh --ssh-identity <ssh key> dbadmin@elasticipaddress
   ```
2. Select **Instances** from the Navigation panel.
3. Select the instance that is attached to the Elastic IP.
4. Click **Connect**.
5. On **Connect to Your Instance**, choose one of the following options:
   - **A Java SSH Client directly from my browser**—Add the path to your private key in the field **Private key path**, and click **Launch SSH Client**.
   - **Connect with a standalone SSH client**—Follow the steps required by your standalone SSH client.

**Connect to an Instance from Windows Using Putty**

If you connect to the instance from the Windows operating system, and plan to use Putty:

1. Convert your key file using PuTTYgen.
2. Connect with Putty or WinSCP (connect via the elastic IP), using your converted key (i.e., the *.ppk file).
3. Move your key file (*pem file) to the root dir using Putty or WinSCP.

**Prepare Instances for Cluster Formation**

After you create your instances, you need to prepare them for cluster formation. Prepare your instances by adding your AWS .pem key and your Vertica license.

By default, each AMI includes a Community Edition license. Once Vertica is installed, you can find the license at this location:

```
/opt/vertica/config/licensing/vertica_community_edition.license.key
```

1. As the dbadmin user, copy your *.pem file (from where you saved it locally) onto your primary instance.

   Depending upon the procedure you use to copy the file, the permissions on the file may change. If permissions change, the `install_vertica` script fails with a message similar to the following:

   ```
   FATAL (19): Failed Login Validation 10.0.3.158, cannot resolve or connect to host as root.
   ```
If you receive a failure message, enter the following command to correct permissions on your *pem file:

```
$ chmod 600 /<name-of-pem>.pem
```

2. Copy your Vertica license over to your primary instance, placing it in your home directory or other known location.

**Change Instances on AWS**

You can change instance types on AWS. For example, you can downgrade a c3.8xlarge instance to c3.4xlarge. See Supported AWS Instance Types for a list of valid AWS instances.

When you change AWS instances you may need to:

- Reconfigure memory settings
- Reset memory size in a resource pool
- Reset number of CPUs in a resource pool

**Reconfigure memory settings**

If you change to an AWS instance type that requires a different amount of memory, you may need to recompute the following and then reset the values:

- **All Systems**
- **max_map_count**

**Note:**
You may need root user permissions to reset these values.

**Reset memory size in a resource pool**

If you used absolute memory in a resource pool, you may need to reconfigure the memory using the MEMORYSIZE parameter in `ALTER RESOURCE POOL`.

**Note:**
If you set memory size as a percentage when you created the original resource pool, you do not need to change it here.
Reset number of CPUs in a resource pool

If your new instance requires a different number of CPUs, you may need to reset the CPUAFFINITYSET parameter in ALTER RESOURCE POOL.

Configure Storage

Vertica recommends that you store information — especially your data and catalog directories — on dedicated Amazon EBS volumes formatted with a supported file system. The /opt/vertica/sbin/configure_software_raid.sh script automates the storage configuration process.

Caution:
Do not store information on the root volume because it might result in data loss.

Vertica performance tests Eon Mode with a per-node EBS volume of up to 2TB. For best performance, combine multiple EBS volumes into a RAID 0 array.

For more information about RAID 0 arrays and EBS volumes, see RAID configuration on Linux.

Determining Volume Names

Because the storage configuration script requires the volume names that you want to configure, you must identify the volumes on your machine. The following command lists the contents of the /dev directory. Search for the volumes that begin with xvd:

```
$ ls /dev
```

Important:
Ignore the root volume. Do not include any of your root volumes in the RAID creation process.
Combining Volumes for Storage

The configure_software_raid.sh shell script combines your EBS volumes into a RAID 0 array.

**Caution:**

Run configure_software_raid.sh in the default setting only if you have a fresh configuration with no existing RAID settings.

If you have existing RAID settings, open the script in a text editor and manually edit the raid_dev value to reflect your current RAID settings. If you have existing RAID settings and you do not edit the script, the script deletes important operating system device files.

Alternately, use the Management Console (MC) console to add storage nodes without unwanted changes to operating system device files. For more information, see Managing Database Clusters.

The following steps combine your EBS volumes into RAID 0 with the configure_software_raid.sh script:

1. Edit the /opt/vertica/sbin/configure_software_raid.sh shell file as follows:
   a. Comment out the safety exit command at the beginning.
   b. Change the sample volume names to your own volume names, which you noted previously. Add more volumes, if necessary.
2. Run the /opt/vertica/sbin/configure_software_raid.sh shell file. Running this file creates a RAID 0 volume and mounts it to /vertica/data.
3. Change the owner of the newly created volume to dbadmin with chown.
4. Repeat steps 1-3 for each node on your cluster.

Create a Cluster

On AWS, use the install_vertica script to combine instances and create a cluster. Check your My Instances page on AWS for a list of current instances and their associated IP addresses. You need these IP addresses when you run install_vertica.

Create a cluster as follows:
1. While connected to your primary instance, enter the following command to combine your instances into a cluster. Substitute the IP addresses for your instances and include your root *.pem file name.

```
$ sudo /opt/vertica/sbin/install_vertica --hosts 10.0.11.164,10.0.11.165,10.0.11.166 \
--dba-user-password-disabled --point-to-point --data-dir /vertica/data \
--ssh-identity ~/name-of-pem.pem --license License.file
```

- If you are using Vertica Community Edition, which limits you to three instances, you can specify `-L CE with no license file.
- When you issue `install_vertica` or `update_vertica` on a Vertica AMI script, `--point-to-point` is the default. This parameter configures Spread to use direct point-to-point communication between all Vertica nodes, which is a requirement for clusters on AWS.
- If you are using IPv6 network addresses to identify the hosts in your cluster, use the `--ipv6` flag in your `install_vertica` command. You must also use IP addresses instead of host names, as the AWS DNS server cannot resolve host names to IPv6 addresses.

2. After combining your instances, Vertica recommends deleting your *.pem key from your cluster to reduce security risks. The example below uses the `shred` command to delete the file:

```
$ shred name-of-pem.pem
```

3. After creating one or more clusters, create your database.

For complete information on the `install_vertica` script and its parameters, see Installing Vertica with the Installation Script.

**Important:**

Stopping or rebooting an instance or cluster without first shutting down the database down, may result in disk or database corruption. To safely shut down and restart your cluster, see Operating the Database.

### Check Open Ports Manually Using the Netcat Utility

Once your cluster is up and running, you can check ports manually through the command line using the `netcat (nc)` utility. What follows is an example using the utility to check ports.
Before performing the procedure, choose the private IP addresses of two nodes in your cluster.

The examples given below use nodes with the private IPs:

```
10.0.11.60 10.0.11.61
```

Install the nc utility on your nodes. Once installed, you can issue commands to check the ports on one node from another node.

1. To check a TCP port:
   a. Put one node in listen mode and specify the port. The following sample shows how to put IP 10.0.11.60 into listen mode for port 4804.

```
[root@ip-10-0-11-60 ~]# nc -l 4804
```

b. From the other node, run nc specifying the IP address of the node you just put in listen mode, and the same port number.

```
[root@ip-10-0-11-61 ~]# nc 10.0.11.60 4804
```

c. Enter sample text from either node and it should show up on the other node. To cancel after you have checked a port, enter Ctrl+C.

`Note: To check a UDP port, use the same nc commands with the –u option.`

```
[root@ip-10-0-11-60 ~]# nc -u -l 4804
[root@ip-10-0-11-61 ~]# nc -u 10.0.11.60 4804
```

**Use Management Console (MC) on AWS**

Management Console (MC) is a database management tool that allows you to view and manage aspects of your cluster. Vertica provides an MC AMI, which you can use with AWS. The MC AMI allows you to create an instance, dedicated to running MC, that you can attach to a new or existing Vertica cluster on AWS. You can create and attach an MC instance to your Vertica on AWS cluster at any time.

For information on requirements and installing MC, see [Installing and Configuring Management Console](#).
See Also

- Network ACL Settings

Log in to MC and Managing Your Cluster

After you launch your MC instance and configure your security group settings, log in to your database. To do so, use the elastic IP you specified during instance creation.

From this elastic IP, you can manage your Vertica database on AWS using standard MC procedures.

Considerations When Using MC on AWS

- Because MC is already installed on the MC AMI, the MC installation process does not apply.
- To uninstall MC on AWS, follow the procedures provided in Uninstalling Management Console before terminating the MC Instance.

Export Data to Amazon S3 Using the AWS Library

⚠️ Deprecated:
The AWS library is deprecated. To export delimited data to S3 or any other destination, use EXPORT TO DELIMITED.
The Vertica library for Amazon Web Services (AWS) is a set of functions and configurable session parameters. These parameters allow you to export delimited data from Vertica to Amazon S3 storage without any third-party scripts or programs.

To use the AWS library, you must have access to an Amazon S3 storage account.

**Configure the Vertica Library for Amazon Web Services**

You use the Vertica library for Amazon Web Services (AWS) to export data from Vertica to S3. This library does not support IAM authentication. You must configure it to authenticate with S3 by using session parameters containing your AWS access key credentials. You can set your session parameters directly, or you can store your credentials in a table and set them with the AWS_SET_CONFIG function.

Because the AWS library uses session parameters, you must reconfigure the library with each new session.

**Important:** Your AWS access key ID and secret access key are different from your account access credentials. For more information about AWS access keys, visit the Managing Access Keys for IAM Users in the AWS documentation.

**Set AWS Authentication Parameters**

The following AWS authentication parameters allow you to access AWS and work with the data in your Vertica database:

- **aws_id:** The 20-character AWS access key used to authenticate your account.
- **aws_secret:** The 40-character AWS secret access key used to authenticate your account.
- **aws_session_token:** The AWS temporary security token generated by running the AWS STS command `get-session-token`. This AWS STS command generates temporary credentials you can use to implement multi-factor authentication for security purposes. See Implement Multi-factor Authentication.

**Implement Multi-factor Authentication**

Implement multi-factor authentication as follows:
1. Run the AWS STS command `get-session-token`, this returns the following:

```
$ Credentials": {
  "SecretAccessKey": "bQid6jNuSwRqUzkIjCJFG7c71gDHZY3h7aDSW2DU6",
  "SessionToken":
  "FQoDYXzdEBcaDM1mKpeu88nDTTFICKsAbaIDIWe48Th33tnUvo9F/8mZicKLLy7Wt6pcT4Flfr6ttIm242/U2CI9G/
XDc6oeysUlI3UGH7cxdhjxAW4FjygCKKuYNL764N2xn0issiMU0ku3GTDyc4U4IN1wyEng3SlshdiqVlk1It2MK0isE
QXKtx
F9FgfnQ8xJZUCKyIzseZwSpULa9YQC3Oz1+Q23rdUCuWU0IFspSU3PhOguH+WTqiM2XcHL5hcUcomqm41gU=",
  "Expiration": "2018-04-12T01:58:50Z",
  "AccessKeyId": "ASIAJ4ZYGTOSVSLUIN7Q"
}
```

For more information on `get-session-token`, see the AWS documentation.

1. Using the SecretAccessKey returned from `get-session-token`, set your temporary `aws_secret`:

```
=> ALTER SESSION SET UDPARAMETER FOR awslib aws_secret='bQid6jNuSwRqUzkIjCJFG7c71gDHZY3h7aDSW2DU6';
```

2. Using the SessionToken returned from `get-session-token`, set your temporary `aws_session_token`:

```
=> ALTER SESSION SET UDPARAMETER FOR awslib aws_session_token='FQoDYXzdEBcaDM1mKpeu88nDTTFICKsAbaIDIWe48Th33tnUvo9F/8mZicKLLy7Wt6pcT4Flfr6ttIm242/U2CI9G/
XDc6oeysUlI3UGH7cxdhjxAW4FjygCKKuYNL764N2xn0issiMU0ku3GTDyc4U4IN1wyEng3SlshdiqVlk1It2MK0isE
QXKtx
F9FgfnQ8xJZUCKyIzseZwSpULa9YQC3Oz1+Q23rdUCuWU0IFspSU3PhOguH+WTqiM2XcHL5hcUcomqm41gU=';
```

3. Using the AccessKeyId returned from `get-session-token`, set your temporary `aws_id`:

```
=> ALTER SESSION SET UDPARAMETER FOR awslib aws_id='ASIAJ4ZYGTOSVSLUIN7Q';
```

The Expiration value returned indicates when the temporary credentials expire. In this example expiration occurs April 12, 2018 at 01:58:50.

These examples show how to implement multifactor authentication using session parameters. You can use either of the following methods to securely set and store your AWS account credentials:

- Configure Session Parameters Directly
- Configure Session Parameters Using Credentials Stored in a Table
**Note:** To increase security, avoid directly setting the plain text value of your key directly in the aws_set_config parameter. Instead, store the value in a table protected with an access policy as described in Configure Session Parameters Using Credentials Stored in a Table.

**AWS Access Key Requirements**

To communicate with AWS, your access key must have the following permissions:

- s3:GetObject
- s3:PutObject
- s3:ListBucket

For security purposes, Vertica recommends that you create a separate access key with limited permissions specifically for use with the Vertica Library for AWS.

**Configure Session Parameters Directly**

These examples show how to set the session parameters for AWS using your own credentials. Parameter values are case sensitive:

- **aws_id:** This value is your AWS access key ID.

  ```sql
  => ALTER SESSION SET UDPARAMETER FOR awslib aws_id='AKABCOEXAMPLEPKPXYZQ';
  ```

- **aws_secret:** This value is your AWS secret access key.

  ```sql
  => ALTER SESSION SET UDPARAMETER FOR awslib aws_secret='CEXAMPLE3tEXAMPLE1wEXAMPLEFrFEXAMPLE6+Yz';
  ```

- **aws_region:** This value is the AWS region associated with the S3 bucket you intend to access. Left unconfigured, aws_region will default to us-east-1. It identifies the default server used by Amazon S3.

  ```sql
  => ALTER SESSION SET UDPARAMETER FOR awslib aws_region='us-east-1';
  ```

When using `ALTER SESSION`:

- Using `ALTER SESSION` to change the values of S3 Parameters also changes the values of corresponding UDParameters.
- Setting a UDParameter changes only the UDParameter.
Setting a configuration parameter changes both the AWS parameter and UDParameter.

Configure Session Parameters Using Credentials Stored in a Table

You can place your credentials in a table and secure them with a row-level access policy. You can then call your credentials with the AWS_SET_CONFIG scalar meta-function. This approach allows you to store your credentials on your cluster for future session parameter configuration. You must have dbadmin access to create access policies.

1. Create a table with rows or columns corresponding with your credentials:

   ```
   => CREATE TABLE keychain(accesskey varchar, secretaccesskey varchar);
   ```

2. Store your credentials in the corresponding columns:

   ```
   => COPY keychain FROM STDIN;
   Enter data to be copied followed by a newline.
   End with a backslash and a period on a line by itself.
   >> AEexampleI5exampleYXQ|CcexampleJf|exampleEXample6+Yz
   >> .
   ```

3. Set a row-level access policy appropriate to your security situation.

4. With each new session, configure your session parameters by calling the AWS_SET_CONFIG parameter in a SELECT statement:

   ```
   => SELECT AWS_SET_CONFIG('aws_id', accesskey), AWS_SET_CONFIG('aws_secret', secretaccesskey)
       FROM keychain;
   aws_set_config | aws_set_config
   -------------------------------
   aws_id | aws_secret
   (1 row)
   ```

5. After you have configured your session parameters, verify them:

   ```
   => SHOW SESSION UDPARAMETER ALL;
   ```

- [AWS_SET_CONFIG](#)
Export Data to Amazon S3 From Vertica

After you configure the library for Amazon Web Services (AWS), you can export Vertica data to Amazon S3 by calling the S3EXPORT() transform function. S3EXPORT() writes data to files, based on the URL you provide. Vertica performs all communication over HTTPS, regardless of the URL type you use. Vertica does not support virtual host style URLs. If you use HTTPS URL constructions, you must use path style URLs.

**Note:**
If your S3 bucket contains a period in its path, set the prepend_hash parameter to True.

You can control the output of S3EXPORT() in the following ways:

- Adjust the base query provided to S3EXPORT
- Adjust the partition of your result set with the OVER() clause

**Adjust the Query Provided to S3EXPORT**

By adjusting the query given to S3EXPORT(), you can export anything from tables to reporting queries.

This example exports a whole table:

```sql
=> SELECT S3EXPORT( * USING PARAMETERS url='s3://exampleBucket/object') OVER(PARTITION BEST) 
   FROM exampleTable;
rows | url
------------------------
606 | https://exampleBucket/object
(1 row)
```

This example exports the results of a query:

```sql
=> SELECT S3EXPORT(customer_name, annual_income USING PARAMETERS url='s3://exampleBucket/object') OVER() 
   FROM public.customer_dimension 
   WHERE (customer_gender, annual_income) IN 
   (SELECT customer_gender, MAX(annual_income) 
    FROM public.customer_dimension 
    GROUP BY customer_gender);
```
**Adjust the Partition of Your Result Set with the OVER Clause**

Use the OVER clause to control your export partitions. Using the OVER() clause without qualification results in a single partition processed by the initiator for all of the query data. This example shows how to call the function with an unqualified OVER() clause:

```
=> SELECT S3EXPORT(name, company USING PARAMETERS url='s3://exampleBucket/object',
                    delimiter=',' ) OVER()
               FROM exampleTable WHERE company='Vertica';
```

```
<table>
<thead>
<tr>
<th>rows</th>
<th>url</th>
</tr>
</thead>
<tbody>
<tr>
<td>25</td>
<td><a href="https://exampleBucket/object">https://exampleBucket/object</a></td>
</tr>
</tbody>
</table>
(1 row)
```

You can also use window clauses, such as window partition clauses and window order clauses, to manage exported objects.

This example shows how you can use a window partition clause to partition S3 objects based on company values:

```
=> SELECT S3EXPORT(name, company
                    USING PARAMETERS url='s3://exampleBucket/object',
                    delimiter=',' ) OVER(PARTITION BY company) AS MEDIAN
               FROM exampleTable;
```

**Adjusting the Export Chunk Size for Wide Tables**

You may encounter the following error when exporting extremely wide tables or tables with long data types such as LONG VARCHAR or LONG VARBINARY:

```
=> SELECT S3EXPORT( * USING PARAMETERS url='s3://exampleBucket/object') OVER(PARTITION BEST)
               FROM veryWideTable;
ERROR 5861: Error calling setup() in User Function s3export
at [/data/.../S3.cpp:787],
error code: 0, message: The specified buffer of 10485760 bytesRead is too small,
it should be at least 11279701 bytesRead.
```

Vertica returns this error if the data for a single row overflows the buffer storing the data before export. By default, this buffer is 10MB. You can increase the size of this buffer using
the chunksize parameter, which sets the size of the buffer in bytes. This example sets it to around 60MB:

```sql
=> SELECT S3EXPORT( * USING PARAMETERS url='s3://exampleBucket/object', chunksize=60485760)
   OVER(PARTITION BEST) FROM veryWideTable;
rows | url
-----+---------------------------------------
 606  | https://exampleBucket/object
(1 row)
```

Add Nodes to a Running Cluster on the Cloud

There are two ways to add nodes to an AWS cluster:

- Using Management Console
- Using admintools

When you use MC to add nodes to a cluster in the cloud, MC provisions the instances, adds the new instances to the existing Vertica cluster, and then adds those hosts to the database. However, when you add nodes to a cluster using admintools, you need to execute those steps yourself, as explained in Adding Nodes Using admintools.

Adding Nodes Using Management Console

In the Vertica Management Console, you can add nodes in several ways, depending on your database mode.

For Eon Mode databases, MC supports actions for subcluster and node management:

- In the cloud: On AWS and GCP.
- On-premises: For Pure Storage FlashBlade.

For Enterprise Mode databases, MC supports these actions:

- In the cloud on AWS: Add Node action, Add Instance action.
- On-premises: Add Node action.
Note:
In the cloud on GCP, Enterprise Mode databases are not supported.

Adding Nodes in an Eon Mode Database

In an Eon Mode database, every node must belong to a subcluster. To add nodes, you always add them to one of the subclusters in the database:

- By scaling up an existing subcluster by one or more nodes.
- By adding a new subcluster of one or more nodes.

Adding Nodes in an Enterprise Mode Database on AWS

In an Enterprise Mode database on AWS, to add an instance to your cluster:

1. On the MC Home page, click View Infrastructure to go to the Infrastructure page. This page lists all the clusters the MC is monitoring.
2. Click any cluster shown on the Infrastructure page.
3. Select View or Manage from the dialog that displays, to view its Cluster page. (In a cloud environment, if MC was deployed from a cloud template the button says "Manage". Otherwise, the button says "View".)

Note:
You can click the pencil icon beside the cluster name to rename the cluster. Enter a name that is unique within MC.

4. Click the Add (+) icon on the Instance List on the Cluster Management page.

   MC adds a node to the selected cluster.
Adding Nodes Using admintools

This section gives an overview on how to add nodes if you are managing your cluster using admintools. Each main step points to another topic with the complete instructions.

**Step 1: Before You Start**

Before you add nodes to a cluster, verify that you have an AWS cluster up and running and that you have:

- Created a database.
- Defined a database schema.
- Loaded data.
- Run the Database Designer.
- Connected to your database.

**Step 2: Launch New Instances to Add to an Existing Cluster**

Perform the procedure in Configure and Launch an Instance to create new instances (hosts) that you then will add to your existing cluster. Be sure to choose the same details you chose when you created the original instances (VPC, placement group, subnet, and security group).

**Step 3: Include New Instances as Cluster Nodes**

You need the IP addresses when you run the install_vertica script to include new instances as cluster nodes.

If you are configuring Amazon Elastic Block Store (EBS) volumes, be sure to configure the volumes on the node before you add the node to your cluster.

To add the new instances as nodes to your existing cluster:

1. Configure and launch your new instances.
2. Connect to the instance that is assigned to the Elastic IP. See Connect to an Instance if you need more information.
3. Run the Vertica installation script to add the new instances as nodes to your cluster. Specify the internal IP addresses for your instances and your *.pem file name.

```bash
$ sudo /opt/vertica/sbin/install_vertica --add-hosts instance-ip --dba-user-password-disabled --point-to-point --data-dir /vertica/data --ssh-identity ~/name-of-pem.pem
```

**Step 4: Add the Nodes**

After you have added the new instances to your existing cluster, add them as nodes to your cluster, as described in Adding Nodes to a Database.

**Step 5: Rebalance the Database**

After you add nodes to a database, always rebalance the database.

**Remove Nodes From a Running AWS Cluster**

Use the following procedures to remove instances/nodes from an AWS cluster.

To avoid data loss, Vertica strongly recommends that you back up your database before removing a node. For details, see Backing Up and Restoring the Database.

**In This Section**

**Remove Hosts From the Database**

Before you remove hosts from the database, verify that you have:

- Backed up the database.
- Lowered the K-safety of the database.

**Note:**

Do not stop the database.
To remove a host from the database:

1. While logged on as dbadmin, launch Administration Tools.
   
   `$ /opt/vertica/bin/admintools`

2. From the Main Menu, select Advanced Menu.
3. From Advanced Menu, select Cluster Management. Click OK.
4. From Cluster Management, select Remove Host(s). Click OK.
5. From Select Database, choose the database from which you plan to remove hosts. Click OK.
6. Select the host(s) to remove. Click OK.
7. Click Yes to confirm removal of the hosts.
8. Click OK. The system displays a message telling you that the hosts have been removed. Automatic rebalancing also occurs.
9. Click OK to confirm. Administration Tools brings you back to the Cluster Management menu.

### Remove Nodes From the Cluster

To remove nodes from a cluster, run the `update_vertica` script and specify:

- The option `--remove-hosts`, followed by the IP addresses of the nodes you are removing.
- The option `--ssh-identity`, followed by the location and name of your *pem file.
- The option `--dba-user-password-disabled`.

The following example removes one node from the cluster:

```bash
$ sudo /opt/vertica/sbin/update_vertica --remove-hosts 10.0.11.165 --point-to-point --ssh-identity ~/name-of-pem.pem --dba-user-password-disabled
```

### Stop the AWS Instances (Optional)

After you have removed one or more nodes from your cluster, to save costs associated with running instances, you can choose to stop the AWS instances that were previously part of your cluster.
To stop an instance in AWS:

1. On AWS, navigate to your Instances page.
2. Right-click the instance, and choose Stop.

This step is optional because, after you have removed the node from your Vertica cluster, Vertica no longer sees the node as part of the cluster, even though it is still running within AWS.

**Upgrade Vertica on AWS**

Before you upgrade to the latest Vertica version, do the following:

1. Back up your existing database.
2. Download the Vertica install packages described in Download and Install the Vertica Install Package.

**Upgrade to the Latest Version of Vertica on AWS**

To upgrade to the latest version of Vertica on AWS, follow the instructions in Upgrading Vertica.

If you are setting up a Vertica cluster on AWS for the first time, follow the procedure for installing and running on AWS.

**Upgrade Vertica Running on AWS**

Vertica supports upgrades of Vertica server running on AWS instances created from the Vertica AMI. To upgrade Vertica, follow the instructions provided in Upgrading Vertica.

Make sure to add the following arguments to the upgrade script:

- --dba-user-password-disabled
- --point-to-point
Copying and Exporting Data on AWS: What You Need to Know

There are common issues that occur when exporting or copying on AWS clusters, as described below. Except for these specific issues as they relate to AWS, copying and exporting data works as documented in Copying Data Between Vertica Databases.

To copy or export data on AWS:

1. **Verify that all nodes in source and destination clusters have their own elastic IPs (or public IPs) assigned.**
   - If your destination cluster is located within the same VPC as your source cluster, proceed to step 3. Each node in one cluster must be able to communicate with each node in the other cluster. Thus, each source and destination node needs an elastic IP (or public IP) assigned.

2. (For non-CloudFormation Template installs) Create an S3 gateway endpoint.
   - If you aren’t using a CloudFormation Template (CFT) to install Vertica, you must create an S3 gateway endpoint in your VPC. For more information, see the AWS documentation.

   For example, the Vertica CFT has the following VPC endpoint:

   ```json
   "S3Endpoint" : {
     "Type" : "AWS::EC2::VPCEndpoint",
     "Properties" : {
       "PolicyDocument" : {
         "Version":"2012-10-17",
         "Statement":[{"Effect":"Allow",
         "Principal": "*",
         "Action": ["*"],
         "Resource": ["*"]
       }]
     },
     "RouteTableIds" : [{"Ref" : "RouteTable"} ],
     "ServiceName" : { "Fn::Join" : ["", ["com.amazonaws.", {"Ref":"AWS::Region" }, ".s3"] ] },
     "VpcId" : {"Ref" : "VPC"}
   }
   
   3. **Verify that your security group allows the AWS clusters to communicate.**
   - Check your security groups for both your source and destination AWS clusters. Verify that ports 5433 and 5434 are open. If one of your AWS clusters is on a separate VPC, verify that your network access control list (ACL) allows communication on port 5434.
**Note:**
This communication method exports and copies (imports) data across the Internet. You can alternatively use non-public IPs and gateways, or VPN to connect the source and destination clusters.

4. If there are one or more elastic load balancers (ELBs) between the clusters, verify that port 5433 is open between the ELBs and clusters.

5. If you use the Vertica client to connect to one or more ELBs, the ELBs only distribute incoming connections. The data transmission path occurs between clusters.

**Vertica on Microsoft Azure**

You can deploy a Vertica database on the Microsoft Azure Cloud running in either **Enterprise Mode** or **Eon Mode**. In Eon Mode, Vertica stores its data communally using Azure block blob storage.

This section explains how to deploy a Vertica database to Microsoft Azure.

For more information about Azure, see the [Azure documentation](#).

**Deploying Vertica from the Azure Marketplace**

Deploy Vertica in the Microsoft Azure Cloud using the [Vertica Analytics Platform](#) entry in the Azure Marketplace. Vertica provides the following deployment options:

- **Eon Mode**: Deploy a Management Console (MC) instance, and then provision and create an Eon Mode database from the MC. For cluster and storage requirements, see [Eon Mode on Azure Prerequisites](#).
- **Enterprise Mode**: Deploy a four-node Enterprise Mode database comprised of one MC instance and three database nodes. This requires an [Azure subscription](#) with a minimum of 12 cores for the Vertica Marketplace solution.

The Enterprise Mode deployment uses the MC primarily as a monitoring tool. For example, you cannot provision and create a database with an Enterprise Mode MC. For information about creating and managing an Enterprise Mode database, see [Create a Database Using Administration Tools](#)
Creating a Deployment

Eon Mode and Enterprise Mode require much of the same information for deployment. Any information that is not required for both deployment types is clearly marked.

1. Selecting the Deployment Type

1. Sign in to your Microsoft Azure account. From the Home screen, select Create a resource under Azure services.
2. Search for Vertica Analytics Platform and select it from the search results.
3. On the Vertica Analytics Platform page, select one of the following:
   - To deploy an MC instance that can manage an Eon Mode database, select Vertica Data Warehouse, Eon BYOL.
   - To deploy an Enterprise Mode database, select Vertica Analytics Platform.
4. On the next screen, select Create.

After you select your deployment type, the Basics tab on the Create Vertica Analytics Platform page displays.

2. Adding Project and Instance Details on the Basics Tab

Provide the following information in the Project details and Instance details sections:

1. Subscription: Azure bills this subscription for the cluster resources.
2. Resource group: The location to save all of the Azure resources. Create a new resource group or choose an existing one from the dropdown list.
3. Region: The location where the virtual machine running your MC instance is deployed.
4. Vertica Management Console User: Eon Mode only. The administrator username for the MC.
5. SSH public key for OS Access: Provide the SSH public key associated with the Vertica User, for command line access to the virtual machine.
6. Password for MC Access: Enter a password to log in to Management Console. Note that Management Console requires that you change your password after the initial login.
7. Confirm password: Reenter the value you entered in Password for MC Access.
3. **Selecting Virtual Machine Settings**

Provide the following information on the **Virtual Machine Settings** tab:

1. **Management Console VM size**: Select Change size to customize the VM settings or select the default. For a list of VM types recommended by use case, see **Recommended Azure VM Types**.
2. **Storage account of Eon DB**: Eon Mode only. The storage account associated with the database deployment.
3. **Number of Vertica Cluster nodes**: Enterprise Mode only. The number of nodes to deploy in the cluster, in addition to the MC instance.
   - The Community Edition (CE) license is automatically applied to the cluster. This license is limited to 1 TB of RAW data 3 Vertica nodes. If you select more than 3 nodes with a CE license, the initial database is created on the first 3 nodes. For information about upgrading your license, see **Managing Licenses**.
4. **Vertica Node VM size**: Enterprise Mode only. Select the VM type to deploy in your cluster. Use the default or select Change size to customize the VM settings. For a list of VM types recommended by use case, see **Recommended Azure VM Types**.
5. **Total RAW storage per node**: Enterprise Mode only. Select the amount of storage per node from the dropdown list. Each VM has a set of premium data disks that are configured and presented as a single storage location.
6. Select **Next: Network Settings >**.

4. **Selecting Network Settings**

Provide the following information on the **Network Settings** tab:

1. **Virtual Network**: The virtual network that hosts the Vertica cluster. Create a new virtual network or select an existing one from the dropdown list.
   - If you select an existing virtual network, Vertica recommends that you already created a subnet to use for the deployment.
2. **First subnet**: The subnet for the associated **Virtual Network**. Create a new subnet or select an existing one from the dropdown list.
3. **Public IP Address Resource Name**: Each VM is configured with a publicly accessible IP address. This field allows you to specify the resource name for those IP addresses, and whether they are static or dynamic. The first public IP address resource is created exactly as entered, and associated with the Vertica Management Console. Azure
appends a number from 1 to 16 to the resource name for each additional Vertica cluster node created. This number associates each VM with a resource.

4. **Domain Name Label for Management Console**: Because each VM has a public IP address, each node requires a DNS name. Enter a prefix for the name. The first DNS name is created exactly as entered, and associated with the Vertica Management Console. Azure appends a number from 1 to 16 to the DNS name for each Vertica cluster node created. That number associates each VM with a resource. Azure adds the remaining part of the fully qualified domain name based on the location where you created the cluster.

5. Select **Next: Review + create**.

---

**5. Verifying on Review + create**

As the **Review + create** page loads, Azure validates your settings. After it passes validation, review your settings. When you are satisfied with your selections, select **Create**.

---

**Accessing the MC After Deployment**

After your resources are successfully deployed, you are brought to the **Overview** page on **Home > resources-name > Deployments**. You must retrieve your Management Console IP address and username to log in.

1. From the **Overview** page, select **Outputs** in the left navigation.
2. Copy the **vertica management console URL** and **vertica management console user name**.
3. Paste the **vertica management console URL** in the browser address bar and press **Enter**.
4. Depending on your browser, you might receive a warning of a security risk. If you receive the warning, select the **Advanced** button and follow the browsers instructions to proceed to the Management Console.
5. On the VerticaManagement Console log in page, paste the **vertica management console user name**, and enter the **Password for MC Access** that you entered on **Basics > Project details** when you were deploying your MC instance.
Deleting a Resource Group

For details about the Azure Resource Manager and deleting a resource group, see the Azure documentation.

Manually Deploy Vertica on Microsoft Azure

Manually creating a database cluster for your Vertica deployment lets you customize your VMs to meet your specific needs. You often want to manually configure your VMs when deploying a Vertica cluster to host an Eon Mode database.

To start creating your Vertica cluster in Azure using manual steps, you first need to create a VM. During the VM creation process, you create and configure the other resources required for your cluster, which are then available for any additional VMs that you create.

The topics in this section explain how to manually deploy Vertica on Azure.

Recommended Azure VM Types

Vertica supports a range of Microsoft Azure virtual machine (VM) types, each optimized for different purposes. Choose the VM type that best matches your performance and price needs as a user.

Note:
The GS VMs are not available in all regions, or from the Azure Marketplace.

You can use them by following the manual deployment steps described in Manually Deploy Vertica on Microsoft Azure.

For the best performance in most common scenarios, use one of the following VMs:

<table>
<thead>
<tr>
<th>Virtual Machine Types</th>
<th>Virtual Machine Size</th>
</tr>
</thead>
<tbody>
<tr>
<td>Memory optimized</td>
<td>DS13_v2</td>
</tr>
<tr>
<td></td>
<td>DS14_v2</td>
</tr>
<tr>
<td>Virtual Machine Types</td>
<td>Virtual Machine Size</td>
</tr>
<tr>
<td>---------------------------------------</td>
<td>----------------------</td>
</tr>
<tr>
<td>DS15_v2</td>
<td></td>
</tr>
<tr>
<td>D8s_v3</td>
<td></td>
</tr>
<tr>
<td>D16s_v3</td>
<td></td>
</tr>
<tr>
<td>D32s_v3</td>
<td></td>
</tr>
<tr>
<td>High memory and I/O throughput</td>
<td></td>
</tr>
<tr>
<td>GS3</td>
<td></td>
</tr>
<tr>
<td>GS4</td>
<td></td>
</tr>
<tr>
<td>GS5</td>
<td></td>
</tr>
<tr>
<td>E8s_v3</td>
<td></td>
</tr>
<tr>
<td>E16s_v3</td>
<td></td>
</tr>
<tr>
<td>E32s_v3</td>
<td></td>
</tr>
<tr>
<td>L8s</td>
<td></td>
</tr>
<tr>
<td>L16s</td>
<td></td>
</tr>
<tr>
<td>L32s</td>
<td></td>
</tr>
</tbody>
</table>

**Supported Azure Operating Systems**

For best performance, use one of the following operating systems when deploying Vertica on Azure:

- Red Hat 7.3 or later
- CentOS 7.3 or later. The Azure Marketplace solution as of this writing (June 2017) is based on CentOS 7.3.1611.

For more information, see Vertica 11.0.x Supported Platforms.

**Configuring and Launching a New Instance**

An Azure VM is similar to a traditional host. Just as with an on-premises cluster, you must prepare and configure the hardware settings for your cluster and network before you install Vertica.
The first steps are:

1. From the Azure marketplace, select an operating system that Vertica supports.
2. Select a VM type. See Recommended Azure VM Types.
3. Choose a deployment model. For best results, choose the resource manager deployment model.

**Configure Network Security Group**

Vertica has specific network security group requirements, as described in Network Security Group Configurations.

Create and name your own network security group, following these guidelines.

You must configure SSH as:

- Protocol: TCP
- Source port range: Any
- Destination port range: 22
- Source: Any
- Destination: Any

You can make additional modifications, based on your specific requirements.

**Add Disk Containers**

Create an Azure storage account, which later contains your cluster storage disk containers.

For optimal throughput, select Premium storage and align the storage to your chosen VM type.

For more information about what a storage account is, and how to create one, refer to About Azure storage accounts.

For an Enterprise Mode database deployment, provision enough space

**Configure Credentials**

Create a password or assign an SSH key pair to use with Vertica.
For information about how to use key pairs in Azure, see [How to create and use an SSH public and private key pair for Linux VMs in Azure](#).

### Assign a Public IP Address

A public IP is an IP address that you can use to connect to your cluster externally. For best results, assign a single static public IP to a node in your cluster. You can then connect to other nodes in your cluster from your primary node using the internal IP addresses that Azure generated when you specified your virtual network settings.

By default, a public IP address is dynamic; it changes every time you shut down the server. You can choose a static IP address, but doing so can add cost to your deployment.

During a VM installation, you cannot set a DNS name. If you use dynamic public IPs, set the DNS name in the public IP resource for each VM after deployment.

For information about public IP addresses, refer to [IP address types and allocation methods in Azure](#).

### Create Additional VMs

If needed, to create additional VMs, repeat the previous instructions in this document.

### Connect to a Virtual Machine

Before you can connect to any of the VMs you created, you must first make your virtual network externally accessible. To do so, you must attach the public IP address you created during network configuration to one of your VMs.

### Connect to Your VM

To connect to your VM, complete the following tasks:

1. Connect to your VM using SSH with the public IP address you created in the configuration steps.
2. Authenticate using the credentials and authentication method you specified during the VM creation process.
Connect to Other VMs

Connect to other virtual machines in your virtual network by first using SSH to connect to your publicly connected VM. Then, use SSH again from that VM to connect through the private IP addresses of your other VMs.

If you are using private key authentication, you may need to move your key file to the root directory of your publicly connected VM. Then, use PuTTY or WinSCP to connect to other VMs in your virtual network.

Prepare the Virtual Machines

After you create your VMs, you need to prepare them for cluster formation.

Add the Vertica License and Private Key

Prepare your nodes by adding your private key (if you are using one) to each node and to your Vertica license. These steps assume that the initial user you configured is the DBADMIN user.

1. As the DBADMIN user, copy your private key file from where you saved it locally onto your primary node.

   Depending upon the procedure you use to copy the file, the permissions on the file may change. If permissions change, the install_vertica script fails with a message similar to the following:

   "Failed Login Validation 10.0.2.158, cannot resolve or connect to host as root."

   If you receive a failure message, enter the following command to correct permissions on your private key file:

   $ chmod 600 /<name-of-key>.pem

2. Copy your Vertica license to your primary VM. Save it in your home directory or other known location.
Install Software Dependencies for Vertica on Azure

In addition to the Vertica standard Installing the Required Packages, as the root user, you must install the following packages before you install Vertica on Azure:

- pstack
- mcelog
- sysstat
- dialog

Configure Storage

Use a dedicated Azure storage account for node storage.

⚠️ Caution: Do not store your information on the root volume, especially your data and catalog directories. Storing information on the root volume may result in data loss.

When configuring your storage, make sure to use a supported file system. For details, see Recommended Storage Format Types.

Attach Disk Containers to Virtual Machines (VMs)

Using your previously created storage account, attach disk containers to your VMs that are appropriate to your needs.

For best performance, combine multiple storage volumes into RAID-0. For most RAID-0 implementations, attach 6 storage disk containers per VM.

Combine Disk Containers for Storage

If you are using RAID, follow these steps to create a RAID-0 drive on your VMs. The following example shows how you can create a RAID-0 volume named md10 from 6 individual volumes named:
1. Form a RAID-0 volume using the `mdadm` utility:

```
$ mdadm --create /dev/md10 --level 0 --raid-devices=6 \ 
   /dev/sdc /dev/sdd /dev/sde /dev/sdf /dev/sdg /dev/sdh
```

2. Format the file system to be one that Vertica supports:

```
$ mkfs.ext4 /dev/md10
```

3. Find the UUID on the newly-formed RAID volume using the `blkid` command. In the output, look for the device you assigned to the RAID volume:

```
$ blkid
... 
/dev/md10 : UUID="e7510a6f-2922-4413-b5fa-9dcd725967fd" TYPE="ext4" PARTUUID="fb9b7449-08c3-4231-9ee5-086f7b8c9001"
...
```

4. The RAID device can be renamed after a reboot. To ensure the filesystem is mounted in a predictable location on your VM, create a directory to use as the mount point to mount the filesystem. For example, you can choose to create a mount point named `/data` that you will use to store your database's catalog and data (or depot, if you are running Vertica in Eon Mode).

```
$ mkdir /data
```

5. Using a text editor, add an entry to the `/etc/fstab` file for the UUID of the filesystem and your mount point so it is mounted when the system boots:

```
UUID=RAID_UUID mountpoint ext4 defaults,nofail,nobarrier 0 2
```

For example, if you have the UUID shown in the previous example and the mount point `/data`, add the following line to the `/etc/fstab` file:

```
UUID=e7510a6f-2922-4413-b5fa-9dcd725967fd /data ext4 defaults,nofail,nobarrier 0 2
```

6. Mount the RAID filesystem you added to the `/etc/fstab` file. For example, to mount a mount point named `/data` use the command:
$ mount /data

7. Create folders for your Vertica data and catalog under your mount point.

$ mkdir /data/vertica
$ mkdir /data/vertica/data

If you are planning to run Vertica in Eon Mode, create a directory for the depot instead of data:

$ mkdir /data/vertica/depot

**Create a Swap File**

In addition to storage volumes to store your data, Vertica requires a swap volume or swap file to operate.

Create a swap file or swap volume of at least 2 GB. The following steps show how to create a swap file within Vertica on Azure:

1. Install devnull and swapfile:

   $ install -o root -g root -m 0600 /dev/null /swapfile

2. Create the swap file:

   $ dd if=/dev/zero of=/swapfile bs=1024 count=2048k

3. Prepare the swap file using mkswap:

   $ mkswap /swapfile

4. Use swapon to instruct Linux to swap on the swap file:

   $ swapon /swapfile

5. Persist the swapfile in FSTAB:

   $ echo "/swapfile    swap    swap    auto     0     0" >> /etc/fstab

Repeat the volume attachment, combination, and swap file creation procedures for each VM in your cluster.
For More Information

- About Azure storage accounts
- Prepare Disk Storage Locations

Download Vertica

To download the Vertica server appropriate for your operating system and license type, go to www.vertica.com/download/vertica.

Run the rpm to extract the files.

After you complete the download and extraction, the next section describes how to use the install_vertica script to form a cluster and install the Vertica database software.

Form a Cluster and Install Vertica

Use the install_vertica script to combine two or more individual VMs to form a cluster and install the Vertica database.

Before You Start

Before you run the install_vertica script:

- Check the Virtual Network page for a list of current VMs and their associated private IP addresses.
- Identify your storage location. The installer assumes that you have mounted your storage to /vertica/data. To specify another location, use the --data-dir argument.
- Identify your storage location. To create your database's data directory on mounted RAID drive, when you run the install_vertica script, provide /vertica/data as the value of the --data-dir option.

Caution: Do not store your data on the root drive.
Combine Virtual Machines (VMs)

The following example shows how to combine VMs using the `install_vertica` script.

1. While connected to your primary node, construct the following command to combine your nodes into a cluster.

   ```
   $ sudo /opt/vertica/sbin/install_vertica --hosts 10.2.0.164,10.2.0.165,10.2.0.166 --dba-user-password-disabled --point-to-point --data-dir /vertica/data --ssh-identity ~/<name-of-private-key>.pem --license <license.file>
   ```

2. Substitute the IP addresses for your VMs and include your root key file name, if applicable.
3. Include the `--point-to-point` parameter to configure spread to use direct point-to-point communication between all Vertica nodes, as required for clusters on Azure when installing or updating Vertica.
4. If you are using Vertica Community Edition, which limits you to three nodes, specify `-L CE` with no license file.
5. After you combine your nodes, to reduce security risks, keep your key file in a secure place—separate from your cluster—and delete your on-cluster key with the `shred` command:

   ```
   $ shred examplekey.pem
   ```

   **Important:**
   You need your key file to perform future Vertica updates.

6. Reboot your cluster to complete the cluster formation and Vertica installation.

For complete information on the `install_vertica` script and its parameters, see [Installing Vertica with the Installation Script](#).

After Your Cluster is Up and Running

Now that your cluster is configured and running, take these steps:

1. Log into one of the database nodes using the database administrator account (named `dbadmin` by default).
2. Create and start a database:
   
   - To create an **Enterprise Mode** database, see Create a Database Using Administration Tools.
   
   - To create an **Eon Mode** database, see Manually Creating an Eon Mode Database on Azure.

3. Configure your database. See Configuring the Database.

**Eon Mode Databases on Azure**

You can create an **Eon Mode** database on a cluster that is hosted on Azure. In this configuration, your database stores its data communally in Azure Blob storage. See Using Eon Mode to learn more about this database mode.

Eon Mode databases on Azure support some of the encryption features built into Azure Storage. You can use its encryption at rest feature transparently—you do not need to configure Vertica to take advantage of it. You can use Microsoft-managed or customer-managed keys for storage encryption. Vertica does not support Azure Storage's client-side encryption and encryption using customer-provided keys. See the Azure Data Encryption at rest page in the Azure documentation for more information about the encryption at rest features in Azure Storage.

**Note:**

If you have an existing Enterprise Mode database, you can migrate it to an Eon Mode database running on Azure. See Migrating an Enterprise Database to Eon Mode.

This section explains how you create an Eon Mode database running on Azure cloud.

**Eon Mode on Azure Prerequisites**

Before you can create an Eon Mode database on Azure, you must have a database cluster and an Azure blob storage container to store your database's data.
**Cluster Requirements**

Before you can create an Eon Mode database on Azure, you must provision a cluster to host it. See Configuring Your Vertica Cluster for Eon Mode for suggestions on choosing VM configurations and the number of nodes your cluster should start with.

**Storage Requirements**

An Eon Mode database on Azure stores its data communally in Azure blob storage. Vertica only supports block blob storage for communal data storage, not append or page blob storage.

You must create a storage path for Vertica to use exclusively. This path can be a blob container or a folder within a blob container. This path must not contain any files. If you attempt to create an Eon Mode database with a container or folder that contains files, admintools returns an error.

You pass Vertica a URI for the storage path using the `azb://` schema. See Azure Blob Storage Object Store for the format of this URI.

You must also configure the storage container so Vertica is authorized to access it. Depending on authentication method you use, you may need to supply Vertica the with credentials to access the container. Vertica can use one of following methods to authenticate with the blob storage container:

- Using Azure managed identities. This authentication method is transparent—you do not need to add any authentication configuration information to Vertica. Vertica automatically uses the managed identity bound to the VMs it runs on to authenticate with the blob storage container. See the Azure AD-managed identities for Azure resources documentation page in the Azure documentation for more information.

If you provide credentials for either of the other two supported authentication methods, Vertica uses them instead of authenticating using a managed identity bound to your VM.

---

**Note:**

If your Azure VMs have more than one managed identity bound to them, you must tell Vertica which identity to use when authenticating.
with the blob storage container. Vertica gets the identity to use from a tag set on the VMs that it is running on.

On your VMs, create a tag with its key named VerticaManagedIdentityClientId and its value to the name of a managed identity bound to your VMs. See the [Use tags to organize your Azure resources and management hierarchy](https://docs.microsoft.com/en-us/azure/active-directory/managed-identities-azure-resources/identify-resource) page in the Azure documentation for more information.

- Using an account name and access key credentials for a service account that has full access to the blob storage container. In this case, you provide Vertica with the credentials when you create the Eon Mode database. See [Creating an Authentication File](https://docs.microsoft.com/en-us/azure/active-directory/managed-identities-azure-resources/identify-resource) for details.

- Using a shared access signature (SAS) that grants Vertica access to the storage container. See [Grant limited access to Azure Storage resources using shared access signatures (SAS)](https://docs.microsoft.com/en-us/azure/storage/common/storage-sas-how-to-use) in the Azure documentation. See [Creating an Authentication File](https://docs.microsoft.com/en-us/azure/active-directory/managed-identities-azure-resources/identify-resource) for details.

For details on how Vertica accesses Azure blob storage, see [Azure Blob Storage Object Store](https://docs.microsoft.com/en-us/azure/storage/common/storage-blob-object-store).

### Manually Creating an Eon Mode Database on Azure

Once you have met the cluster and storage requirements for using an Eon Mode database on Azure, you are ready to create an Eon Mode database. Use the admintools `create_db` tool to create your Eon Mode database.

### Creating an Authentication File

If your database will use a managed identity to authenticate with the Azure storage container, you do not need to supply any additional configuration information to the `create_db` tool.

If your database will not use a managed identity, you must supply `create_db` with authentication information in a configuration file. It must contain at least the `AzureStorageCredentials` parameter that defines one or more account names and keys Vertica will use to access blob storage. It can also contain an `AzureStorageEndpointConfig` parameter that defines an alternate endpoint to use instead of the default Azure host.
name. This option is useful if you are creating a test environment using an Azure storage emulator such as Azurite.

**Important:** Vertica does not officially support Azure storage emulators as a communal storage location.

The following table defines the values that can be set in these two parameters.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
</table>
| AzureStorageCredentials       | Collection of JSON objects, each of which specifies connection credentials for one endpoint. This parameter takes precedence over Azure managed identities.  

The collection must contain at least one object and may contain more. Each object must specify at least one of accountName or blobEndpoint, and at least one of accountKey or sharedAccessSignature.  

- accountName: If not specified, uses the label of blobEndpoint.  
- blobEndpoint: Host name with optional port (host:port). If not specified, uses account.blob.core.windows.net.  
- accountKey: Access key for the account or endpoint.  
- sharedAccessSignature: Access token for finer-grained access control, if being used by the Azure endpoint. |
| AzureStorageEndpointConfig    | Collection of JSON objects, each of which specifies configuration elements for one endpoint. Each object must specify at least one of accountName or blobEndpoint.  

- accountName: If not specified, uses the label of blobEndpoint.  
- blobEndpoint: Host name with optional port (host:port). If not specified, uses account.blob.core.windows.net. |
<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>protocol</td>
<td>HTTPS (default) or HTTP.</td>
</tr>
<tr>
<td>isMultiAccountEndpoint</td>
<td>true if the endpoint supports multiple accounts, false otherwise (default is false). To use multiple-account access, you must include the account name in the URI. If a URI path contains an account, this value is assumed to be true unless explicitly set to false.</td>
</tr>
</tbody>
</table>

The authentication configuration file is a text file containing the configuration parameter names and their values. The values are in a JSON format. The name of this file is not important. The following examples use the file name `auth_params.conf`.

The following example is a configuration file for a storage account hosted on Azure. The storage account name is `mystore`, and the key value is a placeholder. In your own configuration file, you must provide the storage account's access key. You can find this value by right-clicking the storage account in the Azure Storage Explorer and selecting **Copy Primary Key**.

```json
AzureStorageCredentials=[{"accountName": "mystore", "accountKey": "access-key"}]
```

The following example shows a configuration file that defines an account for a storage container hosted on the local system using the Azurite storage system. The user account and key are the "well-known" account provided by Azurite by default. Because this configuration uses an alternate storage endpoint, it also defines the `AzureStorageEndpointConfig` parameter. In addition to reiterating the account name and endpoint definition, this example sets the protocol to the non-encrypted HTTP.

```json
Important:
This example wraps the contents of the JSON values for clarity. In an actual configuration file, you **cannot wrap these values**. They must be on a single line.

AzureStorageCredentials=[{"accountName": "devstoreaccount1", "blobEndpoint": "127.0.0.1:10000 ", "accountKey": "Eby8vdM02xNOcqFlqUwJPLlmEtlCDXJ1OUzFT50uSRZ6IFsuFq2UVErCz4I6tq/K1SZFPTOdr/KHBeksoGMGw=="}]

AzureStorageEndpointConfig=[{"accountName": "devstoreaccount1", "blobEndpoint": "127.0.0.1:10000", "protocol": "http"}]
```
Creating the Eon Mode Database

Use the admintools create_db tool to create your Eon Mode database. The required arguments you pass to this tool are:

<table>
<thead>
<tr>
<th>Argument</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>--communal-storage-location</td>
<td>The URI for the storage container Vertica will use for communal storage. This URI must use the azb:// schema. See Azure Blob Storage Object Store for the format of this URI.</td>
</tr>
<tr>
<td>-x</td>
<td>The path to the file containing the authentication parameters Vertica needs to access the communal storage location. This argument is only required if your database will use a storage account name and key to authenticate with the storage container. If it is using a managed identity, you do not need to specify this argument.</td>
</tr>
<tr>
<td>--depot-path</td>
<td>The absolute path to store the depot on the nodes in the cluster.</td>
</tr>
<tr>
<td>--shard-count</td>
<td>The number of shards for the database. This is an integer number that is usually either a multiple of the number of nodes in your cluster, or an even divisor. See How Shard Count Affects Scaling Your Cluster for more information.</td>
</tr>
<tr>
<td>-s</td>
<td>A comma-separated list of the nodes in your database.</td>
</tr>
<tr>
<td>-d</td>
<td>The name for your database.</td>
</tr>
</tbody>
</table>

Some other common optional arguments for create_db are:

<table>
<thead>
<tr>
<th>Argument</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>-l</td>
<td>The absolute path to the Vertica license file to apply to the new database.</td>
</tr>
<tr>
<td>-p</td>
<td>The password for the new database.</td>
</tr>
<tr>
<td>--depot-size</td>
<td>The maximum size for the depot. Defaults to 60% of the filesystem containing the depot path. You can specify the size in two ways:</td>
</tr>
</tbody>
</table>

Vertica Analytic Database (11.0.x)
Vertica on Google Cloud Platform

Welcome to the Vertica on Google Cloud Platform guide.

Vertica provides two templates to help you deploy a Vertica database running in either Enterprise Mode or Eon Mode. See Vertica Architecture: Eon Versus Enterprise Mode for more information about these modes.

The following topics describe several deployment methods to run Vertica on Google Cloud Platform.

| integer\%: Percentage of filesystem’s disk space to allocate. |
| integer\{K|M|G|T\}: Amount of disk space to allocate for the depot in kilobytes, megabytes, gigabytes, or terabytes. |

However you specify this value, the depot size cannot be more than 80 percent of disk space of the file system where the depot is stored.

To view all arguments for the create_db tool, run the command:

```bash
admintools -t create_db --help
```

The following example demonstrates creating an Eon Mode database with the following settings:

- Vertica will use a storage account named mystore.
- The communal data will be stored in a directory named verticadb located in a storage container named db_blobs.
- The authentication information Vertica needs to access the storage container is in the file named auth_params.conf in the current directory. The contents of this file are shown in the first example under Creating an Authentication File.
- The hostnames of the nodes in the cluster are node01 through node03.

```bash
$ admintools -t create_db \
    --communal-storage-location=azb://mystore/db_blobs/verticadb \ 
    -x auth_params.conf -s node01,node02,node03 \ 
    -d verticadb --depot-path /vertica/depot --shard-count 3 \ 
    -p 'mypassword'
```
Supported GCP Machine Types

Vertica Analytic Database supports a range of machine types, each optimized for different workloads. When you deploy your Vertica Analytic Database cluster to the Google Cloud Platform (GCP), different machine types are available depending on how you provision your database.

Note:
Some machine types are not available across all regions.

The sections below list the GCP machine types that Vertica supports for Vertica cluster hosts, and for use in Management Console. For details on the configuration of the machine type options, see the Google Cloud documentation's Machine types page.

Machine Types Available for MC Hosts

Vertica supports all N1, N2, E2, M1, M2, and C2 machine types to deploy an instance for running the Vertica Management Console.

Tip:
In most cases, 8 vCPUs are sufficient when selecting a machine type for running the Management Console.

Machine Types Available for Vertica Database Cluster Hosts

Vertica supports all N1, N2, E2, M1, M2, and C2 machine types to deploy cluster hosts.

Machine Types for Vertica Database Cluster Hosts Provisioned from MC

The table below lists the GCP machine types that Vertica supports when you provision your cluster from Management Console.
<table>
<thead>
<tr>
<th>Machine Type</th>
<th>Machine Name</th>
</tr>
</thead>
<tbody>
<tr>
<td>N1 standard</td>
<td>n1-standard-16</td>
</tr>
<tr>
<td></td>
<td>n1-standard-32</td>
</tr>
<tr>
<td></td>
<td>n1-standard-64</td>
</tr>
<tr>
<td>N1 high-memory</td>
<td>n1-highmem-16</td>
</tr>
<tr>
<td></td>
<td>n1-highmem-32</td>
</tr>
<tr>
<td></td>
<td>n1-highmem-64</td>
</tr>
<tr>
<td>N2 standard</td>
<td>n2-standard-16</td>
</tr>
<tr>
<td></td>
<td>n2-standard-32</td>
</tr>
<tr>
<td></td>
<td>n2-standard-48</td>
</tr>
<tr>
<td></td>
<td>n2-standard-64</td>
</tr>
<tr>
<td>N2 high-memory</td>
<td>n2-highmem-16</td>
</tr>
<tr>
<td></td>
<td>n2-highmem-32</td>
</tr>
<tr>
<td></td>
<td>n2-highmem-48</td>
</tr>
<tr>
<td></td>
<td>n2-highmem-64</td>
</tr>
</tbody>
</table>

**Deploy Vertica from the Google Cloud Marketplace**

The Vertica entries in the Google Cloud Launcher Marketplace let you quickly deploy a Vertica cluster in the Google Cloud Platform (GCP). Currently, three entries let you select the database mode and the license you want to use:

- The Enterprise Mode launcher deploys a Vertica database with 3 or more nodes, plus an additional VM running the Management Console (MC). See Deploying an Enterprise Mode Database in GCP from the Marketplace for more information.
- The Eon Mode BYOL (bring your own license) launcher deploys a single instance running the MC. You use this MC instance to deploy a Vertica database running on Eon Mode. This database has a community license applied to it initially. You can later
upgrade it to a license you have obtained from Vertica. See Deploying an Eon Mode Database On GCP for more information.

- The Eon Mode BTH (by the hour) launcher also deploys a single instance running the MC that you use to deploy a database. This database has a by-the-hour license applied to it. Instead of paying for a license up front, you pay an hourly fee that covers both Vertica and running your instances. The BTH license is automatically applied to all clusters you create using a BTH MC instance. See Deploying an Eon Mode Database On GCP for more information. If you choose, you can upgrade this hourly license to a longer-term license you purchase from Vertica. To move a BTH cluster to a BYOL license, follow the instructions in Moving a Cloud Installation from By the Hour (BTH) to Bring Your Own License (BYOL) for more information.

**Note:**
Vertica clusters that use IPv6 to identify hosts have not been tested on GCP. Vertica recommends you use IPv4 addresses to identify the hosts in your cluster on GCP.

### Deploying an Enterprise Mode Database in GCP from the Marketplace

The Vertica Cloud Launcher solution creates a Vertica Enterprise Mode database. The solution includes the Vertica Management Console (MC) as the primary UI for you to get started.

The launcher automatically creates a database named vdb using the Community Edition (CE) license. The CE license is limited to a maximum of 3 nodes. You can tell the launcher to add more than 3 nodes to your deployment. In this case, it uses the first three nodes in the cluster to create the database. The remaining nodes are not part of the database, but are added to your cluster. To add these nodes to your database, you must replace the Community Edition license with a license key you receive from the Software Entitlement support site. See Managing Licenses for more information.

After the launcher creates the initial database, it configures the MC to attach to that database automatically.
**Configure the Vertica Cloud Launcher Solution**

To get started with a deployment of Vertica from the [Google Cloud Launcher](https://console.cloud.google.com/solutions/vertica), search for the Vertica Data Warehouse, Enterprise Mode entry.

Follow these steps:

1. Verify that your user account has the **Editor** role and the `runtimeconfig.waiters.getIamPolicy` permission.
2. From the listing page, click **LAUNCH**.
3. On the New Vertica Analytics Platform deployment page, enter the following information:

   - **Deployment name**: Each deployment must have a unique name. That name is used as the prefix for the names of all VMs created during the deployment. The deployment name can only contain lowercase characters, numbers, and dashes. The name must start with a lowercase letter and cannot end with a dash.
   - **Zone**: GCP breaks its cloud data centers into regions and zones. **Regions** are a collection of zones in the same geographical location. **Zones** are collections of compute resources, which vary from zone to zone.

   For best results, pick the zone in your designated region that supports the latest Intel CPUs. For a complete listing of regions and zones, including supported processors, see [Regions and Zones](https://cloud.google.com/compute/docs/regions-zones).

   - **Service Account**: Service accounts allow automated processes to authenticate with GCP. Select the default service account, identified by `project_number-compute@developer.gserviceaccount.com`.
   - **Under Vertica Management Console**, choose the configuration for the virtual machine that will run the Management Console. The Vertica Analytics Platform in Cloud Launcher always deploys the Vertica Management Console (MC) as part of the solution.

   The default machine type for MC is sufficient for most deployments. You can choose another machine type that better suits any additional purposes, such as serving as a target node for backups, data transformation, or additional management tools.

   - **Node count for Vertica Cluster**: The total number of VMs you want to deploy in the Vertica Cluster. The default is 3.
**Note:**
As mentioned above, the Cloud Launcher automatically deploys the Vertica Community Edition license, which limits the database to 3 nodes and up to 1 TB in raw data. Any additional nodes will be part of your database cluster, but will not be part of your database.

If you intend to use the Community Edition license for your database, leave the setting at 3. Otherwise, you would add nodes that will sit idle and cost you money without being part of your database.

- **Machine type for Vertica Cluster nodes:** The Cloud Launcher builds each node in the cluster using the same machine type. Modify the machine type for your nodes based on the workloads you expect your database to handle. See [Supported GCP Machine Types](#) for more information.
- **Data disk type:** GCP offers two types of persistent disk storage: Standard and SSD. The costs associated with Standard are less, but the performance of SSD storage is much better. Vertica recommends you use SSD storage. For more information on Standard and SSD persistent disks, see [Storage Options](#).
- **Disk size in GB:** Disk performance is directly tied to the disk size in GCP. The default value of 2000 GBs (2 TB) is the minimum disk size for SSD persistent disks that allows maximum throughput.

  If you select a smaller disk size, the throughput performance decreases. If you select a large disk size, the performance remains the same as the 2 TB option.

- **Network:** VMs in GCP must exist on a virtual private cloud (VPC). When you created your GCP account, a default VPC was created. Create additional VPCs to isolate solutions or projects from one another. The Vertica Analytics Platform creates all the nodes in the same VPC.
- **Subnetwork:** Just as a GCP account may have multiple VPCs, each VPC may also have multiple subnets. Use additional subnets to group or isolate solutions within the same VPC.
- **Firewall:** If you want your MC to be accessible via the internet, check the Allow access to the Management Console from the Internet box. Vertica recommends you protect your MC using a firewall that restricts access to just the IP addresses of users that need to access it. You can enter one or more comma-separated CIDR address ranges.

After you have entered all the required information, click **Deploy** to begin the deployment process.
Monitor the Deployment

After the deployment begins, Google Cloud Launcher automatically opens the Deployment Manager page that displays the status of the deployment. Items that are still being processed have a spinning circle to the left of them and the text is a light gray color. Items that have been created are dark gray in color, with an icon designating that resource type on the left.

After the deployment completes, a green check mark appears next to the deployment name in the upper left-hand section of the screen.

Accessing the Cluster After Deployment

After the deployment completes, the right-hand section of the screen displays the following information:

- dbadmin password: A randomly generated password for the dbadmin account on the nodes. For security reasons, change the dbadmin password when you first log in to one of the Vertica cluster nodes.
- madmin password: A randomly generated password for the mcadmin account for accessing the Management Console. For security reasons, change the mcadmin password after you first log in to the MC.
- Vertica Node 1 IP address: The external IP address for the first node in the Vertica cluster is exposed here so that you can connect to the VM using a standard SSH client. To access the MC, press the Access Vertica MC button in the Get Started section of the dialog box. Copy the mcadmin password and paste it when asked.

For more information on using the MC, see Using Management Console.

Access the Cluster Nodes

There are two ways to access the cluster nodes directly:

- Use GCP's integrated SSH shell by selecting the SSH button in the Get Started section. This shell opens a pop-up in your browser that runs GCP's web-based SSH client. You are automatically logged on as the user you authenticated as in the GCP environment.
After you have access to the first Vertica cluster node, execute the `su dbadmin` command, and authenticate using the dbadmin password.

- In addition, use other standard SSH clients to connect directly to the first Vertica cluster node. Use the Vertica Node 1 IP address listed on the screen as the dbadmin user, and authenticate with the dbadmin password.

Follow the on-screen directions to log in using the mcadmin account and accept the EULA. After you've been authenticated, access the initial database by clicking the vdb icon (looks like a green cylinder) in the Recent Databases section.

**Using a Custom Service Account**

In general, you should use the default service account created by the GCP deployment (project_number-compute@developer.gserviceaccount.com), but if you want to use a custom service account:

- The custom service account must have the Editor role.
- Individual user accounts must have the Service Account User role on the custom service account.

**Eon Mode Databases on GCP**

You deploy an Eon Mode database to GCP using Google Cloud Platform Launcher to deploy a Management Console (MC) instance. You then use the MC instance to provision and deploy an Eon Mode database.

**GCP Eon Mode Instance Recommendations**

When you use the MC to deploy an Eon Mode database to the Google Cloud Platform (GCP), you choose the instance type to deploy as the database's nodes. The default instance settings in the MC are the more conservative option (currently, n1-standard-16). They are sufficient for most workloads. However, you may choose instances with more memory (such as n1-highmem-16) if your queries perform complex joins that may otherwise spill to disk. You can also choose instances with more cores (such as n1-standard-32), if you perform highly-complex compute-intensive analysis. The following links provide additional information about GCP machine type instances and Vertica:
- **Machine types**: Google Cloud's documentation that describes configuration details for each instance option.
- **Supported GCP Machine Types**: Available machine types when deploying Vertica to GCP.
- **Eon Mode Volume Configuration Defaults for GCP**: Details about Vertica's default volume configurations.

The more powerful instance you choose, the higher the cost per hour. You need to balance whether you want to use fewer, higher-powered but more expensive instances vs. relying on more lower-powered instances that cost less. Thanks to Eon Mode's elasticity, if you choose to use the less-powerful instances, you can always add more nodes to meet peak demands. When you reduce the number of instances to a minimum during off-peak times, you'll spend less than if you had a similar number of more-powerful instances.

### Storage Options

The MC's deployment wizard also asks you to select the type of local storage for your instances. You can select different options for each type of local storage that Vertica uses: the catalog, the depot, and temporary space. For all of these storage locations, you choose the type of disks to use (standard vs. SSD). You will see the best performance with SSD disks. However, SSD disks cost more.

For the depot, you also choose whether to use local or persistent disks. The local option is faster, as it resides directly on the virtual machine host. However, whenever you shut down the node, this storage is wiped clean. The persistent storage is slower than the local option, as it is not stored directly on the machine hosting the instance. However, it is not wiped out whenever you shut down the instance. See the Google Cloud documentation's [Storage options](https://cloud.google.com/storage) page for more information.

Which of these options you choose depends on how much depot warming the nodes must perform when starting. If the content of your node's depots change little over time (or you tend to frequently start and stop instances), using persistent storage makes sense. In this case, the depot's warming period will be shorter because most of the data the node needs to participate in queries may still be in its depot when it starts. It will perform fewer fetches of data from communal storage while participating in queries.

If your working data set is rapidly changing or you tend to leave nodes stopped for extended periods of time, your best choice is usually to use local storage. In this scenario, the data in the node's depot when it restarts is usually stale. To participate in queries, the node must fetch much of the data it needs from communal storage, resulting in slower performance until it has warmed its depot. Using local ephemeral storage makes sense.
here, because you will get the benefit of having faster depot storage. Because your nodes have to warm their depots anyhow, there is less of a downside of having the depot on ephemeral storage.

For general guidelines on scaling your cluster for Eon Mode database, see Configuring Your Vertica Cluster for Eon Mode.

**Eon Mode on GCP Prerequisites**

Before deploying an Eon Mode database on GCP, you must take several steps:

- Review the default service account's permissions for your GCP project.
- Create an HMAC key to use when creating your cluster.
- Create a communal storage location.

**Service Account Permissions**

Service accounts allow automated processes to authenticate with GCP. The Eon Mode database deployment process uses the project's service account for your GCP project to deploy instances. When you create a new project, GCP automatically creates a default service account (identified by `project_number-compute@developer.gserviceaccount.com`) for the project and grants it the IAM role Editor. See the Google Cloud documentation's Understanding roles for details about this and other IAM roles.

The Editor role lets the service account create resources from the Marketplace. When you create an instance of the Management Console (MC), the MC uses the account to deploy further resources, such as provisioning instances for a database.

For details, see the Google Cloud documentation's Understanding service accounts page.

**Permissions and Roles**

To deploy Vertica on GCP, your user account must have the:

- **Editor** role.
- `runtimeconfig.waiters.getIamPolicy` permission.
Creating an HMAC Key

Vertica uses a hash-based message authentication code (HMAC) key to authenticate requests to access the communal storage location. This key has two parts: an access ID and a secret. When you create an Eon Mode database in GCP, you provide both parts of an HMAC key for the nodes to use to access communal storage.

To create an HMAC key:

1. Log in to your Google Cloud account.
2. If the name of the project you will use to create your database does not appear in the top banner, click the dropdown and select the correct project.
3. In the navigation menu in the upper-left corner, under the Storage heading, click Storage and select Settings.
4. In the Settings page, click Interoperability.
5. Scroll to the bottom of the page and find the User account HMAC heading.
6. Unless you have already set a default project, you will see the message stating you haven’t set a default project for your user account yet. Click the Set project-id as default project button to choose the current project as your default for interoperability.
7. Under Access keys for your user account, click **Create a key**.
8. Your new access key and secret appear in the HMAC key list. You will need them when you create your Eon Mode database. You can copy them to a handy location (such as a text editor) or leave a browser tab open to this page while you use another tab or window to create your database. These keys remain available on this page, so you do not need to worry about saving them elsewhere.

**Caution:**
It is vital that you protect the security of your HMAC key. It can grant others access to your Eon Mode database's communal storage location. This means they could access all of the data in your database. Do not write the HMAC key anyplace where it may be exposed, such as email, shared folders, or similar insecure locations.

### Creating a Communal Storage Location

Your Eon Mode database needs a storage location for its communal storage. Eon Mode databases running on GCP use Google Cloud Storage (GCS) for their communal storage location. When you create your new Eon Mode database, you will supply the MC's wizard with a GCS URL for the storage location.

This location needs to meet the following criteria:

- The URL must include at least a bucket name. You can use one or more levels of folders, as well. For example, the following GCS URLs are valid:
  - gs://verticabucket/mydatabase
  - gs://verticabucket/databases/mydatabase
  - gs://verticabucket
  
  Multiple databases can share the same bucket, as long as each has its own folder.

- If provided, the lowest-level folder in the URL must not already exist. For example, in the GCS URL gs://verticabucket/databases/mydatabase, the bucket named verticabucket and the directory named databases must exist. The subdirectory named mydatabase must not exist. The Vertica install process expects to create the final folder itself. If the folder already exists, the installation process fails.
Note:
If you have a communal storage location that already contains data from a previous Eon Mode database that you want to access, use the revive process, rather than installing a new database. See Stopping, Starting, Terminating, and Reviving Eon Mode Database Clusters for details.

- The permissions on the bucket must be set to allow the service account read, write, and delete privileges on the bucket. The best role to assign to the user to gain these permissions is Storage Object Admin.
- To prevent performance issues, the bucket must be in the same region as all of the nodes running the Eon Mode database.
- If you create the database through the admintools UI, you must set gcsauth as a bootstrap parameter in admintools.conf. For more information on this and other GCP parameters, see Google Cloud Storage Parameters.

```
[BootstrapParameters]
gcsauth = ID:secret
```

### Deploying an Eon Mode Database On GCP

Once you have taken the steps listed in Eon Mode on GCP Prerequisites, you are ready to deploy an Eon Mode database in GCP. This process has two steps: deploy a single-node MC instance, then use the MC to provision and deploy a database. The following topics explain these steps.

### Deploying an MC Instance to GCP for Eon Mode

To deploy an MC instance that is able to deploy Eon Mode databases to GCP:

1. Log into your GCP account, if you are not currently logged in.
2. Verify that your user account has the Editor role and the runtimeconfig.waiters.getIamPolicy permission.
3. Verify that the name of the GCP project you want to use for the deployment appears in the top banner. If it does not, click the down arrow next to the project name and select the correct project.
4. Click the navigation menu icon in the top left of the page and select Marketplace.
5. In the Search for solutions box, type Vertica Eon Mode and press enter.
6. Click the search result for Vertica Data Warehouse, Eon Mode. There are two license options: by the hour (BTH) and bring your own license (BYOL). See Deploy Vertica from the Google Cloud Marketplace for more information on this license choice.
7. Click Launch on the license option you prefer.
8. On the following page, fill in the fields to configure your MC instance:

- **Deployment name** identifies your MC deployment in the GCP Deployments page.
- **Zone** is the location where the virtual machine running your MC instance will be deployed. Make this the same location where your communal storage bucket is located.
- **Service Account**: Service accounts allow automated processes to authenticate with GCP. Select the default service account, identified by `project_number-compute@developer.gserviceaccount.com`.
- **Machine Type** is the virtual hardware configuration of the instance that will run the MC. The default values here are "middle of the road" settings which are sufficient for most use cases. If you are doing a small proof-of-concept deployment, you can choose a less powerful instance to save some money. If you are planning on deploying multiple large databases, consider increasing the count of virtual CPUs and RAM.
  For details about Vertica's default volume configurations, see Eon Mode Volume Configuration Defaults for GCP.
- **User Name for Access to MC** is the administrator username for the MC. You can customize this if you want.
- **Network** and **Subnetwork** are the virtual private cloud (VPC) network and subnet within that network you want your MC instance and your Vertica nodes to use. This setting does not affect your MC's external network address. If you want to isolate your Vertica cluster from other GCP instances in your project, create a custom VPC network and optionally a subnet in your GCP project and select them in these fields. See the Google Cloud documentation's VPC network overview page for more information.
- **Firewall** enables access to the MC from the internet by opening port 5450 in the firewall. You can choose to not open this port by clearing the I accept opening a port in the firewall (5450) for Vertica box. However, if you do not open the port in the firewall, your MC instance will only be accessible from within the VPC network. Not opening the port will make accessing your MC instance much harder.
- **Source IP ranges for MC traffic**: If you choose to open the MC for external access, add one or more or more CIDR address ranges to this box for network addresses that you want to be able to access to the MC.
Caution:
Make the address ranges as limited as possible to reduce the chances of unauthorized access to your MC instance.

9. Click the **Deploy** button to start the deployment of your MC instance.

The deployment process will take several minutes.

**Using a Custom Service Account**

In general, you should use the default service account created by the GCP deployment (*project_number*-compute@developer.gserviceaccount.com), but if you want to use a custom service account:

- The custom service account must have the **Editor** role.
- Individual user accounts must have the **Service Account User** role on the custom service account.

**Connect and Log Into the MC Instance**

After the deployment process is finished, the Deployment Manager page for your MC instance contains links to connect to the MC via your browser or ssh.

![Vertica Data Warehouse, Eon Mode](image)

To connect to the MC instance:
1. The MC administrator user has a randomly-generated password that you need to log into the MC. Copy the password in the **MC Admin Password** field to the clipboard.
2. Click **Access Management Console**.
3. A new browser tab or window opens, showing you a page titled **Redirection Notice**. Click the link for the MC URL to continue to the MC login page.
4. Your browser will likely show you a security warning. The MC instance uses a self-signed security certificate. Most browsers treat these certificates as a security hazard because they cannot verify their origin. You can safely ignore this warning and continue. In most browsers, click the **Advanced** button on the warning page, and select the option to proceed. In Chrome, this is a link titled **Proceed to xxx.xxx.xxx.xxx (unsafe)**. In Firefox, it is a button labeled **Accept the Risk and Continue**.
5. At the login screen, enter the MC administrator user name into the **Username** box. This user name is mcadmin, unless you changed the user name in the MC deployment form.
6. Paste the automatically-generated password you copied from the MC Admin Password field earlier into the **Password** box.
7. Click **Log In**.

Once you have logged into the MC, change the MC administrator account's password.

---

**Caution:**
The automatically-generated password appears on the MC instance's deployment page and can be revealed in several locations in the deployment logs. Failure to change this password can lead to unauthorized access to your MC instance.

---

To change the password:

1. On the home page of the MC, under the MC Tools section, click **MC Settings**.
2. In the left-hand menu, click **User Management**.
3. Select the entry for the MC administrator account and click **Edit**.
4. Click either the **Generate new** or **Edit password** button to change the password. If you click the **Generate new** button, be sure to save the automatically-generated password in a safe location. If you click **Edit password**, you are prompted to enter a new password twice.
5. Click **Save** to update the password.

Now that you have created your MC instance, you are ready to deploy a Vertica Eon Mode cluster. See **Using the MC to Provision and Create an Eon Mode Database in GCP**.
Using the MC to Provision and Create an Eon Mode Database in GCP

After you deploy an MC instance to GCP, use it to deploy an Eon Mode database.

**Note:**
Currently, the admintools menu-based interface does not support creating an Eon Mode database on GCP.

To use the MC to provision and deploy a new Eon Mode database on GCP:

1. From the MC home screen, click **Create new database** to launch the Create a Vertica Cluster on Google Cloud wizard.
2. On the first page of the wizard enter the following information:
   - **Google Cloud Storage HMAC Access Key** and **HMAC Secret Key**: Copy and paste the HMAC access key and secret you created earlier. You find these values on the Interoperability tab of the Storage Settings page. See [Eon Mode on GCP Prerequisites](#) for details.
   - **Zone**: This value defaults to the zone containing your MC instance. Make this value the same as the zone containing the Google Cloud Storage bucket that your database will use for communal storage.
     - **Caution**: You will see significant performance issues if you choose different zones for cluster instances, storage, or the MC.
   - **CIDR Range**: The IP address range for clients to whom you want to grant access to your database. Make this range as restrictive as possible to limit access to your database.
3. Click **Next**, and supply the following information:
   - **Vertica Database Name**: the name for your new database. See [Creating a Database Name and Password](#) for database name requirements.
   - **Vertica Version**: select the desired Vertica database version. You can select from the latest hotfix of recent Vertica releases. For each database version, you can also select the operating system.
   - **Vertica Database User Name**: the name of the database superuser. This name defaults to dbadmin, but you can enter another user name here.
• **Password** and **Confirm Password**: Enter a password for the database superuser account.

• **Database Size**: The number of nodes in your initial database. If you specify more than three nodes here, you must supply a valid Vertica license file in the Vertica License field (below).

• **Vertica License**: Click **Browse** to locate and upload your Vertica license key file. If you do not supply a license key file here, the wizard deploys your database with a Vertica Community Edition license. This license has a three node limit, so the value in the Database Size filed cannot be larger than 3 if you do not supply a license. If you use a Community Edition license for your deployment, you can upgrade the license later to expand your cluster load more than 1TB of data. See Managing Licenses form more information.

  **Note:**
  This field does not appear if you created your MC instance using a by-the-hour (BTH) launcher. The BTH license is automatically applied to all clusters you create using a BTH MC instance. For a by-the-hour license, cloud vendors charge the customer for licensed Vertica usage along with their cloud infrastructure charges.

• **Load example data**: Check this box if you want your deployed database to load some example clickstream data. This option is useful if you are testing features and just want some preloaded data in the database to query.

4. Click **Next** and supply the following information:

• **Instance Type**: the specifications of the virtual machine instances the MC will use to deploy your database nodes. See the Google Cloud documentation's [Machine types](https://cloud.google.com/compute/docs/machine-types) page for details of each instance type. Also see [GCP Eon Mode Instance Recommendations](https://cloud.google.com/compute/docs/instance-policies/instance-policies).

• **Database Depot Path** and **Disk Type**: the local mount point for the depot, and the type and number of local disks dedicated to the depot for each node. You cannot change the mount path for the depot. The disks you select in the **Disk Type** field are only used to store the depot. On the next page of the wizard, you will configure disks for the catalog and temporary disk space. You will see the best performance when using SSD disks, although at a higher cost. You can choose to use faster local storage for your depot. However, local storage is ephemeral—GCP wipes the disk clean whenever you stop the instance. This means each time you start a node, it will have to **warm its depot** from scratch, rather than taking advantage of any still-current data in its depot. See the
Google Cloud documentation's [Storage options](https://cloud.google.com/storage/docs/infrastructure) page for more information about the local disk options.

- **Volume Size**: the amount of disk space available on each disk attached to each node in your cluster. This field shows you the total disk space available per node in your cluster. For the best practices on choosing the amount of disk space for your nodes, see Configuring Your Vertica Cluster for Eon Mode.

- **Data Segmentation Shards**: sets the number of shards in your database. After you set this value, you cannot change it later. See Configuring Your Vertica Cluster for Eon Mode for recommendations. The default value is based on the number of nodes you entered in the Database size you specified earlier. It is usually sufficient, unless you anticipate greatly expanding your cluster beyond your initial node count.

- **Communal Location**: a Google Cloud Storage URL that specifies where to store your database's communal data. See Eon Mode on GCP Prerequisites for requirements.

- **Instance IP settings**: specify whether the nodes in your database will have static or ephemeral network addresses that are accessible from the internet, or addresses that are only accessible from within the internal virtual network.

5. Click Next. The wizard validates your communal storage location URL. If there is an problem with the URL you entered, it displays an error message and prompts you to fix the URL.

After your communal storage URL passes validation, fill in the following information:

- **Database Catalog Path, Disk Type, and Size (GB) per Available Node**: the mount point disk type, and disk size for the local copy of the database catalog on each node. You cannot edit the mount point. You choose the type of local disk to use for the catalog, and its size. You can only choose persistent disk storage for the catalog. SSD drives are faster, but more expensive than standard disks. The default setting for the disk size is adequate for most medium size databases. Increase the size if you anticipate maintaining a large database.

- **Database Temp Path, Disk Type, and Size (GB) per Available Node**: the mount point disk type, and disk size for the temporary storage space on each node. You cannot edit the mount point. You choose the type of local disk to use, and its size. You can only choose persistent disk storage for the temporary disk space. SSD drives are faster, but more expensive than standard disks. The default setting is adequate for most databases. Consider increasing the temporary space if you perform many complex merges that spill to disk.

- **Label Instances**: check this box to enable adding labels to your node's instances. Many organizations use labels to organize, track responsibility, and assign costs for instances. See the Google Cloud documentation's [Labeling](https://cloud.google.com/compute/docs/labeling) documentation.
resources page for more information. If you choose to add labels, enter the label name and value, and click Add.

6. Click Next. Review the summary of all your database settings. If you need to make a correction, use the Back button to step back to previous pages of the wizard.

7. When you are satisfied with the database settings, check Accept terms and conditions and click Create.

The process of provisioning and creating the database takes several minutes. After it completes successfully, the MC displays a Get Started button. This button leads to a page of useful links for getting started with your new database.

Manually Deploying an Enterprise Mode Database on GCP

Before you create your Vertica cluster in Google Cloud Platform (GCP) using manual steps, you must create a virtual machine (VM) instance from the Compute Engine section of GCP.

Configure and Launch a New Instance

All VM instances that you create should be launched in the same virtual public cloud (VPC).

To configure and launch a new VM instance, follow these instructions:

1. From within the Compute Engine section of GCP, from the menu on the left-hand site of the screen, select VM Instances.

   GCP displays all the VM instances that you have created so far.

2. Select the CREATE INSTANCE link.
3. Enter a name for the new instance.
4. Select the zone where you plan to deploy the instance.
GCP breaks its cloud data centers down by regions and zones. *Regions* are a collection of zones that are all in the same geographical location. Zones are collections of compute resources, which vary from zone to zone. Always pick the zone in your designated region that supports the latest Intel CPUs.

For a complete listing of regions and zones, including supported processors, see [Regions and Zones](#).

5. Select a machine type.

GCE offers many different types of VM instances. For best results, only deploy Vertica on VM instances with 8 vCPUs or more and at least 30 GB of RAM.

6. Select the boot disk (image).

You create VM instances from a public or custom image. If you are starting with Vertica in GCP for the first time, select either the CentOS 7 or RHEL 7 public image. Those images have been tested thoroughly ith Vertica.

For more information about deploying a VM instance, see [Creating and Starting an Instance](#).

After you have configured the VM instance to be used as a Vertica cluster node, GCP allows you to convert that instance into a custom image. Doing so allows you to deploy multiple versions of that VM instance; each VM instance is identical except for the node name and IP address.

For more information about creating a custom image, see [Creating, Deleting, and Deprecating Custom Images](#).

**Connect to a Virtual Machine**

Before you can connect to any of the VMs you created, you must first identify the external IP address. The VM instance section of GCP contains a list of all currently deployed VMs and their associated external IP addresses.

**Connect to Your VM**

To connect to your VM, complete the following tasks:
1. Connect to your VM using SSH with the external IP address you created in the configuration steps.
2. Authenticate using the credentials and SSH key that you provided to your GCP account upon creation.

**Connect to Other VMs**

To connect to other virtual machines in your virtual network:

1. Use SSH to connect to your publicly connected VM.
2. Use SSH again from that VM to connect through the private IP addresses of your other VMs.

Because GCP forces the use of private key authentication, you may need to move your key file to the `root` directory of your publicly connected VM. Then, use SSH to connect to other VMs in your virtual network.

**Prepare the Virtual Machines**

After you create your VMs, you need to prepare them for cluster formation.

**Add the Vertica License and Private Key**

Prepare your nodes by adding your private key (if you are using one) to each node and to your Vertica license. The following steps assume that the initial user you configured is the DBADMIN user:

1. As the DBADMIN user, copy your private key file from where you saved it locally onto your primary node.

   Depending upon the procedure you use to copy the file, the permissions on the file may change. If permissions change, the `install_vertica` script fails with a message similar to the following:

   ```text
   Failed Login Validation 10.0.2.158, cannot resolve or connect to host as root.
   ```

   If you see the previous failure message, enter the following command to correct permissions on your private key file:
$ chmod 600 /<name-of-key>.pem

2. Copy your Vertica license to your primary VM. Save it in your home directory or other known location.

**Install Software Dependencies for Vertica on GCP**

In addition to the Vertica standard package dependencies, as the root user, you must install the following packages before you install Vertica:

- `pstack`
- `mcelog`
- `sysstat`
- `dialog`

**Configure Storage**

For best disk performance in GCP, Vertica recommends customers use SSD persistent storage, configured to at least 2TB (2000 GB) in size. Disk performance is directly tied to the disk size in GCP. 2000 GBs (2TB) is the minimum disk size for SSD persistent disks that allows maximum throughput.

**Caution:**

Do not store your information on the root volume, especially in your data and catalog directories. Storing information on the root volume may result in data loss.

When configuring your storage, make sure to use a supported file system. See Recommended Storage Format Types for details.

**Create a Swap File**

In addition to storage volumes to store your data, Vertica requires a swap volume or swap file for the setup script to complete.

Create a swap file or swap volume of at least 2 GB. The following steps show how to create a swap file within Vertica on GCP:
1. **Install the devnull and swapfile files:**

   ```bash
   $ install -o root -g root -m 0600 /dev/null /swapfile
   ```

2. **Create the swap file:**

   ```bash
   $ dd if=/dev/zero of=/swapfile bs=1024 count=2048k
   ```

3. **Prepare the swap file using mkswap:**

   ```bash
   $ mkswap /swapfile
   ```

4. **Use swapon to instruct Linux to swap on the swap file:**

   ```bash
   $ swapon /swapfile
   ```

5. **Persist the swapfile in FSTAB:**

   ```bash
   $ echo "/swapfile swap swap auto 0 0" >> /etc/fstab
   ```

6. **Repeat the volume attachment, combination, and swap file creation procedures for each VM in your cluster.**

**Download Vertica**

To download the Vertica server appropriate for your operating system and license type, follow the steps in described in Download and Install the Vertica Server Package.

After you complete the download and extraction, use the install_vertica script to form a cluster and install the Vertica database software, as described in the next section.

**Form a Cluster and Install Vertica**

Use the install_vertica script to combine two or more individual VMs to form a cluster and install your Vertica database.

Before you run the install_vertica script, follow these steps:

1. **Check the VM Instances page of the Compute Engine section on GCP to locate a list of current VMs and their associated internal IP addresses.**
2. Identify your storage location on your VMs. The installer assumes that you have mounted your storage to /home/dbadmin. To specify another location, use the --data-dir argument.

Caution: Do not store your data on the root drive.

The following steps show how to combine virtual machines (VMs) into a cluster using the install_vertica script:

1. While connected to your primary node, construct the following command to combine your nodes into a cluster.

   ```
   $ sudo /opt/vertica/sbin/install_vertica --hosts 10.2.0.164,10.2.0.165,10.2.0.166 --dba-user-password-disabled --point-to-point --data-dir /vertica/data --ssh-identity ~/<name-of-private-key>.pem --license <license.file>
   ```

2. Substitute the IP addresses for your VMs, and include your root key file name, if applicable.

3. Include the --point-to-point parameter to configure spread to use direct point-to-point communication among all Vertica nodes, as required for clusters on GCP when installing or updating Vertica.

4. If you are using Vertica Community Edition, which limits you to three nodes, specify -L CE with no license file.

5. After you combine your nodes, to reduce security risks, keep your key file in a secure place—separate from your cluster—and delete your on-cluster key with the shred command:

   ```
   $ shred examplekey.pem
   ```

Important: You need your key file to perform future Vertica updates.

For complete information about the install_vertica script and its parameters, see Installing Vertica with the Installation Script.

**After Your Cluster is Up and Running**

Now that your cluster is configured and running, and Vertica is running, take these steps:
1. Create a database. See Creating a Database for details.

2. When you installed Vertica, a database administrator user was created with the DBADMIN role (usually named dbadmin). Use this account to create and start a database.

3. See Configuring the Database for important database configuration steps.

Moving a Cloud Installation from By the Hour (BTH) to Bring Your Own License (BYOL)

Vertica offers two licensing options for some of the entries in the Amazon Web Services Marketplace and Google Cloud Marketplace:

- **Bring Your Own License (BYOL)**: a long-term license that you obtain through an online licensing portal. These deployments also work with a free Community Edition license. Vertica uses a community license automatically if you do not install a license that you purchased. (For more about Vertica licenses, see Managing Licenses and Understanding Vertica Licenses.)

- **Vertica by the Hour (BTH)**: a pay-as-you-go environment where you are charged an hourly fee for both the use of Vertica and the cost of the instances it runs on. The Vertica by the hour deployment offers an alternative to purchasing a term license. If you want to crunch large volumes of data within a short period of time, this option might work better for you. The BTH license is automatically applied to all clusters you create using a BTH MC instance.

If you start out with an hourly license, you can later decide to use a long-term license for your database. The support for an hourly versus a long-term license is built into the instances running your database. To move your database from an hourly license to a long-term license, you must create a new database cluster with a new set of instances.

To move from an hourly to a long-term license, follow these steps:

1. Purchase a BYOL license. Follow the process described in Obtaining a License Key File.
2. Apply the new license to your database.
3. Shut down your database.
5. Revive your database onto the new cluster.
The exact steps you must take depend on your database mode and your preferred tool for managing your database:

- **Eon Mode databases**: Use either the [command line](#) or [Management Console](#).
- **Enterprise Mode databases**: Use the command line to switch licenses.

### Moving an Eon Mode Database from BTH to BYOL Using the Command Line

Follow these steps to move an Eon Mode database from an hourly to a long-term license.

1. Obtain a long-term BYOL license from the online licensing portal, described in [Obtaining a License Key File](#).
2. Upload the license file to a node in your database. Note the absolute path in the node's filesystem, as you will need this later when installing the license.
3. Connect to the node you uploaded the license file to in the previous step.
4. Connect to your database using `vsql` and view the licenses table:

   ```sql
   => SELECT * FROM licenses;
   ```

   Note the name of the hourly license listed in the `NAME` column, so you can check if it is still present later.

5. Install the license in the database using the `INSTALL_LICENSE` function with the absolute path to the license file you uploaded in step 2:

   ```sql
   => SELECT install_license('absolute path to BYOL license');
   ```

6. View the licenses table again:

   ```sql
   => SELECT * FROM licenses;
   ```

   If only the new BYOL license appears in the table, skip to step 8. If the hourly license whose name you noted in step 4 is still in the table, copy the name and proceed to step 7.

7. Call the `DROP_LICENSE` function to drop the hourly license:

   ```sql
   => SELECT drop_license('hourly License name');
   ```
8. You will need the path for your cluster's communal storage in a later step. If you do not already know the path, you can find this information by executing this query:

```sql
=> SELECT location_path FROM V_CATALOG.STORAGE_LOCATIONS
    WHERE sharing_type = 'COMMUNAL';
```

10. Shut down the database by calling the `SHUTDOWN` function:

```sql
=> SELECT SHUTDOWN();
```

11. You now need to create a new BYOL cluster onto which you will revive your database. Deploy a new cluster including a new MC instance using a BYOL entry in the marketplace of your chosen cloud platform. See:

- Launch MC and AWS Resources with a CloudFormation Template
- Deploying an Eon Mode Database On GCP

**Important:**
Your new BYOL cluster must have the same number of primary nodes as your existing hourly license cluster.

12. Revive your database onto the new cluster. For instructions, see Reviving an Eon Mode Database Cluster. Because you created the new cluster using a BYOL entry in the marketplace, the database uses the BYOL you applied earlier.

13. After reviving the database on your new BYOL cluster, terminate the instances for your hourly license cluster and MC. For instructions, see your cloud provider's documentation.

---

**Moving an Eon Mode Database from BTH to BYOL Using the MC**

Follow this procedure to move to BYOL and revive your database using MC:

1. Purchase a long-term BYOL license from the online licensing portal, following the steps detailed in Obtaining a License Key File. Save the file to a location on your computer.
2. You now need to install the new license on your database. Log into MC and click your database in the Recent Databases list.
3. At the bottom of your database's Overview page, click the License tab.
4. Under the Installed Licenses list, note the name of the BTH license in the License Name column. You will need this later to check whether it is still present after installing the new long-term license.

5. In the ribbon at the top of the License History page, click the Install New License button. The Settings: License page opens.

6. Click the Browse button next to the Upload a new license box.

7. Locate the license file you obtained in step 1, and click Open.

8. Click the Apply button on the top right of the page.

9. Select the checkbox to agree to the EULA terms and click OK.

10. After Vertica installs the license, click the Close button.

11. Click the License tab at the bottom of the page.

12. If only the new long-term license appears in the Installed Licenses list, skip to Step 16. If the by-the-hour license also appears in the list, copy down its name from the License Name column.

13. You must drop the by-the-hour license before you can proceed. At the bottom of the page, click the Query Execution tab.

14. In the query editor, enter the following statement:

   ```sql
   SELECT DROP_LICENSE('hourly license name');
   ```

15. Click Execute Query. The query should complete indicating that the license has been dropped.

16. You will need the path for your cluster's communal storage in a later step. If you do not already know the path, you can find this information by executing this query in the Query Execution tab:

   ```sql
   SELECT location_path FROM V_CATALOG.STORAGE_LOCATIONS
   WHERE sharing_type = 'COMMUNAL';
   ```

18. You must now stop your by-the-hour database cluster. At the bottom of the page, click the Manage tab.

19. In the banner at the top of the page, click Stop Database and then click OK to confirm.

20. From the Amazon Web Services Marketplace or the Google Cloud Marketplace, deploy a new Vertica Management Console using a BYOL entry. Do not deploy a full cluster. You just need an MC deployment.

21. Log into your new MC instance and revive the database. See Reviving an Eon Mode Database on AWS in MC for detailed instructions.

22. After reviving the database on your new environment, terminate the instances for your hourly license environment. To do so, on the AWS CloudFormation Stacks page, select the hourly environment's stack (its collection of AWS resources) and click Actions > Delete Stack.
Moving an Enterprise Mode Database from Hourly to BYOL Using Backup and Restore

**Note:**
Currently, AWS is the only platform supported for Enterprise Mode databases using hourly licenses.

In an Enterprise Mode database, follow this procedure to move to BYOL, and then back up and restore your database:

1. Obtain a long-term BYOL license from the online licensing portal, described in [Obtaining a License Key File](#).
2. Upload the license file to a node in your database. Note the absolute path in the node's filesystem, as you will need this later when installing the license.
3. Connect to the node you uploaded the license file to in the previous step.
4. Connect to your database using `vsql` and view the licenses table:

   ```
   => SELECT * FROM licenses;
   ```

   Note the name of the hourly license listed in the NAME column, so you can check if it is still present later.

5. Install the license in the database using the `INSTALL_LICENSE` function with the absolute path to the license file you uploaded in step 2:

   ```
   => SELECT install_license('absolute path to BYOL license');
   ```

6. View the licenses table again:

   ```
   => SELECT * FROM licenses;
   ```

   If only the new BYOL license appears in the table, skip to step 8. If the hourly license whose name you noted in step 4 is still in the table, copy the name and proceed to step 7.

7. Call the `DROP_LICENSE` function to drop the hourly license:

   ```
   => SELECT drop_license('hourly license name');
   ```

8. Back up the database. See [Backing Up and Restoring the Database](#).
9. Deploy a new cluster for your database using one of the BYOL entries in the Amazon Web Services Marketplace.

10. Restore the database from the backup you created earlier. See Backing Up and Restoring the Database. When you restore the database, it will use the BYOL you loaded earlier.

11. After restoring the database on your new environment, terminate the instances for your hourly license environment. To do so, on the AWS CloudFormation Stacks page, select the hourly environment's stack (its collection of AWS resources) and click Actions > Delete Stack.

After completing one of these procedures, see Viewing Your License Status to confirm the license drop and install were successful.

**Adjusting Spread Daemon Timeouts For Virtual Environments**

You may see Vertica nodes leave the database even though they are still running. This issue can happen on networks that are prone to spikes in latency or in virtual environments where a node's VM may be paused for a short period of time. You can adjust a setting in Vertica to help prevent this issue from occurring.

Vertica relies on spread daemons to pass messages between database nodes. When a node fails to respond to a spread message after a timeout period, Vertica assumes the node is down and starts to remove it from the database.

The default Spread timeout depends on the number of configured Spread segments:

<table>
<thead>
<tr>
<th>Configured Spread segments</th>
<th>Default timeout</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>8 seconds</td>
</tr>
<tr>
<td>&gt; 1</td>
<td>25 seconds</td>
</tr>
</tbody>
</table>

If network delays or temporary pauses of a VM last longer than the spread timeout period, you may see UP nodes leave the database. In these cases, you can increase the spread timeout to reduce or eliminate instances where UP nodes leave the database.
Azure's Memory-Preserving Updates and Spread Timeouts

In Azure, you might see running nodes leave the database due to scheduled maintenance. Azure’s maintenance down time is usually well-defined. For example, Azure's memory-preserving updates can pause a VM for up to 30 seconds while performing maintenance on the system hosting the VM. This pause does not disrupt the node. It continues normal operation once Azure resumes it. See the Azure documentation’s topic on Maintenance for virtual machines in Azure for more information about updates. If Azure pauses a node for longer than the spread timeout period, Vertica interprets the node's inability to respond to a spread message as the node going down, even though it will resume running normally.

**Note:**
If you deploy your Vertica cluster using the Azure Marketplace, the spread timeout defaults to 35 seconds. If you manually create your cluster in Azure, the spread timeout defaults to 8 or 25 seconds, as described earlier.

Setting the Spread Timeout

When you know your network or nodes may be unable to respond for a specific amount of time, you can increase the spread timeout period to longer than this time. Adjust the timeout to the period of time the node may be unable to respond, plus an additional 5 seconds as a safety margin.

For example, if you know Azure's memory-preserving maintenance can pause your VMs for up to 30 seconds, set the spread timeout to 35 seconds.

If you do not know exactly how long network or node disruptions can last, you can try increasing the spread timeout gradually, until you see reduced instances of UP nodes leaving the database. Be as conservative with this setting as you can.

**Important:**
Vertica cannot react to a node going down or being shut down improperly before the timeout period has elapsed. Changing spread’s timeout to a value too high can result in longer query restarts if a node goes down.
You can see the current setting of the spread timeout by querying system table `SPREAD_STATE`:

```sql
=> SELECT * FROM V_MONITOR.SPREAD_STATE;
```

<table>
<thead>
<tr>
<th>node_name</th>
<th>token_timeout</th>
</tr>
</thead>
<tbody>
<tr>
<td>v_vmart_node0003</td>
<td>8000</td>
</tr>
<tr>
<td>v_vmart_node0001</td>
<td>8000</td>
</tr>
<tr>
<td>v_vmart_node0002</td>
<td>8000</td>
</tr>
</tbody>
</table>

(3 rows)

You change the spread timeout calling the meta-function `SET_SPREAD_OPTION` to set the token timeout to a new value. This value is a string, and sets the timeout in milliseconds.

**Important:**
Changing spread settings with `SET_SPREAD_OPTION` has minor impact on your cluster as it pauses while the new settings are propagated across the entire cluster.

This example sets the timeout to 35 seconds (35000ms):

```sql
=> SELECT SET_SPREAD_OPTION('TokenTimeout', '35000');
NOTICE 9003: Spread has been notified about the change to SET_SPREAD_OPTION

Spread option 'TokenTimeout' has been set to '35000'.

(1 row)
```

```sql
=> SELECT * FROM V_MONITOR.SPREAD_STATE;
```

<table>
<thead>
<tr>
<th>node_name</th>
<th>token_timeout</th>
</tr>
</thead>
<tbody>
<tr>
<td>v_vmart_node0001</td>
<td>35000</td>
</tr>
<tr>
<td>v_vmart_node0002</td>
<td>35000</td>
</tr>
<tr>
<td>v_vmart_node0003</td>
<td>35000</td>
</tr>
</tbody>
</table>

(3 rows)

**Note:**
The changes you make to the spread timeout might not take effect immediately. It might take some time before you see the settings change in `system table V_MONITOR.SPREAD_STATE table`.

Containerized Vertica

Vertica Eon Mode leverages container technology to meet the needs of modern application development and operations workflows that must deliver software quickly and efficiently across a variety of infrastructures. Containerized Vertica supports Kubernetes with automation tools to help maintain the state of your environment with minimal disruptions and manual intervention.

Containerized Vertica provides the following benefits:

- **Performance**: Eon Mode separates compute from storage, which provides the optimal architecture for stateful, containerized applications. Eon Mode subclusters can target specific workloads and scale elastically according to the current computational needs.
- **High availability**: Vertica containers provide a consistent, repeatable environment that you can deploy quickly. If a database host or service fails, you can easily replace the resource.
- **Resource utilization**: A container is a runtime environment that packages an application and its dependencies in an isolated process. This isolation allows containerized applications to share hardware without interference, providing granular resource control and cost savings.
- **Flexibility**: Kubernetes is the de facto container orchestration platform. It is supported by a large ecosystem of public and private cloud providers.

Containerized Vertica Ecosystem

Vertica provides various tools and artifacts for production and development environments. The containerized Vertica ecosystem includes the following:

- **Vertica Helm chart**: Helm is a Kubernetes package manager that bundles into a single package the YAML manifests that deploy Kubernetes objects. Download Vertica Helm charts from the Vertica Helm Charts Repository.
- **Custom Resource Definition (CRD)**: A CRD is a shared global object that extends the Kubernetes API with your custom resource types. Use the CRD to instantiate a custom resource (CR), a deployable object that defines the state of an Eon Mode database on Kubernetes.
- **VerticaDB Operator**: The operator is a custom controller that monitors the state of your CR and automates administrator tasks. If the current state differs from the declared state, the operator works to correct the current state.
- **Admission controller**: The admission controller uses a webhook that the operator queries to verify changes to mutable states in a CR.
- **VerticaDB vlogger**: The vlogger is a lightweight image used to deploy a sidecar utility container. The sidecar sends logs from `vertica.log` in the Vertica server container to stdout on the host node to simplify log aggregation.

- **Vertica Community Edition (CE) image**: The CE image is the containerized version of the limited Enterprise Mode Vertica Community Edition (CE) license. The CE image provides a test environment consisting of an example database and developer tools.

  In addition to the pre-built CE image, you can build a custom CE image with the tools provided in the Vertica [one-node-ce GitHub repository](#).

- **Communal Storage Options**: Vertica supports a variety of public and private cloud storage providers. For a list of supported storage providers, see [Vertica in a Containerized Environment](#).

- **UDx development tools**: The UDx-container GitHub repository provides the tools to build a container that packages the binaries, libraries, and compilers required to create C++ Vertica user-defined extensions. For additional details about extending Vertica in C++, see [C++ SDK](#).

## Vertica Images

The following table describes images that Vertica provides for server and automation tools:

<table>
<thead>
<tr>
<th>Image</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Vertica Kubernetes minimal image (without Tensorflow)</td>
<td>Optimized for Kubernetes. The default image included in the Vertica Helm charts. This image does not contain the TensorFlow package.</td>
</tr>
<tr>
<td><strong>Image names:</strong></td>
<td></td>
</tr>
<tr>
<td>- vertica/vertica-k8s:11.0.2-0-minimal</td>
<td></td>
</tr>
<tr>
<td>- vertica/vertica-k8s:latest</td>
<td></td>
</tr>
<tr>
<td>Vertica Kubernetes (with Tensorflow)</td>
<td>Optimized for Kubernetes. This image has full machine learning capabilities.</td>
</tr>
<tr>
<td><strong>Image name:</strong></td>
<td></td>
</tr>
<tr>
<td>- vertica/vertica-k8s:11.0.2-0</td>
<td></td>
</tr>
<tr>
<td>Vertica Community Edition</td>
<td>A single-node Enterprise Mode image for test environments. For more information, see <a href="#">Vertica Community Edition (CE)</a>.</td>
</tr>
<tr>
<td><strong>Image name:</strong></td>
<td></td>
</tr>
<tr>
<td>- vertica/vertica-ce:11.0.1-0</td>
<td></td>
</tr>
</tbody>
</table>
Vertica DB Operator

The **operator** monitors the state of your custom resources and automates life cycle tasks for Vertica on Kubernetes. For installation instructions, see [Installing the VerticaDB Operator](#).

**Image name**: vertica/verticadb-operator:1.2.0

Vertica vlogger

Lightweight image for sidecar logging. The vlogger sends the contents of `vertica.log` to stdout on the host node. For implementation details, see [Creating a Custom Resource](#).

**Image name**: vertica/vertica-logger:1.0.0

---

## Creating a Custom Vertica Image

The [Creating a Vertica Image](#) tutorial in the [Vertica Integrator's Guide](#) provides a line-by-line description of the Dockerfile hosted on [GitHub](https://github.com). You can add dependencies to replicate your development and production environments.

---

## Containerized Vertica on Kubernetes

Kubernetes is an open-source container orchestration platform that automatically manages infrastructure resources and schedules tasks for containerized applications at scale. Kubernetes achieves automation with a declarative model that decouples the application from the infrastructure. The administrator provides Kubernetes the desired state of an application, and Kubernetes deploys the application and works to maintain its desired state. This frees the administrator to update the application as business needs evolve, without worrying about the implementation details.

An application consists of resources, which are stateful objects that you create from Kubernetes resource types. Kubernetes provides access to resource types through the Kubernetes API, an HTTP API that exposes resource types as endpoints. The most common way to create a resource is with a YAML-formatted manifest file that defines the desired state of the resource. You use the `kubectl command line tool` to request a resource instance of that type from the Kubernetes API. In addition to the default resource types, you can extend the Kubernetes API and define your own resource types as a Custom Resource Definition (CRD).

To manage the infrastructure, Kubernetes divides the hosts into master and worker nodes. Master nodes manage the control plane, a collection of services and controllers that
maintain the desired state of Kubernetes objects and schedule tasks on worker nodes. Worker nodes complete tasks that the control plane assigns. Just as you can create a CRD to extend the Kubernetes API, you can create a custom controller that maintains the state of your custom resources (CR) created from the CRD.

**Vertica Custom Resource Definition and Custom Controller**

The Vertica CRD extends the Kubernetes API so that you can create custom resources that deploy an Eon Mode database as a StatefulSet. In addition, Vertica provides the VerticaDB operator, a custom controller that maintains the desired state of your CR and automates life cycle tasks. The result is a self-healing, highly-available, and scalable Eon Mode database that requires minimal manual intervention.

To simplify deployment, Vertica packages the CRD and the operator in Helm charts. A Helm chart bundles manifest files into a single package to create multiple resource type objects with a single command.

**Custom Resource Definition Architecture**

The Vertica CRD creates a StatefulSet, a workload resource type that persists data with ephemeral Kubernetes objects. The following diagram describes the Vertica CRD architecture:
VerticaDB Operator

The operator is a namespace-scoped custom controller that maintains the state of custom objects and automates administrator tasks. The operator watches objects and compares their current state to the desired state declared in the custom resource. When the current state does not match the desired state, the operator works to restore the objects to the desired state.

In addition to state maintenance, the operator:

- Installs Vertica
- Creates an Eon Mode database
- Upgrades Vertica
- Revives an existing Eon Mode database
- Restarts and reschedules DOWN pods
- Scales subclusters
- Manages services for pods
- Monitors pod health
- Handles load balancing for internal and external traffic

To validate changes to the custom resource, the operator queries the admission controller, a webhook that provides rules for mutable states in a custom resource.
Vertica provides a Helm chart that contains the operator and the admission controller. For details about installing the operator and the admission controller, see Installing the VerticaDB Operator.

**Vertica Pod**

A pod is essentially a wrapper around one or more logically-grouped containers. These containers consume the host node resources in a shared execution environment. In addition to sharing resources, a pod extends the container to interact with Kubernetes services. For example, you can assign labels to associate pods to other objects, and you can implement affinity rules to schedule pods on specific host nodes.

DNS names provide continuity between pod life cycles. Each pod is assigned an ordered and stable DNS name that is unique within its cluster. When a Vertica pod fails, the rescheduled pod uses the same DNS name as its predecessor. If a pod needs to persist data between life cycles, you can mount a custom volume in its filesystem.

Rescheduled pods require information about the environment to become part of the cluster. This information is provided by the Downward API. Environment information, such as the superuser password Secret, is mounted in the /etc/podinfo directory.

**Sidecar Container**

Pods run multiple containers to tightly couple containers that contribute to the same process. The Vertica pod allows a sidecar, a utility container that can access and perform utility tasks for the Vertica server process.

For example, logging is a common utility task. Idiomatic Kubernetes practices retrieve logs from stdout and stderr on the host node for log aggregation. To facilitate this practice, Vertica offers the vlogger sidecar image that sends the contents of vertica.log to stdout on the host node.

If a sidecar needs to persist data, you can mount a custom volume in the sidecar filesystem.

For implementation details, see Creating a Custom Resource.
Persistent Storage

A pod is an ephemeral, immutable object that requires access to external storage to persist data between life cycles. To persist data, the operator uses the following API resource types:

- **StorageClass**: Represents an external storage provider. You must create a StorageClass object separately from your custom resource and set this value with the local.storageClassName configuration parameter.
- **PersistentVolume (PV)**: A unit of storage that mounts in a pod to persist data. You dynamically or statically provision PVs. Each PV references a StorageClass.
- **PersistentVolumeClaim (PVC)**: The resource type that a pod uses to describe its StorageClass and storage requirements.

A pod mounts a PV in its filesystem to persist data, but a PV is not associated with a pod by default. However, the pod is associated with a PVC that includes a StorageClass in its storage requirements. When a pod requests storage with a PVC, the operator observes this request and then searches for a PV that meets the storage requirements. If the operator locates a PV, it binds the PVC to the PV and mounts the PV as a volume in the pod. If the operator does not locate a PV, it must either dynamically provision one, or the administrator must manually provision one before the operator can bind it to a pod.

PVs persist data because they exist independently of the pod life cycle. When a pod fails or is rescheduled, it has no effect on the PV. For additional details about StorageClass, PersistentVolume, and PersistentVolumeClaim, see the Kubernetes documentation.

StorageClass Requirements

The StorageClass affects how the Vertica server environment and operator function. For optimum performance, consider the following:

- If you do not set the local.storageClassName configuration parameter, the operator uses the default storage class. If you use the default storage class, confirm that it meets storage requirements for a production workload.
- Select a StorageClass that uses a recommended storage format type as its fsType.
- Use dynamic volume provisioning. The operator requires on-demand volume provisioning to create PVs as needed.
Local Volume Mounts

The operator mounts a single PVC in the /home/dbadmin/local-data/ directory of each pod to persist data for the following subdirectories:

- /data: Stores the catalog and any temporary files. There is a symbolic link to this path from the local.dataPath parameter value.
- /depot: Improves depot warming in a rescheduled pod. There is a symbolic link to this path from the local.depotPath parameter value.
- /config: A symbolic link to the /opt/vertica/config directory. This directory persists the contents of the configuration directory between restarts.
- /opt/vertica/log: A symbolic link to the opt/vertica/log directory. This directory persists log files between pod restarts.

**Note:**
Kubernetes assigns each custom resource a unique identifier. The volume mount paths include the unique identifier between the mount point and the subdirectory. For example, the full path to the /data directory is /home/dbadmin/local-data/uid/data.

By default, each path mounted in the /local-data directory are owned by the dbadmin user and the verticadb group. For details, see About Linux Users Created by Vertica and Their Privileges.

Custom Volume Mounts

You might need to persist data between pod life cycles in one of the following scenarios:

- An external process performs a task that requires long-term access to the Vertica server data.
- Your custom resource includes a sidecar container in the Vertica pod.

You can mount a custom volume in the Vertica pod or sidecar filesystem. To mount a custom volume in the Vertica pod, add the definition in the spec section of the CR. To mount the custom volume in the sidecar, add it in an element of the sidecars array.

The CR requires that you provide the volume type and a name for each custom volume. The CR accepts any Kubernetes volume type. The volumeMounts.name value identifies the volume within the CR, and has the following requirements and restrictions:
- It must match the volumes.name parameter setting.
- It must be unique among all volumes in the /local-data, /podinfo, or /licensing mounted directories.

For instructions on how to mount a custom volume in either the Vertica server container or in a sidecar, see Creating a Custom Resource.

**Service Objects**

The Vertica Helm chart provides two service objects: a headless service that requires no configuration to maintain DNS records and ordered names for each pod, and a load balancing service that manages internal traffic and external client requests for the pods in your cluster.

**Load Balancing Services**

Each subcluster has its own load balancing service object. To configure the service object, use the subclusters[i].serviceType parameter in the custom resource to define a Kubernetes service type. Vertica supports the following service types:

- **ClusterIP**: The default service type. This service provides internal load balancing, and sets a stable IP and port that is accessible from within the subcluster only.
- **NodePort**: Provides external client access. You can specify a port number for each host node in the subcluster to open for client connections.
- **LoadBalancer**: Uses a cloud provider load balancer to create NodePort and ClusterIP services as needed. For details about implementation, see the Kubernetes documentation and your cloud provider documentation.

**Important:**
To prevent performance issues during heavy network traffic, Vertica recommends that you set --proxy-mode to iptables for your Kubernetes cluster.

Because native Vertica load balancing interferes with the Kubernetes service object, Vertica recommends that you allow the Kubernetes services to manage load balancing for the subcluster. You can configure the native Vertica load balancer within the Kubernetes cluster, but you receive unexpected results. For example, if you set the Vertica load balancing policy to ROUNDROBIN, the load balancing appears random.
For additional details about Kubernetes services, see the official Kubernetes documentation.

Security Considerations

Vertica on Kubernetes supports both TLS and mTLS for communications between resource objects. You must manually configure TLS in your environment. For details, see TLS Protocol.

Admission Controller Webhook TLS Certificates

The VerticaDB operator Helm chart includes the admission controller webhook to validate changes to a custom resource. The webhook requires TLS certificates for data encryption.

The method that you use to install the VerticaDB operator determines how you manage the TLS certificates for the admission controller. If you use the Operator Lifecycle Manager (OLM) and install the VerticaDB operator through OperatorHub.io, the OLM creates and mounts a self-signed certificate for the webhook, which requires no additional action. If you install the VerticaDB operator with the Helm charts, you must manually manage admission controller TLS certificates with one of the following options:

- cert-manager. This Kubernetes add-on generates and manages certificates for your resource objects. It has built-in support in Kubernetes. For installation details, see Installing the VerticaDB Operator.
- Custom certificates. To use custom certificates, you must pass your certificate credentials and a PEM-encoded CA bundle as parameters to the Helm chart. For details, see Installing the VerticaDB Operator and Helm Chart Parameters.

By default, a Helm chart install uses cert-manager unless you provide custom certificates. If you do not install cert-manager or provide custom certificates to the Helm chart, you receive an error when you install the Helm chart.

Custom TLS Certificates

Your custom resource might require several custom TLS certificates to secure internal and external communications. For example, you might require a self-signed certificate authority (CA) bundle to authenticate to a supported storage location, and multiple certificates for
different client connections. You can mount one or more custom certificates in the Vertica server container with the `certSecrets` custom resource parameter. Each certificate is mounted in the container at `/certs/cert-name/key`.

The operator manages changes to the certificates. If you update an existing certificate, the operator replaces the certificate in the Vertica server container. If you add or delete a certificate, the operator reschedules the pod with the new configuration.

For details about adding custom certificates to your custom resource, see Creating a Custom Resource.

**System Configuration**

As a best practice, make system configurations on the host node so that pods inherit those settings from the host node. This strategy eliminates the need to provide each pod a privileged security context to make system configurations on the host.

To manually configure host nodes, refer to the following sections:

- General Operating System Configuration - Automatically Configured by the Installer
- General Operating System Configuration - Manual Configuration

The dbadmin account must use one of the authentication techniques described in dbadmin Authentication Access.

**VerticaDB Operator**

The Vertica operator automates error-prone and time-consuming tasks that a Vertica on Kubernetes administrator must otherwise perform manually. The operator:

- Installs Vertica
- Creates an Eon Mode database
- Upgrades Vertica
- Revives an existing Eon Mode database
- Restarts and reschedules DOWN pods
- Scales subclusters
- Manages services for pods
- Monitors pod health
- Handles load balancing for internal and external traffic
The Vertica operator is a Go binary that uses the **SDK operator framework**. It runs in its own pod, and is namespace-scoped to limit any failures to the objects in its namespace.

To install the operator, see **Installing the VerticaDB Operator**.

**Monitoring Desired State**

Each namespace is allowed one operator pod that acts as a custom controller and monitors the state of the **custom resource objects** within that namespace. The operator uses the **control loop** mechanism to reconcile state changes by investigating state change notifications from the custom resource instance, and periodically comparing the current state with the desired state.

If the operator detects a change in the desired state, it determines what change occurred and reconciles the current state with the new desired state. For example, if the user deletes a subcluster from the custom resource instance and successfully saves the changes, the operator deletes the corresponding subcluster objects in Kubernetes.

**Validating State Changes**

The **verticadb-operator Helm chart** includes an admission controller, which uses a webhook to prevent invalid state changes to the custom resource. When you save a change to a custom resource, the admission controller webhook queries a REST endpoint that provides rules for mutable states in a custom resource. If a change violates the state rules, the admission controller prevents the change and returns a error. For example, it returns an error if you try to save a change that violates **K-Safety**.

**Limitations**

The operator has the following limitations:

- You must manually configure TLS. For details, see **Containerized Vertica on Kubernetes**.
- Vertica recommends that you do not use the **Large Cluster** feature. If a control nodes fails, it might cause more than half of the database nodes to fail. This results in the database losing quorum.
- Backup and Restore is a manual process.
- **Autoscaling** is not supported.
• **Importing and exporting** data between a cluster outside of Kubernetes requires that you expose the service with the [NodePort or LoadBalancer service type](https://kubernetes.io/docs/concepts/services-networking/service/) and properly configure the network.

**Important:**
When configuring the network to import or export data, you must assign each node a static IP export address. When pods are rescheduled to different nodes, you must update the static IP address to reflect the new node.

See [Configuring the Network to Import and Export Data](#) for more information.

---

**Installing the VerticaDB Operator**

The custom resource definition (CRD), operator, and admission controller work together to maintain the state of your environment and provide task automation:

• The CRD extends the Kubernetes API to provide custom objects. It serves as a blueprint for custom resource (CR) instances that specify the desired state of your environment.
• The operator is a namespace-scoped custom controller that monitors custom resource instances to maintain the desired state of the custom resource objects.
• The admission controller is a webhook that queries a REST endpoint to verify changes to mutable states in a custom resource instance.

Install the operator and admission controller from [OperatorHub.io](https://operatorhub.io) or with the [Helm chart](https://hub.helm.sh/).  

**Prerequisites**

• Kubernetes 1.21.1 and higher
• [Helm 3.5.0](https://helm.sh/) and higher
• [kubectl](https://kubernetes.io/docs/reference/generated/kubectl/kubectl-reference/) command line tool
Installing the CRD

The Vertica CRD is included when you install the VerticaDB Helm chart. If you do not have the privileges required to install the CRD, it is available for download as a YAML manifest:

```
$ kubectl apply -f https://github.com/vertica/vertica-kubernetes/releases/download/v1.2.0/verticadbs.vertica.com-crd.yaml
```

Installing from OperatorHub.io

OperatorHub.io is a registry that allows vendors to share Kubernetes operators. Each vendor must adhere to packaging guidelines to simplify user adoption.

To install the VerticaDB operator from OperatorHub.io, navigate to the Vertica operator page and follow the install instructions.

Installing the VerticaDB with Helm Charts

Vertica packages VerticaDB operator and admission controller in a Helm chart. Vertica on Kubernetes allows one operator instance per namespace.

**Important:**
Vertica recommends that you use Kubernetes 1.21.1 or later. Earlier versions require that you add the kubernetes.io/metadata.name=namespace-name label to each namespace that contains an operator.

**Configuring TLS for the Admission Controller**

Before you install the VerticaDB Helm chart, you must configure TLS for the admission controller. The admission controller uses a webhook that requires TLS certificates for data encryption. Choose one of the following data encryption options:

- cert-manager to generate and manage certificates
- Custom certificates
By default, the custom resource uses cert-manager unless you provide custom certificates. You cannot install the VerticaDB operator Helm chart if you do not install cert-manager or provide custom certificates.

**Installing cert-manager**

cert-manager is available as a YAML manifest in a GitHub repository.

1. **Use kubectl to install cert-manager:**

   ```
   $ kubectl apply -f https://github.com/jetstack/cert-manager/releases/download/v1.5.3/cert-manager.yaml
   ```

   Installation might take a few minutes.

2. **Verify the cert-manager installation:**

   ```
   $ kubectl get pods --namespace cert-manager
   ```

<table>
<thead>
<tr>
<th>NAME</th>
<th>READY</th>
<th>STATUS</th>
<th>RESTARTS</th>
<th>AGE</th>
</tr>
</thead>
<tbody>
<tr>
<td>cert-manager-7dd5854bb4-skks7</td>
<td>1/1</td>
<td>Running</td>
<td>5</td>
<td>12d</td>
</tr>
<tr>
<td>cert-manager-cainjector-64c949654c-9nm2z</td>
<td>1/1</td>
<td>Running</td>
<td>5</td>
<td>12d</td>
</tr>
<tr>
<td>cert-manager-webhook-6bdfc7c9d-b7r2p</td>
<td>1/1</td>
<td>Running</td>
<td>5</td>
<td>12d</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

For additional details about cert-manager install verification, see the [cert-manager documentation](https://cert-manager.io/docs/installation/installation/).

**Defining Custom Certificates**

When you install the VerticaDB operator and admission controller Helm chart, you can pass parameters that customize the Helm chart. Use the `--set` option to pass individual settings, and use the `-f` option to pass a YAML-formatted file that contains multiple values.

To pass confidential information, use [Secrets](https://cert-manager.io/docs/installation/installation/). The following command creates a Secret that stores the TLS key, TLS, certificate, and certificate authority (CA) certificate:

```
$ kubectl create secret generic tls-secret --from-file=tls.key=/path/to/tls.key --from-file=tls.crt=/path/to/tls.crt --from-file=ca.crt=/path/to/ca.crt
```

Use `tls-secret` when you install the VerticaDB operator and admission controller Helm chart.
**Installing the Helm Chart**

You must have cluster administrator privileges to complete the following steps. In addition, you must complete one of the following to configure TLS for the admission controller before installation:

- Installing cert-manager
- Defining Custom Certificates

The following steps use the `tls-secret` created in Defining Custom Certificates.

1. Add the Vertica helm charts to your repository. The following command installs the CRD Helm chart and names it `vertica-charts` for future reference:

   ```
   $ helm repo add vertica-charts https://vertica.github.io/charts
   ```

2. Update your Helm repository to ensure that you are using the latest version of your repository:

   ```
   $ helm repo update
   ```

3. Install the operator Helm chart, providing a name for the operator. The following command names the operator `vdb-op`:

   ```
   $ helm install vdb-op vertica-charts/verticadb-operator
   ```

**Helm Chart Parameters**

The following table describes the available settings for the VerticaDB operator and admission controller Helm chart.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>image.name</td>
<td>The name of the image that runs the operator.</td>
</tr>
<tr>
<td>Default:</td>
<td><code>vertica/verticadb-operator:version</code></td>
</tr>
<tr>
<td>webhook.caBundle</td>
<td>A PEM-encoded certificate authority (CA) bundle that validates the webhook's server certificate. If this is not set, the webhook uses the system trust roots on the apiserver.</td>
</tr>
<tr>
<td>Parameter</td>
<td>Description</td>
</tr>
<tr>
<td>-------------------------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>webhook.tlsSecret</td>
<td>Secret that contains the following keys for the webhook.caBundle:</td>
</tr>
<tr>
<td></td>
<td>- tls.key</td>
</tr>
<tr>
<td></td>
<td>- ca.crt</td>
</tr>
<tr>
<td></td>
<td>- tls.crt</td>
</tr>
<tr>
<td>resources.limits and</td>
<td>The resource requirements for the operator pod.</td>
</tr>
<tr>
<td>resources.requests</td>
<td>resources.limits is the maximum amount of CPU and memory that an operator</td>
</tr>
<tr>
<td></td>
<td>pod can consume from its host node.</td>
</tr>
<tr>
<td></td>
<td>resources.requests is the maximum amount of CPU and memory that an operator</td>
</tr>
<tr>
<td></td>
<td>pod can request from its host node.</td>
</tr>
<tr>
<td></td>
<td><strong>Defaults:</strong></td>
</tr>
<tr>
<td></td>
<td>resources:</td>
</tr>
<tr>
<td></td>
<td>limits:</td>
</tr>
<tr>
<td></td>
<td>- cpu: 100m</td>
</tr>
<tr>
<td></td>
<td>- memory: 750Mi</td>
</tr>
<tr>
<td></td>
<td>requests:</td>
</tr>
<tr>
<td></td>
<td>- cpu: 100m</td>
</tr>
<tr>
<td></td>
<td>- memory: 200Mi</td>
</tr>
</tbody>
</table>

**Custom Helm Chart Example**

When you install the VerticaDB operator and admission controller Helm chart, you can pass parameters that customize the Helm chart. Use the `--set` option to pass individual settings, and use the `-f` option to pass a YAML-formatted file that contains multiple values.

The following example installs the Helm chart with custom certificates for the admission controller.

1. Create a Secret that stores the TLS key, TLS certificate, and CA certificate:

   ```
   $ kubectl create secret generic tls-secret --from-file=tls.key=/path/to/tls.key --from-file=tls.crt=/path/to/tls.crt --from-file=ca.crt=/path/to/ca.crt
   ```

2. Install the VerticaDB operator Helm chart. Use `--set` commands to pass a PEM-encoded CA bundle and the `tls-secret`:
For detailed instructions about installing the Helm chart with custom certificates, see Installing the VerticaDB Operator.

## Configuring Communal Storage

Vertica on Kubernetes supports a variety of communal storage providers to accommodate your storage requirements. Configuring each storage provider requires that you create a Secret or ConfigMap to store sensitive information so that you can declare it in your Custom Resource (CR) without exposing any literal values.

### Amazon Web Services (AWS) S3 or S3-Compatible Storage

Vertica on Kubernetes supports AWS communal storage locations, and private cloud S3 storage such as MinIO.

To connect to an S3-compatible storage location, create a Secret to store both your communal access and secret key credentials. Then, add the Secret, path, and S3 endpoint to the CR spec.

1. The following command stores both your S3-compatible communal access and secret key credentials in a Secret named `s3-creds`:

   ```bash
   $ kubectl create secret generic s3-creds --from-literal=accesskey=accesskey --from-literal=secretkey=secretkey
   ```

2. Add the Secret to the communal section of the CR spec:

   ```yaml
   spec:
     ...
     communal:
       credentialSecret: s3-creds
       endpoint: https://path/to/s3-endpoint
       path: s3://bucket-name/key-name
     ...
   ```
For a detailed description of an S3-compatible storage implementation, see Creating a Custom Resource. For additional details about Vertica and AWS, see Vertica on Amazon Web Services.

**Google Cloud Storage**

Authenticating to Google Cloud Storage (GCS) requires your hash-based message authentication code (HMAC) access and secret keys, and the path to your GCS bucket. For details about HMAC keys, see Eon Mode on GCP Prerequisites.

1. The following command stores your HMAC access and secret key in a Secret named gcs-creds:

   ```
   $ kubectl create secret generic gcs-creds --from-literal=accesskey=accessKey --from-literal=secretkey=secretkey
   ```

2. Add the Secret and the path to the GCS bucket that contains your Vertica database to the communal section of the CR spec:

   ```
   spec:
   ...
   communal:
   credentialSecret: gcs-creds
   path: gs://bucket-name/path/to/database-name
   ...
   ```

For additional details about Vertica and GCS, see Vertica on Google Cloud Platform.

**Azure Blob Storage**

Microsoft Azure provides a variety of options to authenticate to Azure Blob Storage location. Depending on your environment, you can use one of the following combinations to store credentials in a Secret:

- accountName and accountKey
- accountName and shared access signature (SAS)

If you use an Azure storage emulator such as Azurite in a testing environment, you can authenticate with accountName and blobStorage values.

**Important:**
Vertica does not officially support Azure storage emulators as a communal
1. The following command stores accountName and accountKey in a Secret named azb-creds:

   ```bash
   $ kubectl create secret generic azb-creds --from-literal=accountKey=accessKey --from-literal=accountName=accountName
   ```

   Alternately, you could store your accountName and your SAS credentials in azb-creds:

   ```bash
   $ kubectl create secret generic azb-creds --from-literal=sharedAccessSignature=sharedAccessSignature --from-literal=accountName=accountName
   ```

2. Add the Secret and the path that contains your AZB storage bucket to the communal section of the CR spec:

   ```yaml
   spec:
   ...
   communal:
     credentialSecret: azb-creds
     path: azb://accountName/bucket-name/database-name
   ...
   ```

For details about Vertica and authenticating to Microsoft Azure, see Eon Mode Databases on Azure.

## Hadoop File Storage

Connect to Hadoop Distributed Filesystem (HDFS) communal storage with the standard `webhdfs` scheme, or the `swebhdfs` scheme for wire encryption. In addition, you must add your HDFS configuration files in a `ConfigMap`, a Kubernetes object that stores data in key-value pairs. You can optionally configure Kerberos to authenticate connections to your HDFS storage location.

The following example uses the `swebhdfs` wire encryption scheme that requires a certificate authority (CA) bundle in the CR spec.

1. The following command stores a PEM-encoded CA bundle in a secret named hadoop-cert:

   ```bash
   $ kubectl create secret generic hadoop-cert --from-file=ca-bundle.pem
   ```
2. HDFS configuration files are located in the /etc/hadoop directory. The following command creates a ConfigMap named hadoop-conf:

```
$ kubectl create configmap hadoop-conf --from-file=/etc/hadoop
```

3. Add the configuration values to the communal and certSecrets sections of the spec:

```
spec:
  ...
  communal:
    path: "swebhdfs://path/to/database"
    hadoopConfig: hadoop-conf
    caFile: /certs/hadoop-cert/ca-bundle.pem
  certSecrets:
    - name: hadoop-cert
  ...
```

The previous example defines the following:

- **communal.path**: The path to the database, using the wire encryption scheme. Enclose the path in double quotes.
- **communal.hadoopConfig**: The ConfigMap storing the contents of the /etc/hadoop directory.
- **communal.caFile**: The mount path in the container filesystem containing the CA bundle used to create the hadoop-cert Secret.
- **certSecrets.name**: The Secret containing the CA bundle.

For additional details about HDFS and Vertica, see Integrating with Apache Hadoop.

**Kerberos Authentication (Optional)**

Vertica authenticates connections to HDFS with Kerberos. The Kerberos configuration between Vertica on Kubernetes is the same as between a standard Eon Mode database and Kerberos, as described in Kerberos Authentication.

1. The following command stores the krb5.conf and krb5.keytab files in a Secret named krb5-creds:

```
$ kubectl create secret generic krb5-creds --from-file=kerberos-conf=/etc/krb5.conf --from-file=kerberos-keytab=/etc/krb5.keytab
```

Consider the following when managing the krb5.conf and krb5.keytab files in Vertica on Kubernetes:
Each pod uses the same `krb5.keytab` file, so you must update the `krb5.keytab` file before you begin any scaling operation.

When you update the contents of the `krb5.keytab` file, the operator updates the mounted files automatically, a process that does not require a pod restart.

The `krb5.conf` file must include a `[domain_realm]` section that maps the Kubernetes cluster domain to the Kerberos realm. The following example maps the default `.cluster.local` domain to a Kerberos realm named `EXAMPLE.COM`:

```
[domain_realm]
.cluster.local = EXAMPLE.COM
```

2. Add the Secret and additional Kerberos configuration information to the CR:

```
spec:
  ...
  communal:
    path: "swebhdfs://path/to/database"
    hadoopConfig: hadoop-conf
    kerberosServiceName: verticadb
    kerberosRealm: EXAMPLE.COM
    kerberosSecret: krb5-creds
  ...
```

The previous example defines the following:

- `communal.path`: The path to the database, using the wire encryption scheme. Enclose the path in double quotes.
- `communal.hadoopConfig`: The ConfigMap storing the contents of the `/etc/hadoop` directory.
- `communal.kerberosServiceName`: The service name for the Vertica principal.
- `communal.kerberosRealm`: The realm portion of the principal.
- `kerberosSecret`: The Secret containing the `krb5.conf` and `krb5.keytab` files.

For a complete definition of each of the previous values, see Custom Resource Definition Parameters.

**Creating a Custom Resource**

The custom resource definition (CRD) is a shared global object that extends the Kubernetes API beyond the standard resource types. The CRD serves as a blueprint for custom resource
(CR) instances. You create CRs that specify the desired state of your environment, and the operator monitors the CR to maintain state for the objects within its namespace.

CRs use the YAML file format. For details about all available CR settings, see custom resource parameters.

Prerequisites

- Complete Installing the VerticaDB Operator.
- Configure a dynamic volume provisioner.
- Confirm that you have the resources to deploy objects you plan to create.
- Acquire a Vertica license. By default, the Helm chart deploys the free Community Edition license.
- Configure a running S3 endpoint that contains an empty communal path bucket. To configure a different supported storage location, see Configuring Communal Storage for instructions.

Creating Secrets

Use the kubectl command line tool to create Secrets that store sensitive information in your custom resource without exposing the values they represent.

1. Create a secret named vertica-license for your Vertica license:

   ```
   $ kubectl create secret generic vertica-license --from-file=license.dat=/path/to/license.dat
   ```

   By default, the Helm chart uses the free Community Edition license. This license is limited to 3 nodes and 1 TB of data.

2. Create a secret named su-passwd to store your superuser password. If you do not add a superuser password, there is not one associated with the database:

   ```
   $ kubectl create secret generic su-passwd --from-literal=password=secret-password
   ```

3. The following command stores both your S3-compatible communal access and secret key credentials in a Secret named s3-creds:

   ```
   $ kubectl create secret generic s3-creds --from-literal=accesskey=accesskey --from-literal=secretkey=secretkey
   ```
4. This tutorial configures a certificate authority (CA) bundle that authenticates the S3-compatible connections to your custom resource. Create a Secret named `aws-cert`:

```bash
$ kubectl create secret generic aws-cert --from-file=root-cert.pem
```

5. You can mount multiple certificates in the Vertica server filesystem. The following command creates a Secret for your mTLS certificate in a Secret named `mtls`:

```bash
$ kubectl create secret generic mtls --from-file=/path/to/mtls-cert
```

**Required Fields**

The `VerticaDB` definition begins with required fields that describe the version, resource type, and metadata:

```yaml
apiVersion: vertica.com/v1beta1
class: VerticaDB
metadata:
  name: verticadb-sample
```

The previous example defines the following:

- **apiVersion**: The API group and Kubernetes API version in `api-group/version` format.
- **kind**: The resource type. `VerticaDB` is the name of the Vertica custom resource type.
- **metadata**: Optional data that identifies objects in the namespace.
  - **name**: The name of this CR object.

**spec Definition**

The `spec` field defines the desired state of the CR. During the control loop, the operator compares the `spec` values to the current state and reconciles any differences.

The following sections nest values under the `spec` field to define the desired state of your custom resource object.
Image Management

Each custom resource instance requires access to Vertica server image and instruction on how often to download a new image:

```yaml
spec:
  image: vertica/vertica-k8s:latest
  imagePullPolicy: IfNotPresent
```

The previous example defines the following:

- **image**: The image to run in the Vertica server container pod, defined here in `docker-registry-hostname/image-name:tag` format. For a full list of available Vertica images, see the [Vertica Dockerhub registry](#).
- **imagePullPolicy**: Controls when the operator pulls the image from the Dockerhub registry. `IfNotPresent` pulls the image only if it is not present in the local image repository.

Cluster Description Values

This section logically groups fields that configure the database and how it operates:

```yaml
spec:
  ...  
  initPolicy: Create  
  kSafety: "1"  
  licenseSecret: vertica-license  
  superuserPasswordSecret: su-passwd
```

The previous example defines the following:

- **initPolicy**: Specifies how to initialize the database. `Create` initializes a new database for the custom resource.
- **kSafety**: Determines the [fault tolerance](#) for the subcluster. For a three-pod subcluster, set `kSafety` to 1.
- **licenseSecret**: The Secret that contains your Vertica license key. The license is mounted in the `/home/dbadmin/licensing/mnt` directory.
- **superuserPasswordSecret**: The Secret that contains the database superuser password.
Configuring Communal Storage

The following example configures communal storage for an S3 endpoint. For a list of supported communal storage locations, see Vertica in a Containerized Environment. For implementation details for each communal storage location, see Configuring Communal Storage.

Provide the location and credentials for the storage location in the communal section:

```yaml
spec:
  ...
  communal:
    credentialSecret: s3-creds
    endpoint: https://path/to/s3-endpoint
    path: s3://bucket-name/key-name
    caFile: /certs/aws-certs/root_cert.pem
    region: aws-region
```

The previous example defines the following:

- **credentialSecret**: The Secret that contains your communal access and secret key credentials.
- **endpoint**: The S3 endpoint URL.
- **path**: The location of the S3 storage bucket, in S3 bucket notation. This bucket must exist before you create the custom resource. After you create the custom resource, you cannot change this value.
- **caFile**: Mounts in the server container filesystem the certificate file that validates S3-compatible connections to your custom resource.
- **region**: The geographic location of the communal storage resources.

Mounting Custom TLS Certificates

certSecrets is a list that contains each Secret that you created to encrypt internal and external communications for your CR. Use the name key to add each certificate:

```yaml
spec:
  ...
  certSecrets:
    - name: mtlss
    - name: aws-cert
```

**certSecrets** accepts an unlimited number of name values. If you update an existing certificate, the operator replaces the certificate and restarts the Vertica server container. If
you add or delete a certificate, the operator reschedules the pod with the new configuration.

**Adding a Sidecar Container**

A sidecar is a utility container that runs in the same pod as the Vertica server container and performs a task for the Vertica server process. For example, you can add a sidecar to send logs from `vertica.log` to the stdout on the host node for log aggregation.

`sidecars` accepts a list of sidecar definitions, where each element defines the following values:

```yaml
spec:
  ...
sidecars:
  - name: vlogger
    image: vertica/vertica-logger:1.0.0
```

The previous example defines the following:

- **name**: The name of the sidecar. `name` indicates the beginning of a sidecar element.
- **image**: The image for the sidecar container. Vertica provides the `vlogger` image that sends the contents of `vertica.log` to stdout on the host node.

Because this sidecar performs a task that requires that it persist data between pod life cycles, the following section mounts a custom volume in the sidecar filesystem.

**Mounting Custom Volumes**

You might need to mount a custom volume to persist data between pod life cycles in one of the following circumstances:

- An external service requires long-term access to your Vertica server data.
- You use a sidecar utility container.

Use the `volumeMounts.*` parameters to mount one or more custom volumes. To mount a custom volume for the Vertica server container, add the `volumeMounts.*` values directly under `spec`. To mount a custom volume for a sidecar container, nest the `volumeMounts.*` values in the `sidecars` array as part of an individual sidecar element definition.

The following example mounts a custom volume named `tenants-vol` in the Vertica server container, and a custom volume named `logger-vol` in the sidecar container:
The previous example defines the following:

- **volumeMounts**: Accepts a list of custom volumes and mount paths to persist data for the Vertica pod.
- **volumeMounts.name**: The name of the custom volume that persists data.
- **volumeMounts.mountPath**: The path to the custom volume mount point in the Vertica pod filesystem.

The `volumes.*` parameters make the custom volume available to the CR to mount in the appropriate container filesystem. Indent `volumes` to the same level as its corresponding `volumeMounts` entry. The following example mounts custom volumes for both the Vertica server container and the sidecar utility container:

```yaml
spec:
  ...
  volumeMounts:
    - name: tenants-vol
      mountPath: /path/to/tenants-vol
  volumes:
    - name: tenants-vol
      persistentVolumeClaim:
        claimName: vertica-pvc
  ...
sidecars:
  - name: vlogger
    image: vertica/vlogger:1.0.0
    volumeMounts:
      - name: logger-vol
        mountPath: /path/to/logger-vol
    volumes:
      - name: logger-vol
        emptyDir: {}
```

The previous example defines the following:

- **volumes**: Accepts a list of custom volumes and volume types to persist data for a container.
- **volumes.name**: The name of the custom volume that persists data. This value must match the corresponding `volumeMounts.name` value.
- **persistentVolumeClaim** and **emptyDir**: The volume type and name. The Vertica custom resource accepts any Kubernetes volume type.

### Local Container Information

Each container persists catalog, depot, configuration, and log data in a PersistentVolume (PV). You must provide information about the data and depot locations for operations such as pod rescheduling:

```
spec:
  ...
  local:
    dataPath: /data
    depotPath: /depot
    requestSize: 500Gi
```

The previous example defines the following:

- **dataPath**: Where the `/data` directory is mounted in the container filesystem. The `/data` directory stores the local catalogs and temporary files.
- **depotPath**: Where the depot is mounted in the container filesystem. Eon Mode databases cache data locally in a `depot` to reduce the time it takes to fetch data from communal storage to perform operations.
- **requestSize**: The minimum size of local data volume available when binding a PV to the pod.

**Note:**
To ensure you do not run out of disk space, verify that the underlying storage is large enough to accommodate the `requestSize` setting.

You must configure a StorageClass to bind the pods to a PersistentVolumeClaim (PVC). For details, see Containerized Vertica on Kubernetes.

### Shard Count

The `shardCount` setting specifies the number of shards in the database:

```
spec:
  ...
  shardCount: 12
```
You cannot change this value after you instantiate the CR. When you change the number of pods in a subcluster, or add or remove a subcluster, the operator rebalances shards automatically.

For guidance on selecting the shard count, see Configuring Your Vertica Cluster for Eon Mode.

### Subcluster Definition

The subclusters section is a list of elements, where each element represents a subcluster and its properties. Each CR requires a primary subcluster or it returns an error:

```yaml
spec:
  ...
  subclusters:
    - isPrimary: true
      name: primary-subcluster
      size: 3
```

The previous example defines the following:

- **isPrimary**: Designates a subcluster as primary or secondary. Each CR requires a primary subcluster or it returns an error. For details, see Subclusters.
- **name**: The name of the subcluster.

**Important:**
The default subcluster name that the Vertica server generates is default_subcluster. This name is invalid for Kubernetes resource types. You must provide a valid name that follows Kubernetes guidelines.

- **size**: The number of pods in the subcluster.

### Subcluster Service Object

Each subcluster communicates with external clients and internal pods through a service object:

```yaml
spec:
  ...
  subclusters:
    ...
```
In the previous example:

- **serviceType**: Defines the subcluster service object.
  
  By default, a subcluster uses the ClusterIP serviceType, which sets a stable IP and port that is accessible from within Kubernetes only. In many circumstances, external client applications need to connect to a subcluster that is fine-tuned for that specific workload. For external client access, set the serviceType to NodePort or LoadBalancer.

- **nodePort**: Assigns a unique port number in the 30000 - 32767 range for client access.

  Each subcluster that uses the NodePort service type requires a unique port for client access. If you do not provide a nodePort value, Kubernetes assigns a unique port in that range automatically. As a best practice, let Kubernetes assign the port number to avoid potential collisions.

  **Important:**
  
  You must create a firewall rule that allows TCP connections on the external port assigned with nodePort.

  To verify the port number, use the `kubectl get svc` command and view the PORT(S) column:

  ```
  $ kubectl get svc
  NAME         TYPE    CLUSTER-IP       EXTERNAL-IP   PORT(S)
  age
  vertica-dashboard NodePort 10.96.136.13  <none>      5433:32000/TCP,5444:30288/TCP 21d
  ...
  ```

  For details about Vertica and service objects, see [Containerized Vertica on Kubernetes](#).

**Pod Resource Limits and Requests**

Set the amount of CPU and memory resources each host node allocates for the Vertica server pod, and the amount of resources each pod can request:

```yaml
spec:
  ...
```
In the previous example:

- **resources**: The amount of resources each pod requests from its host node. When you change resource settings, Kubernetes restarts each pod with the updated resource configuration.
- **limits**: The maximum amount of CPU and memory that each server pod can consume.
- **requests**: The amount of CPU and memory resources that each pod requests from a PV.

The default configuration sets request and limit defaults based on [Recommendations for Sizing Vertica Nodes and Clusters](#). These limits are for testing environments—they are not suitable for production workloads.

As a best practice, set the resource request and limit to equal values so that they are assigned to the [guaranteed QoS class](#). Equal settings also provide the best safeguard against the Out Of Memory (OOM) Killer in constrained environments.

Note:
Select resource settings that your host nodes can accommodate. When a pod is started or rescheduled, Kubernetes searches for host nodes with enough resources available to start the pod. If there is not a host node with enough resources, the pod **status** stays in **Pending** until there are enough resources available.

**Node Affinity**

Kubernetes provides affinity and anti-affinity settings to control which resources the operator uses to schedule pods. As a best practice, set **affinity** to ensure that a single node does not serve two Vertica pods:

```yaml
spec:
  ...  
subclusters:
```
... affinity:
  podAntiAffinity:
    requiredDuringSchedulingIgnoredDuringExecution:
      - labelSelector:
          matchExpressions:
            - key: app.kubernetes.io/name
              operator: In
              values:
            - vertica
          topologyKey: "kubernetes.io/hostname"

In the previous example:

- **affinity**: Provides control over pod and host scheduling using labels.
- **podAntiAffinity**: Uses pod labels to prevent scheduling on certain resources.
- **requiredDuringSchedulingIgnoredDuringExecution**: The rules defined under this statement must be met before a pod is scheduled on a host node.
- **labelSelector**: Identifies the pods affected by this affinity rule.
- **matchExpressions**: A list of pod selector requirements that consists of a key, operator, and values definition. This matchExpression rule checks if the host node is running another pod that uses a vertica label.
- **topologyKey**: Defines the scope of the rule. Because this uses the hostname topology label, this applies the rule in terms of pods and host nodes.

**Complete File Reference**

As a reference, below is the complete CR YAML file created in this tutorial:

```yaml
apiVersion: vertica.com/v1beta1
kind: VerticaDB
metadata:
  name: verticadb-sample
spec:
  image: vertica/vertica-k8s:11.0.1-0
  imagePullPolicy: IfNotPresent
  initPolicy: Create
  kSafety: "1"
  licenseSecret: vertica-license
  superuserPasswordSecret: su-passwd
  communal:
    credentialSecret: s3-creds
    endpoint: https://path/to/s3-endpoint
    path: s3://bucket-name/key-name
    caFile: /certs/aws-certs/root_cert.pem
    region: aws-region
  volumeMounts:
    - name: tenants-vol
  mountPath: /path/to/tenants-vol
  volumes:
```

Custom Resource Definition Parameters

The following table describes the available settings for the Vertica Custom Resource Definition.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>annotations</td>
<td>Custom annotations added to all of the objects</td>
</tr>
<tr>
<td>Parameter</td>
<td>Description</td>
</tr>
<tr>
<td>-------------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>autoRestartVertica</td>
<td>Determines if the operator restarts the Vertica process when the process is not running.</td>
</tr>
<tr>
<td></td>
<td>Set this parameter to false when performing manual maintenance that requires a DOWN database. This prevents the operator from interfering with the database state.</td>
</tr>
<tr>
<td></td>
<td><strong>Default:</strong> true</td>
</tr>
<tr>
<td>certSecrets</td>
<td>A list of Secrets for custom TLS certificates.</td>
</tr>
<tr>
<td></td>
<td>Each certificate is mounted in the container at <code>/certs/cert-name/key</code>. For example, a PEM-encoded CA bundle named root_cert.pem and concealed in a Secret named aws-cert is mounted in <code>/certs/aws-cert/root_cert.pem</code>.</td>
</tr>
<tr>
<td></td>
<td>If you update the certificate after you add it to a custom resource, the operator updates the value automatically. If you add or delete a certificate, the operator reschedules the pod with the new configuration.</td>
</tr>
<tr>
<td></td>
<td>For implementation details, see <a href="#">Creating a Custom Resource</a>.</td>
</tr>
<tr>
<td>communal.caFile</td>
<td>The mount path in the container filesystem to a CA certificate file that validates HTTPS connections to a communal storage endpoint.</td>
</tr>
<tr>
<td></td>
<td>Typically, the certificate is stored in a Secret and included in <code>certSecrets</code>. For details, see <a href="#">Creating a Custom Resource</a>.</td>
</tr>
<tr>
<td>communal.credentialSecret</td>
<td>The name of the Secret that stores the credentials for the communal storage endpoint.</td>
</tr>
<tr>
<td></td>
<td>For implementation details for each supported communal storage location, see <a href="#">Configuring</a>.</td>
</tr>
<tr>
<td>Parameter</td>
<td>Description</td>
</tr>
<tr>
<td>---------------------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td><strong>communal.endpoint</strong></td>
<td>A communal storage endpoint URL. The endpoint must begin with either the http:// or https:// protocol. For example:</td>
</tr>
<tr>
<td></td>
<td><a href="https://path/to/endpoint">https://path/to/endpoint</a></td>
</tr>
<tr>
<td></td>
<td>You cannot change this value after you create the custom resource instance.</td>
</tr>
<tr>
<td></td>
<td>This setting is required when initPolicy is set to Create or Revive.</td>
</tr>
<tr>
<td><strong>communal.includeUIDInPath</strong></td>
<td>When set to true, the operator includes in the path the unique identifier (UID) that Kubernetes assigns to the VerticaDB object. Including the UID creates a unique database path so that you can reuse the communal path in the same endpoint.</td>
</tr>
<tr>
<td></td>
<td><strong>Default</strong>: false</td>
</tr>
<tr>
<td><strong>communal.kerberosRealm</strong></td>
<td>The realm portion of the Vertica Kerberos principal. This value is set in the KerberosRealm database parameter during boostrapping.</td>
</tr>
<tr>
<td><strong>communal.kerberosServiceName</strong></td>
<td>The service name portion of the Vertica Kerberos principal. This value is set in the KerberosServiceName database parameter during boostrapping.</td>
</tr>
<tr>
<td><strong>communal.path</strong></td>
<td>The path to the communal storage bucket. For example:</td>
</tr>
<tr>
<td></td>
<td>s3://bucket-name/key-name</td>
</tr>
<tr>
<td></td>
<td>You must create this bucket before you create the Vertica database.</td>
</tr>
<tr>
<td></td>
<td>The following initPolicy values determine how to set this value:</td>
</tr>
<tr>
<td>Parameter</td>
<td>Description</td>
</tr>
<tr>
<td>------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
</tbody>
</table>
|                  | • Create: The path must be empty.  
|                  | • Revive: The path cannot be empty.  
|                  | You cannot change this value after you create the custom resource.                                                                                                                                         |
| communal.region | The geographic location where the communal storage resources are located.  
|                  | If you do not set the correct region, the configuration fails. You might experience a delay because Vertica retries several times before failing.                                                              |
|                  | This setting is valid for Amazon Web Services (AWS) and Google Cloud Platform (GCP) only. Vertica ignores this setting for other communal storage providers.                                                      |
|                  | **Default:**  
|                  | • AWS: us-east-1  
|                  | • GCP: US-EAST1                                                                                                                                       |
| dbName           | The database name. When initPolicy is set to Revive or ScheduleOnly, this must match the name of the source database.                                                                                       |
|                  | **Default:** vertdb                                                                                                                                       |
| ignoreClusterLease | Ignore the cluster lease when executing a revive or start_db.                                                                                         |
|                  | **Default:** false                                                                                                                                                                                                 |
| image            | The image that defines the Vertica server container's runtime environment. If the                                                                                                                                  |
|                  | **Caution:**  
<p>|                  | If another system is using the same communal storage, setting ignoreClusterLease to true results in data corruption.                                                                                       |</p>
<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>container is hosted in a private container repository, this name must include the path to the repository. When you update the image, the operator stops and restarts the cluster. <strong>Default</strong>: vertica/vertica-k8s:latest</td>
</tr>
<tr>
<td>imagePullPolicy</td>
<td>Determines how often Kubernetes pulls the image for an object. For details, see Updating Images in the Kubernetes documentation. <strong>Default</strong>: If the image tag is latest, the default is Always. Otherwise, the default is IfNotPresent.</td>
</tr>
<tr>
<td>imagePullSecrets</td>
<td>A list of Secrets that store credentials for authentication to a private container repository. For details, see Specifying imagePullSecrets in the Kubernetes documentation.</td>
</tr>
<tr>
<td>initPolicy</td>
<td>How to initialize the Vertica database in Kubernetes. Enter Create or Revive:</td>
</tr>
<tr>
<td></td>
<td>• Create forces the creation of a new database for the custom resource.</td>
</tr>
<tr>
<td></td>
<td>• Revive initializes an existing Eon Mode database as a StatefulSet with the revive command. For information about Revive, see Generating a Custom Resource from an Existing Eon Mode Database.</td>
</tr>
<tr>
<td></td>
<td>• ScheduleOnly schedules a subcluster for a Hybrid Kubernetes cluster.</td>
</tr>
<tr>
<td>kerberosSecret</td>
<td>The Secret that stores the following values for Kerberos authentication to Hadoop Distributed File System (HDFS):</td>
</tr>
<tr>
<td></td>
<td>• krb5.conf: Contains Kerberos configuration information.</td>
</tr>
<tr>
<td></td>
<td>• krb5.keytab: Contains credentials for the</td>
</tr>
<tr>
<td>Parameter</td>
<td>Description</td>
</tr>
<tr>
<td>-------------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Vertica Kerberos principal. This file must be readable by the file owner that is running the process. The default location for each of these files is the /etc directory.</td>
<td></td>
</tr>
<tr>
<td>kSafety</td>
<td>Sets the fault tolerance for the cluster. The operator supports setting this value to 0 or 1 only. For details, see K-Safety. You cannot change this value after you create the custom resource. <strong>Default: 1</strong></td>
</tr>
<tr>
<td>labels</td>
<td>Custom labels added to all of the objects that the operator creates.</td>
</tr>
<tr>
<td>licenseSecret</td>
<td>The Secret that contains the contents of license files. The Secret must share a namespace with the custom resource (CR). Each of the keys in the Secret is mounted as a file in /home/dbadmin/licensing/mnt. If this value is set when the CR is created, the operator installs one of the licenses automatically, choosing the first one alphabetically. If you update this value after you create the custom resource, you must manually install the Secret in each Vertica pod.</td>
</tr>
<tr>
<td>local.dataPath</td>
<td>The path in the container filesystem for the local data, such as the catalog. If initPolicy is set to Revive or ScheduleOnly, the dataPath for the new database must match the dataPath for the source database. <strong>Default: /data</strong></td>
</tr>
<tr>
<td>Parameter</td>
<td>Description</td>
</tr>
<tr>
<td>-------------------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>local.depotPath</td>
<td>The path in the container filesystem that stores the depot. If initPolicy is set to Revive or ScheduleOnly, the depotPath for the new database must match the depotPath for the source database.</td>
</tr>
<tr>
<td>local.requestSize</td>
<td>The minimum size of the local data volume when selecting a persistent volume (PV).</td>
</tr>
<tr>
<td>local.storageClass</td>
<td>The name of the StorageClass used for the local data volume that stores the local catalog, depot, and configuration files. Select this value when defining the persistent volume claim (PVC). By default, this parameter is not set. The PVC in the default configuration uses the default storage class set by Kubernetes.</td>
</tr>
<tr>
<td>reviveOrder</td>
<td>The order of nodes during a revive operation. Each entry contains the subcluster index, and the number of pods to include from the subcluster. For example, consider a database with the following setup:</td>
</tr>
</tbody>
</table>
|                         | - v_db_node0001: subcluster A  
- v_db_node0002: subcluster A  
- v_db_node0003: subcluster B  
- v_db_node0004: subcluster A  
- v_db_node0005: subcluster B  
- v_db_node0006: subcluster B                                                                                                                                                                                                                                     |         |
|                         | If the subclusters[] list is defined as {'A', 'B'}, the revive order is as follows:                                                                                                                                                                                                                                                |         |
|                         | - {subclusterIndex:0, podCount:2} # 2 pods from subcluster A  
- {subclusterIndex:1, podCount:1} # 1 pod from subcluster B                                                                                                                                                                                                                 |         |
<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
</table>
|                    | - {subclusterIndex:0, podCount:1} # 1 pod from subcluster A  
|                    | - {subclusterIndex:1, podCount:2} # 2 pods from subcluster B  |
| restartTimeout     | When restarting pods, the number of seconds before admintools times out.  
|                    | Default: 0. The operator uses the 20 minutes default used by admintools. |
| shardCount         | The number of shards in the database. You cannot update this value after you create the custom resource.  
|                    | For more information about database shards and Eon Mode, see Configuring Your Vertica Cluster for Eon Mode. |

| sidecars[]         | One or more optional utility containers that complete tasks for the Vertica server container. Each sidecar entry is a fully-formed container spec, similar to the container that you add to a Pod spec.  
|                    | The following example adds a sidecar named vlogger to the custom resource:  
|                    | spec:  
|                    |   ...  
|                    |   sidecars:  
|                    |     - name: vlogger  
|                    |       image: vertica/vertica-logger:1.0.0  
|                    |       volumeMounts:  
|                    |         - name: my-custom-vol  
|                    |         mountPath: /path/to/custom-volume  
<p>|                    | volumeMounts.name is the name of a custom volume. This value must match volumes.name to mount the custom volume in the sidecar container filesystem. See volumes for additional details. |</p>
<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>For implementation details, see Creating a Custom Resource.</td>
</tr>
<tr>
<td>sidecars[i].volumeMounts</td>
<td>List of custom volumes and mount paths that persist sidecar container data. Each volume element requires a name value and a mountPath.</td>
</tr>
<tr>
<td></td>
<td>To mount a volume in the Vertica sidecar container filesystem, <code>volumeMounts.name</code> must match the <code>volumes.name</code> value for the corresponding sidecar definition, or the webhook returns an error.</td>
</tr>
<tr>
<td></td>
<td>For implementation details, see Creating a Custom Resource.</td>
</tr>
<tr>
<td>sidecars[i].volumes</td>
<td>List of custom volumes that persist sidecar container data. Each volume element requires a name value and a volume type. volumes accepts any Kubernetes volume type.</td>
</tr>
<tr>
<td></td>
<td>To mount a volume in a sidecar filesystem, <code>volumes.name</code> must match the <code>volumeMounts.name</code> value for the corresponding sidecar element volume mount, or the webhook returns an error.</td>
</tr>
<tr>
<td></td>
<td>For implementation details, see Creating a Custom Resource.</td>
</tr>
<tr>
<td>sshSecret</td>
<td>A Secret that contains SSH credentials for authentication between an Eon Mode database and custom resource in a hybrid architecture.</td>
</tr>
<tr>
<td></td>
<td>The Secret requires the following values:</td>
</tr>
<tr>
<td></td>
<td>* id_rsa</td>
</tr>
<tr>
<td></td>
<td>* id_rsa.pub</td>
</tr>
<tr>
<td></td>
<td>* authorized_keys</td>
</tr>
<tr>
<td></td>
<td>For details, see Hybrid Kubernetes Clusters.</td>

<tr>
<td>Parameter</td>
<td>Description</td>
</tr>
<tr>
<td>-------------------------------</td>
<td>----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>subclusters[i].affinity</td>
<td>Applies rules that constrain the Vertica server pod to specific nodes. It is more expressive than nodeSelector. If this parameter is not set, then the pods use no affinity setting. In production settings, it is a best practice to configure affinity to run one server pod per host node. For configuration details, see Creating a Custom Resource.</td>
</tr>
<tr>
<td>subclusters[i].externalIPs</td>
<td>Enables the service object to attach to a specified external IP. If not set, the external IP is empty in the service object.</td>
</tr>
<tr>
<td>subclusters[i].isPrimary</td>
<td>Indicates whether the subcluster is primary or secondary. Each database must have at least one primary subcluster. Default: true</td>
</tr>
<tr>
<td>subclusters[i].name</td>
<td>The subcluster name. This is a required setting. If you change the name of an existing subcluster, the operator deletes the old subcluster and creates a new one with the new name.</td>
</tr>
<tr>
<td>subclusters[i].nodePort</td>
<td>When subclusters[i].serviceType is set to NodePort, this parameter enables you to define the port that is opened at each node for external client connections. The port must be within the defined range allocated by the control plane (ports 30000-32767).</td>
</tr>
<tr>
<td>Parameter</td>
<td>Description</td>
</tr>
<tr>
<td>---------------------------------</td>
<td>--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>subclusters[i].nodeSelector</td>
<td>Provides control over which nodes are used to schedule each pod. If this is not set, the node selector is left off the pod when it is created. To set this parameter, provide a list of key/value pairs. The following example schedules server pods only at nodes that have the disktype=ssd and region=us-east labels:</td>
</tr>
<tr>
<td></td>
<td><strong>subclusters:</strong></td>
</tr>
<tr>
<td></td>
<td>- name: defaultsubcluster</td>
</tr>
<tr>
<td></td>
<td>nodeSelector:</td>
</tr>
<tr>
<td></td>
<td>disktype: ssd</td>
</tr>
<tr>
<td></td>
<td>region: us-east</td>
</tr>
<tr>
<td>subclusters[i].priorityClassName</td>
<td>The PriorityClass name assigned to pods in the StatefulSet. This affects where the pod gets scheduled.</td>
</tr>
<tr>
<td>subclusters[i].resources.limits</td>
<td>The resource limits for pods in the StatefulSet, which sets the maximum amount of CPU and memory that each server pod can consume. Vertica recommends that you set these values equal to subclusters[i].resources.requests to ensure that the pods are assigned to the guaranteed QoS class. This reduces the possibility that pods are chosen by the out of memory (OOM) Killer. For more information, see Recommendations for Sizing Vertica Nodes and Clusters in the Vertica Knowledge Base.</td>
</tr>
<tr>
<td>subclusters[i].resources.requests</td>
<td>The resource requests for pods in the StatefulSet, which sets the maximum amount of CPU and memory that each server pod can consume.</td>
</tr>
<tr>
<td>Parameter</td>
<td>Description</td>
</tr>
<tr>
<td>----------------------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td></td>
<td>Vertica recommends that you set these values equal to subclusters [i].resources.limits to ensure that the pods are assigned to the guaranteed QoS class. This reduces the possibility that pods are chosen by the out of memory (OOM) Killer.</td>
</tr>
<tr>
<td></td>
<td>For more information, see Recommendations for Sizing Vertica Nodes and Clusters in the Vertica Knowledge Base.</td>
</tr>
<tr>
<td>subclusters[i].serviceType</td>
<td>Identifies the type of Kubernetes service to use for external client connectivity. The default is type is ClusterIP, which sets a stable IP and port that is accessible only from within Kubernetes itself.</td>
</tr>
<tr>
<td></td>
<td>Depending on the service type, you might need to set nodePort or externalIPs in addition to this configuration parameter.</td>
</tr>
<tr>
<td></td>
<td><strong>Default</strong>: ClusterIP</td>
</tr>
<tr>
<td>subclusters[i].size</td>
<td>The number of pods in the subcluster. This determines the number of Vertica nodes in the subcluster. Changing this number deletes or schedules new pods.</td>
</tr>
<tr>
<td></td>
<td>The minimum size of a subcluster is 1. The subclusters kSafety setting determines the minimum and maximum size of the cluster.</td>
</tr>
<tr>
<td></td>
<td><strong>Note:</strong> By default, the Vertica container uses the Vertica Community Edition (CE) license. The CE license limits subclusters to 3 Vertica nodes and a maximum of 1TB of data. Use the licenseSecret parameter to add your Vertica license.</td>
</tr>
<tr>
<td></td>
<td>For instructions about how to create the license Secret, see Creating a Custom Vertica License.</td>
</tr>
<tr>
<td>Parameter</td>
<td>Description</td>

</tr>
<tr>
<td>subclusters[i].tolerations</td>
<td>Any taints and tolerations used to influence where a pod is scheduled.</td>
</tr>
</tbody>
</table>
| superuserPasswordSecret   | The Secret that contains the database superuser password. Create this Secret before deployment. If you do not create this Secret before deployment, there is no password authentication for the database. The Secret must use a key named password:  
```bash
kubectl create secret generic su-passwd --from-literal=password=secret-password
```
|                            | The following text adds this Secret to the custom resource:  
```bash
db:
superuserSecretPassword: su-passwd
```
| volumeMounts               | List of custom volumes and mount paths that persist Vertica server container data. Each volume element requires a name value and a mountPath. To mount a volume in the Vertica server container filesystem, `volumeMounts.name` must match the `volumes.name` value defined in the `spec` definition, or the webhook returns an error. For implementation details, see Creating a Custom Resource. |
| volumes                    | List of custom volumes that persist Vertica server container data. Each volume element requires a name value and a volume type. `volumes` accepts any Kubernetes volume type. |
Parameter | Description
--- | ---
| | To mount a volume in the filesystem, volumes.name must match the volumeMounts.name value for the corresponding volume mount, or the webhook returns an error.
| | For implementation details, see Creating a Custom Resource.

**Subclusters on Kubernetes**

Eon Mode uses subclusters for workload isolation and scaling. The Vertica operator provides tools to direct external client communications to specific subclusters, and automate scaling without stopping your database.

The custom resource definition (CRD) provides parameters that allow you to fine-tune each subcluster for specific workloads. For example, you can increase the subcluster size setting for increased throughput, or adjust the resource requests and limits to manage compute power. When you create a custom resource instance, the operator deploys each subcluster as a StatefulSet. Each StatefulSet has its own service object, which allows an external client to connect to a specific subcluster.

Kubernetes uses the subcluster name to derive names for the subcluster StatefulSet, service object, and pods. This naming convention tightly couples the subcluster objects to help Kubernetes effectively manage the cluster. If you want to rename a subcluster, you must delete it from the CRD and redefine it so that the operator can create new objects with a derived name.

**Important:**
The default subcluster name that the Vertica server generates is default_subcluster. This name is invalid for Kubernetes resource types. You must provide a valid name that follows Kubernetes guidelines.
External Client Connections

External clients can target specific subclusters that are fine-tuned to handle their workload. Each subcluster has its own service object that handles external connections. You cannot target multiple subclusters with a single client.

The operator performs health monitoring that checks if the Vertica daemon is running on each pod. If it is, then the operator allows the service object to route traffic to the pod.

The service object derives its name from the custom resource name and the associated subcluster and uses the `customResourceName-subclusterName` format. Vertica supports the following service object types:

- **ClusterIP**: The default service type. This service provides internal load balancing, and sets a stable IP and port that is accessible from within the subcluster only.
- **NodePort**: Provides external client access. You can specify a port number for each host node in the subcluster to open for client connections.
- **LoadBalancer**: Uses a cloud provider load balancer to create NodePort and ClusterIP services as needed. For details about implementation, see the Kubernetes documentation and your cloud provider documentation.

For configuration details, see Creating a Custom Resource.

Managing Internal and External Workloads

The Vertica StatefulSet uses only a single external service object. All external client requests are sent through this service object and load balanced among the pods in the cluster.

Import and Export

Importing and exporting data between a cluster outside of Kubernetes requires that you expose the service with the NodePort or LoadBalancer service type and properly configure the network.

**Important:**
When importing or exporting data, each node must have a static IP address. Rescheduled pods might be on different host nodes, so you must monitor and update the static IP addresses to reflect the new node.
Scaling Subclusters

The operator enables you to scale the number of subclusters, and the number of pods per subcluster automatically. This allows you to utilize or conserve resources depending on the immediate needs of your workload.

Prerequisites

- Complete Installing the VerticaDB Operator
- Install the kubectl command line tool
- Complete Creating a Custom Resource

Note:
By default, the custom resource uses the free Community Edition (CE) license. This license allows you to deploy up to three nodes with a maximum of 1TB of data. To add resources beyond these limits, you must add your Vertica license to the custom resource as described in Creating a Custom Resource.

Scaling the Number of Subclusters

Adjust the number of subclusters in your custom resource to fine-tune resources for short-running dashboard queries. For example, increase the number of subclusters to increase throughput. For more information, see Improving Query Throughput Using Subclusters.

1. Use kubectl edit to open your default text editor and update the YAML file for the specified custom resource. The following command opens a custom resource named vdb for editing:

   ```
   $ kubectl edit vdb
   ```

2. In the spec section of the custom resource, locate the subclusters subsection. Begin the isPrimary field to define a new subcluster.
The `isPrimary` field accepts a boolean that specifies whether the subcluster is a primary or secondary. Because there is already a primary subcluster in our custom resource, enter false:

```yaml
spec:
  ...
  subclusters:
    ...
    - isPrimary: false
```

3. Follow the steps in Creating a Custom Resource to complete the subcluster definition. The following completed example adds a secondary subcluster for dashboard queries:

```yaml
spec:
  ...
  subclusters:
    - isPrimary: true
      name: primary-subcluster
    ...
    - isPrimary: false
      name: dashboard
      nodePort: 32001
      resources:
        limits:
          cpu: 32
          memory: 96Gi
        requests:
          cpu: 32
          memory: 96Gi
      serviceType: NodePort
      size: 3
```

4. Save and close the custom resource file. You receive a message similar to the following when you successfully update the file:

```
verticadb.vertica.com/vertica-db edited
```

5. Use the `kubectl` wait command to monitor when the new pods are ready:

```
$ kubectl wait --for=condition=Ready pod --selector app.kubernetes.io/name=vertica-db --timeout 180s
pod/vdb-dashboard-0 condition met
pod/vdb-dashboard-1 condition met
pod/vdb-dashboard-2 condition met
```
Scaling the Pods in a Subcluster

For long-running, analytic queries, increase the pod count for a subcluster. See Using Elastic Crunch Scaling to Improve Query Performance.

1. Use `kubectl edit` to open your default text editor and update the YAML file for the specified custom resource. The following command opens a custom resource named `vdb` for editing:

   ```
   $ kubectl edit vertica-db
   ```

2. Update the `subclusters.size` value to 6:

   ```
   spec:
   ...
   subclusters:
   ...
   - isPrimary: false
   ...
   size: 6
   ```

   Shards are rebalanced automatically.

3. Save and close the custom resource file. You receive a message similar to the following when you successfully update the file:

   ```
   verticadb.vertica.com/vertica-db edited
   ```

4. Use the `kubectl wait` command to monitor when the new pods are ready:

   ```
   $ kubectl wait --for=condition=Ready pod --selector app.kubernetes.io/name=vertica-db --timeout 180s
   pod/vdb-subcluster1-3 condition met
   pod/vdb-subcluster1-4 condition met
   pod/vdb-subcluster1-5 condition met
   ```

Deleting a Subcluster

Delete a subcluster when it is no longer needed or to preserve resources.

**Important:**

Because each custom resource instance requires a primary subcluster, you...
1. Use `kubectl edit` to open your default text editor and update the YAML file for the specified custom resource. The following command opens a custom resource named `vdb` for editing:

```
$ kubectl edit vertica-db
```

2. In the `subclusters` subsection nested under `spec`, locate the subcluster that you want to delete. Delete the element in the subcluster array represents the subcluster that you want to delete. Each element is identified by a hyphen `-`.

3. After you delete the subcluster and save, you receive a message similar to the following:

```
verticadb.vertica.com/vertica-db edited
```

---

### Upgrading Vertica on Kubernetes

The operator automates Vertica server version upgrades for a custom resource. During the version upgrade, the operator stops the cluster because Vertica does not allow a cluster to run multiple versions simultaneously. This version restriction prohibits your custom resource from updating with the Kubernetes rolling update model, which allows different application versions during upgrades to minimize downtime.

---

**Note:**
Vertica recommends using incremental upgrade paths. The operator assumes the upgrade is incremental and does not validate the image versions.

You cannot downgrade your Vertica server license version. For additional details about licensing, see Understanding Vertica Licenses.

---

### Prerequisites

- Complete Installing the VerticaDB Operator.
- Complete Creating a Custom Resource.
Upgrade the Vertica server version and use the **kubectl command line tool** to monitor the progress. The operator indicates when an upgrade is in progress or complete with the UpgradeInProgress status condition.

1. Update the image value in the CR with **kubectl** patch:

   ```
   $ kubectl patch verticadb cluster-name --type=merge --patch '{"spec": {"image": "vertica/vertica-k8s:new-version"}}'
   ```

2. Use **kubectl** wait to wait until the operator acknowledges the new image and begins upgrade mode:

   ```
   $ kubectl wait --for=condition=ImageChangeInProgress=True vdb/cluster-name --timeout=180s
   ```

3. Use **kubectl** wait to wait until the operator leaves upgrade mode:

   ```
   $ kubectl wait --for=condition=ImageChangeInProgress=False vdb/cluster-name --timeout=800s
   ```

### Viewing the Upgrade Process

To view the upgrade process, use **kubectl describe** to list the events the operator generated during the upgrade:

```
$ kubectl describe vdb cluster-name
...
Events:
  Type          Reason          Age    From                        Message
  ----          --------          ----    -----                        -------
  Normal        ImageChangeStart 5m10s  verticadb-operator          Vertica server image change has been initiated to 'vertica-k8s:old-version'
  Normal        ClusterShutdownStarted 5m12s  verticadb-operator          Calling 'admintools -t stop_db'
  Normal        ClusterShutdownSucceeded 4m08s  verticadb-operator          Successfully called 'admintools -t stop_db' and it took 56.22132s
  Normal        ClusterRestartStarted 4m25s  verticadb-operator          Calling 'admintools -t start_db' to restart the cluster
  Normal        ClusterRestartSucceeded 25s  verticadb-operator          Successfully called 'admintools -t start_db' and it took 240s
  Normal        ImageChangeSucceeded 5s  verticadb-operator          Vertica server image change has completed successfully.
```
Leverage Kubernetes tooling to quickly create a secondary subcluster for a database.
Create an isolated sandbox environment to run ad hoc queries on a communal dataset.
Experiment with the Vertica on Kubernetes performance overhead without migrating your primary subcluster into Kubernetes.

Define the Kubernetes portion of a hybrid architecture with a custom resource. The custom resource has no knowledge of Vertica hosts that exist separately from the custom resource. This limits the operator's functionality and requires that you manually complete some tasks that the operator automates for a standard Vertica on Kubernetes custom resource.

Requirements and Restrictions

The hybrid Kubernetes architecture has the following requirements and restrictions:

- Hybrid Kubernetes clusters require a tool that enables Border Gateway Protocol (BGP) so that pods are accessible to your on-premises subcluster for external communication. For example, you can use the Calico CNI plugin to enable BGP.
- You cannot use network address translation (NAT) between the Kubernetes pods and the on-premises cluster.

Operator Limitations

In a hybrid architecture, the operator has no visibility outside of the custom resource. This limited visibility means that the operator cannot interact with the Eon Mode database or the primary subcluster. Within the scope of the custom resource, the operator automates only the following:

- Schedules pods based on the manifest.
- Creates service objects for the subcluster.
- Creates a PersistentVolumeClaim (PVC) that persists data for each pod.
- Executes the restart_node administration tool command if the Vertica server process is not running. To override this default behavior, set autoRestartVertica to false.
Manual Tasks

Because of the limited operator functionality, the administrator must manually perform the following tasks:

- Restart the cluster if quorum is lost. For details about maintaining quorum, see Data Integrity and High Availability in an Eon Mode Database.
- Execute the `update_vertica` script to set up the configuration directory. Vertica on Kubernetes requires the following configuration options for `update_vertica`:

  ```bash
  $ /opt/vertica/sbin/update_vertica \
  --accept-eula \ 
  --add-hosts host-list \ 
  --dba-user su-password-Secret \ 
  --failure-threshold NONE \ 
  --no-system-configuration \ 
  --point-to-point \ 
  --data-dir /data-dir \ 
  --dba-user dbadmin \ 
  --no-package-checks
  ```

  **Note:**
  In the previous example, the `--dba-user` option accepts a Secret that is provided in the superuserPasswordSecret configuration parameter.

After you call `update_vertica`, use `admintools` with the `db_add_node` option to add the nodes and complete the setup:

```bash
$ /opt/vertica/bin/admintools \
-t db_add_node \
--hosts host-list \
--database db-name\ 
--subcluster sc-name \
--noprompt
```

For details, see Adding and Removing Nodes From Subclusters.

Defining a Hybrid Cluster

Before you define a hybrid cluster, you must create a Secret to store SSH credentials. In an Eon Mode database, nodes communicate through SSH. The Vertica container uses SSH, but
the SSH key is regenerated each time a container is built.

The following command creates a Secret named ssh-key that stores SSH credentials that persists between life cycles to allow secure connections between the on-premises nodes and the CR:

```
$ kubectl create secret generic ssh-keys --from-file=$HOME/.ssh
```

Create a custom resource to define a subcluster that runs outside your standard Eon Mode database:

```
apiVersion: vertica.com/v1beta1
kind: VerticaDB
metadata:
  name: hybrid-secondary-sc
spec:
  image: vertica/vertica-k8s:11.0.2-0-minimal
  initPolicy: ScheduleOnly
  sshSecret: ssh-keys
  subclusters:
    - name: sc1
      size: 3
    - name: sc2
      size: 3
```

In the previous example:

- **initPolicy**: Hybrid clusters require that you set this to ScheduleOnly.
- **sshSecret**: The Secret that contains SSH keys that authenticate connections to Vertica hosts outside the CR.
- **dbName**: This value must match the name of the standard Eon Mode database that is associated with this subcluster.
- **local**: Required. The values persist data to the PersistentVolume (PV). These values must match the directory locations in the Eon Mode database that is associated with the Kubernetes pods.
- **subclusters**: Definition for each subcluster.

**Note:**

Hybrid custom resources ignore configuration parameters that control settings outside the scope of the hybrid subcluster, such as the communal.* and the subclusters[i].isPrimary parameters.

For complete implementation details, see Creating a Custom Resource. For details about each setting, see Custom Resource Definition Parameters.
Generating a Custom Resource from an Existing Eon Mode Database

To simplify Vertica on Kubernetes adoption, Vertica provides the `vdb-gen` migration tool that revives an existing Eon Mode database as a StatefulSet in Kubernetes. `vdb-gen` generates a custom resource (CR) from an existing Eon Mode database by connecting to the database and writing to stdout.

The `vdb-gen` tool is available for download as a release artifact in the `vertica-kubernetes` GitHub repository.

Use the `-h` flag to view a full list of the available `vdb-gen` options, including options for debugging and working with environment variables. The following steps generate a CR using basic commands:

1. Execute `vdb-gen` and redirect the output to a YAML-formatted file:

   ```bash
   $ vdb-gen --password secret --name mydb 10.20.30.40 vertdb > vdb.yaml
   ```

   The previous command uses the following flags and values:
   
   - `password`: The existing database superuser secret password.
   - `name`: The name of the new custom resource object.
   - `10.20.30.40`: The IP address of the existing database
   - `vertdb`: The name of the existing Eon Mode database.
   - `vdb.yaml`: The YAML formatted file that contains the custom resource definition generated by the `vdb-gen` tool.

2. Use the `admintools stop_db command` to stop the existing database:

   ```bash
   $ /opt/vertica/bin/admintools -t stop_db -d vertdb
   ```

   Wait for the cluster lease to expire before continuing. For details, see Reviving an Eon Mode Database Cluster

3. Apply the YAML-formatted manifest that was generated by the `vdb-gen` tool:

   ```bash
   $ kubectl apply -f vdb.yaml
   verticadb.vertica.com/mydb created
   ```

**Note:**
For performance purposes, do not apply the manifest to resources.
that already contain a Vertica on Kubernetes install.

4. The operator creates the StatefulSet, installs Vertica on each pod, and runs revive. To view the events generated for the new database, use kubectl describe:

```
$ kubectl describe vdb mydb
```

**Troubleshooting Your Kubernetes Cluster**

These tips can help you avoid issues related to your Vertica on Kubernetes deployment and troubleshoot any problems that occur.

Download the [kubectl command line tool](https://kubernetes.io/docs/tasks/tools/install-kubectl/) to debug your Kubernetes resources.

**Helm Install Failure**

When you install the VerticaDB operator and admission controller Helm chart, the helm install command might return the following error:

```
$ helm install vdb-op vertica-charts/verticadb-operator
Error: INSTALLATION FAILED: unable to build kubernetes objects from release manifest: [unable to recognize "": no matches for kind "Certificate" in version "cert-manager.io/v1", unable to recognize "": no matches for kind "Issuer" in version "cert-manager.io/v1"]
```

The error indicates that you have not met the TLS prerequisite for the admission controller webhook. To resolve this issue, install cert-manager or configure custom certificates. The following steps install cert-manager.

1. Install the cert-manager YAML manifest:

```
$ kubectl apply -f https://github.com/jetstack/cert-manager/releases/download/v1.5.3/cert-manager.yaml
```

2. Verify the cert-manager installation.

   If you try to install the Helm chart immediately after you install cert-manager, you might receive the following error:
You receive this error because cert-manager needs time to create its pods and register the webhook with the cluster. Wait a few minutes, and then verify the cert-manager installation with the following command:

```
$ kubectl get pods --namespace cert-manager
```

For additional details about cert-manager install verification, see the [cert-manager documentation](#).

3. After you verify the cert-manager installation, you must uninstall the Helm chart and then reinstall:

```
$ helm uninstall vdb-op
$ helm install vdb-op vertica-charts/verticadb-operator
```

For additional information, see Installing the VerticaDB Operator.

---

### Verify Updates to a Custom Resource

Because the operator takes time to perform tasks, updates to the custom resource are not effective immediately. Use the kubectl command line tool to verify that changes are applied.

You can use the kubectl wait command to wait for a specified condition. For example, the operator uses the ImageChangeInProgress condition to provide an upgrade status. After you begin the image version upgrade, wait until the operator acknowledges the upgrade and sets this condition to True:

```
$ kubectl wait --for=condition=ImageChangeInProgress=True vdb/cluster-name --timeout=180s
```

After the upgrade begins, you can wait until the operator leaves upgrade mode and sets this condition to False:

```
$ kubectl wait --for=condition=ImageChangeInProgress=False vdb/cluster-name --timeout=800s
```
For more information about `kubectl wait`, see the [kubectl reference documentation](https://kubernetes.io/docs/reference/kubectl/execute-reference-commands/wait/).

## Pods are Running but the Database is not Ready

When you check the pods in your cluster, the pods are running but the database is not ready:

```
$ kubectl get pods
NAME                                      READY STATUS    RESTARTS AGE
verticadb-crd-scl-0                        0/1    Running    0    12m
verticadb-crd-scl-1                        0/1    Running    1    12m
verticadb-crd-scl-2                        0/1    Running    0    12m
verticadb-operator-controller-manager-5d9dc9db8-kw9nv 2/2    Running    0    24m
```

To find the root cause of the issue, use `kubectl logs` to check the operator manager. The following example shows that the communal storage bucket does not exist:

```
$ kubectl logs -l app.kubernetes.io/name=verticadb-operator -c manager -f
2021-08-04T20:03:00.289Z INFO controllers.VerticaDB ExecInPod entry {"verticadb": "default/verticadb-crd", "pod": {"namespace": "default", "name": "verticadb-crd-scl-0"}, "command": "bash -c ls -l /opt/vertica/config/admintools.conf && grep '^node\|v\|\|host' /opt/vertica/config/admintools.conf "}
2021-08-04T20:03:00.369Z INFO controllers.VerticaDB ExecInPod stream {"verticadb": "default/verticadb-crd", "pod": {"namespace": "default", "name": "verticadb-crd-scl-0"}, "err": null, "stdout": "-rw-rw-r-- 1 dbadmin verticadb 1243 Aug 4 20:00 /opt/vertica/config/admintools.conf\nhosts = 10.244.1.5,10.244.2.4,10.244.4.6\nnode0001 = 10.244.1.5,\ndata/data/node0002 = 10.244.2.4,\ndata/data/node0003 = 10.244.4.6,\ndata/data\n", "stderr": ""}

```

Vertica Analytic Database (11.0.x)
test.txt failed.
Testing rw access to communal location s3://newbucket/db/26100df1-93e5-4e64-b665-533e14abb67c/
failed
"stderr": ""
2021-08-04T20:03:17.051Z INFO controllers.VerticaDB aborting reconcile of VerticaDB
{"verticadb": "default/vertica-crd", "result": {"Requeue":true,"RequeueAfter":0}, "err": null}
2021-08-04T20:03:17.051Z DEBUG controller-runtime.manager.events Warning {"object": {"kind":"VerticaDB","namespace":"default","name":"vertica-crd","uid":"26100df1-93e5-4e64-b665-533e14abb67c","apiVersion":"vertica.com/v1beta1","resourceVersion":"11591"}, "reason": "S3BucketDoesNotExist", "message": "The bucket in the S3 path 's3://newbucket/db/26100df1-93e5-4e64-b665-533e14abb67c' does not exist"}

Create an S3 bucket for the cluster:

$ S3_BUCKET=newbucket
$ S3_CLUSTER_IP=$(kubectl get svc | grep minio | head -1 | awk '{print $3}')
$ export AWS_ACCESS_KEY_ID=minio
$ export AWS_SECRET_ACCESS_KEY=minio123
$ aws s3 mb s3://$S3_BUCKET --endpoint-url http://$S3_CLUSTER_IP
make_bucket: newbucket

Use kubectl get pods to verify that the cluster uses the new S3 bucket and the database is ready:

$ kubectl get pods
<table>
<thead>
<tr>
<th>NAME</th>
<th>READY</th>
<th>STATUS</th>
<th>RESTARTS</th>
<th>AGE</th>
</tr>
</thead>
<tbody>
<tr>
<td>minio-ss-0-0</td>
<td>1/1</td>
<td>Running</td>
<td>0</td>
<td>18m</td>
</tr>
<tr>
<td>minio-ss-0-1</td>
<td>1/1</td>
<td>Running</td>
<td>0</td>
<td>18m</td>
</tr>
<tr>
<td>minio-ss-0-2</td>
<td>1/1</td>
<td>Running</td>
<td>0</td>
<td>18m</td>
</tr>
<tr>
<td>minio-ss-0-3</td>
<td>1/1</td>
<td>Running</td>
<td>0</td>
<td>18m</td>
</tr>
<tr>
<td>vertica-crd-scl-0</td>
<td>1/1</td>
<td>Running</td>
<td>0</td>
<td>20m</td>
</tr>
<tr>
<td>vertica-crd-scl-1</td>
<td>1/1</td>
<td>Running</td>
<td>0</td>
<td>20m</td>
</tr>
<tr>
<td>vertica-crd-scl-2</td>
<td>1/1</td>
<td>Running</td>
<td>0</td>
<td>20m</td>
</tr>
<tr>
<td>verticadb-operator-controller-manager-5d9ccd9b8-kw9nv</td>
<td>2/2</td>
<td>Running</td>
<td>0</td>
<td>63m</td>
</tr>
</tbody>
</table>

Database is not Available

After you create a custom resource instance, the database is not available. The kubectl get custom-resource command does not display information:

$ kubectl get vdb
<table>
<thead>
<tr>
<th>NAME</th>
<th>AGE</th>
<th>SUBCLUSTERS</th>
<th>INSTALLED</th>
<th>DBADDED</th>
<th>UP</th>
</tr>
</thead>
<tbody>
<tr>
<td>vertica-crd</td>
<td>4s</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Use kubectl describe custom-resource to check the events for the pods to identify any issues:

$ kubectl describe vdb
Name: vertica-crd
Namespace: default
In this circumstance, the custom resource uses a Secret named `su-passwd` to store the Superuser Password Secret, but there is no such Secret available. Create a Secret named `su-passwd` to store the Secret:

```bash
kubectl create secret generic su-passwd --from-literal=password=sup3rs3cr3t
```

Use `kubectl get custom-resource` to verify the issue is resolved:

```bash
$ kubectl get vdb
```

### Image Pull Failure

You receive an ImagePullBackOff error when you deploy a Vertica cluster with Helm charts, but you do not pre-pull the Vertica image from the local registry server:

```bash
$ kubectl describe pod pod-name-0
```

This occurs because the Vertica image size is too big to pull from the registry while deploying the Vertica cluster. Execute the following command on a Kubernetes host:
$ docker image list | grep vertica-k8s
k8s-rhel7-01:5000/vertica-k8s default-1 2d6f5d3d90d6 9 days ago 1.55GB

The solve this issue, complete one of the following:

- Pull the Vertica images on each node before creating the Vertica StatefulSet:

  ```
  $ NODES=`kubectl get nodes | grep -v NAME | awk '{print $1}'`
  $ for node in $NODES; do ssh $node docker pull $DOCKER_REGISTRY:5000/vertica-k8s:$K8S_TAG; done
  ```

- Use the reduced-size `vertica/vertica-k8s:11.0.0-0-minimal` image for the Vertica server.

## Pending Pods Due to Insufficient CPU

If your host nodes do not have enough resources to fulfill the resource request from a pod, the pod stays in pending status.

**Note:**
As a best practice, do not request the maximum amount of resources available on a host node to leave resources for other processes on the host node.

In the following example, the pod requests 40 CPUs on the host node, and the pod stays in Pending:

```
$ kubectl describe pod cluster-vertica-defaultsubcluster-0
...
Status: Pending
...
Containers:
  server:
    Image: docker.io/library/vertica-k8s:default-1
    Ports: 5433/TCP, 5434/TCP, 22/TCP
    Host Ports: 0/TCP, 0/TCP, 0/TCP
    Command: /opt/vertica/bin/docker-entrypoint.sh
    restart-vertica-node
    Limits:
      memory: 200Gi
    Requests:
      cpu: 40
      memory: 200Gi
...
Events:
  Type       Reason          Age               From                    Message
```
To confirm the resources available on the host node. The following command confirms that the host node has only 40 allocatable CPUs:

```
$ kubectl describe node host-node-1
...
Conditions:
  Type                      Status    LastHeartbeatTime          LastTransitionTime      Message                          Reason
  -----                    ----      ----------------------------  --------------------------  -------------------------------  ----
  KubeletHasNoDiskPressure False     Sat, 20 Mar 2021 22:39:10 -0400 Sat, 20 Mar 2021 13:07:02 -0400 kubelet has no disk pressure
Addresses:
  InternalIP: 172.19.0.5
  Hostname: eng-g9-191
Capacity:
cpu: 40
  ephemeral-storage: 285509064Ki
  hugepages-1Gi: 0
  hugepages-2Mi: 0
  memory: 263839236Ki
  pods: 110
Allocatable:
cpu: 40
  ephemeral-storage: 285509064Ki
  hugepages-1Gi: 0
  hugepages-2Mi: 0
  memory: 263839236Ki
  pods: 110
...
Non-terminated Pods: (3 in total)
  Namespace Name                  CPU Requests CPU Limits Memory
  ------- --------------            ---------- --------- -------
  default cluster-vertica-defaultsubcluster-0 38 (95%)  0 (0%) 200Gi
  kube-system cluster-vertica-defaultsubcluster-0 51m
  kube-proxy-lgjhp                   100m (0%) 100m (0%) 50Mi
  kube-system kubeflannel-ds-8brv9 100m (0%) 100m (0%) 50Mi
  kube-proxy-lgjhp                   0 (0%)  0 (0%)  0 (0%)
  ...
```

To correct this issue, reduce the `resource.requests` in the subcluster to values lower than the maximum allocatable CPUs. The following example uses a YAML-formatted file named `patch.yaml` to lower the resource requests for the pod:
Testing the Sidecar Logger

If your custom resource uses the vlogger image for sidecar logging, run the following command to confirm it is functioning properly:

```
$ kubectl logs pod-name -c vlogger
```

For sidecar implementation details, see Creating a Custom Resource.
Integrating with Apache Hadoop

Apache™ Hadoop™, like Vertica, uses a cluster of nodes for distributed processing. The primary component of interest is HDFS, the Hadoop Distributed File System.

You can use Vertica with HDFS in several ways:

- You can import HDFS data into locally-stored ROS files.
- You can access HDFS data in place using external tables. You can define the tables yourself or get schema information from Hive, a Hadoop component.
- You can use HDFS as a storage location for ROS files.
- You can export data from Vertica to share with other Hadoop components using a Hadoop columnar format. See Exporting Data to Files for more information.

Hadoop file paths are expressed as URLs in the webhdfs or hdfs URL scheme. For more about using these schemes, see HDFS File System.

Hadoop Distributions

Vertica can be used with Hadoop distributions from Hortonworks, Cloudera, and MapR. See Vertica Integrations for Hadoop for the specific versions that are supported.

If you are using Cloudera, you can manage your Vertica cluster using Cloudera Manager. See Integrating With Cloudera Manager.
If you are using MapR, see Integrating Vertica with the MapR Distribution of Hadoop.

**WebHDFS Requirement**

By default, if you use a URL in the `hdfs` scheme, Vertica uses the (deprecated) Libhdfs++ library instead of WebHDFS. However, it falls back to WebHDFS for features not available in Libhdfs++, such as encryption zones, wire encryption, or writes. Even if you always use URLs in the `hdfs` scheme to choose Libhdfs++, you must still have a WebHDFS service available to handle these fallback cases. In addition, for some uses, such as Eon Mode communal storage, you must use WebHDFS directly with the `webhdfs` scheme.

⚠️ **Deprecated:**
Support for LibHDFS++ is deprecated. In the future, URLs in the `hdfs` scheme will be automatically converted to the `webhdfs` scheme. To make this change in your database, set the `HDFSUseWebHDFS` configuration parameter to 1 (enabled).

**Cluster Layout**

Vertica supports two cluster architectures for Hadoop integration. Which architecture you use affects the decisions you make about integration with HDFS. These options might also be limited by license terms.

- You can co-locate Vertica on some or all of your Hadoop nodes. Vertica can then take advantage of data locality.
- You can build a Vertica cluster that is separate from your Hadoop cluster. In this configuration, Vertica can fully use each of its nodes; it does not share resources with Hadoop.

With either architecture, if you are using the `hdfs` scheme to read ORC or Parquet files, you must do some additional configuration. See Configuring HDFS Access.

**Co-located Clusters**

With co-located clusters, Vertica is installed on some or all of your Hadoop nodes. The Vertica nodes use a private network in addition to the public network used by all Hadoop nodes, as the following figure shows:
You might choose to place Vertica on all of your Hadoop nodes or only on some of them. If you are using HDFS Storage Locations you should use at least three Vertica nodes, the minimum number for K-Safety in an Enterprise Mode Database.

Using more Vertica nodes can improve performance because the HDFS data needed by a query is more likely to be local to the node.

You can place Hadoop and Vertica clusters within a single rack, or you can span across many racks and nodes. If you do not co-locate Vertica on every node, you can improve performance by co-locating it on at least one node in each rack. See Configuring Rack Locality.

Normally, both Hadoop and Vertica use the entire node. Because this configuration uses shared nodes, you must address potential resource contention in your configuration on those nodes. See Configuring Hadoop for Co-Located Clusters for more information. No changes are needed on Hadoop-only nodes.

**Hardware Recommendations**

Hadoop clusters frequently do not have identical provisioning requirements or hardware configurations. However, Vertica nodes should be equivalent in size and capability, per the best-practice standards recommended in General Hardware and OS Requirements and Recommendations in Installing Vertica.

Because Hadoop cluster specifications do not always meet these standards, Vertica recommends the following specifications for Vertica nodes in your Hadoop cluster.

<table>
<thead>
<tr>
<th>Specifications for...</th>
<th>Recommendation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Processor</td>
<td>For best performance, run:</td>
</tr>
</tbody>
</table>
### Specifications for...

<table>
<thead>
<tr>
<th>Recommendation</th>
</tr>
</thead>
</table>
| - Two-socket servers with 8–14 core CPUs, clocked at or above 2.6 GHz for clusters over 10 TB  
- Single-socket servers with 8–12 cores clocked at or above 2.6 GHz for clusters under 10 TB |

#### Memory

Distribute the memory appropriately across all memory channels in the server:

- **Minimum**—8 GB of memory per physical CPU core in the server  
- **High-performance applications**—12–16 GB of memory per physical core  
- **Type**—at least DDR3-1600, preferably DDR3-1866

#### Storage

**Read/write:**

- **Minimum**—40 MB/s per physical core of the CPU  
- **For best performance**—60–80 MB/s per physical core

Storage post RAID: Each node should have 1–9 TB. For a production setting, Vertica recommends RAID 10. In some cases, RAID 50 is acceptable.

Because Vertica performs heavy compression and encoding, SSDs are not required. In most cases, a RAID of more, less-expensive HDDs performs just as well as a RAID of fewer SSDs.

If you intend to use RAID 50 for your data partition, you should keep a spare node in every rack, allowing for manual failover of a Vertica node in the case of a drive failure. A Vertica node recovery is faster than a RAID 50 rebuild. Also, be sure to never put more than 10 TB compressed on any node, to keep node recovery times at an acceptable rate.

#### Network

10 GB networking in almost every case. With the introduction of 10 GB over cat6a (Ethernet), the cost difference is minimal.
Configuring Hadoop for Co-Located Clusters

If you are co-locating Vertica on any HDFS nodes, there are some additional configuration requirements.

Hadoop Configuration Parameters

For best performance, set the following parameters with the specified minimum values:

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Minimum Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>HDFS block size</td>
<td>512MB</td>
</tr>
<tr>
<td>Namenode Java Heap</td>
<td>1GB</td>
</tr>
<tr>
<td>Datanode Java Heap</td>
<td>2GB</td>
</tr>
</tbody>
</table>

WebHDFS

Hadoop has two services that can provide web access to HDFS:

- WebHDFS
- httpFS

For Vertica, you must use the WebHDFS service.

YARN

The YARN service is available in newer releases of Hadoop. It performs resource management for Hadoop clusters. When co-locating Vertica on YARN-managed Hadoop nodes you must make some changes in YARN.

Vertica recommends reserving at least 16GB of memory for Vertica on shared nodes. Reserving more will improve performance. How you do this depends on your Hadoop distribution:
If you are using Hortonworks, create a "Vertica" node label and assign this to the nodes that are running Vertica. If you are using Cloudera, enable and configure static service pools.

Consult the documentation for your Hadoop distribution for details. Alternatively, you can disable YARN on the shared nodes.

**Hadoop Balancer**

The Hadoop Balancer can redistribute data blocks across HDFS. For many Hadoop services, this feature is useful. However, for Vertica this can reduce performance under some conditions.

If you are using HDFS storage locations, the Hadoop load balancer can move data away from the Vertica nodes that are operating on it, degrading performance. This behavior can also occur when reading ORC or Parquet files if Vertica is not running on all Hadoop nodes. (If you are using separate Vertica and Hadoop clusters, all Hadoop access is over the network, and the performance cost is less noticeable.)

To prevent the undesired movement of data blocks across the HDFS cluster, consider excluding Vertica nodes from rebalancing. See the Hadoop documentation to learn how to do this.

**Replication Factor**

By default, HDFS stores three copies of each data block. Vertica is generally set up to store two copies of each data item through K-Safety. Thus, lowering the replication factor to 2 can save space and still provide data protection.

To lower the number of copies HDFS stores, set HadoopFSReplication, as explained in Troubleshooting HDFS Storage Locations.

**Disk Space for Non-HDFS Use**

You also need to reserve some disk space for non-HDFS use. To reserve disk space using Ambari, set dfs.datanode.du.reserved to a value in the hdfs-site.xml configuration file.

Setting this parameter preserves space for non-HDFS files that Vertica requires.
Configuring Rack Locality

Note:
This feature is supported only for reading ORC and Parquet data on co-located clusters. It is only meaningful on Hadoop clusters that span multiple racks.

When possible, when planning a query Vertica automatically uses database nodes that are co-located with the HDFS nodes that contain the data. Moving query execution closer to the data reduces network latency and can improve performance. This behavior, called node locality, requires no additional configuration.

When Vertica is co-located on only a subset of HDFS nodes, sometimes there is no database node that is co-located with the data. However, performance is usually better if a query uses a database node in the same rack. If configured with information about Hadoop rack structure, Vertica attempts to use a database node in the same rack as the data to be queried.

For example, the following diagram illustrates a Hadoop cluster with three racks each containing three data nodes. (Typical production systems have more data nodes per rack.) In each rack, Vertica is co-located on one node.
If you configure rack locality, Vertica uses db01 to query data on dn1, dn2, or dn3, and uses db02 and db03 for data on rack2 and rack3 respectively. Because HDFS replicates data, any given data block can exist in more than one rack. If a data block is replicated on dn2, dn3, and dn6, for example, Vertica uses either db01 or db02 to query it.

Hadoop components are rack-aware, so configuration files describing rack structure already exist in the Hadoop cluster. To use this information in Vertica, configure fault groups that describe this rack structure. Vertica uses fault groups in query planning.

**Configuring Fault Groups**

Vertica uses Fault Groups to describe physical cluster layout. Because your database nodes are co-located on HDFS nodes, Vertica can use the information about the physical layout of the HDFS cluster.
**Tip:**
For best results, ensure that each Hadoop rack contains at least one co-located Vertica node.

Hadoop stores its cluster-layout data in a topology mapping file in HADOOP_CONF_DIR. On HortonWorks the file is typically named topology_mappings.data. On Cloudera it is typically named topology.map. Use the data in this file to create an input file for the fault-group script. For more information about the format of this file, see Creating a Fault Group Input File.

Following is an example topology mapping file for the cluster illustrated previously:

```
[network_topology]
dn1.example.com=/rack1
10.20.41.51=/rack1
dn2.example.com=/rack1
10.20.41.52=/rack1
dn3.example.com=/rack1
10.20.41.53=/rack1
dn4.example.com=/rack2
10.20.41.71=/rack2
dn5.example.com=/rack2
10.20.41.72=/rack2
dn6.example.com=/rack2
10.20.41.73=/rack2
dn7.example.com=/rack3
10.20.41.91=/rack3
dn8.example.com=/rack3
10.20.41.92=/rack3
dn9.example.com=/rack3
10.20.41.93=/rack3
```

From this data, you can create the following input file describing the Vertica subset of this cluster:

```
/rack1 /rack2 /rack3
/rack1 = db01
/rack2 = db02
/rack3 = db03
```

This input file tells Vertica that the database node "db01" is on rack1, "db02" is on rack2, and "db03" is on rack3. In creating this file, ignore Hadoop data nodes that are not also Vertica nodes.

After you create the input file, run the fault-group tool:

```
$ python /opt/vertica/scripts/fault_group_ddl_generator.py dbName input_file > fault_group_ddl.sql
```

The output of this script is a SQL file that creates the fault groups. Execute it following the instructions in Creating Fault Groups.
You can review the new fault groups with the following statement:

```sql
=> SELECT member_name, node_address, parent_name FROM fault_groups
INNER JOIN nodes ON member_name=node_name ORDER BY parent_name;
```

<table>
<thead>
<tr>
<th>member_name</th>
<th>node_address</th>
<th>parent_name</th>
</tr>
</thead>
<tbody>
<tr>
<td>db01</td>
<td>10.20.41.51</td>
<td>/rack1</td>
</tr>
<tr>
<td>db02</td>
<td>10.20.41.71</td>
<td>/rack2</td>
</tr>
<tr>
<td>db03</td>
<td>10.20.41.91</td>
<td>/rack3</td>
</tr>
</tbody>
</table>

(3 rows)

**Working With Multi-Level Racks**

A Hadoop cluster can use multi-level racks. For example, `/west/rack-w1`, `/west/rack-2`, and `/west/rack-w3` might be served from one data center, while `/east/rack-e1`, `/east/rack-e2`, and `/east/rack-e3` are served from another. Use the following format for entries in the input file for the fault-group script:

```
/west /east
/west = /rack-w1 /rack-w2 /rack-w3
/east = /rack-e1 /rack-e2 /rack-e3
/rack-w1 = db01
/rack-w2 = db02
/rack-w3 = db03
/rack-e1 = db04
/rack-e2 = db05
/rack-e3 = db06
```

Do not create entries using the full rack path, such as `/west/rack-w1`.

**Auditing Results**

To see how much data can be loaded with rack locality, use `EXPLAIN` with the query and look for statements like the following in the output:

```
100% of ORC data including co-located data can be loaded with rack locality.
```
Separate Clusters

With separate clusters, a Vertica cluster and a Hadoop cluster share no nodes. You should use a high-bandwidth network connection between the two clusters.

The following figure illustrates the configuration for separate clusters:

Network

The network is a key performance component of any well-configured cluster. When Vertica stores data to HDFS it writes and reads data across the network.

The layout shown in the figure calls for two networks, and there are benefits to adding a third:
• Database Private Network: Vertica uses a private network for command and control and moving data between nodes in support of its database functions. In some networks, the command and control and passing of data are split across two networks.

• Database/Hadoop Shared Network: Each Vertica node must be able to connect to each Hadoop data node and the NameNode. Hadoop best practices generally require a dedicated network for the Hadoop cluster. This is not a technical requirement, but a dedicated network improves Hadoop performance. Vertica and Hadoop should share the dedicated Hadoop network.

• Optional Client Network: Outside clients may access the clustered networks through a client network. This is not an absolute requirement, but the use of a third network that supports client connections to either Vertica or Hadoop can improve performance. If the configuration does not support a client network, than client connections should use the shared network.

### Hadoop Configuration Parameters

For best performance, set the following parameters with the specified minimum values:

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Minimum Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>HDFS block size</td>
<td>512MB</td>
</tr>
<tr>
<td>Namenode Java Heap</td>
<td>1GB</td>
</tr>
<tr>
<td>Datanode Java Heap</td>
<td>2GB</td>
</tr>
</tbody>
</table>

### Configuring HDFS Access

Vertica uses information from the Hadoop cluster configuration to support reading data (COPY or external tables). In Eon Mode, it also uses this information to access communal storage on HDFS. Vertica nodes therefore must have access to certain Hadoop configuration files.

For both co-located and separate clusters that use Kerberos authentication, configure Vertica for Kerberos as explained in [Configure Vertica for Kerberos Authentication](https://vertica.com/docs/).  

Vertica requires access to the WebHDFS service and ports on all name nodes and data nodes. For more information about WebHDFS ports, see [HDFS Ports in the Cloudera documentation](https://vertica.com/docs/).
Accessing Hadoop Configuration Files

Your Vertica nodes need access to certain Hadoop configuration files:

- If Vertica is co-located on HDFS nodes, then those configuration files are already present.
- If Vertica is running on a separate cluster, you must copy the required files to all database nodes. A simple way to do so is to configure your Vertica nodes as Hadoop edge nodes. Client applications run on *edge nodes*; from Hadoop’s perspective, Vertica is a client application. You can use Ambari or Cloudera Manager to configure edge nodes. For more information, see the documentation from your Hadoop vendor.

Verify that the value of the HadoopConfDir configuration parameter (see Apache Hadoop Parameters) includes a directory containing the `core-site.xml` and `hdfs-site.xml` files. If you do not set a value, Vertica looks for the files in `/etc/hadoop/conf`. For all Vertica users, the directory is accessed by the Linux user under which the Vertica server process runs.

Vertica uses several properties defined in these configuration files. These properties are listed in HDFS File System.

Using a Cluster with High Availability NameNodes

If your Hadoop cluster uses High Availability (HA) Name Nodes, verify that the `dfs.nameservices` parameter and the individual name nodes are defined in `hdfs-site.xml`.

Using More Than One Hadoop Cluster

In some cases, a Vertica cluster requires access to more than one HDFS cluster. For example, your business might use separate HDFS clusters for separate regions, or you might need data from both test and deployment clusters.

To support multiple clusters, perform the following steps:
1. Copy the configuration files from all HDFS clusters to your database nodes. You can place the copied files in any location readable by Vertica. However, as a best practice, you should place them all in the same directory tree, with one subdirectory per HDFS cluster. The locations must be the same on all database nodes.

2. Set the HadoopConfDir configuration parameter. The value is a colon-separated path containing the directories for all of your HDFS clusters.

3. Use an explicit name node or name service in the URL when creating an external table or copying data. Do not use hdfs:/// because it could be ambiguous. For more information about URLs, see HDFS File System.

Vertica connects directly to a name node or name service; it does not otherwise distinguish among HDFS clusters. Therefore, names of HDFS name nodes and name services must be globally unique.

**Verifying the Configuration**

Use the `VERIFY_HADOOP_CONF_DIR` function to verify that Vertica can find configuration files in HadoopConfDir.

Use the `HDFS_CLUSTER_CONFIG_CHECK` function to test access through the hdfs scheme.

For more information about testing your configuration, see Verifying HDFS Configuration.

**Updating Configuration Files**

If you update the configuration files after starting Vertica, use the following statement to refresh them:

```
=> SELECT CLEAR_HDFS_CACHES();
```

The `CLEAR_HDFS_CACHES` function also flushes information about which name node is active in a High Availability (HA) Hadoop cluster. Therefore, the first request after calling this function is slow, because the initial connection to the name node can take more than 15 seconds.
Verifying HDFS Configuration

Use the EXTERNAL_CONFIG_CHECK function to test access to HDFS. This function calls several others. If you prefer to test individual components, or if some tests do not apply to your configuration, you can instead call the functions individually. For example, if you are not using the HCatalog Connector then you do not need to call that function. The functions are:

- **KERBEROS_CONFIG_CHECK**: tests the Vertica keytab and the user's Kerberos credential.
- **HADOOP_IMPERSONATION_CONFIG_CHECK**: shows the delegation tokens that are in use. This function does not test them.
- **HDFS_CLUSTER_CONFIG_CHECK**: tests access to the HDFS clusters found in HadoopConfDir, including using Kerberos and impersonation (delegation tokens).
- **HCATALOGCONNECTOR_CONFIG_CHECK**: tests HCatalog Connector access to HiveServer2.

To run all tests, call EXTERNAL_CONFIG_CHECK with no arguments:

```sql
=> SELECT EXTERNAL_CONFIG_CHECK();
```

To test only some authorities, nameservices, or Hive schemas, pass a single string argument. The format is a comma-separated list of "key=value" pairs, where keys are "authority", "nameservice", and "schema". The value is passed to all of the sub-functions; see those reference pages for details on how values are interpreted.

The following example tests the configuration of only the nameservice named "ns1":

```sql
=> SELECT EXTERNAL_CONFIG_CHECK('nameservice=ns1');
```

Troubleshooting Reads from HDFS

You might encounter the following issues when accessing data in HDFS.
Queries Using [web]hdfs:/// Show Unexpected Results

If you are using the /// shorthand to query external tables and see unexpected results, such as production data in your test cluster, verify that HadoopConfDir is set to the value you expect. The HadoopConfDir configuration parameter defines a path to search for the Hadoop configuration files that Vertica needs to resolve file locations. The HadoopConfDir parameter can be set at the session level, overriding the permanent value set in the database.

To debug problems with /// URLs, try replacing the URLs with ones that use an explicit nameservice or name node. If the explicit URL works, then the problem is with the resolution of the shorthand. If the explicit URL also does not work as expected, then the problem is elsewhere (such as your nameservice).

Queries Take a Long Time to Run When Using HA

The High Availability Name Node feature in HDFS allows a name node to fail over to a standby name node. The dfs.client.failover.max.attempts configuration parameter (in hdfs-site.xml) specifies how many attempts to make when failing over. Vertica uses a default value of 4 if this parameter is not set. After reaching the maximum number of failover attempts, Vertica concludes that the HDFS cluster is unavailable and aborts the operation. Vertica uses the dfs.client.failover.sleep.base.millis and dfs.client.failover.sleep.max.millis parameters to decide how long to wait between retries. Typical ranges are 500 milliseconds to 15 seconds, with longer waits for successive retries.

A second parameter, ipc.client.connect.retry.interval, specifies the time to wait between attempts, with typical values being 10 to 20 seconds.

Cloudera and Hortonworks both provide tools to automatically generate configuration files. These tools can set the maximum number of failover attempts to a much higher number (50 or 100). If the HDFS cluster is unavailable (all name nodes are unreachable), Vertica can appear to hang for an extended period (minutes to hours) while trying to connect.

Failover attempts are logged in the QUERY_EVENTS system table. The following example shows how to query this table to find these events:

```sql
=> SELECT event_category, event_type, event_description, operator_name, event_details, count(event_type) AS count
```
FROM query_events
WHERE event_type ilike 'WEBHDFS FAILOVER RETRY'
GROUP BY event_category, event_type, event_description, operator_name, event_details;

You can either wait for Vertica to complete or abort the connection, or set the
dfs.client.failover.max.attempts parameter to a lower value.

WebHDFS Error When Using LibHDFS++

When creating an external table or loading data and using the hdfs scheme, you might see
errors from WebHDFS failures. Such errors indicate that Vertica was not able to use the
hdfs scheme and fell back to webhdfs, but that the WebHDFS configuration is incorrect.

First verify the value of the HadoopConfDir configuration parameter, which can be set at
the session level. Then verify that the HDFS configuration files found there have the correct
WebHDFS configuration for your Hadoop cluster. See Configuring HDFS Access for
information about use of these files. See your Hadoop documentation for information
about WebHDFS configuration.

Vertica Places Too Much Load on the Name Node
(LibHDFS++)

Large HDFS clusters can sometimes experience heavy load on the name node when clients,
including Vertica, need to locate data. If your name node is sensitive to this load and if you
are using LibHDFS++, you can instruct Vertica to distribute metadata about block locations
to its nodes so that they do not have to contact the name node as often. Distributing this
metadata can degrade database performance somewhat in deployments where the name
node isn’t contended. This performance effect is because the data must be serialized and
distributed.

If protecting your name node from load is more important than query performance, set the
EnableHDFSBlockInfoCache configuration parameter to 1 (true). Usually this applies to large
HDFS clusters where name node contention is already an issue.
This setting applies to access through LibHDFS++ (hdfs scheme). Sometimes LibHDFS++ falls back to WebHDFS, which does not use this setting. If you have enabled this setting and you are still seeing high traffic on your name node from Vertica, check the QUERY_EVENTS system table for LibHDFS++ UNSUPPORTED OPERATION events.

**Kerberos Authentication Errors**

Kerberos authentication can fail even though a ticket is valid if Hadoop expires tickets frequently. It can also fail due to clock skew between Hadoop and Vertica nodes. For details, see Troubleshooting Kerberos Authentication.

**Accessing Kerberized HDFS Data**

If your Hortonworks or Cloudera Hadoop cluster uses Kerberos authentication to restrict access to HDFS, Vertica must be granted access. If you use Kerberos authentication for your Vertica database, and database users have HDFS access, then you can configure Vertica to use the same principals to authenticate. However, not all Hadoop administrators want to grant access to all database users, preferring to manage access in other ways. In addition, not all Vertica databases use Kerberos.

Vertica provides the following options for accessing Kerberized Hadoop clusters:

- Using Vertica Kerberos principals.
- Using Hadoop proxy users combined with Vertica users.
- Using a user-specified delegation token which grants access to HDFS. Delegation tokens are issued by the Hadoop cluster.

Proxy users and delegation tokens both use a session parameter to manage identities. Vertica need not be Kerberized when using either of these methods.

Vertica does not support Kerberos for MapR.

To test your Kerberos configuration, see Verifying HDFS Configuration.

**Using Kerberos with Vertica**

If you use Kerberos for your Vertica cluster and your principals have access to HDFS, then you can configure Vertica to use the same credentials for HDFS.

Vertica authenticates with Hadoop in two ways that require different configurations:
- **User Authentication**—On behalf of the user, by passing along the user's existing Kerberos credentials. This method is also called user impersonation. Actions performed on behalf of particular users, like executing queries, generally use user authentication.
- **Vertica Authentication**—On behalf of system processes that access ROS data or the catalog, by using a special Kerberos credential stored in a keytab file.

**Note:**
Vertica and Hadoop must use the same Kerberos server or servers (KDCs).

Vertica can interact with more than one Kerberos realm. To configure multiple realms, see Multi-realm Support.

Vertica attempts to automatically refresh Hadoop tokens before they expire. See Token Expiration.

**User Authentication**

To use Vertica with Kerberos and Hadoop, the client user first authenticates with one of the Kerberos servers (Key Distribution Center, or KDC) being used by the Hadoop cluster. A user might run `kinit` or sign in to Active Directory, for example.

A user who authenticates to a Kerberos server receives a Kerberos ticket. At the beginning of a client session, Vertica automatically retrieves this ticket. Vertica then uses this ticket to get a Hadoop token, which Hadoop uses to grant access. Vertica uses this token to access HDFS, such as when executing a query on behalf of the user. When the token expires, Vertica automatically renews it, also renewing the Kerberos ticket if necessary.

The user must have been granted permission to access the relevant files in HDFS. This permission is checked the first time Vertica reads HDFS data.

Vertica can use multiple KDCs serving multiple Kerberos realms, if proper cross-realm trust has been set up between realms.

**Vertica Authentication**

Automatic processes, such as the Tuple Mover or the processes that access Eon Mode communal storage, do not log in the way users do. Instead, Vertica uses a special identity (principal) stored in a keytab file on every database node. (This approach is also used for Vertica clusters that use Kerberos but do not use Hadoop.) After you configure the keytab
file, Vertica uses the principal residing there to automatically obtain and maintain a Kerberos ticket, much as in the client scenario. In this case, the client does not interact with Kerberos.

Each Vertica node uses its own principal; it is common to incorporate the name of the node into the principal name. You can either create one keytab per node, containing only that node's principal, or you can create a single keytab containing all the principals and distribute the file to all nodes. Either way, the node uses its principal to get a Kerberos ticket and then uses that ticket to get a Hadoop token.

When creating HDFS storage locations Vertica uses the principal in the keytab file, not the principal of the user issuing the CREATE LOCATION statement. The HCatalog Connector sometimes uses the principal in the keytab file, depending on how Hive authenticates users.

### Configuring Users and the Keytab File

If you have not already configured Kerberos authentication for Vertica, follow the instructions in Configure Vertica for Kerberos Authentication. Of particular importance for Hadoop integration:

1. Create one Kerberos principal per node.
2. Place the keytab files in the same location on each database node and set configuration parameter `KerberosKeytabFile` to that location.
3. Set KerberosServiceName to the name of the principal. (See Inform Vertica About the Kerberos Principal.)

If you are using the HCatalog Connector, follow the additional steps in Configuring Security in the HCatalog Connector documentation.

If you are using HDFS storage locations, give all node principals read and write permission to the HDFS directory you will use as a storage location.

### Proxy Users and Delegation Tokens

An alternative to granting HDFS access to individual Vertica users is to use delegation tokens, either directly or with a proxy user. In this configuration, Vertica accesses HDFS on behalf of some other (Hadoop) user. The Hadoop users need not be Vertica users at all.
In Vertica, you can either specify the name of the Hadoop user to act on behalf of (doAs), or you can directly use a Kerberos delegation token that you obtain from HDFS (Bring Your Own Delegation Token). In the doAs case, Vertica obtains a delegation token for that user, so both approaches ultimately use delegation tokens to access files in HDFS.

Use the HadoopImpersonationConfig session parameter to specify a user or delegation token to use for HDFS access. Each session can use a different user and can use either doAs or a delegation token. The value of HadoopImpersonationConfig is a set of JSON objects.

To use delegation tokens of either type (more specifically, when HadoopImpersonationConfig is set), you must access HDFS through WebHDFS.

**User Impersonation (doAs)**

You can use user impersonation to access data in an HDFS cluster from Vertica. This approach is called "doAs" (for "do as") because Vertica uses a single proxy user on behalf of another (Hadoop) user. The impersonated Hadoop user does not need to also be a Vertica user.

In the following illustration, Alice is a Hadoop user but not a Vertica user. She connects to Vertica as the proxy user, vertica-etl. In her session, Vertica obtains a delegation token (DT) on behalf of the doAs user (Alice), and uses that delegation token to access HDFS.

You can use doAs with or without Kerberos, so long as HDFS and Vertica match. If HDFS uses Kerberos then Vertica must too.
User Configuration

The Hadoop administrator must create a proxy user and allow it to access HDFS on behalf of other users. Set values in core-site.xml as in the following example:

```
<name>hadoop.proxyuser.vertica-etl.users</name>
<value>*</value>

<name>hadoop.proxyuser.vertica-etl.hosts</name>
<value>*</value>
```

In Vertica, create a corresponding user.

Session Configuration

To make requests on behalf of a Hadoop user, first set the HadoopImpersonationConfig session parameter to specify the user and HDFS cluster. Vertica will access HDFS as that user until the session ends or you change the parameter.

The value of this session parameter is a collection of JSON objects. Each object specifies an HDFS cluster and a Hadoop user. For the cluster, you can specify either a name service or an individual name node. If you are using HA name node, then you must either use a name service or specify all name nodes. HadoopImpersonationConfig Format describes the full JSON syntax.

The following example shows access on behalf of two different users. The users "stephanie" and "bob" are Hadoop users, not Vertica users. "vertica-etl" is a Vertica user.

```
$ vsql -U vertica-etl

=> ALTER SESSION SET
    HadoopImpersonationConfig = '[["nameservice":"hadoopNS", "doAs":"stephanie"]];
=> COPY nation FROM 'webhdfs:///user/stephanie/nation.dat';

=> ALTER SESSION SET
    HadoopImpersonationConfig = '[["nameservice":"hadoopNS", "doAs":"bob"],
    {"authority":"hadoop2:50070", "doAs":"rob"}];
=> COPY nation FROM 'webhdfs:///user/bob/nation.dat';
```

Vertica uses Hadoop delegation tokens, obtained from the name node, to impersonate Hadoop users. In a long-running session, a token could expire. Vertica attempts to renew tokens automatically; see Token Expiration.
Testing the Configuration

You can use the HADOOP_IMPERSONATION_CONFIG_CHECK function to test your HDFS delegation tokens and HCATALOGCONNECTOR_CONFIG_CHECK to test your HCatalog Connector delegation token.

Bring Your Own Delegation Token

Instead of creating a proxy user and giving it access to HDFS for use with doAs, you can give Vertica a Hadoop delegation token to use. You must obtain this delegation token from the Hadoop name node. In this model, security is handled entirely on the Hadoop side, with Vertica just passing along a token. Vertica may or may not be Kerberized.

A typical workflow is:

- In an ETL front end, a user submits a query.
- The ETL system uses authentication and authorization services to verify that the user has sufficient permission to run the query.
- The ETL system requests a delegation token for the user from the name node.
- The ETL system makes a client connection to Vertica, sets the delegation token for the session, and runs the query.

When using a delegation token, clients can connect as any Vertica user. No proxy user is required.

In the following illustration, Bob has a Hadoop-issued delegation token. He connects to Vertica and Vertica uses that delegation token to access files in HDFS.
Session Configuration

Set the `HadoopImpersonationConfig` session parameter to specify the delegation token and HDFS cluster. Vertica will access HDFS using that delegation token until the session ends, the token expires, or you change the parameter.

The value of this session parameter is a collection of JSON objects. Each object specifies a delegation token ("token") in WebHDFS format and an HDFS name service or name node. `HadoopImpersonationConfig Format` describes the full JSON syntax.

The following example shows access on behalf of two different users. The users "stephanie" and "bob" are Hadoop users, not Vertica users. "dbuser1" is a Vertica user with no special privileges.

```
$ vsq1 -U dbuser1
=> ALTER SESSION SET
  HadoopImpersonationConfig = '[{"authority":"hadoop1:50070","token":"JAAGZGJldGwxBmRiZXRsMQCKAWDXJgB9igFg-zEfy4ao4Bmh53YxikqrbhHbbUn4V5cNg58WQxOXRJ1REZTIGR1bGvYXRpb24RMTAuMjAuMTAwLjU0OjgwMjA"}]';
=> COPY nation FROM 'webhdfs:///user/stephanie/nation.dat';

=> ALTER SESSION SET
  HadoopImpersonationConfig = '[{"authority":"hadoop1:50070","token":"HgADdG9tA3RvbQCKAWDXJgAogFg-zKEKI4gaI4BmehR0Ulpq-iPxrVhZ1NSmodAQn8l8i73XRJREZTIGR1bGvYXRpb24RMTAuMjAuMTAwLjU0OjgwMjA"}]';
=> COPY nation FROM 'webhdfs:///user/bob/nation.dat';
```

You can use the `WebHDFS REST API` to get delegation tokens:
Vertica does not, and cannot, renew delegation tokens when they expire. You must either keep sessions shorter than token lifetime or implement a renewal scheme.

**Delegation Tokens and the HCatalog Connector**

HiveServer2 uses a different format for delegation tokens. To use the HCatalog Connector, therefore, you must set two delegation tokens, one as usual (authority) and one for HiveServer2 (schema). The HCatalog Connector uses the schema token to access metadata and the authority token to access data. The schema name is the same Hive schema you specified in CREATE HCATALOG SCHEMA. The following example shows how to use these two delegation tokens.

```
$ vsql -U dbuser1
-- set delegation token for user and HiveServer2
=> ALTER SESSION SET
    HadoopImpersonationConfig='[
    {"nameservice":"hadoopNS","token":"JQAHcmVsZwFzZQdyZwIx1YXN1AIoBYVJKrYSKAWF2VzGEjgmzj_IUCIrI9b8Dq6awFTHk5nC-fHB8xsSVCSERGUYBkZwx1Z2F0aW9uETEwLjIwLjQyLjEwOTo4MDIw"},
    {"schema":"access","token":"UwAHcmVsZwFzZQdyZwIx1YXN1LI2hpdmUvZWNsLWEwLCS52ZK3OaWNHY29yY25jZjBiAKvkVSVE1DQNPJU1AuQ09NigFhUKmyTou8BXZWNk8BjgEFFKNx2xPURn19Yq9tf-0nekoD51TzvFuh3VKVFRPREVMUdBVEIP19UT0tFTHeZoaXZ1c2VydlyMkNsaWVudFRva2Vu"}]

=> CREATE HCATALOG SCHEMA access WITH hcatalog_schema 'access';

=> USE access;

=> SELECT * FROM access.t1;

=> SELECT * FROM hcatalog_tables;
```

HiveServer2 does not provide a REST API for delegation tokens like WebHDFS does. See [Getting a HiveServer2 Delegation Token](#) for some tips.

**Testing the Configuration**

You can use the `HADOOP_IMPERSONATION_CONFIG_CHECK` function to test your HDFS delegation tokens and `HCATALOGCONNECTOR_CONFIG_CHECK` to test your HCatalog Connector delegation token.
Getting a HiveServer2 Delegation Token

To access Hive metadata using HiveServer2, you need a special delegation token. (See Bring Your Own Delegation Token.) HiveServer2 does not provide an easy way to get this token, unlike the REST API that grants HDFS (data) delegation tokens.

The following utility code shows a way to get this token. You will need to modify this code for your own cluster; in particular, change the value of the connectURL static.

```java
import java.io.FileWriter;
import java.io.PrintStream;
import java.io.PrintWriter;
import java.io.StringWriter;
import java.io.Writer;
import java.security.PrivilegedExceptionAction;
import java.sql.Connection;
import java.sql.DriverManager;
import java.sql.ResultSet;
import java.sql.Statement;
import org.apache.hadoop.conf.Configuration;
import org.apache.hadoop.hive.shims.Utils;
import org.apache.hadoop.security.UserGroupInformation;
import org.apache.hive.jdbc.HiveConnection;
import org.json.simple.JSONArray;
import org.json.simple.JSONObject;

public class JDBCTest {
    public static final String driverName = "org.apache.hive.jdbc.HiveDriver";
    public static String connectURL = "jdbc:hive2://node2.cluster0.example.com:2181,node1.cluster0.example.com:2181,node3.cluster0.example.com:2181/;serviceDiscoveryMode=zooKeeper;zooKeeperNamespace=hiveserver2";
    public static String schemaName = "hcat";
    public static String verticaUser = "condor";
    public static String proxyUser = "condor-2";
    public static String krb5conf = "/home/server/kerberos/krb5.conf";
    public static String realm = "EXAMPLE.COM";
    public static String keytab = "/home/server/kerberos/kt.keytab";
    
    public static void main(String[] args) {
        if (args.length < 7) {
            System.out.println("Usage: JDBCTest <jdbc_url> <hive_schema> <kerberized_user> <proxy_user> <krb5_conf> <krb_realm> <krb_keytab>");
            System.exit(1);
        }
        String connectURL = args[0];
        String schemaName = args[1];
        String verticaUser = args[2];
        String proxyUser = args[3];
        String krb5conf = args[4];
        String realm = args[5];
        String keytab = args[6];
    }
}
```
System.out.println("connectURL: " + connectURL);
System.out.println("schemaName: " + schemaName);
System.out.println("verticaUser: " + verticaUser);
System.out.println("proxyUser: " + proxyUser);
System.out.println("krb5conf: " + krb5conf);
System.out.println("realm: " + realm);
System.out.println("keytab: " + keytab);

    user.doAs(new PrivilegedExceptionAction() {
        public Void run() throws Exception {
            System.out.println("In doas: "+ UserGroupInformation.getLoginUser());
            Connection con = DriverManager.getConnection(JDBCTest.connectURL);
            System.out.println("Connected to HiveServer2");
            JDBCTest.showUser(con);
            System.out.println("Getting delegation token for user");
            String token = ((HiveConnection) con).getDelegationToken(JDBCTest.proxyUser, "hive/_HOST@" + JDBCTest.realm);
            System.out.println("Got token: " + token);
            System.out.println("Closing original connection");
            con.close();

            System.out.println("Setting delegation token in UGI");
            Utils.setTokenStr(Utils.getUGI(), token, "hiveserver2ClientToken");
            con = DriverManager.getConnection(JDBCTest.connectURL + ";auth=delegationToken");
            System.out.println("Connected to HiveServer2 with delegation token");
            JDBCTest.showUser(con);
            con.close();

            JDBCTest.writeDTJSON(token);

            return null;
        }
    });
}
private static void showUser(Connection con) throws Exception {
    String sql = "select current_user");
Statement stmt = con.createStatement();
ResultSet res = stmt.executeQuery(sql);
StringBuilder result = new StringBuilder();
while (res.next()) {
    result.append(res.getString(1));
}
System.out.println("\tcurrent_user: "+result.toString());

private static void writeDTJSON(String token) {
    JSONArray arr = new JSONArray();
    JSONObject obj = new JSONObject();
    obj.put("schema", schemaName);
    obj.put("token", token);
    arr.add(obj);
    try {
        FileWriter fileWriter = new FileWriter("hcat_delegation.json");
        fileWriter.write(arr.toJSONString());
        fileWriter.flush();
    } catch (Exception e) {
        e.printStackTrace();
    }
}

Following is an example call and its output:

$ java -cp hs2token.jar JDBCTest 'jdbc: hive2://test.example.com:10000/default;principal=hive/_HOST@EXAMPLE.COM' "default" "testuser" "test" "/etc/krb5.conf" "EXAMPLE.COM" "/test/testuser.keytab" connectURL: jdbc: hive2://test.example.com:10000/default;principal=hive/_HOST@EXAMPLE.COM

HadoopImpersonationConfig Format

The value of the HadoopImpersonationConfig session parameter is a set of one or more JSON objects. Each object describes one doAs user or delegation token for one Hadoop destination. You must use WebHDFS, not LibHDFS++, to use impersonation.

Syntax

```
[ { ("doAs" | "token"): value,
   ("nameservice" | "authority" | "schema"): value} [, ...] ]
```

Properties

<table>
<thead>
<tr>
<th>doAs</th>
<th>The name of a Hadoop user to impersonate.</th>
</tr>
</thead>
<tbody>
<tr>
<td>token</td>
<td>A delegation token to use for HDFS access.</td>
</tr>
<tr>
<td>nameservice</td>
<td>A Hadoop name service. All access to this name service uses the doAs user or delegation token.</td>
</tr>
<tr>
<td>authority</td>
<td>A name node authority. All access to this authority uses the doAs user or delegation token. If the name node fails over to another name node, the doAs user or delegation token does not automatically apply to the failover name node. If you are using HA name node, use nameservice instead of authority or include objects for every name node.</td>
</tr>
<tr>
<td>schema</td>
<td>A Hive schema, for use with the HCatalog Connector. Vertica uses this object's doAs user or token to access Hive metadata only. For data access you must also specify a name service or authority object, just like for all other data access.</td>
</tr>
</tbody>
</table>
**Examples**

In the following example of doAs, Bob is a Hadoop user and vertica-etl is a Kerberized proxy user.

```
$ kinit vertica-etl -kt /home/dbadmin/vertica-etl.keytab
$ vsq1 -U vertica-etl

=> ALTER SESSION SET
    HadoopImpersonationConfig = '[["nameservice":"hadoopNS", "doAs":"Bob"]];

=> COPY nation FROM 'webhdfs:///user/bob/nation.dat';
```

In the following example, the current Vertica user (it doesn’t matter who that is) uses a Hadoop delegation token. This token belongs to Alice, but you never specify the user name here. Instead, you use it to get the delegation token from Hadoop.

```
$ vsq1 -U dbuser1

=> ALTER SESSION SET
    HadoopImpersonationConfig = "[
    "nameservice":"hadoopNS","token":"JAAGZGJldGwxBmRiZXRsMQCKAwDXJgB9igFg-zKEfy4gao4Bmh3YtXiwightH8bbUn4VscNg5BwWQzXRUUzI4ZFlGr1bGvnyXKp2z4RMTMjJu6UjgwM8J"]];

=> COPY nation FROM 'webhdfs:///user/alice/nation.dat';
```

In the following example, "authority" specifies the (single) name node on a Hadoop cluster that does not use high availability.

```
$ vsq1 -U dbuser1

=> ALTER SESSION SET
    HadoopImpersonationConfig = "[
    "authority":"hadoop1:50070", "doAs":"Stephanie"];

=> COPY nation FROM 'webhdfs://hadoop1:50070/user/stephanie/nation.dat';
```

To access data in Hive you need to specify two delegation tokens. The first, for a name service or authority, is for data access as usual. The second is for the HiveServer2 metadata for the schema. HiveServer2 requires a delegation token in WebHDFS format. The schema name is the Hive schema you specify with CREATE HCATALOG SCHEMA.

```
$ vsq1 -U dbuser1

-- set delegation token for user and HiveServer2
=> ALTER SESSION SET
    HadoopImpersonationConfig=[
    "{"nameservice":"hadoopNS","token":"JQAHcmVsZwFzQdyZlw1YXN1AIoBYVJKeYSKAUF2VzGEjgmgz_"
     "IUCIrI9b8Qw6awFTlHk5Sc-fH85sSf0VEcSbTEjy8zKx0z2F8aK9uTEWjLjwLjgWl4wW0t04MD1jw"}]
    
    "{"schema":"access","token":"uW4cmVsZwFzQdyZlw1YXN102pdmUvZw5nLc5LmTeWMC52ZXJ0abWx2yC5sb21AVkVSV
     E1DQUNPUIeuA09N1gFhUkmyTooBYXZWNk4BjgETFKJ2nxPURn19Yq9tf-
    
```
Each object in the HadoopImpersonationConfig collection specifies one connection to one Hadoop cluster. You can add as many connections as you like, including to more than one Hadoop cluster. The following example shows delegation tokens for two different Hadoop clusters. Vertica uses the correct token for each cluster when connecting.

```sql
$ vsq1 -U dbuser1
=> ALTER SESSION SET HadoopImpersonationConfig = '[
    {"nameservice":"productionNS","token":"JAAGZGJldGwxBmRiZXRsMQCKAWDXJgB9igFg-zKefY4gao4BmhS3YXx1QwhBhbUn4V5cNgS8WqX3XRUiIREZT16R1bGvX8pb24RTAuMjAuMTAwjU8OjgwMjA"},
    {"nameservice":"testNS", "token":"HQAHcmVsZWFzZQdyzWx1YYXIAoBYVJKrYSKAwF2vzGEjgmzj_IUCIr19bBdque6awFTh5nC-fH88x5VwVC55RGUyBkZx1ZfOwh9wETEwLjwi-jQytjEwOTo4MDIw"}]
];
=> COPY clicks FROM 'webhdfs://productionNS/data/clickstream.dat';
=> COPY testclicks FROM 'webhdfs://testNS/data/clickstream.dat';
```

## Token Expiration

Vertica uses Hadoop tokens when using Kerberos tickets ([Using Kerberos with Vertica](#)) or doAs ([User Impersonation (doAs)](#)). Vertica attempts to automatically refresh Hadoop tokens before they expire, but you can also set a minimum refresh frequency if you prefer. Use the `HadoopFSTokenRefreshFrequency` configuration parameter to specify the frequency in seconds:

```sql
=> ALTER DATABASE exampledb SET HadoopFSTokenRefreshFrequency = '86400';
```

If the current age of the token is greater than the value specified in this parameter, Vertica refreshes the token before accessing data stored in HDFS.

Vertica does not refresh delegation tokens ([Bring Your Own Delegation Token](#)).
Using HDFS Storage Locations

Vertica stores data in its native format, ROS, in storage locations. You can place storage locations on the local Linux file system or in HDFS. If you place storage locations on HDFS, you must perform additional configuration in HDFS to be able to manage them. These are in addition to the requirements in Vertica for managing storage locations and backup/restore.

If you use HDFS storage locations, the HDFS data must be available when you start Vertica. Your HDFS cluster must be operational, and the ROS files must be present. If you moved data files, or they are corrupted, or your HDFS cluster is not responsive, Vertica cannot start.

Hadoop Configuration for Backup and Restore

If your Vertica cluster uses storage locations on HDFS, and you want to be able to back up and restore those storage locations using vbr, you must enable snapshotting in HDFS.

The Vertica backup script uses HDFS's snapshotting feature to create a backup of HDFS storage locations. A directory must allow snapshotting before HDFS can take a snapshot. Only a Hadoop superuser can enable snapshotting on a directory. Vertica can enable snapshotting automatically if the database administrator is also a Hadoop superuser.

If HDFS is unsecured, the following instructions apply to the database administrator account, usually dbadmin. If HDFS uses Kerberos security, the following instructions apply to the principal stored in the Vertica keytab file, usually vertica. The instructions below use the term "database account" to refer to this user.

We recommend that you make the database administrator or principal a Hadoop superuser. If you are not able to do so, you must enable snapshotting on the directory before configuring it for use by Vertica.

The steps you need to take to make the Vertica database administrator account a superuser depend on the distribution of Hadoop you are using. Consult your Hadoop distribution's documentation for details.
Manually Enabling Snapshotting for a Directory

If you cannot grant superuser status to the database account, you can instead enable snapshotting of each directory manually. Use the following command:

```bash
$ hdfs dfsadmin -allowSnapshot path
```

Issue this command for each directory on each node. Remember to do this each time you add a new node to your HDFS cluster.

Nested snapshottable directories are not allowed, so you cannot enable snapshotting for a parent directory to automatically enable it for child directories. You must enable it for each individual directory.

Additional Requirements for Kerberos

If HDFS uses Kerberos, then in addition to granting the keytab principal access, you must give Vertica access to certain Hadoop configuration files. See Configuring Kerberos.

Testing the Database Account's Ability to Make HDFS Directories Snapshottable

After making the database account a Hadoop superuser, verify that the account can set directories snapshottable:

1. Log into the Hadoop cluster as the database account (dbadmin by default).
2. Determine a location in HDFS where the database administrator can create a directory. The `/tmp` directory is usually available. Create a test HDFS directory using the command:

```bash
$ hdfs dfs -mkdir /path/testdir
```

3. Make the test directory snapshottable using the command:

```bash
$ hdfs dfsadmin -allowSnapshot /path/testdir
```
The following example demonstrates creating an HDFS directory and making it snapshottable:

```bash
$ hdfs dfs -mkdir /tmp/snaptest
$ hdfs dfsadmin -allowSnapshot /tmp/snaptest
Allowing snapshot on /tmp/snaptest succeeded
```

### Removing HDFS Storage Locations

The steps to remove an HDFS storage location are similar to standard storage locations:

1. Remove any existing data from the HDFS storage location by using `SET_OBJECT_STORAGE_POLICY` to change each object's storage location. Alternatively, you can use `CLEAR_OBJECT_STORAGE_POLICY`. Because the Tuple Mover runs infrequently, set the `enforce-storage-move` parameter to `true` to make the change immediately.
2. Retire the location on each host that has the storage location defined using `RETIRE_LOCATION`. Set `enforce-storage-move` to `true`.
3. Drop the location on each node using `DROP_LOCATION`.
4. Optionally remove the snapshots and files from the HDFS directory for the storage location.
5. Perform a full database backup.

For more information about changing storage policies, changing usage, retiring locations, and dropping locations, see Managing Storage Locations.

**Important:**

If you have backed up the data in the HDFS storage location you are removing, you must perform a full database backup after you remove the location. If you do not and restore the database to a backup made before you removed the location, the location's data is restored.

### Removing Storage Location Files from HDFS

Dropping an HDFS storage location does not automatically clean the HDFS directory that stored the location's files. Any snapshots of the data files created when backing up the location are also not deleted. These files consume disk space on HDFS and also prevent the directory from being reused as an HDFS storage location. Vertica cannot create a storage location in a directory that contains existing files or subdirectories.
You must log into the Hadoop cluster to delete the files from HDFS. An alternative is to use some other HDFS file management tool.

**Removing Backup Snapshots**

HDFS returns an error if you attempt to remove a directory that has snapshots:

```bash
$ hdfs dfs -rm -r -f -skipTrash /user/dbadmin/v_vmart_node0001
rm: The directory /user/dbadmin/v_vmart_node0001 cannot be deleted since /user/dbadmin/v_vmart_node0001 is snapshottable and already has snapshots
```

The Vertica backup script creates snapshots of HDFS storage locations as part of the backup process. If you made backups of your HDFS storage location, you must delete the snapshots before removing the directories.

HDFS stores snapshots in a subdirectory named `.snapshot`. You can list the snapshots in the directory using the standard HDFS `ls` command:

```bash
$ hdfs dfs -ls /user/dbadmin/v_vmart_node0001/.snapshot
Found 1 items
drwxrwx---  - dbadmin supergroup 0 2014-09-02 10:13 /user/dbadmin/v_vmart_node0001/.snapshot/s20140902-101358.629
```

To remove snapshots, use the command:

```bash
$ hdfs dfs -removeSnapshot directory snapshotname
```

The following example demonstrates the command to delete the snapshot shown in the previous example:

```bash
$ hdfs dfs -deleteSnapshot /user/dbadmin/v_vmart_node0001 s20140902-101358.629
```

You must delete each snapshot from the directory for each host in the cluster. After you have deleted the snapshots, you can delete the directories in the storage location.

**Important:**

Each snapshot's name is based on a timestamp down to the millisecond. Nodes independently create their own snapshots. They do not synchronize snapshot creation, so their snapshot names differ. You must list each node's snapshot directory to learn the names of the snapshots it contains.

See Apache's [HDFS Snapshot documentation](https://hadoop.apache.org/docs/r2.7.3/hdfs commands.html#hdfs dfs -removeSnapshot) for more information about managing and removing snapshots.
Removing the Storage Location Directories

You can remove the directories that held the storage location's data by either of the following methods:

- Use an HDFS file manager to delete directories. See your Hadoop distribution's documentation to determine if it provides a file manager.
- Log into the Hadoop Name Node using the database administrator’s account and use HDFS’s `rmr` command to delete the directories. See Apache's File System Shell Guide for more information.

The following example uses the HDFS `rmr` command from the Linux command line to delete the directories left behind in the HDFS storage location directory `/user/dbadmin`. It uses the `-skipTrash` flag to force the immediate deletion of the files:

```
$ hdfsp dfs -ls /user/dbadmin
Found 3 items
drwxrwx---  - dbadmin supergroup 0 2014-08-29 15:11 /user/dbadmin/v_vmart_node0001
drwxrwx---  - dbadmin supergroup 0 2014-08-29 15:11 /user/dbadmin/v_vmart_node0002
drwxrwx---  - dbadmin supergroup 0 2014-08-29 15:11 /user/dbadmin/v_vmart_node0003

$ hdfsp dfs -rmr -skipTrash /user/dbadmin/*
Deleted /user/dbadmin/v_vmart_node0001
Deleted /user/dbadmin/v_vmart_node0002
Deleted /user/dbadmin/v_vmart_node0003
```

Using the HCatalog Connector

The Vertica HCatalog Connector lets you access data stored in Apache's Hive data warehouse software the same way you access it within a native Vertica table.

If your files are in the Optimized Columnar Row (ORC) or Parquet format and do not use complex types, the HCatalog Connector creates an external table and uses the ORC or Parquet reader instead of using the Java SerDe. See ORC (Parser) and PARQUET (Parser) for more information about these readers.

The HCatalog Connector performs predicate pushdown to improve query performance. Instead of reading all data across the network to evaluate a query, the HCatalog Connector moves the evaluation of predicates closer to the data. Predicate pushdown applies to Hive partition pruning, ORC stripe pruning, and Parquet row-group pruning. The HCatalog Connector supports predicate pushdown for the following predicates: >, >=, =, <>, <=, <.
Overview

There are several Hadoop components that you need to understand to use the HCatalog connector:

- Apache Hive lets you query data stored in a Hadoop Distributed File System (HDFS) the same way you query data stored in a relational database. Behind the scenes, Hive uses a set of serializer and deserializer (SerDe) classes to extract data from files stored in HDFS and break it into columns and rows. Each SerDe handles data files in a specific format. For example, one SerDe extracts data from comma-separated data files while another interprets data stored in JSON format.
- Apache HCatalog is a component of the Hadoop ecosystem that makes Hive's metadata available to other Hadoop components (such as Pig).
- HiveServer2 makes HCatalog and Hive data available via JDBC. Through it, a client can make requests to retrieve data stored in Hive, as well as information about the Hive schema. HiveServer2 can use authorization services (Sentry or Ranger). HiveServer2 can use Hive LLAP (Live Long And Process).

The Vertica HCatalog Connector lets you transparently access data that is available through HiveServer2. You use the connector to define a schema in Vertica that corresponds to a Hive database or schema. When you query data within this schema, the HCatalog Connector transparently extracts and formats the data from Hadoop into tabular data. Vertica supports authorization services and Hive LLAP.

**Note:**
You can use the WebHCat service instead of HiveServer2, but performance is usually better with HiveServer2. Support for WebHCat is deprecated. To use WebHCat, set the HCatalogConnectorUseHiveServer2 configuration parameter to 0. See [Apache Hadoop Parameters](#). WebHCat does not support authorization services.

**HCatalog Connection Features**

The HCatalog Connector lets you query data stored in Hive using the Vertica native SQL syntax. Some of its main features are:
- The HCatalog Connector always reflects the current state of data stored in Hive.
- The HCatalog Connector uses the parallel nature of both Vertica and Hadoop to process Hive data. The result is that querying data through the HCatalog Connector is often faster than querying the data directly through Hive.
- Because Vertica performs the extraction and parsing of data, the HCatalog Connector does not significantly increase the load on your Hadoop cluster.
- The data you query through the HCatalog Connector can be used as if it were native Vertica data. For example, you can execute a query that joins data from a table in an HCatalog schema with a native table.

**HCatalog Connector Considerations**

There are a few things to keep in mind when using the HCatalog Connector:

- Hive's data is stored in flat files in a distributed file system, requiring it to be read and deserialized each time it is queried. This deserialization causes Hive performance to be much slower than that of Vertica. The HCatalog Connector has to perform the same process as Hive to read the data. Therefore, querying data stored in Hive using the HCatalog Connector is much slower than querying a native Vertica table. If you need to perform extensive analysis on data stored in Hive, you should consider loading it into Vertica. Vertica optimization often makes querying data through the HCatalog Connector faster than directly querying it through Hive.
- If Hive uses Kerberos security, the HCatalog Connector uses the querying user's credentials in queries by default. If Hive uses Sentry or Ranger to enforce security, then you must either disable this behavior in Vertica by setting EnableHCatImpersonation to 0 or grant users access to the underlying data in HDFS. (Sentry supports ACL synchronization to automatically grant access.) Alternatively, you can specify delegation tokens for data and metadata access. See Configuring Security.
- Hive supports complex data types such as lists, maps, and structs that Vertica does not support. Columns containing these data types are converted to a JSON representation of the data type and stored as a VARCHAR. See Data Type Conversions from Hive to Vertica.

**Note:**
The HCatalog Connector is read-only. It cannot insert data into Hive.
How the HCatalog Connector Works

When planning a query that accesses data from a Hive table, the Vertica HCatalog Connector on the initiator node contacts HiveServer2 (or WebHCat) in your Hadoop cluster to determine if the table exists. If it does, the connector retrieves the table's metadata from the metastore database so the query planning can continue. When the query executes, all nodes in the Vertica cluster directly retrieve the data necessary for completing the query from HDFS. They then use the Hive SerDe classes to extract the data so the query can execute. When accessing data in ORC or Parquet format, the HCatalog Connector uses Vertica’s internal readers for these formats instead of the Hive SerDe classes.

This approach takes advantage of the parallel nature of both Vertica and Hadoop. In addition, by performing the retrieval and extraction of data directly, the HCatalog Connector reduces the impact of the query on the Hadoop cluster.

For files in the Optimized Columnar Row (ORC) or Parquet format that do not use complex types, the HCatalog Connector creates an external table and uses the ORC or Parquet reader instead of using the Java SerDe. You can direct these readers to access custom Hive partition locations if Hive used them when writing the data. By default these extra checks are turned off to improve performance.
HCatalog Connector Requirements

Before you can use the HCatalog Connector, both your Vertica and Hadoop installations must meet the following requirements.

Vertica Requirements

All of the nodes in your cluster must have a Java Virtual Machine (JVM) installed. You must use the same Java version that the Hadoop cluster uses. See Installing the Java Runtime on Your Vertica Cluster.

You must also add certain libraries distributed with Hadoop and Hive to your Vertica installation directory. See Configuring Vertica for HCatalog.

Hadoop Requirements

Your Hadoop cluster must meet several requirements to operate correctly with the Vertica Connector for HCatalog:

- It must have Hive, HiveServer2, and HCatalog installed and running. See Apache's HCatalog page for more information.
- The HiveServer2 server and all of the HDFS nodes that store HCatalog data must be directly accessible from all of the hosts in your Vertica database. Verify that any firewall separating the Hadoop cluster and the Vertica cluster will pass HiveServer2, metastore database, and HDFS traffic.
- The data that you want to query must be in an internal or external Hive table.
- If a table you want to query uses a non-standard SerDe, you must install the SerDe's classes on your Vertica cluster before you can query the data. See Using Nonstandard SerDes.
Installing the Java Runtime on Your Vertica Cluster

The HCatalog Connector requires a 64-bit Java Virtual Machine (JVM). The JVM must support Java 6 or later, and must be the same version as the one installed on your Hadoop nodes.

Note: If your Vertica cluster is configured to execute User Defined Extensions (UDxs) written in Java, it already has a correctly-configured JVM installed. See Developing User-Defined Extensions (UDxs) in Extending Vertica for more information.

Installing Java on your Vertica cluster is a two-step process:

1. Install a Java runtime on all of the hosts in your cluster.
2. Set the JavaBinaryForUDx configuration parameter to tell Vertica the location of the Java executable.

Installing a Java Runtime

For Java-based features, Vertica requires a 64-bit Java 6 (Java version 1.6) or later Java runtime. Vertica supports runtimes from either Oracle or OpenJDK. You can choose to install either the Java Runtime Environment (JRE) or Java Development Kit (JDK), since the JDK also includes the JRE.

Many Linux distributions include a package for the OpenJDK runtime. See your Linux distribution's documentation for information about installing and configuring OpenJDK.

To install the Oracle Java runtime, see the Java Standard Edition (SE) Download Page. You usually run the installation package as root in order to install it. See the download page for instructions.

Once you have installed a JVM on each host, ensure that the java command is in the search path and calls the correct JVM by running the command:

```$ java -version```

This command should print something similar to:
Note:
Any previously installed Java VM on your hosts may interfere with a newly installed Java runtime. See your Linux distribution's documentation for instructions on configuring which JVM is the default. Unless absolutely required, you should uninstall any incompatible version of Java before installing the Java 6 or Java 7 runtime.

Setting the javaBinaryForUDx Configuration Parameter

The javaBinaryForUDx configuration parameter tells Vertica where to look for the JRE to execute Java UDxs. After you have installed the JRE on all of the nodes in your cluster, set this parameter to the absolute path of the Java executable. You can use the symbolic link that some Java installers create (for example, `/usr/bin/java`). If the Java executable is in your shell search path, you can get the path of the Java executable by running the following command from the Linux command line shell:

```
$ which java
/usr/bin/java
```

If the `java` command is not in the shell search path, use the path to the Java executable in the directory where you installed the JRE. Suppose you installed the JRE in `/usr/java/default` (which is where the installation package supplied by Oracle installs the Java 1.6 JRE). In this case, the Java executable is `/usr/java/default/bin/java`.

You set the configuration parameter by executing the following statement as a database superuser:

```sql
=> ALTER DATABASE DEFAULT SET PARAMETER javaBinaryForUDx = '/usr/bin/java';
```

See `ALTER DATABASE` for more information on setting configuration parameters.

To view the current setting of the configuration parameter, query the `configuration_parameters` system table:

```sql
=> \x
Expanded display is on.
=> SELECT * FROM configuration_parameters WHERE parameter_name = 'javaBinaryForUDx';
```

---

Vertica Analytic Database (11.0.x)  Page 5986 of 6776
Once you have set the configuration parameter, Vertica can find the Java executable on each node in your cluster.

**Note:**
Since the location of the Java executable is set by a single configuration parameter for the entire cluster, you must ensure that the Java executable is installed in the same path on all of the hosts in the cluster.

### Configuring Vertica for HCatalog

Before you can use the HCatalog Connector, you must add certain Hadoop and Hive libraries to your Vertica installation. You must also copy the Hadoop configuration files that specify various connection properties. Vertica uses the values in those configuration files to make its own connections to Hadoop.

You need only make these changes on one node in your cluster. After you do this you can install the HCatalog connector.

### Copy Hadoop Libraries and Configuration Files

Vertica provides a tool, hcatUtil, to collect the required files from Hadoop. This tool copies selected libraries and XML configuration files from your Hadoop cluster to your Vertica cluster. This tool might also need access to additional libraries:

- If you plan to use Hive to query files that use Snappy compression, you need access to the Snappy native libraries, libhadoop*.so and libsnappy*.so.

- If you plan to use Hive to query files that use LZO compression, you need access to the hadoop-lzo-*.jar and libgplcompression.so* libraries. In core-site.xml you must also edit the io.compression.codecs property to include com.hadoop.compression.lzo.LzopCodec.
If you plan to use a JSON SerDe with a Hive table, you need access to its library. This is the same library that you used to configure Hive; for example:

```
hive> add jar /home/release/json-serde-1.3-jar-with-dependencies.jar;

hive> create external table nationjson (id int,name string,rank int,text string)
ROW FORMAT SERDE 'org.openx.data.jsonserde.JsonSerDe'
LOCATION '/user/release/vt/nationjson';
```

If you are using any other libraries that are not standard across all supported Hadoop versions, you need access to those libraries.

If any of these cases applies to you, do one of the following:

- Include the path(s) in the path you specify as the value of --hcatLibPath, or
- Copy the file(s) to a directory already on that path.

If Vertica is not co-located on a Hadoop node, you should do the following:

1. Copy /opt/vertica/packages/hcat/tools/hcatUtil to a Hadoop node and run it there, specifying a temporary output directory. Your Hadoop, HIVE, and HCatalog lib paths might be different. In newer versions of Hadoop the HCatalog directory is usually a subdirectory under the HIVE directory, and Cloudera creates a new directory for each revision of the configuration files. Use the values from your environment in the following command:

   ```
   hcatUtil --copyJars
   --hadoopHiveHome="$HADOOP_HOME/lib;$HIVE_HOME/lib;/hcatalog/dist/share"
   --hadoopHiveConfPath="$HADOOP_CONF_DIR;$HIVE_CONF_DIR;$WEBHCAT_CONF_DIR"
   --hcatLibPath="/tmp/hadoop-files"
   ```

   If you are using Hive LLAP, specify the hive2 directories.

2. Verify that all necessary files were copied:

   ```
   hcatUtil --verifyJars --hcatLibPath=/tmp/hadoop-files
   ```

3. Copy that output directory (/tmp/hadoop-files, in this example) to /opt/vertica/packages/hcat/lib on the Vertica node you will connect to when installing the HCatalog connector. If you are updating a Vertica cluster to use a new Hadoop cluster (or a new version of Hadoop), first remove all JAR files in /opt/vertica/packages/hcat/lib except vertica-hcatalogudl.jar.

4. Verify that all necessary files were copied:

   ```
   hcatUtil --verifyJars --hcatLibPath=/opt/vertica/packages/hcat
   ```
If Vertica is co-located on some or all Hadoop nodes, you can do this in one step on a shared node. Your Hadoop, HIVE, and HCatalog lib paths might be different; use the values from your environment in the following command:

```
shcatUtil --copyJars
   --hadoopHiveHome="$HADOOP_HOME/lib;$HIVE_HOME/lib;/hsq1/dist/share"
   --hadoopHiveConfPath="$HADOOP_CONF_DIR;$HIVE_CONF_DIR;$WEBHCAT_CONF_DIR"
   --hcatLibPath="/opt/vertica/packages/hcat/lib"
```

The hcatUtil script has the following arguments:

<table>
<thead>
<tr>
<th>Argument</th>
<th>Description and Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>-c, --copyJars</td>
<td>Copy the required JAR files from hadoopHiveHome and configuration files from hadoopHiveConfPath.</td>
</tr>
<tr>
<td>-v, --verifyJars</td>
<td>Verify that the required files are present in hcatLibPath. Check the output of hcatUtil for error and warning messages.</td>
</tr>
<tr>
<td>--hadoopHiveHome=</td>
<td>Paths to the Hadoop, Hive, and HCatalog home directories. Separate directories by semicolons (;). Enclose paths in double quotes.</td>
</tr>
<tr>
<td>&quot;value1;value2;...&quot;</td>
<td>Note: Always place $HADOOP_HOME on the path before $HIVE_HOME. In some Hadoop distributions, these two directories contain different versions of the same library.</td>
</tr>
<tr>
<td>--hadoopHiveConfPath=</td>
<td>Paths of the following configuration files:</td>
</tr>
<tr>
<td>&quot;value1;value2;...&quot;</td>
<td>- hive-site.xml</td>
</tr>
<tr>
<td></td>
<td>- core-site.xml</td>
</tr>
<tr>
<td></td>
<td>- yarn-site.xml</td>
</tr>
<tr>
<td></td>
<td>- webhcat-site.xml (optional with the default configuration; required if you use WebHCat instead of HiveServer2)</td>
</tr>
<tr>
<td></td>
<td>- hdfs-site.xml</td>
</tr>
<tr>
<td></td>
<td>Separate directories by semicolons (;). Enclose paths in double quotes.</td>
</tr>
<tr>
<td></td>
<td>In previous releases of Vertica this parameter was optional under some conditions. It is now required.</td>
</tr>
</tbody>
</table>
--hcatLibPath="value" | Output path for the libraries and configuration files. On a Vertica node, use /opt/vertica/packages/hcat/lib. If you have previously run hcatUtil with a different version of Hadoop, first remove the old JAR files from the output directory (all except vertica-hcatalogudl.jar).

After you have copied the files and verified them, install the HCatalog connector.

Install the HCatalog Connector

On the same node where you copied the files from hcatUtil, install the HCatalog connector by running the install.sql script. This script resides in the ddl/ folder under your HCatalog connector installation path. This script creates the library and VHCatSource and VHCatParser.

**Note:**
The data that was copied using hcatUtil is now stored in the database. If you change any of those values in Hadoop, you need to rerun hcatUtil and install.sql. The following statement returns the names of the libraries and configuration files currently being used:

```sql
=> SELECT dependencies FROM user_libraries WHERE lib_name='VHCatalogLib';
```

Now you can create HCatalog schema parameters, which point to your existing Hadoop services, as described in Defining a Schema Using the HCatalog Connector.

Upgrading to a New Version of Vertica

After upgrading to a new version of Vertica, perform the following steps:

1. Uninstall the HCatalog Connector using the uninstall.sql script. This script resides in the ddl/ folder under your HCatalog connector installation path.

2. Delete the contents of the hcatLibPath directory except for vertica-hcatalogudl.jar.

3. Rerun hcatUtil.

4. Reinstall the HCatalog Connector using the install.sql script.

For more information about upgrading Vertica, see Upgrade Vertica.
Additional Options for Hadoop Columnar File Formats

When reading Hadoop columnar file formats (ORC or Parquet), the HCatalog Connector attempts to use the built-in readers. When doing so, it uses the hdfs scheme by default. In order to use the hdfs scheme, you must perform the configuration described in Configuring HDFS Access.

To have the HCatalog Connector use the webhdfs scheme instead, use ALTER DATABASE to set HDFSUseWebHDFS to 1. This setting applies to all HDFS access, not just the HCatalog Connector.

Configuring Security

You can use any of the security options described in Accessing Kerberized HDFS Data to access Hive data. This topic describes additional steps needed specifically for using the HCatalog Connector.

If you use Kerberos from Vertica, the HCatalog Connector can use an authorization service (Sentry or Ranger). If you use delegation tokens, you must manage authorization yourself.

Kerberos

You can use Kerberos from Vertica as described in Using Kerberos with Vertica.

How you configure the HCatalog Connector depends on how Hive manages authorization.

- If Hive uses Sentry to manage authorization, and if Sentry uses ACL synchronization, then the HCatalog Connector must access HDFS as the current user. Verify that the EnableHCatImpersonation configuration parameter is set to 1 (the default). ACL synchronization automatically provides authorized users with read access to the underlying HDFS files.
- If Hive uses Sentry without ACL synchronization, then the HCatalog Connector must access HDFS data as the Vertica principal. (The user still authenticates and accesses metadata normally.) Set the EnableHCatImpersonation configuration parameter to 0. The Vertica principal must have read access to the underlying HDFS files.
- If Hive uses Ranger to manage authorization, and the Vertica users have read access to the underlying HDFS files, then you can use user impersonation. Verify that the
EnableHCatImpersonation configuration parameter is set to 1 (the default). You can, instead, disable user impersonation and give the Vertica principal read access to the HDFS files.

- If Hive uses either Sentry or Ranger, the HCatalog Connector must use HiveServer2 (the default). WebHCat does not support authorization services.
- If Hive does not use an authorization service, or if you are connecting to Hive using WebHCat instead of HiveServer2, then the HCatalog Connector accesses Hive as the current user. Verify that EnableHCatImpersonation is set to 1. All users must have read access to the underlying HDFS files.

In addition, in your Hadoop configuration files (core-site.xml in most distributions), make sure that you enable all Hadoop components to impersonate the Vertica user. The easiest way to do so is to set the proxyuser property using wildcards for all users on all hosts and in all groups. Consult your Hadoop documentation for instructions. Make sure you set this property before running hcatUtil (see Configuring Vertica for HCatalog).

**Delegation Tokens**

You can use delegation tokens for a session as described in Bring Your Own Delegation Token. When using the HCatalog Connector you specify two delegation tokens, one for the data and one for the metadata. The metadata token is tied to a Hive schema. See HadoopImpersonationConfig Format for information about how to specify these two delegation tokens.

**Verifying Security Configuration**

To verify that the HCatalog Connector can access Hive data, use the HCATALOGCONNECTOR_CONFIG_CHECK function.

For more information about testing your configuration, see Verifying HDFS Configuration.
Defining a Schema Using the HCatalog Connector

After you set up the HCatalog Connector, you can use it to define a schema in your Vertica database to access the tables in a Hive database. You define the schema using the `CREATE HCATALOG SCHEMA` statement.

When creating the schema, you must supply the name of the schema to define in Vertica. Other parameters are optional. If you do not supply a value, Vertica uses default values. Vertica reads some default values from the HDFS configuration files; see Configuration Parameters.

To create the schema, you must have read access to all Hive data. Verify that the user creating the schema has been granted access, either directly or through an authorization service such as Sentry or Ranger. The dbadmin user has no automatic special privileges.

After you create the schema, you can change many parameters using the `ALTER HCATALOG SCHEMA` statement.

After you define the schema, you can query the data in the Hive data warehouse in the same way you query a native Vertica table. The following example demonstrates creating an HCatalog schema and then querying several system tables to examine the contents of the new schema. See Viewing Hive Schema and Table Metadata for more information about these tables.

```sql
=> CREATE HCATALOG SCHEMA hcat WITH HOSTNAME='hcathost' PORT=9083
    HCATALOG_SCHEMA='default' HIVESERVER2_HOSTNAME='hs.example.com'
    SSL_CONFIG='/etc/hadoop/conf/ssl-client.xml' HCATALOG_USER='admin';
CREATE SCHEMA
=> \
Expanded display is on.

=> SELECT * FROM v_catalog.hcatalog_schemata;
- [ RECORD 1 ]----------------------------------------------+-
schema_id | 45035996273748224
schema_name | hcat
schema_owner_id | 45035996273704962
schema_owner | admin
create_time | 2017-12-05 14:43:03.353404-05
hostname | hcathost
port | -1
hiveserver2_hostname | hs.example.com
webservice_hostname |
webservice_port | 50011
webhdfs_address | hs.example.com:50070
```
**Configuration Parameters**

The HCatalog Connector uses the following values from the Hadoop configuration files if you do not override them when creating the schema.

```sql
=> SELECT * FROM v_catalog.hcatalog_table_list;
- [ RECORD 1 ]-------------------------
table_schema_id | 45035996273748224
table_schema | hcat
hcatalog_schema | default
table_name | nation
hcatalog_user_name | admin

- [ RECORD 2 ]-------------------------
table_schema_id | 45035996273748224
table_schema | hcat
hcatalog_schema | default
table_name | raw
hcatalog_user_name | admin

- [ RECORD 3 ]-------------------------
table_schema_id | 45035996273748224
table_schema | hcat
hcatalog_schema | default
table_name | raw_rcfile
hcatalog_user_name | admin

- [ RECORD 4 ]-------------------------
table_schema_id | 45035996273748224
table_schema | hcat
hcatalog_schema | default
table_name | raw_sequence
hcatalog_user_name | admin
```
### File Properties

<table>
<thead>
<tr>
<th>File</th>
<th>Properties</th>

### Using Partitioned Data

Hive supports partitioning data, as in the following example:

```sql
hive> create table users (name varchar(64), address string, city varchar(64)) partitioned by (state varchar(64)) stored as orc;
```

Vertica takes advantage of partitioning information for formats that provide it in metadata (ORC and Parquet). Queries can skip irrelevant partitions entirely (partition pruning), and Vertica does not need to materialize partition columns. For more about use of partitions, see [Improving Query Performance](#) and [Using Partition Columns](#).

By default Hive stores partition information under the path for the table definition, which might be local to Hive. However, a Hive user can choose to store partition information elsewhere, such as in a shared location like S3, as in the following example:
hive> alter table users add partition (state='MA')
location 's3a://DataLake/partitions/users/state=MA';

During query execution, therefore, Vertica must query Hive for the location of a table's partition information.

Because the additional Hive queries can be expensive, Vertica defaults to looking for partition information only in Hive's default location. If your Hive table specified a custom location, use the CUSTOM_PARTITIONS parameter:

=> CREATE HCATALOG SCHEMA hcat WITH HOSTNAME='hcathost' PORT=9083
   HCATALOG_SCHEMA='default' HIVESERVER2_HOSTNAME='hs.example.com'
   SSL_CONFIG='/etc/hadoop/conf/ssl-client.xml' HCATALOG_USER='admin'
   CUSTOM_PARTITIONS='yes';

Vertica can access partition locations in the S3 and S3a schemes, and does not support the S3n scheme.

The HIVE_CUSTOM_PARTITIONS_ACCESSED system table records all custom partition locations that have been used in queries.

**Using the HCatalog Connector with WebHCat**

By default the HCatalog Connector uses HiveServer2 to access Hive data. If you are instead using WebHCat, set the HCatalogConnectorUseHiveServer2 configuration parameter to 0 before creating the schema as in the following example.

=> ALTER DATABASE DEFAULT SET PARAMETER HCatalogConnectorUseHiveServer2 = 0;
=> CREATE HCATALOG SCHEMA hcat WITH WEBSERVICE_HOSTNAME='webhcat.example.com';

If you have previously used WebHCat, you can switch to using HiveServer2 by setting the configuration parameter to 1 and using ALTER HCATALOG SCHEMA to set HIVESERVER2_HOSTNAME. You do not need to remove the WebHCat values; the HCatalog Connector uses the value of HCatalogConnectorUseHiveServer2 to determine which parameters to use.

**Querying Hive Tables Using HCatalog Connector**

Once you have defined the HCatalog schema, you can query data from the Hive database by using the schema name in your query.
Since the tables you access through the HCatalog Connector act like Vertica tables, you can perform operations that use both Hive data and native Vertica data, such as a join:

```
=> SELECT u.FirstName, u.LastName, d.time, d.Message from UserData u
    -> JOIN hcat.messages d ON u.UserID = d.UserID LIMIT 10;

FirstName | LastName | time                  | Message
-----------|----------|-----------------------|---------------------
Whitney    | Kerr     | 2013-10-29 00:10:43   | hymenaeos cursus lorem Suspendis
Troy       | Oneal    | 2013-10-29 00:32:11   | porta Vivamus condimentum
Reene      | Coleman  | 2013-10-29 00:42:55   | lectus quis imperdiet
Fay        | Moss     | 2013-10-29 00:53:39   | sit eleifend tempus a aliquam mauris
Dominique  | Cabrera  | 2013-10-29 01:15:07   | turpis vehicula tortor
Mohammad   | Eaton    | 2013-10-29 00:21:27   | Fusce ad sem vehicula morbi
Cade       | Barr     | 2013-10-29 01:25:51   | sapien adipiscing eget Aliquam tor
Oprah      | Mcmillan | 2013-10-29 01:36:35   | varius Cum iaculis metus
Astra      | Sherman  | 2013-10-29 01:58:03   | dignissim odio Pellentesque primis
Chelsea    | Malone   | 2013-10-29 02:00:47   | pede tempor dignissim Sed luctus
```

### Viewing Hive Schema and Table Metadata

When using Hive, you access metadata about schemas and tables by executing statements written in HiveQL (Hive's version of SQL) such as `SHOW TABLES`. When using the HCatalog Connector, you can get metadata about the tables in the Hive database through several Vertica system tables.

There are four system tables that contain metadata about the tables accessible through the HCatalog Connector:

- **HCATALOG_SCHEMATA** lists all of the schemas that have been defined using the HCatalog Connector.
- **HCATALOG_TABLE_LIST** contains an overview of all of the tables available from all schemas defined using the HCatalog Connector. This table only shows the tables that the user querying the table can access. The information in this table is retrieved using
a single call to HiveServer2 for each schema defined using the HCatalog Connector, which means there is a little overhead when querying this table.

- **HCATALOG_TABLES** contains more in-depth information than HCATALOG_TABLE_LIST.
- **HCATALOG_COLUMNS** lists metadata about all of the columns in all of the tables available through the HCatalog Connector. As for HCATALOG_TABLES, querying this table results in one call to HiveServer2 per table, and therefore can take a while to complete.

The following example demonstrates querying the system tables containing metadata for the tables available through the HCatalog Connector.

```sql
=> CREATE HCATALOG SCHEMA hcat WITH hostname='hcathost'
-> HCATALOG_SCHEMA='default' HCATALOG_DB='default' HCATALOG_USER='hcatuser';
CREATE SCHEMA
=> SELECT * FROM HCATALOG_SCHEMATA;
- [ RECORD 1 ]-----------------------------

</table>
Synchronizing an HCatalog Schema or Table With a Local Schema or Table

Querying data from an HCatalog schema can be slow due to Hive performance issues. This slow performance can be especially annoying when you want to examine the structure of the tables in the Hive database. Getting this information from Hive requires you to query the HCatalog schema's metadata using the HCatalog Connector.

To avoid this performance problem you can use the SYNC_WITH_HCATALOG_SCHEMA function to create a snapshot of the HCatalog schema's metadata within a Vertica schema. You supply this function with the name of a pre-existing Vertica schema, typically the one created through CREATE HCATALOG SCHEMA, and a Hive schema available through the HCatalog Connector. You must have permission both in Vertica to write the data and in Hive and HDFS to read it.

**Note:**
To synchronize a schema, you must have read permission for the underlying files in HDFS. If Hive uses Sentry to manage authorization, then you can use ACL synchronization to manage HDFS access. Otherwise, the user of this function must have read access in HDFS.

The function creates a set of external tables within the Vertica schema that you can then use to examine the structure of the tables in the Hive database. Because the metadata in the Vertica schema is local, query planning is much faster. You can also use standard Vertica statements and system-table queries to examine the structure of Hive tables in the HCatalog schema.

**Caution:**
The SYNC_WITH_HCATALOG_SCHEMA function overwrites tables in the Vertica schema whose names match a table in the HCatalog schema. Do not use the Vertica schema to store other data.

When SYNC_WITH_HCATALOG_SCHEMA creates tables in Vertica, it matches Hive's STRING and BINARY types to Vertica's VARCHAR(65000) and VARBINARY(65000) types. You might want to change these lengths, using ALTER TABLE SET DATA TYPE, in two cases:

- If the value in Hive is larger than 65000 bytes, increase the size and use LONG VARCHAR or LONG VARBINARY to avoid data truncation. If a Hive string uses multi-
byte encodings, you must increase the size in Vertica to avoid data truncation. This step is needed because Hive counts string length in characters while Vertica counts it in bytes.

- If the value in Hive is much smaller than 65000 bytes, reduce the size to conserve memory in Vertica.

The Vertica schema is just a snapshot of the HCatalog schema's metadata. Vertica does not synchronize later changes to the HCatalog schema with the local schema after you call SYNC_WITH_HCATALOG_SCHEMA. You can call the function again to re-synchronize the local schema to the HCatalog schema. If you altered column data types, you will need to repeat those changes because the function creates new external tables.

By default, SYNC_WITH_HCATALOG_SCHEMA does not drop tables that appear in the local schema that do not appear in the HCatalog schema. Thus, after the function call the local schema does not reflect tables that have been dropped in the Hive database since the previous call. You can change this behavior by supplying the optional third Boolean argument that tells the function to drop any table in the local schema that does not correspond to a table in the HCatalog schema.

Instead of synchronizing the entire schema, you can synchronize individual tables by using SYNC_WITH_HCATALOG_SCHEMA_TABLE. If the table already exists in Vertica the function overwrites it. If the table is not found in the HCatalog schema, this function returns an error. In all other respects this function behaves in the same way as SYNC_WITH_HCATALOG_SCHEMA.

If you change the settings of any HCatalog Connector configuration parameters (Apache Hadoop Parameters), you must call this function again.

**Examples**

The following example demonstrates calling SYNC_WITH_HCATALOG_SCHEMA to synchronize the HCatalog schema in Vertica with the metadata in Hive. Because it synchronizes the HCatalog schema directly, instead of synchronizing another schema with the HCatalog schema, both arguments are the same.

```sql
=> CREATE HCATALOG SCHEMA hcat WITH hostname='hcathost' HCATALOG_SCHEMA='default'
               HCATALOG_USER='hcatuser';
CREATE SCHEMA
=> SELECT sync_with_hcatalog_schema('hcat', 'hcat');
sync_with_hcatalog_schema
------------------------------------------
Schema hcat synchronized with hcat
tables in hcat = 56
```
Tables altered in hcat = 0
Tables created in hcat = 56
Stale tables in hcat = 0
Table changes erred in hcat = 0
(1 row)

=> - - Use vsql's \d command to describe a table in the synced schema

=> \d hcat.messages

List of Fields by Tables

<td></td>
</tr>
<tr>
<td>hcat</td>
<td>messages</td>
<td>message</td>
<td>varchar</td>
<td>65000</td>
<td>f</td>
<td>f</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

(4 rows)

This example shows synchronizing with a schema created using CREATE HCATALOG
SCHEMA. Synchronizing with a schema created using CREATE SCHEMA is also supported.

You can query tables in the local schema that you synchronized with an HCatalog schema. However, querying tables in a synchronized schema isn't much faster than directly querying the HCatalog schema, because SYNC_WITH_HCATALOG_SCHEMA only duplicates the HCatalog schema's metadata. The data in the table is still retrieved using the HCatalog Connector.

Data Type Conversions from Hive to Vertica

The data types recognized by Hive differ from the data types recognized by Vertica. The following table lists how the HCatalog Connector converts Hive data types into data types compatible with Vertica.

<table>
<thead>
<tr>
<th>Hive Data Type</th>

<td>VARCHAR (65000) containing a JSON-format representation of the struct.</td>
</tr>
</tbody>
</table>

### Data-Width Handling Differences Between Hive and Vertica

The HCatalog Connector relies on Hive SerDe classes to extract data from files on HDFS. Therefore, the data read from these files are subject to Hive's data width restrictions. For example, suppose the SerDe parses a value for an INT column into a value that is greater than $2^{32} - 1$ (the maximum value for a 32-bit integer). In this case, the value is rejected even if it would fit into a Vertica's 64-bit INTEGER column because it cannot fit into Hive's 32-bit INT.
Hive measures CHAR and VARCHAR length in characters and Vertica measures them in bytes. Therefore, if multi-byte encodings are being used (like Unicode), text might be truncated in Vertica.

Once the value has been parsed and converted to a Vertica data type, it is treated as native data. This treatment can result in some confusion when comparing the results of an identical query run in Hive and in Vertica. For example, if your query adds two INT values that result in a value that is larger than $2^{32}-1$, the value overflows its 32-bit INT data type, causing Hive to return an error. When running the same query with the same data in Vertica using the HCatalog Connector, the value will probably still fit within Vertica's 64-int value. Thus the addition is successful and returns a value.

**Using Nonstandard SerDes**

Hive stores its data in unstructured flat files located in the Hadoop Distributed File System (HDFS). When you execute a Hive query, it uses a set of serializer and deserializer (SerDe) classes to extract data from these flat files and organize it into a relational database table. For Hive to be able to extract data from a file, it must have a SerDe that can parse the data the file contains. When you create a table in Hive, you can select the SerDe to be used for the table's data.

Hive has a set of standard SerDes that handle data in several formats such as delimited data and data extracted using regular expressions. You can also use third-party or custom-defined SerDes that allow Hive to process data stored in other file formats. For example, some commonly-used third-party SerDes handle data stored in JSON format.

The HCatalog Connector directly fetches file segments from HDFS and uses Hive's SerDes classes to extract data from them. The Connector includes all Hive's standard SerDes classes, so it can process data stored in any file that Hive natively supports. If you want to query data from a Hive table that uses a custom SerDe, you must first install the SerDe classes on the Vertica cluster.

**Determining Which SerDe You Need**

If you have access to the Hive command line, you can determine which SerDe a table uses by using Hive's SHOW CREATE TABLE statement. This statement shows the HiveQL statement needed to recreate the table. For example:
In the example, `ROW FORMAT SERDE` indicates that a special SerDe is used to parse the data files. The next row shows that the class for the SerDe is named `org.apache.hadoop.hive.contrib.serde2.JsonSerde`. You must provide the HCatalog Connector with a copy of this SerDe class so that it can read the data from this table.

You can also find out which SerDe class you need by querying the table that uses the custom SerDe. The query will fail with an error message that contains the class name of the SerDe needed to parse the data in the table. In the following example, the portion of the error message that names the missing SerDe class is in bold.

```sql
=> SELECT * FROM hcat.jsontable;
ERROR 3399: Failure in UDx RPC call InvokePlanUDL(): Error in User Defined Object [VHCatSource], error code: 0
HINT If error message is not descriptive or local, may be we cannot read metadata from hive metastore thrift://hcathost:9083 or HDFS namenode (check UDxLogs/UDxFencedProcessesJava.log in the catalog directory for more information)
at com.vertica.hcatalogudl.HCatalogSplitsNoOpSourceFactory.plan(HCatalogSplitsNoOpSourceFactory.java:98)
at com.vertica.udxfence.UDxExecContext.planUDSource(UDxExecContext.java:898)
...```

---

**Installing the SerDe on the Vertica Cluster**

You usually have two options to getting the SerDe class file the HCatalog Connector needs:
Find the installation files for the SerDe, then copy those over to your Vertica cluster. For example, there are several third-party JSON SerDes available from sites like Google Code and GitHub. You may find the one that matches the file installed on your Hive cluster. If so, then download the package and copy it to your Vertica cluster.

- Directly copy the JAR files from a Hive server onto your Vertica cluster. The location for the SerDe JAR files depends on your Hive installation. On some systems, they may be located in /usr/lib/hive/lib.

Wherever you get the files, copy them into the /opt/vertica/packages/hcat/lib directory on every node in your Vertica cluster.

**Important:**
If you add a new host to your Vertica cluster, remember to copy every custom SerDer JAR file to it.

### Troubleshooting HCatalog Connector Problems

You may encounter the following issues when using the HCatalog Connector.

#### Connection Errors

The HCatalog Connector can encounter errors both when you define a schema and when you query it. The types of errors you get depend on which `CREATE HCATALOG SCHEMA` parameters are incorrect. Suppose you have incorrect parameters for the metastore database, but correct parameters for HiveServer2. In this case, HCatalog-related system table queries succeed, while queries on the HCatalog schema fail. The following example demonstrates creating an HCatalog schema with the correct default HiveServer2 information. However, the port number for the metastore database is incorrect.

```sql
=> CREATE HCATALOG SCHEMA hcat2 WITH hostname='hcathost'
-> HCATALOG_SCHEMA='default' HCATALOG_USER='hive' PORT=1234;

CREATE SCHEMA
=> SELECT * FROM HCATALOG_TABLE_LIST;
-[ RECORD 1 ]------------------------
| table_schema_id | 45035996273864536 |
| table_schema     | hcat2             |
| hcatalog_schema  | default           |
| table_name       | test              |
```
To resolve these issues, you must drop and recreate the schema or alter the schema to correct the parameters. If you still have issues, determine whether there are connectivity issues between your Vertica cluster and your Hadoop cluster. Such issues can include a firewall that prevents one or more Vertica hosts from contacting the HiveServer2, metastore, or HDFS hosts.

**UDx Failure When Querying Data: Error 3399**

You might see an error message when querying data (as opposed to metadata like schema information). This might be accompanied by a ClassNotFoundException in the log. This can happen for the following reasons:

- You are not using the same version of Java on your Hadoop and Vertica nodes. In this case you need to change one of them to match the other.
- You have not used hcatUtil to copy all Hadoop and Hive libraries and configuration files to Vertica, or you ran hcatutil and then changed your version of Hadoop or Hive.
- You upgraded Vertica to a new version and did not rerun hcatutil and reinstall the HCatalog Connector.
- The version of Hadoop you are using relies on a third-party library that you must copy manually.
- You are reading files with LZO compression and have not copied the libraries or set the io.compression.codecs property in core-site.xml.
- You are reading Parquet data from Hive, and columns were added to the table after some data was already present in the table. Adding columns does not update existing data, and the ParquetSerDe provided by Hive and used by the HCatalog Connector does not handle this case. This error is due to a limitation in Hive and there is no workaround.
The query is taking too long and is timing out. If this is a frequent problem, you can increase the value of the UDxFencedBlockTimeout configuration parameter. See General Parameters.

If you did not copy the libraries or configure LZO compression, follow the instructions in Configuring Vertica for HCatalog.

If the Hive jars that you copied from Hadoop are out of date, you might see an error message like the following:

```
ERROR 3399: Failure in UDx RPC call InvokePlanUDL(): Error in User Defined Object [VHCatSource], error code: 0 Error message is [ Found interface org.apache.hadoop.mapreduce.JobContext, but class was expected ]
HINT hive metastore service is thrift://localhost:13433 (check UDxLogs/UDxFencedProcessesJava.log in the catalog directory for more information)
```

This error usually signals a problem with hive-hcatalog-core jar. Make sure you have an up-to-date copy of this file. Remember that if you rerun hcatUtil you also need to re-create the HCatalog schema.

You might also see a different form of this error:

```
ERROR 3399: Failure in UDx RPC call InvokePlanUDL(): Error in User Defined Object [VHCatSource], error code: 0 Error message is [ javax/servlet/Filter ]
```

This error can be reported even if hcatUtil reports that your libraries are up to date. The javax.servlet.Filter class is in a library that some versions of Hadoop use but that is not usually part of the Hadoop installation directly. If you see an error mentioning this class, locate servlet-api-*.jar on a Hadoop node and copy it to the hcat/lib directory on all database nodes. If you cannot locate it on a Hadoop node, locate and download it from the Internet. (This case is rare.) The library version must be 2.3 or higher.

After you have copied the jar to the hcat/lib directory, reinstall the HCatalog connector as explained in Configuring Vertica for HCatalog.

**Authentication Error When Querying Data**

You might have successfully created a schema using CREATE HCATALOG SCHEMA but get errors at query time such as the following:

```
=> SELECT * FROM hcat.clickdata;
ERROR 6776: Failed to glob [hdfs:///user/hive/warehouse/click-*.parquet] because of error: hdfs:///user/hive/warehouse/click-12214.parquet: statAll failed;
  error: AuthenticationFailed
```
You might see this error if Hive uses an authorization service. If the permissions on the underlying files in HDFS match those in the authorization service, then Vertica must use user impersonation when accessing that data. To enable user impersonation, set the EnableHCatImpersonation configuration parameter to 1.

Vertica uses the database principal to access HDFS. Therefore, if EnableHCatImpersonation is 0, the Vertica database principal must have access to the data inside the hive warehouse on HDFS. If it does not, you might see the following error:

```sql
=> SELECT * FROM hcat.salesdata;
ERROR 6776: Failed to glob [vertica-hdfs:///hive/warehouse/sales/*/*] because of error: vertica-hdfs:///hive/warehouse/sales/: listStat failed; error: Permission denied: user=vertica, access=EXECUTE, inode="/hive/warehouse/sales":hdfs:hdfs:d----
```

The URL scheme in this error message has been changed from hdfs to vertica-hdfs. This is an internal scheme and is not valid in URLs outside of Vertica. You cannot use this scheme when specifying paths in HDFS.

### Differing Results Between Hive and Vertica Queries

Sometimes, running the same query on Hive and on Vertica through the HCatalog Connector can return different results. There are a few common causes of this problem.

This discrepancy is often caused by the differences between the data types supported by Hive and Vertica. See [Data Type Conversions from Hive to Vertica](#) for more information about supported data types.

If Hive string values are being truncated in Vertica, this might be caused by multi-byte character encodings in Hive. Hive reports string length in characters, while Vertica records it in bytes. For a two-byte encoding such as Unicode, you need to double the column size in Vertica to avoid truncation.

Discrepancies can also occur if the Hive table uses partition columns of types other than string.

If the Hive table stores partition data in custom locations instead of the default, you will see different query results if you do not specify the CUSTOM_PARTITIONS parameter when creating the Vertica schema. See [Using Partitioned Data](#). Further, even when using custom partitions, there are differences between Vertica and Hive:

- If a custom partition is unavailable at query time, Hive ignores it and returns the rest of the results. Vertica reports an error.
- If a partition is altered in Hive to use a custom location after table creation, Hive reads data from only the new location while Vertica reads data from both the default and the new locations.
- If a partition value and its corresponding directory name disagree, Hive uses the value in its metadata while Vertica uses the value in the directory name.

The following example illustrates these differences. A table in Hive, partitioned on the state column, starts with the following data:

```sql
hive> select * from inventory;

<table>
<thead>
<tr>
<th>inventory.ID</th>
<th>inventory.quant</th>
<th>inventory.state</th>
</tr>
</thead>
<tbody>
<tr>
<td>2</td>
<td>300</td>
<td>CA</td>
</tr>
<tr>
<td>4</td>
<td>400</td>
<td>CA</td>
</tr>
<tr>
<td>5</td>
<td>500</td>
<td>DC</td>
</tr>
<tr>
<td>1</td>
<td>100</td>
<td>PA</td>
</tr>
<tr>
<td>2</td>
<td>200</td>
<td>PA</td>
</tr>
</tbody>
</table>
```

The partition for one state, CA, is then moved. This directory contains some data already. Note that the query now returns different results for the CA partitions:

```sql
hive> ALTER TABLE inventory PARTITION (state='CA') SET LOCATION 'hdfs:///partitions/inventory/state=MD';
hive> select * from inventory;

<table>
<thead>
<tr>
<th>inventory.ID</th>
<th>inventory.quant</th>
<th>inventory.state</th>
</tr>
</thead>
<tbody>
<tr>
<td>20</td>
<td>30000</td>
<td>CA</td>
</tr>
<tr>
<td>40</td>
<td>40000</td>
<td>CA</td>
</tr>
<tr>
<td>5</td>
<td>500</td>
<td>DC</td>
</tr>
<tr>
<td>1</td>
<td>100</td>
<td>PA</td>
</tr>
<tr>
<td>2</td>
<td>200</td>
<td>PA</td>
</tr>
</tbody>
</table>
```

The CA partitions were moved to a directory named state=MD. Vertica reports the state for the first two rows, the ones in the new partition location, as MD because of the directory name. It also reports the CA values from the original location in addition to the new one:

```sql
=> SELECT * FROM hcat.inventory;

<table>
<thead>
<tr>
<th>ID</th>
<th>quant</th>
<th>state</th>
</tr>
</thead>
<tbody>
<tr>
<td>20</td>
<td>30000</td>
<td>MD</td>
</tr>
<tr>
<td>40</td>
<td>40000</td>
<td>MD</td>
</tr>
<tr>
<td>2</td>
<td>300</td>
<td>CA</td>
</tr>
<tr>
<td>4</td>
<td>400</td>
<td>CA</td>
</tr>
<tr>
<td>1</td>
<td>100</td>
<td>PA</td>
</tr>
<tr>
<td>2</td>
<td>200</td>
<td>PA</td>
</tr>
<tr>
<td>5</td>
<td>500</td>
<td>DC</td>
</tr>
</tbody>
</table>
```

(7 rows)
HCatalog Connector Installation Fails on MapR

If you mount a MapR file system as an NFS mount point and then install the HCatalog Connector, it could fail with a message like the following:

ROLLBACK 2929: Couldn't create new UDx side process, failed to get UDx side process info from zygote: Broken pipe

This might be accompanied by an error like the following in dbLog:

java.io.IOException: Couldn't get lock for /home/dbadmin/node02_catalog/UDxFencedProcessesJava.log
  at java.util.logging.FileHandler.openFiles(FileHandler.java:389)
  at java.util.logging.FileHandler.<init>(FileHandler.java:287)
  at com.vertica.udxfence.UDxLogger.setup(UDxLogger.java:78)
  at com.vertica.udxfence.UDxSideProcess.go(UDxSideProcess.java:75)
...

This error occurs if you locked your NFS mount point when creating it. Locking is the default. If you use the HCatalog Connector with MapR mounted as an NFS mount point, you must create the mount point with the -o noblock option. For example:

```
sudo mount -o noblock -t nfs MaprCLDBServiceHostname:/mapr/ClusterName/vertica/$(hostname -f)/ vertica
```

You can use the HCatalog Connector with MapR without mounting the MapR file system. If you mount the MapR file system, you must do so without a lock.

Excessive Query Delays

Network issues or high system loads on the HiveServer2 server can cause long delays while querying a Hive database using the HCatalog Connector. While Vertica cannot resolve these issues, you can set parameters that limit how long Vertica waits before canceling a query on an HCatalog schema. You can set these parameters globally using Vertica configuration parameters. You can also set them for specific HCatalog schemas in the CREATE HCATALOG SCHEMA statement. These specific settings override the settings in the configuration parameters.

The HCatConnectionTimeout configuration parameter and the CREATE HCATALOG SCHEMA statement's HCATALOG_CONNECTION_TIMEOUT parameter control how many seconds the HCatalog Connector waits for a connection to the HiveServer2 server. A value of 0 (the default setting for the configuration parameter) means to wait indefinitely. If the server
does not respond by the time this timeout elapses, the HCatalog Connector breaks the connection and cancels the query. If you find that some queries on an HCatalog schema pause excessively, try setting this parameter to a timeout value, so the query does not hang indefinitely.

The HCatSlowTransferTime configuration parameter and the CREATE HCATALOG SCHEMA statement's HCATALOG_SLOW TRANSFER TIME parameter specify how long the HCatalog Connector waits for data after making a successful connection to the server. After the specified time has elapsed, the HCatalog Connector determines whether the data transfer rate from the server is at least the value set in the HCatSlowTransferLimit configuration parameter (or by the CREATE HCATALOG SCHEMA statement's HCATALOG_SLOW TRANSFER_LIMIT parameter). If it is not, then the HCatalog Connector terminates the connection and cancels the query.

You can set these parameters to cancel queries that run very slowly but do eventually complete. However, query delays are usually caused by a slow connection rather than a problem establishing the connection. Therefore, try adjusting the slow transfer rate settings first. If you find the cause of the issue is connections that never complete, you can alternately adjust the Linux TCP socket timeouts to a suitable value instead of relying solely on the HCatConnectionTimeout parameter.

**SerDe Errors**

Errors can occur if you attempt to query a Hive table that uses a nonstandard SerDe. If you have not installed the SerDe JAR files on your Vertica cluster, you receive an error similar to the one in the following example:

```
=> SELECT * FROM hcat.jsontable;
ERROR 3399: Failure in U Dx RPC call InvokePlanUDL(): Error in User Defined Object [VHCatSource], error code: 0
(message:org.apache.hive.serde2.SerDeException SerDe com.cloudera.hive.serde.JSONSerDe does not exist) ] HINT If error message is not descriptive or local, maybe we cannot read metadata from hive metastore service thrift://hcathost:9083 or HDFS namenode (check U DxLogs/U DxFencedProcessesJava.log in the catalog directory for more information) at com.vertica.hcatalogudl.HCatalogSplitsNoOpSourceFactory .plan(HCatalogSplitsNoOpSourceFactory.java:98) at com.vertica.udxfence.U DxExecContext.planUDSource(U DxExecContext.java:898) ...
```

...
In the error message, you can see that the root cause is a missing SerDe class (shown in bold). To resolve this issue, install the SerDe class on your Vertica cluster. See Using Nonstandard SerDes for more information.

This error may occur intermittently if just one or a few hosts in your cluster do not have the SerDe class.

**Integrating With Cloudera Manager**

The Cloudera distribution of Hadoop includes Cloudera Manager, a web-based tool for managing a Hadoop cluster. Cloudera Manager can manage any service for which a service description is available, including Vertica.

You can use Cloudera Manager to start, stop, and monitor individual database nodes or the entire database. You can manage both co-located and separate Vertica clusters—Cloudera can manage services on nodes that are not part of the Hadoop cluster.

You must install and configure your Vertica database before proceeding; you cannot use Cloudera Manager to create the database.

**Installing the Service**

**Note:**

Because the service has to send the database password over the network, you should enable encryption on your Hadoop cluster before proceeding.

A Cloudera Service Description (CSD) file describes a service that Cloudera can manage. The Vertica CSD is in /opt/vertica/share/CSD on a database node.

To install the Vertica CSD, follow these steps:

1. On a Vertica node, follow the instructions in VerticaAPIKey to generate an API key. You need this key to finish the installation of the CSD.
2. On the Hadoop node that hosts Cloudera Manager, copy the CSD file into /opt/cloudera/csd.
3. Restart Cloudera Manager:

   ```
   $ service cloudera-scm-server restart
   ```

4. In a web browser, go to Cloudera Manager and restart the Cloudera Management Service.
5. If your Vertica cluster is separate from your Hadoop cluster (not co-located on it): Use Cloudera Manager to add the hosts for your database nodes. If your cluster is co-located, skip this step.
6. Use Cloudera Manager to add the Vertica service.
7. On the "Role Assignment" page, select the hosts that are database nodes.
8. On the "Configuration" page, specify values for the following fields:
   - database name
   - agent port (accept the default if you’re not sure)
   - API key
   - database user to run as (usually dbadmin) and password

About the Agent

When you manage Vertica through Cloudera Manager, you are actually interacting with the Vertica Agent, not the database directly. The Agent runs on all database nodes and interacts with the database on your behalf. Management Console uses the same agent.

Most of the time this extra indirection is transparent to you.

A Cloudera-managed service contains one or more roles. In this case the service is "Vertica" and the single role is "Vertica Node".

Available Operations

Cloudera Manager shows two groups of operations. Service-level operations apply to the service on all nodes, while role-level operations apply only to a single node.

You can perform the following service-level operations on all nodes:

- Start: Starts the agent and, if it is not already running, the database.
- Stop: Stops the database and agent.
- Restart: Calls Stop and then Start.
- Add Role Instances: Adds new database nodes to Cloudera Manager. The nodes must already be part of the Vertica cluster, and the hosts must already be known to Cloudera Manager.
- Enter Maintenance Mode: Suppresses health alerts generated by Cloudera Manager.
- Exit Maintenance Mode: Resumes normal reporting.
- Update Memory Pool Size: Applies memory-pool settings from the Static Service Pools configuration page.
You can perform all of these operations except Add Role Instances on individual nodes as role-level operations.

**Managing Memory Pools**

Cloudera Manager allows you to change resource allocations, such as memory and CPU, for the nodes it manages. If you are using co-located clusters, centrally managing resources can simplify your cluster management. If you are using separate Hadoop and Vertica clusters, you might prefer to manage Vertica separately as described in Managing the Database in the Administrator's Guide.

Use the Cloudera Manager "Static Service Pools" configuration page to configure resource allocations. The "Vertica Memory Pool" value, specified in GB, is the maximum amount of memory to allocate to the database on each node. If the configuration page includes "Cgroup Memory Hard Limit", set it to the same value as "Vertica Memory Pool".

After you have set these values, you can use the "Update Memory Pool Size" operation to apply the value to the managed nodes. This operation is equivalent to `ALTER RESOURCE POOL GENERAL MAXMEMORYSIZE`. Configuration changes in "Static Service Pools" do not take effect in Vertica until you perform this operation.

**Uninstalling the Service**

To uninstall the Vertica CSD, follow these steps:

1. Stop the Vertica service and then remove it from Cloudera Manager.
2. Remove the CSD file from `/opt/cloudera/csd`.
3. From the command line, restart the Cloudera Manager server.
4. In Cloudera Manager, restart the Cloudera Management Service.

**Integrating Vertica with the MapR Distribution of Hadoop**

MapR is a distribution of Apache Hadoop produced by MapR Technologies that extends the standard Hadoop components with its own features. Vertica can integrate with MapR in the following ways:
You can read data from MapR through an NFS mount point. After you mount the MapR file system as an NFS mount point, you can use `CREATE EXTERNAL TABLE AS COPY` or `COPY` to access the data as if it were on the local file system. This option provides the best performance for reading data.

You can use the HCatalog Connector to read Hive data. Do not use the HCatalog Connector with ORC or Parquet data in MapR for performance reasons. Instead, mount the MapR file system as an NFS mount point and create external tables without using the Hive schema. For more about reading Hive data, see Using the HCatalog Connector.

You can create a storage location to store data in MapR using the native Vertica format (ROS). Mount the MapR file system as an NFS mount point and then use `CREATE LOCATION ...ALL NODES SHARED` to create a storage location. (CREATE LOCATION does not support NFS mount points in general, but does support them for MapR.)

**Note:**

If you create a Vertica database and place its initial storage location on MapR, Vertica designates the storage location for both DATA and TEMP usage. Vertica does not support TEMP storage locations on MapR, so after you create the location, you must alter it to store only DATA files. See Altering Location Use. Ensure that you have a TEMP location on the Linux file system.

Other Vertica integrations for Hadoop are not available for MapR.

For information on mounting the MapR file system as an NFS mount point, see Accessing Data with NFS and Configuring Vertica Analytics Platform with MapR on the MapR website. In particular, you must configure MapR to add Vertica as a MapR service.

## Examples

In the following examples, the MapR file system has been mounted as /mapr.

The following statement creates an external table from ORC data:

```
=> CREATE EXTERNAL TABLE t (a1 INT, a2 VARCHAR(20))
   AS COPY FROM '/mapr/data/file.orc' ORC;
```

The following statement creates an external table from Parquet data and takes advantage of partition pruning (see Using Partition Columns):
CREATE EXTERNAL TABLE t2 (id int, name varchar(50), created date, region varchar(50))
AS COPY FROM '/mapr/*/*/*' PARQUET(hive_partition_cols='created,region');

The following statement loads ORC data from MapR into Vertica:

=> COPY t FROM '/mapr/data/*.orc' ON ANY NODE ORC;

The following statements create a storage location to hold ROS data in the MapR file system:

=> CREATE LOCATION '/mapr/my.cluster.com/data' SHARED USAGE 'DATA' LABEL 'maprfs';
=> SELECT ALTER_LOCATION_USE('/mapr/my.cluster.com/data', '' , 'DATA');
Integrating with Apache Kafka

Vertica provides a high-performance mechanism for integrating with Apache Kafka, an open-source distributed real-time streaming platform. Because Vertica can both consume data from and produce data for Kafka, you can use Vertica as part of an automated analytics workflow: Vertica can retrieve data from Kafka, perform analytics on the data, and then send the results back to Kafka for consumption by other applications.

Prerequisites

- Install Vertica.
- Configure the database.
- Install and configure Apache Kafka.

Architecture Overview

The Vertica and Kafka integration provides the following features:

- A U Dx library containing functions that load and parse data from Kafka topics into Vertica.
- A job scheduler that uses the UDL library to continuously consume data from Kafka with exactly-once semantics.
- Push-based notifiers that send data collector messages from Vertica to Kafka.
- A KafkaExport function that sends Vertica data to Kafka.
Vertica as a Kafka Consumer

A Kafka consumer reads messages written to Kafka by other data streams. Because Vertica can read messages from Kafka, you can store and analyze data from any application that sends data to Kafka without configuring each individual application to connect to Vertica. Vertica provides tools to automatically or manually consume data loads from Kafka.

Manual Loads

Manually load a finite amount of data from Kafka by directly executing a COPY statement. This is useful if you want to analyze, test, or perform additional processing on a set of messages.
For more information, see Consuming Data From Kafka.

**Automatic Loads**

Automatically load data from Kafka with a job scheduler. A scheduler constantly loads data and ensures that each Kafka message is loaded exactly once.

You must install Java 8 on each Vertica node that runs the scheduler. For more information, see Automatically Consume Data From Kafka with the Scheduler.

**Vertica as a Kafka Producer**

A Kafka producer sends data to Kafka, which is then available to Kafka consumers for processing. You can send the following types of data to Kafka:

- Vertica analytics results. Use KafkaExport to export Vertica tables and queries.
- Health and performance data from Data Collector tables. Create push-based notifiers to send this data for consumption for third-party monitoring tools.
- Ad hoc messages. Use NOTIFY to signal that tasks such as stored procedures are complete.

For more information, see Producing Data for Kafka.

**Data Streaming Integration Terms**

Vertica uses the following terms to describe its streaming feature. These are general terms, which may differ from each specific streaming platform's terminology.

**Terminology**

<table>
<thead>
<tr>
<th>Term</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Host</td>
<td>A data streaming server.</td>
</tr>
<tr>
<td>Source</td>
<td>A feed of messages in a common category which streams into the same Vertica target tables. In Apache Kafka, a source is known as a topic.</td>
</tr>
</tbody>
</table>
### Data Loader Terminology

<table>
<thead>
<tr>
<th>Data Loader Term</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Scheduler</td>
<td>An external tool that schedules data loads from a streaming data source into Vertica.</td>
</tr>
<tr>
<td>Microbatch</td>
<td>A microbatch represents a single segment of a data load from a streaming data source. It encompasses all of the information the scheduler needs to perform a load from a streaming data source into Vertica.</td>
</tr>
<tr>
<td>Frame</td>
<td>The window of time during which a Scheduler executes microbatches to load data. This window controls the duration of each COPY statement the scheduler runs as a part of the microbatch. During the frame, the scheduler gives an active microbatch from each source an opportunity to load data. It gives priority to microbatches that need more time to load data based on the history of previous microbatches.</td>
</tr>
<tr>
<td>Stream</td>
<td>A feed of messages that is identified by a source and partition. The offset uniquely identifies the position within a particular source-partition stream.</td>
</tr>
<tr>
<td>Lane</td>
<td>A thread within a job scheduler instance that issues microbatches to perform the load.</td>
</tr>
</tbody>
</table>
### Configuring Vertica and Kafka

Both Vertica and Kafka have settings you can use to optimize your streaming data loads. The topics in this section explain these settings.

### Kafka and Vertica Configuration Settings

The following sections list settings for Vertica and Kafka that you can set to optimize performance.

### Vertica Producer Settings

These settings change how Vertica acts as a Kafka producer when using either the KafkaExport function or through notifiers. How you change these settings depends on the method you are using to export data (KafkaExport or Notifiers).

<table>
<thead>
<tr>
<th>Setting</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>queue.buffering.max.messages</td>
<td>Specifies the size of the Vertica producer queue. If Vertica generates too many messages too quickly, the queue can fill, resulting in dropped messages. Increasing this value consumes more memory, but reduces the chance of lost messages.</td>
</tr>
<tr>
<td>queue.buffering.max.ms</td>
<td>Specifies the frequency with which Vertica flushes the producer message queue. Lower values decrease latency at the cost of throughput. Higher values increase throughput, but can cause the producer queue (set by queue.buffering.max.messages) to fill more frequently,</td>
</tr>
<tr>
<td>Setting</td>
<td>Notes</td>
</tr>
<tr>
<td>-----------------------------</td>
<td>----------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>message.max.bytes</td>
<td>Specifies the maximum size of a Kafka protocol request message batch. This values should be the same on your sources, brokers, and producers.</td>
</tr>
<tr>
<td>message.send.max.retries</td>
<td>Specifies the number of attempts the producer makes to deliver the message to a broker. Higher values increase the chance of success.</td>
</tr>
<tr>
<td>retry.backoff.ms</td>
<td>Specifies the interval Vertica waits before resending a failed message.</td>
</tr>
<tr>
<td>request.required.acks</td>
<td>Specifies how many broker replica acknowledgments Kafka requires before it considers message delivery successful. Requiring acknowledgments increases latency. Removing acknowledgments increases the risk of message loss.</td>
</tr>
<tr>
<td>request.timeout.ms</td>
<td>Specifies the interval that the producer waits for a response from the broker. Broker response time is affected by server load and the number of message acknowledgments you require. Higher values increase latency.</td>
</tr>
<tr>
<td>compression.type</td>
<td>Specifies the compression algorithm used to encode data before sending it to a broker. Compression helps to reduce the network footprint of your Vertica producers and increase disk utilization. Vertica supports gzip and snappy.</td>
</tr>
</tbody>
</table>

**Kafka Broker Settings**

Kafka brokers receive messages from producers and distribute them among Kafka consumers. Configure these settings on the brokers themselves. These settings function independently of your producer and consumer settings. For detailed information on Apache Kafka broker settings, refer to the [Apache Kafka documentation](https://kafka.apache.org/documentation/).
### Vertica Consumer Settings

The following settings changes how Vertica acts when it consumes data from Kafka. You can set this value using the kafka_conf parameter on the KafkaSource UDL when directly executing a COPY statement. For schedulers, use the `-message_max_bytes` settings in the scheduler tool.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>message.max.bytes</td>
<td>Specifies the maximum size of a Kafka protocol request message batch. Set this value to a high enough value to prevent the overhead of fetching batches of messages interfering with loading data. Defaults to 24MB for newly-created load specs.</td>
</tr>
</tbody>
</table>

**Important:**

The meaning of this setting changed between Kafka version 0.10 and 0.11. If you have a scheduler you created using Vertica version 9.1.0 or earlier, see Changes to the `message.max.bytes` Setting in Kafka Version 0.11 and Later for settings you may need to change.
Directly Setting Kafka Library Options

Vertica relies on the open source rdkafka library to communicate with Apache Kafka. This library contains many options for controlling how Vertica and Kafka interact. You set the most common rdkafka library options through the settings in the vkconfig utility and the Kafka integration functions such as KafkaSource.

There are some rdkafka settings that cannot be directly set from within the Vertica. Under normal circumstances, you do not need to change them. However, if you find that you need to set a specific rdkafka setting that is not directly available from Vertica, you can directly pass options to the rdkafka library through the kafka_conf options.

The kafka_conf argument is supported when using a scheduler to load data from Kafka. You can set the values in the following ways (listed in order of lower to higher precedence):

- The Linux environment variable VERTICA_RDKAFKA_CONF set on the host where you run the vkconfig utility.
- The Linux environment variable VERTICA_RDKAFKA_CONF_KAFKA_CLUSTER set on the host where you run the vkconfig utility. The KAFKA_CLUSTER portion of the variable name is the name of a Kafka cluster you have defined using vkconfig's cluster utility. The settings in this environment variable only affect the specific Kafka cluster you name in KAFKA_CLUSTER.
- The --kafka_conf option of the vkconfig utility. This option can be set in the cluster, source, launch, and sync tools. Note that the setting only applies to each vkconfig utility call—it does not carry over to other vkconfig utility calls. For example, if you need to supply an option to the cluster and source tool, you must supply the kafka_conf option to both of them.

**Note:**
Using an environment variable to set your rdkafka options helps to keep your settings consistent. It is easy to forget to set the --kafka_conf option for each call to the vkconfig script.

All of these options cascade, so setting an option using the --kafka_conf argument to the cluster tool overrides the same option that was set in the environment variables.

You can also directly set rdkafka options when directly calling KafkaExport, KafkaSource, and several other Kafka integration functions. These functions accept a parameter named kafka_conf.
The kafka_conf Option Settings

The kafka_conf vkconfig option accepts a JSON object with settings in the following formats:

- One or more option/value pairs:
  ```
  --kafka_conf '{"option1":value1[, "option2":value2...]}'
  ```

- A single option with multiple values:
  ```
  --kafka_conf '{"option1":"value1[;value2...]"}'
  ```

See the [rdkafka project on GitHub](https://github.com/edenhill/rdkafka) for a list of the configuration options supported by the rdkafka library.

**Important:**
Arbitrarily setting options via kafka_conf can result in errors or unpredictable behavior. If you encounter a problem loading messages after setting an rdkafka option using the kafka_conf option, roll back your change to see if that was the source of the problem.

To prevent confusion, never set options via the kafka_conf parameter that can be set directly through scheduler options. For example, do not use the kafka_conf option to set Kafka's message.max.bytes setting. Instead, use the load-spec tool's --message-max-bytes option.

**Example**

The following example demonstrates disabling rdkafka's api.version.request option when manually loading messages using KafkaSource. You should always disable this option when accessing Kafka cluster running version 0.9 or earlier. See Configuring Vertica for Apache Kafka Version 0.9 and Earlier for more information.

```sql
=> CREATE FLEX TABLE iot_data();
CREATE TABLE => COPY public.iot_data SOURCE KafkaSource(stream='iot_json|0|2',
brokers='kafka-01.example.com:9092',
stop_on_eof=True,
kafka_conf='{"api.version.request":false}')
PARSER KafkaJSONParser();
```
This example demonstrates setting two options with a JSON object when calling the cluster tool. It disables the api.version.request option and enables CRC checks of messages from Kafka using the check.crcs option:

```
$ vkconfig cluster --create --cluster StreamCluster1
   --hosts kafka01.example.com:9092,kafka02.example.com:9092
   --conf myscheduler.config
   --kafka_conf '{"api.version.request":false, "check.crcs":true}'
```

The following example demonstrates setting the same options using an environment variable:

```
$ export VERTICA_RDKAFKA_CONF="{"api.version.request":false, "check.crcs":true}" 
$ vkconfig cluster --create --cluster StreamCluster1
   --hosts kafka01.example.com:9092,kafka02.example.com:9092
   --conf myscheduler.config
```

**Important:** Setting the `check.crcs` option is just an example. Vertica does not suggest you enable the CRC check in your schedulers under normal circumstances. It adds additional overhead and can result in slower performance.

## Configuring Vertica for Apache Kafka Version 0.9 and Earlier

Apache Kafka version 0.10 introduced a new feature that allows consumers to determine which version of the Kafka API the Kafka brokers support. Consumers that support this feature send an initial API version query to the Kafka broker to determine the API version to use when communicating with them. Kafka brokers running version 0.9.0 or earlier cannot respond to the API query. If the consumer does not receive a reply from the Kafka broker within a timeout period (set to 10 seconds by default) the consumer can assume the Kafka broker is running Kafka version 0.9.0 or earlier.

The Vertica integration with Kafka supports this API query feature starting in version 9.1.1. This API check can cause problems if you are connecting Vertica to a Kafka cluster running 0.9.0 or earlier. You may notice poorer performance loading messages from Kafka and may
experience errors as the 10 second API request timeout can cause parts of the Kafka integration feature to time out and report errors.

For example, if you run the `vkconfig` source utility to configure a source on a Kafka 0.9 cluster, you may get the following error:

```bash
$ vkconfig source --create --conf weblog.conf --cluster kafka_weblog --source web_hits
Exception in thread "main" com.vertica.solutions.kafka.exception.ConfigurationException:

### Disabling the API Version Request When Using the Streaming Job Scheduler

To avoid these problems, you must disable the API version request feature in the rd_kafka library that Vertica uses to communicate with Kafka. The easiest way to disable this setting when using the scheduler is to set a Linux environment variable on the host on which you run the `vkconfig` script. Using the environment variable ensures that each call to `vkconfig` includes the setting to disable the API version request. The `vkconfig` script checks two variables:

- **VERTICA_RDKAFKA_CONF** applies to all Kafka clusters that the scheduler running on the host communicates with.
- **VERTICA_RDKAFKA_CONF_CLUSTER_NAME** applies to just the Kafka cluster named `CLUSTER_NAME`. Use this variable if your scheduler communicates with several Kafka clusters, some of which are not running version 0.9 or earlier.

If you set both variables, the cluster-specific one takes precedence. This feature is useful if most of the clusters your scheduler connects to are running Kafka 0.9 or earlier, but a few
run 0.10 or later. This case, you can disable the API version check for most clusters using the VERTICA_RDKAFKA_CONF variable and re-enable the check for specific clusters using VERTICA_RDKAFKA_CONF_CLUSTER_NAME.

If just a few of your Kafka clusters run version 0.9 or earlier, you can just set the cluster-specific variables for them, and leave the default values in place for the majority of your clusters.

The content of the environment variable is the setting to tell the rdkafka library to not to query the Kafka cluster for the API version it supports:

api.version.request=false

To set the environment variable in BASH, use the export command:

$ export VERTICA_RDKAFKA_CONF=api.version.request=false

If you wanted the setting to just affect a cluster named kafka_weblog, the command is:

$ export VERTICA_RDKAFKA_CONF_kafka_weblog=api.version.request=false

You can add the command to any of the common user environment configuration files such as ~/.bash_profile or the system-wide files such as /etc/profile. You must ensure that the same setting is used for all users who may run the vtconfig script, including any calls made by daemon processes such as init. You can also directly include this command in any script you use to set configure or start your scheduler.

**Disabling the API Version Request When Directly Loading Messages**

You can disable the API request when you directly call KafkaSource to load messages by using the kafka_conf parameter:

```sql
=> CREATE FLEX TABLE iot_data();
CREATE TABLE
=> COPY public.iot_data SOURCE KafkaSource(stream='iot_json|0|-2',
                              brokers='kafka-01.example.com:9092',
                              stop_on_eof=True,
                              kafka_conf='{"api.version.request":false}')

PARSER KafkaJSONParser();
Rows Loaded
----------
5000
(1 row)
```

Changes to the message.max.bytes Setting in Kafka Version 0.11 and Later

In Kafka version 0.10 and earlier, the message.max.bytes setting configured the maximum allowable size for an individual message. Starting in version 0.11, Kafka began grouping messages into batches. This version changed the meaning of this setting to be the largest allowable size of a message batch.

This change can have a significant impact on how fast your Vertica database loads messages from Kafka 0.11 and later. If you created your streaming job scheduler using Vertica version 9.1.0 or earlier, you might find that its load spec's message.max.bytes value is set too low. Upgrading your scheduler does not adjust this setting automatically.

To prevent slow throughput when using Vertica with Kafka 0.11 and later, manually adjust the message.max.bytes setting in scheduler's load spec. Testing by Vertica suggests the best value for this setting is 25165824 (24 × 1024 × 1024) bytes.

The following example demonstrates updating the message.max.bytes setting in the load spec named weblog_load of an existing scheduler that is defined using the configuration file named weblog.conf:

```
$ /opt/vertica/packages/kafka/bin/vkconfig load-spec --update \
  --load-spec weblog_load --conf weblog.conf --message-max-bytes 25165824
```

Vertica Eon Mode and Kafka

You can use the Vertica integration with Apache Kafka when Vertica is running in Eon Mode. For Eon Mode running in a cloud environment, consider using a larger frame duration for schedulers in clusters. Cloud infrastructures lead to larger latencies overall, especially when storage layers are separated from compute layers. If you do not account for the added latency, you can experience a lower data throughput, as more of the frame's
time is lost to overhead caused by the cloud environment. Using a longer frame length can also help prevent Vertica from creating many small ROS containers when loading data from Kafka. The trade off when you use a larger frame length is that your data load experiences more latency. See Choosing a Frame Duration for more information.

## Consuming Data From Kafka

A Kafka consumer subscribes to one or more topics managed by a Kafka cluster. Each topic is a data stream, an unbounded dataset that is represented as an ordered sequence of messages. Vertica can manually or automatically consume Kafka topics to perform analytics on your streaming data.

### Manually Consume Data

Manually consume data from Kafka with a COPY statement that calls a KafkaSource function and parser. Manual loads are helpful when you want to:

- Populate a table one time with the messages currently in Kafka.
- Analyze a specific set of messages. You can choose the subset of data to load from the Kafka stream.
- Explore the data in a Kafka stream before you set up a scheduler to continuously stream the data into Vertica.
- Control the data load in ways not possible with the scheduler. For example, you cannot perform business logic or custom rejection handling during the data load from Kafka because the scheduler does not support additional processing during its transactions. Instead, you can periodically run a transaction that executes a COPY statement to load data from Kafka, and then perform additional processing.

For a detailed example, see Manually Consume Data From Kafka.

### Automatically Consume Data

Automatically consume streaming data from Kafka into Vertica with a scheduler, a command-line tool that loads data as it arrives. The scheduler loads data in segments defined by a microbatch, a unit of work that processes the partitions of a single Kafka topic for a specified duration of time. You can manage scheduler configuration and options using the vkconfig tool.
For details, see Automatically Consume Data From Kafka with the Scheduler

**Monitoring Consumption**

You must monitor message consumption to ensure that Kafka and Vertica are communicating effectively. You can use native Kafka tools to monitor consumer groups, or you can use `vkconfig` tool to view consumption details.

For additional information, see Monitoring Message Consumption.

**Parsing Data with Kafka Filters**

Your data stream might encode data that the Kafka parser functions cannot parse by default. Use Kafka filters to delimit messages in your stream to improve data consumption.

For details, see Parsing Custom Formats.

**Manually Consume Data From Kafka**

You can manually load streaming data from Kafka into Vertica using a `COPY` statement, just as you can load a finite set of data from a file or other source. Unlike a standard data source, Kafka data arrives continuously as a stream of messages that you must parse before loading into Vertica. Use Kafka functions in the `COPY` statement to prepare the data stream.

This example incrementally builds a `COPY` statement that manually loads JSON-encoded data from a Kafka topic named `web_hits`. The `web_hits` topic streams server logs of web site requests.

For information about loading data into Vertica, see Getting Data into Vertica.

**Creating the Target Table**

To determine the target table schema, you must identify the message structure. The following is a sample of the `web_hits` stream:
This topic streams JSON-encoded data. Because JSON data is inconsistent and might contain unpredictable added values, store this data stream in a flex table. Flex tables dynamically accept additional fields that appear in the data.

The following statement creates a flex table named web_table to store the data stream:

```sql
=> CREATE FLEX TABLE web_table();
```

To begin the COPY statement, add the web_table as the target table:

```sql
COPY web_table
```

For more information about flex tables, see Using Flex Tables.

**Note:**
If you are copying data containing default values into a flex table, you must identify the default value column as `__raw__`. For more information, see Bulk Loading Data into Flex Tables.

### Defining KafkaSource

The source of your COPY statement is always KafkaSource. KafkaSource accepts details about the data stream, Kafka brokers, and additional processing options to continuously load data until an end condition is met.

### Stream Details

The stream parameter defines the data segment that you want to load from one or more topic partitions. Each Kafka topic splits its messages into different partitions to get scalable throughput. Kafka keeps a backlog of messages for each topic according to rules set by the Kafka administrator. You can choose to load some or all of the messages in the backlog, or just load the currently streamed messages.

For each partition, the stream parameter requires the topic name, topic partition, and the partition offset as a list delimited by a pipe character (|). Optionally, you can provide and end offset as an end condition to stop loading from the data stream:
'stream='topic_name|partition|start_offset[|end_offset]'\n
To load the entire backlog from a single partition of the web_hits topic, use the SOURCE keyword to append KafkaSource with the following `stream` parameter values:

```
COPY ...
SOURCE KafkaSource(stream='web_hits|0|-2', ...) 
```

In the previous example:

- `web_hits` is the name of the topic to load data from.
- `0` is the topic partition to load data from. Topic partitions are 0-indexed, and `web_hits` contains only one partition.
- `-2` loads the entire backlog. This is a special offset value that tells KafkaSource to start loading at the earliest available message offset.

### Loading Multiple Partitions

This example loads from only one partition, but it is important to understand how to load from multiple partitions in a single COPY statement.

To load from additional partitions in the same topic, or even additional topics, supply a comma-separated list of topic name, partition number, and offset values delimited by pipe characters. For example, the following `stream` argument loads the entire message backlog from partitions 0 through 2 of the web_hits topic:

```
KafkaSource(stream='web_hits|0|-2,web_hits|1|-2,web_hits|2|-2')...
```

**Note:**
While you can load messages from different Kafka topics in the same COPY statement, you must ensure the data from the different topics is compatible with the target table's schema. The schema is less of a concern if you are loading data into a flex table, which can accommodate almost any data you want to load.

When you load multiple partitions in the same COPY statement, you can set the `executionparallelism` parameter to define the number of threads created for the COPY statement. Ideally, you want to use one thread per partition. You can choose to not specify a value and let Vertica determine the number of threads based on the number of partitions and the resources available in the resource pool. In this example, there is only one partition, so there's no need for additional threads to load data.
Note:
The EXECUTIONPARALLELISM setting on the resource pool assigned is the upper limit on the number of threads your COPY statement can use. Setting executionparallelism on the KafkaSource function call to a value that is higher than that of the resource pool's EXECUTIONPARALLELISM setting does not increase the number of threads Vertica uses beyond the limits of the resource pool.

Adding the Kafka Brokers

KafkaSource requires the host names (or IP addresses) and port numbers of the brokers in your Kafka cluster. The Kafka brokers are the service Vertica accesses in order to retrieve the Kafka data. In this example, the Kafka cluster has one broker named kafka01.example.com, running on port 9092. Append the brokers parameter and value to the COPY statement:

```
COPY ...
SOURCE KafkaSource(stream='web_hits|0|-2',
                    brokers='kafka01.example.com:9092', ...)
```

Choosing the End Condition

Because data continuously arrives from Kafka, manual loads from Kafka require that you define an end condition that indicates when to stop loading data. In addition to the end offset described in Stream Details, you can choose to:

- Copy as much data as possible for a set duration of time.
- Load data until no new data arrives within a timeout period.
- Load all available data, and not wait for any further data to arrive.

This example runs COPY for 10000 milliseconds (10 seconds) to get a sample of the data. If the COPY statement is able to load the entire backlog of data in under 10 seconds, it spends the remaining time loading streaming data as it arrives. This values is set in the duration parameter. Append the duration value to complete the KafkaSource definition:

```
COPY ...
SOURCE KafkaSource(stream='web_hits|0|-2',
                    brokers='kafka01.example.com:9092',
                    duration=interval '10000 milliseconds')
```
If you start a long-duration COPY statement from Kafka and need to stop it, you can call one of the functions that closes its session, such as `CLOSE_ALL_SESSIONS`.

**Important:**
The duration that you set for your data load is not exact. The duration controls how long the KafkaSource process runs.

### Selecting a Parser

Kafka does not enforce message formatting on its data streams. Messages are often in Avro or JSON format, but they could be in any format. Your COPY statement usually uses one of three Kafka-specific parsers:

- [KafkaParser](#)
- [KafkaJSONParser](#)
- [KafkaAvroParser](#)

Because the Kafka parsers can recognize record boundaries in streaming data, the other parsers (such as the Flex parsers) are not directly compatible with the output of KafkaSource. You must alter the KafkaSource output using filters before other parsers can process the data. See Parsing Custom Formats for more information.

In this example, the data in the web_hits is encoded in JSON format, so it uses the KafkaJSONParser. This value is set in the COPY statement's PARSER clause:

```sql
COPY ...
SOURCE ...
PARSER KafkaJSONParser()
```

### Storing Rejected Data

Vertica saves raw Kafka messages that the parser cannot parse to a rejects table, along with information on why it was rejected. This table is created by the COPY statement. This example saves rejects to the table named web_hits_rejections. This value is set in the COPY statement's REJECTED DATA AS TABLE clause:

```sql
COPY ...
SOURCE ...
PARSER ...
REJECTED DATA AS TABLE public.web_hits_rejections;
```
## Loading the Data Stream into Vertica

The following steps load JSON data from the web_hits topic for 10 seconds using the COPY statement that was incrementally built in the previous sections:

1. Execute the COPY statement:

```sql
=> COPY web_table
    SOURCE KafkaSource(stream='web_hits|0-2',
                        brokers='kafka01.example.com:9092',
                        duration=interval '10000 milliseconds')
    PARSER KafkaJSONParser()
    REJECTED DATA AS TABLE public.web_hits_rejections;
 Rows Loaded
---------
  800
(1 row)
```

2. Compute the flex table keys:

```sql
=> SELECT compute_flextable_keys('web_table');

compute_flextable_keys
-------------------------
Please see public.web_table_keys for updated keys
(1 row)
```

For additional details, see Computing Flex Table Keys.

3. Query web_table_keys to return the keys:

```sql
=> SELECT * FROM web_table_keys;
key_name | frequency | data_type_guess
---------+-----------+------------------
date     | 800       | Timestamp
user_agent| 800       | Varchar(294)
ip       | 800       | Varchar(30)
url      | 800       | Varchar(88)
(4 rows)
```

4. Query web_table to return the data loaded from the web_hits Kafka topic:

```sql
=> SELECT date, url, ip FROM web_table LIMIT 10;
date        | url                          | ip              |
------------|------------------------------|-----------------|

```

Automatically Consume Data From Kafka with the Scheduler

Vertica offers a scheduler that loads streamed messages from one or more Kafka topics. Automatically loading streaming data has a number of advantages over manually using COPY:

- The streamed data automatically appears in your database. The frequency with which new data appears in your database is governed by the scheduler's frame duration.
- The scheduler provides an exactly-once consumption process. The schedulers manage offsets for you so that each message sent by Kafka is consumed once.
- You can configure backup schedulers to provide high-availability. Should the primary scheduler fail for some reason, the backup scheduler automatically takes over loading data.
- The scheduler manages resources for the data load. You control its resource usage through the settings on the resource pool you assign to it. When loading manually, you must take into account the resources your load consumes.

There are a few drawbacks to using a scheduler which may make it unsuitable for your needs. You may find that schedulers do not offer the flexibility you need for your load process. For example, schedulers cannot perform business logic during the load transaction. If you need to perform this sort of processing, you are better off creating your own load process. This process would periodically run COPY statements to load data from Kafka. Then it would perform the business logic processing you need before committing the transaction.

For information on job scheduler requirements, refer to Vertica Integration for Apache Kafka.

What the Job Scheduler Does

The scheduler is responsible for scheduling loads of data from Kafka. The scheduler's basic unit of processing is a frame, which is a period of time. Within each frame, the scheduler
assigns a slice of time for each active microbatch to run. Each microbatch is responsible for loading data from a single source. Once the frame ends, the scheduler starts the next frame. The scheduler continues this process until you stop it.

**The Anatomy of a Scheduler**

Each scheduler has several groups of settings, each of which control an aspect of the data load. These groups are:

- The scheduler itself, which defines the configuration schema, frame duration, and resource pool.
- Clusters, which define the hosts in the Kafka cluster that the scheduler contacts to load data. Each scheduler can contain multiple clusters, allowing you to load data from multiple Kafka clusters with a single scheduler.
- Sources, which define the Kafka topics and partitions in those topics to read data from.
- Targets, which define the tables in Vertica that will receive the data. These tables can be traditional Vertica database tables, or they can be flex tables.
- Load specs, which define setting Vertica uses while loading the data. These settings include the parsers and filters Vertica needs to use to load the data. For example, if you are reading a Kafka topic that is in Avro format, your load spec needs to specify the Avro parser and schema.
- Microbatches, which represent an individual segment of a data load from a Kafka stream. They combine the definitions for your cluster, source, target, and load spec that you create using the other vkconfig tools. The scheduler uses all of the information in the microbatch to execute `COPY` statements using the `KafkaSource` UDL function to transfer data from Kafka to Vertica. The statistics on each microbatch's load is stored in the `stream_microbatch_history` table.

**The vkconfig Script**

You use a Linux command-line script named vkconfig to create, configure, and run schedulers. This script is installed on your Vertica hosts along with the Vertica server in the following path:

```
/opt/vertica/packages/kafka/bin/vkconfig
```

**Note:**
You can install and use the vkconfig utility on a non-Vertica host. You may
want to do this if:

- You do not want the scheduler to use Vertica host resources.
- You want users who do not have shell accounts on the Vertica hosts to be able to set up and alter schedulers.

The easiest way to install vkconfig on a host is to install the Vertica server RPM. You must use the RPM that matches the version of Vertica installed on your database cluster. Do not create a database after installing the RPM. The vkconfig utility and its associated files will be in the `/opt/vertica/packages/kafka/bin` directory on the host.

The vkconfig script contains multiple tools. The first argument to the vkconfig script is always the tool you want to use. Each tool performs one function, such as changing one group of settings (such as clusters or sources) or starting and stopping the scheduler. For example, to create or configure a scheduler, you use the command:

```bash
$ /opt/vertica/packages/kafka/bin/vkconfig scheduler other options...
```

### What Happens When You Create a Scheduler

When you create a new scheduler, the vkconfig script takes the following steps:

- Creates a new Vertica schema using the name you specified for the scheduler. You use this name to identify the scheduler during configuration.
- Creates the tables needed to manage the Kafka data load in the newly-created schema. See Data Streaming Schema Tables for more information.

### Validating Schedulers

When you create or configure a scheduler, it validates the following settings:

- Confirms that all brokers in the specified cluster exist.
- Connects to the specified host or hosts and retrieves the list of all brokers in the Kafka cluster. Getting this list always ensures that the scheduler has an up-to-date list of all the brokers. If the host is part of a cluster that has already been defined, the scheduler cancels the configuration.
- Confirms that the specified source exists. If the source no longer exists, the source is disabled.
- Retrieves the number of partitions in the source. If the number of partitions retrieved from the source is different than the partitions value saved by the scheduler, Vertica updates the scheduler with the number of partitions retrieved from the source in the cluster.

You can disable validation using the `--validation-type` option in the vkconfig script's scheduler tool. See Scheduler Tool Options for more information.

**Synchronizing Schedulers**

By default, the scheduler automatically synchronizes its configuration and source information with Kafka host clusters. You can configure the synchronization interval using the `--config-refresh` scheduler utility option. Each interval, the scheduler:

- Checks for updates to the scheduler's configuration by querying its settings in its Vertica configuration schema.
- Performs all of the checks listed in Validating Schedulers.

You can configure synchronization settings using the `--auto-sync` option using the vkconfig script's scheduler tool. Scheduler Tool Options for details.

**Launching a Scheduler**

You use the vkconfig script's launch tool to launch a scheduler.

When you launch a scheduler, it collects data from your sources, starting at the specified offset. You can view the `stream_microbatch_history` table to see what the scheduler is doing at any given time.

To learn how to create, configure, and launch a scheduler, see Setting up a Scheduler in this guide.

You can also choose to bypass the scheduler. For example, you might want to do a single load with a specific range of offsets. For more information, see Manually Consume Data From Kafka in this guide.

If the Vertica cluster goes down, the scheduler attempts to reconnect and fails. You must relaunch the scheduler when the cluster is restarted.
Managing a Running Scheduler

When you launch a scheduler from the command line, it runs in the foreground. It will run until you kill it (or the host shuts down). Usually, you want to start the scheduler as a daemon process that starts it when the host operating system starts, or after the Vertica database has started.

You shut down a running scheduler using the vkconfig script's shutdown tool. See **Shutdown Tool Options** for details.

You can change most of a scheduler's settings (adding or altering clusters, sources, targets, and microbatches for example) while it is running. The scheduler automatically acts on the configuration updates.

Launching Multiple Job Schedulers for High Availability

For high availability, you can launch two or more identical schedulers that target the same configuration schema. You differentiate the schedulers using the launch tool's --instance-name option (see **Launch Tool Options**).

The active scheduler loads data and maintains an $lock on the stream_lock table. The scheduler not in use remains in stand-by mode until the active scheduler fails or is disabled. If the active scheduler fails, the backup scheduler immediately obtains the lock on the stream_lock table, and takes over loading data from Kafka where the failed scheduler left off.

Managing Messages Rejected During Automatic Loads

Vertica rejects messages during automatic loads using the parser definition, which is required in the microbatch load spec.

The scheduler creates a rejection table to store rejected messages for each microbatch automatically. To manually specify a rejection table, use the --rejection-schema and --rejection-table microbatch utility options when creating the microbatch. Query the stream_microbatches table to return the rejection schema and table for a microbatch.

For additional details about how Vertica handles rejected data, see **Handling Messy Data**.
Passing Options to the Scheduler's JVM

The scheduler uses a Java Virtual Machine to connect to Vertica via JDBC. You can pass command-line options to the JVM through a Linux environment variable named VKCONFIG_JVM_OPTS. This option is useful when configuring a scheduler to use TLS/SSL encryption when connecting to Vertica. See Configuring Your Scheduler for TLS Connections for more information.

Viewing Schedulers from the MC

You can view the status of Kafka jobs from the MC. For more information, refer to Viewing Load History.

Setting up a Scheduler

You set up a scheduler using the Linux command line. Usually you perform the configuration on the host where you want your scheduler to run. It can be one of your Vertica hosts, or a separate host where you have installed the vkconfig utility (see The vkconfig Script for more information).

Follow these steps to set up and start a scheduler to stream data from Kafka to Vertica:

1. Create a Config File (Optional)
2. Add the vkconfig Directory to Your Path (Optional)
3. Create a Resource Pool for Your Scheduler
4. Create the Scheduler
5. Create a Cluster
6. Create a Data Table
7. Create a Source
8. Create a Target
9. Create a Load-Spec
10. Create a Microbatch
11. Launch the Scheduler

These steps are explained in the following sections. These sections will use the example of loading web log data (hits on a web site) from Kafka into a Vertica table.
**Create a Config File (Optional)**

Many of the arguments you supply to the vkconfig script while creating a scheduler do not change. For example, you often need to pass a username and password to Vertica to authorize the changes to be made in the database. Adding the username and password to each call to vkconfig is tedious and error-prone.

Instead, you can pass the vkconfig utility a configuration file using the `--conf` option that specifies these arguments for you. It can save you a lot of typing and frustration.

The config file is a text file with a `keyword=value` pair on each line. Each keyword is a vkconfig command-line option, such as the ones listed in **Common vkconfig Script Options**.

The following example shows a config file named `weblog.conf` that will be used to define a scheduler named `weblog_sched`. This config file is used throughout the rest of this example.

```
# The configuration options for the weblog_sched scheduler.
username=dbadmin
password=mypassword
dbhost=vertica01.example.com
dbport=5433
config-schema=weblog_sched
```

**Add the vkconfig Directory to Your Path (Optional)**

The vkconfig script is located in the `/opt/vertica/packages/kafka/bin` directory. Typing this path for each call to vkconfig is tedious. You can add vkconfig to your search path for your current Linux session using the following command:

```
$ export PATH=/opt/vertica/packages/kafka/bin:$PATH
```

For the rest of your session, you are able to call vkconfig without specifying its entire path:

```
$ vkconfig
Invalid tool
Valid options are scheduler, cluster, source, target, load-spec, microbatch, sync, launch, shutdown, help
```

If you want to make this setting permanent, add the export statement to your `~/.profile` file. The rest of this example assumes that you have added this directory to your shell's search path.
Create a Resource Pool for Your Scheduler

Vertica recommends you always create a resource pool specifically for each scheduler. Schedulers assume they have exclusive use of the resource pool they are assigned. Using a separate pool for a scheduler lets you fine-tune its impact on your Vertica cluster's performance. You create resource pools within Vertica using the CREATE RESOURCE POOL statement.

The following resource pool settings play an important role when creating your scheduler's resource pool:

- PLANNEDCONCURRENCY determines the number of microbatches (COPY statements) that the scheduler sends to Vertica simultaneously.
- EXECUTIONPARALLELISM determines the maximum number of threads that each node creates to process a microbatch’s partitions.
- QUEUETIMEOUT provides manual control over resource timings. Set this to 0 to allow the scheduler to manage timings.

See Managing Scheduler Resources and Performance for detailed information about these settings and how to fine-tune a resource pool for your scheduler.

The following CREATE RESOURCE POOL statement creates a resource pool that loads 1 microbatch and processes 1 partition:

```sql
=> CREATE RESOURCE POOL weblog_pool
    MEMORYSIZE '10%'
    PLANNEDCONCURRENCY 1
    EXECUTIONPARALLELISM 1
    QUEUETIMEOUT 0;
```

If you do not create and assign a resource pool for your scheduler, it uses a portion of the GENERAL resource pool. Vertica suggests you do not use the GENERAL pool for schedulers used in production environments. This fallback to using the GENERAL pool is intended as a convenience during testing your scheduler configuration. When you are ready to deploy your scheduler, create a resource pool that you have tuned to its specific needs. Each time you start a scheduler that is using the GENERAL pool, the vkconfig utility will display a warning message.

Not allocating enough resources to your schedulers can result in errors. For example, you may get OVERSHOT DEADLINE FOR FRAME errors if the scheduler is not able to load data from all of the topics it is supposed to in a data frame.

See Resource Pool Architecture for more information about resource pools.
Create the Scheduler

Vertica includes a default scheduler named stream_config. You can use this scheduler or create a new scheduler using the vkconfig script's scheduler tool with the --create and --config-schema options:

$ vkconfig scheduler --create --config-schema scheduler_name --conf conf_file

The --create and --config-schema options are the only ones required to add a scheduler with default options. This command creates a new schema in Vertica that holds the scheduler's configuration. See What Happens When You Create a Scheduler for details on the creation of the scheduler's schema.

You can use additional configuration parameters to further customize your scheduler. See Scheduler Tool Options for more information.

The following example:

- Creates a scheduler named weblog_sched using the --config-schema option.
- Grants privileges to configure and run the scheduler to the Vertica user named kafka_user with the --operator option. The dbadmin user must specify additional privileges separately.
- Specifies a frame duration of seven minutes with the --frame-duration option. For more information about picking a frame duration, see Choosing a Frame Duration.
- Sets the resource pool that the scheduler uses to the weblog_pool created earlier:

$ vkconfig scheduler --create --config-schema weblog_sched --operator kafka_user \ --frame-duration '00:07:00' --resource-pool weblog_pool --conf weblog.conf

Note:
Technically, the previous example doesn't need to supply the --config-schema argument because it is set in the weblog.conf file. It appears in this example for clarity. There's no harm in supplying it on the command line as well as in the configuration file, as long as the values match. If they do not match, the value given on the command line takes priority.
Create a Cluster

You must associate at least one Kafka cluster with your scheduler. Schedulers can access more than one Kafka cluster. To create a cluster, you supply a name for the cluster and host names and ports the Kafka cluster's brokers.

When you create a cluster, the scheduler attempts to validate it by connecting to the Kafka cluster. If it successfully connects, the scheduler automatically retrieves the list of all brokers in the cluster. Therefore, you do not have to list every single broker in the --hosts parameter.

The following example creates a cluster named kafka_weblog, with two Kafka broker hosts: kafka01.example.com and kafka03.example.com in the example.com domain. The Kafka brokers are running on port 9092.

$ vkconfig cluster --create --cluster kafka_weblog \ 
--hosts kafka01.example.com:9092,kafka03.example.com:9092 --conf weblog.conf

See Cluster Tool Options for more information.

Create a Source

Next, create at least one source for your scheduler to read. The source defines the Kafka topic the scheduler loads data from as well as the number of partitions the topic contains.

To create and associate a source with a configured scheduler, use the source tool. When you create a source, Vertica connects to the Kafka cluster to verify that the topic exists. So, before you create the source, make sure that the topic already exists in your Kafka cluster. Because Vertica verifies the existence of the topic, you must supply the previously-defined cluster name using the --cluster option.

The following example creates a source for the Kafka topic named web_hits on the cluster created in the previous step. This topic has a single partition.

$ vkconfig source --create --cluster kafka_weblog --source web_hits --partitions 1 --conf weblog.conf

Note: The --partitions parameter is the number of partitions to load, not a list of individual partitions. For example, if you set this parameter to 3, the scheduler will load data from partitions 0, 1, and 2.
Create a Data Table

Before you can create a target for your scheduler, you must create a target table in your Vertica database. This is the table Vertica uses to store the data the scheduler loads from Kafka. You must decide which type of table to create for your target:

- A standard Vertica database table, which you create using the `CREATE TABLE` statement. This type of table stores data efficiently. However, you must ensure that its columns match the data format of the messages in Kafka topic you are loading. You cannot load complex types of data into a standard Vertica table.
- A flex table, which you create using `CREATE FLEXIBLE TABLE`. A flex table is less efficient than a standard Vertica database table. However, it is flexible enough to deal with data whose schema varies and changes. It also can load most complex data types that (such as maps and lists) that standard Vertica tables cannot.

**Important:**
Avoid having columns with primary key restrictions in your target table. The scheduler stops loading data if it encounters a row that has a value which violates this restriction. If you must have a primary key restricted column, try to filter out any redundant values for that column in the streamed data before it is loaded by the scheduler.

The data in this example is in a set format, so the best table to use is a standard Vertica table. The following example creates a table named `web_hits` to hold four columns of data. This table is located in the public schema.

```sql
=> CREATE TABLE web_hits (ip VARCHAR(16), url VARCHAR(256), date DATETIME, user_agent VARCHAR(1024));
```

**Note:**
You do not need to create a rejection table to store rejected messages. The scheduler creates the rejection table automatically.

Create a Target

Once you have created your target table, you can create your scheduler's target. The target tells your scheduler where to store the data it retrieves from Kafka. This table must exist when you create your target. You use the `vkconfig` script's target tool with the `--target-`
schema and --target_table options to specify the Vertica target table's schema and name. The following example adds a target for the table created in the previous step.

```bash
$ vkconfig target --create --target-schema public --target-table web_hits --conf weblog.conf
```

See Target Tool Options for more information.

## Create a Load Spec

The scheduler's load spec provides parameters that Vertica uses when parsing the data loaded from Kafka. The most important option is --parser which sets the parser that Vertica uses to parse the data. You have three parser options:

- **KafkaAvroParser** for data in Avro format.
- **KafkaJSONParser** for data in JSON format.
- **KafkaParser** to load each message into a single VARCHAR field. See Parsing Custom Formats for more information.

In this example, the data being loaded from Kafka is in JSON format. The following command creates a load spec named weblog_load and sets the parser to KafkaJSONParser.

```bash
$ vkconfig load-spec --create --parser KafkaJSONParser --load-spec weblog_load --conf weblog.conf
```

See Load Spec Tool Options for more information.

## Create a Microbatch

The microbatch combines all of the settings added to the scheduler so far to define the individual COPY statements that the scheduler uses to load data from Kafka.

The following example uses all of the settings created in the previous examples to create a microbatch called weblog.

```bash
$ vkconfig microbatch --create --microbatch weblog --target-schema public --target-table web_hits \
--add-source web_hits --add-source-cluster kafka_weblog --load-spec weblog_load \
--conf weblog.conf
```

For microbatches that might benefit from a reduced transaction size, consider using the --max-parallelism option when creating the microbatch. This option splits a single microbatch with multiple partitions into the specified number of simultaneous COPY statements consisting of fewer partitions.
See Microbatch Tool Options for more information about --max-parallelism and other options.

**Launch the Scheduler**

Once you've created at least one microbatch, you can run your scheduler. You start your scheduler using the launch tool, passing it the name of the scheduler's schema. The scheduler begins scheduling microbatch loads for every enabled microbatch defined in its schema.

The following example launches the weblog scheduler defined in the previous steps. It uses the nohup command to prevent the scheduler being killed when the user logs out, and redirects stdout and stderr to prevent a nohup.out file from being created.

```
$ nohup vkconfig launch --conf weblog.conf >/dev/null 2>&1 &
```

**Important:**

Vertica does not recommend specifying a password on the command line. Passwords on the command line can be exposed by the system's list of processes, which shows the command line for each process. Instead, put the password in a configuration file. Make sure the configuration file's permissions only allow it to be read by the user.

See Launch Tool Options for more information.

**Checking that the Scheduler is Running**

Once you have launched your scheduler, you can verify that it is running by querying the `stream_microbatch_history` table in the scheduler's schema. This table lists the results of each microbatch the scheduler has run.

For example, this query lists the microbatch name, the start and end times of the microbatch, the start and end offset of the batch, and why the batch ended. The results are ordered to start from when the scheduler was launched:

```
=> SELECT microbatch, batch_start, batch_end, start_offset, end_offset, end_reason
    FROM weblog_sched.stream_microbatch_history
    ORDER BY batch_start DESC LIMIT 10;
```

<table>
<thead>
<tr>
<th>microbatch</th>
<th>batch_start</th>
<th>batch_end</th>
<th>start_offset</th>
<th>end_offset</th>
<th>end_reason</th>
</tr>
</thead>
</table>
Choosing a Frame Duration

One key setting for your scheduler is its frame duration. The duration sets the amount of time the scheduler has to run all of the microbatches you have defined for it. This setting has significant impact on how data is loaded from Apache Kafka.

What Happens During Each Frame

To understand the right frame duration, you first need to understand what happens during each frame.

The frame duration is split among the microbatches you add to your scheduler. In addition, there is some overhead in each frame that takes some time away from processing the microbatches. Within each microbatch, there is also some overhead which reduces the time the microbatch spends loading data from Kafka. The following diagram shows roughly how each frame is divided:
As you can see, only a portion of the time in the frame is spent actually loading the streaming data.

**How the Scheduler Prioritizes Microbatches**

To start with, the scheduler evenly divides the time in the frame among the microbatches. It then runs each microbatch in turn.

In each microbatch, the bulk of the time is dedicated to loading data using a **COPY** statement. This statement loads data using the **KafkaSource** UDL. It runs until one of two conditions occurs:

- It reaches the ends of the data streams for the topics and partitions you defined for the microbatch. In this case, the microbatch completes processing early.
- It reaches a timeout set by the scheduler.

As the scheduler processes frames, it notes which microbatches finish early. It then schedules them to run first in the next frame. Arranging the microbatches in this manner lets the scheduler allocate more of the time in the frame to the microbatches that are spending the most time loading data (and perhaps have not had enough time to reach the end of their data streams).

For example, consider the following diagram. During the first frame, the scheduler evenly divides the time between the microbatches. Microbatch #2 uses all of the time allocated to it (as indicated by the filled-in area), while the other microbatches do not. In the next frame, the scheduler rearranges the microbatches so that microbatches that finished early go first. It also allocates less time to the microbatches that ran for a shorter period. Assuming these microbatches finish early again, the scheduler is able to give the rest of the time in the frame to microbatch #2. This shifting of priorities continues while the scheduler
runs. If one topic sees a spike in traffic, the scheduler compensates by giving the microbatch reading from that topic more time.

What Happens if the Frame Duration is Too Short

If you make the scheduler's frame duration too short, microbatches may not have enough time to load all of the data in the data streams they are responsible for reading. In the worst case, a microbatch could fall further behind when reading a high-volume topic during each frame. If left unaddressed, this issue could result in messages never being loaded, as they age out of the data stream before the microbatch has a chance to read them.

In extreme cases, the scheduler may not be able to run each microbatch during each frame. This problem can occur if the frame duration is so short that much of is spent in overhead tasks such committing data and preparing to run microbatches. The COPY statement that each microbatch runs to load data from Kafka has a minimum duration of 1 second. Add to this the overhead of processing data loads. In general, if the frame duration is shorter than 2 seconds times the number of microbatches in the scheduler, then some microbatches may not get a chance to run in each frame.

If the scheduler runs out of time during a frame to run each microbatch, it compensates during the next frame by giving priority to the microbatches that didn't run in the prior frame. This strategy makes sure each microbatch gets a chance to load data. However, it cannot address the root cause of the problem. Your best solution is to increase the frame duration to give each microbatch enough time to load data during each frame.
What Happens if the Frame Duration is Too Long

One downside of a long frame duration is increased data latency. This latency is the time between when Kafka sends data out and when that data becomes available for queries in your database. A longer frame duration means that there is more time between each execution of a microbatch. That translates into more time between the data in your database being updated.

Depending on your application, this latency may not be important. When determining your frame duration, consider whether having the data potentially delayed up to the entire length of the frame duration will cause an issue.

Another issue to consider when using a long frame duration is the time it takes to shut down the scheduler. The scheduler does not shut down until the current COPY statement completes. Depending on the length of your frame duration, this process might take a few minutes.

The Minimum Frame Duration

At a minimum, allocate two seconds for each microbatch you add to your scheduler. The vkconfig utility warns you if your frame duration is shorter than this lower limit. In most cases, you want your frame duration to be longer. Two seconds per microbatch leaves little time for data to actually load.

Balancing Frame Duration Requirements

To determine the best frame duration for your deployment, consider how sensitive you are to data latency. If you are not performing time-sensitive queries against the data streaming in from Kafka, you can afford to have the default 5 minute or even longer frame duration. If you need a shorter data latency, then consider the volume of data being read from Kafka. High volumes of data, or data that has significant spikes in traffic can cause problems if you have a short frame duration.
Using Different Schedulers for Different Needs

Suppose you are loading streaming data from a few Kafka topics that you want to query with low latency and other topics that have a high volume but which you can afford more latency. Choosing a "middle of the road" frame duration in this situation may not meet either need. A better solution is to use multiple schedulers: create one scheduler with a shorter frame duration that reads just the topics that you need to query with low latency. Then create another scheduler that has a longer frame duration to load data from the high-volume topics.

For example, suppose you are loading streaming data from an Internet of Things (IOT) sensor network via Kafka into Vertica. You use the most of this data to periodically generate reports and update dashboard displays. Neither of these use cases are particularly time sensitive. However, three of the topics you are loading from do contain time-sensitive data (system failures, intrusion detection, and loss of connectivity) that must trigger immediate alerts.

In this case, you can create one scheduler with a frame duration of 5 minutes or more to read most of the topics that contain the non-critical data. Then create a second scheduler with a frame duration of at least 6 seconds (but preferably longer) that loads just the data from the three time-sensitive topics. The volume of data in these topics is hopefully low enough that having a short frame duration will not cause problems.

Managing Scheduler Resources and Performance

Your scheduler's performance is impacted by the number of microbatches in your scheduler, partitions in each microbatch, and nodes in your Vertica cluster. Use resource pools to allocate a subset of system resources for your scheduler, and fine-tune those resources to optimize automatic loads into Vertica.

The following sections provide details about scheduler resource pool configurations and processing scenarios:

- Schedulers and Resource Pools
- Key Resource Pool Settings
- Loading Multiple Microbatches Concurrently
- Parallel Processing within Vertica
- Loading Partitioned Topics Concurrently
Schedulers and Resource Pools

Vertica recommends you always create a resource pool specifically for each scheduler. Schedulers assume they have exclusive use of the resource pool they are assigned. Using a separate pool for a scheduler lets you fine-tune its impact on your Vertica cluster's performance. You create resource pools within Vertica using the `CREATE RESOURCE POOL` statement.

If you do not create and assign a resource pool for your scheduler, it uses a portion of the GENERAL resource pool. Vertica suggests you do not use the GENERAL pool for schedulers used in production environments. This fallback to using the GENERAL pool is intended as a convenience during testing your scheduler configuration. When you are ready to deploy your scheduler, create a resource pool that you have tuned to its specific needs. Each time you start a scheduler that is using the GENERAL pool, the vkconfig utility will display a warning message.

Not allocating enough resources to your schedulers can result in errors. For example, you may get OVERSHOT DEADLINE FOR FRAME errors if the scheduler is not able to load data from all of the topics it is supposed to in a data frame.

See Resource Pool Architecture for more information about resource pools.

Key Resource Pool Settings

A microbatch is a unit of work that processes the partitions of a single Kafka topic within the duration of a frame. The following resource pool settings play an important role in how Vertica loads microbatches and processes partitions:

- **PLANNEDCONCURRENCY** determines the number of microbatches (COPY statements) the scheduler sends to Vertica simultaneously. At the start of each frame, the scheduler creates the number of scheduler threads specified by PLANNEDCONCURRENCY. Each scheduler thread connects to Vertica and loads one microbatch at a time. If there are more microbatches than scheduler threads, the scheduler queues the extra microbatches and loads them as threads become available.

- **EXECUTIONPARALLELISM** determines the maximum number of threads each node creates to process a microbatch’s partitions. When a microbatch is loaded into Vertica, its partitions are distributed evenly among the nodes in the cluster. During
each frame, a node creates a maximum of one thread for each partition. Each thread reads from one partition at a time until processing completes, or the frame ends. If there are more partitions than threads across all nodes, remaining partitions are processed as threads become available.

- QUEUETIMEOUT provides manual control over resource timings. Set the resource pool parameter QUEUETIMEOUT to 0 to allow the scheduler to manage timings. After all of the microbatches are processed, the scheduler waits for the remainder of the frame to process the next microbatch. A properly sized configuration includes rest time to plan for traffic surges. See Choosing a Frame Duration for information about the impacts of frame duration size.

For example, the following CREATE RESOURCE POOL statement creates a resource pool named weblogs_pool that loads 2 microbatches simultaneously. Each node in the Vertica cluster creates 10 threads per microbatch to process partitions:

```sql
=> CREATE RESOURCE POOL weblogs_pool
   MEMORYSIZE '10%'
   PLANNEDCONCURRENCY 2
   EXECUTIONPARALLELISM 10
   QUEUETIMEOUT 0;
```

For a three-node Vertica cluster, weblogs_pool provides resources for each node to create up to 10 threads to process partitions, or 30 total threads per microbatch.

**Loading Multiple Microbatches Concurrently**

In some circumstances, you might have more microbatches in your scheduler than available PLANNEDCONCURRENCY. The following images illustrate how the scheduler loads microbatches into a single Vertica node when there are not enough scheduler threads to load each microbatch simultaneously. The resource pool's PLANNEDCONCURRENCY (PC) is set to 2, but the scheduler must load three microbatches: A, B, and C. For simplicity, EXECUTIONPARALLELISM (EP) is set to 1.

To begin, the scheduler loads microbatch A and microbatch B, while microbatch C waits:
When either microbatch finishes loading, the scheduler loads any remaining microbatches. In the following image, microbatch A is completely loaded into Vertica. The scheduler continues to load microbatch B, and uses the newly available scheduler thread to load microbatch C:

The scheduler continues sending data until all microbatches are loaded into Vertica, or the frame ends.

Experiment with PLANNEDCONCURRENCY to optimize performance. Note that setting it too high might create too many connections at the beginning of each frame, resulting in scalability stress on Vertica or Kafka. Setting PLANNEDCONCURRENCY too low does not take full advantage of the multiprocessing power of Vertica.
**Parallel Processing within Vertica**

The resource pool setting `EXECUTIONPARALLELISM` limits the number of threads each Vertica node creates to process partitions. The following image illustrates how a three-node Vertica cluster processes a topic with nine partitions, when there is not enough `EXECUTIONPARALLELISM` to create one thread per partition. The partitions are distributed evenly among Node 1, Node 2, and Node 3 in the Vertica cluster. The scheduler's resource pool has `PLANNEDCONCURRENCY` (PC) set to 1 and `EXECUTIONPARALLELISM` (EP) set to 2, so each node creates a maximum of 2 threads when the scheduler loads microbatch A. Each thread reads from one partition at a time. Partitions that are not assigned a thread must wait for processing:

As threads finish processing their assigned partitions, the remaining partitions are distributed to threads as they become available:
When setting the EXECUTIONPARALLELISM on your scheduler's resource pool, consider the number of partitions across all microbatches in the scheduler.

**Loading Partitioned Topics Concurrently**

Single topics with multiple partitions might benefit from increased parallel loading or a reduced transaction size. The `--max-parallelism` microbatch utility option enables you to dynamically split a topic with multiple partitions into multiple, load-balanced microbatches that each consist of a subset of the original microbatch's partitions. The scheduler loads the dynamically split microbatches simultaneously using the [PLANNEDCONCURRENCY](https://www.vertica.com/docs/11/10/guides/vertica-admin-guide/index.html#PLANNEDCONCURRENCY) available in its resource pool.

The EXECUTIONPARALLELISM setting in the scheduler's resource pool determines the maximum number of threads each node creates to process its portion of a single microbatch’s partitions. Splitting a microbatch enables each node to create more threads for the same unit of work. When there is enough PLANNEDCONCURRENCY and the number of partitions assigned per node is greater than the EXECUTIONPARALLELISM setting in the scheduler's resource pool, use `--max-parallelism` to split the microbatch and create more threads per node to process more partitions in parallel.

The following image illustrates how a two-node Vertica cluster loads and processes microbatch A using a resource pool with PLANNEDCONCURRENCY (PC) set to 2, and EXECUTIONPARALLELISM (EP) set to 2. Because the scheduler is loading only one
microbatch, there is 1 scheduler thread left unused. Each node creates 2 threads per scheduler thread to process its assigned partitions:

Setting microbatch A's `--max-parallelism` option to 2 enables the scheduler to dynamically split microbatch A into 2 smaller microbatches, A1 and A2. Because there are 2 available scheduler threads, the subset microbatches are loaded into Vertica simultaneously. Each node creates 2 threads per scheduler thread to process partitions for microbatches A1 and A2:
Use --max-parallelism to prevent bottlenecks in microbatches consisting of high-volume Kafka topics. It also provides faster loads for microbatches that require additional processing, such as text indexing.

**Using Connection Load Balancing with the Kafka Scheduler**

You supply the scheduler with the name of a Vertica node in the --dbhost option or the dbhost entry in your configuration file. The scheduler connects to this node to initiate all of the statements it executes to load data from Kafka. For example, each time it executes a microbatch, the scheduler connects to the same node to run the COPY statement. Having a single node act as the initiator node for all of the scheduler's actions can affect the performance of the node, and in turn the database as a whole.

To avoid a single node becoming a bottleneck, you can use connection load balancing to spread the load of running the scheduler's statements across multiple nodes in your database. Connection load balancing distributes client connections among the nodes in a load balancing group. See About Native Connection Load Balancing for an overview of this feature.

Enabling connection load balancing for a scheduler is a two-step process:

1. Choose or create a load balancing policy for your scheduler.
2. Enable load balancing in the scheduler.

**Choosing or Creating a Load Balancing Policy for the Scheduler**

A connecting load balancing policy redirects incoming connections in from a specific set of network addresses to a group of nodes. If your database already defines a suitable load balancing policy, you can use it instead of creating one specifically for your scheduler.

If your database does not have a suitable policy, create one. Have your policy redirect connections coming from the IP addresses of hosts running Kafka schedulers to a group of nodes in your database. The group of nodes that you select will act as the initiators for the statements that the scheduler executes.

**Important:**
In an Eon Mode database, only include nodes that are part of a primary
**Information:**

Subcluster in the scheduler's load balancing group. These nodes are the most efficient for loading data.

The following example demonstrates setting up a load balancing policy for all three nodes in a three-node database. The scheduler runs on node 1 in the database, so the source address range (192.168.110.0/24) of the routing rule covers the IP addresses of the nodes in the database. The last step of the example verifies that connections from the first node (IP address 10.20.110.21) are load balanced.

```sql
=> SELECT node_name, node_address, node_address_family FROM v_catalog.nodes;

<table>
<thead>
<tr>
<th>node_name</th>
<th>node_address</th>
<th>node_address_family</th>
</tr>
</thead>
<tbody>
<tr>
<td>v_vmart_node001</td>
<td>10.20.110.21</td>
<td>ipv4</td>
</tr>
<tr>
<td>v_vmart_node002</td>
<td>10.20.110.22</td>
<td>ipv4</td>
</tr>
<tr>
<td>v_vmart_node003</td>
<td>10.20.110.23</td>
<td>ipv4</td>
</tr>
</tbody>
</table>

(4 rows)

=> CREATE NETWORK ADDRESS node01 ON v_vmart_node001 WITH '10.20.110.21';
CREATE NETWORK ADDRESS
=> CREATE NETWORK ADDRESS node02 ON v_vmart_node002 WITH '10.20.110.22';
CREATE NETWORK ADDRESS
=> CREATE NETWORK ADDRESS node03 on v_vmart_node003 WITH '10.20.110.23';
CREATE NETWORK ADDRESS
=> CREATE LOAD BALANCE GROUP kafka_scheduler_group WITH ADDRESS node01,node02,node03;
CREATE LOAD BALANCE GROUP
=> CREATE ROUTING RULE kafka_scheduler_rule ROUTE
   '10.20.110.0/24' TO kafka_scheduler_group;
CREATE ROUTING RULE
=> SELECT describe_load_balance_decision('10.20.110.21');
   describe_load_balance_decision

------------------------------------------------------------------------------------------------------------------
Describing load balance decision for address [10.20.110.21]
Load balance cache internal version id (node-local): [2]
Considered rule [kafka_scheduler_rule] source ip filter [10.20.110.0/24]...
input address matches this rule
Matched to load balance group [kafka_scheduler_group] the group has policy [ROUNDROBIN] number of addresses [3]
(0) LB Address: [10.20.110.21]:5433
(1) LB Address: [10.20.110.22]:5433
(2) LB Address: [10.20.110.23]:5433
Chose address at position [1]
Routing table decision: Success. Load balance redirect to: [10.20.110.23] port [5433]

(1 row)
```

**Important:**

Be careful if you run your scheduler on a Vertica node and have either set its dbhost name to localhost or are not specifying a value (which means dbhost defaults to localhost). Connections to localhost use the loopback IP address 127.0.0.1 instead of the node's primary network address. If you create a load balancing routing rule that redirects incoming connections
from the node's IP address range, it will not apply to connections made using localhost. The best solution is to use the node's IP address or FQDN as the dbhost setting.

If your scheduler connects to Vertica from an IP address that no routing rule applies to, you will see messages similar to the following in the vertica.log:

```
[Session] <INFO> Load balance request from client address ::1 had decision:
   Classic load balancing considered, but either the policy was NONE or no target was available. Details: [NONE or invalid]
<LOG> @v_vmart_node0001: 00000/5789: Connection load balance request refused by server
```

**Enabling Load Balancing in the Scheduler**

Clients must opt-in to load balancing for Vertica to apply the connection load balancing policies to the connection. For example, you must pass the -C flag to the vsql command for your interactive session to be load balanced.

The scheduler uses the Java JDBC library to connect to Vertica. To have the scheduler opt-in to load balancing, you must set the JDBC library's ConnectionLoadBalance option to 1. See [Load Balancing in JDBC](#) for details.

Use the vkconfig script's --jdbc-opt option, or add the jdbc-opt option to your configuration file to set the ConnectionLoadBalance option. For example, to start the scheduler from the command line using a configuration file named weblog.conf, use the command:

```
$ nohup vkconfig launch --conf weblog.conf --jdbc-opt ConnectionLoadBalance=1 >/dev/null 2>&1 &
```

To permanently enable load balancing, you can add the load balancing option to your configuration file. The following example shows the weblog.conf file from the example in Setting up a Scheduler configured to use connection load balancing.

```
username=dbadmin
password=mypassword
dbhost=10.20.110.21
dbport=5433
config.schema=weblog_sched
jdbc-opt=ConnectionLoadBalance=1
```

You can check whether the scheduler's connections are being load balanced by querying the [SESSIONS](#) table:
In the `client_label` column, the scheduler's connections have labels starting with `vkstream` (the row without a client label is an interactive session). You can see that the three connections the scheduler has opened all go to different nodes.

### Limiting Loads Using Offsets

Kafka maintains a user-configurable backlog of messages. By default, a newly-created scheduler reads all of the messages in a Kafka topic, including all of the messages in the backlog, not just the messages that are streamed out after the scheduler starts. Often, this is what you want.

In some cases, however, you may want to stream just a section of a source into a table. For example, suppose you want to analyze the web traffic of your e-commerce site starting at specific date and time. However, your Kafka topic contains web access records from much further back in time than you want to analyze. In this case, you can use an offset to stream just the data you want into Vertica for analysis.

Another common use case is when you have already loaded data some from Kafka manually (see [Manually Consume Data From Kafka](#)). Now you want to stream all of the newly-arriving data. By default, your scheduler ill reload all of the previously loaded data (assuming it is still available from Kafka). You can use an offset to tell your scheduler to start automatically loading data at the point where your manual data load left off.

### Configuring a Scheduler to Start Streaming From an Offset

The `vkconfig` script's microbatch tool has an `--offset` option that lets you specify the index of the message in the source where you want the scheduler to begin loading. This option accepts a comma-separated list of index values. You must supply one index value for each partition in the source unless you use the `--partition` option. This option lets you choose the partitions the offsets apply to. The scheduler cannot be running when you set an offset in the microbatch.
If your microbatch defines more than one cluster, use the `--cluster` option to select which one the offset option applies to. Similarly, if your microbatch has more than one source, you must select one using the `--source` option.

For example, suppose you want to load just the last 1000 messages from a source named `web_hits`. To make things easy, suppose the source contains just a single partition, and the microbatch defines just a single cluster and single topic.

Your first task is to determine the current offset of the end of the stream. You can do this on one of the Kafka nodes by calling the `GetOffsetShell` class with the time parameter set to `-1` (the end of the topic):

```
$ path to kafka/bin/kafka-run-class.sh kafka.tools.GetOffsetShell \
   --broker-list kafka01:9092,kafka03:9092 --time -1 \
   --topic web_hits
```

You can also use `GetOffsetShell` to find the offset in the stream that occurs before a timestamp.

In the above example, the `web_hits` topic's single partition has an ending offset of 8932. If we want to load the last 1000 messages from the source, we need to set the microbatch's offset to 8932 - 1001 or 7931.

**Note:**

The start of an offset is inclusive in the Vertica COPY statement. Kafka's native starting offset is exclusive. Therefore, you must add one to the offset to get the correct number of messages.

With the offset calculated, you are ready to set it in the microbatch's configuration. The following example:

- Shuts down the scheduler whose configuration information stored in the `weblog.conf` file.
- Sets the starting offset using the microbatch utility.
- Restarts the scheduler.

```
$ vkconfig shutdown --conf weblog.conf
$ vkconfig microbatch --microbatch weblog --update --conf weblog.conf --offset 7931
$ nohup vkconfig launch --conf weblog.conf >/dev/null 2>&1 &
```

If the target table was empty or truncated before the scheduler started, it will have 1000 rows in the table in it (until more messages are streamed through the source):
```sql
=> select count(*) from webHits;
  count
  -------
   1000
   (1 row)
```

**Note:**
The last example assumes that the offset values for the last 1000 messages in the Kafka topic were assigned consecutively. This assumption is not always be true. A Kafka topic can have gaps in its offset numbering for a variety of reasons. Offsets refer to the key value assigned to a message by Kafka, not its position in the topic.

**Ending a COPY From Kafka at an Offset**

When you manually copy data from a Kafka source into Vertica, the COPY statement defaults to loading all of the messages in the topic. You can specify a maximum offset the COPY should load to by supplying an end offset value in addition to the starting offset in the KafkaSource's source parameter.

**Updating Schedulers After Vertica Upgrades**

A scheduler is only compatible with the version of Vertica that created it. Between Vertica versions, the scheduler's configuration schema or the U Dx function the scheduler calls may change. After you upgrade Vertica, you must update your schedulers to account for these changes.

When you upgrade Vertica to a new major version or service pack, use the vkconfig scheduler tool's `--upgrade` option to update your scheduler. If you do not update a scheduler, you receive an error message if you try to launch it. For example:

```
$ nohup vkconfig launch --conf weblog.conf >/dev/null 2>&1 &
com.vertica.solutions.kafka.exception.FatalException: Configured scheduler schema and current scheduler configuration schema version do not match. Upgrade configuration by running:
  vkconfig scheduler --upgrade
  at com.vertica.solutions.kafka.scheduler.StreamCoordinator.assertVersion(StreamCoordinator.java:54)
  at com.vertica.solutions.kafka.scheduler.StreamCoordinator.run(StreamCoordinator.java:125)
  at com.vertica.solutions.kafka.Launcher.run(Launcher.java:205)
  at com.vertica.solutions.kafka.Launcher.main(Launcher.java:258)
$ vkconfig scheduler --upgrade --conf weblog.conf
Checking if UPGRADE necessary...
```
Monitoring Message Consumption

You can monitor the progress of your data streaming from Kafka several ways:

- Monitoring the consumer groups to which Vertica reports its progress. This technique is best if the tools you want to use to monitor your data load work with Kafka.
- Use the monitoring APIs built into the vkconfig tool. These APIs report the configuration and consumption of your streaming scheduler in JSON format. These APIs are useful if you are developing your own monitoring scripts, or your monitoring tools can consume status information in JSON format.

Monitoring Vertica Message Consumption with Consumer Groups

Apache Kafka has a feature named consumer groups that helps distribute message consumption loads across sets of consumers. When using consumer groups, Kafka evenly divides up messages based on the number of consumers in the group. Consumers report back to the Kafka broker which messages it read successfully. This reporting helps Kafka to manage message offsets in the topic's partitions, so that no consumer in the group is sent the same message twice.

Vertica does not rely on Kafka's consumer groups to manage load distribution or preventing duplicate loads of messages. The streaming job scheduler manages topic partition offsets on its own.

Even though Vertica does not need consumer groups to manage offsets, it does report back to the Kafka brokers which messages it consumed. This feature lets you use third-party tools to monitor the Vertica cluster's progress as it loads messages. By default, Vertica reports its progress to a consumer group named vertica-\textit{databaseName}, where \textit{databaseName} is the name of the Vertica database. You can change the name of the consumer group that Vertica reports its progress to when defining a scheduler or during manual loads of data. Third party tools can query the Kafka brokers to monitor the Vertica cluster's progress when loading data.
For example, you can use Kafka's `kafka-consumer-groups.sh` script (located in the `bin` directory of your Kafka installation) to view the status of the Vertica consumer group. The following example demonstrates listing the consumer groups available defined in the Kafka cluster and showing the details of the Vertica consumer group:

```
$ cd /path/to/kafka/bin
$.kafka-consumer-groups.sh --list --bootstrap-server localhost:9092
Note: This will not show information about old Zookeeper-based consumers.
vertica-vmart
$.kafka-consumer-groups.sh --describe --group vertica-vmart 
--bootstrap-server localhost:9092
Note: This will not show information about old Zookeeper-based consumers.
Consumer group 'vertica-vmart' has no active members.

<table>
<thead>
<tr>
<th>TOPIC</th>
<th>PARTITION</th>
<th>CURRENT-OFFSET</th>
<th>LOG-END-OFFSET</th>
<th>LAG</th>
<th>CONSUMER-ID</th>
</tr>
</thead>
<tbody>
<tr>
<td>web_hits</td>
<td>0</td>
<td>24500</td>
<td>30000</td>
<td>5500</td>
<td>-</td>
</tr>
</tbody>
</table>
```

From the output, you can see that Vertica reports its consumption of messages back to the vertica-vmart consumer group. This group is the default consumer group when Vertica has the example VMart database loaded. The second command lists the topics being consumed by the vertica-vmart consumer group. You can see that the Vertica cluster has read 24500 of the 30000 messages in the topic's only partition. Later, running the same command will show the Vertica cluster's progress:

```
$ cd /path/to/kafka/bin
$.kafka-consumer-groups.sh --describe --group vertica-vmart 
--bootstrap-server localhost:9092
Note: This will not show information about old Zookeeper-based consumers.
Consumer group 'vertica-vmart' has no active members.

<table>
<thead>
<tr>
<th>TOPIC</th>
<th>PARTITION</th>
<th>CURRENT-OFFSET</th>
<th>LOG-END-OFFSET</th>
<th>LAG</th>
<th>CONSUMER-ID</th>
</tr>
</thead>
<tbody>
<tr>
<td>web_hits</td>
<td>0</td>
<td>30000</td>
<td>30000</td>
<td>0</td>
<td>-</td>
</tr>
</tbody>
</table>
```

**Changing the Consumer Group Where Vertica Reports its Progress**

You can change the consumer group that Vertica reports its progress to when consuming messages.
Changing for Automatic Loads with the Scheduler

When using a scheduler, you set the consumer group by setting the --consumer-group-id argument to the vkconfig script's scheduler or microbatch utilities. For example, suppose you want the example scheduler shown in Setting up a Scheduler to report its consumption to the consumer group name vertica-database. Then you could use the command:

```bash
$ /opt/vertica/packages/kafka/bin/vkconfig microbatch --update \  --conf weblog.conf --microbatch weblog --consumer-group-id vertica-database
```

When the scheduler begins loading data, it will start updating the new consumer group. You can see this on a Kafka node using kafka-consumer-groups.sh.

Use the --list option to return the consumer groups:

```bash
$ /path/to/kafka/bin/kafka-consumer-groups.sh --list --bootstrap-server localhost:9092
Note: This will not show information about old Zookeeper-based consumers.
vertica-database
vertica-vmart
```

Use the --describe and --group options to return details about a specific consumer group:

```bash
$ /path/to/kafka/bin/kafka-consumer-groups.sh --describe --group vertica-database \   --bootstrap-server localhost:9092
Note: This will not show information about old Zookeeper-based consumers.

Consumer group 'vertica-database' has no active members.

<table>
<thead>
<tr>
<th>TOPIC</th>
<th>PARTITION</th>
<th>CURRENT-OFFSET</th>
<th>LOG-END-OFFSET</th>
<th>LAG</th>
<th>CONSUMER-ID</th>
</tr>
</thead>
<tbody>
<tr>
<td>web_hits</td>
<td>0</td>
<td>30300</td>
<td>30300</td>
<td>0</td>
<td>-</td>
</tr>
</tbody>
</table>
```

Changing for Manual Loads

To change the consumer group when manually loading data, use the group_id parameter of KafkaSource function:

```sql
=> COPY web_hits SOURCE KafkaSource(stream='web_hits|0|-2', brokers='kafka01.example.com:9092', stop_on_eof=True,
```

Vertica Analytic Database (11.0.x)
Using Consumer Group Offsets When Loading Messages

You can choose to have your scheduler, manual load, or custom loading script start loading messages from the consumer group's offset. To load messages from the last offset stored in the consumer group, use the special -3 offset.

Automatic Load with the Scheduler Example

To instruct your scheduler to load messages from the consumer group's saved offset, use the vkconfig script microbatch tool's --offset argument.

1. Stop the scheduler using the shutdown command and the configuration file that you used to create the scheduler:

   ```
   $ /opt/vertica/packages/kafka/bin/vkconfig microbatch shutdown --conf weblog.conf
   ```

2. Set the microbatch --offset option to -3:

   ```
   $ /opt/vertica/packages/kafka/bin/vkconfig microbatch --update --conf weblog.conf --microbatch weblog --offset -3
   ```

This sets the offset to -3 for all topic partitions that your scheduler reads from. The scheduler begins the next load with the consumer group's saved offset, and all subsequent loads use the offset saved in stream_microbatch_history.

Manual Load Example

This example loads messages from the web_hits topic that has one partition consisting of 51,000 messages. For details about manual loads with KafkaSource, see Manually Consume Data From Kafka.
1. The first COPY statement creates a consumer group named vertica_manual, and loads the first 50,000 messages from the first partition in the web_hits topic:

```sql
=> COPY web_hits
   SOURCE KafkaSource(stream='web_hits|0|0|50000',
                      brokers='kafka01.example.com:9092',
                      stop_on_eof=True,
                      group_id='vertica_manual')
   PARSER KafkaJSONParser()
   REJECTED DATA AS TABLE public.web_hits_rejections;
   Rows Loaded
   ------------
   50000
   (1 row)
```

2. The next COPY statement passes -3 as the start_offset stream parameter to load from the consumer group's saved offset:

```sql
=> COPY web_hits
   SOURCE KafkaSource(stream='web_hits|0|-3',
                      brokers='kafka01.example.com:9092',
                      stop_on_eof=True,
                      group_id='vertica_manual')
   PARSER KafkaJSONParser()
   REJECTED DATA AS TABLE public.web_hits_rejections;
   Rows Loaded
   ------------
   1000
   (1 row)
```

**Disabling Consumer Group Reporting**

Vertica reports the offsets of the messages it consumes to Kafka by default. If you do not specifically configure a consumer group for Vertica, it still reports its offsets to a consumer group named vertica_database-name (where database-name is the name of the database Vertica is currently running).

If you want to completely disable having Vertica report its consumption back to Kafka, you can set the consumer group to an empty string or NULL. For example:

```sql
=> COPY web_hits SOURCE KafkaSource(stream='web_hits|0|-2',
                                      brokers='kafka01.example.com:9092',
                                      stop_on_eof=True,
                                      group_id=NULL)
   PARSER KafkaJsonParser();
   Rows Loaded
   ------------
   60000
   (1 row)
```
Getting Configuration and Statistics Information From vkconfig

The vkconfig tool has two features that help you examine your scheduler's configuration and monitor your data load:

- The vkconfig tools that configure your scheduler (scheduler, cluster, source, target, load-spec, and microbatch) have a `--read` argument that has them output their current settings in the scheduler.
- The vkconfig statistics tool lets you get statistics on your microbatches. You can filter the microbatch records based on a date and time range, cluster, partition, and other criteria.

Both of these features output their data in JSON format. You can use third-party tools that can consume JSON data or write your own scripts to process the configuration and statics data.

You can also access the data provided by these vkconfig options by querying the configuration tables in the scheduler's schema. However, you may find these options easier to use as they do not require you to connect to the Vertica database.

### Getting Configuration Information

You pass the `--read` option to vkconfig's configuration tools to get the current settings for the options that the tool can set. This output is in JSON format. This example demonstrates getting the configuration information from the scheduler and cluster tools for the scheduler defined in the weblog.conf configuration file:

```bash
$ vkconfig scheduler --read --conf weblog.conf
{"version":"v9.2.0", "frame_duration":"00:00:10", "resource_pool":"weblog_pool", "config_refresh":"00:05:00", "new_source_policy":"FAIR", "pushback_policy":"LINEAR", "pushback_max_count":5, "auto_sync":true, "consumer_group_id":null}

$ vkconfig cluster --read --conf weblog.conf
{"cluster":"kafka_weblog", "hosts":"kafak01.example.com:9092,kafka02.example.com:9092"}
```

The `--read` option lists all of values created by the tool in the scheduler schema. For example, if you have defined multiple targets in your scheduler, the `--read` option lists all of them.
You can filter the --read option output using the other arguments that the vkconfig tools accept. For example, in the cluster tool, you can use the --host argument to limit the output to just show clusters that contain a specific host. These arguments support LIKE-predicate wildcards, so you can match partial values. See LIKE predicate for more information about using wildcards.

The following example demonstrates how you can filter the output of the --read option of the cluster tool using the --host argument. The first call shows the unfiltered output. The second call filters the output to show only those clusters that start with "kafka":

```bash
$ vkconfig cluster --read --conf weblog.conf
{"cluster":"some_cluster", "hosts":"host01.example.com"}
{"cluster":"iot_cluster", "hosts":"kafka-iot01.example.com:9092,kafka-iot02.example.com:9092"}
{"cluster":"weblog", "hosts":"web01.example.com:9092,web02.example.com:9092"}
{"cluster":"streamcluster1", "hosts":"kafka-a-01.example.com:9092,kafka-a-02.example.com:9092"}
{"cluster":"test_cluster", "hosts":"test01.example.com:9092,test02.example.com:9092"}

$ vkconfig cluster --read --conf weblog.conf --hosts kafka%
{"cluster":"iot_cluster", "hosts":"kafka-iot01.example.com:9092,kafka-iot02.example.com:9092"}
{"cluster":"streamcluster1", "hosts":"kafka-a-01.example.com:9092,kafka-a-02.example.com:9092"}
```

See the Cluster Tool Options, Load Spec Tool Options, Microbatch Tool Options, Scheduler Tool Options, Target Tool Options, and Source Tool Options for more information.

### Getting Streaming Data Load Statistics

The vkconfig script's statistics tool lets you view the history of your scheduler's microbatches. You can filter the results using any combination of the following criteria:

- The name of the microbatch
- The Kafka cluster that was the source of the data load
- The name of the topic
- The partition within the topic
- The Vertica schema and table targeted by the data load
- A date and time range
- The latest microbatches
See Statistics Tool Options for all of the options available in this tool.

This example gets the last two microbatches that the scheduler ran:

```bash
$ vkconfig statistics --last 2 --conf weblog.conf
{
"microbatch":"weblog", "target_schema":"public", "target_table":"web_hits",
"source_name":"web_hits", "source_cluster":"kafka_weblog", "source_partition":0,
"start_offset":73300, "end_offset":73399, "end_reason":"END_OF_STREAM",
"end_reason_message":null, "partition_bytes":10588, "partition_messages":100,
"timeslice":"00:00:00.807000", "batch_start":"2018-11-02 13:22:08.825295",
"batch_end":"2018-11-02 13:22:08.135299", "source_duration":"00:00:00.219619",
"consecutive_error_count":null, "transaction_id":45035996273976123,
"frame_start":"2018-11-02 13:22:07.601", "frame_end":null}
{
"microbatch":"weblog", "target_schema":"public", "target_table":"web_hits",
"source_name":"web_hits", "source_cluster":"kafka_weblog", "source_partition":0,
"start_offset":73200, "end_offset":73299, "end_reason":"END_OF_STREAM",
"end_reason_message":null, "partition_bytes":19781, "partition_messages":100,
"timeslice":"00:00:00.561000", "batch_start":"2018-11-02 13:21:58.044698",
"batch_end":"2018-11-02 13:21:58.335431", "source_duration":"00:00:00.214868",
"consecutive_error_count":null, "transaction_id":45035996273976095,
"frame_start":"2018-11-02 13:21:57.561", "frame_end":null}
```

This example gets the microbatches from the source named web_hits between 13:21:00 and 13:21:20 on November 2nd 2018:

```bash
$ vkconfig statistics --source "web_hits" --from-timestamp \
"2018-11-02 13:21:00" --to-timestamp "2018-11-02 13:21:20" \
--conf weblog.conf
{
"microbatch":"weblog", "target_schema":"public", "target_table":"web_hits",
"source_name":"web_hits", "source_cluster":"kafka_weblog", "source_partition":0,
"start_offset":72800, "end_offset":72899, "end_reason":"END_OF_STREAM",
"end_reason_message":null, "partition_bytes":19989, "partition_messages":100,
"timeslice":"00:00:00.778000", "batch_start":"2018-11-02 13:21:17.581606",
"batch_end":"2018-11-02 13:21:18.850705", "source_duration":"00:00:01.215751",
"consecutive_error_count":null, "transaction_id":45035996273975997,
"frame_start":"2018-11-02 13:21:17.34", "frame_end":null}
{
"microbatch":"weblog", "target_schema":"public", "target_table":"web_hits",
"source_name":"web_hits", "source_cluster":"kafka_weblog", "source_partition":0,
"start_offset":72700, "end_offset":72799, "end_reason":"END_OF_STREAM",
"end_reason_message":null, "partition_bytes":19640, "partition_messages":100,
"timeslice":"00:00:00.857000", "batch_start":"2018-11-02 13:21:07.470834",
"batch_end":"2018-11-02 13:21:08.732255", "source_duration":"00:00:01.210932",
"consecutive_error_count":null, "transaction_id":45035996273975978,
"frame_start":"2018-11-02 13:21:07.309", "frame_end":null}
```

See Statistics Tool Options for more examples of using this tool.

## Parsing Custom Formats

To process a Kafka data stream, the parser must identify the boundary between each message. Vertica provides Kafka parsers that can identify boundaries for Avro, JSON, and raw data formats, but your data stream might use a custom format. To parse custom
 formats, Vertica provides filters that insert boundary information in the data stream before it reaches the parser.

**Kafka Filters**

Vertica provides the following filters:

- **KafkaInsertDelimiters**: Inserts a user-specified delimiter between each message in the data stream. The delimiter can contain any characters and be of any length. This parser uses the following syntax:
  
  ```
  KafkaInsertDelimiters(delimiter = 'delimiter')
  ```

- **KafkaInsertLengths**: Inserts the message length in bytes at the beginning of the message. Vertica writes the length as a 4-byte uint32 value in big-endian network byte order. For example, a 100-byte message is preceded by 0x00000064. This parser uses the following syntax:
  
  ```
  KafkaInsertLengths()
  ```

  **Note:** Because each Kafka filter requires input from a stream source and outputs a non-stream source, you cannot use both Kafka filters in the same COPY statement to process a Kafka data stream.

In addition to one of the Kafka filters, you can include one or more user-defined filters in a single COPY statement. Specify multiple filters as a comma-separated list, and list the Vertica filter first. If you use a non-Kafka parser, you must use at least one filter to prepare the data stream for the parser, or the parser fails and returns an error.

**Examples**

The following COPY statement loads comma-separated values from two partitions in a topic named `iot-data`. The load exits after it processes all messages in both partitions. The KafkaInsertDelimiters filter inserts newlines between the Kafka messages to convert them into traditional rows of data. The statement uses the standard COPY parser to delimit CSV values with a comma:

```sql
=> COPY kafka_iot SOURCE KafkaSource(stream='iot-data|0|-2,iot-data|1|-2',
                     brokers='kafka01:9092',
                     stop_on_eof=True)
                  FILTER KafkaInsertDelimiters(delimiter = E'\n')
```
Avro Schema Registry with Vertica

Vertica supports the use of a Confluent schema registry for Avro schemas with the KafkaAvroParser. By using a schema registry, you enable the Avro parser to parse and decode messages written by the registry and to retrieve schemas stored in the registry. In addition, a schema registry enables Vertica to process streamed data without sending a copy of the schema with each record. Vertica can access a schema registry in the following ways:

- schema ID
- subject and version

**Note:**
If you use the compatibility config resource in your schema registry, you should specify a value of at least BACKWARD. You may also choose to use a stricter compatibility setting. For more information on installing and configuring a schema registry, refer to the Confluent documentation.

Schema ID Loading

In schema ID based loading, the Avro parser checks the schema ID associated with each message to identify the correct schema to use. A single COPY statement can reference multiple schemas. Because each message is not validated, Vertica recommends that you use a flex table as the target table for schema ID based loading.

The following example shows a COPY statement that refers to a schema registry located on the same host.

```sql
=> COPY logs source kafkasource(stream='simple|0|0', stop_on_eof=true, duration=interval '10 seconds') parser KafkaAvroParser(schema_registry_url='http://localhost:8081/');
```
Subject and Version Loading

In subject and version loading, you specify a subject and version in addition to the schema registry URL. The addition of the subject and version identifies a single schema to use for all messages in the COPY. If any message in the statement is incompatible with the schema, the COPY fails. Because all messages are validated prior to loading, Vertica recommends that you use a standard Vertica table as the target for subject and version loading.

The following example shows a COPY statement that identifies a schema subject and schema version as well as a schema registry.

```sql
=> COPY t source kafkasource(stream='simpleEvolution@0@0',
                   stop_on_eof=true, duration=interval '10 seconds') parser
KafkaAvroParser(schema_registry_url='http://repository:8081/schema-repo/',

Producing Data for Kafka

In addition to consuming data from Kafka, Vertica can produce data for Kafka. Stream the following data from Vertica for consumption by other Kafka consumers:

- Vertica analytics results. Use KafkaExport to export Vertica tables and queries.
- Health and performance data from Data Collector tables. Create push-based notifiers to send this data for consumption for third-party monitoring tools.
- Ad hoc messages. Use NOTIFY to signal that tasks such as stored procedures are complete.

Producing Data Using KafkaExport

The KafkaExport function lets you stream data from Vertica to Kafka. You pass this function three arguments and two or three parameters:
The *partitionColumn* and *keyColumn* arguments set the Kafka topic's partition and key value, respectively. You can set either or both of these values to NULL. If you set the partition to NULL, Kafka uses its default partitioning scheme (either randomly assigning partitions if the key value is NULL, or based on the key value if it is not).

The *valueColumn* argument is a LONG VARCHAR containing message data that you want to send to Kafka. Kafka does not impose structure on the message content. Your only restriction on the message format is what the consumers of the data are able to parse.

You are free to convert your data into a string in any way you like. For simple messages (such as a comma-separated list), you can use functions such as CONCAT to assemble your values into a message. If you need a more complex data format, such as JSON, consider writing a UDX function that accepts columns of data and outputs a LONG VARCHAR containing the data in the format you require. See Developing User-Defined Extensions (UDXs) for more information.

The data exported from Vertica using KafkaExport is sent to Kafka in JSON format.

See KafkaExport for detailed information about KafkaExport's syntax.

**Export Example**

This example shows you how to perform a simple export of several columns of a table. Suppose you have the following table containing a simple set of Internet of things (IOT) data:

```sql
=> SELECT * FROM iot_report LIMIT 10;
server | date        | location        | id
--------------------------------------------
1 | 2016-10-11 04:09:28 | -14.86058, 112.75848 | 70982827
1 | 2017-07-02 12:37:48 | -21.42197, -127.17672 | 49494918
1 | 2017-10-19 14:04:33 | -71.72156, -36.27381 | 94328189
1 | 2018-08-30 08:09:45 | 83.97962, 162.83848 | 967212
2 | 2017-01-20 03:05:24 | 37.17372, 136.14026 | 36670100
2 | 2017-07-29 11:38:37 | -38.99517, 171.72671 | 52849116
2 | 2018-04-19 13:06:58 | 60.28989, 133.98275 | 36059026
2 | 2018-08-28 01:09:51 | -59.71784, -144.97142 | 77310139
2 | 2018-09-14 23:16:15 | 58.07275, 111.87354 | 4198109
(10 rows)

=> \d iot_report
List of Fields by Tables
```
You want to send the data in this table to a Kafka topic named `iot_results` for consumption by other applications. Looking at the data and the structure of the `iot_report`, you may decide the following:

- The server column is a good match for the partitions in `iot_report`. There are three partitions in the Kafka topic, and the values in server column are between 1 and 3. Suppose the partition column had a larger range of values (for example, between 1 and 100). Then you could use the modulo operator (%) to coerce the values into the same range as the number of partitions (server % 3). A complication with these values is that the values in the server are 1-based (the lowest value in the column is 1). Kafka's partition numbering scheme is zero-based. So, you must adjust the values in the server column by subtracting 1 from them.
- The id column can act as the key. This column has a data type of `INTEGER`. The KafkaExport function expects the key value to be a `VARCHAR`. Vertica does not automatically cast `INTEGER` values to `VARCHAR`, so you must explicitly cast the value in your function call.
- The consumers of the `iot_report` topic expect values in comma-separated format. You can combine the values from the date and location columns into a single `VARCHAR` using nested calls to the `CONCAT` function.

The final piece of information you need to know is the host names and port numbers of the brokers in your Kafka cluster. In this example, there are two brokers named `kafka01` and `kafka03`, running on port 6667 (the port that Hortonworks clusters use). Once you have all of this information, you are ready to export your data.

The following example shows how you might export the contents of `iot_report`:

```sql
=> SELECT KafkaExport(server - 1, id::VARCHAR,
       CONCAT(CONCAT(date, ',', location))
       USING PARAMETERS brokers='kafka01:6667,kafka03:6667',
       topic='iot_results') OVER (PARTITION BEST) FROM iot_report;
```

KafkaExport returned 0 rows which means Vertica was able to send all of your data to Kafka without any errors.

Other things to note about the example:
The CONCAT function automatically converts the date column's DATETIME value to a VARCHAR for you, so you do not need to explicitly cast it.

Two nested CONCAT functions are necessary to concatenate the date field with a comma, and the resulting string with the location field.

Adding a third column to the message field would require two additional CONCAT function calls (one to concatenate a comma after the location column, and one to concatenate the additional column's value). Using CONCAT becomes messy after just a few column's worth of data.

On the Kafka side, you will see whatever you sent as the valueColumn (third) argument of the KafkaExport function. In the above example, this is a CSV list. If you started a console consumer for iot_results topic before running the example query, you would see the following output when the query runs:

```
$ /opt/kafka/bin/kafka-console-consumer.sh --topic iot_results --zookeeper localhost
2017-10-10 12:08:33, 78.84883, -137.56584
2017-12-06 16:50:57, -25.33024, -157.91389
2018-08-19 00:02:18, 13.00436, 85.44815
2016-10-11 04:09:28, -14.86058, 112.75848
2017-10-19 14:04:33, -71.72156, -36.27381
2018-07-11 19:35:18, -9.41315, 102.36866
2018-08-30 08:09:45, 83.97962, 162.88348
2017-01-20 03:05:24, 37.17372, 136.14026
2017-07-20 11:38:37, -38.99517, 171.72671
2018-04-19 13:06:58, 69.28989, 133.98275
2018-08-28 01:09:51, -59.71784, -144.97142
2018-09-14 23:16:15, 58.07275, 111.07354
```

### KafkaExport's Return Value

KafkaExport outputs any rows that Kafka rejected. For example, suppose you forgot to adjust the partition column to be zero-based in the previous example. Then some of the rows exported to Kafka would specify a partition that does not exist. In this case, Kafka rejects these rows, and KafkaExport reports them in table format:

```
=> SELECT KafkaExport(server, id::VARCHAR, 
CONCAT(CONCAT(date, ', ', location)), 
USING PARAMETERS brokers='kafka01:6667,kafka03:6667',
topic='iot_results') OVER (PARTITION BEST) FROM iot_report;
```

<table>
<thead>
<tr>
<th>partition</th>
<th>key</th>
<th>message</th>
<th>failure_reason</th>
</tr>
</thead>
<tbody>
<tr>
<td>3</td>
<td>40492866</td>
<td>2017-10-10 12:08:33, 78.84883, -137.56584,</td>
<td>Local: Unknown partition</td>
</tr>
<tr>
<td>3</td>
<td>73846066</td>
<td>2017-12-06 16:50:57, -25.33024, -157.91389,</td>
<td>Local: Unknown partition</td>
</tr>
<tr>
<td>3</td>
<td>27462612</td>
<td>2018-08-19 00:02:18, 13.00436, 85.44815,</td>
<td>Local: Unknown partition</td>
</tr>
</tbody>
</table>
Vertica Documentation
Integrating with Apache Kafka

Note:
Another common reason for Kafka rejecting a row is that its message value is longer than Kafka's message.max.bytes setting.

You can capture this output by creating a table to hold the rejects. Then use an INSERT statement to insert KafkaExport's results:

```sql
=> CREATE TABLE export_rejects (partition INTEGER, key VARCHAR, message LONG VARCHAR, failure_reason VARCHAR);
CREATE TABLE => INSERT INTO export_rejects SELECT KafkaExport(server, id::VARCHAR, CONCAT(CONCAT(date, ','), location)
    USING PARAMETERS brokers='kafka01:6667,kafka03:6667',
    topic='iot_results') OVER (PARTITION BEST) FROM iot_report;
OUTPUT
-----
  4
(1 row)
=> SELECT * FROM export_rejects;

<table>
<thead>
<tr>
<th>partition</th>
<th>key</th>
<th>message</th>
<th>failure_reason</th>
</tr>
</thead>
<tbody>
<tr>
<td>3</td>
<td>27462612</td>
<td>2018-08-19 00:02:18, 13.00436, 85.44815</td>
<td>Local: Unknown partition</td>
</tr>
<tr>
<td>3</td>
<td>40492866</td>
<td>2017-10-10 12:08:33, 78.84883, -137.56584</td>
<td>Local: Unknown partition</td>
</tr>
<tr>
<td>3</td>
<td>73846006</td>
<td>2017-12-06 16:50:57, -25.33024, -157.91389</td>
<td>Local: Unknown partition</td>
</tr>
</tbody>
</table>
(4 rows)
```

Producing Kafka Messages Using Notifiers

You can use notifiers to help you monitor your Vertica database using third-party Kafka-aware tools by producing messages to a Kafka topic. You can directly publish messages (for example, from a SQL script to indicate a long-running query has finished). Notifiers can also automatically send messages when a component in the data collector tables is updated.

Creating a Notifier

You must create a notifier before you can use it. At a minimum, a notifier defines:

- A unique name.
- A message protocol. This is `kafka://` when sending messages to Kafka.
- The server to communicate with. For Kafka, this is the address and port number of a Kafka broker.
- The maximum message buffer size. If the queue of messages to be sent via the notifier exceed this limit, messages are dropped.

You create the notifier with `CREATE NOTIFIER`. This example creates a notifier named `load_progress_notifier` that sends messages via the Kafka broker running on `kafka01.example.com` on port 9092:

```sql
=> CREATE NOTIFIER load_progress_notifier
   ACTION 'kafka://kafka01.example.com:9092'
   MAXMEMORYSIZE '10M';
```

While not required, it's best practice to create notifiers that use an encrypted connection. The following example creates a notifier that uses an encrypted connection and verifies the Kafka server's certificate with the provided CA bundle:

```sql
=> CREATE NOTIFIER encrypted_notifier
   ACTION 'kafka://127.0.0.1:9092'
   MAXMEMORYSIZE '10M'
   TLSMODE 'verify-ca'
   CA BUNDLE ca_bundle;
```

Follow this procedure to create or alter notifiers for Kafka endpoints that use SASL_SSL. Note that you must repeat this procedure whenever you change the TLSMODE, certificates, or CA bundle for a given notifier.

1. Use CREATE or ALTER to disable the notifier while setting the TLSMODE, certificate, and CA bundle.

```sql
=> ALTER NOTIFIER encrypted_notifier
   DISABLE
   TLSMODE 'verify-ca'
   CA BUNDLE ca_bundle2;
```

2. ALTER the notifier and set the proper rdkafka adapter parameters for SASL_SSL.

```sql
=> ALTER NOTIFIER encrypted_notifier PARAMETERS
   'sasl.username=user;sasl.password=password;sasl.mechanism=PLAIN;security.protocol=SASL_SSL';
```

3. Enable the notifier.

```sql
=> ALTER NOTIFIER encrypted_notifier ENABLE;
```
Sending Individual Messages Via a Notifier

You can send an individual message via a notifier using the `NOTIFY` function. This feature is useful for reporting the progress of SQL scripts such as ETL tasks to third-party reporting tools.

You pass this function three string values:

- The message to send.
- The name of the notifier to send the message.
- The Kafka topic to receive the message.

For example, suppose you want to send the message "Daily load finished" to the `vertica_notifications` topic of the Kafka cluster defined in the `load_progress_notifier` notifier created earlier. Then you could execute the following statement:

```sql
=> SELECT NOTIFY('Daily load finished.',
    'load_progress_notifier',
    'vertica_notifications');
NOTIFY
-------
OK
(1 row)
```

The message the notifier sends to Kafka is in JSON format. You can see the resulting message by using the console consumer on a Kafka node. For example:

```bash
$ /opt/kafka/bin/kafka-console-consumer.sh --bootstrap-server localhost:9092 \
    --from-beginning \
    --topic vertica_notifications \
    --max-messages 1
```

```
{"_db":"vmart","_schema":"v_internal","_table":"dc_notifications","channel":"vertica_notifications","message":"Daily load finished.","node_name":"v_vmart_node0001","notifier":"load_progress_notifier","request_id":2,"session_id":"v_vmart_node0001-463079:0x4ba6f","statement_id":-1,"time":"2018-06-19 09:48:42.314181-04","transaction_id":45035996275565458,"user_id":45035996273704962,"user_name":"dbadmin"}
```

Processed a total of 1 messages
Vertica Documentation
Integrating with Apache Kafka

Monitoring DC Tables with Notifiers
The Vertica Data Collector (DC) tables monitor many different database functions. You can
have a notifier automatically send a message when a DC component updates. You can
query the DATA_COLLECTOR table to get a list of the DC components.
You configure the notifier to send DC component updates to Kafka using the function SET_
DATA_COLLECTOR_NOTIFY_POLICY.
To be notified of failed login attempts, you can create a notifier that sends a notification
when the DC component LoginFailures updates. The TLSMODE 'verify-ca' verifies that
the server's certificate is signed by a trusted CA.
=> CREATE NOTIFIER vertica_stats ACTION 'kafka://kafka01.example.com:9092' MAXMEMORYSIZE '10M'
TLSMODE 'verify-ca';
CREATE NOTIFIER
=> SELECT SET_DATA_COLLECTOR_NOTIFY_POLICY('LoginFailures','vertica_stats', 'vertica_notifications',
true);
SET_DATA_COLLECTOR_NOTIFY_POLICY
---------------------------------SET
(1 row)

Like the messages sent via the NOTIFY function, the data sent to Kafka from the DC
components is in JSON format. The previous example results in messages like the following
being sent to the vertica_notifications Kafka topic:
{"_db":"vmart","_schema":"v_internal","_table":"dc_login_failures",
"authentication_method":"Reject","client_authentication_name":"",
"client_hostname":"::1","client_label":"","client_os_user_name":"dbadmin",
"client_pid":481535,"client_version":"","database_name":"alice",
"effective_protocol":"3.8","node_name":"v_vmart_node0001",
"reason":"INVALID USER","requested_protocol":"3.8","ssl_client_fingerprint":"",
"time":"2018-06-19 14:51:22.437035-04","user_name":"alice"}

Viewing Notification Policies for a DC Component
Use the GET_DATA_COLLECTOR_NOTIFY_POLICY function to list the policies set for a DC
component.
=> SELECT GET_DATA_COLLECTOR_NOTIFY_POLICY('LoginFailures');
GET_DATA_COLLECTOR_NOTIFY_POLICY
---------------------------------------------------------------------Notifiable; Notifier: vertica_stats; Channel: vertica_notifications

Vertica Analytic Database (11.0.x)

Page 6088 of 6776


Disabling a Notification Policy

You can call `SET_DATA_COLLECTOR_NOTIFY_POLICY` function with its fourth argument set to FALSE to disable a notification policy. The following example disables the notify policy for the LoginFailures component:

```sql
=> SELECT SET_DATA_COLLECTOR_NOTIFY_POLICY('LoginFailures','vertica_stats', 'vertica_notifications', false);
SET_DATA_COLLECTOR_NOTIFY_POLICY
-----------------------------
SET
(1 row)
=> SELECT GET_DATA_COLLECTOR_NOTIFY_POLICY('LoginFailures');
GET_DATA_COLLECTOR_NOTIFY_POLICY
-----------------------------
Not notifiable;
(1 row)
```

TLS/SSL Encryption with Kafka

You can use TLS/SSL encryption between Vertica, your scheduler, and Kafka. This encryption prevents others from accessing the data that is sent between Kafka and Vertica. It can also verify the identity of all parties involved in data streaming, so no impostor can pose as your Vertica cluster or a Kafka broker.

**Note:**
Many people often confuse the terms TLS and SSL. SSL is an older encryption protocol that has been largely replace with the newer and more secure TLS standard. However, many people still use the term SSL to refer to encryption between servers and applications, even when that encryption is actually TLS. For example, Java and Kafka use the term SSL exclusively, even when dealing with TLS. This document uses SSL/TLS and SSL interchangeably.

Some common cases where you want to use SSL encryption between Vertica and Kafka are:

- Your Vertica database and Kafka communicate over an insecure network. For example, suppose your Kafka cluster is located in a cloud service and your Vertica cluster is within your internal network. In this case, any data you read from Kafka travels over an insecure connection across the Internet.
You are required by security policies, laws, or other requirements to encrypt all of your network traffic.

For more information about TLS/SSL encryption in Vertica, see TLS Protocol.

## Using TLS/SSL Between the Scheduler and Vertica

The scheduler connects to Vertica the same way other client applications do. There are two ways you can configure Vertica to use SSL/TLS authentication and encryption with clients:

- If Vertica is configured to use SSL/TLS server authentication, you can choose to have your scheduler confirm the identity of the Vertica server.
- If Vertica is configured to use mutual SSL/TLS authentication, you can configure your scheduler to identify itself to Vertica as well as have it verify the identity of the Vertica server. Depending on your database's configuration, the Vertica server may require your scheduler to use TLS when connecting. See Implementing Client Self-Authentication for more information.

For information on encrypted client connections with Vertica, refer to TLS Protocol.

The scheduler runs on a Java Virtual Machine (JVM) and uses JDBC to connect to Vertica. It acts like any other JDBC client when connecting to Vertica. To use TLS/SSL encryption for the scheduler's connection to Vertica, use the Java keystore and truststore mechanism to hold the keys and certificates the scheduler uses to identify itself and Vertica.

- The keystore contains your scheduler's private encryption key and its certificate (public key).
- The truststore contains CAs that you trust. If you enable authentication, the scheduler uses these CAs to verify the identity of the Vertica cluster it connects to. If one of the CAs in the trust store was used to sign the server's certificate, then the Scheduler knows it can trust the identity of the Vertica server.

You can pass options to the JVM that executes the scheduler through the Linux environment variable named VKCONFIG_JVM_OPTS. You add the parameters to this variable that alter the scheduler's JDBC settings (such as the truststore and keystore for the scheduler's JDBC connection). See Configure Kafka for TLS for an example.

You can also use the - -jdbc-url scheduler option to alter the JDBC configuration. See Common vkconfig Script Options for more information about the scheduler options and JDBC Connection Properties for more information about the properties they can alter.
Using TLS/SSL Between Vertica and Kafka

You can stream data from Kafka into Vertica two ways: manually using a COPY statement and the KafkaSource UD source function, or automatically using the scheduler.

To directly copy data from Kafka via an SSL connection, you set session variables containing an SSL key and certificate. When KafkaSource finds that you have set these variables, it uses the key and certificate to create a secure connection to Kafka. See Configure Kafka for TLS for details.

When automatically streaming data from Kafka to Vertica, you configure the scheduler the same way you do to use an SSL connection to Vertica. When the scheduler executes COPY statements to load data from Kafka, it uses its own keystore and truststore to create an SSL connection to Kafka.

To use an SSL connection when producing data from Vertica to Kafka, you set the same session variables you use when directly streaming data from Kafka via an SSL connection. The KafkaExport function uses these variables to establish a secure connection to Kafka.

Note: Notifiers do not currently support using TLS/SSL connections.

See the Apache Kafka documentation for more information about using SSL/TLS authentication with Kafka.

Planning TLS/SSL Encryption Between Vertica and Kafka

Some things to consider before you begin configuring TLS/SSL:

- Which connections between the scheduler, Vertica, and Kafka needs to be encrypted?
  In some cases, you may only need to enable encryption between Vertica and Kafka. This scenario is common when Vertica and the Kafka cluster are on different networks. For example, suppose Kafka is hosted in a cloud provider and Vertica is hosted in your internal network. Then the data must travel across the unsecured Internet between the two. However, if Vertica and the scheduler are both in your local network, you may decide that configuring them to use SSL/TLS is unnecessary. In
other cases, you will want all parts of the system to be encrypted. For example, you want to encrypt all traffic when Kafka, Vertica, and the scheduler are all hosted in a cloud provider whose network may not be secure.

- Which connections between the scheduler, Vertica, and Kafka require trust? You can opt to have any of these connections fail if one system cannot verify the identity of another. See Verifying Identities below.
- Which CAs will you be using to sign each certificate? The simplest way to configure the scheduler, Kafka, and Vertica is to use the same CA to sign all of the certificates you will use when setting up TLS/SSL. Using the same root CA to sign the certificates requires you to be able to edit the configuration of Kafka, Vertica, and the scheduler. If you cannot use the same CA to sign all certificates, all truststores must contain the entire chain of CAs used to sign the certificates, all the way up to the root CA. Including the entire chain of trust ensures each system can verify each other's identities.

**Verifying Identities**

Your primary challenge when configuring TLS/SSL encryption between Vertica, the scheduler, and Kafka is making sure the scheduler, Kafka, and Vertica can all verify each other's identity. The most common problem people have encountered when setting up TLS/SSL encryption is ensuring the remote system can verify the authenticity of a system's certificate. The best way to prevent this problem is to ensure that the all systems have their certificates signed by a CA that all of the systems explicitly trust.

When a system attempts to start an encrypted connection with another system, it sends its certificate to the remote system. This certificate can be signed by one or more Certificate Authorities (CA) that help identify the system making the connection. These signatures form a "chain of trust." A certificate is signed by a CA. That CA, in turn, could have been signed by another CA, and so forth. Often, the chain ends with a CA (referred to as the root CA) from a well-known commercial provider of certificates, such as Comodo SSL or DigiCert, that are trusted by default on many platforms such as operating systems and web browsers.

If the remote system finds a CA in the chain that it trusts, it verifies the identity of the system making the connection, and the connection can continue. If the remote system cannot find the signature of a CA it trusts, it may block the connection, depending on its configuration. Systems can be configured to only allow connections from systems whose identity has been verified.
Note:
Verifying the identity of another system making a TLE/SSL connection is often referred to as "authentication." Do not confuse this use of authentication with other forms of authentication used with Vertica. For example, TLS/SSL's authentication of a client connection has nothing to do with Vertica user authentication. Even if you successfully establish a TLS/SSL connection to Vertica using a client, Vertica still requires you to provide a user name and password before you can interact with it.

Configuring Your Scheduler for TLS Connections

The scheduler can use TLS for two different connections: the one it makes to Vertica, and the connection it creates when running COPY statements to retrieve data from Kafka. Because the scheduler is a Java application, you supply the TLS key and the certificate used to sign it in a keystore. You also supply a truststore that contains in the certificates that the scheduler should trust. Both the connection to Vertica and to Kafka can use the same keystore and truststore. You can also choose to use separate keystores and truststores for these two connections by setting different JDBC settings for the scheduler. See JDBC Connection Properties for a list of these settings.

See Configure Kafka for TLS for detailed steps on configuring your scheduler to use SSL.

Important:
If you choose to use a file format other than the standard Java Keystore (JKS) format for your keystore or truststore files, you must use the correct file extension in the filename. For example, suppose you choose to use a keystore and truststore saved in PKCS#12 format. Then your keystore and trustore files must end with the .pfx or .p12 extension.

If the scheduler does not recognize the file's extension (or there is no extension in the file name), it assumes that the file is in JKS format. If the file is not in JKS format, you will see an error message when starting the scheduler, similar to "Failed to create an SSLSocketFactory when setting up TLS: keystore not found."

Note that if the Kafka server's parameter client.ssl.auth is set to none or requested, you do not need to create a keystore.
Using TLS/SSL When Directly Loading Data from Kafka

You can manually load data from Kafka using the COPY statement and the KafkaSource user-defined load function (see Manually Consume Data From Kafka). To have KafkaSource open a secure connection to Kafka, you must supply it with an SSL key and other information.

When starting, the KafkaSource function checks if several user session variables are defined. These variables contain the SSL key, the certificate used to sign the key, and other information that the function needs to create the SSL connection. See Kafka User-Defined Session Parameters for a list of these variables. If KafkaSource finds these variables are defined, it uses them to create an SSL connection to Kafka.

See Configure Kafka for TLS for a step-by-step guide on configuring and using an SSL connection when directly copying data from Kafka.

These variables are also used by the KafkaExport function to establish a secure connection to Kafka when exporting data.

Configure Kafka for TLS

This page covers procedures for configuring TLS connections Vertica, Kafka, and the scheduler.

Note that the following example configures TLS for a Kafka server where ssl.client.auth=required, which requires the following:

- kafka_SSL_Certificate
- kafka_SSL_PrivateKey_secret
- kafka_SSL_PrivateKeyPassword_secret
- A keystore for the Scheduler

If your configuration uses ssl.client.auth=none or ssl.client.auth=requested, these parameters and the scheduler keystore are optional.
Creating Certificates for Vertica and Clients

The CA certificate in this example is self-signed. In a production environment, you should instead use a trusted CA.

This example uses the same self-signed root CA to sign all of the certificates used by the scheduler, Kafka brokers, and Vertica. If you cannot use the same CA to sign the keys for all of these systems, make sure you include the entire chain of trust in your keystores.

For more information, see Generating TLS Certificates and Keys.

1. Generate a private key, `root.key`.

   ```sh
   $ openssl genrsa -out root.key
   Generating RSA private key, 2048 bit long modulus
   .................................................................
   .................................................++++
   ..................+++ e is 65537 (0x10001)
   ``

2. Generate a self-signed CA certificate.

   ```sh
   $ openssl req -new -x509 -key root.key -out root.crt
   You are about to be asked to enter information that will be incorporated into your certificate request.
   What you are about to enter is what is called a Distinguished Name or a DN.
   There are quite a few fields but you can leave some blank
   For some fields there will be a default value,
   If you enter '.', the field will be left blank.
   ----- Country Name (2 letter code) [AU]:US
   State or Province Name (full name) [Some-State]:MA
   Locality Name (eg, city) [Cambridge]:
   Organization Name (eg, company) [Internet Widgits Pty Ltd]:My Company
   Organizational Unit Name (eg, section) []:
   Common Name (e.g. server FQDN or YOUR name) []:*.mycompany.com
   Email Address []:myemail@mycompany.com
   ``

3. Restrict to the owner read/write permissions for `root.key` and `root.crt`. Grant read permissions to other groups for `root.crt`.

   ```sh
   $ ls
   root.crt root.key
   $ chmod 600 root.key
   $ chmod 644 root.crt
   ``

4. Generate the server private key, `server.key`.
5. Create a certificate signing request (CSR) for your CA. Be sure to set the "Common Name" field to a wildcard (asterisk) so the certificate is accepted for all Vertica nodes in the cluster:

$ openssl req -new -key server.key -out server_reqout.txt
You are about to be asked to enter information that will be incorporated into your certificate request.
What you are about to enter is what is called a Distinguished Name or a DN.
There are quite a few fields but you can leave some blank
For some fields there will be a default value,
If you enter '.', the field will be left blank.
-----
Country Name (2 letter code) [AU]:US
State or Province Name (full name) [Some-State]:MA
Locality Name (eg, city) []:Cambridge
Organization Name (eg, company) [Internet Widgits Pty Ltd]:My Company
Organizational Unit Name (eg, section) []:
Common Name (e.g. server FQDN or YOUR name) []:*.mycompany.com
Email Address []:myemail@mycompany.com

Please enter the following 'extra' attributes to be sent with your certificate request
A challenge password []: server_key_password
An optional company name []:

6. Sign the server certificate with your CA. This creates the server certificate server.crt.

$ openssl x509 -req -in server_reqout.txt -days 3650 -sha1 -CAcreateserial -CA root.crt \ 
-Cakey root.key -out server.crt
Signature ok
subject=/C=US/ST=MA/L=Cambridge/O=My Company/CN=*.mycompany.com/emailAddress=myemail@mycompany.com
Getting CA Private Key

7. Set the appropriate permissions for the key and certificate.

$ chmod 600 server.key
$ chmod 644 server.crt

Create a Client Key and Certificate (Mutual Mode Only)

In Mutual Mode, clients and servers verify each other's certificates before establishing a connection. The following procedure creates a client key and certificate to present to
Vertica. The certificate must be signed by a CA that Vertica trusts.

The steps for this are identical to those above for creating a server key and certificate for Vertica.

```
$ openssl genrsa -out client.key
Generating RSA private key, 2048 bit long modulus
....................................................+++ e is 65537 (0x10001)

$ openssl req -new -key client.key -out client_reqout.txt
You are about to be asked to enter information that will be incorporated into your certificate request.
What you are about to enter is what is called a Distinguished Name or a DN.
There are quite a few fields but you can leave some blank
For some fields there will be a default value,
If you enter '.', the field will be left blank.
Country Name (2 letter code) [AU]:US
State or Province Name (full name) [Some-State]:MA
Locality Name (eg, city) []:Cambridge
Organization Name (eg, company) [Internet Wdigts Pty Ltd]:My Company
Organizational Unit Name (eg, section) []:
Common Name (e.g. server FQDN or YOUR name) []:*\.mycompany.com
Email Address []:myemail@mycompany.com

Please enter the following 'extra' attributes to be sent with your certificate request
A challenge password []: server_key_password
An optional company name []:

$ openssl x509 -req -in client_reqout.txt -days 3650 -sha1 -CAcreateserial -CA root.crt 
-CAkey root.key -out client.crt
Signature ok
subject=/C=US/ST=MA/L=Cambridge/O=My Company/CN=*.mycompany.com/emailAddress=myemail@mycompany.com
Getting CA Private Key

$ chmod 600 client.key
$ chmod 644 client.crt
```

Set up Mutual Mode Client-Server TLS

Configure Vertica for Mutual Mode

The following keys and certificates must be imported and then distributed to the nodes on your Vertica cluster with TLS CONFIGURATION for Mutual Mode:

- root.key
- root.crt
You can view existing keys and certificates by querying `CRYPTOGRAPHIC_KEYS` and `CERTIFICATES`.

1. Import the server and root keys and certificates into Vertica with `CREATE KEY` and `CREATE CERTIFICATE`. See Generating TLS Certificates and Keys for details.

   ```
   => CREATE KEY imported_key TYPE 'RSA' AS '-----BEGIN PRIVATE KEY--------,--------END PRIVATE KEY-';
   => CREATE CA CERTIFICATE imported_ca AS '-----BEGIN CERTIFICATE--------,--------END CERTIFICATE-';
   => CREATE CERTIFICATE imported_cert AS '-----BEGIN CERTIFICATE--------,--------END CERTIFICATE-';
   ```

   In this example, `\set` is used to retrieve the contents of `root.key`, `root.crt`, `server.key`, and `server.crt`.

   ```
   => \set ca_cert ```cat root.crt``````
   => \set serv_key ```cat server.key``````
   => \set serv_cert ```cat server.crt``````

   => CREATE CA CERTIFICATE root_ca AS :ca_cert;
   CREATE CERTIFICATE
   => CREATE KEY server_key TYPE 'RSA' AS :serv_key;
   CREATE KEY
   => CREATE CERTIFICATE server_cert AS :serv_cert;
   CREATE CERTIFICATE
   ```

2. Follow the steps for Mutual Mode in Configuring Client-server TLS to set the proper TLSMODE and TLS CONFIGURATION parameters.

Configure a Client for Mutual Mode

Clients must have their private key, certificate, and CA certificate. The certificate will be presented to Vertica when establishing a connection, and the CA certificate will be used to verify the server certificate from Vertica.

This example configures the `vsql` client for mutual mode.

1. Create a `.vsql` directory in the user's home directory.

   ```
   $ mkdir ~/.vsql
   ```

2. Copy `client.key`, `client.crt`, and `root.crt` to the `vsql` directory.
3. Log into Vertica with `vsql` and query the `SESSIONS` system table to verify that the connection is using mutual mode:

```
$ vsql
Password: user-password
Welcome to vsql, the Vertica Analytic Database interactive terminal.
Type: \h or \? for help with vsql commands
\g or terminate with semicolon to execute query
\q to quit

SSL connection (cipher: DHE-RSA-AES256-GCM-SHA384, bits: 256, protocol: TLSv1.2)

=> select user_name,ssl_state from sessions;
user_name | ssl_state
-----------
dbadmin   | Mutual
(1 row)
```

**Configure Kafka for TLS**

**Configure the Kafka Brokers**

This procedure configures Kafka to use TLS with client connections. You can also configure Kafka to use TLS to communicate between brokers. However, inter-broker TLS has no impact on establishing an encrypted connection between Vertica and Kafka.

1. Create a truststore file for all of your Kafka brokers, importing your CA certificate. This example uses the self-signed `root.crt` created above.

```
=> $ keytool -keystore kafka.truststore.jks -alias CARoot -import -file root.crt
Enter keystore password: some_password
Re-enter new password: some_password
Owner: EMAILADDRESS=myemail@mycompany.com, CN=*.mycompany.com, O=MyCompany, L=Cambridge, ST=MA, C=US
Issuer: EMAILADDRESS=myemail@mycompany.com, CN=*.mycompany.com, O=MyCompany, L=Cambridge, ST=MA, C=US
Serial number: c3f02e87707d01aa
Certificate fingerprints:
```
2. Create a keystore file for the Kafka broker named kafka01. Each broker's keystore should be unique.

The keytool command adds the a Subject Alternative Name (SAN) used as a fallback when establishing a TLS connection. Use your Kafka broker's fully-qualified domain name (FQDN) as the value for the SAN and "What is your first and last name?" prompt.

In this example, the FQDN is kafka01.example.com. The alias for keytool is set to localhost, so local connections to the broker use TLS.

```
$ keytool -keystore kafka01.keystore.jks -alias localhost -validity 365 -genkey -keyalg RSA \ 
  -ext SAN=DNS:kafka01.mycompany.com
Enter keystore password: some_password
Re-enter new password: some_password
What is your first and last name? [Unknown]: kafka01.mycompany.com
What is the name of your organizational unit? [Unknown]:
What is the name of your organization? [Unknown]: MyCompany
```
What is the name of your City or Locality?
[Unknown]: Cambridge

What is the name of your State or Province?
[Unknown]: MA

What is the two-letter country code for this unit?
[Unknown]: US

Is CN=Database Admin, OU=MyCompany, O=Unknown, L=Cambridge, ST=MA, C=US correct?
[no]: yes

Enter key password for <localhost>
(RETURN if same as keystore password):

3. Export the Kafka broker's certificate. In this example, the certificate is exported as kafka01.unsigned.crt.

$ keytool -keystore kafka01.keystore.jks -alias localhost 
-keystorepass some_password
-certreq -file kafka01.unsigned.crt

4. Sign the broker's certificate with the CA certificate.

$ openssl x509 -req -CA root.crt -CAkey root.key -in kafka01.unsigned.crt 
-out kafka01.signed.crt -days 365 -CAcreateserial

5. Import the CA certificate into the broker's keystore.

Note:
If you use different CAs to sign the certificates in your environment, you must add the entire chain of CAs you used to sign your certificate to the keystore, all the way up to the root CA. Including the entire chain of trust helps other systems verify the identity of your Kafka broker.

$ keytool -keystore kafka01.keystore.jks -alias CARoot -import -file root.crt

Owner: EMAILADDRESS=myemail@mycompany.com, CN=*.mycompany.com, O=MyCompany, L=Cambridge, ST=MA, C=US
Issuer: EMAILADDRESS=myemail@mycompany.com, CN=*.mycompany.com, O=MyCompany, L=Cambridge, ST=MA, C=US
Serial number: c3f02e87707d01aa
Certificate fingerprints:
SHA256:
6. Import the signed Kafka broker certificate into the keystore.

```
$ keytool -keystore kafka01.keystore.jks -alias localhost 
    -import -file kafka01.signed.crt
```

Enter keystore password: some_password

Owner: CN=Database Admin, OU=MyCompany, O=Unknown, L=Cambridge, ST=MA, C=US
Issuer: EMAILADDRESS=myemail@mycompany.com, CN=*.mycompany.com, O=MyCompany, L=Cambridge, ST=MA, C=US

Serial number: b4b9a1828e6ca5f
Certificate fingerprints:
Signature algorithm name: SHA256withRSA
Subject Public Key Algorithm: 2048-bit RSA key
Version: 1
Trust this certificate? [no]: yes
Certificate was added to keystore

7. If you are not logged into the Kafka broker for which you prepared the keystore, copy
the truststore and keystore to it using scp. If you have already decided where to store
the keystore and truststore files in the broker's filesystem, you can directly copy them to their final destination. This example just copies them to the root user's home directory temporarily. The next step moves them into their final location.

```
$ scp kafka.truststore.jks kafka01.keystore.jks root@kafka01.mycompany.com:
root@Kafka01.mycompany.com's password: root_password
kafka.truststore.jks    100%  1048  1.0KB/s  00:00
kafka01.keystore.jks    100%  3277  3.2KB/s  00:00
```

8. Repeat steps 2 through 7 for the remaining Kafka brokers.

**Allow Kafka to Read the Keystore and Truststore**

If you did not copy the truststore and keystore to directory where Kafka can read them in the previous step, you must copy them to a final location on the broker. You must also allow the user account you use to run Kafka to read these files. The easiest way to ensure the user's access is to give this user ownership of these files.

In this example, Kafka is run by a Linux user kafka. If you use another user to run Kafka, be sure to set the permissions on the truststore and keystore files appropriately.

1. Log into the Kafka broker as root.

2. Copy the truststore and keystore to a directory where Kafka can access them. There is no set location for these files: you can choose a directory under /etc, or some other location where configuration files are usually stored. This example copies them from root's home directory to Kafka's configuration directory named /opt/kafka/config/. In your own system, this configuration directory may be in a different location depending on how you installed Kafka.

3. Copy the truststore and keystore to a directory where Kafka can access them. There is no set location for these files: you can choose a directory under /etc, or some other location where configuration files are usually stored. This example copies them from root's home directory to Kafka's configuration directory named /opt/kafka/config/. In your own system, this configuration directory may be in a different location depending on how you installed Kafka.

    ```
    # cd /opt/kafka/config/
    /opt/kafka/config# cp /root/kafka01.keystore.jks /root/kafka.truststore.jks 
    ```

4. If you aren't logged in as a user account that runs Kafka, change the ownership of the truststore and keystore files. This example changes the ownership from root (which is
the user currently logged in) to the kafka user:

/opt/kafka/config# ls -l
total 80
...  
-rw-r--r-- 1 kafka nogroup 1221 Feb 21 2018 consumer.properties  
-rw-r----- 1 root root  3277 Mar 27 08:03 kafka01.keystore.jks  
-rw-r--r-- 1 root root   1048 Mar 27 08:03 kafka.truststore.jks  
-rw-r--r-- 1 kafka nogroup  4727 Feb 21 2018 log4j.properties  
...  
/opt/kafka/config# chown kafka kafka01.keystore.jks kafka.truststore.jks  
/opt/kafka/config# ls -l
total 80
...  
-rw-r--r-- 1 kafka nogroup 1221 Feb 21 2018 consumer.properties  
-rw-r----- 1 root root  3277 Mar 27 08:03 kafka01.keystore.jks  
-rw-r--r-- 1 root root   1048 Mar 27 08:03 kafka.truststore.jks  
-rw-r--r-- 1 kafka nogroup  4727 Feb 21 2018 log4j.properties  
...  

5. Repeat steps 1 through 3 for the remaining Kafka brokers.

**Configure Kafka to use TLS**

With the truststore and keystore in place, your next step is to edit the Kafka's server.properties configuration file to tell Kafka to use TLS/SSL encryption. This file is usually stored in the Kafka config directory. The location of this directory depends on how you installed Kafka. In this example, the file is located in /opt/kafka/config.

When editing the files, be sure you do not change their ownership. The best way to ensure Linux does not change the file's ownership is to use su to become the user account that runs Kafka, assuming you are not already logged in as that user:

$ /opt/kafka/config# su -s /bin/bash kafka

**Note:**
The previous command lets you start a shell as the kafka system user even if that user cannot log in.

The server.properties file contains Kafka broker settings in a `property=value` format. To configure the Kafka broker to use SSL, alter or add the following property settings:

<table>
<thead>
<tr>
<th>Property</th>
<th>Set to:</th>
</tr>
</thead>
</table>

Vertica Analytic Database (11.0.x) Page 6104 of 6776
<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>listeners</td>
<td>Host names and ports on which the Kafka broker listens. If you are not using SSL for connections between brokers, you must supply both a PLAINTEXT and SSL option. For example:</td>
</tr>
<tr>
<td></td>
<td>listeners=PLAINTEXT://hostname:9092,SSL://hostname:9093</td>
</tr>
<tr>
<td>ssl.keystore.location</td>
<td>Absolute path to the keystore file.</td>
</tr>
<tr>
<td>ssl.keystore.password</td>
<td>Password for the keystore file.</td>
</tr>
<tr>
<td>ssl.key.password</td>
<td>Password for the Kafka broker's key in the keystore. You can make this password different than the keystore password if you choose.</td>
</tr>
<tr>
<td>ssl.truststore.location</td>
<td>Location of the truststore file.</td>
</tr>
<tr>
<td>ssl.truststore.password</td>
<td>Password to access the truststore.</td>
</tr>
<tr>
<td>ssl.enabled.protocols</td>
<td>TLS/SSL protocols that Kafka allows clients to use.</td>
</tr>
<tr>
<td>ssl.client.auth</td>
<td>Specifies whether SSL authentication is required or optional. The most secure setting for this setting is required to verify the client's identity.</td>
</tr>
</tbody>
</table>

**Important:**
These settings vary depending on your version of Kafka. Always consult the [Apache Kafka documentation](https://kafka.apache.org/) for your version of Kafka before making changes to server.properties. In particular, be aware that Kafka version 2.0 and later enables host name verification for clients and inter-broker communications by default.

This example configures Kafka to verify client identities via SSL authentication. It does not use SSL to communicate with other brokers, so the server.properties file defines both SSL and PLAINTEXT listener ports. It does not supply a host name for listener ports which tells Kafka to listen on the default network interface.

The lines added to the kafka01 broker's copy of server.properties for this configuration are:

```properties
listeners=PLAINTEXT://:9092,SSL://:9093
ssl.keystore.location=/opt/kafka/config/kafka01.keystore.jks
ssl.keystore.password=vertica
```
You must make these changes to the `server.properties` file on all of your brokers.

After making your changes to your broker's `server.properties` files, restart Kafka. How you restart Kafka depends on your installation:

- If Kafka is running as part of a Hadoop cluster, you can usually restart it from within whatever interface you use to control Hadoop (such as Ambari).
- If you installed Kafka directly, you can restart it either by directly running the `kafka-server-stop.sh` and `kafka-server-start.sh` scripts or via the Linux system's service control commands (such as `systemctl`). You must run this command on each broker.

### Test the Configuration

If you have not configured client authentication, you can quickly test whether Kafka can access its keystore by running the command:

```
$ openssl s_client -debug -connect broker_host_name:9093 -tls1
```

If Kafka is able to access its keystore, this command will output a dump of the broker's certificate (exit with CTRL+C):

```
=> # openssl s_client -debug -connect kafka01.mycompany.com:9093 -tls1
CONNECTED(00000003)
write to 0xa4e4f0 [0xa58023] (197 bytes => 197 (0x5))

read from 0xa4e4f0 [0xa53ad3] (5 bytes => 5 (0x5))
0000 - 16 03 01 08 fc .....
```
The above method is not conclusive, however; it only tells you if Kafka is able to find its keystore.

The best test of whether Kafka is able to accept TLS connections is to configure the command-line Kafka producer and consumer. In order to configure these tools, you must first create a client keystore. These steps are identical to creating a broker keystore.

Note: This example assumes that Kafka has a topic named test that you can send test messages to.

1. Create the client keystore:

2. Respond to the "What is your first and last name?" with the FQDN of the system you will use to run the producer and/or consumer. Answer the rest of the prompts with the details of your organization.

3. Export the client certificate so it can be signed:

   keytool -keystore client.keystore.jks -alias localhost -certreq -file client.unsigned.cert

4. Sign the client certificate with the root CA:

   openssl x509 -req -CA root.crt -CAkey root.key -in client.unsigned.cert -out client.signed.cert \   -days 365 -CAcreateserial

5. Add the root CA to keystore:

   keytool -keystore client.keystore.jks -alias CARoot -import -file root.crt

6. Add the signed client certificate to the keystore:

   keytool -keystore client.keystore.jks -alias localhost -import -file client.signed.cert

7. Copy the keystore to a location where you will use it. For example, you could choose to copy it to the same directory where you copied the keystore for the Kafka broker. If you choose to copy it to some other location, or intend to use some other user to run the command-line clients, be sure to add a copy of the truststore file you created for the brokers. Clients can reuse this truststore file for authenticating the Kafka brokers because the same CA is used to sign all of the certificates. Also set the file's ownership and permissions accordingly.
Next, you must create a properties file (similar to the broker’s server.properties file) that configures the command-line clients to use TLS. For a client running on the Kafka broker named kafka01, your configuration file could would look like this:

```properties
security.protocol=SSL
ssl.truststore.location=/opt/kafka/config/kafka.truststore.jks
ssl.truststore.password=trustore_password
ssl.keystore.location=/opt/kafka/config/client.keystore.jks
ssl.keystore.password=keystore_password
ssl.key.password=key_password
ssl.enabled.protocols=TLSv1.2,TLSv1.1,TLSv1
ssl.client.auth=required
```

This property file assumes the keystore file is located in the Kafka configuration directory.

Finally, you can run the command line producer or consumer to ensure they can connect and process data. You supply these clients the properties file you just created. The following example assumes you stored the properties file in the Kafka configuration directory, and that Kafka is installed in /opt/kafka:

```
~# cd /opt/kafka

/opt/kafka# bin/kafka-console-producer.sh --broker-list kafka01.mycompany.com:9093 \  --topic test --producer.config config/client.properties
>test
>test again
>More testing. These messages seem to be getting through!
^D

/opt/kafka# bin/kafka-console-consumer.sh --bootstrap-server kafka01.mycompany.com:9093 --topic test \  --consumer.config config/client.properties --from-beginning

test
test again
More testing. These messages seem to be getting through!
^C
Processed a total of 3 messages
```

## Loading Data from Kafka

After you configure Kafka to accept TLS connections, verify that you can directly load data from it into Vertica. You should perform this step even if you plan to create a scheduler to automatically stream data.

You can choose to create a separate key and certificate for directly loading data from Kafka. This example re-uses the key and certificate created for the Vertica server in part 2 of this example.
You directly load data from Kafka by using the KafkaSource data source function with the COPY statement (see Manually Consume Data From Kafka). The KafkaSource function creates the connection to Kafka, so it needs a key, certificate, and related passwords to create an encrypted connection. You pass this information via session parameters. See Kafka User-Defined Session Parameters for a list of these parameters.

The easiest way to get the key and certificate into the parameters is by first reading them into vsql variables. You get their contents by using back quotes to read the file contents via the Linux shell. Then you set the session parameters from the variables. Before setting the session parameters, increase the MaxSessionUDParameterSize session parameter to add enough storage space in the session variables for the key and the certificates. They can be larger than the default size limit for session variables (1000 bytes).

The following example reads the server key and certificate and the root CA from the a directory named /home/dbadmin/SSL. Because the server's key password is not saved in a file, the example sets it in a Linux environment variable named KVERTICA_PASS before running vsql. The example sets MaxSessionUDParameterSize to 100000 before setting the session variables. Finally, it enables TLS for the Kafka connection and streams data from the topic named test.

```
$ export KVERTICA_PASS=server_key_password
$ vsql
Welcome to vsql, the Vertica Analytic Database interactive terminal.

Type: \h or \? for help with vsql commands
    \g or terminate with semicolon to execute query
    \q to quit

SSL connection (cipher: DHE-RSA-AES256-GCM-SHA384, bits: 256, protocol: TLSv1.2)

=> COPY t SOURCE KafkaSource(brokers='kafka01.mycompany.com:9093',
  stream='test|0|-2', stop_on_eof=true,
  duration=interval '5 seconds')
```
Configure the Scheduler

The final piece of the configuration is to set up the scheduler to use SSL when communicating with Kafka (and optionally with Vertica). When the scheduler runs a COPY command to get data from Kafka, it uses its own key and certificate to authenticate with Kafka. If you choose to have the scheduler use TLS/SSL to connect to Vertica, it can reuse the same keystore and truststore to make this connection.

Create a Truststore and Keystore for the Scheduler

Because the scheduler is a separate component, it must have its own key and certificate. The scheduler runs in Java and uses the JDBC interface to connect to Vertica. Therefore, you must create a keystore (when ssl.client.auth=required) and truststore for it to use when making a TLS-encrypted connection to Vertica.

Keep in mind that creating a keystore is optional if your Kafka server sets ssl.client.auth to none or requested.

This process is similar to creating the truststores and keystores for Kafka brokers. The main difference is using the the -dname option for keytool to set the Common Name (CN) for the key to a domain wildcard. Using this setting allows the key and certificate to match any host in the network. This option is especially useful if you run multiple schedulers on different servers to provide redundancy. The schedulers can use the same key and certificate, no matter which server they are running on in your domain.

1. Create a truststore file for the scheduler. Add the CA certificate that you used to sign the keystore of the Kafka cluster and Vertica cluster. If you are using more than one
CA to sign your certificates, add all of the CAs you used.

```
$ keytool -keystore scheduler.truststore.jks -alias CARoot -import \
   -file root.crt
Enter keystore password: some_password
Re-enter new password: some_password
Owner: EMAILADDRESS=myemail@mycompany.com, CN=*.mycompany.com, O=MyCompany, L=Cambridge, ST=MA, C=US
Issuer: EMAILADDRESS=myemail@mycompany.com, CN=*.mycompany.com, O=MyCompany, L=Cambridge, ST=MA, C=US
Serial number: c3f02e87707d01aa
Certificate fingerprints:
Signature algorithm name: SHA256withRSA
Subject Public Key Algorithm: 2048-bit RSA key
Version: 3

Extensions:

#1: ObjectID: 2.5.29.35 Criticality=false
AuthorityKeyIdentifier [

      0010: E5 3D 78 16  .=x.
   ] ]
]

Trust this certificate? [no]: yes
Certificate was added to keystore
```

2. Initialize the keystore, passing it a wildcard host name as the Common Name. The alias parameter in this command is important, as you use it later to identify the key the scheduler must use when creating SSL connections:

```
keytool -keystore scheduler.keystore.jks -alias vsched -validity 365 -genkey \ 
   -keyalg RSA -dname CN=*.mycompany.com
```
Important:
If you choose to use a file format other than the standard Java Keystore (JKS) format for your keystore or truststore files, you must use the correct file extension in the filename. For example, suppose you choose to use a keystore and truststore saved in PKCS#12 format. Then your keystore and trustore files must end with the .pfx or .p12 extension.

If the scheduler does not recognize the file's extension (or there is no extension in the file name), it assumes that the file is in JKS format. If the file is not in JKS format, you will see an error message when starting the scheduler, similar to "Failed to create an SSLSocketFactory when setting up TLS: keystore not found."

3. Export the scheduler's key so you can sign it with the root CA:

```bash
$ keytool -keystore scheduler.keystore.jks -alias vsched -certreq \
   -file scheduler.unsigned.cert
```

4. Sign the scheduler key with the root CA:

```bash
$ openssl x509 -req -CA root.crt -CAkey root.key -in scheduler.unsigned.cert \
   -out scheduler.signed.cert -days 365 -CAcreateserial
```

5. Re-import the scheduler key into the keystore:

```bash
$ keytool -keystore scheduler.keystore.jks -alias localhost -import -file 
   scheduler.signed.cert
```

**Set Environment Variable VKCONFIG_JVM_OPTS**

You must pass several settings to the JDBC interface of the Java Virtual Machine (JVM) that runs the scheduler. These settings tell the JDBC driver where to find the keystore and truststore, as well as the key's password. The easiest way to pass in these settings is to set a Linux environment variable named VKCONFIG_JVM_OPTS. As it starts, the scheduler checks this environment variable and passes any properties defined in it to the JVM.

The properties that you need to set are:

- `javax.net.ssl.keystore`: the absolute path to the keystore file to use.
- `javax.net.ssl.keyStorePassword`: the password for the scheduler's key.
- `javax.net.ssl.trustStore`: The absolute path to the truststore file.
The Linux command line to set the environment variable is:

```bash
export VKCONFIG_JVM_OPTS="$VKCONFIG_JVM_OPTS -Djavax.net.ssl.trustStore=path/to/truststore \\
                             -Djavax.net.ssl.keyStore=path/to/keystore \\
                             -Djavax.net.ssl.keyStorePassword=keystore_password"
```

**Note:**
The previous command preserves any existing contents of the VKCONFIG_JVM_OPTS variable. If you find the variable has duplicate settings, remove the $VKCONFIG_JVM_OPTS from your statement so you override the existing values in the variable.

For example, suppose the scheduler's truststore and keystore are located in the directory `/home/dbadmin/SSL`. Then you could use the following command to set the VKCONFIG_JVM_OPTS variable:

```bash
$ export VKCONFIG_JVM_OPTS="$VKCONFIG_JVM_OPTS \\
                             -Djavax.net.ssl.trustStore=/home/dbadmin/SSL/scheduler.truststore.jks \\
                             -Djavax.net.ssl.keyStore=/home/dbadmin/SSL/scheduler.keystore.jks \\
                             -Djavax.net.ssl.keyStorePassword=key_password"
```

**Important:**
The Java property names are case sensitive.

To ensure that this variable is always set, add the command to the `~/.bashrc` or other startup file of the user account that runs the scheduler.

If you require TLS on the JDBC connection to Vertica, add `TLSmode=require` to the JDBC URL that the scheduler uses. The easiest way to add this is to use the scheduler's `-jdbc-url` option. Assuming that you use a configuration file for your scheduler, you can add this line to it:

```bash
--jdbc-url=jdbc:vertica://VerticaHost:portNumber/databaseName?user=username&password=password&TLSmode=require
```

For more information about using the JDBC with Vertica, see Programming JDBC Client Applications.

**Enable TLS in the Scheduler Configuration**

Lastly, enable TLS. Every time you run `vkconfig`, you must pass it the following options:
<table>
<thead>
<tr>
<th>Option</th>
<th>Set to:</th>
</tr>
</thead>
<tbody>
<tr>
<td>--enable-ssl</td>
<td>true, to enable the scheduler to use SSL when connecting to Kafka.</td>
</tr>
<tr>
<td>--ssl-ca-alias</td>
<td>Alias for the CA you used to sign your Kafka broker's keys. This must match the value you supplied to the -alias argument of the keytool command to import the CA into the truststore.</td>
</tr>
<tr>
<td>Note:</td>
<td>If you used more than one CA to sign keys, omit this option to import all of the CAs into the truststore.</td>
</tr>
<tr>
<td>--ssl-key-alias</td>
<td>Alias assigned to the schedule key. This value must match the value you supplied to the -alias you supplied to the keytool command when creating the scheduler's keystore.</td>
</tr>
<tr>
<td>--ssl-key-password</td>
<td>Password for the scheduler key.</td>
</tr>
</tbody>
</table>

See [Common wkconfig Script Options](#) for details of these options. For convenience and security, add these options to a configuration file that you pass to wkconfig. Otherwise, you run the risk of exposing the key password via the process list which can be viewed by other users on the same system. See [Configuration File Format](#) for more information on setting up a configuration file.

Add the following to the scheduler configuration file to allow it to use the keystore and truststore and enable TLS when connecting to Vertica:

```plaintext
enable-ssl=true
cssl-ca-alias=CAroot
cssl-key-alias=vsched
cssl-key-password=vertica
cjdbc-
curl=jdbc:vertica://VerticaHost:portNumber/databaseName?user=
cusername&password=password&TLSmode=require
```

**Start the Scheduler**

Once you have configured the scheduler to use SSL, start it and verify that it can load data. For example, to start the scheduler with a configuration file named `weblog.conf`, use the command:
Troubleshooting Kafka TLS/SSL Connection Issues

After configuring Vertica, Kafka, and your scheduler to use TLS/SSL authentication and encryption, you may encounter issues with data streaming. This section explains some of the more common errors you may encounter, and how to troubleshoot them.

Errors when Launching the Scheduler

You may see errors like this when launching the scheduler:

```
$ vkconfig launch --conf weblog.conf
java.sql.SQLNonTransientException: com.vertica.solutions.kafka.exception.ConfigurationException:
   No keystore system property found: null
   at com.vertica.solutions.kafka.util.SQLUtilities.getConnection(SQLUtilities.java:181)
   at com.vertica.solutions.kafka.cli.CLIUtil.assertDBConnectionWorks(CLIUtil.java:40)
   at com.vertica.solutions.kafka.Launcher.run(Launcher.java:135)
   at com.vertica.solutions.kafka.Launcher.main(Launcher.java:263)
Caused by: com.vertica.solutions.kafka.exception.ConfigurationException: No keystore system property found: null
   at com.vertica.solutions.kafka.security.KeyStoreUtil.loadStore(KeyStoreUtil.java:77)
   at com.vertica.solutions.kafka.security.KeyStoreUtil.<init>(KeyStoreUtil.java:42)
   at com.vertica.solutions.kafka.util.SQLUtilities.getConnection(SQLUtilities.java:179)
   ... 3 more
```

The scheduler throws these errors when it cannot locate or read the keystore or truststore files. To resolve this issue:

- Verify you have set the VKCONFIG_JVM_OPTS Linux environment variable. Without this variable, the scheduler will not know where to find the truststore and keystore to use when creating TLS/SSL connections. See Configure Kafka for TLS for more information.
- Verify that the keystore and truststore files are located in the path you set in the VKCONFIG_JVM_OPTS environment variable.
- Verify that the user account that runs the scheduler has read access to the truststore and keystore files.
- Verify that the key password you provide in the scheduler configuration is correct. Note that you must supply the password for the key, not the keystore.

Another possible error message is a failure to set up a TLS Keystore:
This error can be caused by using a keystore or truststore file in a format other than JKS and not supplying the correct file extension. If the scheduler does not recognize the file extension of your keystore or truststore file name, it assumes the file is in JKS format. If the file isn't in this format, the scheduler will exit with the error message shown above. To correct this error, rename the keystore and truststore files to use the correct file extension. For example, if your files are in PKCS 12 filemat, change their file extension to .p12 or .pks.

### Data Does Not Load

If you find that scheduler is not loading data into your database, you should first query the `stream_microbatch_history` table to determine whether the scheduler is executing microbatches, and if so, what their results are. A faulty TLS/SSL configuration usually results in a status of `NETWORK_ISSUE`:

```
=> SELECT frame_start, end_reason, end_reason_message FROM weblog_sched.stream_microbatch_history;
```

<table>
<thead>
<tr>
<th>frame_start</th>
<th>end_reason</th>
<th>end_reason_message</th>
</tr>
</thead>
<tbody>
<tr>
<td>2019-04-05 11:35:18.365</td>
<td>NETWORK_ISSUE</td>
<td></td>
</tr>
<tr>
<td>2019-04-05 11:35:38.462</td>
<td>NETWORK_ISSUE</td>
<td></td>
</tr>
</tbody>
</table>

If you suspect an SSL issue, you can verify that Vertica is establishing a connection to Kafka by looking at Kafka's `server.log` file. Failed SSL connection attempts can appear in this log like this example:

```
java.io.IOException: Unexpected status returned by SSLEngine.wrap, expected CLOSED, received OK. Will not send close message to peer.
    at org.apache.kafka.common.network.SslTransportLayer.close(SslTransportLayer.java:172)
    at org.apache.kafka.common.network.KafkaChannel.close(KafkaChannel.java:61)
    at org.apache.kafka.common.network.Selector.doClose(Selector.java:739)
    at org.apache.kafka.common.network.Selector.close(Selector.java:727)
    at org.apache.kafka.common.network.Selector.pollSelectionKeys(Selector.java:520)
    at org.apache.kafka.common.network.Selector.poll(Selector.java:412)
    at kafka.network.Processor.poll(SocketServer.scala:551)
    at kafka.network.Processor.run(SocketServer.scala:468)
    at java.lang.Thread.run(Thread.java:748)
```
If you do not see errors of this sort, you likely have a network problem between Kafka and Vertica. If you do see these errors, consider the following debugging steps:

- Verify that the configuration of your Kafka cluster is uniform. For example, you may see connection errors if some Kafka nodes are set to require client authentication and others aren’t.
- Verify that the Common Names (CN) in the certificates and keys match the host name of the system.
- Verify that the Kafka cluster is accepting connections on the ports and host names you specify in the server.properties file's listeners property. For example, suppose you use IP addresses in this setting, but use host names when defining the cluster in the scheduler's configuration. Then Kafka may reject the connection attempt by Vertica or Vertica may reject the Kafka node's identity.
- If you are using client authentication in Kafka, try turning it off to see if the scheduler can connect. If disabling authentication allows the scheduler to stream data, then you can isolate the problem to client authentication. In this case, review the certificates and CAs of both the Kafka cluster and the scheduler. Ensure that the truststores include all of the CAs used to sign the key, up to and including the root CA.

### Authenticating with Kafka Using SASL

Kafka supports using Simple Authentication and Security Layer (SASL) to authenticate producers and consumers. You can use SASL to authenticate Vertica with Kafka when using most of the Kafka-related functions such as KafkaSource.

Vertica supports using the SASL_PLAINTEXT and SASL_SSL protocols with the following authentication mechanisms:

- PLAIN
- SCRAM-SHA-256
- SCRAM-SHA-512

You must configure your Kafka cluster to enable SASL authentication. See the Kafka documentation for your Kafka version to learn how to configure SASL authentication.

**Note:**

KafkaExport does not support using TLS/SSL with SASL authentication at this time.

To use SASL authentication between Vertica and Kafka, directly set SASL-related configuration options in the rdkafka library using the kafka_conf parameter. Vertica uses this library to connect to Kafka. See Directly Setting Kafka Library Options for more information on directly setting configuration options in the rdkafka library.
Among the relevant configuration options are:

- `security.protocol` sets the security protocol to use to authenticate with Kafka.
- `sasl.mechanism` sets the security mechanism.
- `sasl.username` sets the SASL user to use for authentication.
- `sasl.password` sets the password to use for SASL authentication.

See the rdkafka configuration documentation for a list of all the SASL-related settings.

The following example demonstrates calling KafkaCheckBrokers using the SASL_PLAINTEXT security protocol.

```
=> SELECT KafkaCheckBrokers(USING PARAMETERS
    brokers='kafka01.example.com:9092',
    kafka_conf='sasl.username=user;sasl.password=password;sasl.mechanism=PLAIN;security.protocol=SASL_PLAINTEXT'
  ) OVER ();
```

This example demonstrates using SASL authentication when copying data from Kafka via an SSL connection. This example assumes that Vertica and Kafka have been configured to use TLS/SSL encryption as described in TLS/SSL Encryption with Kafka.

```
=> COPY mytopic_table
    SOURCE KafkaSource(
        stream='mytopic|0|-2',
        brokers='kafka01.example.com:9092',
        stop_on_eof=true,
        kafka_conf='sasl.username=user;sasl.password=password;sasl.mechanism=PLAIN;security.protocol=SASL_SSL'
    )
  FILTER KafkaInsertDelimiters(delimiter = E'\n')
  DELIMITER ','
  ENCLOSED BY "";
```

For more information about using SASL with the rfkafka library, see Using SASL with librdkafka on the rdkafka github site.

**Troubleshooting Kafka Integration Issues**

The following topics can help you troubleshoot issues integrating Vertica with Apache Kafka.
Using kafkacat to Troubleshoot Kafka Integration Issues

Kafkacat is a third-party open-source utility that lets you connect to Kafka from the Linux command line. It uses the same underlying library that the Vertica integration for Apache Kafka uses to connect to Kafka. This shared library makes kafkacat a useful tool for testing and debugging your Vertica integration with Kafka.

You may find kafkacat useful for:

- Testing connectivity between your Vertica and Kafka clusters.
- Examining Kafka data for anomalies that may prevent some of it from loading into Vertica.
- Producing data for test loads into Vertica.
- Listing details about a Kafka topic.

For more information about kafkacat, see its project page at Github.

Running kafkacat on Vertica Nodes

The kafkacat utility is bundled in the Vertica install package, so it is available on all nodes of your Vertica cluster in the /opt/vertica/packages/kafka/bin directory. This is the same directory containing the vkconfig utility, so if you have added it to your path, you can use the kafkacat utility without specifying its full path. Otherwise, you can add this path to your shell's environment variable using the command:

```
set PATH=/opt/vertica/packages/kafka/bin:$PATH
```

Note:

On Debian and Ubuntu systems, you must tell kafkacat to use Vertica's own copy of the SSL libraries by setting the LD_LIBRARY_PATH environment variable:

```
$ export LD_LIBRARY_PATH=/opt/vertica/lib
```

If you do not set this environment variable, the kafkacat utility exits with the error:
# kafkacat: error while loading shared libraries: libcrypto.so.10: cannot open shared object file: No such file or directory

Executing kafkacat without any arguments gives you a basic help message:

```
$ kafkacat
Error: -b <broker,..> missing

Usage: kafkacat <options> [file1 file2 .. | topic1 topic2 ..]]
kafkacat - Apache Kafka producer and consumer tool
https://github.com/edenhill/kafkacat
Copyright (c) 2014-2015, Magnus Edenhill
Version releases/VER_8_1_RELEASE_BUILD_1_555_20170615-4931-g3fb918 (librdkafka releases/VER_8_1_RELEASE_BUILD_1_555_20170615-4931-g3fb918)

General options:
-C | -P | -L Mode: Consume, Produce or metadata List
-G <group-id> Mode: High-level KafkaConsumer (Kafka 0.9 balanced consumer groups)
Expects a list of topics to subscribe to
-t <topic> Topic to consume from, produce to, or list
-p <partition> Partition
-b <brokers,..> Bootstrap broker(s) (host[:port])
-D <delim> Message delimiter character:
a-z.. | \r | \n | \t | \xNN
Default: \n
-K <delim> Key delimiter (same format as -D)
-c <cnt> Limit message count
-X list List available librdkafka configuration properties
-X prop=val Set librdkafka configuration property.
Properties prefixed with "topic." are applied as topic properties.
-X dump Dump configuration and exit.
-d <dbg1,...> Enable librdkafka debugging:
all,generic,broker,topic,metadata,queue,msg,protocol,cgrp,security,fetch,feature
-q Be quiet (verbosity set to 0)
-v Increase verbosity
-V Print version

Producer options:
-z snappy|gzip Message compression. Default: none
-p -1 Use random partitioner
-D <delim> Delimiter to split input into messages
-K <delim> Delimiter to split input key and message
-l Send messages from a file separated by delimiter, as with stdin.
   (only one file allowed)
-T Output sent messages to stdout, acting like tee.
-c <cnt> Exit after producing this number of messages
-Z Send empty messages as NULL messages
file1 file2.. Read messages from files.
With -l, only one file permitted.
Otherwise, the entire file contents will be sent as one single message.

Consumer options:
-o <offset> Offset to start consuming from:
   beginning | end | stored |
   <value> (absolute offset) |
```
<value> (relative offset from end)
-e     Exit successfully when last message received
-f <fmt..>     Output formatting string, see below. Takes precedence over -D and -K.
-D <delim>     Delimiter to separate messages on output
-K <delim>     Print message keys prefixing the message with specified delimiter.
-o     Print message offset using -K delimiter
-c <cnt>     Exit after consuming this number of messages
-Z     Print NULL messages and keys as "NULL" (instead of empty)
-u     Unbuffered output

Metadata options:
-t <topic>     Topic to query (optional)

Format string tokens:
%     Message payload
%S     Message payload length (or -1 for NULL)
%R     Message payload length (or -1 for NULL) serialized as a binary big endian 32-bit signed integer
%k     Message key
%X     Message key length (or -1 for NULL)
%t     Topic
%p     Partition
%o     Message offset
\n \r \t     Newlines, tab
\xXX \xNNN     Any ASCII character

Example:
-f 'Topic %t [%p] at offset %o: key %k: %s
'

Consumer mode (writes messages to stdout):
kafkacat -b <broker> -t <topic> -p <partition>
or:
kafkacat -C -b ...

High-level KafkaConsumer mode:
kafkacat -b <broker> -G <group-id> topic1 top2 ^aregex\d+

Producer mode (reads messages from stdin):
... | kafkacat -b <broker> -t <topic> -p <partition>
or:
kafkacat -P -b ...

Metadata listing:
kafkacat -L -b <broker> [-t <topic>]

Testing Connectivity to a Kafka Cluster and Getting Metadata

One basic troubleshooting step you often need to perform is verifying that Vertica nodes can connect to the Kafka cluster. Successfully executing just about any kafkacat command
will prove the Vertica node you are logged into is able to reach the Kafka cluster. One simple command you can execute to verify connectivity is to get the metadata for all of the topics the Kafka cluster has defined. The following example demonstrates using kafkacat's metadata listing command to connect to the broker named kafka01 running on port 6667 (the Kafka broker port used by Hortonworks Hadoop clusters).

```
$ kafkacat -L -b kafka01:6667
Metadata for all topics (from broker -1: kafka01:6667/bootstrap):
  2 brokers:
  broker 1001 at kafka03.example.com:6667
  broker 1002 at kafka01.example.com:6667
  4 topics:
  topic "iot-data" with 3 partitions:
    partition 2, leader 1002, replicas: 1002, isrs: 1002
    partition 1, leader 1001, replicas: 1001, isrs: 1001
    partition 0, leader 1002, replicas: 1002, isrs: 1002
  topic "__consumer_offsets" with 50 partitions:
    partition 23, leader 1001, replicas: 1002,1001, isrs: 1001,1002
    partition 41, leader 1001, replicas: 1002,1001, isrs: 1001,1002
    partition 32, leader 1002, replicas: 1002,1001, isrs: 1001,1002
    partition 8, leader 1002, replicas: 1002,1001, isrs: 1001,1002
    partition 17, leader 1001, replicas: 1002,1001, isrs: 1001,1002
    partition 44, leader 1002, replicas: 1002,1001, isrs: 1001,1002
    partition 35, leader 1001, replicas: 1002,1001, isrs: 1001,1002
    partition 26, leader 1002, replicas: 1002,1001, isrs: 1001,1002
    partition 11, leader 1001, replicas: 1002,1001, isrs: 1001,1002
    partition 29, leader 1001, replicas: 1002,1001, isrs: 1001,1002
    partition 38, leader 1002, replicas: 1002,1001, isrs: 1001,1002
    partition 47, leader 1001, replicas: 1002,1001, isrs: 1001,1002
    partition 20, leader 1002, replicas: 1002,1001, isrs: 1001,1002
    partition 2, leader 1002, replicas: 1002,1001, isrs: 1001,1002
    partition 5, leader 1001, replicas: 1002,1001, isrs: 1001,1002
    partition 14, leader 1002, replicas: 1002,1001, isrs: 1001,1002
    partition 46, leader 1002, replicas: 1002,1001, isrs: 1001,1002
    partition 49, leader 1001, replicas: 1002,1001, isrs: 1001,1002
    partition 40, leader 1002, replicas: 1002,1001, isrs: 1001,1002
    partition 4, leader 1002, replicas: 1002,1001, isrs: 1001,1002
    partition 13, leader 1001, replicas: 1002,1001, isrs: 1001,1002
    partition 22, leader 1002, replicas: 1002,1001, isrs: 1001,1002
    partition 31, leader 1001, replicas: 1002,1001, isrs: 1001,1002
    partition 16, leader 1002, replicas: 1002,1001, isrs: 1001,1002
    partition 7, leader 1001, replicas: 1002,1001, isrs: 1001,1002
    partition 43, leader 1001, replicas: 1002,1001, isrs: 1001,1002
    partition 25, leader 1001, replicas: 1002,1001, isrs: 1001,1002
    partition 34, leader 1002, replicas: 1002,1001, isrs: 1001,1002
    partition 10, leader 1002, replicas: 1002,1001, isrs: 1001,1002
    partition 37, leader 1001, replicas: 1002,1001, isrs: 1001,1002
    partition 1, leader 1001, replicas: 1002,1001, isrs: 1001,1002
    partition 19, leader 1001, replicas: 1002,1001, isrs: 1001,1002
    partition 28, leader 1002, replicas: 1002,1001, isrs: 1001,1002
    partition 45, leader 1001, replicas: 1002,1001, isrs: 1001,1002
    partition 36, leader 1002, replicas: 1002,1001, isrs: 1001,1002
    partition 27, leader 1001, replicas: 1002,1001, isrs: 1001,1002
    partition 9, leader 1001, replicas: 1002,1001, isrs: 1001,1002

partition 15, leader 1001, replicas: 1002,1001, isrs: 1001,1002
partition 42, leader 1002, replicas: 1002,1001, isrs: 1001,1002
partition 24, leader 1002, replicas: 1002,1001, isrs: 1001,1002
partition 33, leader 1001, replicas: 1002,1001, isrs: 1001,1002
partition 6, leader 1002, replicas: 1002,1001, isrs: 1001,1002
partition 0, leader 1002, replicas: 1002,1001, isrs: 1001,1002
topic "web_hits" with 1 partitions:
partition 0, leader 1001, replicas: 1001, isrs: 1001
topic "ambari_kafka_service_check" with 1 partitions:
partition 0, leader 1002, replicas: 1002, isrs: 1002

You can also use this output to verify the topics defined by your Kafka cluster, as well as the
number of partitions each topic defines. You need this information when copying data
between Kafka and Vertica.

Retrieving Messages from a Kafka Topic
When you are troubleshooting issues with streaming messages from Kafka in Vertica, you
often want to look at the raw data that Kafka sent. For example, you may want to verify
that the messages are in the format that your expect. Or, you may want to review specific
messages to see if some of them weren't in the right format for Vertica to parse. You can
use kafkacat to read messages from a topic using its consume command (-C). At the very
least, you must pass kafkacat the brokers (-b argument) and the topic you want to read
from (-t). You can also choose to read messages from a specific offset (-o) and partition (p). You will usually also want kafkacat to exit after completing the data read (-e) instead
continuing to wait for more messages.
This example gets the last message in the topic named web_hits. The offset argument uses
a negative value, which tells kafkacat to read from the end of the topic.
$ kafkacat -C -b kafka01:6667 -t web_hits -o -1 -e
{"url": "wp-content/list/search.php", "ip": "132.74.240.52",
"date": "2018/03/28 14:12:34",
"user_agent": "Mozilla/5.0 (iPod; U; CPU iPhone OS 4_2 like
Mac OS X; sl-SI) AppleWebKit/532.22.4 (KHTML, like Gecko) Version/3.0.5
Mobile/8B117 Safari/6532.22.4"}
% Reached end of topic web_hits [0] at offset 54932: exiting

You can also read a specific range of messages by specifying an offset and a limit (-c
argument). For example, you may want to look at a specific range of data to determine why
Vertica could not load it. The following example reads 10 messages from the topic iot-data
starting at offset 3280:

Vertica Analytic Database (11.0.x)

Page 6123 of 6776


Generating Data for a Kafka Topic

If you are preparing to stream data from a Kafka topic that is not yet active, you may want a way to stream test messages. You can then verify that the topic's messages load into Vertica without worrying that you will miss actual data.

To send data to Kafka, use kafkacat's produce command (-P). The easiest way to supply it with messages is to pipe them in via STDIN, one message per line. You can choose a specific partition for the data, or have kafkacat randomly assign each message to a random partition by setting the partition number to -1. For example, suppose you have a file named iot-data.csv that you wanted to produce to random partitions of a Kafka topic named iot-data. Then you could use the following command:

```bash
$ cat iot_data.csv | kafkacat -P -p -1 -b kafka01:6667 -t iot-data
```

Troubleshooting Slow Load Speeds

Here are some potential issues that could cause messages to load slowly from Kafka.

Verify You Have Disabled the API Version Check When Communicating with Kafka 0.9 or Earlier

If your Kafka cluster is running 0.9 or earlier, be sure you have disable the rdkafka library's api.version.request option. If you do not, every Vertica connection to Kafka will pause for 10 seconds until the API version request times out. Depending on the frame size of your load or other timeout settings, this delay can either reduce the throughput of your data...
loads. It can even totally prevent messages from being loaded. See Configuring Vertica for Apache Kafka Version 0.9 and Earlier

**Update the message-max-bytes Setting of Schedulers Created Before Vertica Version 9.1.1**

If you find that a scheduler is loading data slowly after upgrading to Vertica Version 9.1.1 or later, consider updating its load spec's message-max-bytes parameter. The meaning of this setting changed in Kafka 0.11. See Changes to the message.max.bytes Setting in Kafka Version 0.11 and Later for more information.

**Eon Mode and Cloud Latency**

Eon Mode separates compute from storage in a Vertica cluster, which can cause a small amount of latency when Vertica loads and saves data. Cloud computing infrastructure can also cause latency. This latency can eat into the frame duration for your schedulers, causing them to load less data in each frame. For this reason, you should consider increasing frame durations when loading data from Kafka in an Eon Mode database. See Vertica Eon Mode and Kafka for more information.

**Troubleshooting Missing Messages**

Kafka producers that emit a high data volume might overwhelm Vertica, possibly resulting in messages expiring in Kafka before the scheduler loads them into Vertica. This is more common when Vertica performs additional processing on the loaded messages, such as text indexing.

If you see that you are missing messages from a topic with multiple partitions, consider configuring the `--max-parallelism` microbatch utility option. The `--max-parallelism` option splits a microbatch into multiple subset microbatches. This enables you to use PLANNEDCONCURRENCY available in the scheduler's resource pool to create more scheduler threads for simultaneous loads of a single microbatch. Each node uses the resource pool EXECUTIONPARALLELISM setting to determine the number of threads created to process partitions. Because EXECUTIONPARALLELISM threads are created per scheduler thread, using more PLANNEDCONCURRENCY per microbatch enables you to process more partitions in parallel for a single unit of work.
For details, see Managing Scheduler Resources and Performance.

vkconfig Script Options

Vertica includes the vkconfig script that lets you configure your schedulers. This script contains multiple tools that set groups of options in the scheduler, as well as starting and shutting it down. You supply the tool you want to use as the first argument in your call to the vkconfig script.

The topics in this section explain each of the tools available in the vkconfig script as well as their options. You can use the options in the Common vkconfig Script Options topic with any of the utilities. Utility-specific options appear in their respective tables.

Common vkconfig Script Options

These options are available across the different tools available in the vkconfig script.

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>--conf filename</td>
<td>A text file containing configuration options for the vkconfig script. See Configuration File Format below.</td>
</tr>
<tr>
<td>--config-schema</td>
<td>The name of the scheduler's Vertica schema. This value is the same as the name of the scheduler. You use this name to identify the scheduler during configuration.</td>
</tr>
<tr>
<td>schema_name</td>
<td>Default Value: stream_config</td>
</tr>
<tr>
<td>--dbhost hostname</td>
<td>The host name or IP address of the Vertica node acting as the initiator node for the scheduler.</td>
</tr>
<tr>
<td></td>
<td>Default Value: localhost</td>
</tr>
<tr>
<td>--dbport port_number</td>
<td>The port to use to connect to a Vertica database.</td>
</tr>
<tr>
<td></td>
<td>Default Value: 5433</td>
</tr>
<tr>
<td>Option</td>

<tr>
<td>--ssl-ca-alias alias_name</td>
<td>The alias of the root certificate authority in the truststore. When set, the scheduler loads only the certificate associated with the specified alias. When omitted, the scheduler loads all certificates into the truststore.</td>
</tr>
<tr>
<td>--ssl-key-alias alias_name</td>
<td>The alias of the key and certificate pairs within the keystore. Must be set when Vertica uses SSL to connect to Kafka.</td>
</tr>
<tr>
<td>--ssl-key-password password</td>
<td>The password for the SSL key. Must be set when Vertica uses SSL to connect to Kafka.</td>
</tr>
<tr>
<td>Caution:</td>
<td>Specifying this option on the command line can expose it to other users logged into the host. Always use a configuration file to set this option.</td>
</tr>
<tr>
<td>--username username</td>
<td>The Vertica database user used to alter the configuration of the scheduler. This use must have create privileges on the scheduler's schema.</td>
</tr>
<tr>
<td>Default Value:</td>
<td>Current user</td>
</tr>
<tr>
<td>--version</td>
<td>Displays the version number of the scheduler.</td>
</tr>
</tbody>
</table>
Configuration File Format

You can use a configuration file to store common parameters you use in your calls to the vkconfig utility. The configuration file is a text file containing one option setting per line in the format:

option=value

You can also include comments in the option file by prefixing them with a hash mark (#).

# config.properties:  
username=myuser  
password=mypassword  
dbhost=localhost  
dbport=5433

You tell vkconfig to use the configuration file using the --conf option:

$ /opt/vertica/packages/kafka/bin/vkconfig source --update --conf config.properties

You can override any stored parameter from the command line:

$ /opt/vertica/packages/kafka/bin/vkconfig source --update --conf config.properties --dbhost otherVerticaHost

Examples

These examples show how you can use the shared utility options.

Display help for the scheduler utility:

$ vkconfig scheduler --help
This command configures a Scheduler, which can run and load data from configured sources and clusters into Vertica tables. It provides options for changing the 'frame duration' (time given per set of batches to resolve), as well as the dedicated Vertica resource pool the Scheduler will use while running.

### Scheduler Tool Options

The `vkconfig` script's scheduler tool lets you configure schedulers that continuously loads data from Kafka into Vertica. Use the scheduler tool to create, update, or delete a scheduler, defined by `config-schema`. If you do not specify a scheduler, commands apply to the default `stream_config scheduler`.

### Syntax

```
vkconfig scheduler (--create | --read | --update | --drop) other_options...
```

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>--create</strong></td>
<td>Creates a new load spec, cannot be used with --delete, --read, or --update.</td>
</tr>
<tr>
<td><strong>--read</strong></td>
<td>Outputs the current setting of the scheduler in JSON format. Cannot be used with --create, --delete, or --update.</td>
</tr>
<tr>
<td><strong>--update</strong></td>
<td>Updates an existing scheduler. Cannot be used with --create, --delete, or --read.</td>
</tr>
<tr>
<td><strong>--drop</strong></td>
<td>Drops the scheduler's schema. Dropping its schema deletes the scheduler. After you drop the scheduler's schema, you cannot</td>
</tr>
<tr>
<td>Option</td>
<td>Description</td>
</tr>
<tr>
<td>--------------------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td><strong>recover</strong></td>
<td></td>
</tr>
<tr>
<td><strong>--add-operator</strong> <code>user_name</code></td>
<td>Grants a Vertica user account or role access to use and alter the scheduler. Requires the <strong>--update</strong> shared utility option.</td>
</tr>
<tr>
<td><strong>--auto-sync</strong> `{TRUE</td>
<td>FALSE}`</td>
</tr>
<tr>
<td><strong>Default Value:</strong></td>
<td><strong>TRUE</strong></td>
</tr>
<tr>
<td><strong>--config-refresh</strong> <code>HH:MM:SS</code></td>
<td>The interval of time that the scheduler runs before synchronizing its settings and updating its cached metadata (such as changes made by using the <strong>--update</strong> option).</td>
</tr>
<tr>
<td><strong>Default Value:</strong></td>
<td><strong>00:05:00</strong></td>
</tr>
<tr>
<td><strong>--consumer-group-id</strong> <code>id_name</code></td>
<td>The name of the Kafka consumer group to which Vertica reports its progress consuming messages. See <a href="#">Monitoring Vertica Message Consumption with Consumer Groups</a> for more information.</td>
</tr>
<tr>
<td><strong>Default Value:</strong></td>
<td><code>vertica_database-name</code></td>
</tr>
<tr>
<td><strong>--dump</strong></td>
<td>When you use this option along with the <strong>--read</strong> option, vkconfig outputs the Vertica query it would use to retrieve the data, rather than outputting the data itself. This option is useful if you want to access the data from within Vertica without having to go through vkconfig. This option has no effect if not used with <strong>--read</strong>.</td>
</tr>
</tbody>
</table>

[Vertica Documentation](#) - Integrating with Apache Kafka - Vertica Analytic Database (11.0.x) - Page 6131 of 6776
<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
</table>
| --eof-timeout-ms number of milliseconds | If a COPY command does not receive any messages within the eof-timeout-ms interval, Vertica responds by ending that COPY statement.  

**Default Value:**  
1 second  

See [Manually Consume Data From Kafka](#) for more information. |
| --fix-config                  | Repairs the configuration and re-creates any missing tables. Valid only with the **--update shared configuration** option.                                                                                   |
| --frame-duration HH:MM:SS     | The interval of time that all individual frames last with this scheduler. The scheduler must have enough time to run each microbatch (each of which execute a COPY statement). You can approximate the average available time per microbatch using the following equation:  

TimePerMicrobatch = (FrameDuration*Parallelism)/Microbatches  

This is just a rough estimate as there are many factors that impact the amount of time that each microbatch will be able to run.  

The vkconfig utility warns you if the time allocated per microbatch is below 2 seconds. You usually should allocate more than two seconds per microbatch to allow the scheduler to load all of the data in the data stream.  

**Default Value:**  
00:05:00 |

**Note:**  
In versions of Vertica earlier than 10.0, the default frame duration was 10 seconds. In version 10.0, this default value was increased to 5 minutes in part to compensate for the removal of WOS. If you created your scheduler with the default frame duration in a version prior to 10.0, the frame duration is not updated to the new default value. In this case,
<table>

</tr>
</tbody>
</table>

Default Value:
ERROR

For more information on validation, refer to Automatically Consume Data From Kafka with the Scheduler.

Renamed from --skip-validation.

See Common vkconfig Script Options for options that are available in all of the vkconfig tools.

Examples

These examples show how you can use the scheduler utility options.

Give a user, Jim, privileges on the StreamConfig scheduler. Specify that you are making edits to the stream_config scheduler with the --config-scheme option:

```
$ /opt/vertica/packages/kafka/bin/vkconfig scheduler --update --config-schema stream_config --add-operator Jim
```

Edit the default stream_config scheduler so that every microbatch waits for data for one second before ending:

```
$ /opt/vertica/packages/kafka/bin/vkconfig scheduler --update --eof-timeout-ms 1000
```

Upgrade the scheduler named iot_scheduler_8.1 to a new scheduler named iot_scheduler_9.0 that is compatible with the current version of Vertica:

```
$ /opt/vertica/packages/kafka/bin/vkconfig scheduler --upgrade --config-schema iot_scheduler_8.1 \  
   --upgrade-to-schema iot_scheduler_9.0
```

Drop the schema scheduler219a:

```
$ /opt/vertica/packages/kafka/bin/vkconfig scheduler --drop --config-schema scheduler219a --username dbadmin
```
Read the current setting of the options you can set using the scheduler tool for the scheduler defined in weblogs.conf.

```
$ vkconfig scheduler --read --conf weblogs.conf
{"version":"v9.2.0", "frame_duration":"00:00:10", "resource_pool":"weblog_pool", "config_refresh":"00:05:00", "new_source_policy":"FAIR", "pushback_policy":"LINEAR", "pushback_max_count":5, "auto_sync":true, "consumer_group_id":null}
```

### Cluster Tool Options

The `vkconfig` script's cluster tool lets you define the streaming hosts your scheduler connects to.

### Syntax

```
vkconfig cluster {--create | --read | --update | --delete} [--cluster cluster_name] [other_options...]
```

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>--create</td>
<td>Creates a new load spec, cannot be used with --delete, --read, or --update.</td>
</tr>
<tr>
<td>--read</td>
<td>Outputs the settings of all clusters defined in the scheduler. This output is in JSON format. Cannot be used with --create, --delete, or --update. You can limit the output to specific clusters by supplying one or more cluster names in the --cluster option. You can also limit the output to clusters that contain one or more specific hosts using the --hosts option. Use commas to separate multiple values. You can use LIKE wildcards in these options. See <a href="#">LIKE predicate</a> for more information about using wildcards.</td>
</tr>
<tr>
<td>--update</td>
<td>Updates an existing cluster. Cannot be used with --create, --delete, or --read.</td>
</tr>
<tr>
<td>--delete</td>
<td>Deletes a cluster. Cannot be used with --create, --read, or --update.</td>
</tr>
<tr>
<td>Option</td>
<td>Description</td>
</tr>
<tr>
<td>----------------------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>--dump</td>
<td>When you use this option along with the --read option, <code>vkconfig</code> outputs the Vertica query it would use to retrieve the data, rather than outputting the data itself. This option is useful if you want to access the data from within Vertica without having to go through <code>vkconfig</code>. This option has no effect if not used with --read.</td>
</tr>
<tr>
<td>--cluster <code>cluster_name</code></td>
<td>A unique, case-insensitive name for the cluster to operate on. This option is required for --create, --update, and --delete.</td>
</tr>
<tr>
<td>--hosts <code>b1:port[,b2:port...]</code></td>
<td>Identifies the broker hosts that you want to add, edit, or remove from a Kafka cluster. To identify multiple hosts, use a comma delimiter.</td>
</tr>
<tr>
<td>--kafka_conf 'option=value[; option2=value2...]'</td>
<td>A JSON-formatted object of option/value pairs to pass directly to the rdkafka library. This is the library Vertica uses to communicate with Kafka. You can use this parameter to directly set configuration options that are not available through the Vertica integration with Kafka. See <a href="#">Directly Setting Kafka Library Options</a> for details.</td>
</tr>

<tr>
<td></td>
<td>- SKIP - Perform no validation.</td>
</tr>
</tbody>
</table>

Renamed from --skip-validation.

See [Common vkconfig Script Options](#) for options that are available in all of the `vkconfig` tools.
Vertica Documentation
Integrating with Apache Kafka

Examples
This example shows how you can create the cluster, StreamCluster1, and assign two hosts:
$ /opt/vertica/packages/kafka/bin/vkconfig cluster --create --cluster StreamCluster1 \
--hosts 10.10.10.10:9092,10.10.10.11:9092
--conf myscheduler.config

This example shows how you can list all of the clusters associated with the scheduler
defined in the weblogs.conf file:
$ vkconfig cluster --read --conf weblog.conf
{"cluster":"kafka_weblog",
"hosts":"kafka01.example.com:9092,kafka02.example.com:9092"}

Source Tool Options
Use the vkconfig script's source tool to create, update, or delete a source.

Syntax
vkconfig source {--create | --read | --update | --delete} --source source_name [other_options...]

Option

Description

--create

Creates a new load spec, cannot be used with --delete,
--read, or --update.

--read

Outputs the current setting of the sources defined in the
scheduler. The output is in JSON format. Cannot be used with
--create, --delete, or --update.
By default this option outputs all of the sources defined in the
scheduler. You can limit the output by using the --cluster, -enabled, --partitions, and --source options. The
output will only contain sources that match the values in these
options. The --enabled option can only have a true or false
value. The --source option is case-sensitive.
You can use LIKE wildcards in these options. See LIKE predicate

Vertica Analytic Database (11.0.x)

</tr>
</tbody>
</table>

See [Common vkconfig Script Options](#) for options that are available in all of the `vkconfig` tools.

## Examples

The following examples show how you can create or update SourceFeed.

Create the source `SourceFeed` and assign it to the cluster, `StreamCluster1` in the scheduler defined by the `myscheduler.conf` config file:

```
$ /opt/vertica/packages/kafka/bin/vkconfig source --create --source SourceFeed \  --cluster StreamCluster1 --partitions 3 \  --conf myscheduler.conf
```

Update the existing source `SourceFeed` to use the existing cluster, `StreamCluster2` in the scheduler defined by the `myscheduler.conf` config file:

```
$ /opt/vertica/packages/kafka/bin/vkconfig source --update --source SourceFeed \  --new-cluster StreamCluster2 \  --conf myscheduler.conf
```

The following example reads the sources defined in the scheduler defined by the `weblogs.conf` file.
Target Tool Options

Use the target tool to configure a Vertica table to receive data from your streaming data application.

Syntax

```
vkconfig target {--create | --read | --update | --delete} [--target-table table --table_schema schema] [other_options...]
```

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>--create</td>
<td>Creates a new load spec, cannot be used with --delete, --read, or --update.</td>
</tr>
<tr>
<td>--read</td>
<td>Outputs the targets defined in the scheduler. This output is in JSON format. Cannot be used with --create, --delete, or --update. By default this option outputs all of the targets defined in the configuration schema. You can limit the output to specific targets by using the --target-schema and --target-table options. The vkconfig script only outputs targets that match the values you set in these options. You can use LIKE wildcards in these options. See LIKE predicate for more information about using wildcards.</td>
</tr>
<tr>
<td>--update</td>
<td>Updates an existing target. Cannot be used with --create, --delete, or --read.</td>
</tr>
<tr>
<td>--delete</td>
<td>Deletes a target. Cannot be used with --create, --read, or --update.</td>
</tr>
<tr>
<td>--target-table table</td>
<td>The name of a Vertica table receive data from the scheduler. This option is required for --create, --update, and --delete.</td>
</tr>
<tr>
<td>Option</td>
<td>Description</td>
</tr>
<tr>
<td>------------------------------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>--target-schema &lt;schema&gt;</td>
<td>The existing Vertica schema containing the target table. This option is required for --create, --update, and --delete.</td>
</tr>
<tr>
<td>--dump</td>
<td>When you use this option along with the --read option, vkconfig outputs the Vertica query it would use to retrieve the data, rather than outputting the data itself. This option is useful if you want to access the data from within Vertica without having to go through vkconfig. This option has no effect if not used with --read.</td>
</tr>
<tr>
<td>--new-target-schema &lt;schema_name&gt;</td>
<td>Changes the Vertica schema associated with this schema to a new, already created schema. <strong>Requires:</strong> --update option.</td>
</tr>
<tr>
<td>--new-target-table &lt;schema_name&gt;</td>
<td>Changes the Vertica target table associated with this schema to a new, already created table. <strong>Requires:</strong> --update option.</td>
</tr>
</tbody>
</table>
| --validation-type {ERROR|WARN|SKIP} | Controls validation performed on a created or updated target:  
  - ERROR - Cancel configuration or creation if vkconfig cannot validate that the table exists. This is the default setting.  
  - WARN - Creates or updates the target if validation fails, but display a warning.  
  - SKIP - Perform no validation.  
  Renamed from --skip-validation. |

**Important:**
Avoid having columns with primary key restrictions in your target table. The scheduler stops loading data if it encounters a row that has a value which violates this restriction. If you must have a primary key restricted column, try to filter out any redundant values for that column in the streamed data before is it loaded by the scheduler.

See Common vkconfig Script Options for options that are available in all of the vkconfig tools.
Vertica Documentation
Integrating with Apache Kafka

Examples
This example shows how you can create a target for the scheduler defined in the
myscheduler.conf configuration file from public.streamtarget table:
$ /opt/vertica/packages/kafka/bin/vkconfig target --create --target-table streamtarget --conf
myscheduler.conf

This example lists all of the targets in the scheduler defined in the weblogs.conf
configuration file.
$ vkconfig target --read --conf weblog.conf
{"target_schema":"public", "target_table":"web_hits"}

Load Spec Tool Options
The vkconfig script's load spec tool lets you provide parameters for a COPY statement that
loads streaming data.

Syntax
$ vkconfig load-spec {--create | --read | --update | --delete} [--load-spec spec-name] [other-options...]

Option

Description

--create

Creates a new load spec, cannot be used with --delete,
--read, or --update.

--read

Outputs the current settings of the load specs defined in the
scheduler. This output is in JSON format. Cannot be used with
--create, --delete, or --update.
By default, this option outputs all load specs defined in the
scheduler. You can limit the output by supplying a single value
or a comma-separated list of values to these options:
l
l
l

--load-spec
--filters
--uds-kv-parameters

| --validation-type {ERROR|WARN|SKIP} | Specifies the validation performed on a created or updated load spec, to one of the following:  
  - ERROR: Cancel configuration or creation if vkconfig cannot validate the load spec. This is the default setting.  
  - WARN: Proceed with task if validation fails, but display a warning.  
  - SKIP: Perform no validation.  
  Renamed from --skip-validation.                                                                                                                                                                                                                                                                 |

See Common vkconfig Script Options for options that are available in all of the vkconfig tools.

**Examples**

These examples show how you can use the Load Spec utility options.

Create load spec Streamspec1:
$ /opt/vertica/packages/kafka/bin/vkconfig load-spec --create --load-spec Streamspec1 --conf myscheduler.conf

**Rename load spec Streamspec1 to Streamspec2:**

$ /opt/vertica/packages/kafka/bin/vkconfig load-spec --update --load-spec Streamspec1  
--new-load-spec Streamspec2  
--conf myscheduler.conf

**Update load spec Filterspec to use the KafkaInsertLengths filter and a custom decryption filter:**

$ /opt/vertica/packages/kafka/bin/vkconfig load-spec --update --load-spec Filterspec  
(filters "KafkaInsertLengths() DecryptFilter (parameter=Key)" 
--conf myscheduler.conf

**Read the current settings for load spec streamspec1:**

$ vkconfig load-spec --read --load-spec streamspec1 --conf weblog.conf
{"load_spec":"streamspec1", "filters":null, "parser":"KafkaParser",  
"parser_parameters":null, "load_method":"TRICKLE", "message_max_bytes":null,  
"uds_kv_parameters":null}
<table>

### Option Description

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>--validation-type</code></td>
<td>Controls the validation performed on a created or updated microbatch:</td>
</tr>
<tr>
<td>{ERROR</td>
<td>WARN</td>
</tr>
<tr>
<td></td>
<td>• WARN - Proceed with task if validation fails, but display a warning.</td>
</tr>
<tr>
<td></td>
<td>• SKIP - Perform no validation.</td>
</tr>
<tr>
<td></td>
<td>Renamed from <code>--skip-validation</code>.</td>
</tr>
</tbody>
</table>

See [Common `vkconfig` Script Options](#) for options that are available in all of the `vkconfig` tools.

### Special Starting Offset Values

The `start_offset` portion of the `stream` parameter lets you start loading messages from a specific point in the topic's partition. It also accepts one of two special offset values:

- `-2` tells the scheduler to start loading at the earliest available message in the topic's partition. This value is useful when you want to load as many messages as you can from the Kafka topic's partition.
- `-3` tells the scheduler to start loading from the consumer group's saved offset. If the consumer group does not have a saved offset, it starts loading from the earliest available message in the topic partition. See [Monitoring Vertica Message Consumption with Consumer Groups](#) for more information.

### Examples

This example shows how you can create the microbatch, mbatch1. This microbatch identifies the schema, target table, load spec, and source for the microbatch:

```
$ /opt/vertica/packages/kafka/bin/vkconfig microbatch --create --microbatch mbatch1 \   --target-schema public \   --target-table BatchTarget \   --load-spec Filterspec \   --add-source SourceFeed \   --add-source-cluster StreamCluster1 \   --confmyscheduler.conf
```
This example demonstrates listing the current settings for the microbatches in the scheduler defined in the weblog.conf configuration file.

```bash
$ vkconfig microbatch --read --conf weblog.conf
```

## Launch Tool Options

Use the vkconfig script's launch tool to assign a name to a scheduler instance.

### Syntax

```
vkconfig launch [options...]
```

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>--enable-ssl {true</td>
<td>false}</td>
</tr>
<tr>
<td>--ssl-ca-alias alias</td>
<td>The user-defined alias of the root certifying authority you are using to authenticate communication between Vertica and Kafka. This parameter is used only when SSL is enabled.</td>
</tr>
<tr>
<td>--ssl-key-alias alias</td>
<td>The user-defined alias of the key/certificate pair you are using to authenticate communication between Vertica and Kafka. This parameter is used only when SSL is enabled.</td>
</tr>
<tr>
<td>--ssl-key-password password</td>
<td>The password used to create your SSL key. This parameter is used only when SSL is enabled.</td>
</tr>
<tr>
<td>--instance-name name</td>
<td>(Optional) Allows you to name the process running the scheduler. You can use this command when viewing the scheduler_history table, to find which instance is currently running.</td>
</tr>
<tr>
<td>--kafka_conf</td>
<td>A JSON-formatted object of option/value pairs to pass directly to the scheduler.</td>
</tr>
</tbody>
</table>
See Common vkconfig Script Options for options that are available in all of the vkconfig tools.

### Examples

This example shows how you can launch the scheduler defined in the myscheduler.conf config file and give it the instance name PrimaryScheduler:

```
$ nohup /opt/vertica/packages/kafka/bin/vkconfig launch --instance-name PrimaryScheduler \
--conf myscheduler.conf >/dev/null 2>&1 &
```

This example shows how you can launch an instance named SecureScheduler with SSL enabled:

```
$ nohup /opt/vertica/packages/kafka/bin/vkconfig launch --instance-name SecureScheduler --enable-SSL true \
--ssl-ca-alias authenticcert --ssl-key-alias ourkey \
--ssl-key-password secret \ 
--conf myscheduler.conf \ 
>/dev/null 2>&1 &
```

### Shutdown Tool Options

Use the vkconfig script's shutdown tool to terminate one or all Vertica schedulers running on a host. Always run this command before restarting a scheduler to ensure the scheduler has shutdown correctly.

**Syntax**

```
vkconfig shutdown [options...]
```

See Common vkconfig Script Options for options that are available in all vkconfig tools.

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>'option=value [; option2 =value2...]'</td>
<td>rdkafka library. This is the library Vertica uses to communicate with Kafka. You can use this parameter to directly set configuration options that are not available through the Vertica integration with Kafka. See Directly Setting Kafka Library Options for details.</td>
</tr>
</tbody>
</table>
Examples

To terminate all schedulers running on a host, use the `shutdown` command with no options:

```
$ /opt/vertica/packages/kafka/bin/vkconfig shutdown
```

Use the `--conf` or `--config-schema` option to specify a scheduler to shut down. The following command terminates the scheduler that was launched with the same `--conf` `myscheduler.conf` option:

```
$ /opt/vertica/packages/kafka/bin/vkconfig shutdown --conf myscheduler.conf
```

Statistics Tool Options

The statistics tool lets you access the history of microbatches that your scheduler has run. This tool outputs the log of the microbatches in JSON format to the standard output. You can use its options to filter the list of microbatches to get just the microbatches that interest you.

**Note:**
The statistics tool can sometimes produce confusing output if you have altered the scheduler configuration over time. For example, suppose you have microbatch-a target a table. Later, you change the scheduler's configuration so that microbatch-b targets the table. Afterwards, you run the statistics tool and filter the microbatch log based on target table. Then the log output will show entries from both microbatch-a and microbatch-b.
## Syntax

```bash
vkconfig statistics [options]
```

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>--cluster cluster [cluster2...]</code></td>
<td>Only return microbatches that retrieved data from a cluster whose name matches one in the list you supply.</td>
</tr>
<tr>
<td><code>--dump</code></td>
<td>Instead of returning microbatch data, return the SQL query that <code>vkconfig</code> would execute to extract the data from the scheduler tables. You can use this option if you want use a Vertica client application to get the microbatch log instead of using <code>vkconfig</code>'s JSON output.</td>
</tr>
<tr>
<td><code>--from-timestamp timestamp</code></td>
<td>Only return microbatches that began after <code>timestamp</code>. The timestamp value is in <code>yyyy-[m]-[d]d hh:mm:ss</code> format. Cannot be used in conjunction with <code>--last</code>.</td>
</tr>
<tr>
<td><code>--last number</code></td>
<td>Returns the <code>number</code> most recent microbatches that meet all other filters. Cannot be used in conjunction with <code>--from-timestamp</code> or <code>--to-timestamp</code>.</td>
</tr>
<tr>
<td><code>--microbatch name [name2...]</code></td>
<td>Only return microbatches whose name matches one of the names in the comma-separated list.</td>
</tr>
<tr>
<td><code>--partition partition# [partition#2...]</code></td>
<td>Only return microbatches that accessed data from the topic partition that matches ones of the values in the partition list.</td>
</tr>
<tr>
<td><code>--source source [source2...]</code></td>
<td>Only return microbatches that accessed data from a source whose name matches one of the names in the list you supply to this argument.</td>
</tr>
<tr>
<td><code>--target-schema schema [schema2...]</code></td>
<td>Only return microbatches that wrote data to the Vertica schemas whose name matches one of the names in the target schema list argument.</td>
</tr>
<tr>
<td><code>--target-table table</code></td>
<td>Only return microbatches that wrote data to Vertica tables whose name match one of the names in the target schema list argument.</td>
</tr>
</tbody>
</table>
Vertica Documentation
Integrating with Apache Kafka

[,"table2"...]
--to-timestamp
"timestamp"

Only return microbatches that began before timestamp. The
timestamp value is in yyyy-[m]m-[d]d hh:mm:ss format.
Cannot be used in conjunction with --last.

See Common vkconfig Script Options for options that are available in all of the vkconfig
tools.

Usage Considerations
l

l

l

You can use LIKE wildcards in the values you supply to the --cluster, -microbatch, --source, --target-schema, and --target-table arguments.
This feature lets you match partial strings in the microbatch data. See LIKE predicate
for more information about using wildcards.
The string comparisons for the --cluster, --microbatch, --source, --targetschema, and --target-table arguments are case-insensitive.
The date and time values you supply to the --from-timestamp and --totimestamp arguments use the java.sql.timestamp format for parsing the value. This
format's parsing can accept values that you may consider invalid and would expect it
to reject. For example, if you supply a timestamp of 01-01-2018 24:99:99, the Java
timestamp parser silently converts the date to 2018-01-02 01:40:39 instead of
returning an error.

Examples
This example gets the last microbatch that the scheduler defined in the weblog.conf file
ran:
$ /opt/vertica/packages/kafka/bin/vkconfig statistics --last 1 --conf weblog.conf
{"microbatch":"weblog", "target_schema":"public", "target_table":"web_hits",
"source_name":"web_hits", "source_cluster":"kafka_weblog", "source_partition":0,
"start_offset":80000, "end_offset":79999, "end_reason":"END_OF_STREAM",
"end_reason_message":null, "partition_bytes":0, "partition_messages":0,
"timeslice":"00:00:09.793000", "batch_start":"2018-11-06 09:42:00.176747",
"batch_end":"2018-11-06 09:42:00.437787", "source_duration":"00:00:00.214314",
"consecutive_error_count":null, "transaction_id":45035996274513069,
"frame_start":"2018-11-06 09:41:59.949", "frame_end":null}

If your scheduler is reading from more than partition, the --last 1 option lists the last
microbatch from each partition:

Vertica Analytic Database (11.0.x)

Page 6155 of 6776


You can use the \texttt{--partition} argument to get just the partitions you want:

\texttt{
$ /opt/vertica/packages/kafka/bin/vkconfig statistics --last 1 --partition 2 --conf iot.conf
\$
}

If your scheduler reads from more than one source, the \texttt{--last 1} option outputs the last microbatch from each source:

\texttt{
$ /opt/vertica/packages/kafka/bin/vkconfig statistics --last 1 --conf weblog.conf
\$
}
You can use wildcards to enable partial matches. This example demonstrates getting the last microbatch for all microbatches whose names end with "log":

```bash
$ /opt/vertica/packages/kafka/bin/vkconfig statistics --microbatch "%log" \
   --last 1 --conf weblog.conf
```

To get microbatches from a specific period of time, use the --from-timestamp and --to-timestamp arguments. This example gets the microbatches that read from partition #2 between 12:52:30 and 12:53:00 on 2018-11-06 for the scheduler defined in iot.conf:

```bash
$ /opt/vertica/packages/kafka/bin/vkconfig statistics --partition 1 \
   --from-timestamp "2018-11-06 12:52:30" \ 
   --to-timestamp "2018-11-06 12:53:00" --conf iot.conf
```

This example demonstrates using the --dump argument to get the SQL statement vkconfig executed to retrieve the output from the previous example:

```bash
$ /opt/vertica/packages/kafka/bin/vkconfig statistics --dump --partition 1 \ 
   --from-timestamp "2018-11-06 12:52:30" \
```
Sync Tool Options

The sync utility immediately updates all source definitions by querying the Kafka cluster's brokers defined by the source. By default, it updates all of the sources defined in the target schema. To update just specific sources, use the \texttt{--source} and \texttt{--cluster} options to specify which sources to update.

Syntax

\texttt{vkconfig sync [options...]} \\

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>\texttt{--source source_name}</td>
<td>The name of the source sync. This source must already exist in the target schema.</td>
</tr>
<tr>
<td>\texttt{--cluster cluster_name}</td>
<td>Identifies the cluster containing the source that you want to sync. You must have already defined this cluster in the scheduler.</td>
</tr>
<tr>
<td>\texttt{--kafka_conf '} \texttt{option=value [; option2=value2 ...]}</td>
<td>A JSON-formatted object of option/value pairs to pass directly to the rdkafka library. This is the library Vertica uses to communicate with Kafka. You can use this parameter to directly set configuration options that are not available through the Vertica integration with Kafka. See \texttt{Directly Setting Kafka Library Options} for details.</td>
</tr>
</tbody>
</table>

See the \texttt{Common vkconfig Script Options} for options available in all of the vkconfig tools..
Kafka Function Reference

This section lists the functions that make up Vertica's Kafka integration feature.

KafkaAvroParser

The KafkaAvroParser parses Avro-formatted Kafka messages and loads them into a regular Vertica table or a Vertica flex table.

KafkaAvroParser(
  [enforce_length=Boolean]
  [, reject_on_materialized_type_error=Boolean]
  [, flatten_maps=Boolean]
  [, flatten_arrays=Boolean]
  [, flatten_records=Boolean]
  [, external_schema=JSON_string]
  [, codec='default'|'snappy'|'null']
  [, with_metadata=Boolean]
  [, schema-registry-url='url']
  [, schema_registry_subject='subject_name']
  [, schema_registry_version='version_number']
  [, key_separator='separator'])

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>enforce_length</td>
<td>When set to TRUE, rejects the row if any value is too wide to fit into its column. When using the default setting (FALSE), the parser truncates any value that is too wide to fit within the column's maximum width.</td>
</tr>
<tr>
<td>reject_on_materialized_type_error</td>
<td>When set to TRUE, rejects the row if it contains a materialized column value that cannot be mapped into the materialized column's data type.</td>
</tr>
<tr>
<td>flatten_maps</td>
<td>If set to TRUE, flattens all Avro maps.</td>
</tr>
<tr>
<td>flatten_arrays</td>
<td>If set to TRUE, flattens Avro arrays.</td>
</tr>
<tr>
<td>flatten_records</td>
<td>If set to TRUE, flattens all Avro records.</td>
</tr>
<tr>
<td>external_schema</td>
<td>Specifies the schema of the Avro file as a JSON string. If this parameter is not specified, the parser assumes that each message has the schema on it. If you are using a schema registry, do not use this parameter.</td>
</tr>
<tr>
<td>Parameter</td>
<td>Description</td>
</tr>
<tr>
<td>--------------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
</tbody>
</table>
| codec              | Specifies the codec in which the Avro file was written. Valid values are:
  - 'default' - data is not compressed and codec is not needed
  - 'deflate' - data is compressed using the deflate codec
  - 'snappy' - snappy compression

**Note:**
This option is mainly provided for backwards compatibility. You usually have Kafka compress data at the message level, and have KafkaSource decompress the message for you.

<table>
<thead>
<tr>
<th>with_metadata</th>
<th>If set to TRUE, messages include Avro datum, schema, and object metadata. By default, the KafkaAvroParser parses messages without including schema and metadata. If you enable this parameter, write your messages using the Avro API and confirm they contain only Avro datum. The default value is FALSE.</th>
</tr>
</thead>
<tbody>
<tr>
<td>schema_registry_url</td>
<td>Specifies the URL of the Confluent schema registry. This parameter is required to load data based on a schema registry version. If you are using an external schema, do not use this parameter. For more information, refer to Avro Schema Registry with Vertica.</td>
</tr>
<tr>
<td>schema_registry_subject</td>
<td>In the schema registry, the subject of the schema to use for data loading.</td>
</tr>
<tr>
<td>schema_registry_version</td>
<td>In the schema registry, the version of the schema to use for data loading.</td>
</tr>
<tr>
<td>key_separator</td>
<td>Sets the character to use as the separator between keys.</td>
</tr>
</tbody>
</table>

KafkaAvroParser supports the same data types as the favroparser. For details, see Avro Data.

The following example demonstrates loading data from Kafka in an Avro format. The statement:

- Loads data into an existing flex table named weather_logs.
- Copies data from the default Kafka broker (running on the local system on port 9092).
- The source is named temperature.
- The source has a single partition.
The load starts from offset 0.
The load ends either after 10 seconds or the load reaches the end of the source, whichever occurs first.
The KafkaAvroParser does not flatten any arrays, maps, or records it finds in the source.
The schema for the data is provided in the statement as a JSON string. It defines a record type named Weather that contains fields for a station name, a time, and a temperature.
Rejected rows of data are saved to a table named t_rejects1.

```sql
=> COPY weather_logs
    SOURCE KafkaSource(stream='temperature|0|0', stop_on_eof=true,
                        duration=interval '10 seconds')
    PARSER KafkaAvroParser(flatten_arrays=False, flatten_maps=False, flatten_records=False, external_schema=E'
        "type": "record",
        "name": "Weather",
        "fields": [
            {
                "name": "station",
                "type": "string"
            },
            {
                "name": "time",
                "type": "long"
            },
            {
                "name": "temp",
                "type": "int"
            }
        ]')
REJECTED DATA AS TABLE "t_rejects1";
```

**KafkaCheckBrokers**

Retrieves information about the brokers in a Kafka cluster. This function is intended mainly for internal use—it used by the streaming job scheduler to get the list of brokers in the Kafka cluster. You can call the function to determine which brokers Vertica knows about.

**Syntax**

```sql
KafkaCheckBrokers(USING PARAMETERS brokers='hostname:port[,hostname2:port...]' [ , kafka_conf='option=value[,option2=value2...]' [ , timeout=timeout_sec]])
```

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>brokers</td>
<td>The host name and port number of a broker in the Kafka cluster used to retrieve the list of brokers. You can supply more than one broker as a comma-separated list. If the list includes brokers from more than one Kafka cluster, the cluster containing the last host in the list is queried.</td>
</tr>
<tr>
<td>kafka_conf</td>
<td>A JSON-formatted object of option/value pairs to pass directly to the rdkafka library. This is the library Vertica uses to communicate with Kafka. You can use this parameter to directly set configuration options that are</td>
</tr>
</tbody>
</table>

<td>9092</td>
</tr>
<tr>
<td>0</td>
<td>kafka01.example.com</td>
<td>9092</td>
</tr>
</tbody>
</table>
```

(4 rows)

**KafkaExport**

Sends Vertica data to Kafka.

If Vertica successfully exports all of the rows of data to Kafka, this function returns zero rows. You can use the output of this function to copy failed messages to a secondary table for evaluation and reprocessing.

**Syntax**

```
SELECT KafkaExport(partitionColumn, keyColumn, valueColumn
USING PARAMETERS brokers='host[:port][,host...]',
    topic='topicname'
[,kafka_conf='kafka_configuration_setting']
[,fail_on_conf_parse_error=Boolean])
OVER (partition_clause) FROM table;
```
## Parameters

<table>
<thead>
<tr>
<th>Argument</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>partitionColumn</code></td>
<td>The target partition for the export. If you set this value to NULL, Vertica uses the default partitioning scheme. You can use the partition argument to send messages to partitions that map to Vertica segments.</td>
</tr>
<tr>
<td><code>keyColumn</code></td>
<td>The user defined key value associated with the <code>valueColumn</code>. Use NULL to skip this argument.</td>
</tr>
<tr>
<td><code>valueColumn</code></td>
<td>The message itself. The column is a LONG VARCHAR, allowing you to send up to 32MB of data to Kafka. However, Kafka may impose its own limits on message size.</td>
</tr>
<tr>
<td><code>brokers</code></td>
<td>A string containing a comma-separated list of one or more host names or IP addresses (with optional port number) of brokers in the Kafka cluster.</td>
</tr>
<tr>
<td><code>topic</code></td>
<td>The Kafka topic to which you are exporting.</td>
</tr>
<tr>
<td><code>kafka_conf</code></td>
<td>A JSON-formatted object of option/value pairs to pass directly to the rdkafka library. This is the library Vertica uses to communicate with Kafka. You can use this parameter to directly set configuration options that are not available through the Vertica integration with Kafka. See <a href="#">Directly Setting Kafka Library Options</a> for details.</td>
</tr>
<tr>
<td><code>fail_on_conf_parse_error</code></td>
<td>Determines whether the function fails when <code>kafka_conf</code> contains incorrectly formatted options and values, or invalid configuration properties.</td>
</tr>
<tr>
<td></td>
<td><strong>Default Value:</strong> FALSE</td>
</tr>
<tr>
<td></td>
<td>For accepted option and value formats, see <a href="#">Directly Setting Kafka Library Options</a>.</td>
</tr>
<tr>
<td></td>
<td>For a list of valid configuration properties, see the <a href="#">rdkafka GitHub repository</a>.</td>
</tr>
</tbody>
</table>
Examples

```sql
=> SELECT KafkaExport(partition, messageId, message
    USING PARAMETERS brokers='kafka01.example.com:9092',
    source='failure_test',
    kafka_conf='"message.max.bytes":64000')
OVER (PARTITION BEST)
FROM failure_test;
```

<table>
<thead>
<tr>
<th>partition</th>
<th>key</th>
<th>substr</th>
<th>failure_reason</th>
</tr>
</thead>
<tbody>
<tr>
<td>-123</td>
<td>key1</td>
<td>negative partition not allowed</td>
<td>Local: Unknown partition</td>
</tr>
<tr>
<td>54321</td>
<td></td>
<td>nonexistent partition</td>
<td>Local: Unknown partition</td>
</tr>
<tr>
<td>0</td>
<td>key1</td>
<td>normal value1</td>
<td>Broker: Message size too</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>0</td>
<td></td>
<td></td>
<td>Broker: Message size too</td>
</tr>
<tr>
<td>large</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>0</td>
<td>key2</td>
<td>normal value2</td>
<td>Broker: Message size too</td>
</tr>
</tbody>
</table>

Producing Data Using KafkaExport

KafkaJSONParser

The KafkaJSONParser parses JSON-formatted Kafka messages and loads them into a regular Vertica table or a Vertica flex table.

Syntax

```sql
KafkaJSONParser(
    [enforce_length=Boolean]
    [, flatten_maps=Boolean]
    [, flatten_arrays=Boolean]
    [, start_point=string]
    [, start_point_occurrence=integer]
    [, omit_empty_keys=Boolean]
    [, reject_on_duplicate=Boolean]
    [, reject_on_materialized_type_error=Boolean]
    [, reject_on_empty_key=Boolean]
    [, key_separator=char]
    [, suppress_nonalphanumeric_key_chars=Boolean]
)
```
<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>enforce_length</td>
<td>If set to TRUE, rejects the row if data being loaded is too wide to fit into its column. Defaults to FALSE, which truncates any data that is too wide to fit into its column.</td>
</tr>
<tr>
<td>flatten_maps</td>
<td>If set to TRUE, flattens all JSON maps.</td>
</tr>
<tr>
<td>flatten_arrays</td>
<td>If set to TRUE, flattens JSON arrays.</td>
</tr>
<tr>
<td>start_point</td>
<td>Specifies the key in the JSON data that the parser should parse. The parser only extracts data that is within the value associated with the start_point key. It parses the values of all instances of the start_point key within the data.</td>
</tr>
<tr>
<td>start_point_occurrence</td>
<td>Integer value indicating which occurrence of the key specified by the start_point parameter where the parser should begin parsing. For example, if you set this value to 4, the parser will only begin loading data from the fifth occurrence of the start_point key. Only has an effect if you also supply the start_point parameter.</td>
</tr>
<tr>
<td>omit_empty_keys</td>
<td>If set to TRUE, omits any key from the load data that does not have a value set.</td>
</tr>
<tr>
<td>reject_on_duplicate</td>
<td>If set to TRUE, rejects the row that contains duplicate key names. Key names are case-insensitive, so the keys &quot;mykey&quot; and &quot;MyKey&quot; are considered duplicates.</td>
</tr>
<tr>
<td>reject_on_materialized_type_error</td>
<td>If set to TRUE, rejects the row if the data includes keys matching an existing materialized column and has a key that cannot be mapped into the materialized column's data type.</td>
</tr>
<tr>
<td>reject_on_empty_key</td>
<td>If set to TRUE, rejects any row containing a key without a value.</td>
</tr>
<tr>
<td>key_separator</td>
<td>A single character to use as the separator between key values instead of the default period (.) character.</td>
</tr>
<tr>
<td>suppress_nonalphanumeric_key_chars</td>
<td>If set to TRUE, replaces all non-alphanumeric characters in JSON key values with an underscore (_) character.</td>
</tr>
</tbody>
</table>

See [JSON Data](#) for more information.
The following example demonstrates loading JSON data from Kafka. The parameters in the statement define to the load to:

- Load data into the pre-existing table named logs.
- The KafkaSource streams the data from a single partition in the source called server_log.
- The Kafka broker for the data load is running on the host named kafka01 on port 9092.
- KafkaSource stops loading data after either 10 seconds or on reaching the end of the stream, whichever happens first.
- The KafkaJSONParser flattens any arrays or maps in the JSON data.

```
=> COPY logs
    SOURCE KafkaSource(stream='server_log|0|0',
                        stop_on_eof=true,
                        duration=interval '10 seconds',
                        brokers='kafka01:9092')
    PARSER KafkaJSONParser(flatten_arrays=True, flatten_maps=True);
```

## KafkaListManyTopics

Retrieves information about all topics from a Kafka broker. This function lists all of the topics defined in the Kafka cluster as well the number of partitions it contains and which brokers serve the topic.

### Syntax

```
KafkaListManyTopics('broker:port[;...]'
                      [USING PARAMETERS
                       [kafka_conf='option=value[;option2=value2...]
                       [, timeout=timeout_sec]]])
```

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>broker</td>
<td>The hostname (or ip address) of a broker in the Kafka cluster</td>
</tr>
<tr>
<td>port</td>
<td>The port number on which the broker is running.</td>
</tr>
<tr>
<td>kafka_conf</td>
<td>A JSON-formatted object of option/value pairs to pass directly to the rdkafka library. This is the library Vertica uses to communicate with Kafka. You can use this parameter to directly set configuration options that are not available through the Vertica integration with Kafka. See Directly Setting Kafka Library Options for details.</td>
</tr>
</tbody>
</table>
timeout | Integer number of seconds to wait for a response from the Kafka cluster.

Example

=> \x
Expanded display is on.
=> SELECT KafkaListManyTopics('kafka01.example.com:9092')
   OVER (PARTITION AUTO);
- [ RECORD 1 ]-----------------------------------------------
brokers | kafka01.example.com:9092,kafka02.example.com:9092
topic   | __consumer_offsets
num_partitions | 50
- [ RECORD 2 ]-----------------------------------------------
brokers | kafka01.example.com:9092,kafka02.example.com:9092
topic   | iot_data
num_partitions | 1
- [ RECORD 3 ]-----------------------------------------------
brokers | kafka01.example.com:9092,kafka02.example.com:9092
topic   | test
num_partitions | 1

KafkaListTopics

Gets the list of topics available from a Kafka broker.

Syntax

KafkaListTopics(USING PARAMETERS brokers='hostname:port[,hostname2:port2...]'
[, kafka_conf='option=value[;option2=value2...]']
[, timeout=timeout_sec])

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>brokers</td>
<td>The host name and port number of the broker to query for a topic list. You can supply more than one broker as a comma-separated list. However, the returned list will only contain the topics served by the last broker in the list.</td>
</tr>
<tr>
<td>kafka_conf</td>
<td>A JSON-formatted object of option/value pairs to pass directly to the rdkafka library. This is the library Vertica uses to communicate with Kafka. You can use this parameter to directly set configuration options that are not available through the Vertica integration with Kafka. See <a href="#">Directly Setting Kafka Library Options</a> for details.</td>
</tr>
<tr>
<td>timeout</td>
<td>Integer number of seconds to wait for a response from the Kafka cluster.</td>
</tr>
</tbody>
</table>
Example

```sql
=> SELECT KafkaListTopics(USING PARAMETERS brokers='kafka1-01.example.com:9092')
  OVER ();

<table>
<thead>
<tr>
<th>topic</th>
<th>num_partitions</th>
</tr>
</thead>
<tbody>
<tr>
<td>test</td>
<td>1</td>
</tr>
<tr>
<td>iot_data</td>
<td>1</td>
</tr>
<tr>
<td>__consumer_offsets</td>
<td>50</td>
</tr>
<tr>
<td>vertica_notifications</td>
<td>1</td>
</tr>
<tr>
<td>web_hits</td>
<td>1</td>
</tr>
</tbody>
</table>

(5 rows)
```

KafkaOffsets

The KafkaOffsets user-defined transform function returns load operation statistics generated by the most recent invocation of KafkaSource. Query KafkaOffsets to see the metadata produced by your most recent load operation. You can query KafkaOffsets after each KafkaSource invocation to view information about that load. If you are using the scheduler, you can also view historical load information in the `stream_microbatch_history` table.

For each load operation, KafkaOffsets returns the following:

- source kafka topic
- source kafka partition
- starting offset
- ending offset
- number of messages loaded
- number of bytes read
- duration of the load operation
- end message
- end reason

The following example demonstrates calling KafkaOffsets to show partition information on the table named `web_test` that was loaded using KafkaSource.

```sql
=> SELECT kpartition, start_offset, end_offset, msg_count, ending FROM (select KafkaOffsets() over() FROM web_test) AS stats ORDER BY kpartition;

<table>
<thead>
<tr>
<th>kpartition</th>
<th>start_offset</th>
<th>end_offset</th>
<th>msg_count</th>
<th>ending</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>-2</td>
<td>9999</td>
<td>1068</td>
<td>END_OFFSET</td>
</tr>
</tbody>
</table>
```
The output shows that KafkaSource loaded 1068 messages (rows) from Kafka in a single partition. The KafkaSource ended the data load because it reached the ending offset.

**Note:**
The values shown in the start_offset column are exclusive (the message with the shown offset was not loaded) and the values in the end_offset column are inclusive (the message with the shown offset was loaded). This is the opposite of the values specified in the KafkaSource's stream parameter. The difference between the inclusiveness of KafkaSource's and KafkaOffset's start and end offsets are based on the needs of the job scheduler. KafkaOffset is primarily intended for the job scheduler's use, so the start and end offset values are defined so the scheduler can easily start streaming from where left off.

**KafkaParser**

The KafkaParser does not parse data loaded from Kafka. Instead, it passes the messages through as LONG VARCHAR values. Use this parser when you want to load raw Kafka messages into Vertica for further processing. You can use this parser as a catch-all for unsupported formats.

KafkaParser does not take any parameters.

**Example**

The following example loads raw messages from a Kafka topic named iot-data into a table named raw_iot.

```sql
=> CREATE TABLE raw_iot(message LONG VARCHAR);
CREATE TABLE
=> COPY raw_iot SOURCE KafkaSource(stream='iot-data|0|-2,iot-data|1|-2,iot-data|2|-2',
                            brokers='docd01:6667,docd03:6667', stop_on_eof=TRUE)
                            PARSER KafkaParser();
Rows Loaded
-------------
5000
(1 row)
=> select * from raw_iot limit 10;
message
-------------
10039, 59, -68.951406, -19.270126
10042, 40, -82.688712, 4.7187705
```
KafkaSource

The KafkaSource UDL accesses data from a Kafka cluster. All Kafka parsers must use KafkaSource. Messages processed by KafkaSource must be at least one byte in length. KafkaSource writes an error message to vertica.log for zero-length messages.

The output of KafkaSource does not work directly with any of the non-Kafka parsers in Vertica (such as the FCSVPARSER). The KafkaParser produces additional metadata about the stream that parsers need to use in order to correctly parse the data. You must use filters such as KafkaInsertDelimiters to transform the data into a format that can be processed by other parsers. See Parsing Custom Formats for more an example.

You can cancel a running KafkaSource data load by using a close session function such as CLOSE_ALL_SESSIONS.

Syntax

KafkaSource(stream='topic_name|partition|start_offset[|end_offset][, param=value [, ...]]')

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>stream</td>
<td>Required. Defines the data to be loaded as a comma-separated list of one or more partitions. Each partition is defined by three required values and one optional value separated by pipe characters (</td>
</tr>
<tr>
<td></td>
<td>- topic_name: the name of the Kafka topic to load data from. You can read from different Kafka topics in the same stream parameter, with some limitations. See Loading from Multiple Topics in the Same Stream Parameter below for more information.</td>
</tr>
<tr>
<td>Parameter</td>
<td>Description</td>
</tr>
<tr>
<td>----------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
</tbody>
</table>
|                | • *partition*: the partition in the Kafka topic to copy.  
|                | • *start_offset*: the offset in the Kafka topic where the load will begin. This offset is inclusive (the message with the offset *start_offset* is loaded).  
|                | See [Special Starting Offset Values] below for additional options.  
|                | • *end_offset*: the optional offset where the load should end. This offset is exclusive (the message with the offset *end_offset* will not be loaded).  
|                | To end a load using *end_offset*, you must supply an ending offset value for all partitions in the stream parameter. Attempting to set an ending offset for some partitions and not set offset values for others results in an error.  
|                | If you do not specify an ending offset, you must supply at least one other ending condition using *stop_on_eof* or *duration*.                                                                               |
| brokers        | A comma-separated list of host:port pairs of the brokers in the Kafka cluster. Vertica recommends running Kafka on a different machine than Vertica.                                                             |
|                | **Default Value**: localhost:9092                                                                                                                                                                          |
| duration       | An INTERVAL that specifies the duration of the frame. After this specified amount of time, KafkaSource terminates the COPY statements. If this parameter is not set, you must set at least one other ending condition by using *stop_on_eof* or specify an ending offset instead. See [Duration Note] below for more information. |
| executionparallelism | The number of threads to use when loading data. Normally, you set this to an integer value between 1 and the number of partitions the node is loading from. Setting this parameter to a reduced value limits the number of threads used to process any COPY statement. It also increases the throughput of short queries issued in the pool, especially if the queries are executed concurrently.  
<p>|                | If you do not specify this parameter, Vertica automatically creates a thread for every partition, up to the limit allowed.                                                                                 |</p>
<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>by the resource pool.</td>
</tr>
<tr>
<td></td>
<td>If the value you specify for the KafkaSource is lower than the value specified for the scheduler resource pool, the KafkaSource value applies. This value cannot exceed the value specified for the scheduler’s resource pool.</td>
</tr>
<tr>
<td>stop_on_eof</td>
<td>Determines whether KafkaSource should terminate the COPY statement after it reaches the end of a file. If this value is not set, you must set at least one other ending condition using duration or by supplying ending offsets instead.</td>
</tr>
<tr>
<td></td>
<td><strong>Default Value:</strong> FALSE</td>
</tr>
<tr>
<td>group_id</td>
<td>The name of the Kafka consumer group to which Vertica reports its progress consuming messages. See <a href="https://docs.vertica.com/11.0.1/Integrating_with_Apache_Kafka.html">Monitoring Vertica Message Consumption with Consumer Groups</a> for more information.</td>
</tr>
<tr>
<td></td>
<td><strong>Default Value:</strong></td>
</tr>
<tr>
<td></td>
<td>vertica_database-name</td>
</tr>
<tr>
<td></td>
<td>Set this value to NULL to disable progress reports to a Kafka consumer group.</td>
</tr>
<tr>
<td>kafka_conf</td>
<td>A JSON-formatted object of option/value pairs to pass directly to the rdkafka library. This is the library Vertica uses to communicate with Kafka. You can use this parameter to directly set configuration options that are not available through the Vertica integration with Kafka. See <a href="https://docs.vertica.com/11.0.1/Integrating_with_Apache_Kafka.html">Directly Setting Kafka Library Options</a> for details.</td>
</tr>
<tr>
<td>fail_on_conf_parse_error</td>
<td>Determines whether the function fails when kafka_conf contains incorrectly formatted options and values, or invalid configuration properties.</td>
</tr>
<tr>
<td></td>
<td><strong>Default Value:</strong> FALSE</td>
</tr>
<tr>
<td></td>
<td>For accepted option and value formats, see <a href="https://docs.vertica.com/11.0.1/Integrating_with_Apache_Kafka.html">Directly Setting Kafka Library Options</a>.</td>
</tr>
<tr>
<td>Parameter</td>
<td>Description</td>
</tr>
<tr>
<td>-----------</td>
<td>-------------</td>
</tr>
<tr>
<td></td>
<td>For a list of valid configuration properties, see the <a href="https://github.com/edenhill/librdkafka">rdkafka GitHub repository</a>.</td>
</tr>
</tbody>
</table>

**Special Starting Offset Values**

The `start_offset` portion of the `stream` parameter lets you start loading messages from a specific point in the topic's partition. It also accepts one of two special offset values:

- `-2` tells KafkaSource to start loading at the earliest available message in the topic's partition. This value is useful when you want to load as many messages as you can from the Kafka topic's partition.
- `-3` tells KafkaSource to start loading from the consumer group's saved offset. If the consumer group does not have a saved offset, it starts loading from the earliest available message in the topic partition. See [Monitoring Vertica Message Consumption with Consumer Groups](https://docs.vertica.com/integrations/index.html#monitoring-vertica-message-consumption-with-consumer-groups) for more information.

**Loading from Multiple Topics in the Same Stream Parameter**

You can load from multiple Kafka topics in a single stream parameter as long as you follow these guidelines:

- The data for the topics must be in the same format because you pass the data from KafkaSource to a single parser. For example, you cannot load data from one topic that is in Avro format and another in JSON format.
- Similarly, you need to be careful if you are loading Avro data and specifying an external schema from a registry. The Avro parser accepts a single schema per data load. If the data from the separate topics have different schemas, then all of the data from one of the topics will be rejected.
- The data in the different topics should have the same (or very similar) schemas, especially if you are loading data into a traditional Vertica table. While you can load data with different schemas into a flex table, there are only a few scenarios where it makes sense to combine dissimilar data into a single table.
### Duration Note

The duration parameter applies to the length of time that Vertica allows the KafkaSource function to run. It usually reflects the amount of time the overall load statement takes. However, if KafkaSource is loading a large volume of data or the data needs extensive processing and parsing, the overall runtime of the query can exceed the amount of time specified in duration.

### Example

The following example demonstrates calling KafkaSource to load data from Kafka into an existing flex table named web_table with the following options:

- The stream is named web_hits which has a single partition.
- The load starts at the earliest message in the stream (identified by passing -2 as the start offset).
- The load ends when it reaches the message with offset 1000.
- The Kafka cluster's brokers are kafka01 and kafka03 in the example.com domain.
- The brokers are listening on port 9092.
- The load ends if it reaches the end of the stream before reaching the message with offset 1000. If you do not supply this option, the connector waits until Kafka sends a message with offset 1000.
- The loaded data is sent to the KafkaJSONParser for processing.

```sql
=> COPY web_table
      SOURCE KafkaSource(stream='web_hits|0|-2|1000',
     brokers='kafka01.example.com:9092,kafka03.example.com:9092',
     stop_on_eof=true)
     PARSER KafkaJSONParser();
Rows Loaded
----------
  1000
(1 row)
```

To view details about this load operation, query [KafkaOffsets](https://www.vertica.com/doc/11.0.x/docset/Integrating-with-Apache-Kafka.html). KafkaOffsets returns metadata about the messages that Vertica consumed from Kafka during the most recent KafkaSource invocation:

```sql
=> SELECT KafkaOffsets() OVER();
                 ktopic | kpartition | start_offset | end_offset | msg_count | bytes_read | duration | ending | end_msg
---------- | ---------- | ------------ | ---------- | --------- | --------- | ------- | ------ | -------
------------ | ---------- | ------------ | ---------- | --------- | --------- | ------- | ------ | -------
``
The `msg_count` column verifies that Vertica loaded 1000 messages, and the ending column indicates that Vertica stopped consuming messages when it reached the message with the offset 1000.

## KafkaTopicDetails

Retrieves information about the specified topic from one or more Kafka brokers. This function lists details about the topic partitions, and the Kafka brokers that serve each partition in the Kafka cluster.

### Syntax

```
KafkaTopicDetails(USING PARAMETERS brokers='hostname:port[,hostname2:port2...]'
    , topic=topic_name
    [, kafka_conf='option=value[;option2=value2...]']
    [, timeout=timeout_sec])
```

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>brokers</td>
<td>The hostname (or IP address) of a broker in the Kafka cluster.</td>
</tr>
<tr>
<td>port</td>
<td>The port number on which the broker is running.</td>
</tr>
<tr>
<td>topic</td>
<td>Kafka topic that you want details for.</td>
</tr>
<tr>
<td>kafka_conf</td>
<td>A semicolon-delimited list of <code>option=value</code> pairs to pass directly to the</td>
</tr>
<tr>
<td></td>
<td>rdkafka library. This is the library Vertica uses to communicate with Kafka.</td>
</tr>
<tr>
<td></td>
<td>You can use this parameter to directly set configuration options that are</td>
</tr>
<tr>
<td></td>
<td>not available through the Vertica integration with Kafka. See Directly Setting</td>
</tr>
<tr>
<td></td>
<td>Kafka Library Options for details.</td>
</tr>
<tr>
<td>timeout</td>
<td>Integer number of seconds to wait for a response from the Kafka cluster.</td>
</tr>
</tbody>
</table>
Example

```sql
=> SELECT KafkaTopicDetails(USING PARAMETERS brokers='kafka1-01.example.com:9092',topic='iot_data') OVER();
```

<table>

Data Streaming Schema Tables

Every time you create a scheduler (`--create`), Vertica creates a schema for that scheduler with the name you specify or the default `stream_config`. Each schema has the following tables:

- `stream_clusters`
- `stream_events`
- `stream_load_specs`
- `stream_microbatch_history`
- `stream_microbatch_source_map`
- `stream_microbatches`
- `stream_scheduler`
- `stream_scheduler_history`
- `stream_sources`
- `stream_targets`

**Caution:**
Vertica recommends that you do not alter these tables except in consultation with support.

**stream_clusters**

This table lists clusters and hosts. You change settings in this table using the `vkconfig` cluster tool. See [Cluster Tool Options](#) for more information.
<table>
<thead>
<tr>
<th>Column</th>
<th>Data Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>INTEGER</td>
<td>The identification number assigned to the cluster.</td>
</tr>
<tr>
<td>cluster</td>
<td>VARCHAR</td>
<td>The name of the cluster.</td>
</tr>
<tr>
<td>hosts</td>
<td>VARCHAR</td>
<td>A comma-separated list of hosts associated with the cluster.</td>
</tr>
</tbody>
</table>

### Examples

This example shows a cluster and its associated hosts.

```sql
=> SELECT * FROM stream_config.stream_clusters;
    id | cluster  | hosts                        
-----------------------+------------+-----------------------------
  2250001 | streamcluster | 10.10.10.10:9092,10.10.11:9092 
(1 rows)
```

### stream_events

This table logs microbatches and other important events from the scheduler in an internal log table.

This table was renamed from kafka_config.kafka_events.

<table>
<thead>
<tr>
<th>Column</th>
<th>Data Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>event_time</td>
<td>TIMESTAMP</td>
<td>The time the event was logged.</td>
</tr>
<tr>
<td>log_level</td>
<td>VARCHAR</td>
<td>The type of event that was logged.</td>
</tr>
</tbody>
</table>

Valid Values:

- TRACE
- DEBUG
- FATAL
- ERROR
- WARN
- INFO

Default value:
<table>
<thead>
<tr>
<th>Column</th>
<th>Data Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>frame_start</td>
<td>TIMESTAMP</td>
<td>The time when the frame executed.</td>
</tr>
<tr>
<td>frame_end</td>
<td>TIMESTAMP</td>
<td>The time when the frame completed.</td>
</tr>
<tr>
<td>microbatch</td>
<td>INTEGER</td>
<td>The identification number of the associated microbatch.</td>
</tr>
<tr>
<td>message</td>
<td>VARCHAR</td>
<td>A description of the event.</td>
</tr>
<tr>
<td>exception</td>
<td>VARCHAR</td>
<td>If this log is in the form of a stack trace, this column lists the exception.</td>
</tr>
</tbody>
</table>

**Examples**

This example shows typical rows from the stream_events table.

```sql
=> SELECT * FROM stream_config.stream_events;
-[ RECORD 1 ]-+----------
| event_time | 2016-07-17 13:28:35.548-04 |
| log_level  | INFO                    |
| frame_start|                         |
| frame_end  |                         |
| microbatch |                         |
| message    | New leader registered for schema stream_config. New ID: 0, new Host: 10.20.30.40 |
| exception  |                         |

-[ RECORD 2 ]-+----------
| event_time | 2016-07-17 13:28:45.643-04 |
| log_level  | INFO                    |
| frame_start| 2015-07-17 12:28:45.633   |
| frame_end  | 2015-07-17 13:28:50.701-04|
| microbatch |                         |
| message    | Generated tuples: test3|2|-2,test3|1|-2,test3|0|-2 |
| exception  |                         |

-[ RECORD 3 ]-+----------
| event_time | 2016-07-17 14:28:50.701-04 |
| log_level  | INFO                    |
| frame_start| 2016-07-17 13:28:45.633   |
| frame_end  | 2016-07-17 14:28:50.701-04|
| microbatch |                         |
| message    | Total rows inserted: 0   |
| exception  |                         |
```
stream_load_specs

This table describes user-created load specs. You change the entries in this table using the vkconfig utility's load spec tool.

<table>
<thead>
<tr>
<th>Column</th>
<th>Data Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>INTEGER</td>
<td>The identification number assigned to the cluster.</td>
</tr>
<tr>
<td>load_spec</td>
<td>VARCHAR</td>
<td>The name of the load spec.</td>
</tr>
<tr>
<td>filters</td>
<td>VARCHAR</td>
<td>A comma-separated list of UDFilters for the scheduler to include in the COPY statement it uses to load data from Kafka.</td>
</tr>
<tr>
<td>parser</td>
<td>VARCHAR</td>
<td>A VerticalUDParser to use with a specified target. If you are using a Vertica native parser, parser parameters serve as a COPY statement parameters.</td>
</tr>
<tr>
<td>parser_parameters</td>
<td>VARCHAR</td>
<td>A list of parameters to provide to the parser.</td>
</tr>
<tr>
<td>load_method</td>
<td>VARCHAR</td>
<td>The COPY load method to use for all loads with this scheduler.</td>
</tr>
<tr>
<td>message_max_bytes</td>
<td>INTEGER</td>
<td>The maximum size, in bytes, of a message.</td>
</tr>
<tr>
<td>uds_kv_parameters</td>
<td>VARCHAR</td>
<td>A list of parameters that are supplied to the KafkaSource statement. If the value in this column is in the format key=value, the scheduler it to the COPY statement's KafkaSource call.</td>
</tr>
</tbody>
</table>

**Examples**

This example shows the load specs that you can use with a Vertica instance.
SELECT * FROM stream_config.stream_load_specs;

- [ RECORD 1 ]---------------------
  id | 1
  load_spec | loadspec2
  filters | KafkaParser
  parser | KafkaParser
  parser_parameters | 
  load_method | direct
  message_max_bytes | 1048576
  uds_kv_parameters | 

- [ RECORD 2 ]---------------------
  id | 750001
  load_spec | streamspec1
  filters | 
  parser | KafkaParser
  parser_parameters | 
  load_method | TRICKLE
  message_max_bytes | 1048576
  uds_kv_parameters | 

**stream_lock**

This table is locked by the scheduler. This locks prevent multiple schedulers from running at the same time. The scheduler that locks this table updates it with its own information.

**Important:**
Do not use this table in a serializable transaction that locks this table. Locking this table can interfere with the operation of the scheduler.

<table>
<thead>
<tr>
<th>Column</th>
<th>Data Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>scheduler_id</td>
<td>INTEGER</td>
<td>A unique ID for the scheduler instance that is currently running.</td>
</tr>
<tr>
<td>update_time</td>
<td>TIMESTAMP</td>
<td>The time the scheduler took ownership of writing to the schema.</td>
</tr>
<tr>
<td>process_info</td>
<td>VARCHAR</td>
<td>Information about the scheduler process. Currently unused.</td>
</tr>
</tbody>
</table>

**Example**

```sql
=> SELECT * FROM weblog_sched.stream_lock;

scheduler_id | update_time | process_info
--------------|-------------|-----------------|
```
stream_microbatch_history

This table contains a history of every microbatch executed within this scheduler configuration.

<table>
<thead>
<tr>
<th>Column</th>
<th>Data Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>source_name</td>
<td>VARCHAR</td>
<td>The name of the source.</td>
</tr>
<tr>
<td>source_cluster</td>
<td>VARCHAR</td>
<td>The name of the source cluster. The clusters are defined in stream_clusters.</td>
</tr>
<tr>
<td>source_partition</td>
<td>INTEGER</td>
<td>The number of the data streaming partition.</td>
</tr>
<tr>
<td>start_offset</td>
<td>INTEGER</td>
<td>The starting offset of the microbatch.</td>
</tr>
<tr>
<td>end_offset</td>
<td>INTEGER</td>
<td>The ending offset of the microbatch.</td>
</tr>
<tr>
<td>end_reason</td>
<td>VARCHAR</td>
<td>An explanation for why the batch ended. The following are valid end reasons:</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• DEADLINE - The batch ran out of time.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• END_OFFSET - The load reached the ending offset specified in the KafkaSource. This reason is never used by the scheduler, as it does specify an end offset.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• END_OF_STREAM - There are no messages available to the scheduler or the eof_timeout has been reached.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• NETWORK_ERROR - The scheduler could not connect to Kafka.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• RESET_OFFSET - The start offset was changed using the --update and --offset parameters to the KafkaSource. This state does not occur during normal scheduler operations.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• SOURCE_ISSUE - The Kafka service returned an</td>
</tr>
<tr>
<td>Column</td>
<td>Data Type</td>
<td>Description</td>
</tr>
<tr>
<td>---------------------</td>
<td>---------------</td>
<td>--------------------------------------------------------------------------------------------------------------------------------------------</td>

stream_microbatch_source_map

This table maps microbatches to their associated sources.

<table>
<thead>
<tr>
<th>Column</th>
<th>Data Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>microbatch</td>
<td>INTEGER</td>
<td>The identification number of the microbatch.</td>
</tr>
<tr>
<td>source</td>
<td>INTEGER</td>
<td>The identification number of the associated source.</td>
</tr>
</tbody>
</table>

Examples

This example shows typical rows from the stream_microbatch table.

```
SELECT * FROM stream_config.stream_microbatch_source_map;
```

```
<table>
<thead>
<tr>
<th>microbatch</th>
<th>source</th>
</tr>
</thead>
<tbody>
<tr>

stream_microbatches

This table contains configuration data related to microbatches.

<table>
<thead>
<tr>
<th>Column</th>
<th>Data Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>INTEGER</td>
<td>The identification number of the microbatch.</td>
</tr>
<tr>
<td>microbatch</td>
<td>VARCHAR</td>
<td>The name of the microbatch.</td>
</tr>
<tr>
<td>target</td>
<td>INTEGER</td>
<td>The identification number of the target associated with the microbatch.</td>
</tr>
<tr>
<td>Column</td>
<td>Data Type</td>
<td>Description</td>
</tr>
<tr>
<td>--------------------</td>
<td>-----------</td>
<td>----------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>load_spec</td>
<td>INTEGER</td>
<td>The identification number of the load spec associated with the microbatch.</td>
</tr>
<tr>
<td>target_columns</td>
<td>VARCHAR</td>
<td>The table columns associated with the microbatch.</td>
</tr>
<tr>
<td>rejection_schema</td>
<td>VARCHAR</td>
<td>The schema that contains the rejection table.</td>
</tr>
<tr>
<td>rejection_table</td>
<td>VARCHAR</td>
<td>The table where Vertica stores messages that are rejected by the database.</td>
</tr>
<tr>
<td>max_parallelism</td>
<td>INTEGER</td>
<td>The number of parallel COPY statements the scheduler uses to process the microbatch.</td>
</tr>
<tr>
<td>enabled</td>
<td>BOOLEAN</td>
<td>When TRUE, the microbatch is enabled for use.</td>
</tr>
<tr>
<td>consumer_group_id</td>
<td>VARCHAR</td>
<td>The name of the Kafka consumer group to report loading progress to. This value is NULL if the microbatch reports its progress to the default consumer group for the scheduler. See Monitoring Vertica Message Consumption with Consumer Groups for more information.</td>
</tr>
</tbody>
</table>

**Examples**

This example shows a row from a typical stream_microbatches table.

```sql
=> select * from weblog_sched.stream_microbatches;
- [ RECORD 1 ]-----------------------
id          | 750001
microbatch  | weberrors
target     | 750001
load_spec   | 2250001
target_columns |
rejection_schema |
rejection_table |
max_parallelism | 1
enabled     | t
consumer_group_id |
- [ RECORD 2 ]-----------------------
id          | 1
microbatch  | weblog
target     | 1
load_spec   | 1
target_columns |
rejection_schema |
```
stream_scheduler

This table contains metadata related to a single scheduler.

This table was renamed from kafka_config.kafka_scheduler. This table used to contain a column named eof_timeout_ms. It has been removed.

<table>
<thead>
<tr>
<th>Column</th>
<th>Data Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>version</td>
<td>VARCHAR</td>
<td>The version of the scheduler.</td>
</tr>
<tr>
<td>frame_duration</td>
<td>INTERVAL</td>
<td>The length of time of the frame. The default is 00:00:10.</td>
</tr>
<tr>
<td>resource_pool</td>
<td>VARCHAR</td>
<td>The resource pool associated with this scheduler.</td>
</tr>
<tr>
<td>config_refresh</td>
<td>INTERVAL</td>
<td>The interval of time that the scheduler runs before applying any changes to its metadata, such as, changes made using the --update option. For more information, refer to --config-refresh in Scheduler Tool Options.</td>
</tr>
<tr>
<td>new_source_policy</td>
<td>VARCHAR</td>
<td>When during the frame that the source runs. Set this value with the --new-source-policy in Source Tool Options. Valid Values:</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- FAIR: Takes the average length of time from the previous batches and schedules itself appropriately.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- START: Runs all new sources at the beginning of the frame. In this case, Vertica gives the minimal amount of time to run.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- END: Runs all new sources starting at the end of the frame. In this case, Vertica gives the maximum amount of time to run.</td>
</tr>
<tr>
<td>Column</td>
<td>Data Type</td>
<td>Description</td>
</tr>
<tr>
<td>------------------------</td>
<td>-----------</td>
<td>-------------</td>
</tr>
</tbody>
</table>
| pushback_policy        | VARCHAR   | (Not currently used.) How Vertica handles delays for microbatches that continually fail. Valid Values:
|                        |           | • FLAT      |
|                        |           | • LINEAR    |
|                        |           | • EXPONENTIAL |
| Default Value:         |           | LINEAR      |
| pushback_max_count     | INTEGER   | (Currently not used.) The maximum number of times a microbatch can fail before Vertica terminates it. |
| auto_sync              | BOOLEAN   | When TRUE, the scheduler automatically synchronizes source information with host clusters. For more information, refer to [Automatically Consume Data From Kafka with the Scheduler](#). Default Value: TRUE |
| consumer_group_id      | VARCHAR   | The name of the Kafka consumer group to which the scheduler reports its progress in consuming messages. This value is NULL if the scheduler reports to the default consumer group named vertica-*database_name*. See [Monitoring Vertica Message Consumption with Consumer Groups](#) for more information. |

**Examples**

This example shows a typical row in the stream_scheduler table.

```sql
=> SELECT * FROM weblog_sched.stream_scheduler;
- [ RECORD 1 ]------------------------------
  version    | v9.2.1
  frame_duration  | 00:05:00
```
stream_scheduler_history

This table shows the history of launched scheduler instances.

This table was renamed from kafka_config.kafka_scheduler_history.

<table>
<thead>
<tr>
<th>Column</th>
<th>Data Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>elected_leader_time</td>
<td>TIMESTAMP</td>
<td>The time when this instance took began scheduling operations.</td>
</tr>
<tr>
<td>host</td>
<td>VARCHAR</td>
<td>The host name of the machine running the scheduler instance.</td>
</tr>
<tr>
<td>launcher</td>
<td>VARCHAR</td>
<td>The name of the currently active scheduler instance.</td>
</tr>
<tr>
<td></td>
<td></td>
<td><strong>Default Value:</strong></td>
</tr>
<tr>
<td></td>
<td></td>
<td>NULL</td>
</tr>
<tr>
<td>scheduler_id</td>
<td>INTEGER</td>
<td>The identification number of the scheduler.</td>
</tr>
<tr>
<td>version</td>
<td>VARCHAR</td>
<td>The version of the scheduler.</td>
</tr>
</tbody>
</table>

Examples

This example shows typical rows from the stream_scheduler_history table.

```
SELECT * FROM stream_config.stream_scheduler_history;
```

<table>
<thead>
<tr>
<th>elected_leader_time</th>
<th>host</th>
<th>launcher</th>
<th>scheduler_id</th>
<th>version</th>
</tr>
</thead>
<tbody>
<tr>
<td>2016-07-26 13:19:42.692</td>
<td>10.20.100.62</td>
<td></td>
<td>0</td>
<td>v8.0.0</td>
</tr>
<tr>
<td>2016-07-26 13:54:37.715</td>
<td>10.20.100.62</td>

<td>3</td>
<td>v8.0.0</td>
</tr>
<tr>
<td>2016-07-26 15:51:20.513</td>
<td>10.20.100.62</td>
<td>SchedulerInstance</td>
<td>4</td>
<td>v8.0.0</td>
</tr>
</tbody>
</table>
stream_sources

This table contains metadata related to data streaming sources.

This table was formerly named kafka_config.kafka_scheduler.

<table>
<thead>
<tr>
<th>Column</th>
<th>Data Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>INTEGER</td>
<td>The identification number of the source</td>
</tr>
<tr>
<td>source</td>
<td>VARCHAR</td>
<td>The name of the source.</td>
</tr>
<tr>
<td>cluster</td>
<td>INTEGER</td>
<td>The identification number of the cluster associated with the source.</td>
</tr>
<tr>
<td>partitions</td>
<td>INTEGER</td>
<td>The number of partitions in the source.</td>
</tr>
<tr>
<td>enabled</td>
<td>BOOLEAN</td>
<td>When TRUE, the source is enabled for use.</td>
</tr>
</tbody>
</table>

Examples

This example shows a typical row from the stream_sources table.

```
select * from stream_config.stream_sources;
- [ RECORD 1 ]----------
  id | 1
  source | SourceFeed1
  cluster | 1
  partitions | 1
  enabled | t
- [ RECORD 2 ]----------
  id | 250001
  source | SourceFeed2
  cluster | 1
  partitions | 1
  enabled | t
```
stream_targets

This table contains the metadata for all Vertica target tables.

The table was formerly named kafka_config.kafka_targets.

<table>
<thead>
<tr>
<th>Column</th>
<th>Data Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>INTEGER</td>
<td>The identification number of the target table</td>
</tr>
<tr>
<td>target_schema</td>
<td>VARCHAR</td>
<td>The name of the schema for the target table.</td>
</tr>
<tr>
<td>target_table</td>
<td>VARCHAR</td>
<td>The name of the target table.</td>
</tr>
</tbody>
</table>

Examples

This example shows typical rows from the stream_tables table.

```
=> SELECT * FROM stream_config.stream_targets;
-[ RECORD 1 ]-------------------------
id | 1
| target_schema | public
| target_table  | stream_flex1
-[ RECORD 2 ]-------------------------
id | 2
| target_schema | public
| target_table  | stream_flex2
```
Integrating with Apache Spark

Apache Spark is an open-source, general-purpose cluster-computing framework. See the Apache Spark website for more information. Vertica provides a Spark connector that you install into Spark that lets you transfer data between Vertica and Spark.

Using the connector, you can:

- Copy large volumes of data from Spark DataFrames to Vertica tables. This feature lets you save your Spark analytics in Vertica.
- Copy data from Vertica to Spark RDDs or DataFrames for use with Python, R, Scala and Java. The connector efficiently pushes down column selection and predicate filtering to Vertica before loading the data.

The connector lets you use Spark to preprocess data for Vertica and to use Vertica data in your Spark application. You can even round-trip data from Vertica to Spark—copy data from Vertica to Spark for analysis, and then save the results of that analysis back to Vertica.

See the spark-connector project on GitHub for more information about the connector.

How the Connector Works

The Spark connector is a library that you incorporate into your Spark applications to read data from and write data to Vertica. When transferring data, the connector uses an intermediate storage location as a buffer between the Vertica and Spark clusters. Using the intermediate storage location lets both Vertica and Spark use all of the nodes in their clusters to transfer data in parallel.
When transferring data from Vertica to Spark, the connector tells Vertica to write the data as Parquet files in the intermediate storage location. As part of this process, the connector pushes down the required columns and any Spark data filters into Vertica as SQL. This push down lets Vertica pre-filter the data so it only copies the data that Spark needs. Once Vertica finishes copying the data, the connector has Spark load it into DataFrames from the intermediate location.

When transferring data from Spark to Vertica, the process is reversed. Spark writes data into the intermediate storage location. It then connects to Vertica and runs a COPY statement to load the data from the intermediate location into a table.

**Getting the Connector**

The Spark connector is an open source project. For the latest information on it, visit the spark-connector project on GitHub. To get an alert when there are updates to the connector, you can log into a GitHub account and click the Notifications button on any of the project's pages.

You have three options to get the Spark connector:

- Get the connector from Maven Central. If you use Gradle, Maven, or SBT to manage your Spark applications, you can add a dependency to your project to automatically get the connector and its dependencies and add them into your Spark application. See Getting the Connector from Maven Central below.
- Download a precompiled assembly from the GitHub project's releases page. Once you have downloaded the connector, you must configure Spark to use it. See Deploy the Connector to the Spark Cluster below.
- Clone the connector project and compile it. This option is useful if you want features or bugfixes that have not been released yet. See Compiling the Connector below.

See the Spark connector project on GitHub for detailed instructions on deploying and using the connector.

**Getting the Connector from Maven Central**

The Vertica Spark connector is available from the Maven Central Repository. Using Maven Central is the easiest method of getting the connector if your build tool supports downloading dependencies from it.
If your Spark project is managed by Gradle, Maven, or SBT you can add the Spark connector to it by listing it as a dependency in its configuration file. You may also have to enable Maven Central if your build tool does not automatically do so.

For example, suppose you use SBT to manage your Spark application. In this case, the Maven Central repository is enabled by default. All you need to do is add the `com.vertica.spark` dependency to your `build.sbt` file.

See the `com.vertica.spark` page on the Maven Repository site for more information on the available Spark connector versions and dependency information for your build system.

## Compiling the Connector

You may choose to compile the Spark connector if you want to test new features or bugfixes that have not yet been released. Compiling the connector is necessary if you plan on contributing your own features.

To compile the connector, you need:

- The SBT build tool. In order to compile the connector, you must install SBT and all of its dependencies (including a version of the Java SDK). See the [SBT documentation](#) for requirements and installation instructions.
- `git` to clone the Spark connector V2 source from the GitHub.

As a quick overview, executing the following commands on a Linux command line will download the source and compile it into an assembly file:

```
$ git clone https://github.com/vertica/spark-connector.git
$ cd spark-connector/connector
$ sbt assembly
```

Once compiled, the connector is located at `target/scala-<n.n>/spark-vertica-connector-assembly-x.x.jar`. The `<n.n>` is the currently-supported version of Scala and `x.x` is the current version of the Spark connector.

See the [CONTRIBUTING](#) document in the connector's GitHub project for detailed requirements and compiling instructions.

Once you compile the connector, you must deploy it to your Spark cluster. See the next section for details.
Deploy the Connector to the Spark Cluster

If you downloaded the Spark connector from GitHub or compiled it yourself, you must deploy it to your Spark cluster before you can use it. Two options include copying it to a Spark node and including it in a spark-submit or spark-shell command or deploying it to the entire cluster and having it loaded automatically.

Loading the Spark Connector from the Command Line

The quickest way to use the connector is to include it in the --jars argument when executing a spark-submit or spark-shell command. To be able to use the connector in the command line, you must first copy its assembly JAR to the Spark node on which you will run the commands. Then add the path to the assembly JAR file as part of the --jars command line argument.

For example, suppose you copied the assembly file to your current directory on a Spark node. Then you could load the connector when starting spark-shell with the command:

```
spark-shell --jars spark-vertica-connector-assembly-x.x.jar
```

You could also enable the connector when submitting a Spark job using spark-submit with the command:

```
spark-submit --jars spark-vertica-connector-assembly-x.x.jar
```

Configure Spark to Automatically Load the Connector

You can configure your Spark cluster to automatically load the connector. Deploying the connector this way ensures that the Spark connector is available to all Spark applications on your cluster.
To have Spark automatically load the Spark connector:

1. Copy the Spark connector's assembly JAR file to the same path on all of the nodes in your Spark cluster. For example, on Linux you could copy the spark-vertica-connector-assembly-x.x.jar file to the /usr/local/lib directory on every Spark node. The file must be in the same location on each node.

2. In your Spark installation directories on each node in your cluster, edit the conf/spark-defaults.conf file to add or alter the following line:

   ```
   spark.jars /path_to_assembly/spark-vertica-connector-assembly-x.x.jar
   ```

   For example, if you copied the assembly JAR file to /usr/local/lib, you would add:

   ```
   spark.jars /usr/local/lib/spark-vertica-connector-assembly-x.x.jar
   ```

   **Note:**

   If the `spark.jars` line already exists in the configuration file, add a comma to the end of the line, then add the path to the assembly file. Do not add a space between the comma and the surrounding values.

   If you have the JAR files for the Spark connector V1 in your configuration file, you do not need to remove them. Both connector versions can be loaded into Spark at the same time without a conflict.

3. Test your configuration by starting a Spark shell and entering the statement:

   ```
   import com.vertica.spark._
   ```

   If the statement completes successfully, then Spark was able to locate and load the Spark connector library correctly.

**Prior Connector Versions**

The Vertica Spark connector is an open source project available from GitHub. It is released on a separate schedule than the Vertica server.

Versions of Vertica prior to 11.0.2 distributed a closed-source proprietary version of the Spark connector. This legacy version is no longer supported, and is not distributed with the Vertica server install package.

The newer open source Spark connector differs from the old one in the following ways:
The new connector uses the Spark V2 API. Using this newer API makes it more future-proof than the legacy connector, which uses an older Spark API.

The primary class name has changed. Also, the primary class has several renamed configuration options and a few removed options. See Migrating From the Legacy Vertica Spark Connector for a list of these changes.

It supports more features than the older connector, such as Kerberos authentication and S3 intermediate storage.

It comes compiled as an assembly which contains supporting libraries such as the Vertica JDBC library.

It is distributed separate from the Vertica server. You can directly download it from the GitHub project. It is also available from the Maven Central Repository, making it easier for you to integrate it into your Gradle, Maven, or SBT workflows.

It is an open-source project that is not tied to the Vertica server release cycle. New features and bug fixes do not have to wait for a Vertica release. You can also contribute your own features and fixes.

Use the connector V2 if your environment supports it. It has more features than the connector V1. If your Spark cluster is running a version of Spark earlier than 3.0, continue to use the connector V1. You can load both versions of the connector into Spark at the same time, so you can gradually port your Spark applications to the new version.

**Spark Connector Requirements**

To use the Vertica Spark connector, you must have:

- An installed and configured Vertica database. See Installing Vertica and the Configuring the Database for details.
- An Apache Spark cluster supported by one of the versions of the Vertica Spark connector. See Vertica Integration for Apache Spark for details on the versions of Spark and Scala supported by the connector.
- An intermediate storage location where Vertica and Spark can save data being transferred to the other system. See the next section for details.

For details on installing and using Apache Spark and Apache Hadoop, see the Apache Spark web site, the Apache Hadoop website, or your Hadoop vendor's installation documentation.
Intermediate Storage Configuration

When transferring data, the Spark connector has Spark and Vertica write data to a temporary storage location. Currently, the connector supports using HDFS as an intermediate storage location. Both Spark and Vertica must be configured to access this location. Dedicate a directory in the intermediate storage location for transferring files between Spark and Vertica. A dedicated storage can help prevent interference from other applications.

On the Vertica size, you must configure your database to read data from and write data to the HDFS storage location. See Configuring HDFS Access for the steps you need to take to configure Vertica to be able to access the intermediate storage location.

For Spark, you will need any credentials the HDFS storage location requires to access it.

Supported Versions

For supported versions of Apache Spark and Apache Hadoop see the following sections in the Supported Platforms guide:

- Vertica Integration for Apache Spark
- Vertica Integrations for Hadoop

Migrating From the Legacy Vertica Spark Connector

If you have existing Spark applications that used the closed-source Vertica Spark connector, you must update them to work with the newer open-source connector. The new connector offers new features, better performance, and is under ongoing development. The old connector has been removed from service.
Deployment Changes between the Old and Connectors

The legacy connector was only distributed with the Vertica server install. The new connector is distributed via several channels giving you more ways to deploy it.

The new Spark connector is available from Maven Central. If you use Gradle, Maven, or SBT to manage your Spark applications, you may find it more convenient to deploy the Spark connector using a dependency rather than manually installing it on your Spark cluster. Integrating the connector into your Spark project as a dependency makes updating to newer versions of the connector easy—just update the required version in the dependency. See Getting the Connector from Maven Central for more information.

You can also download the precompiled connector assembly or build it from source. In this case, you must deploy the connector to your Spark cluster. The legacy connector depended on the Vertica JDBC driver and required that you separately include it. The new connector is an assembly that incorporates all of its dependencies, including the JDBC driver. You only need to deploy a single JAR file containing the Spark connector to your Spark cluster.

You can have Spark load both the legacy and new connector at the same time because the new connector's primary class name is different (see below). This renaming lets you add the new connector to your Spark configuration files without having to immediately port all of your Spark applications that use the legacy connector to the new API. You can just add the new assembly JAR file to spark-jars list in the spark-defaults.conf file.

API Changes

There are several API changes from the legacy connector to the new connector require changes to your Spark application.

VerticaRDD Class no Longer Supported

The legacy connector supported a class named VerticaRDD to load data from Vertica using the Spark resilient distributed dataset (RDD) feature. The new connector does not
support this separate class. Instead, if you want to directly manipulate an RDD, access it through the DataFrame object you create using the DataSource API.

**DefaultSource Class Renamed VerticaSource**

The primary class in the legacy connector is named DataSource. In the new connector, this class has been renamed to VerticaSource. This renaming lets both connectors coexist, allowing you to gradually transition your Spark applications.

For your existing Spark application to use the new connector, you must change calls to the DataSource class to the VerticaSource class. For example, suppose your Spark application has this method call to read data from the legacy connector:

```python
spark.read.format("com.vertica.spark.datasource.DefaultSource").options(opts).load()
```

Then to have it use the new connector, use this method call:

```python
spark.read.format("com.vertica.spark.datasource.VerticaSource").options(opts).load()
```

**Changed API Options**

In addition to renaming of the DataSource class to VerticaSource, some of the names for options for the primary connector class have changed. Other options are no longer supported. If you are porting a Spark application from the legacy to the new connector that uses one of the following options, you must update your code:

<table>
<thead>
<tr>
<th>Legacy DataSource Option</th>
<th>New VerticaSource Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>fileformat</td>
<td>none</td>
<td>The new connector does not support the fileformat option. The files that Vertica and Spark write to the intermediate storage location are always in parquet format.</td>
</tr>
<tr>
<td>hdfs_url</td>
<td>staging_fs_url</td>
<td>The location of the intermediate storage location that Vertica and Spark use to exchange data. Renamed to be more general, as the new connector supports storage platforms in addition to HDFS.</td>
</tr>
</tbody>
</table>
In addition, the new connector has added options to support new features such as Kerberos authentication. For details on the connector's VerticaSource options API, see the Vertica Spark connector GitHub project.

## Take Advantage of New Features

The new Vertica Spark connector offers new features that you may want to take advantage of.

Currently, the most notable new features are:

- Kerberos authentication. This feature lets you configure the connector for passwordless connections to Vertica. See the Kerberos documentation in the Vertica Spark connector GitHub project for details of using this feature.
- Support for using S3 for intermediate storage. This option lets you avoid having to set up a Hadoop cluster solely to host an HDFS storage location. See the S3 user guide at the connector GitHub site.
Integrating with Voltage SecureData

Voltage SecureData is a suite of encryption technologies that let you integrate end-to-end data encryption into other applications. It uses Format-Preserving Encryption (FPE): the encrypted values have the same overall format as the unencrypted data. This feature means you do not have to change the data types of table columns that you want to encrypt. It also preserves reference integrity: the encrypted values have the same sort order as unencrypted data, and encrypted values can be cross-referenced between tables, as long as each instance of the value is encrypted with the same key.

See the Voltage web site for more about SecureData.

This section explains how you can integrate the SecureData encryption feature into Vertica.

How Vertica and SecureData Work Together

Vertica provides functions to encrypt and decrypt data using SecureData.
Vertica SecureData supplies a number of interfaces for applications to use its encryption: web-based APIs, command-line tools, and SDKs for C, C#, and Java. Vertica has developed a connector that calls the SecureData API that lets you:

- Encrypt sensitive data as it is being loaded into Vertica using SecureData's FPE feature. You can ensure data is stored in Vertica in its encrypted state (referred to as "encrypted at rest"). Authorized users can decrypt the data as needed. Unauthorized users only see the encrypted values. Decryption for authorized users can be automated using views or access policies. The data is transparently decrypted for them.
- Encrypt semi-sensitive data that is stored unencrypted in Vertica so unauthorized users only see a masked version of the data. You can also automate this on-the-fly encryption using access policies.

The encryption method you choose depends on the data you are processing. For example, regulations or contracts may require you to encrypt specific pieces of data. In these cases, use SecureData to encrypt your data as it is loaded, so it is never stored in an unencrypted format within Vertica.

In other cases, you may have semi-sensitive data that you can choose between the two options. In these cases, choose the method that requires the least number of encryptions or decryptions (and therefore of calls to SecureData). If most of the queries on the data need to be masked from users who should not see the unencrypted values, then encrypt the data at rest. Alternatively, if the most of the queries will be from authorized users, with only occasional queries where the data should be masked, then store the data in an unencrypted format and use on-the-fly encryption to mask the data.

## Requirements for Integrating with SecureData

Before you can use SecureData with Vertica, you must verify the following:

- You are using version 6.0 or later of SecureData. The Vertica integration functions use APIs introduced in version 6.0 of SecureData.
- All of the nodes in your Vertica cluster are able to communicate with all of your SecureData appliance hosts. Any firewalls between your Vertica cluster and your SecureData appliance must allow connections on the ports that SecureData uses for communications. See "Ensuring Access to SecureData Services" in the SecureData Appliance Installation Guide for a list of the ports that SecureData uses.
- Your Vertica database is not using Federal Information Processing Standard (FIPS) mode. FIPS is incompatible with the Voltage SecureData integration. When FIPS mode
is active, the SecureData integration library is not installed by default. Do not
manually install this library if you are using FIPS.

- You are following the best practices when using Safe Unicode FPE formats.

### Best Practices for Safe Unicode FPE

Starting with Voltage SecureData Simple API 6.0, you can use Safe Unicode Format Preserving Encryption (FPE) formats to encrypt and decrypt Unicode strings.

When encrypting Unicode with Safe Unicode FPE formats, the plaintext passed into the `VoltageSecureProtect` function is first encrypted with an alphabet of all Unicode code points, and then encoded with the Base32K-encoding to produce encrypted text in Unicode Normalization Form C (NFC). The encrypted text will generally consist of 3-byte Chinese and Japanese characters, as they account for a significant portion of the NFC-stable alphabet. `VoltageSecureAccess` reverses this process.

Unlike regular FPE, which handles ASCII strings consisting of single bytes, Safe Unicode FPE handles strings consisting of variable-length code points. This variability introduces an important complication: Safe Unicode FPE formats like UNICODE_BASE32K are not length-preserving. The encryption algorithm guarantees that the encrypted text will be larger than the original, and failing to account for this expansion can lead to truncated or otherwise improperly stored encrypted text, making decryption impossible.

Additionally, Unicode allows semantically equivalent characters to be encoded in different ways, which means that unnormalized, semantically equivalent plaintexts can have different forms when encrypted, compromising referential integrity. To prevent this, you should always normalize your plaintext strings into their NFC forms before encryption. For more information on Unicode normalization, see the Unicode Consortium's Normalization FAQ.

The encrypted text is guaranteed to be larger than the plaintext in the following ways:

- 16/15ths longer in character-length (rounded up)
- up to 4-times larger (in bytes)

For a list of predefined formats for Safe Unicode FPE, consult your copy of the Voltage SecureData Simple API documentation.

### Checklist for Safe Unicode FPE

Before using Safe Unicode FPE:
- Normalize your plaintext to its NFC form before encryption.
- For fixed-length data types: remove any padding from the plaintext string.
- To store the encrypted text, ensure that the columns storing the encrypted text can handle:
  - strings 16/15ths times longer than your longest plaintext string
  - strings up to 4-times larger (in bytes) than your largest plaintext string

**Verifying the Vertica Server's Access to the SecureData CA Certificate**

Before you can use SecureData with Vertica, you must verify that the root certificate authority (CA) and any intermediate certificate authority used to sign the SecureData Appliance's certificate is in the Vertica server's trust store (/opt/vertica/packages/voltagesecure/trustStore/). Vertica supplies many standard root certificates in this directory. If your SecureData Appliance uses a certificate signed by a standard CA authority, it is likely already in the trust store.

If your SecureData Appliance is using a certificate signed by your own internal CA authority, you must add this CA Certificate to the Vertica trust store.

If you are unsure whether your CA Certificate is in the Vertica trust store, follow the steps under Troubleshooting Certificate Problems to test whether the Vertica already has the CA certificate. If you are able to retrieve the client policy XML file from the SecureData Appliance, then your Vertica cluster has the correct CA certificate to access SecureData.

**Adding the CA Certificate to Vertica**

You must add the CA to Vertica trust store before using the SecureData Integration if you used:

- Your own CA certificate to sign your SecureData Appliance's certificate.
- A third-party CA that is not in the Vertica trust store.

To add the CA certificate to the Vertica trust store, you need:

- The certificate authority (CA) file used to sign the SecureData Appliance's certificate. This file must be in Privacy Enhanced Mail (.pem) format. The file name does not matter, as long as it has the .pem extension.
Access to the dbadmin account on the Vertica nodes. This access is required in order to copy the certificate file to trust store directory in the Vertica installation.

To add the necessary CA file to Vertica:

1. Login to one of the Vertica nodes as the dbadmin user.
2. Copy the .pem file to the /opt/vertica/packages/voltagesecure/trustStore/ directory. You only need to copy this file to a single node. Vertica takes care of distributing the file to the rest of the nodes in the cluster.
3. On the Linux command line, execute the following command to reinstall the SecureData integration library:

   ```
   $ admintools -t install_package -d database_name -p 'password' --package voltagesecure --force-reinstall
   ```

When Vertica reinstall the SecureData integration library, it copies the CA authority file to the all nodes in the cluster. After the file is distributed, all Vertica nodes can authenticate with the SecureData Appliance.

For example, suppose:

- Your certificate file is named `my_ca.cert.pem`, and you have copied it to the dbadmin home directory on node in your cluster.
- Your database is named VMart.

Then the process of installing the CA file would look like this:

```bash
$ cp my_ca.cert.pem /opt/vertica/packages/voltagesecure/trustStore/
$ admintools -t install_package -d VMart -p dbadminpassword --package voltagesecure --force-reinstall
Installing package voltagesecure...
...Success!
```

## Troubleshooting Certificate Problems

You can test whether the Vertica trust store has the correct certificate by executing the following statement from the Linux command line:

```bash
curl --capath /vertica_catalog_directory/Libraries/\ $(vsql -A -t -c "SELECT sal_storage_id from user_libraries WHERE lib_name = 'VoltageSecureLib';")\ https://SecureData_appliance_hostname/policy/clientPolicy.xml
```

Where:
- **vertica_catalog_directory** is the absolute path to the Vertica catalog directory. See Understanding the Catalog Directory for more information about the catalog directory.
- **SecureData_appliance_hostname** is the host name of your Voltage SecureData Appliance.

For example, suppose you are connected to node0001 of the example VMart database. Also, your Voltage SecureData appliance’s host name is voltage-pp-0000.example.com. Then you would use the following command to test your certificate installation.

```bash
$ curl --capath /home/dbadmin/VMart/v_vmart_node0001_catalog/Libraries/
$(vsql -A -t -c "SELECT sal_storage_id from user_libraries WHERE lib_name = 'VoltageSecureLib';")
https://voltage-pp-0000.example.com/policy/clientPolicy.xml
```

```xml
<clientPolicy version="2">
  <server name="SecureDataAppliance" version="6.4.2.232000" />
  <localDomains>example.com</localDomains>
  <userWhitelist/>
  <defaultDistrict value="0"/>
  <sendUniversalReader value="1"/>
  <messageFooterGlobal/></messageFooterGlobal>
  <parameterAggressiveDistricts>example.com</parameterAggressiveDistricts>
  <localPolicyLocked value="0"/>
  <trustedDistricts/>
  <fallThroughDistrict>example.com</fallThroughDistrict>
</clientPolicy>
```

The `<clientPolicy>`... output (which is the content of the `clientPolicy.xml` file) indicates that the Vertica node was able to use its CA certificate to connect to the SecureData Appliance.

**Tip:**
If you are unsure which Format Preserving Encryption (FPE) formats are defined in your SecureData Appliance, examine the output of the `curl` command. Look for the tags with `formatName` attributes which describe each of the formats.

If the CA certificate you installed on Vertica does not match the certificate installed on the SecureData Appliance, you will see an error similar to the following:
$ curl --capath /home/dbadmin/VMart/v_vmart_node0001_catalog/libraries/$(vsql -At -c "SELECT sal_storage_id from user_libraries WHERE lib_name = 'VoltageSecureLib';") https://voltage-pp-0000.example.com/policy/clientPolicy.xml

curl: (60) Peer certificate cannot be authenticated with known CA certificates
More details here: http://curl.haxx.se/docs/sslcerts.html

In this case, verify that you have installed the correct CA certificate in Vertica, and that its file name has a .pem extension.

If you see other errors, such as "couldn't connect to host," verify that your firewall configuration allows your Vertica nodes to access your SecureData Appliance.

## Configuring Access to SecureData

The Vertica integration functions require several pieces of information in order to connect to and authenticate with SecureData.

### SecureData Global Configuration Settings

The SecureData integration has one required setting and two optional settings that you set globally using the `VoltageSecureConfigureGlobal` function. This function saves the settings to a configuration file named `/voltagesecure/conf.global` stored in the Vertica Distributed File System (DFS). This file system is used by Vertica to store data that can be accessed by all nodes. You must use the function to create this file before you use any of the other SecureData integration functions. All users who have access to the SecureData functions are able to access the settings in this file.

The one required setting is the URL of the SecureData policy file. This file provides the SecureData integration library with details of how the SecureData Appliance is configured. The library also uses this URL to determine the address of the SecureData Appliance.

The two optional settings are:

- `allow_short_fpe`: When set to True, SecureData ignores the lower length limit for encoding FPE values. Usually, SecureData does not use FPE to encrypt data shorter than a lower limit (usually, 8 bits). See the *SecureData Architecture Guide*‘s section on Data Length Restrictions for more information.

- `enable_file_cache`: When set to True, Vertica caches the SecureData policy file and encryption keys to disk, rather than just to memory. Defaults to false.
Integrating with Voltage SecureData

This example sets the policy URL globally to https://voltage-pp-0000.example.com/policy/clientPolicy.xml and the network timeout to 200 seconds.

```sql
=> SELECT VoltageSecureConfigureGlobal(USING PARAMETERS
    policy_url='https://voltage-pp-0000.example.com/policy/clientPolicy.xml',
    NETWORK_TIMEOUT=200)
OVER ();
```

<table>
<thead>
<tr>
<th>cache</th>
<th>network_timeout</th>
<th>allow_short_fpe</th>
<th>enable_file_</th>
</tr>
</thead>
<tbody>
<tr>
<td><a href="https://voltage-pp-0000.example.com/policy/clientPolicy.xml">https://voltage-pp-0000.example.com/policy/clientPolicy.xml</a></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>200</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

(1 row)

Manually refresh the client policy across the nodes:

```sql
=> SELECT VoltageSecureRefreshPolicy() OVER ();
```

Successfully refreshed policy on node [v_sandbox_node0001]. Policy on other nodes will be refreshed the next time a Voltage operation is run on them.

(1 row)

**Important:**
The SecureData integration only supports one configuration for the SecureData Appliance at a time.

### SecureData User Configuration Settings

The remaining SecureData settings define SecureData user information. They are usually specific to each user accessing the integration functions. However, you can have all Vertica users share the same SecureData user configuration. These settings are:

- Your authentication credentials for SecureData. The exact information you need depends on your SecureData Appliance's configuration. There are four potential settings you that you can use:
  - **username**: a username that you use to identify yourself. Your user name is either defined by LDAP (when using LDAP authentication) or by the SecureData appliance when using shared secret authentication.
  - **identity**: the SecureData identity to use. See the SecureData Administrator Guide for more information about identities in SecureData. The identity usually takes the form of an email address. When your SecureData Appliance uses LDAP authentication, your LDAP account must have access to this identity.
shared_secret: a password set in SecureData.
password: the LDAP password to use to authenticate with SecureData.

You can supply both a username and identity, depending on the SecureData Appliance's configuration. Your SecureData Appliance can be configured to supply the identity based on your SecureData username.

However, you can only use a shared_secret or a password. If you set both parameters, the Vertica SecureData functions exit with an error.

You have two options for setting these configuration values: setting them in user-defined session parameters, or saving the values in a configuration file stored in the Vertica distributed file system.

### Setting SecureData User Session Parameters

Use the ALTER SESSION statement to set parameters for the voltagesecurelib library. This library contains all of the SecureData functions. The following example demonstrates configuring the session to access SecureData using shared secret authentication.

```
=> ALTER SESSION SET UDPARAMETER FOR voltagesecurelib identity='alice@example.com';
=> ALTER SESSION SET UDPARAMETER FOR voltagesecurelib username='alice';
=> ALTER SESSION SET UDPARAMETER FOR voltagesecurelib shared_secret='my_shared_secret';
```

Once set, these parameters only last for the duration of your session.

### Saving Parameters in Configuration Files

You can use the VoltageSecureConfigure function to save SecureData user parameters to a configuration file in the DFS. You must supply a file name for your configuration file. You can choose to store your SecureData parameters in a user-specific file by supplying just a file name, such as securedata.conf. Behind the scenes, your configuration file is stored in DFS under a directory named for your username. This directory prevents your configuration file from conflicting with other users' files. You do not use this directory name when accessing your configuration file.
You can also store the configuration parameters in an absolute file named `/voltagesecure/conf`. All users who have access to the SecureData integration functions can use this configuration file in their function calls. You can use this file if all of the users accessing the SecureData functions share the same SecureData user settings.

**Important:**

All users that have access to the VoltageSecureConfigure function can write to the global `/voltagesecure/conf` file. Users do not need to be able to write to this file in order to use it in calls to the other SecureData integration functions. You will usually choose to either grant users access to VoltageSecureConfigure in order to save their own configuration files, or you will use the global `/voltagesecure/conf` file and not grant users access to VoltageSecureConfigure.

Values in the session parameters override values in configuration files.

You call VoltageSecureConfigure with the parameters you want to save to the configuration file. Values that you do not set in this function call are not set in the configuration file. You must supply those values to the other SecureData integration functions using session parameters.

If you choose to save either the password or shared secret to your configuration file, you do not directly pass them to the VoltageSecureConfigure function. Instead, you set the value in the appropriate session variable, and then set either VoltageSecureConfigure's `store_password` or `store_shared_secret` parameter to true. When either of these parameters are true, VoltageSecureConfigure reads the value from the session variable and saves it in the configuration file.

**Caution:**

Under normal circumstances, users are not able to directly read data from files stored in DFS. However, all users who have access to UDx functions that read from the DFS could access these files from within Vertica.

In addition, these files are stored as plain text in every node's file system. Anyone with the proper file system access on the nodes can read the file's contents.

You should take both of these facts into consideration when deciding whether to store sensitive information such as passwords or shared secrets in either the shared or per-user configuration files.
Example: Creating a User-Specific Configuration File

The following example shows how you can create a user-specific configuration file. This example does not store information such as the password or shared secret, so you must still set session parameters for these values before you can call the other SecureData integration functions.

```sql
=> \x
Expanded display is on.
=> SELECT VoltageSecureConfigure
  (USING PARAMETERS config_dfs_path='voltage.conf',
   username='alice', identity='alice@example.com', store_password=false
  ) OVER ();

<table>
<thead>
<tr>
<th>config_dfs_path</th>
<th>voltage.conf</th>
</tr>
</thead>
<tbody>
<tr>
<td>identity</td>
<td><a href="mailto:alice@example.com">alice@example.com</a></td>
</tr>
<tr>
<td>username</td>
<td>alice</td>
</tr>
</tbody>
</table>
```

Encrypting, Decrypting, and Hashing Data

Once you have set up authentication with the SecureData Appliance (SDA), call the `VoltageSecureProtect` and `VoltageSecureAccess` functions to encrypt/hash or decrypt your data, respectively. At a minimum, you pass these functions the value to be encrypted, hashed, or decrypted and value's FPE format as defined in the Voltage SDA. You can also capture these parameters in SQL Macros and access policies.

Connecting Vertica to the SecureData Appliance

The following example demonstrates how to fetch the SDA client policy with Vertica and then how to set the session parameters for authentication to the SDA.
1. **Add the SecureData CA certificate to Vertica.**
2. **Set the client policy with** [Vertica SecureData](https://voltage-Vertica.com)
   ```
   => SELECT VoltageSecureConfigureGlobal(USING PARAMETERS
      policy_url='https://voltage-pp-0000.example.com/policy/clientPolicy.xml')
      OVER ();
      | allow_short_fpe |
   enable_file_cache
   -----------------+-------------------
   https://voltage-pp-0000.example.com/policy/clientPolicy.xml | | (1 row)
   ```
3. **(Optional) Retrieve the latest version of the client policy with** [Vertica SecureData](https://voltage-Vertica.com)
   ```
   => SELECT VoltageSecureRefreshPolicy() OVER ();
   | PolicyRefresh |
   -------------------
   Successfully refreshed policy on node [v_node0001]. Policy on other nodes
   will be refreshed the next time a Voltage operation is run on them.
   (1 row)
   ```
4. **Set the authentication parameters to authenticate to the SDA as a Vertica user with** [Vertica SecureData](https://voltage-Vertica.com)
   ```
   => ALTER SESSION SET UDPARAMETER FOR voltagesecurelib identity='alice@example.com';
   => ALTER SESSION
   => ALTER SESSION SET UDPARAMETER FOR voltagesecurelib username='alice';
   => ALTER SESSION
   => ALTER SESSION SET UDPARAMETER FOR voltagesecurelib shared_secret='my_secret';
   => ALTER SESSION
   ```

   **VerticaSecureConfigure** saves these parameters to the specified `config_dfs_path`. This configuration file can then be passed to other Voltage functions.

   ```
   => SELECT VoltageSecureConfigure(USING PARAMETERS config_dfs_path='voltage.conf',
      username='alice', identity='alice@example.com', store_password=false) OVER ();
<table>
<thead>
<tr>
<th>identity</th>
<th>username</th>
</tr>
</thead>
<tbody>
<tr>
<td>voltage.conf</td>
<td><a href="mailto:alice@example.com">alice@example.com</a></td>
</tr>
</tbody>
</table>
   => SELECT VoltageSecureProtect('123-45-6789' USING PARAMETERS
      format='ssn',
      config_dfs_path='voltage.conf');
   ```
Encrypting and Decrypting Data

`VoltageSecureProtect` takes a format-preserving encryption (FPE) format defined in your SDA and VARCHAR data and returns format-preserved ciphertext, which can then be decrypted with `VoltageSecureAccess`. That is, if the plaintext follows the form of a phone number (###-###-####), the resulting ciphertext will be in the same form. Formats can be customized in various ways, like masking certain values, leaving some part of the string unencrypted, etc.

One of the many predefined formats in the SDA is `ssn`. The `ssn` format encrypts all but the last four digits of the social security number, which can be useful for certain roles like customer support, which may need the last four digits of the SSN to authenticate individuals over the phone.

```sql
=> SELECT VoltageSecureProtect('123-45-6789' USING PARAMETERS format='ssn');
VoltageSecureProtect
--------------------
376-69-6789
(1 row)

=> SELECT VoltageSecureAccess('376-69-6789' USING PARAMETERS format='ssn');
VoltageSecureAccess
--------------------
123-45-6789
(1 row)
```

Another predefined format is `auto`, which can handle a wide variety of data, including SSNs. In contrast to `ssn`, `auto` is configured in the SDA to encrypt all characters in the plaintext.

```sql
=> SELECT VoltageSecureProtect('123-45-6789' USING PARAMETERS format='auto');
VoltageSecureProtect
--------------------
820-31-5110
(1 row)
```

Note that you can only decrypt ciphertext with the same format that generated it. In this case, ciphertext created with `ssn` must be decrypted with `ssn`. Passing the format `auto` with a ciphertext generated with `ssn`, for instance, would simply return an incorrect plaintext.
Encrypting Data During Load

When handling sensitive data, you often want to encrypt it as you load it so the unencrypted values are never stored in your database.

The following example demonstrates loading data using COPY. Suppose you have a data filled with customer information with the following fields: id number, first name, last name, social security number, card verification number, and date of birth:

<table>
<thead>
<tr>
<th>id</th>
<th>first_name</th>
<th>last_name</th>
<th>ssn</th>
<th>cc_num</th>
<th>cvv</th>
<th>dob</th>
</tr>
</thead>
<tbody>
<tr>
<td>5341</td>
<td>Thane</td>
<td>Ross</td>

<td>1955-11-06</td>
</tr>
</tbody>
</table>

To encrypt the social security number and the credit card number columns, call VoltageSecureProtect to encrypt these columns in the COPY statement you use to load the data:

```sql
=> CREATE TABLE customers (id INTEGER, first_name VARCHAR, last_name VARCHAR,
                        ssn VARCHAR(11), cc_num VARCHAR(25), cvv VARCHAR(5), dob DATE);
CREATE TABLE
=> COPY customers (id, first_name, last_name, ssn_raw FILLER VARCHAR(11),
                   cc_num_raw FILLER VARCHAR(25), cvv, dob,
                   ssn AS VoltageSecureProtect(ssn_raw USING PARAMETERS format='ssn',
                                                config_dfs_path='voltage.conf'),
                   cc_num AS VoltageSecureProtect(cc_num_raw USING PARAMETERS format='cc',
                                               config_dfs_path='voltage.conf'))
                   FROM '/home/dbadmin/customer_data.csv' DELIMITER ',';
Rows Loaded
----------
100
(1 row)
```

=> SELECT * FROM customers ORDER BY id ASC LIMIT 10;

<table>
<thead>
<tr>
<th>id</th>
<th>first_name</th>
<th>last_name</th>

<td>1955-11-06</td>
</tr>
</tbody>
</table>
Caution:
Always use the same FPE format to encrypt data in a column. If you use different FPE formats in the same column (such as loading some data using ssn and other data using auto) there is no way to tell which format was used for any particular row, and properly and improperly encrypted ciphertexts will be indistinguishable.

Encrypting Non-VARCHAR Data

VoltageSecureProtect function only encrypts VARCHAR values, so if you need to encrypt other data types, such as DATE or INTEGER, you must cast these values to VARCHAR in your function call and then cast them back to DATE or INTEGER when storing them.

Building off the previous example, the following encrypts the date of birth (dob) column, which holds date type DATE.

```sql
=> CREATE TABLE customers2 (id INTEGER, first_name VARCHAR, last_name VARCHAR, ssn VARCHAR(11), cc_num VARCHAR(25), cvv VARCHAR(5), dob DATE);
CREATE TABLE
=> COPY customers2 (id, first_name, last_name, ssn, cc_num, cvv, dob) FROM '/home/dbadmin/customer_data.csv' DELIMITER ',';
Rows Loaded
----------
100
(1 row)
=> SELECT * FROM customers2 ORDER BY id ASC LIMIT 10;
id | first_name | last_name | ssn | cc_num | cvv | dob
---+------------+-----------+-----+--------+-----+--------
5345 | Thane      | Ross      | 559-32-0670 | 376765616314013 | 618 | 1902-03-09
5346 | Talon      | Wilkins   | 540-48-0784 | 4716511603424923 | 111 | 2023-07-22
5347 | Daquan     | Phelps    | 785-34-0092 | 342226134491834 | 294 | 2001-01-18
5348 | Basia      | Lopez     | 111-85-0705 | 4595818418314603 | 503 | 1921-08-17
5349 | Kaseem     | Hendrix   | 672-57-0309 | 4556 078 73 7944 | 693 | 1962-08-23
5350 | Omar       | Lott      | 825-45-0131 | 6462 0541 0799 6261 | 555 | 1930-01-12
5351 | Nell       | Cooke     | 637-50-0105 | 646 59756 30903 530 | 818 | 2008-01-01
5352 | Illana     | Middleton | 831-47-0929 | 648 23648 86684 267 | 883 | 1956-09-07
5353 | Garrett    | Williamson | 408-73-0287 | 5334 2702 1360 8370 | 869 | 2079-03-25
5354 | Hanna      | Ware      | 694-97-0394 | 543 38494 19219 254 | 586 | 1903-07-16
(10 rows)
```
To encrypt dates, you must create your own FPE format. Be sure to match your custom FPE format to standard Vertica date format of YYYY-MM-DD. The example's birthday is one such custom format.

Note that you cannot use the auto format for DATE types; ciphertext generated by auto uses the full range of numbers and letters and only preserves the number of characters and any separators, so the resulting ciphertext cannot typically be cast to a date.

```sql
=> SELECT VoltageSecureProtect('07-16-1969' USING PARAMETERS format='auto',
                                 config_dfs_path='/voltagesecure/conf');
VoltageSecureProtect
----------------------
45-86-8651
(1 row)
```

```sql
=> SELECT VoltageSecureProtect('07-16-1969' USING PARAMETERS format='auto',
                                 config_dfs_path='/voltagesecure/conf')::DATE;
ERROR 2992: Date/time field value out of range: "45-86-8651"
HINT: Perhaps you need a different "datestyle" setting
```

## Decrypting Values in Queries

To decrypt ciphertext stored in tables, call VoltageSecureAccess on the encrypted column in your query.

The following example queries a table and decrypts the SSN column:

```sql
=> SELECT id, first_name, last_name, VoltageSecureAccess(ssn USING PARAMETERS format='ssn',
                                                          config_dfs_path='/voltagesecure/conf') AS ssn_plaintext,
                      dob
FROM customers
WHERE dob < '1970-1-1'
ORDER BY id ASC
LIMIT 10;
```

<table>
<thead>
<tr>
<th>id</th>
<th>first_name</th>
<th>last_name</th>
<th>ssn_plaintext</th>
<th>dob</th>
</tr>
</thead>
<tbody>
<tr>
<td>5346</td>
<td>Talon</td>
<td>Wilkins</td>
<td>540-48-0784</td>
<td>1941-09-17</td>
</tr>
<tr>
<td>5347</td>
<td>Daquan</td>
<td>Phelps</td>
<td>785-34-0092</td>
<td>1963-05-08</td>
</tr>
<tr>
<td>5348</td>
<td>Basia</td>
<td>Lopez</td>
<td>011-85-0705</td>
<td>1940-04-29</td>
</tr>
<tr>
<td>5349</td>
<td>Kaseem</td>
<td>Hendrix</td>
<td>672-57-0309</td>
<td>1942-03-11</td>

<tr>
<td>5355</td>
<td>Quinn</td>
<td>Pruitt</td>
<td>818-91-0359</td>
<td>1965-11-14</td>
</tr>
</tbody>
</table>
Important:
The VoltageSecureAccess function has no way of determining if the values you are passing it are actually encrypted or not; the function simply takes the input and transforms it using the decryption key. If you pass it values from an unencrypted column, you will get back scrambled values. For example:

```sql
=> SELECT first_name,
       VoltageSecureAccess(first_name USING PARAMETERS format='auto',
                            config_dfs_path='/voltagesecure/conf')
       AS decrypted_first_name
FROM customers LIMIT 10;
```

<table>
<thead>
<tr>
<th>first_name</th>
<th>decrypted_first_name</th>
</tr>
</thead>
<tbody>
<tr>
<td>Omar</td>
<td>Rftd</td>
</tr>
<tr>
<td>Illana</td>
<td>Clfkow</td>
</tr>
<tr>
<td>Hanna</td>
<td>Bodng</td>
</tr>
<tr>
<td>Keith</td>
<td>Hklnw</td>
</tr>
<tr>
<td>Constance</td>
<td>Ciqgtmgtw</td>
</tr>
<tr>
<td>Kirk</td>

<tr>
<td>Branden</td>
<td>Ytqgnpp</td>
</tr>
<tr>
<td>Hope</td>
<td>Tqzc</td>
</tr>
<tr>
<td>Keane</td>
<td>Pdcax</td>
</tr>
</tbody>
</table>

(10 rows)

Decrypting Non-VARCHAR Columns

Like VoltageSecureProtect, VoltageSecureAccess can only handle VARCHAR values. When you decrypt ciphertext from a non-VARCHAR column, you must cast it to a VARCHAR before passing it to VoltageSecureAccess. If your query or client application depends on the original data type of the column, you must then cast the returned plaintext back to the column's original data type.

The following example decrypts the dob column by casting the column data from DATE to VARCHAR, passing it to VoltageSecureAccess, and then casting the plaintext back to DATE.

```sql
=> SELECT id, first_name, last_name,
       VoltageSecureAccess(dob::VARCHAR USING PARAMETERS format='birthday',
                            config_dfs_path='/voltagesecure/conf')::DATE AS dob
FROM customers2 ORDER BY id LIMIT 10;
```

<table>
<thead>
<tr>
<th>id</th>
<th>first_name</th>
<th>last_name</th>
<th>dob</th>
</tr>
</thead>
<tbody>
<tr>
<td>5345</td>
<td>Thane</td>
<td>Ross</td>
<td>1996-05-09</td>
</tr>
</tbody>
</table>

(10 rows)
Masking Decrypted Values

If the ciphertext was created with a format that specifies a form of "masking," plaintexts returned by VoltageSecureAccess can be masked by using the mask=true parameter. If you don't specify this parameter, the full plaintext will be returned regardless of the format.

This format, as defined in the Voltage SDA, obscures all but the last two characters of the decrypted plaintext.

```
=> SELECT VoltageSecureAccess('g3kbx6ru19', USING PARAMETERS
   format='maskedFormat',
   config_dfs_path='voltage.conf');

VoltageSecureAccess
------------------------
1234567890

=> SELECT VoltageSecureAccess('g3kbx6ru19', USING PARAMETERS
   format='maskedFormat',
   config_dfs_path='voltage.conf',
   mask=true);

VoltageSecureAccess
------------------------
XXXXXXXXX90
```

Tweaking Ciphertext

Analogous to a salt, you can pass an additional "tweak" value to add to the key used by VoltageSecureProtect to create unique ciphertexts from the same plaintext. This "tweaked" ciphertext can then only be decrypted by passing the same format and "tweak" value to VoltageSecureAccess. Support for this feature is set in the SDA.

The following example uses the custom format ssn-tweak and the value tweakvalue123 to tweak the ciphertext.
Tweaking an Entire Column

A common use case is to use the values from one column to tweak the ciphertext in another.

The following example loads the data in a similar manner to the previous section, but uses the values from the last_name column to tweak the dates of birth of each customer.

```sql
=> CREATE TABLE customers (id INTEGER, first_name VARCHAR, last_name VARCHAR, ssn VARCHAR(11), cc_num VARCHAR(25), cvv VARCHAR(5), dob DATE);
CREATE TABLE

=> COPY customers (id, first_name, last_name, ssn_raw FILLER VARCHAR(11),
  cc_num_raw FILLER VARCHAR(25), cvv, dob_raw FILLER DATE, ssn AS VoltageSecureProtect(ssn_raw USING PARAMETERS format='ssn',
  config dfs_path='voltage.conf'),
  /* cast the dob_raw to VARCHAR and tweak with last_name, then cast back to DATE */
  dob AS VoltageSecureProtect(dob_raw::VARCHAR, last_name USING PARAMETERS format='date-tweak',
  config dfs_path='voltage.conf')::DATE,
  cc_num AS VoltageSecureProtect(cc_num_raw USING PARAMETERS format='cc', config dfs_
  path='voltage.conf'))
FROM 'customers.csv' DELIMITER ',';

Rows Loaded
-------------
100
(1 row)

=> SELECT id, first_name, last_name, dob FROM customers ORDER BY id;
```

```
<table>
<thead>
<tr>
<th>id</th>
<th>first_name</th>
<th>last_name</th>
<th>dob</th>
</tr>
</thead>
<tbody>
<tr>
<td>5345</td>
<td>Thane</td>
<td>Ross</td>
<td>2006-03-07</td>
</tr>
<tr>
<td>5346</td>
<td>Talon</td>
<td>Wilkins</td>
<td>1936-06-09</td>
</tr>
<tr>
<td>5347</td>
<td>Daquan</td>
<td>Phelps</td>
<td>1953-12-01</td>
</tr>
<tr>
<td>5348</td>
<td>Basia</td>
<td>Lopez</td>
<td>1979-11-30</td>
</tr>
<tr>
<td>5349</td>
<td>Kaseem</td>
<td>Hendrix</td>
<td>2000-01-07</td>
</tr>
<tr>
<td>5350</td>
<td>Omar</td>
<td>Lott</td>
<td>1984-07-27</td>
</tr>
<tr>
<td>5351</td>
<td>Nell</td>
<td>Cooke</td>
<td>2053-03-20</td>
</tr>
</tbody>
</table>
```
To decrypt the column, include the tweak column in the call to VoltageSecureAccess. The tweak column must contain the same data it did when it was used to encrypt the column.

```
=> SELECT id, first_name, last_name, VoltageSecureAccess(dob::VARCHAR, last_name USING PARAMETERS format='date-tweak', config_dfs_path='voltage.conf')::DATE AS dob
FROM customers ORDER BY id;
```

**Tweaking Columns with Stored Procedures**

Since tweak values become part of the encryption key, a tweak column's contents must be the same at the time of both encryption and decryption. To avoid losing access to the plaintext, when modifying a tweak column, you must:

1. decrypt the ciphertext
2. modify the tweak column
3. re-encrypt the plaintext data with the contents of the modified tweak column

You can automate this process by using stored procedures. For example, a stored procedure to update a customer's date of birth when tweaked with their last name might be:

```
=> CREATE PROCEDURE update_dob (employee_id INT, tweak_value VARCHAR) AS $$
BEGIN
    PERFORM UPDATE customers
    SET dob = (WITH dob AS (SELECT VoltageSecureAccess(dob::VARCHAR, last_name USING PARAMETERS format='date-tweak', config_dfs_path='voltage.conf')::DATE AS dob
                           FROM customers
       )
       WHERE employee_id = $1 AND last_name = $2)
END $$
```
WHERE id = employee_id)
SELECT VoltageSecureProtect(dob::VARCHAR, tweak_value
USING PARAMETERS format='date-tweak', config_dfs_path='voltage.conf')::DATE
FROM dob_)
WHERE ID = employee_id;

PERFORM UPDATE customers SET last_name = tweak_value WHERE ID = employee_id;

PERFORM COMMIT;
END;
$$;

You can then call the procedure to update the encrypted value and the tweak value:

=> CALL update_dob(5349, 'Henderson');

### Hashing Data

VoltageSecureProtect can also hash your data while preserving its format, which can be useful in contexts where you need to anonymize data to comply with privacy standards while retaining accessibility for client code.

You should keep in mind the following:

- hashing is a one way operation, so the original plaintext is unrecoverable
- the nature of format-preserving hash functions and plaintexts with low entropy (names, dates, SSNs, etc.) mean that collisions are much more likely than with standard hashing functions

The following example encrypts an SSN using a customFPH format, ssnHash.

=> SELECT VoltageSecureProtect('681-09-2913' USING PARAMETERS
format='ssnHash',
config_dfs_path='voltage.conf');

```
+------------------------+
<table>
<thead>
<tr>
<th>VoltageSecureProtect</th>
</tr>
</thead>
<tbody>
<tr>
<td>841-68-2913</td>
</tr>
</tbody>
</table>
```

### Encapsulating Encryption Business Logic with SQL Macros

The VoltageSecureProtect and VoltageSecureAccess functions are fairly low-level functions and require a lot of preparation to use correctly. This includes, but is not limited to, information on the data type you're decrypting/encrypting, which Voltage format to use,
casting the input to VARCHAR and then back to your desired data type, and identity management. Writing queries with this many moving parts can be tedious.

To streamline this process, you can encapsulate this information in SQL macros and decide its behavior in a more dynamic way with case expressions. This approach offers several benefits:

- You can associate a Voltage format with the data's purpose and Vertica will automatically encrypt and decrypt the value accordingly.
- You can automate the required type casting to and from your desired data type to VARCHAR.
- The THROW_ERROR function can provide a form of input validation for your macros.
- You can specify an identity for a given case expression during encryption which restricts decryption privileges to the same identity.

Note: SQL macros are incompatible with User-Defined Transform Functions, such as VoltageSecureProtectAllKeys.

To view your macros, query the USER_FUNCTIONS system table.

**Encryption and Decryption Macro Templates**

In the following macros, the data_purpose parameter describes what the data is used for (e.g. temperature) and the value parameter indicates value being encrypted and its data_type (e.g. INT). The data_type must be the same across the entire macro.

The data_purpose parameter is also associated with both the voltage_format and voltage_identity parameters, which control how the data is encrypted/decrypted and which identity has access to it, respectively.

If you pass into the function a data_purpose without a corresponding case expression, the THROW_ERROR function will return a user-specified error, which itself must be casted to the function's return data_type.  

Note that the standard casting operator :: will terminate the query entirely if it encounters types incompatible with the specified cast, which can be problematic when casting larger datasets. To prevent the query from terminating, you can use the ::! operator to first attempt the specified cast, but to return a NULL value for incompatible types. For more information, see Cast Failures.
Encryption Macro with VoltageSecureProtect

```sql
=> CREATE FUNCTION encryptDataType(data_purpose VARCHAR, value data_type) RETURN data_type AS BEGIN RETURN(CASE WHEN (data_purpose='data_purpose')
    then VoltageSecureProtect(value::VARCHAR USING PARAMETERS
    format='voltage_format',
    identity='voltage_identity')::data_type
    ELSE THROW_ERROR('no matching data_purpose')::data_type
    END);
END;
```

Decryption Macro with VoltageSecureAccess

```sql
=> CREATE FUNCTION decryptDataType(data_purpose VARCHAR, value data_type) RETURN data_type AS BEGIN RETURN(CASE WHEN (data_purpose='data_purpose')
    then VoltageSecureAccess(value::VARCHAR USING PARAMETERS
    format='voltage_format',
    identity='voltage_identity')::data_type
    ELSE THROW_ERROR('no matching data_purpose')::data_type
    END);
END;
```

Example

The following example shows how to manage encryption and decryption for a column with dates of birth. In this case, you might want to define a separate identity for encrypting customer and employee data.

```sql
=> SELECT * FROM customer_dob;  
  dates  
  --------  
  1955-11-04  
  1991-12-01  
  1977-07-07  
  (3 rows)
```

For encryption, define the following macro.
=> CREATE FUNCTION encryptDOB(data_purpose VARCHAR, value DATE) RETURN DATE
   AS BEGIN
     RETURN
       (CASE
         -- The data_purpose parameter controls which identity is used during encryption;
         WHEN (data_purpose='customer')
         -- Format, identities, and casting from DATE to VARCHAR and back to DATE are all
         -- encapsulated in the case expression;
           then VoltageSecureProtect(value::VARCHAR USING PARAMETERS
             format='birthday',
             identity='customer_data@example.com')::DATE
         WHEN (data_purpose='employee')
           then VoltageSecureProtect(value::VARCHAR USING PARAMETERS
             format='birthday',
             identity='employee_data@example.com')::DATE
         ELSE
           THROW_ERROR('Unsupported data_purpose -- You must pass ''customer'' when
             encrypting customer data or ''employee'' when encrypting employee data')::DATE
         END);
   END;

To encrypt the dates column in the customer_dob table:

=> SELECT encryptDOB('customer', dates) FROM customer_dob;
encryptDOB
-----------
2048-08-09
1917-03-05
2022-01-07

To encrypt a value individually:

=> SELECT encryptDOB('customer', '1955-11-04');
encryptDOB
-----------
2048-08-09

You can define a matching macro for decryption. Since encrypted data can only be
decrypted with matching identities, these case expressions use the same data_purpose
and identities for decryption.

For decryption, define the following macro:

=> CREATE FUNCTION decryptDOB(data_purpose VARCHAR, value DATE) RETURN DATE
   AS BEGIN
     RETURN
       (CASE
         -- The case expressions and parameters must match the ones for encryption;
         WHEN (data_purpose='customer')
           then VoltageSecureAccess(value::VARCHAR USING PARAMETERS
             format='birthday',
             identity='customer_data@example.com')::DATE
WHEN (data_purpose='employee')
  then VoltageSecureAccess(value::VARCHAR USING PARAMETERS
      format='birthday',
      identity='employee_data@example.com')::DATE
ELSE
  THROW_ERROR('Unsupported data_purpose -- You must pass ''customer'' when
               decrypting customer data or ''employee'' when decrypting employee data')::DATE
END);
END;

To decrypt an encrypted column in a nested call:

```sql
=> SELECT decryptDOB('customer', encryptDOB('customer', dates)) FROM customer_dob;
decryptDOB
----------
1955-11-04
1991-12-01
1977-07-07
(3 rows)
```

To decrypt a value individually:

```sql
=> SELECT decryptDOB('customer', '2048-08-09');
decryptDOB
----------
1955-11-04
```

To drop these macros:

```sql
=> DROP FUNCTION encryptDOB(VARCHAR, DATE);
DROP FUNCTION
=> DROP FUNCTION decryptDOB(VARCHAR, DATE);
DROP FUNCTION
```

## Granting Users Access to the Voltage SecureData Integration Functions

By default, Vertica users do not have access to the Voltage SecureData Integration Functions. Users attempting to call the integration functions without the correct privileges will receive the following error:

```sql
=> SELECT id,
       first_name,
       last_name,
       VoltageSecureAccess(ssn USING PARAMETERS format='ssn',
                        config_dfs_path='/voltagesecure/conf') AS ssn,
       dob
FROM customers
```
WHERE dob < '1970-1-1'
ORDER BY id ASC
LIMIT 10;

ERROR 6482: Failed to parse Access Policies for table "customers" [Function public.VoltageSecureProtect(varchar) does not exist, or permission is denied for public.VoltageSecureProtect(varchar)]

Users must have EXECUTE access to the integration functions in order to use them. These functions are part of the PUBLIC schema. The functions in the Voltage SecureData integration library are:

<table>
<thead>
<tr>
<th>Function Signature</th>
<th>Function Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>VoltageSecureAccess(VARCHAR)</td>
<td>Function</td>
</tr>
<tr>
<td>VoltageSecureConfigure()</td>
<td>Transform Function</td>
</tr>
<tr>
<td>VoltageSecureProtect(VARCHAR)</td>
<td>Function</td>
</tr>
<tr>
<td>VoltageSecureProtectAllKeys(VARCHAR)</td>
<td>Transform Function</td>
</tr>
</tbody>
</table>

The following example demonstrates granting the user named Alice access to the VoltageSecureAccess function to be able to decrypt data.

=> \c vmart dbadmin
You are now connected to database "vmart" as user "dbadmin".
=> GRANT EXECUTE ON FUNCTION public.VoltageSecureProtect(VARCHAR) TO alice;
GRANT PRIVILEGE
=> \c vmart alice
You are now connected to database "vmart" as user "alice".
=> SELECT id, first_name, last_name,
    VoltageSecureAccess(ssn USING PARAMETERS format='ssn',
                        config_dfs_path='/voltagessecure/conf')
    AS ssn,
    dob
FROM customers
WHERE dob < '1970-1-1'
ORDER BY id ASC
LIMIT 10;

id | first_name | last_name | ssn       | dob          
---|------------|-----------|-----------|--------------
5345 | Thane      | Ross      | 559-32-0670 | 1902-03-09   
5348 | Basia      | Lopez     | 011-85-0705 | 1921-08-17   
5349 | Kaseem     | Hendrix   | 672-57-0309 | 1962-08-23   
5350 | Omar       | Lott      | 825-45-0131 | 1930-01-12   
5352 | Illana     | Middleton | 831-47-0929 | 1956-09-07   
5354 | Hanna      | Ware      | 694-97-0394 | 1983-07-16   
5358 | Mallory    | Vaughn    | 870-53-0272 | 1961-03-09   
5363 | Kirk       | Robinson  | 155-08-0085 | 1964-06-28   
5366 | Branden    | Coffey    | 789-38-0423 | 1923-06-11   
5367 | Raven      | Keith     | 250-31-0269 | 1918-07-31   
(10 rows)
See **GRANT (User Defined Extension)** for a detailed explanation of granting access to UDxs to users.

### Creating Roles for SecureData Users

Instead of granting access to each function to individual users, you can create roles that you grant access to the functions. Then you can grant users who need to access the SecureData functions access to these roles.

Consider creating at least two roles: one for access to the VoltageSecureConfigure function and another for access to the other functions. In most cases, not all users need to access VoltageSecureConfigure, especially if you choose to create a single, global configuration file. See **Configuring Access to SecureData** for more information about using VoltageSecureConfigure.

The following example:

- Creates two roles: `secure_data_users`, who are granted access to the protect and access functions, and `secure_data_admins`, who are granted access to the SecureDataConfigure function.
- Grants the `secure_data_user` role to a user named Alice
- Sets the new role as her default role.
- Switches to Alice
- Calls several of the SecureData functions.

```
=> \c vmart dbadmin
You are now connected to database "vmart" as user "dbadmin".
=> create role secure_data_users;
create role
=> grant execute on function public.VoltageSecureAccess(varchar)
    to secure_data_users;
grant privilege
=> grant execute on function public.VoltageSecureProtect(varchar)
    to secure_data_users;
grant privilege
=> grant execute on transform function
    public.VoltageSecureProtectAllKeys(varchar)
    to secure_data_users;
grant privilege
=> create role secure_data_admins;
create role
=> grant execute on transform function public.VoltageSecureConfigure()
    to secure_data_admins;
grant privilege
=> grant secure_data_users to ALICE;
grant role
=> alter user alice default role secure_data_users;
alter user
```
You are now connected to database "vmart" as user "alice".

```
=> SET ROLE secure_data_users;
SET
=> SELECT VoltageSecureProtect('123-45-6789' USING PARAMETERS format='ssn',
                             config_dfs_path='voltagesecure/conf');
VoltageSecureProtect
----------------------
376-69-6789
(1 row)
=> SELECT VoltageSecureAccess('376-69-6789' USING PARAMETERS format='ssn',
                             config_dfs_path='voltagesecure/conf');
VoltageSecureAccess
----------------------
123-45-6789
(1 row)
```

Note that Alice can use the global configuration file, despite not being able to access the VoltageSecureConfigure function.

In the previous example, the global configuration file includes the shared secret or password. See Configuring Access to SecureData for a discussion of the security implications of saving sensitive information to a SecureData configuration file.

**Automating Encryption and Decryption with Access Policies**

You can automate encryption and decryption by creating access policies. These policies let you show users with specific roles unencrypted values while users without those roles see encrypted ones. Alternatively, you can create an access policy that masks unencrypted data stored in the database when queried by users who lack a specific role.

Users do not explicitly call the SecureData integration functions when you create access policies to automatically encrypt and decrypt data. However, they still must have access to the SecureData functions and have any necessary session variables set. See Configuring Access to SecureData and Granting Users Access to the Voltage SecureData Integration Functions for the necessary configuration for the access policies to work. If a user who does
not have access to the SecureData integration functions queries a table with an access policy that calls these functions, the query generates an error.

**Automatically Decrypting Table Columns for Privileged Users**

To decrypt an encrypted column automatically, create an access policy for the encrypted column that calls `VoltageSecureAccess` if the user has a role enabled. If the user does not have the role enabled, just return the encrypted value.

The following example:

1. Creates a role named `see_ssn` and grants it to the user named Alice, as well as granting Alice access to the customers table.
2. Creates an access policy on the customers table's ssn column that decrypts the column's value if the user has the `see_ssn` role enabled.
3. Switches to the user named Alice.
4. Queries the customers table, without the `see_ssn` role enabled.
5. Enables the `see_ssn` role and queries the table again.

```sql
=> CREATE ROLE see_ssn;
CREATE ROLE

=> GRANT see_ssn TO alice;
GRANT ROLE

=> GRANT ALL ON TABLE customers TO alice;
GRANT PRIVILEGE

=> CREATE ACCESS POLICY ON customers FOR COLUMN ssn
CASE
      WHEN enabled_role('see_ssn') THEN VoltageSecureAccess(ssn USING PARAMETERS format='ssn',
                      config_dfs_path='/voltagesecure/conf')
ELSE ssn
END ENABLE;
CREATE ACCESS POLICY

=> \c vmart alice;
Password:
You are now connected to database "vmart" as user "alice".

=> SELECT first_name, last_name, ssn FROM customers WHERE id < 5355 ORDER BY id ASC;
first_name | last_name | ssn
-------------------------------
Gil        | Reeves    | 997-92-0657
Robert     | Moran     | 715-02-0455
Hall       | Rice      | 938-83-0659
Micah      | Trevino   | 495-57-0860
```

Vertica Analytic Database (11.0.x)
(4 rows)

=> SET ROLE see_ssn;
SET
=> SELECT first_name, last_name, ssn FROM customers WHERE id < 5355 ORDER BY id ASC;

</table>

(4 rows)

In the above example, you could combine the see_ssn role with a role that grants users access to the SecureData integration functions. Users who do not have the see_ssn role do not need to have access to the SecureData functions in order to see the encrypted values.

Note:
The above example assumes that the shared configuration file (/voltagesecure/conf) contains all of the credentials necessary to authenticate with the SecureData Appliance, including the password or shared secret. This configuration may not be secure enough to meet your requirements. See the caution in VoltageSecureConfigure for more information. In production use, consider having each privileged user set their identity, username, and password or shared secret in session variables. Unprivileged users do not need to set these values.

Automatically Encrypting Columns for Unprivileged Users

You can also create access policies that encrypt values. Use this technique to prevent some users from seeing values in columns that aren’t sensitive enough to require encryption in the database, but should not be seen by all users. This technique is the opposite of the encryption-on-the-fly: users that have a specific role enabled get the value from the table; if they do not have the role, the access policy encrypts the value.

The following example:

1. Creates a role named see_dob and assigns it to the user Alice.
2. Creates an access policy on the dob column of the customers table. It returns the value in the column if the user has the see_dob role active and encrypts the value if not.
3. Switches to the user named Alice.
4. Queries the customers table including the dob column.
5. Sets the see_dob role and queries customers again.

```sql
=> CREATE ROLE see_dob;
CREATE ROLE

=> GRANT see_dob TO alice;
GRANT ROLE

=> CREATE ACCESS POLICY ON customers FOR COLUMN dob
CASE
  WHEN enabled_role('see_dob') THEN dob
  ELSE VoltageSecureProtect(dob::varchar USING PARAMETERS format='birthday',
                              config_dfs_path='/voltagesecure/conf')::date
END ENABLE;
CREATE ACCESS POLICY

=> \c vmart alice
Password:
You are now connected to database "vmart" as user "alice".

=> SELECT first_name, last_name, dob FROM customers ORDER BY id ASC LIMIT 10;
first_name | last_name | dob 
-------------|-----------|-----
Gil        | Reeves    | 2048-08-09
Robert     | Moran     | 1917-03-05
Hall       | Rice      | 2022-01-07

MacKenzie  | Burks     | 1982-11-07
Anne       | Marquez   | 1949-07-09
Dominic    | Avery     | 1976-12-02
Alfreda    | Mcdaniel  | 1975-02-08
(10 rows)
```

**Note:**
The values you pass to VoltageSecureProtect and VoltageSecureAccess must be...
be VARCHARs. In the previous example, the dob column's data type is DATE, so its value has to be cast to VARCHAR when passed to VoltageSecureProtect. The encrypted value has to be cast back to a DATE value because its output needs to match the table schema.

In the previous example, users who do not have the see_dob role enabled must have access to the SecureData functions in order to see the masked values. If they do not have access to the SecureData functions, querying the customers table results in an error message. The following example creates a new user named Bob and grants him access to the customers table, without any access to the SecureData functions.

```sql
=> CREATE USER bob;
CREATE USER
=> GRANT ALL ON TABLE customers TO bob;
GRANT PRIVILEGE
=> \c vmart bob
You are now connected to database "vmart" as user "bob".
=> SELECT * FROM customers LIMIT 10;
ERROR 6482: Failed to parse Access Policies for table "customers"
[Function public.VoltageSecureProtect(varchar) does not exist, or permission is denied for public.VoltageSecureProtect(varchar)]
```

### Querying eFPE Encrypted Columns

You can use a feature in Voltage SecureData called Embedded Format Preserving Encryption to encrypt your data. You choose to use eFPE when you define the format in your SecureData Appliance. This format is slightly different than the standard FPE format. It uses key rotation, and embeds identification information in the encrypted value. Due to these factors, calls to VoltageSecureProtect using an eFPE format may not result in the same encrypted value, depending on key rotation schedules and the identity of the caller. This feature makes querying columns encrypted using an eFPE format more challenging.

When you want to search a standard FPE encrypted column for a value, you can just encrypt the plain text with VoltageSecureProtect and use the output in your query. For example, suppose you want to search for the customers table for an entry with the social security number 559-32-0670. Then you could use the following query:

```sql
=> SELECT id, first_name, last_name FROM customers
   WHERE ssn = VoltageSecureProtect('559-32-0670' USING PARAMETERS
      format='ssn',
      config_dfs_path='voltage.conf');
```

<table>
<thead>
<tr>
<th>id</th>
<th>first_name</th>
<th>last_name</th>
</tr>
</thead>
<tbody>
<tr>
<td>5345</td>
<td>Thane</td>
<td>Ross</td>
</tr>
</tbody>
</table>

(1 row)
Querying a column that uses eFPE format encryption is not as simple, as you do not know which embedded key was used to encrypt the data. You could just use the VoltageSecureAccess function to decrypt the entire contents of the table column and search the result for the value you need. However, this is inefficient, as the SecureData function has to be called for every row of data in the table.

A better solution is to use the `VoltageSecureProtectAllKeys` function. This function is similar to VoltageSecureProtect. However, instead of returning a single encrypted value, it returns a table containing the value encrypted with each of the keys defined for the eFPE format.

```sql
=> SELECT VoltageSecureProtectAllKeys('376765616314013' USING PARAMETERS
  format='cc_num',
  config_dfs_path='/voltagesecure/conf')
OVER ();
```

<table>
<thead>
<tr>
<th>data</th>
<th>protected</th>
</tr>
</thead>
<tbody>
<tr>
<td>376765616314013</td>
<td>XMVMRU9RJU4013</td>
</tr>
<tr>
<td>376765616314013</td>
<td>X5FD4K01UEE4013</td>
</tr>
<tr>
<td>376765616314013</td>
<td>M7ZXTIQVCPB4013</td>
</tr>
<tr>
<td>376765616314013</td>
<td>UB0SC9K3EXZ4013</td>
</tr>
<tr>
<td>376765616314013</td>
<td>ZJ1C8C9L9R4013</td>
</tr>
</tbody>
</table>

(5 rows)

In the previous example, the cc_num column is encrypted using an eFPE format. The output from VoltageSecureProtectAllKeys shows that this eFPE format has 5 keys defined. The content of the protected column contains the same value encrypted with each of the keys.

To use this function in a query for a value in an eFPE column, use a JOIN on the table you are searching and the result table from VoltageSecureProtectAllKeys. The following example demonstrates querying the customers table to find all rows that have a cc_num value that matches the unencrypted credit card value 376765616314013.

```sql
=> SELECT id, first_name, last_name FROM customers3 u
JOIN (SELECT VoltageSecureProtectAllKeys('376765616314013' USING PARAMETERS
  format='cc_num',
  config_dfs_path='/voltagesecure/conf')
OVER ()) pak
ON u.cc_num = pak.protected;
```

<table>
<thead>
<tr>
<th>id</th>
<th>first_name</th>
<th>last_name</th>
</tr>
</thead>
<tbody>
<tr>
<td>5345</td>
<td>Thane</td>
<td>Ross</td>
</tr>
</tbody>
</table>

(1 row)
Voltage SecureData Integration
Function Reference

The functions in this section are part of the Vertica voltagesecure library for integrating with Voltage SecureData. These functions are automatically installed when you install or upgrade Vertica. However, you must re-install the voltagesecure library to distribute the CA certificate to all nodes in the Vertica cluster. See Verifying the Vertica Server's Access to the SecureData CA Certificate for instructions.

VoltageSecureAccess

Calls SecureData to decrypt ciphertexts encrypted with VoltageSecureProtect.

Syntax

```sql
VoltageSecureAccess('ciphertext' [, 'tweak'] USING PARAMETERS
    format='format_name'
    [, mask=is_masked]
    [, config_dfs_path='config_file']
    [, identity=sd_identity]);
```

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ciphertext</td>
<td>A VARCHAR value that was encrypted using SecureData. You must cast other data types (for example DATE values) to VARCHAR when calling this function.</td>
</tr>
<tr>
<td>tweak</td>
<td>VARCHAR value analogous to a salt that allows equivalent plaintexts to produce different ciphertexts. The same tweak value must for encryption and decryption of a given plaintext. When encrypting or hashing an entire column, you can pass another column for a set of tweak values.</td>
</tr>
</tbody>
</table>

Caution: Never use two columns as tweak values for each other or else
The original plaintext for both columns will be unrecoverable.

| **format_name** | A string specifying the original FPE format used to generate the ciphertext. Note that SecureData has no way to tell if the value passed to it was actually encrypted or not, or what FPE format was used. |
| **is_masked** | A boolean, whether to mask the value when decrypting the ciphertext. Masking is defined on a per-format basis on the SecureData Appliance. Note that since masking is optional, you must specify whether to decrypt with masking enabled. If you omit the masking parameter, the plaintext will be unmasked by default: |
| **config_file** | String containing the file name of the configuration file to use when authenticating with the SecureData appliance. You must create this file using VoltageSecureConfigure. If you do not supply this parameter, you must set session parameters to configure access to SecureData. See Configuring Access to SecureData. Any values set in session parameters override the values in this file. |
| **sd_identity** | A string containing the identity to use when decrypting the data. Because SecureData uses the identity to determine encryption keys, this identity must match the identity used to encrypt the data. If supplied, this value overrides any identity value set in the configuration file or session parameter. |

**Examples**

The following example decrypts a Social Security Number (SSN) originally encrypted with a predefined format.

```sql
=> SELECT VoltageSecureAccess('376-69-6789' USING PARAMETERS format='ssn');
VoltageSecureAccess
------------------------
123-45-6789
(1 row)
```

This example demonstrates decrypting an encrypted column within a query.

```sql
=> SELECT id,
       first_name,
       last_name,
```
The following example decrypts Unicode using a predefined format. For a full list of predefined formats, consult the Voltage SecureData documentation.

```sql
=> SELECT VoltageSecureAccess('607-0diçç-ぶてびねら' using parameters format='PREDEFINED::JU_AUTO_TYPE');
  VoltageSecureAccess
  -----------------------
  123-Hello-こんにちは
```

Decrypt a SSN ciphertext with the original FPE format and tweak value:

```sql
=> SELECT VoltageSecureAccess('721-21-2913', 'tweakvalue123' USING PARAMETERS format='ssn-tweak',
  config_dfs_path='voltage.conf');
  VoltageSecureProtect
  -----------------------
  681-09-2913
```

Decrypt a ciphertext that was encrypted with a masking format. This format obscures all but the last two characters of the decrypted plaintext.

```sql
=> SELECT VoltageSecureAccess('g3kbx6ru19', USING PARAMETERS format='maskedFormat',
  config_dfs_path='voltage.conf');
  VoltageSecureAccess
  -----------------------
  1234567890
=> SELECT VoltageSecureAccess('g3kbx6ru19', USING PARAMETERS format='maskedFormat',
  config_dfs_path='voltage.conf',
  mask=true);
```

VoltageSecureConfigure

Saves SecureData user access configuration parameters to a file in the Vertica Distributed File System (DFS). You then pass the file's name to the other SecureData integration functions. This function can store the configuration file in the user's own DFS directory or in a globally-accessible file named /voltagesecure/conf.

Syntax

```
VoltageSecureConfigure(USING PARAMETERS config_dfs_path='filename'
    [, identity=sd_identity]
    [, store_password=Boolean]
    [, store_shared_secret=Boolean]
    [, username=sd_user]
) OVER ();
```

Parameters

<table>
<thead>
<tr>
<th>config_dfs_path = 'filename'</th>
<th>Required. A string containing the path for the configuration file in DFS. This is either:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>- A file name (without any path information). The function automatically stores the file in a DFS directory named for the user. Creating this directory prevents different user's files from overwriting one another.</td>
</tr>
<tr>
<td></td>
<td>- The absolute path /voltagesecure/conf. All users can use this file in calls to the other functions in the SecureData library. This</td>
</tr>
<tr>
<td>Parameter</td>
<td>Description</td>
</tr>
<tr>
<td>---------------------------</td>
<td>-----------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>identity=sd_boolean</td>
<td>A string containing identity to use with the SecureData Appliance. This is usually in the form of an email address. When SecureData uses LDAP authentication, it uses this value to authenticate the user.</td>
</tr>
<tr>
<td>store_password=Boolean</td>
<td>A Boolean value. When set to true, Vertica stores the LDAP password stored in the password session parameter in the configuration file. Defaults to false.</td>
</tr>
<tr>
<td>store_shared_secret=Boolean</td>
<td>A Boolean value. When set to true, Vertica stores the shared secret set in the shared_secret session parameter in the configuration file. Defaults to false.</td>
</tr>
<tr>
<td>username=sd_user</td>
<td>A string containing the user name for authenticating with SecureData.</td>
</tr>
</tbody>
</table>

**Notes**

- Any SecureData session variables that are set override values from the configuration file. See Configuring Access to SecureData for more information.
- The SecureData integration only supports one configuration for the SecureData Appliance at a time.
- Under normal circumstances, users are not able to directly read data from files stored in DFS. However, all users who have access to UDx functions that read from the DFS could access these files from within Vertica. In addition, these files are stored as plain text in every node's file system. Anyone with the proper file system access on the nodes can read the file's contents. You should take both of these facts into consideration when deciding whether to store sensitive information such as passwords or shared secrets in either the shared or per-user configuration files.

**Example**

The following example demonstrates saving configuration information to a configuration file named voltage.conf in the user's own Vertica DFS directory.

```sql
=> SELECT VoltageSecureConfigure(USING PARAMETERS config_dfs_path='voltage.conf',
```
VoltageSecureConfigureGlobal

Saves global SecureData access configuration parameters for all users to a file in the Vertica Distributed File System (DFS). This function stores the configuration file file named /voltagesecure/conf.global in the distributed file system (DFS). You must use this function to configure at least the SecureData policy URL before you can use any of the other Voltage SecureData integration functions.

To refresh the client policy, see VoltageSecureRefreshPolicy.

Syntax

VoltageSecureConfigureGlobal(USING PARAMETERS policy_url=url
    [, allow_short_fpe=Boolean]
    [, allow_file_cache=Boolean]
    [, network_timeout=Integer]
) OVER ();

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>policy_url=url</td>
<td>A string containing the URL of the SecureData policy file. The Vertica SecureData library uses the contents of this file, such as the formats that the SecureData Appliance supports. It also uses the URL of this file to determine the location of the SecureData Appliance.</td>
</tr>
<tr>
<td>allow_short_fpe</td>
<td>A Boolean value. When set to True, SecureData ignores the lower length limit for encoding FPE values. Usually, SecureData does not use FPE to encrypt data shorter than a lower limit (usually, 8 bits). See the SecureData Architecture Guide's section on Data Length Restrictions for more information.</td>
</tr>
<tr>
<td>enable_file_cache</td>
<td>A Boolean value. When set to True, Vertica caches the SecureData policy file and encryption keys to disk, rather than just to memory. Defaults to false.</td>
</tr>
</tbody>
</table>
**Boolean**

| network_timeout= | An Integer value. Configures the network timeout in seconds. Defaults to its maximum value of 300 seconds. |

**Example**

To set the policy URL to `https://voltage-pp-0000.example.com/policy/clientPolicy.xml` and set the network timeout to 200 seconds:

```sql
=> SELECT VoltageSecureConfigureGlobal(USING PARAMETERS
  policy_url='https://voltage-pp-0000.example.com/policy/clientPolicy.xml',
  NETWORK_TIMEOUT=200)
  OVER ();
```

```
cache | network_timeout
-------+-----------------------------
| 1 row |
```

To view the current policy:

```sql
=> SELECT VoltageSecureConfigureGlobal() OVER();
```

```
cache | network_timeout
-------+-----------------------------
| 1 row |
```

Manually refresh the client policy across the nodes:

```sql
=> SELECT VoltageSecureRefreshPolicy() OVER ();
```

```
Successfully refreshed policy on node [v_sandbox_node0001]. Policy on other nodes will be refreshed the next time a Voltage operation is run on them.
(1 row)
```
**VoltageSecureProtect**

Calls SecureData to encrypt or hash a value while preserving the structure of the original plaintext.

**Syntax**

```
VoltageSecureProtect('plaintext' [, 'tweak'] USING PARAMETERS
   format='format_name'
   [, config_dfs_path='config_file']
   [, identity=sd_identity]);
```

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>plaintext</td>
<td>VARCHAR value to encrypt. You must cast other data types (for example DATE values) to VARCHAR when calling this function. NULL values return NULL.</td>
</tr>
<tr>
<td>tweak</td>
<td>VARCHAR value analogous to a salt that allows equivalent plaintexts to produce different ciphertexts. The same tweak value must for encryption and decryption of a given plaintext. When encrypting or hashing an entire column, you can pass another column for a set of tweak values.</td>
</tr>
<tr>
<td>format_name</td>
<td>String specifying a format-preserving encryption (FPE) or format-preserving hash (FPH) format to encrypt or hash the plaintext. To encrypt your data, pass an FPE format defined in your SecureData Appliance. To hash your data, pass an FPH format defined in your SecureData Appliance (version 6.6+). Note that hashing operations are one-way and cannot be reversed with VoltageSecureAccess.</td>
</tr>
</tbody>
</table>

**Caution:**

Never use two columns as tweak values for each other or else the original plaintext for both columns will be unrecoverable.
Caution: Always use the same FPE format to encrypt data in a column. If you use different FPE formats in the same column (such as loading some data using ssn and other data using auto) there is no way to tell which format was used for any particular row, and properly and improperly encrypted ciphertexts will be indistinguishable.

| config_file | String containing the file name of the configuration file to use when authenticating with the SecureData appliance. You must create this file using VoltageSecureConfigure. If you do not supply this parameter, you must set session parameters to configure access to SecureData. See Configuring Access to SecureData. Any values set in session parameters override the values in this file. |
| sd_identity | String containing the identity to use when authenticating with SecureData. SecureData uses this value as a basis for the encryption key. This value usually takes the form of an email address. If supplied, it overrides any values set in the configuration file or session parameters. |

Examples

Encrypt a social security number (SSN) value using both the ssn and auto FPE formats (this example assumes that all of the necessary SecureData authentication information has been set in session variables):

```sql
=> SELECT VoltageSecureProtect('123-45-6789' USING PARAMETERS format='ssn');
VoltageSecureProtect
---------------------
376-69-6789  
(1 row)

=> SELECT VoltageSecureProtect('123-45-6789' USING PARAMETERS format='auto');
VoltageSecureProtect
---------------------
820-31-5110  
(1 row)
```

Encrypt two table columns in a COPY statement, authenticating to the SecureData Appliance with the user's private configuration file saved in DFS:

```sql
=> COPY customers (id, first_name, last_name, ssn_raw FILLER VARCHAR(11),
cc_num_raw FILLER VARCHAR(25), cvv, dob,
ssn AS VoltageSecureProtect(ssn_raw USING PARAMETERS format='ssn'),
```
Query for a particular value in an encrypted column:

```sql
=> SELECT id, first_name, last_name FROM customers
    WHERE ssn = VoltageSecureProtect('559-32-0670' USING PARAMETERS
        format='ssn',
        config_dfs_path='voltage.conf');
```

```
id | first_name | last_name  
5345 | Thane      | Ross
```

Encrypting NULL values returns NULL:

```sql
=> CREATE TABLE nulltable(n VARCHAR (20));
=> INSERT INTO nulltable VALUES (NULL);

=> SELECT VoltageSecureProtect(n USING PARAMETERS format='auto') FROM nulltable;
VoltageSecureProtect
------------------
607-0diçç-ぶでびねら
```

Encrypt a Unicode string using a predefined format. For a full list of predefined formats, consult the Voltage SecureData documentation.

```sql
=> SELECT VoltageSecureProtect('123-Hello-こんにちは' USING PARAMETERS format='PREDEFINED::JU_AUTO_TYPE');
VoltageSecureProtect
------------------
607-0diçç-ぶでびねら
```

Encrypt a SSN with a tweak value:

```sql
=> SELECT VoltageSecureProtect('681-09-2913', 'tweakvalue123' USING PARAMETERS format='ssn-tweak');
VoltageSecureProtect
------------------
721-21-2913
```

```sql
=> SELECT VoltageSecureAccess('721-21-2913', 'tweakvalue123' USING PARAMETERS format='ssn-tweak');
```
Hash a SSN with a FPH format and a tweak value:

=> SELECT VoltageSecureProtect('681-09-2913', 'tweakvalue123' USING PARAMETERS
   format='ssnHash',
   config_dfs_path='voltage.conf');

- Encrypting, Decrypting, and Hashing Data
- Best Practices for Safe Unicode FPE

VoltageSecureProtectAllKeys

This function helps you locate values in a column encrypted using an Embedded Format Preserving Encryption (eFPE) format. These formats use key rotation, so the encrypted value you get back for a piece of plain text changes over time. You pass this function an unencrypted value. It returns a table consisting of two columns: the unencrypted value and the value encrypted with each of the keys defined for the eFPE. The number of rows in the table are determined by the number of keys the eFPE format contains. Usually, you use the output of this function in a join to locate a matching encrypted value in a table.

Syntax

VoltageSecureProtectAllKeys(value USING PARAMETERS format='eFPE_format'
  [, config_dfs_path=config_file]
  [, identity=sd_identity] )

Parameters

| value  | VARCHAR containing the value to encrypt. You must cast other data types |
(for example DATE values) to VARCHAR when calling this function.

<table>
<thead>
<tr>
<th>format=</th>
<th>eFPE_format</th>
<th>String containing the name of an eFPE format defined by SecureData. This format must be an eFPE format defined by your SecureData Appliance, or the function returns an error. This format must also match the format of value. VoltageSecureProtectAllKeys returns an error if value's format does not match the one you specify in eFPE_format.</th>
</tr>
</thead>
<tbody>
<tr>
<td>config_dfs_path=</td>
<td>config_file</td>
<td>String containing the file name of the configuration file to use when authenticating with the SecureData appliance. You must create this file using VoltageSecureConfigure. If you do not supply this parameter, you must set session parameters to configure access to SecureData. See Configuring Access to SecureData. Any values set in session parameters override the values in this file.</td>
</tr>
<tr>
<td>identity=</td>
<td>sd_identity</td>
<td>String containing the identity to use when authenticating with SecureData. SecureData uses this value as a basis for the encryption key. This value usually takes the form of an email address. If supplied, it overrides any values set in the configuration file or session parameters.</td>
</tr>
</tbody>
</table>

**Examples**

The following example demonstrates a simple call to VoltageSecureProtectAllKeys.

```sql
=> SELECT VoltageSecureProtectAllKeys('376765616314013' USING PARAMETERS
  format='cc_num',
  config_dfs_path='/voltagesecure/conf') OVER ();
```

<table>
<thead>
<tr>
<th>data</th>
<th>protected</th>
</tr>
</thead>
<tbody>
<tr>
<td>376765616314013</td>
<td>XMVMRU9RJVU4013</td>
</tr>
<tr>
<td>376765616314013</td>
<td>X5FD4KQ1UEE4013</td>
</tr>
<tr>
<td>376765616314013</td>
<td>M7ZXTIQVCPB4013</td>
</tr>
<tr>
<td>376765616314013</td>
<td>U8OSC9K2EZ24013</td>
</tr>
<tr>
<td>376765616314013</td>
<td>ZJ1C50C9L9R4013</td>
</tr>
</tbody>
</table>

(5 rows)

In this example, the cc_num eFPE format has five keys defined for it, so the return value is a table containing five rows.

The following example shows a more common use: querying a table column that is encrypted using an eFPE format.

```sql
=> SELECT id, first_name, last_name FROM customers3 u
JOIN (SELECT VoltageSecureProtectAllKeys('376765616314013' USING PARAMETERS
```

(5 rows)
In the previous example, the customers3 table is joined to the output from VoltageSecureProtectAllKeys. Any rows in the customers3 table where the encrypted cc_num column value matches values from the protected column of VoltageSecureProtectAllKeys matches appear in the output.

This function returns an error if you use it on a non-eFPE format:

```sql
=> SELECT first_name, last_name, ssn FROM customers u JOIN (
    SELECT VoltageSecureProtectAllKeys('232-28-0657' USING PARAMETERS format='ssn',
        config_dfs_path='/voltagesecure/conf')
    OVER ()
) pak ON u.ssn = pak.protected;
ERROR 5861: Error calling processPartition() in User Function VoltageSecureProtectAllKeys at [ProtectAllKeys.cpp:21], error code: 1711, message: Error getting key numbers: eFPE format required
```

**See Also**

- Configuring Access to SecureData
- VoltageSecureAccess
- VoltageSecureProtect
- VoltageSecureProtectAllKeys

**VoltageSecureRefreshPolicy**

Immediately refreshes the client policy on the initiator node. Policies on non-initiator nodes are refreshed the next time a Voltage function is called on them.

**Syntax**

```sql
VoltageSecureRefreshPolicy()
```
Parameters
None

Example
Manually refresh the client policy across the nodes:

```sql
=> SELECT VoltageSecureRefreshPolicy() OVER ();
   PolicyRefresh
```
Successfully refreshed policy on node [v_sandbox_node0001]. Policy on other nodes will be refreshed the next time a Voltage operation is run on them.
(1 row)

Glossary

The Vertica Glossary defines terms that are common and specific to Vertica.

**Access Rank**

Determines the speed at which a column can be accessed. Columns are stored on disk from the highest ranking to the lowest ranking in which the highest ranking columns are placed on the fastest disks and the lowest ranking columns are placed on the slowest disks.

**Administration Host**

The host on which the Vertica rpm package was manually installed. Always run the Administration Tools on this host if possible.

**Administration Tools**

One of the ways you can manage a Vertica database is provided in the form of a graphical user interface, called Administration Tools.

This tool allows you to perform various tasks quickly and easily, some of which are:

- View the state of the database cluster
- Create a database
- Start a database
• Stop a database
• Run Database Designer
• Connect to a database using vsqI

Using the following command, always run the Administration Tools on the Administration Host if possible.

$ /opt/vertica/bin/adminTools

**Note:**
Throughout the Vertica documentation, you might see Administration Tools referred to as Admin Tools or admintools or adminTools. They all refer to the same utility.

For more information, see Administration Tools.

**Agent**

A daemon process that runs on each Vertica cluster node. The agent is used by certain clients, such as Management Console, to administer Vertica.

Agents monitor Vertica database clusters and communicate with their clients to provide the following functionality:

• Provide local access, command, and control over database instances on a given node, using functionality similar to Administration Tools
• Report log-level data from the Administration Tools and Vertica log files
• Cache details from long-running jobs—such as create/start/stop database operations—that you can view through your browser
• Track changes to data-collection and monitoring utilities and communicate updates to clients
• Specifically for MC, communicate between all cluster nodes and MC through a webhook subscription, which automates information sharing and reports on cluster-specific issues like node state, alerts, events, and so on

The agent runs on port 5444, which must be accessible to agent clients.

**Anchor Table**

Database table that is the source for data in a projection. The anchor table and its projection must be in the same schema. The privileges to create, access, or alter a
projection are based on the anchor tables that the projection references, as well as the schemas that contain them.

In the following simple statement, public data is the anchor table:

=> CREATE PROJECTION publicdataproj AS (SELECT * FROM publicdata);

**Ancient History Mark (AHM)**

Also known as AHM, the ancient history mark is the oldest epoch whose data is accessible to historical queries. Any data that precedes the AHM is eligible to be purged.

For detailed information, see Understanding Vertica Epochs in the Vertica Knowledge Base.

**Apportioned Load**

An apportioned load is a divisible load, such that you can load a single data file on more than one node. Apportioned load divides the load at planning time, based on available nodes and cores on each node. Each load starts at a different offset, requiring a parser that supports apportioning. Some of the parsers built into Vertica support apportioned load. Using the SDK, you can write parsers that perform apportioned loads.

**Authentication Service (AS)**

A service that usually runs on the same host as the Kerberos Key Distribution Center (KDC). The AS issues tickets for a requested service. The tickets are in turn given to users for access to the service. The AS answers requests from clients that do not send credentials with a request. The AS is generally used to gain access to the ticket-granting service (TGS) by issuing a ticket-granting ticket (TGT).

**Bitstring**

A sequence of bits.

**Buddy Projection**

Required for K-safety. Two projections are considered to be buddies if they contain the same columns and have the same hash segmentation, using different node ordering.

For more information, see:
Bulk Loading

A process of loading large amounts of data, such as an initial load of historic data.

C-Store

A research project at MIT, Brandeis, Brown, and the University of Massachusetts (Boston), on which Vertica is based.

Cardinality

Refers to the number of unique values for a given column in a relational table:

- **High cardinality**: Refers to columns containing values that are highly unique, such as a customer ID or an employee e-mail address. For example, in the Vertica VMart schema, the employee_dimension table contains an employee_key column. This column contains values that uniquely identify each employee. Since the values in this column are unique and could be numerous, the column's cardinality type is referred to as high cardinality.

- **Normal cardinality**: Refers to columns containing values that are less unique, such as job titles and street addresses. An example of a normal-cardinality column would be job_title or employee_first_name in the employee_dimension table, where many employees could share the same job title or same first name.

- **Low cardinality**: Refers to a low number of unique values, relative to the overall number of records in a table. For example, in the employee_dimension table, the column called employee_gender would contain two unique values: 'Male' or 'Female'. Since there are only two values possible in this column, cardinality is low.

Catalog

A set of files that contains information (metadata) about the objects—such as nodes, tables, constraints, and projections—in a database. Vertica maintains a catalog on each node in the cluster.
Catalog Path

A storage location used to store the database catalog.

Cluster

The concept of Cluster in the Vertica Analytics Platform is a collection of hosts with the Vertica software packages (RPM or DEB) that are in one admin tools domain. You can access and manage a cluster from one admintools initiator host.

Columnar Tables

Vertica database tables consisting of structured data columns. The term differentiates these tables from Flex (or Flexible) tables, which minimally contain one column of unstructured, or semi-structured data. Flex tables can also have structured data columns, but they are not required. Compare with Flexible Tables.

Communal Storage

The shared storage location containing an Eon Mode database's data. The data within the communal storage is the canonical copy of the data—Vertica does not consider data as being committed until it has been written to communal storage.

The communal data storage location is based on an object store, such as an S3 bucket when Vertica runs in the AWS cloud, or a PureStorage FlashBlade.

Control Node

A node that connects to the Spread service to send and receive cluster-wide broadcast messages. In databases where the large cluster feature is disabled, all nodes are control nodes. In databases where the large cluster feature is enabled, a subset of nodes are control nodes. Vertica assigns non-control nodes to a control node. These dependent nodes rely on their control node to relay broadcast messages to them. See Large Cluster for more information.
Cooperative Parse

A *cooperative parse* occurs when a single node uses multiple threads to parse data for loading. Cooperative parse divides a load at execution time, based on how threads are scheduled, if the parser supports cooperation. Some of the parsers built into Vertica support cooperative parse. Using the SDK, you can write parsers that perform cooperative parse.

Correlated columns

Two columns are correlated if the value of one column is related to the value of the other column. For example, state name and country name columns are strongly correlated because the city name usually, but perhaps not always, identifies the state name. The city of Conshohoken is uniquely associated with Pennsylvania, whereas the city of Boston exists in Georgia, Indiana, Kentucky, New York, Virginia, and Massachusetts. In this case, city name is strongly correlated with state name.

Critical Node

A critical node is a node whose failure would cause the database to become unsafe and force a shutdown. Nodes can become critical for the following reasons:

- A node has the only copy of a particular projection.
- Fewer than half of your nodes are active. In an Eon Mode database, at least half of your primary nodes must be up to maintain data integrity.

The *V_MONITOR.CRITICAL_NODES* system table lists the critical nodes, if any, in your cluster.

For more information, see *K-Safety in an Enterprise Mode Database* for Enterprise Mode databases, and *Data Integrity and High Availability in an Eon Mode Database* for Eon Mode databases.

Current epoch

The epoch into which data (COPY, INSERT, UPDATE, and DELETE operations) is currently being written.
Data Collector
A utility that collects and retains database monitoring information. For details, see Data Collector Utility.

Data Path
A storage location that contains actual database data files.

Database
A cluster of nodes that, when active, can perform distributed data storage and SQL statement execution through administrative, interactive, and programmatic user interfaces.

Database Designer
A tool that analyzes a logical schema definition, sample queries, and sample data, and creates a physical schema (projections) in the form of a SQL script that you deploy automatically or manually. The script creates a minimal set of superprojections to ensure K-safety, and, optionally, non-superprojections. In most cases, the projections created by the Database Designer provide excellent query performance within physical constraints.

The Database Designer can create two distinct design types. The design you choose depends on what you are trying to accomplish:

- Comprehensive Design
- Incremental Design

You can also create custom designs if the Database Designer does not meet your needs.

For detailed information, see Creating a Database Design.

Database superuser
The automatically-created database user who has the same name as the Linux database administrator account and who can bypass all GRANT/REVOKE authorization, or any user that has been granted the PSEUDOSUPERUSER role. Do not confuse the concept of a database superuser with Linux superuser (root) privilege. A database superuser cannot have Linux superuser privilege.
Default Subcluster

The default subcluster is the subcluster Vertica adds new nodes to if you do not specify a subcluster to contain the new nodes. Your database can only have a single default subcluster. You can make a subcluster the default using the `ALTER SUBCLUSTER` statement.

DELTAVAL (delta encoding)

Stores only the differences between sequential data values instead of the values themselves.

Depot Warming

On startup, the depots of new nodes are empty, while the depots of restarted nodes often contain stale data that must be refreshed. When depot warming is enabled, a node that is undergoing startup preemptively loads its depot with frequently queried and pinned data. When the node completes startup and begins to execute queries, its depot already contains much of the data it needs to process those queries. This reduces the need to fetch data from communal storage, and expedites query performance accordingly.

**Note:**

Fetching data to a warming depot can delay node startup.

For details, see Managing Depot Caching.

Derived Column

A column whose values are calculated by an expression at load time. The expression is specified within the `COPY` statement, and the column exists in the target database.

Dimension Table

Sometimes called a lookup or reference table, a dimension table is one of a set of companion tables to a large (fact/anchor) table in a star schema. It contains the PRIMARY KEY column corresponding to the join columns in fact tables. For example, a business might use a dimension table to contain item codes and descriptions.
Dimension tables can be connected to other dimension tables to form a hierarchy of dimensions in a snowflake schema.

**Directed Query**

A saved set of instructions that direct the optimizer to generate a query plan for a given query. The query plan consists of SQL annotated with hints. A directed query pairs two components:

- *Input query*: A query that triggers use of this directed query when it is active.
- *Annotated query*: A SQL statement with embedded optimizer hints. The annotated query is used by the optimizer in creating a query plan for the specified input query.

**Encoding**

The process of converting data into a standard format. In Vertica, encoded data can be processed directly, while compressed data cannot. Vertica uses a number of different encoding strategies, depending on column data type, table cardinality, and sort order.

**Enterprise Mode**

A database mode that optimizes your database for analytic speed. This is the "original" mode of the Vertica database—the only mode it supported before Eon Mode was introduced. In this mode, data is stored by the database nodes. This proximity allows nodes to operate on locally stored data for most queries, reducing query times. An Enterprise Mode database is harder to scale up and down than an Eon Mode database, which is optimized for scalability.

**Eon Mode**

Eon Mode is the database mode that optimizes your database for scalability. This mode separates data storage from computing resources. By separating the two, you can add or remove nodes from your cluster to adjust growing or shrinking analytic workloads. Scaling the cluster size does not affect running queries. Eon Mode is especially well-suited for cloud environments. See Eon Mode Concepts for more information.

**Epoch**

A logical unit of time in which a single change is made to data in your Vertica database.
For detailed information, see Epochs in the Administrator's Guide.

**Epoch Map**
A catalog object that provides mapping between time and epochs. Specifically, an epoch map contains a list of epoch numbers and their associated timestamps.

**Executor Node**
Any node that participates in executing a specific SQL statement. The initiator node can, and usually does, also function as an executor node.

**Expression**
An expression is anything that can represent a single column in a SELECT statement.

For example, the following are all expressions:

```
1+2
foo(3)
x
```

**External Procedure**
A procedure external to Vertica that you create, maintain, and store on the server.

**Event Series**
Tables with a time column, most typically a timestamp data type.

**Flexible Tables**
Vertica database tables that minimally contain two columns:

- **identity**: A real column with an incrementing IDENTITY value for partitioning and sorting. Used if no other columns serve this purpose.

- **raw**: A real LONG VARBINARY column containing unstructured, or semi-structured data.
You can create Flex tables with additional real columns, but they are not required. Compare with Columnar Tables.

**Flattening (subqueries and views)**

Occurs when a subquery or named view is internally rewritten so the subquery is combined with the outer query block. The result sets of the original and flattened queries are exactly the same, but the flattened query usually benefits from significant performance improvements.

**Full Backup**

Consists of copying each catalog and all data files (ROS containers) on each node, as well as the complete `/opt/vertica/config` directory.

**GENERAL Pool**

A special built-in pool that represents the total amount of RAM available to the resource manager for use by queries. Other pools can borrow memory from the GENERAL pool. See also Built-In Pools.

**Grant**

Vertica defines GRANT in two ways:

1. Grant a user privileges to access database objects using any GRANT statement, except GRANT (Authentication).

2. Associate a user-defined authentication method with a user through GRANT (Authentication). This operation differs from GRANT <privileges> as authentication methods are “associated” with a user or role and privileges are “granted” to a user or role.

**Examples**

**Grant Access Privileges to a User**

This example shows how to grant a user, Joe, privileges to access the online_sales schema:
GRANT USAGE ON SCHEMA online_sales TO Joe;

Associate an Authentication Method with a User

This example shows how to associate the v_ldap authentication method to user jsmith:

=> GRANT AUTHENTICATION v_ldap TO jsmith;

Grouped ROS

A grouped ROS is a highly-optimized, read-oriented physical storage structure organized by projection. A grouped ROS makes heavy use of compression and indexing. Unlike a ROS, a grouped ROS stores data for two or more grouped columns in one disk file.

Hash Segmentation

Specifies how to segment projection data for distribution across all cluster nodes. You can specify segmentation for a table and a projection. If a table definition specifies segmentation, Vertica uses it for that table's auto-projections.

It is strongly recommended that you use Vertica's built-in HASH function, which distributes data evenly across the cluster, and facilitates optimal query execution.

For more detailed information, see Projection Segmentation.

Historical Data

Refers to any data in memory or physical storage other than the current epoch. Historical data includes all COPY, INSERT, UPDATE, and DELETE operations, including deleted rows. This allows Vertica to run a historical query on data written up to and including the epoch representing the specified date and time.

Historical Query

A query that retrieves data from a snapshot of the database, taken at a specific timestamp or epoch. For details, see Historical Queries in Analyzing Data.
Immutable (Invariant) Functions

When run with a given set of arguments, immutable functions always produce the same result, regardless of environment or session settings such as locale.

Initiator Node

In the context of a client connection, the initiator node is the node associated with the specific host to which the connection was made. The initiator node can, and usually does, also function as an executor node, and is generally where the most descriptive log messages reside.

K-Safety

K-safety sets fault tolerance for the database cluster, where K can be set to 0, 1, or 2. The value of K specifies how many copies Vertica creates of segmented projection data. If K-safety for a database is set to 1 or 2, Vertica creates K+1 instances, or buddies, of each projection segment. Vertica distributes these buddies across the database cluster, such that projection data is protected in the event of node failure. If any node fails, the database can continue to process queries so long as buddies of data on the failed node remain available elsewhere on the cluster.

For more information, see Using Database Designer.

Last Epoch

The last epoch is the current epoch minus one. SELECT statements under READ COMMITTED isolation read from the last epoch.

Last Good Epoch (LGE)

A term used in manual recovery, LGE (Last Good Epoch) refers to the most recent epoch that can be recovered.
Live Aggregate Projection

A live aggregate projection contains columns with values that are aggregated from columns in its anchor table. When you load data into the table, Vertica aggregates the data before loading it into the live aggregate projection. On subsequent loads—for example, through `INSERT` or `COPY`—Vertica recalculates aggregations with the new data and updates the projection.

Locale

Locale specifies the user’s language, country, and any special variant preferences, such as collation. Vertica uses locale to determine the behavior of certain string functions. Locale also determines the collation for various SQL commands that require ordering and comparison, such as `aggregate GROUP BY` and `ORDER BY` clauses, joins, and the analytic `ORDER BY` clause.

The default locale for a Vertica database is `en_US@collation=binary` (English US). You can define a new default locale that is used for all sessions on the database. You can also override the locale for individual sessions. However, projections are always collated using the default `en_US@collation=binary` collation, regardless of the session collation. Any locale-specific collation is applied at query time.

If you set the locale to null, Vertica sets the locale to `en_US_POSIX`. You can set the locale back to the default locale and collation by issuing the vsql meta-command `\locale`. For example:

```sql
=> set locale to '';
INFO 2567: Canonical locale: 'en_US_POSIX'
Standard collation: 'LEN'
English (United States, Computer)
=> \locale en_US@collation=binary;
INFO 2567: Canonical locale: 'en_US'
Standard collation: 'LEN_KBINARY'
English (United States)
=> \locale
en_US@collation-binary;
```

You can set locale through ODBC, JDBC, and ADO.net.
Logical Schema

Consists of a set of tables and referential integrity constraints in a Vertica database. The objects in the logical schema are visible to SQL users. The logical schema does not include projections, which make up the physical schema.

Location Label

A label assigned to a storage location. Location labels identify the location so you can create object storage policies. The labeled location you use in a storage policy becomes the default storage location for the object.

Management Console

A database management tool that provides a unified view of your Vertica database and lets you monitor multiple clusters from a single point of access. See Management Console in Vertica Concepts.

MC Super (superuser administrator)

Called Super on the MC interface, the MC super is the Linux user account that gets created when you configure MC. See Configuring MC and SUPER Role (mc).

MC-managed Database

A Vertica database that an MC SUPER or ADMIN user creates on MC or imports into the MC interface, along with the database cluster. When MC users are granted database privileges, their privileges are defined though the MC itself and pertain only to databases managed on the MC. See About MC Privileges and Roles.

Manual Recovery

The process of recovery after an unclean shutdown of the database, where the administrator must accept recovery from the Last Good Epoch, which could lead to loss of some recently loaded data. See Failure Recovery.
**Mergeout**

Mergeout is a Tuple Mover process that consolidates ROS containers and purges deleted records.

**Meta-Functions**

Used to query or change the internal state of Vertica and are not part of the SQL standard. See Vertica Meta-Functions.

**Metadata**

Data that describes the data in a database, such as data type, compression, constraints, and so forth, for each column in the tables. Metadata is stored in the Vertica catalog.

**Mutual Mode**

When a database is configured for TLS/SSL security in *mutual mode*, incoming client requests verify the certificate of the server, and the server also requires that each client present a certificate and private key so that the server can verify the client.

**Node**

A host configured to run an instance of Vertica. It is a member of the database cluster. For a database to have the ability to recover from the failure of a node requires a database K-safety value of at least 1 (3+ nodes).

**Non-Repeatable Read**

Occurs in a READ COMMITTED isolation level when two identical queries in the same transaction produce different results. This occurs when another transaction commits changes that alter the results of the query after the first query has completed and before the second query has begun.
**NUL**

Represents a character whose ASCII/Unicode code is zero, sometimes qualified "ASCII NUL".

**NULL**

Means *no value*, and is true of a field (column) or constant but not of a character.

**OID**

An object identifier (OID) is an identifier used to name an object. Structurally, an OID consists of a node in a hierarchically-assigned namespace, formally defined using the International Telecommunication Union-Telecommunication's (ITU-T) Abstract Syntax Notation standard (ASN.1). Vertica database objects are always assigned an OID. The OID can be used directly in some statements, such as `HAS_TABLE_PRIVILEGE`.

*Source: Wikipedia*

**Parallel Load**

*Parallel load* is the process of loading data on any available node in the cluster (not necessarily the local node). Use this approach in combination with wildcards (such as `*.dat`) to load data files in parallel in a distributed manner. See `COPY ON ANY NODE` in `COPY Parameters`.

**Path (quality plan)**

The execution strategy of the Vertica cost-based query optimizer, denoting a sub operation in the query plan.

**Partitioning**

Specifies how data is organized within individual nodes. Partitioning attempts to introduce hot spots within the node, providing a convenient way to drop data and reclaim the disk space.
Note:
Partitioning and segmentation are terms often used interchangeably for other databases, but they have completely separate goals in Vertica regarding data localization. See Partitioning and Segmentation in the Administrator's Guide for details.

Phantom Read

Occurs in a READ COMMITTED isolation level when two identical queries in the same transaction produce different collections of rows. This occurs because a table lock is not acquired on SELECT during the initial query.

Physical Schema

Consists of a set of projections used to store data on disk. The projections in the physical schema are based on the objects in the logical schema.

Physical Schema Design

A usable K=1 design based on an analysis of the sample data files and queries (if available). The physical schema design contains segmented (fact table) superprojections and replicated (dimension table) superprojections.

Primary Column

A column that is loaded from raw data, and not derived from an expression.

Primary Node

In Eon Mode, a primary node is a node that is a member of a primary subcluster. Primary nodes are the only nodes in the database that Vertica considers when determining whether the database is able to maintain data integrity. Vertica requires that more than half of the primary nodes in the database be up. Also, all shards must have at least one primary node as a subscriber. If either of these conditions are not met, Vertica shuts the database down to prevent potential data corruption.
**Primary Subcluster**

In Eon Mode, a primary subcluster is a type of subcluster that is intended to form the core of your database. Vertica only considers the nodes in primary subclusters when determining the K-Safety of your database. Your database can remain running as long as half the nodes in your primary subclusters are up, and all shards have at least one node in a primary subcluster as a subscriber. See Subcluster Types and Elastic Scaling for more information.

**Primary Subscriber**

In an Eon Mode database, each shard has a primary subscriber node. This node is responsible for running Tuple Mover processes that maintain the data in the shard.

**Projection**

Optimized collections of table columns that provide physical storage for data. A projection can contain some or all of the columns of one or more tables.

For conceptual information about Vertica projections, see Physical Schema (Projections) in Vertica Concepts. For information about using and managing projections, see Working with Projections in the Administrator's Guide.

**Projection set**

A group of buddy projections that are safe for a given level of K-safety. When K=1, there are two buddies in a set; when K=2, there are three buddies. The Database Designer assigns all projections in a projection set the same base name so they can be identified as a group.

A projection must be part of a projection set before it is refreshed. Once a projection set is created (by creating buddies), the set is refreshed in a single transaction.

**Query Cluster Level**

Determines the number of sets used to group similar queries. The query cluster level can be any integer from one (1) to the number of queries to be included in the physical schema design.
Queries are generally grouped based on the columns they access and the way in which they are used. The following work loads typically use different types of queries and are placed in different query clusters: drill downs, large aggregations, and large joins. For example, if a reporting tool and dashboard both access the same database, the reporting tool is likely to use a drill down to access a subset of data and the dashboard is likely to use a large aggregation to look across a large range of data. In this case, there would be at least two (2) query clusters.

**Query Optimizer**

The component that evaluates different strategies for running a query and picks the best one.

**Quorum**

Your database has a minimum number of nodes that must be up and part of the database cluster for the database to continue operating. When this minimum requirement is met, your database has a quorum of nodes.

The number of nodes that make up a quorum depends on the database mode:

- In Enterprise Mode, over half the nodes (50% of total nodes + 1) must be up.
- In Eon Mode, over half of the primary nodes in the cluster must be up.

The database can lose quorum if too many nodes go down. The database's reaction to losing quorum also depends on the database's mode:

- An Enterprise Mode database that loses quorum shuts down to prevent potential data corruption.
- An Eon Mode database that loses quorum goes into read-only mode to prevent potential data corruption. In this mode, you can usually execute queries, but DDL and DML statements fail with an error.

For more on database availability, see K-Safety in an Enterprise Mode Database and Data Integrity and High Availability in an Eon Mode Database.

**Recovery**

Vertica can restore the database to a fully functional state after one or more nodes in the system experiences a software- or hardware-related failure. Vertica recovers nodes by querying replicas of the data stored on other nodes. For example, a hardware failure can
cause a node to lose database objects or to miss changes made to the database (INSERTs, UPDATEs, and so on) while offline. When the node comes back online, queries other nodes in the cluster to recover lost objects and catch up with database changes.

**Referential Integrity**

Consists of a set of constraints (logical schema objects) that define primary key and foreign key columns.

- Each small table must have a PRIMARY KEY constraint.
- The large table must contain columns that can be used to join the large table to smaller tables.
- Outer join queries produce the same results as the corresponding inner join query if there is a FOREIGN KEY constraint on the outer table. Note that the inner table of the outer join query must always have a PRIMARY KEY constraint on its join columns.

**Refresh (projections)**

Ensures that all projections on a node are up-to-date (can participate in query execution). This process could take a long time, depending on how much data is in the table(s).

For more information, see Refreshing Projections.

**Resegmentation**

A process that Vertica performs automatically during query execution that distributes the rows of an existing projection or intermediate relation evenly to each node in the cluster. At the end of resegmentation, every row from the input relation is on exactly one node. Vertica resegments data when the input does not have the segmentation required to compute the requested result efficiently and correctly.

**Resource Pool**

A resource pool comprises a pre-allocated subset of the system resources, with an associated queue. A resource pool is created using the CREATE RESOURCE POOL command as described in the SQL Reference Manual.
Resource Manager

In a single-user environment, the system can devote all resources to a single query and get the most efficient execution for that one query. However, in an environment where several concurrent queries are expected to run at once, there is tension between providing each query the maximum amount of resources (thereby getting fastest run time for that query) and serving multiple queries simultaneously with a reasonable run time. The Resource Manager provides options and controls for resolving this tension, while ensuring that every query eventually gets serviced and that true system limits are respected at all times.

Role

A role groups together a set of privileges that can be assigned to a user or another role. You can use roles to quickly grant or revoke privileges on multiple tables, schemas, functions or other database entities to one or more users with a single command.

Vertica's implementation of roles conforms to the SQL Standard T331 for basic roles.

Rollback

Transaction rollbacks restore a database to an earlier state by discarding changes made by that transaction. Statement-level rollbacks discard only the changes initiated by the reverted statements. Transaction-level rollbacks discard all changes made by the transaction.

With a ROLLBACK statement, you can explicitly roll back to a named savepoint within the transaction, or discard the entire transaction. Vertica can also initiate automatic rollbacks in two cases:

- An individual statement returns an ERROR message. In this case, Vertica rolls back the statement.
- DDL errors, systemic failures, dead locks, and resource constraints return a ROLLBACK message. In this case, Vertica rolls back the entire transaction.

Explicit and automatic rollbacks always release any locks that the transaction holds.
**ROS (Read Optimized Store)**

Read Optimized Store (ROS) is a highly optimized, read-oriented, disk storage structure, organized by projection. ROS makes heavy use of compression and indexing.

**Savepoint**

A *savepoint* is a special marker inside a transaction that allows commands that execute after the savepoint to be rolled back. The transaction is restored to the state that preceded the savepoint.

Vertica supports two types of savepoints:

- An *implicit savepoint* is automatically established after each successful command within a transaction. This savepoint is used to roll back the next statement if it returns an error. A transaction maintains one implicit savepoint, which it rolls forward with each successful command. Implicit savepoints are available to Vertica only and cannot be referenced directly.

- *Named savepoints* are labeled markers within a transaction that you set through `SAVEPOINT` statements. A named savepoint can later be referenced in the same transaction through `RELEASE SAVEPOINT`, which destroys it, and `ROLLBACK TO SAVEPOINT`, which rolls back all operations that followed the savepoint. Named savepoints can be especially useful in nested transactions: a nested transaction that begins with a savepoint can be rolled back entirely, if necessary.

**Secondary Subcluster**

A secondary subcluster is a type of subcluster that is easy to start and shutdown on demand. In Eon Mode, Vertica does not consider the nodes in a secondary subcluster when determining whether the database has shard coverage or a quorum of nodes. You can stop or remove secondary subclusters without causing the database to go into read-only mode. See [Subcluster Types and Elastic Scaling](#) for more information.

**Segmentation**

Defines how physical data storage (projections) is stored in a database cluster using the `CREATE PROJECTION` statement. The goal is to distribute data evenly across multiple nodes in the database so that all nodes can participate in query execution.
**Note:**
Partitioning and segmentation are terms often used interchangeably for other databases, but they have completely separate goals in Vertica regarding data localization. See Partitioning and Segmentation in the Administrator's Guide for details.

## Server Mode

When a database is configured for TLS/SSL security in *server mode*, incoming client requests do verify the certificate of the server, but the server does not verify the clients. In Vertica, the server is the Vertica database server, and the client is any Vertica user who logs into the database. The Vertica client user may log in to the database directly in a command window, or may connect to the Vertica database server via the Management Console running in a browser.

## Session

An occurrence of a user interacting with a database through the use of SQL statements. You can start a session using vsql or a JDBC application. In Vertica, the scope of a session is the same as that of a connection. Connecting to the database starts a session, and exiting ends it.

Session-scoped data is preserved beyond the lifetime of a single transaction. Terminating a session truncates a table and deletes all rows.

## Shard

A subset of the data and associated metadata stored in an Eon Mode database. Shards are how Vertica divides the work of processing queries, data loads, and data maintenance between the nodes in a subcluster. Nodes **subscribe** to one or more shards. When processing a query, each node is responsible for processing the data in the shard or shards to which it subscribes.

You set the number of shards for the database during the database creation process. The number of shards cannot be changed after creating the database.

Shards have a single **primary subscriber** in the database cluster. The primary subscriber node maintains the data in the shard by running **Tuple Mover** processes on it.
Shard Coverage

In an Eon Mode database, nodes in a subcluster subscribe to one or more shards in communal storage. Each node handles the data in the shard or shards it subscribes to when processing queries. When a subcluster has at least one node subscribed to each shard, it has shard coverage. It is able to process queries because it has access to all of the data in the database. In a K-safe database, each subcluster has at least two nodes subscribing to each node. If the subcluster loses too many nodes in rapid succession, it may no longer have a node subscribing to each shard. In this case, the subcluster loses shard coverage and cannot process queries.

The database cluster as a whole must have at least one primary node subscribed to each shard in communal storage. This state is called having primary shard coverage. Primary nodes coordinate the maintenance of data in communal storage. If the cluster loses primary nodes to the point that it does not have at least one subscribed to each shard, it loses primary shard coverage. In this case, the database goes into read-only mode because it is unsafe to alter the data in communal storage when one or more shards do not have a primary node subscriber.

See Data Integrity and High Availability in an Eon Mode Database.

Snapshot Isolation

An historical query that gets data from the latest epoch (AT LATEST EPOCH). For details, see Historical Queries.

Spread

An open source toolkit used in Vertica to provide a high performance messaging service that is resilient to network faults. Spread daemons start automatically when a database starts up for the first time, and the spread process runs on control nodes in the cluster.

Sort-Merge Join

If both inputs are pre-sorted, merge joins do not have to do any pre-processing. Vertica uses the term sort-merge join to refer to the case when one of the inputs must be sorted prior to the merge join. Vertica sorts the inner input side but only if the outer input side is already sorted on the join keys.
Stable functions

When run with a given set of arguments, stable functions produce the same result within a single query or scan operation. However, a stable function can produce different results when issued under different environments or at different times, such as change of locale and time zone—for example, SYSDATE.

See also Immutable (Invariant) Functions.

Statement

A line of SQL, excluding the semicolon. For example, the following are all statements:

```
SELECT * FROM foo WHERE bar = 6
CREATE TABLE t1 (i INT);
INSERT INTO t1 VALUES(3)
```

Storage Location

A directory path used by Vertica to store catalog, actual data files, and temporary data files. You can also create storage locations for users, and then grant one or more users access to the storage. You can also create a storage location with a location label, for use in storage policies.

Storage Policy

A database object you create to associate a labeled location as the default storage location for the object. Database object can be a database, schema, table, or min- and max- ranges of a partition.

Strict

Indicates that a function always returns null when any of its input arguments is null.
**Subcluster**

A subset of a cluster in an Eon Mode database. Subclusters isolate workloads to a group of nodes, letting you separate tasks such as load and query.

Subclusters come in two types:

- **Primary subclusters** count when Vertica determines whether the database can continue to run safely. Your database shuts down if less than half the primary nodes in your database are up, or does not have a primary node as a subscriber. Primary subclusters are best used for data loading and DDE workloads.
- **Secondary subclusters** do not count towards maintaining data integrity. You can shut them down without impacting the stability of the database. Secondary subclusters are best used for query workloads. They cannot commit transactions directly, so they are less efficient at performing data loads and DDE statements.

**Superprojection**

A projection that includes all columns in an anchor table. Vertica uses superprojections to ensure support for all queries and other DML operations.

Under certain conditions, Vertica automatically creates a table's superprojection immediately on table creation. Vertica also creates a superprojection when you first load data into that table, if none already exists. `CREATE PROJECTION` can create a superprojection if it specifies to include all table columns. A table can have multiple superprojections.

For more information, see Designing Projections.

**Temp Location**

A storage location used as temp space by Vertica.

**Temp Space**

Disk space temporarily occupied by temporary files created by certain query execution operations, such as hash joins and sorts, in the case when they have to spill to disk. Such operations might also be encountered during queries, recovery, refreshing projections, and so on. If a temp location is provided to the database, Vertica uses it as temp space.
Top-K Projection

A projection that configures the projection data for a Top-K query. A Top-K query is one that retrieves the top $k$ rows from a group of tuples.

A Top-K projection is a type of live aggregate projection.

Transaction

One or more operations that are executed as a unit of work. At the user level, transactions occur in the current session by a user or script running one or more SQL statements. When you commit a transaction, any changes you make to data in tables using INSERT, DELETE, UPDATE, MERGE, and COPY during the transaction become permanent. If you roll back the transaction, all changes made to table data are undone.

Vertica supports Atomicity, Consistency, Isolation, and Durability (ACID) for SQL transactions.

Tuple Mover (TM)

The Tuple Mover manages ROS data storage. On mergeout, it combines small ROS containers into larger ones and purges deleted data.

UDx

User-defined extensions (UDxs) are functions contained in external libraries that are developed in C++, Python, Java, or R using the Vertica SDK. The external libraries are defined in the Vertica catalog using the CREATE LIBRARY statement. They are best suited for analytic operations that are difficult to perform in SQL, or that need to be performed frequently enough that their speed is a major concern.

Up-To-Date (Projection)

A projection is up-to-date (or up to date) if it is eligible to participate in query execution. Projections on empty tables are up-to-date upon creation. If the table has data loaded already, newly created projections are marked not up-to-date until refreshed. If a projection is refreshed while a node is down, that projection can be marked up-to-date.
even though it is missing data on one of the nodes. This is because the node will build the data during the recovery process before participating in queries.

**User-Defined SQL Function**

User-defined SQL functions let you define and store commonly-used SQL expressions as a function. User-defined SQL functions are useful for executing complex queries and combining Vertica built-in functions. You simply call the function name you assigned in your query.

A user-defined SQL function can be used anywhere in a query where an ordinary SQL expression can be used, except in a table partition clause or the projection segmentation clause.

**View**

A named logical relation specified by an associated query that can be accessed similarly to a table in the FROM clause of a SQL statement. The results of the query are not stored but obtained on the fly when the SQL referencing the view is executed.

**Volatile functions**

Regardless of their arguments or environment, volatile functions can return a different result with each invocation—for example, `UUID_GENERATE`.

**vsql**

vsql is a character-based, interactive, front-end utility that lets you type SQL statements and see the results. It also provides a number of meta-commands and various shell-like features that facilitate writing scripts and automating a variety of tasks.

For more information, see *Installing the vsql Client* and the more general topic, *Using vsql*.

**Window (analytic)**

An analytic function’s OVER clause specifies how to partition, sort, and frame function input with respect to the current row. The input data is the result set that the query returns after it evaluates FROM, WHERE, GROUP BY, and HAVING clauses.
**Working Data Size**

The amount of data that most of your queries operate on. In most Vertica databases, you store more data than you regularly query. For example, suppose you are storing sales data for a corporation. You may keep many years of sales data in your database. However, the majority of queries you run may only query the last year of data to determine current sales trends. In that case, your working data size is the amount of sales data you load into the database in a year.

Knowing your working data size is important when configuring an Eon Mode database. You want the total size of the depots in all of the nodes a subcluster to be large enough to fit the working data size. Note that the working data size may vary per subcluster. Some subclusters may only work on recently-loaded data, while others do many queries on a larger data set.

**Workload Analyzer**

An advisor tool that analyzes system information held in SQL system tables (monitoring APIs) and returns a set of tuning recommendations. See Analyzing Workloads in the Administrator's Guide for details.
Third-Party Software Acknowledgements

This document contains the licenses and notices for open source software used in Vertica Analytics Platform 11.0.x.

**Description**

The precise terms and conditions for copying, distribution and modification follow.

https://www.ansible.com/

**Terms and Conditions**

0. Definitions.

"This License" refers to version 3 of the GNU General Public License.

"Copyright" also means copyright-like laws that apply to other kinds of works, such as semiconductor masks.

"The Program" refers to any copyrightable work licensed under this License. Each licensee is addressed as "you". "Licensees" and "recipients" may be individuals or organizations.

To "modify" a work means to copy from or adapt all or part of the work in a fashion requiring copyright permission, other than the making of an exact copy. The resulting work is called a "modified version" of the earlier work or a work "based on" the earlier work.

A "covered work" means either the unmodified Program or a work based on the Program.

To "propagate" a work means to do anything with it that, without permission, would make you directly or secondarily liable for infringement under applicable copyright law, except
executing it on a computer or modifying a private copy. Propagation includes copying, distribution (with or without modification), making available to the public, and in some countries other activities as well.

To "convey" a work means any kind of propagation that enables other parties to make or receive copies. Mere interaction with a user through a computer network, with no transfer of a copy, is not conveying.

An interactive user interface displays "Appropriate Legal Notices" to the extent that it includes a convenient and prominently visible feature that (1) displays an appropriate copyright notice, and (2) tells the user that there is no warranty for the work (except to the extent that warranties are provided), that licensees may convey the work under this License, and how to view a copy of this License. If the interface presents a list of user commands or options, such as a menu, a prominent item in the list meets this criterion.

The "source code" for a work means the preferred form of the work for making modifications to it. "Object code" means any non-source form of a work.

A "Standard Interface" means an interface that either is an official standard defined by a recognized standards body, or, in the case of interfaces specified for a particular programming language, one that is widely used among developers working in that language.

The "System Libraries" of an executable work include anything, other than the work as a whole, that (a) is included in the normal form of packaging a Major Component, but which is not part of that Major Component, and (b) serves only to enable use of the work with that Major Component, or to implement a Standard Interface for which an implementation is available to the public in source code form. A "Major Component", in this context, means a major essential component (kernel, window system, and so on) of the specific operating system (if any) on which the executable work runs, or a compiler used to produce the work, or an object code interpreter used to run it.

The "Corresponding Source" for a work in object code form means all the source code needed to generate, install, and (for an executable work) run the object code and to modify the work, including scripts to control those activities. However, it does not include the work's System Libraries, or general-purpose tools or generally available free programs which are used unmodified in performing those activities but which are not part of the work. For example, Corresponding Source includes interface definition files associated with source files for the work, and the source code for shared libraries and dynamically linked subprograms that the work is specifically designed to require, such as by intimate data communication or control flow between those subprograms and other parts of the work.
The Corresponding Source need not include anything that users can regenerate automatically from other parts of the Corresponding Source.

The Corresponding Source for a work in source code form is that same work.

2. Basic Permissions.

All rights granted under this License are granted for the term of copyright on the Program, and are irrevocable provided the stated conditions are met. This License explicitly affirms your unlimited permission to run the unmodified Program. The output from running a covered work is covered by this License only if the output, given its content, constitutes a covered work. This License acknowledges your rights of fair use or other equivalent, as provided by copyright law.

You may make, run and propagate covered works that you do not convey, without conditions so long as your license otherwise remains in force. You may convey covered works to others for the sole purpose of having them make modifications exclusively for you, or provide you with facilities for running those works, provided that you comply with the terms of this License in conveying all material for which you do not control copyright. Those thus making or running the covered works for you must do so exclusively on your behalf, under your direction and control, on terms that prohibit them from making any copies of your copyrighted material outside their relationship with you.

Conveying under any other circumstances is permitted solely under the conditions stated below. Sublicensing is not allowed; section 10 makes it unnecessary.

3. Protecting Users' Legal Rights From Anti-Circumvention Law.

No covered work shall be deemed part of an effective technological measure under any applicable law fulfilling obligations under article 11 of the WIPO copyright treaty adopted on 20 December 1996, or similar laws prohibiting or restricting circumvention of such measures.

When you convey a covered work, you waive any legal power to forbid circumvention of technological measures to the extent such circumvention is effected by exercising rights under this License with respect to the covered work, and you disclaim any intention to limit operation or modification of the work as a means of enforcing, against the work's users, your or third parties' legal rights to forbid circumvention of technological measures.

You may convey verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice; keep intact all notices stating that this License and any non-permissive terms added in accord with section 7 apply to the code; keep intact all notices of
the absence of any warranty; and give all recipients a copy of this License along with the Program.

You may charge any price or no price for each copy that you convey, and you may offer support or warranty protection for a fee.

5. Conveying Modified Source Versions.

You may convey a work based on the Program, or the modifications to produce it from the Program, in the form of source code under the terms of section 4, provided that you also meet all of these conditions:

a) The work must carry prominent notices stating that you modified it, and giving a relevant date.

b) The work must carry prominent notices stating that it is released under this License and any conditions added under section 7. This requirement modifies the requirement in section 4 to "keep intact all notices".

c) You must license the entire work, as a whole, under this License to anyone who comes into possession of a copy. This License will therefore apply, along with any applicable section 7 additional terms, to the whole of the work, and all its parts, regardless of how they are packaged. This License gives no permission to license the work in any other way, but it does not invalidate such permission if you have separately received it.

d) If the work has interactive user interfaces, each must display Appropriate Legal Notices; however, if the Program has interactive interfaces that do not display Appropriate Legal Notices, your work need not make them do so.

A compilation of a covered work with other separate and independent works, which are not by their nature extensions of the covered work, and which are not combined with it such as to form a larger program, in or on a volume of a storage or distribution medium, is called an "aggregate" if the compilation and its resulting copyright are not used to limit the access or legal rights of the compilation's users beyond what the individual works permit. Inclusion of a covered work in an aggregate does not cause this License to apply to the other parts of the aggregate.

6. Conveying Non-Source Forms.

You may convey a covered work in object code form under the terms of sections 4 and 5, provided that you also convey the machine-readable Corresponding Source under the terms of this License, in one of these ways:

a) Convey the object code in, or embodied in, a physical product (including a physical distribution medium), accompanied by the Corresponding Source fixed on a durable physical medium customarily used for software interchange.
b) Convey the object code in, or embodied in, a physical product (including a physical distribution medium), accompanied by a written offer, valid for at least three years and valid for as long as you offer spare parts or customer support for that product model, to give anyone who possesses the object code either (1) a copy of the Corresponding Source for all the software in the product that is covered by this License, on a durable physical medium customarily used for software interchange, for a price no more than your reasonable cost of physically performing this conveying of source, or (2) access to copy the Corresponding Source from a network server at no charge.

c) Convey individual copies of the object code with a copy of the written offer to provide the Corresponding Source. This alternative is allowed only occasionally and noncommercially, and only if you received the object code with such an offer, in accord with subsection 6b.

d) Convey the object code by offering access from a designated place (gratis or for a charge), and offer equivalent access to the Corresponding Source in the same way through the same place at no further charge. You need not require recipients to copy the Corresponding Source along with the object code. If the place to copy the object code is a network server, the Corresponding Source may be on a different server (operated by you or a third party) that supports equivalent copying facilities, provided you maintain clear directions next to the object code saying where to find the Corresponding Source. Regardless of what server hosts the Corresponding Source, you remain obligated to ensure that it is available for as long as needed to satisfy these requirements.

e) Convey the object code using peer-to-peer transmission, provided you inform other peers where the object code and Corresponding Source of the work are being offered to the general public at no charge under subsection 6d.

A separable portion of the object code, whose source code is excluded from the Corresponding Source as a System Library, need not be included in conveying the object code work.

A "User Product" is either (1) a "consumer product", which means any tangible personal property which is normally used for personal, family, or household purposes, or (2) anything designed or sold for incorporation into a dwelling. In determining whether a product is a consumer product, doubtful cases shall be resolved in favor of coverage. For a particular product received by a particular user, "normally used" refers to a typical or common use of that class of product, regardless of the status of the particular user or of the way in which the particular user actually uses, or expects or is expected to use, the product. A product is a consumer product regardless of whether the product has substantial commercial, industrial or non-consumer uses, unless such uses represent the only significant mode of use of the product.
"Installation Information" for a User Product means any methods, procedures, authorization keys, or other information required to install and execute modified versions of a covered work in that User Product from a modified version of its Corresponding Source. The information must suffice to ensure that the continued functioning of the modified object code is in no case prevented or interfered with solely because modification has been made.

If you convey an object code work under this section in, or with, or specifically for use in, a User Product, and the conveying occurs as part of a transaction in which the right of possession and use of the User Product is transferred to the recipient in perpetuity or for a fixed term (regardless of how the transaction is characterized), the Corresponding Source conveyed under this section must be accompanied by the Installation Information. But this requirement does not apply if neither you nor any third party retains the ability to install modified object code on the User Product (for example, the work has been installed in ROM).

The requirement to provide Installation Information does not include a requirement to continue to provide support service, warranty, or updates for a work that has been modified or installed by the recipient, or for the User Product in which it has been modified or installed. Access to a network may be denied when the modification itself materially and adversely affects the operation of the network or violates the rules and protocols for communication across the network.

Corresponding Source conveyed, and Installation Information provided, in accord with this section must be in a format that is publicly documented (and with an implementation available to the public in source code form), and must require no special password or key for unpacking, reading or copying.

7. Additional Terms.

"Additional permissions" are terms that supplement the terms of this License by making exceptions from one or more of its conditions. Additional permissions that are applicable to the entire Program shall be treated as though they were included in this License, to the extent that they are valid under applicable law. If additional permissions apply only to part of the Program, that part may be used separately under those permissions, but the entire Program remains governed by this License without regard to the additional permissions.

When you convey a copy of a covered work, you may at your option remove any additional permissions from that copy, or from any part of it. (Additional permissions may be written to require their own removal in certain cases when you modify the work.) You may place additional permissions on material, added by you to a covered work, for which you have or can give appropriate copyright permission.
Notwithstanding any other provision of this License, for material you add to a covered work, you may (if authorized by the copyright holders of that material) supplement the terms of this License with terms:

a) Disclaiming warranty or limiting liability differently from the terms of sections 15 and 16 of this License; or

b) Requiring preservation of specified reasonable legal notices or author attributions in that material or in the Appropriate Legal Notices displayed by works containing it; or

c) Prohibiting misrepresentation of the origin of that material, or requiring that modified versions of such material be marked in reasonable ways as different from the original version; or

d) Limiting the use for publicity purposes of names of licensors or authors of the material; or

e) Declining to grant rights under trademark law for use of some trade names, trademarks, or service marks; or

f) Requiring indemnification of licensors and authors of that material by anyone who conveys the material (or modified versions of it) with contractual assumptions of liability to the recipient, for any liability that these contractual assumptions directly impose on those licensors and authors.

All other non-permissive additional terms are considered "further restrictions" within the meaning of section 10. If the Program as you received it, or any part of it, contains a notice stating that it is governed by this License along with a term that is a further restriction, you may remove that term. If a license document contains a further restriction but permits relicensing or conveying under this License, you may add to a covered work material governed by the terms of that license document, provided that the further restriction does not survive such relicensing or conveying.

If you add terms to a covered work in accord with this section, you must place, in the relevant source files, a statement of the additional terms that apply to those files, or a notice indicating where to find the applicable terms.

Additional terms, permissive or non-permissive, may be stated in the form of a separately written license, or stated as exceptions; the above requirements apply either way.

8. Termination.

You may not propagate or modify a covered work except as expressly provided under this License. Any attempt otherwise to propagate or modify it is void, and will automatically terminate your rights under this License (including any patent licenses granted under the third paragraph of section 11).
However, if you cease all violation of this License, then your license from a particular copyright holder is reinstated (a) provisionally, unless and until the copyright holder explicitly and finally terminates your license, and (b) permanently, if the copyright holder fails to notify you of the violation by some reasonable means prior to 60 days after the cessation.

Moreover, your license from a particular copyright holder is reinstated permanently if the copyright holder notifies you of the violation by some reasonable means, this is the first time you have received notice of violation of this License (for any work) from that copyright holder, and you cure the violation prior to 30 days after your receipt of the notice.

Termination of your rights under this section does not terminate the licenses of parties who have received copies or rights from you under this License. If your rights have been terminated and not permanently reinstated, you do not qualify to receive new licenses for the same material under section 10.

You are not required to accept this License in order to receive or run a copy of the Program. Ancillary propagation of a covered work occurring solely as a consequence of using peer-to-peer transmission to receive a copy likewise does not require acceptance. However, nothing other than this License grants you permission to propagate or modify any covered work. These actions infringe copyright if you do not accept this License. Therefore, by modifying or propagating a covered work, you indicate your acceptance of this License to do so.

10. Automatic Licensing of Downstream Recipients.

Each time you convey a covered work, the recipient automatically receives a license from the original licensors, to run, modify and propagate that work, subject to this License. You are not responsible for enforcing compliance by third parties with this License. An "entity transaction" is a transaction transferring control of an organization, or substantially all assets of one, or subdividing an organization, or merging organizations. If propagation of a covered work results from an entity transaction, each party to that transaction who receives a copy of the work also receives whatever licenses to the work the party's predecessor in interest had or could give under the previous paragraph, plus a right to possession of the Corresponding Source of the work from the predecessor in interest, if the predecessor has it or can get it with reasonable efforts.

You may not impose any further restrictions on the exercise of the rights granted or affirmed under this License. For example, you may not impose a license fee, royalty, or other charge for exercise of rights granted under this License, and you may not initiate litigation (including a cross-claim or counterclaim in a lawsuit) alleging that any patent
claim is infringed by making, using, selling, offering for sale, or importing the Program or any portion of it.

11. Patents.

A "contributor" is a copyright holder who authorizes use under this License of the Program or a work on which the Program is based. The work thus licensed is called the contributor's "contributor version".

A contributor's "essential patent claims" are all patent claims owned or controlled by the contributor, whether already acquired or hereafter acquired, that would be infringed by some manner, permitted by this License, of making, using, or selling its contributor version, but do not include claims that would be infringed only as a consequence of further modification of the contributor version. For purposes of this definition, "control" includes the right to grant patent sublicenses in a manner consistent with the requirements of this License.

Each contributor grants you a non-exclusive, worldwide, royalty-free patent license under the contributor's essential patent claims, to make, use, sell, offer for sale, import and otherwise run, modify and propagate the contents of its contributor version.

In the following three paragraphs, a "patent license" is any express agreement or commitment, however denominated, not to enforce a patent (such as an express permission to practice a patent or covenant not to sue for patent infringement). To "grant" such a patent license to a party means to make such an agreement or commitment not to enforce a patent against the party.

If you convey a covered work, knowingly relying on a patent license, and the Corresponding Source of the work is not available for anyone to copy, free of charge and under the terms of this License, through a publicly available network server or other readily accessible means, then you must either (1) cause the Corresponding Source to be so available, or (2) arrange to deprive yourself of the benefit of the patent license for this particular work, or (3) arrange, in a manner consistent with the requirements of this License, to extend the patent license to downstream recipients. "Knowingly relying" means you have actual knowledge that, but for the patent license, your conveying the covered work in a country, or your recipient's use of the covered work in a country, would infringe one or more identifiable patents in that country that you have reason to believe are valid.

If, pursuant to or in connection with a single transaction or arrangement, you convey, or propagate by procuring conveyance of, a covered work, and grant a patent license to some of the parties receiving the covered work authorizing them to use, propagate, modify or convey a specific copy of the covered work, then the patent license you grant is automatically extended to all recipients of the covered work and works based on it.
A patent license is "discriminatory" if it does not include within the scope of its coverage, prohibits the exercise of, or is conditioned on the non-exercise of one or more of the rights that are specifically granted under this License. You may not convey a covered work if you are a party to an arrangement with a third party that is in the business of distributing software, under which you make payment to the third party based on the extent of your activity of conveying the work, and under which the third party grants, to any of the parties who would receive the covered work from you, a discriminatory patent license (a) in connection with copies of the covered work conveyed by you (or copies made from those copies), or (b) primarily for and in connection with specific products or compilations that contain the covered work, unless you entered into that arrangement, or that patent license was granted, prior to 28 March 2007.

Nothing in this License shall be construed as excluding or limiting any implied license or other defenses to infringement that may otherwise be available to you under applicable patent law.

If conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot convey a covered work so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not convey it at all. For example, if you agree to terms that obligate you to collect a royalty for further conveying from those to whom you convey the Program, the only way you could satisfy both those terms and this License would be to refrain entirely from conveying the Program.

13. Use with the GNU Affero General Public License.

Notwithstanding any other provision of this License, you have permission to link or combine any covered work with a work licensed under version 3 of the GNU Affero General Public License into a single combined work, and to convey the resulting work. The terms of this License will continue to apply to the part which is the covered work, but the special requirements of the GNU Affero General Public License, section 13, concerning interaction through a network will apply to the combination as such.

14. Revised Versions of this License.

The Free Software Foundation may publish revised and/or new versions of the GNU General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies that a certain numbered version of the GNU General Public License "or any later version" applies to it, you have the option of following the terms and conditions either of that numbered version
or of any later version published by the Free Software Foundation. If the Program does not specify a version number of the GNU General Public License, you may choose any version ever published by the Free Software Foundation.

If the Program specifies that a proxy can decide which future versions of the GNU General Public License can be used, that proxy's public statement of acceptance of a version permanently authorizes you to choose that version for the Program.

Later license versions may give you additional or different permissions. However, no additional obligations are imposed on any author or copyright holder as a result of your choosing to follow a later version.

15. Disclaimer of Warranty.

THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

16. Limitation of Liability.

IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MODIFIES AND/OR CONVEYS THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

17. Interpretation of Sections 15 and 16.

If the disclaimer of warranty and limitation of liability provided above cannot be given local legal effect according to their terms, reviewing courts shall apply local law that most closely approximates an absolute waiver of all civil liability in connection with the Program, unless a warranty or assumption of liability accompanies a copy of the Program in return for a fee.

TERNDS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.
"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not
pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify,
defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all
other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work,
where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor,
except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties of or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

Description

Data serialization system: Apache Avro is a data serialization system. Avro provides:

- Rich data structures.
- A compact, fast, binary data format.
- A container file, to store persistent data.
- Remote procedure call (RPC).
- Simple integration with dynamic languages.

Code generation is not required to read or write data files nor to use or implement RPC protocols. Code generation as an optional optimization, only worth implementing for statically typed languages.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licenser" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or
otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You
institute patent litigation against any entity (including a
cross-claim or counterclaim in a lawsuit) alleging that the Work
or a Contribution incorporated within the Work constitutes direct
or contributory patent infringement, then any patent licenses
granted to You under this License for that Work shall terminate
as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the
Work or Derivative Works thereof in any medium, with or without
modifications, and in Source or Object form, provided that You
meet the following conditions:

(a) You must give any other recipients of the Work or
Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices
stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works
that You distribute, all copyright, patent, trademark, and
attribution notices from the Source form of the Work,
excluding those notices that do not pertain to any part of
the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its
distribution, then any Derivative Works that You distribute must
include a readable copy of the attribution notices contained
within such NOTICE file, excluding those notices that do not
pertain to any part of the Derivative Works, in at least one
of the following places: within a NOTICE text file distributed
as part of the Derivative Works; within the Source form or
documentation, if provided along with the Derivative Works; or,
within a display generated by the Derivative Works, if and
wherever such third-party notices normally appear. The contents
of the NOTICE file are for informational purposes only and
do not modify the License. You may add Your own attribution
notices within Derivative Works that You distribute, alongside
or as an addendum to the NOTICE text from the Work, provided
that such additional attribution notices cannot be construed
as modifying the License.

You may add Your own copyright statement to Your modifications and
may provide additional or different license terms and conditions
for use, reproduction, or distribution of Your modifications, or
for any such Derivative Works as a whole, provided Your use,
reproduction, and distribution of the Work otherwise complies with
the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,
your Contribution intentionally submitted for inclusion in the Work
by You to the Licensor shall be under the terms and conditions of
this License, without any additional terms or conditions.
Notwithstanding the above, nothing herein shall supersede or modify
the terms of any separate license agreement You may have executed
with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade
names, trademarks, service marks, or product names of the Licensor,
except as required for reasonable and customary use in describing the
origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or
agreed to in writing, Licensor provides the Work (and each
Contributor provides its Contributions) on an "AS IS" BASIS,
WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
implied, including, without limitation, any warranties or conditions
of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
PARTICULAR PURPOSE. You are solely responsible for determining the
appropriateness of using or redistributing the Work and assume any
risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory,
whether in tort (including negligence), contract, or otherwise,
unless required by applicable law (such as deliberate and grossly
negligent acts) or agreed to in writing, shall any Contributor be
liable to You for damages, including any direct, indirect, special,
incidental, or consequential damages of any character arising as a
result of this License or out of the use or inability to use the
Work (including but not limited to damages for loss of goodwill,
work stoppage, computer failure or malfunction, or any and all
other commercial damages or losses), even if such Contributor
has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing
the Work or Derivative Works thereof, You may choose to offer,
and charge a fee for, acceptance of support, warranty, indemnity,
or other liability obligations and/or rights consistent with this
License. However, in accepting such obligations, You may act only
on Your own behalf and on Your sole responsibility, not on behalf
of any other Contributor, and only if You agree to indemnify,
defend, and hold each Contributor harmless for any liability
incurred by, or claims asserted against, such Contributor by reason
of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following
boilerplate notice, with the fields enclosed by brackets "["]
replaced with your own identifying information. (Don't include
the brackets!) The text should be enclosed in the appropriate
comment syntax for the file format. We also recommend that a
file or class name and description of purpose be included on the
same "printed page" as the copyright notice for easier
identification within third-party archives.

http://www.apache.org/licenses/

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object
form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work,
excluding those notices that do not pertain to any part of
the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its
distribution, then any Derivative Works that You distribute must
include a readable copy of the attribution notices contained
within such NOTICE file, excluding those notices that do not
pertain to any part of the Derivative Works, in at least one
of the following places: within a NOTICE text file distributed
as part of the Derivative Works; within the Source form or
documentation, if provided along with the Derivative Works; or,
within a display generated by the Derivative Works, if and
wherever such third-party notices normally appear. The contents
of the NOTICE file are for informational purposes only and
do not modify the License. You may add Your own attribution
notices within Derivative Works that You distribute, alongside
or as an addendum to the NOTICE text from the Work, provided
that such additional attribution notices cannot be construed
as modifying the License.

You may add Your own copyright statement to Your modifications and
may provide additional or different license terms and conditions
for use, reproduction, or distribution of Your modifications, or
for any such Derivative Works as a whole, provided Your use,
reproduction, and distribution of the Work otherwise complies with
the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,
your Contribution intentionally submitted for inclusion in the Work
by You to the Licensor shall be under the terms and conditions of
this License, without any additional terms or conditions.
Notwithstanding the above, nothing herein shall supersede or modify
the terms of any separate license agreement You may have executed
with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade
names, trademarks, service marks, or product names of the Licensor,
except as required for reasonable and customary use in describing the
origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or
agreed to in writing, Licensor provides the Work (and each
Contributor provides its Contributions) on an "AS IS" BASIS,
WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
implied, including, without limitation, any warranties or conditions
of TITLE, NONINFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
PARTICULAR PURPOSE. You are solely responsible for determining the
appropriateness of using or redistributing the Work and assume any
risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory,
whether in tort (including negligence), contract, or otherwise,
unless required by applicable law (such as deliberate and grossly
negligent acts) or agreed to in writing, shall any Contributor be
liable to You for damages, including any direct, indirect, special,
incidental, or consequential damages of any character arising as a
result of this License or out of the use or inability to use the
Work (including but not limited to damages for loss of goodwill,
work stoppage, computer failure or malfunction, or any and all
other commercial damages or losses), even if such Contributor
has been advised of the possibility of such damages.
9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.
"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensors" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributors" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the
Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of
this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but
Third-Party Software Acknowledgements

not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:
(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly
negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the
Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided
that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of Your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity
exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses
granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions
of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of Your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to
communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the license. You may add Your own attribution
notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.
"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.
4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided You do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the
appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).
"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and
attribute notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.
9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

Apache Hadoop Libhdfs++ Kerberos

Apache License 2.0, Apache component version 2.7.2

https://hadoop.apache.org/docs/r2.8.0/hadoop-project-dist/hadoop-common/SecureMode.html

Vertica provides Kerberos support for the libhdfs++ library to support C++ calls to the Apache Hadoop Distributed File System (HDFS). This version has new functionality and substantial modifications.

License

Apache License
Version 2.0, January 2004
http://www.apache.org/licenses/

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.
2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use,
reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of Your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical
transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

Vertica Analytic Database (11.0.x)
(a) You must give any other recipients of the Work or
Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices
stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works
that You distribute, all copyright, patent, trademark, and
attribute notices from the Source form of the Work,
excluding those notices that do not pertain to any part of
the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its
distribution, then any Derivative Works that You distribute must
include a readable copy of the attribution notices contained
within such NOTICE file, excluding those notices that do not
pertain to any part of the Derivative Works, in at least one
of the following places: within a NOTICE text file distributed
as part of the Derivative Works; within the Source form or
documentation, if provided along with the Derivative Works; or,
within a display generated by the Derivative Works, if and
wherever such third-party notices normally appear. The contents
of the NOTICE file are for informational purposes only and
do not modify the License. You may add Your own attribution
notices within Derivative Works that You distribute, alongside
or as an addendum to the NOTICE text from the Work, provided
that such additional attribution notices cannot be construed
as modifying the License.

You may add Your own copyright statement to Your modifications
and may provide additional or different license terms and conditions
for use, reproduction, or distribution of Your modifications, or
for any such Derivative Works as a whole, provided Your use,
reproduction, and distribution of the Work otherwise complies with
the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,
any Contribution intentionally submitted for inclusion in the Work
by You to the Licensor shall be under the terms and conditions of
this License, without any additional terms or conditions.
Notwithstanding the above, nothing herein shall supersede or modify
the terms of any separate license agreement You may have executed
with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade
names, trademarks, service marks, or product names of the Licensor,
except as required for reasonable and customary use in describing
the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or
agreed to in writing, Licensor provides the Work (and each
Contributor provides its Contributions) on an "AS IS" BASIS,
WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
implied, including, without limitation, any warranties or conditions
of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
PARTICULAR PURPOSE. You are solely responsible for determining the
appropriateness of using or redistributing the Work and assume any
risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory,
whether in tort (including negligence), contract, or otherwise,
unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally
submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or
documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of Your accepting any such warranty or additional liability.
END OF TERMS AND CONDITIONS

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition,
"control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their
Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.
7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes
of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and
(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided You keep all notations as required for such modifications. You may provide前的content shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity,
or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted"
means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents
of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of Your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS
APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the
direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s)
with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.
7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

Copyright [yyyy] [name of copyright owner]

Licensed under the Apache License, Version 2.0 (the "License"); you may not use this file except in compliance with the License. You may obtain a copy of the License at

http://www.apache.org/licenses/LICENSE-2.0

Unless required by applicable law or agreed to in writing, software distributed under the License is distributed on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied. See the License for the specific language governing permissions and limitations under the License.
BLAS

Version 3.6.0, updated November 2015

Basic Linear Algebra Subprograms (BLAS) are routines that provide standard building blocks for performing basic vector and matrix operations. The Level 1 BLAS perform scalar, vector and vector-vector operations, the Level 2 BLAS perform matrix-vector operations, and the Level 3 BLAS perform matrix-matrix operations. Because the BLAS are efficient, portable, and widely available, they are commonly used in the development of high quality linear algebra software, LAPACK for example.

http://www.netlib.org/blas/

License and Acknowledgments

This material is based upon work supported by the National Science Foundation under Grant No. ASC-9313958 and DOE Grant No. DE-FG03-94ER25219. Any opinions, findings and conclusions or recommendations expressed in this material are those of the author(s) and do not necessarily reflect the views of the National Science Foundation (NSF) or the Department of Energy (DOE).

The reference BLAS is a freely-available software package. It is available from netlib via anonymous ftp and the World Wide Web. Thus, it can be included in commercial software packages (and has been). We only ask that proper credit be given to the authors.

Like all software, it is copyrighted. It is not trademarked, but we do ask the following:

- If you modify the source for these routines we ask that you change the name of the routine and comment the changes made to the original.
- We will gladly answer any questions regarding the software. If a modification is done, however, it is the responsibility of the person who modified the routine to provide support.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the
Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided
that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]"
replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.
"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.
4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the
appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to
communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the license. You may add Your own attribution
notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.
"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and
(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties of MERCHANTABILITY, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a
result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

FreeMarker Subcomponents with Different Copyright Owners

FreeMarker, both in its source code and binary form (freemarker.jar) includes a number of files that are licensed by the Apache Software Foundation under the Apache License, Version 2.0. This is the same license as the license of FreeMarker, but the copyright owner is the Apache Software Foundation. These files are:
Historical Notes

FreeMarker 1.x was released under the LGPL license. Later, by community consensus, we have switched over to a BSD-style license. As of FreeMarker 2.2pre1, the original author, Benjamin Geer, has relinquished the copyright in behalf of Visigoth Software Society. With FreeMarker 2.3.21 the license has changed to Apache License, Version 2.0, and the owner has changed from Visigoth Software Society to three of the FreeMarker 2.x developers, Attila Szegedi, Daniel Dekany, and Jonathan Revusky.

gperftools-libs

Version 2.7

gperftools is a collection of a high-performance multi-threaded malloc() implementation, described as a thread-friendly heap-checker, heap-profile, and cpu-profiler. Includes tcmalloc, libtcmalloc, and libprofiler.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the
Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided
that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]"
replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation
source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the
Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties of MERCHANTABILITY, OR FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.
8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the
Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided
that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

**TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION**

1. Definitions.

   "License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

   "Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

   "Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

   "You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.
"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.
4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the
appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

License

Apache License
Version 2.0, January 2004
http://www.apache.org/licenses/

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all
other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work,
where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor,
except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of,
the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must
include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties of or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only
on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or
Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices
stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the
Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation
source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the
Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties of MERCHANTABILITY, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.
8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

Copyright [yyyy] [name of copyright owner]

Licensed under the Apache License, Version 2.0 (the "License"); you may not use this file except in compliance with the License. You may obtain a copy of the License at

   http://www.apache.org/licenses/LICENSE-2.0

Unless required by applicable law or agreed to in writing, software distributed under the License is distributed on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied. See the License for the specific language governing permissions and limitations under the License.

COMMON DEVELOPMENT AND DISTRIBUTION LICENSE (CDDL) Version 1.0

https://mvnrepository.com/artifact/javexx.el/el-api
License

1. Definitions.

1.1. “Contributor” means each individual or entity that creates or contributes to the creation of Modifications.

1.2. “Contributor Version” means the combination of the Original Software, prior Modifications used by a Contributor (if any), and the Modifications made by that particular Contributor.

1.3. “Covered Software” means (a) the Original Software, or (b) Modifications, or (c) the combination of files containing Original Software with files containing Modifications, in each case including portions thereof.

1.4. “Executable” means the Covered Software in any form other than Source Code.

1.5. “Initial Developer” means the individual or entity that first makes Original Software available under this License.

1.6. “Larger Work” means a work which combines Covered Software or portions thereof with code not governed by the terms of this License.

1.7. “License” means this document.

1.8. “Licensable” means having the right to grant, to the maximum extent possible, whether at the time of the initial grant or subsequently acquired, any and all of the rights conveyed herein.

1.9. “Modifications” means the Source Code and Executable form of any of the following:

A. Any file that results from an addition to, deletion from or modification of the contents of a file containing Original Software or previous Modifications;

B. Any new file that contains any part of the Original Software or previous Modification; or

C. Any new file that is contributed or otherwise made available under the terms of this License.

1.10. “Original Software” means the Source Code and Executable form of computer software code that is originally released under this License.

1.11. “Patent Claims” means any patent claim(s), now owned or hereafter acquired, including without limitation, method, process, and apparatus claims, in any patent Licensable by grantor.
1.12. “Source Code” means (a) the common form of computer software code in which modifications are made and (b) associated documentation included in or with such code.

1.13. “You” (or “Your”) means an individual or a legal entity exercising rights under, and complying with all of the terms of, this License. For legal entities, “You” includes any entity which controls, is controlled by, or is under common control with You. For purposes of this definition, “control” means (a) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (b) ownership of more than fifty percent (50%) of the outstanding shares or beneficial ownership of such entity.

2. License Grants.

2.1. The Initial Developer Grant.

Conditioned upon Your compliance with Section 3.1 below and subject to third party intellectual property claims, the Initial Developer hereby grants You a world-wide, royalty-free, non-exclusive license:

(a) under intellectual property rights (other than patent or trademark) Licensable by Initial Developer, to use, reproduce, modify, display, perform, sublicense and distribute the Original Software (or portions thereof), with or without Modifications, and/or as part of a Larger Work; and

(b) under Patent Claims infringed by the making, using or selling of Original Software, to make, have made, use, practice, sell, and offer for sale, and/or otherwise dispose of the Original Software (or portions thereof).

(c) The licenses granted in Sections 2.1(a) and (b) are effective on the date Initial Developer first distributes or otherwise makes the Original Software available to a third party under the terms of this License.

(d) Notwithstanding Section 2.1(b) above, no patent license is granted: (1) for code that You delete from the Original Software, or (2) for infringements caused by: (i) the modification of the Original Software, or (ii) the combination of the Original Software with other software or devices.

2.2. Contributor Grant.

Conditioned upon Your compliance with Section 3.1 below and subject to third party intellectual property claims, each Contributor hereby grants You a world-wide, royalty-free, non-exclusive license:

(a) under intellectual property rights (other than patent or trademark) Licensable by Contributor to use, reproduce, modify, display, perform, sublicense and distribute the Modifications created by such Contributor (or portions thereof), either on an unmodified basis, with other Modifications, as Covered Software and/or as part of a Larger Work; and
(b) under Patent Claims infringed by the making, using, or selling of Modifications made by that Contributor either alone and/or in combination with its Contributor Version (or portions of such combination), to make, use, sell, offer for sale, have made, and/or otherwise dispose of: (1) Modifications made by that Contributor (or portions thereof); and (2) the combination of Modifications made by that Contributor with its Contributor Version (or portions of such combination).

(c) The licenses granted in Sections 2.2(a) and 2.2(b) are effective on the date Contributor first distributes or otherwise makes the Modifications available to a third party.

(d) Notwithstanding Section 2.2(b) above, no patent license is granted: (1) for any code that Contributor has deleted from the Contributor Version; (2) for infringements caused by: (i) third party modifications of Contributor Version, or (ii) the combination of Modifications made by that Contributor with other software (except as part of the Contributor Version) or other devices; or (3) under Patent Claims infringed by Covered Software in the absence of Modifications made by that Contributor.

3. Distribution Obligations.

3.1. Availability of Source Code.

Any Covered Software that You distribute or otherwise make available in Executable form must also be made available in Source Code form and that Source Code form must be distributed only under the terms of this License. You must include a copy of this License with every copy of the Source Code form of the Covered Software You distribute or otherwise make available. You must inform recipients of any such Covered Software in Executable form as to how they can obtain such Covered Software in Source Code form in a reasonable manner on or through a medium customarily used for software exchange.

3.2. Modifications.

The Modifications that You create or to which You contribute are governed by the terms of this License. You represent that You believe Your Modifications are Your original creation(s) and/or You have sufficient rights to grant the rights conveyed by this License.

3.3. Required Notices.

You must include a notice in each of Your Modifications that identifies You as the Contributor of the Modification. You may not remove or alter any copyright, patent or trademark notices contained within the Covered Software, or any notices of licensing or any descriptive text giving attribution to any Contributor or the Initial Developer.

3.4. Application of Additional Terms.

You may not offer or impose any terms on any Covered Software in Source Code form that alters or restricts the applicable version of this License or the recipients’ rights hereunder.
You may choose to offer, and to charge a fee for, warranty, support, indemnity or liability obligations to one or more recipients of Covered Software. However, you may do so only on Your own behalf, and not on behalf of the Initial Developer or any Contributor. You must make it absolutely clear that any such warranty, support, indemnity or liability obligation is offered by You alone, and You hereby agree to indemnify the Initial Developer and every Contributor for any liability incurred by the Initial Developer or such Contributor as a result of warranty, support, indemnity or liability terms You offer.

3.5. Distribution of Executable Versions.

You may distribute the Executable form of the Covered Software under the terms of this License or under the terms of a license of Your choice, which may contain terms different from this License, provided that You are in compliance with the terms of this License and that the license for the Executable form does not attempt to limit or alter the recipient’s rights in the Source Code form from the rights set forth in this License. If You distribute the Covered Software in Executable form under a different license, You must make it absolutely clear that any terms which differ from this License are offered by You alone, not by the Initial Developer or Contributor. You hereby agree to indemnify the Initial Developer and every Contributor for any liability incurred by the Initial Developer or such Contributor as a result of any such terms You offer.

You may create a Larger Work by combining Covered Software with other code not governed by the terms of this License and distribute the Larger Work as a single product. In such a case, You must make sure the requirements of this License are fulfilled for the Covered Software.

4. Versions of the License.

4.1. New Versions.

Sun Microsystems, Inc. is the initial license steward and may publish revised and/or new versions of this License from time to time. Each version will be given a distinguishing version number. Except as provided in Section 4.3, no one other than the license steward has the right to modify this License.

4.2. Effect of New Versions.

You may always continue to use, distribute or otherwise make the Covered Software available under the terms of the version of the License under which You originally received the Covered Software. If the Initial Developer includes a notice in the Original Software prohibiting it from being distributed or otherwise made available under any subsequent version of the License, You must distribute and make the Covered Software available under the terms of the version of the License under which You originally received the Covered
Software. Otherwise, You may also choose to use, distribute or otherwise make the Covered Software available under the terms of any subsequent version of the License published by the license steward.

4.3 Modified Versions.

When You are an Initial Developer and You want to create a new license for Your Original Software, You may create and use a modified version of this License if You: (a) rename the license and remove any references to the name of the license steward (except to note that the license differs from this License); and (b) otherwise make it clear that the license contains terms which differ from this License.

5. DISCLAIMER OF WARRANTY.

COVERED SOFTWARE IS PROVIDED UNDER THIS LICENSE ON AN “AS IS” BASIS, WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, WITHOUT LIMITATION, WARRANTIES THAT THE COVERED SOFTWARE IS FREE OF DEFECTS, MERCHANTABLE, FIT FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE COVERED SOFTWARE IS WITH YOU. SHOULD ANY COVERED SOFTWARE PROVE DEFECTIVE IN ANY RESPECT, YOU (NOT THE INITIAL DEVELOPER OR ANY OTHER CONTRIBUTOR) ASSUME THE COST OF ANY NECESSARY SERVICING, REPAIR OR CORRECTION. THIS DISCLAIMER OF WARRANTY CONSTITUTES AN ESSENTIAL PART OF THIS LICENSE. NO USE OF ANY COVERED SOFTWARE IS AUTHORIZED HEREUNDER EXCEPT UNDER THIS DISCLAIMER.

6. TERMINATION.

6.1. This License and the rights granted hereunder will terminate automatically if You fail to comply with terms herein and fail to cure such breach within 30 days of becoming aware of the breach. Provisions which, by their nature, must remain in effect beyond the termination of this License shall survive.

6.2. If You assert a patent infringement claim (excluding declaratory judgment actions) against Initial Developer or a Contributor (the Initial Developer or Contributor against whom You assert such claim is referred to as “Participant”) alleging that the Participant Software (meaning the Contributor Version where the Participant is a Contributor or the Original Software where the Participant is the Initial Developer) directly or indirectly infringes any patent, then any and all rights granted directly or indirectly to You by such Participant, the Initial Developer (if the Initial Developer is not the Participant) and all Contributors under Sections 2.1 and/or 2.2 of this License shall, upon 60 days notice from Participant terminate prospectively and automatically at the expiration of such 60 day notice period, unless if within such 60 day period You withdraw Your claim with respect to the Participant Software against such Participant either unilaterally or pursuant to a written agreement with Participant.
6.3. In the event of termination under Sections 6.1 or 6.2 above, all end user licenses that have been validly granted by You or any distributor hereunder prior to termination (excluding licenses granted to You by any distributor) shall survive termination.

7. LIMITATION OF LIABILITY.

UNDER NO CIRCUMSTANCES AND UNDER NO LEGAL THEORY, WHETHER TORT (INCLUDING NEGLIGENCE), CONTRACT, OR OTHERWISE, SHALL YOU, THE INITIAL DEVELOPER, ANY OTHER CONTRIBUTOR, OR ANY DISTRIBUTOR OF COVERED SOFTWARE, OR ANY SUPPLIER OF ANY OF SUCH PARTIES, BE LIABLE TO ANY PERSON FOR ANY INDIRECT, SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES OF ANY CHARACTER INCLUDING, WITHOUT LIMITATION, DAMAGES FOR LOST PROFITS, LOSS OF GOODWILL, WORK STOPPAGE, COMPUTER FAILURE OR MALFUNCTION, OR ANY AND ALL OTHER COMMERCIAL DAMAGES OR LOSSES, EVEN IF SUCH PARTY SHALL HAVE BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. THIS LIMITATION OF LIABILITY SHALL NOT APPLY TO LIABILITY FOR DEATH OR PERSONAL INJURY RESULTING FROM SUCH PARTY’S NEGLIGENCE TO THE EXTENT APPLICABLE LAW PROHIBITS SUCH LIMITATION. SOME JURISDICTIONS DO NOT ALLOW THE EXCLUSION OR LIMITATION OF INCIDENTAL OR CONSEQUENTIAL DAMAGES, SO THIS EXCLUSION AND LIMITATION MAY NOT APPLY TO YOU.

8. U.S. GOVERNMENT END USERS.

The Covered Software is a “commercial item,” as that term is defined in 48 C.F.R. 2.101 (Oct. 1995), consisting of “commercial computer software” (as that term is defined at 48 C.F.R. § 252.227-7014(a)(1)) and “commercial computer software documentation” as such terms are used in 48 C.F.R. 12.212 (Sept. 1995). Consistent with 48 C.F.R. 12.212 and 48 C.F.R. 227.7202-1 through 227.7202-4 (June 1995), all U.S. Government End Users acquire Covered Software with only those rights set forth herein. This U.S. Government Rights clause is in lieu of, and supersedes, any other FAR, DFAR, or other clause or provision that addresses Government rights in computer software under this License.

9. MISCELLANEOUS.

This License represents the complete agreement concerning subject matter hereof. If any provision of this License is held to be unenforceable, such provision shall be reformed only to the extent necessary to make it enforceable. This License shall be governed by the law of the jurisdiction specified in a notice contained within the Original Software (except to the extent applicable law, if any, provides otherwise), excluding such jurisdiction’s conflict-of-law provisions. Any litigation relating to this License shall be subject to the jurisdiction of the courts located in the jurisdiction and venue specified in a notice contained within the Original Software, with the losing party responsible for costs, including, without limitation, court costs and reasonable attorneys’ fees and expenses. The application of the United Nations Convention on Contracts for the International Sale of Goods is expressly excluded. Any law or regulation which provides that the language of a contract shall be construed
against the drafter shall not apply to this License. You agree that You alone are responsible for compliance with the United States export administration regulations (and the export control laws and regulation of any other countries) when You use, distribute or otherwise make available any Covered Software.

10. RESPONSIBILITY FOR CLAIMS.

As between Initial Developer and the Contributors, each party is responsible for claims and damages arising, directly or indirectly, out of its utilization of rights under this License and You agree to work with Initial Developer and Contributors to distribute such responsibility on an equitable basis. Nothing herein is intended or shall be deemed to constitute any admission of liability.

NOTICE PURSUANT TO SECTION 9 OF THE COMMON DEVELOPMENT AND DISTRIBUTION LICENSE (CDDL)

The code released under CDDL shall be governed by the laws of the State of California (excluding conflict-of-law provisions). Any litigation relating to this License shall be subject to the jurisdiction of the Federal Courts of the Northern District of California and the state courts of the State of California, with venue lying in Santa Clara County, California.

The GNU General Public License (GPL)
Version 2, June 1991

Copyright (C) 1989, 1991 Free Software Foundation, Inc. 59 Temple Place, Suite 330, Boston, MA 02111-1307 USA

Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

Preamble

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change free software--to make sure the software is free for all its users. This General Public License applies to most of the Free Software Foundation's software and to any other program whose authors commit to using it. (Some other Free Software Foundation software is covered by the GNU Library General Public License instead.) You can apply it to your programs, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish), that you receive source code or can get it
if you want it, that you can change the software or use pieces of it in new free programs; and that you know you can do these things.

To protect your rights, we need to make restrictions that forbid anyone to deny you these rights or to ask you to surrender the rights. These restrictions translate to certain responsibilities for you if you distribute copies of the software, or if you modify it.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must give the recipients all the rights that you have. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

We protect your rights with two steps: (1) copyright the software, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the software.

Also, for each author's protection and ours, we want to make certain that everyone understands that there is no warranty for this free software. If the software is modified by someone else and passed on, we want its recipients to know that what they have is not the original, so that any problems introduced by others will not reflect on the original authors' reputations.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that redistributors of a free program will individually obtain patent licenses, in effect making the program proprietary. To prevent this, we have made it clear that any patent must be licensed for everyone's free use or not licensed at all.

The precise terms and conditions for copying, distribution and modification follow.

TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License applies to any program or other work which contains a notice placed by the copyright holder saying it may be distributed under the terms of this General Public License. The "Program", below, refers to any such program or work, and a "work based on the Program" means either the Program or any derivative work under copyright law: that is to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another language. (Hereinafter, translation is included without limitation in the term "modification".) Each licensee is addressed as "you".

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running the Program is not restricted, and the output from the Program is covered only if its contents constitute a work based on the Program (independent of having been made by running the Program). Whether that is true depends on what the Program does.
1. You may copy and distribute verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and give any other recipients of the Program a copy of this License along with the Program.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Program or any portion of it, thus forming a work based on the Program, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

   a) You must cause the modified files to carry prominent notices stating that you changed the files and the date of any change.

   b) You must cause any work that you distribute or publish, that in whole or in part contains or is derived from the Program or any part thereof, to be licensed as a whole at no charge to all third parties under the terms of this License.

   c) If the modified program normally reads commands interactively when run, you must cause it, when started running for such interactive use in the most ordinary way, to print or display an announcement including an appropriate copyright notice and a notice that there is no warranty (or else, saying that you provide a warranty) and that users may redistribute the program under these conditions, and telling the user how to view a copy of this License. (Exception: if the Program itself is interactive but does not normally print such an announcement, your work based on the Program is not required to print an announcement.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Program, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Program, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Program.

In addition, mere aggregation of another work not based on the Program with the Program (or with a work based on the Program) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.
3. You may copy and distribute the Program (or a work based on it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you also do one of the following:

a) Accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

b) Accompany it with a written offer, valid for at least three years, to give any third party, for a charge no more than your cost of physically performing source distribution, a complete machine-readable copy of the corresponding source code, to be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

c) Accompany it with the information you received as to the offer to distribute corresponding source code. (This alternative is allowed only for noncommercial distribution and only if you received the program in object code or executable form with such an offer, in accord with Subsection b above.)

The source code for a work means the preferred form of the work for making modifications to it. For an executable work, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the executable. However, as a special exception, the source code distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

If distribution of executable or object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place counts as distribution of the source code, even though third parties are not compelled to copy the source along with the object code.

4. You may not copy, modify, sublicense, or distribute the Program except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense or distribute the Program is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

5. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Program or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Program (or any work based on the Program), you indicate
your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Program or works based on it.

6. Each time you redistribute the Program (or any work based on the Program), the recipient automatically receives a license from the original licensor to copy, distribute or modify the Program subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties to this License.

7. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Program at all. For example, if a patent license would not permit royalty-free redistribution of the Program by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Program.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system, which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

8. If the distribution and/or use of the Program is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Program under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

9. The Free Software Foundation may publish revised and/or new versions of the General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.
Each version is given a distinguishing version number. If the Program specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of this License, you may choose any version ever published by the Free Software Foundation.

10. If you wish to incorporate parts of the Program into other free programs whose distribution conditions are different, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

NO WARRANTY

11. BECAUSE THE PROGRAM IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

12. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

You are entitled to receive the source code for such software. For no less than three years from the date you obtained this software package, you may download a copy of the source code for the software in this package licensed under the GPL at no charge by visiting: [http://www.vertica.com/licenses/el-api-1.1.jar](http://www.vertica.com/licenses/el-api-1.1.jar)

Apache License
Version 2.0, January 2004
http://www.apache.org/licenses/

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to
communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, nonexclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the license. You may add Your own attribution

notices within Derivative Works that You distribute, alongside
or as an addendum to the NOTICE text from the Work, provided
that such additional attribution notices cannot be construed
as modifying the License.

You may add Your own copyright statement to Your modifications and
may provide additional or different license terms and conditions
for use, reproduction, or distribution of Your modifications, or
for any such Derivative Works as a whole, provided Your use,
reproduction, and distribution of the Work otherwise complies with
the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,
any Contribution intentionally submitted for inclusion in the Work
by You to the Licensor shall be under the terms and conditions of
this License, without any additional terms or conditions.
Notwithstanding the above, nothing herein shall supersede or modify
the terms of any separate license agreement You may have executed
with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade
names, trademarks, service marks, or product names of the Licensor,
except as required for reasonable and customary use in describing the
origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or
agreed to in writing, Licensor provides the Work (and each
Contributor provides its Contributions) on an "AS IS" BASIS,
WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
implied, including, without limitation, any warranties or conditions
of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
PARTICULAR PURPOSE. You are solely responsible for determining the
appropriateness of using or redistributing the Work and assume any
risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory,
whether in tort (including negligence), contract, or otherwise,
unless required by applicable law (such as deliberate and grossly
negligent acts) or agreed to in writing, shall any Contributor be
liable to You for damages, including any direct, indirect, special,
incidental, or consequential damages of any character arising as a
result of this License or out of the use or inability to use the
Work (including but not limited to damages for loss of goodwill,
work stoppage, computer failure or malfunction, or any and all
other commercial damages or losses), even if such Contributor
has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing
the Work or Derivative Works thereof, You may choose to offer,
and charge a fee for, acceptance of support, warranty, indemnity,
or other liability obligations and/or rights consistent with this
License. However, in accepting such obligations, You may act only
on Your own behalf and on Your sole responsibility, not on behalf
of any other Contributor, and only if You agree to indemnify,
defend, and hold each Contributor harmless for any liability
incurred by, or claims asserted against, such Contributor by reason
of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.
To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

License

NOTICE; LIMITED LICENSE GRANTS

Sun Microsystems, Inc. ('Sun') hereby grants you a fully-paid, non-exclusive, non-transferable, worldwide, limited license (without the right to sublicense), under the Sun's applicable intellectual property rights to view, download, use and reproduce the Specification only for the purpose of internal evaluation, which shall be understood to include developing applications intended to run on an implementation of the Specification
provided that such applications do not themselves implement any portion(s) of the Specification.

Sun also grants you a perpetual, non-exclusive, worldwide, fully paid-up, royalty free, limited license (without the right to sublicense) under any applicable copyrights or patent rights it may have in the Specification to create and/or distribute an Independent Implementation of the Specification that: (i) fully implements the Spec(s) including all its required interfaces and functionality; (ii) does not modify, subset, superset or otherwise extend the Licensor Name Space, or include any public or protected packages, classes, Java interfaces, fields or methods within the Licensor Name Space other than those required/authorized by the Specification or Specifications being implemented; and (iii) passes the TCK (including satisfying the requirements of the applicable TCK Users Guide) for such Specification. The foregoing license is expressly conditioned on your not acting outside its scope. No license is granted hereunder for any other purpose.

You need not include limitations (i)-(iii) from the previous paragraph or any other particular 'pass through' requirements in any license You grant concerning the use of your Independent Implementation or products derived from it. However, except with respect to implementations of the Specification (and products derived from them) that satisfy limitations (i)-(iii) from the previous paragraph, You may neither: (a) grant or otherwise pass through to your licensees any licenses under Sun's applicable intellectual property rights; nor (b) authorize your licensees to make any claims concerning their implementation's compliance with the Spec in question.

For the purposes of this Agreement: 'Independent Implementation' shall mean an implementation of the Specification that neither derives from any of Sun's source code or binary code materials nor, except with an appropriate and separate license from Sun, includes any of Sun's source code or binary code materials; and 'Licensor Name Space' shall mean the public class or interface declarations whose names begin with 'java', 'javax', 'com.sun' or their equivalents in any subsequent naming convention adopted by Sun through the Java Community Process, or any recognized successors or replacements thereof.

This Agreement will terminate immediately without notice from Sun if you fail to comply with any material provision of or act outside the scope of the licenses granted above.

TRADEMARKS

No right, title, or interest in or to any trademarks, service marks, or trade names of Sun or Sun's licensors is granted hereunder. Sun, Sun Microsystems, the Sun logo, Java, and the Java Coffee Cup logo are trademarks or registered trademarks of Sun Microsystems, Inc. in the U.S. and other countries.

DISCLAIMER OF WARRANTIES
THE SPECIFICATION IS PROVIDED 'AS IS'. SUN MAKES NO REPRESENTATIONS OR WARRANTIES, EITHER EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO, WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, OR NON-INFRINGEMENT, THAT THE CONTENTS OF THE SPECIFICATION ARE SUITABLE FOR ANY PURPOSE OR THAT ANY PRACTICE OR IMPLEMENTATION OF SUCH CONTENTS WILL NOT INFRINGE ANY THIRD PARTY PATENTS, COPYRIGHTS, TRADE SECRETS OR OTHER RIGHTS. This document does not represent any commitment to release or implement any portion of the Specification in any product.

THE SPECIFICATION COULD INCLUDE TECHNICAL INACCURACIES OR TYPOGRAPHICAL ERRORS. CHANGES ARE PERIODICALLY ADDED TO THE INFORMATION THEREIN; THESE CHANGES WILL BE INCORPORATED INTO NEW VERSIONS OF THE SPECIFICATION, IF ANY. SUN MAY MAKE IMPROVEMENTS AND/OR CHANGES TO THE PRODUCT(S) AND/OR THE PROGRAM(S) DESCRIBED IN THE SPECIFICATION AT ANY TIME. Any use of such changes in the Specification will be governed by the then-current license for the applicable version of the Specification.

LIMITATION OF LIABILITY

TO THE EXTENT NOT PROHIBITED BY LAW, IN NO EVENT WILL SUN OR ITS LICENSORS BE LIABLE FOR ANY DAMAGES, INCLUDING WITHOUT LIMITATION, LOST REVENUE, PROFITS OR DATA, OR FOR SPECIAL, INDIRECT, CONSEQUENTIAL, INCIDENTAL OR PUNITIVE DAMAGES, HOWEVER CAUSED AND REGARDLESS OF THE THEORY OF LIABILITY, ARISING OUT OF OR RELATED TO ANY FURNISHING, PRACTICING, MODIFYING OR ANY USE OF THE SPECIFICATION, EVEN IF SUN AND/OR ITS LICENSORS HAVE BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

You will indemnify, hold harmless, and defend Sun and its licensors from any claims arising or resulting from: (i) your use of the Specification; (ii) the use or distribution of your Java application, applet and/or clean room implementation; and/or (iii) any claims that later versions or releases of any Specification furnished to you are incompatible with the Specification provided to you under this license.

RESTRICTED RIGHTS LEGEND

U.S. Government: If this Specification is being acquired by or on behalf of the U.S. Government or by a U.S. Government prime contractor or subcontractor (at any tier), then the Government's rights in the Software and accompanying documentation shall be only as set forth in this license; this is in accordance with 48 C.F.R. 227.7201 through 227.7202-4 (for Department of Defense (DoD) acquisitions) and with 48 C.F.R. 2.101 and 12.212 (for non-DoD acquisitions).

REPORT
You may wish to report any ambiguities, inconsistencies or inaccuracies you may find in connection with your use of the Specification ('Feedback'). To the extent that you provide Sun with any Feedback, you hereby: (i) agree that such Feedback is provided on a non-proprietary and non-confidential basis, and (ii) grant Sun a perpetual, non-exclusive, worldwide, fully paid-up, irrevocable license, with the right to sublicense through multiple levels of sublicensees, to incorporate, disclose, and use without limitation the Feedback for any purpose related to the Specification and future versions, implementations, and test suites thereof.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licenser" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.
"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and
(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special,
 incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. **Jetty**

Copyright ©, Eclipse Foundation

[https://www.eclipse.org/jetty/](https://www.eclipse.org/jetty/)

**License**

THE ACCOMPANYING PROGRAM IS PROVIDED UNDER THE TERMS OF THIS ECLIPSE PUBLIC LICENSE ("AGREEMENT"). ANY USE, REPRODUCTION OR DISTRIBUTION OF THE PROGRAM CONSTITUTES RECIPIENT'S ACCEPTANCE OF THIS AGREEMENT.

1. DEFINITIONS

"Contribution" means:

a) in the case of the initial Contributor, the initial code and documentation distributed under this Agreement, and

b) in the case of each subsequent Contributor:

i) changes to the Program, and

ii) additions to the Program;
where such changes and/or additions to the Program originate from and are distributed by that particular Contributor. A Contribution 'originates' from a Contributor if it was added to the Program by such Contributor itself or anyone acting on such Contributor's behalf. Contributions do not include additions to the Program which: (i) are separate modules of software distributed in conjunction with the Program under their own license agreement, and (ii) are not derivative works of the Program.

"Contributor" means any person or entity that distributes the Program.

"Licensed Patents" mean patent claims licensable by a Contributor which are necessarily infringed by the use or sale of its Contribution alone or when combined with the Program.

"Program" means the Contributions distributed in accordance with this Agreement.

"Recipient" means anyone who receives the Program under this Agreement, including all Contributors.

2. GRANT OF RIGHTS

a) Subject to the terms of this Agreement, each Contributor hereby grants Recipient a non-exclusive, worldwide, royalty-free copyright license to reproduce, prepare derivative works of, publicly display, publicly perform, distribute and sublicense the Contribution of such Contributor, if any, and such derivative works, in source code and object code form.

b) Subject to the terms of this Agreement, each Contributor hereby grants Recipient a non-exclusive, worldwide, royalty-free patent license under Licensed Patents to make, use, sell, offer to sell, import and otherwise transfer the Contribution of such Contributor, if any, in source code and object code form. This patent license shall apply to the combination of the Contribution and the Program if, at the time the Contribution is added by the Contributor, such addition of the Contribution causes such combination to be covered by the Licensed Patents. The patent license shall not apply to any other combinations which include the Contribution. No hardware per se is licensed hereunder.

c) Recipient understands that although each Contributor grants the licenses to its Contributions set forth herein, no assurances are provided by any Contributor that the Program does not infringe the patent or other intellectual property rights of any other entity. Each Contributor disclaims any liability to Recipient for claims brought by any other entity based on infringement of intellectual property rights or otherwise. As a condition to exercising the rights and licenses granted hereunder, each Recipient hereby assumes sole responsibility to secure any other intellectual property rights needed, if any. For example, if a third party patent license is required to allow Recipient to distribute the Program, it is Recipient's responsibility to acquire that license before distributing the Program.

d) Each Contributor represents that to its knowledge it has sufficient copyright rights in its Contribution, if any, to grant the copyright license set forth in this Agreement.
3. REQUIREMENTS

A Contributor may choose to distribute the Program in object code form under its own license agreement, provided that:

a) it complies with the terms and conditions of this Agreement; and

b) its license agreement:

i) effectively disclaims on behalf of all Contributors all warranties and conditions, express and implied, including warranties or conditions of title and non-infringement, and implied warranties or conditions of merchantability and fitness for a particular purpose;

ii) effectively excludes on behalf of all Contributors all liability for damages, including direct, indirect, special, incidental and consequential damages, such as lost profits;

iii) states that any provisions which differ from this Agreement are offered by that Contributor alone and not by any other party; and

iv) states that source code for the Program is available from such Contributor, and informs licensees how to obtain it in a reasonable manner on or through a medium customarily used for software exchange.

When the Program is made available in source code form:

a) it must be made available under this Agreement; and

b) a copy of this Agreement must be included with each copy of the Program.

Contributors may not remove or alter any copyright notices contained within the Program.

Each Contributor must identify itself as the originator of its Contribution, if any, in a manner that reasonably allows subsequent Recipients to identify the originator of the Contribution.

4. COMMERCIAL DISTRIBUTION

Commercial distributors of software may accept certain responsibilities with respect to end users, business partners and the like. While this license is intended to facilitate the commercial use of the Program, the Contributor who includes the Program in a commercial product offering should do so in a manner which does not create potential liability for other Contributors. Therefore, if a Contributor includes the Program in a commercial product offering, such Contributor ("Commercial Contributor") hereby agrees to defend and indemnify every other Contributor ("Indemnified Contributor") against any losses, damages and costs (collectively "Losses") arising from claims, lawsuits and other legal actions brought by a third party against the Indemnified Contributor to the extent caused by the acts or omissions of such Commercial Contributor in connection with its distribution of the
Program in a commercial product offering. The obligations in this section do not apply to any claims or Losses relating to any actual or alleged intellectual property infringement. In order to qualify, an Indemnified Contributor must: a) promptly notify the Commercial Contributor in writing of such claim, and b) allow the Commercial Contributor to control, and cooperate with the Commercial Contributor in, the defense and any related settlement negotiations. The Indemnified Contributor may participate in any such claim at its own expense.

For example, a Contributor might include the Program in a commercial product offering, Product X. That Contributor is then a Commercial Contributor. If that Commercial Contributor then makes performance claims, or offers warranties related to Product X, those performance claims and warranties are such Commercial Contributor's responsibility alone. Under this section, the Commercial Contributor would have to defend claims against the other Contributors related to those performance claims and warranties, and if a court requires any other Contributor to pay any damages as a result, the Commercial Contributor must pay those damages.

5. NO WARRANTY

EXCEPT AS EXPRESSLY SET FORTH IN THIS AGREEMENT, THE PROGRAM IS PROVIDED ON AN "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, EITHER EXPRESS OR IMPLIED INCLUDING, WITHOUT LIMITATION, ANY WARRANTIES OR CONDITIONS OF TITLE, NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. Each Recipient is solely responsible for determining the appropriateness of using and distributing the Program and assumes all risks associated with its exercise of rights under this Agreement, including but not limited to the risks and costs of program errors, compliance with applicable laws, damage to or loss of data, programs or equipment, and unavailability or interruption of operations.

6. DISCLAIMER OF LIABILITY

EXCEPT AS EXPRESSLY SET FORTH IN THIS AGREEMENT, NEITHER RECIPIENT NOR ANY CONTRIBUTORS SHALL HAVE ANY LIABILITY FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING WITHOUT LIMITATION LOST PROFITS), HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE USE OR DISTRIBUTION OF THE PROGRAM OR THE EXERCISE OF ANY RIGHTS GRANTED HEREUNDER, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

7. GENERAL

If any provision of this Agreement is invalid or unenforceable under applicable law, it shall not affect the validity or enforceability of the remainder of the terms of this Agreement,
and without further action by the parties hereto, such provision shall be reformed to the minimum extent necessary to make such provision valid and enforceable.

If Recipient institutes patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Program itself (excluding combinations of the Program with other software or hardware) infringes such Recipient’s patent(s), then such Recipient's rights granted under Section 2(b) shall terminate as of the date such litigation is filed.

All Recipient's rights under this Agreement shall terminate if it fails to comply with any of the material terms or conditions of this Agreement and does not cure such failure in a reasonable period of time after becoming aware of such noncompliance. If all Recipient's rights under this Agreement terminate, Recipient agrees to cease use and distribution of the Program as soon as reasonably practicable. However, Recipient's obligations under this Agreement and any licenses granted by Recipient relating to the Program shall continue and survive.

Everyone is permitted to copy and distribute copies of this Agreement, but in order to avoid inconsistency the Agreement is copyrighted and may only be modified in the following manner. The Agreement Steward reserves the right to publish new versions (including revisions) of this Agreement from time to time. No one other than the Agreement Steward has the right to modify this Agreement. The Eclipse Foundation is the initial Agreement Steward. The Eclipse Foundation may assign the responsibility to serve as the Agreement Steward to a suitable separate entity. Each new version of the Agreement will be given a distinguishing version number. The Program (including Contributions) may always be distributed subject to the version of the Agreement under which it was received. In addition, after a new version of the Agreement is published, Contributor may elect to distribute the Program (including its Contributions) under the new version. Except as expressly stated in Sections 2(a) and 2(b) above, Recipient receives no rights or licenses to the intellectual property of any Contributor under this Agreement, whether expressly, by implication, estoppel or otherwise. All rights in the Program not expressly granted under this Agreement are reserved.

This Agreement is governed by the laws of the State of New York and the intellectual property laws of the United States of America. No party to this Agreement will bring a legal action under this Agreement more than one year after the cause of action arose. Each party waives its rights to a jury trial in any resulting litigation.

JsonPath

Version 2.2.0

https://github.com/json-path/JsonPath

License

Apache License
Version 2.0, January 2004
http://www.apache.org/licenses/
1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.
2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices as long as they are in the same form as the License and include the text "distributes this work AS IS" wherever such third-party notices normally appear. You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with this License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with this License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with this License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with this License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with this License.
the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations or/and rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[ ]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

Copyright [yyyy] [name of copyright owner]

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or...
Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices
stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the
Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

License

Apache License
Version 2.0, January 2004
http://www.apache.org/licenses/

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes
of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and
(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity,
or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

Notice

Copyright (C) 1985-2015 by the Massachusetts Institute of Technology.

All rights reserved.

Redistribution and use in source and binary forms, with or without modification, are permitted provided that the following conditions are met:

- Redistributions of source code must retain the above copyright notice, this list of conditions and the following disclaimer.
- Redistributions in binary form must reproduce the above copyright notice, this list of conditions and the following disclaimer in the documentation and/or other materials provided with the distribution.

THIS SOFTWARE IS PROVIDED BY THE COPYRIGHT HOLDERS AND CONTRIBUTORS "AS IS" AND ANY EXPRESS OR IMPLIED WARRANTIES, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE ARE DISCLAIMED. IN NO EVENT SHALL THE COPYRIGHT HOLDER OR CONTRIBUTORS BE LIABLE FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING, BUT NOT LIMITED TO, PROCUREMENT OF SUBSTITUTE GOODS OR SERVICES; LOSS OF USE, DATA, OR PROFITS; OR BUSINESS INTERRUPTION) HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE USE OF THIS SOFTWARE, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGE.

Downloading of this software may constitute an export of cryptographic software from the United States of America that is subject to the United States Export Administration Regulations (EAR), 15 CFR 730-774.

Additional laws or regulations may apply. It is the responsibility of the person or entity contemplating export to comply with all applicable export laws and regulations, including obtaining any required license from the U.S. government.
The U.S. government prohibits export of encryption source code to certain countries and individuals, including, but not limited to, the countries of Cuba, Iran, North Korea, Sudan, Syria, and residents and nationals of those countries.

Documentation components of this software distribution are licensed under a Creative Commons Attribution-ShareAlike 3.0 Unported License.  
(http://creativecommons.org/licenses/by-sa/3.0/)

Individual source code files are copyright MIT, Cygnus Support, Novell, OpenVision Technologies, Oracle, Red Hat, Sun Microsystems, FundsXpress, and others.

Project Athena, Athena, Athena MUSE, Discuss, Hesiod, Kerberos, Moira, and Zephyr are trademarks of the Massachusetts Institute of Technology (MIT). No commercial use of these trademarks may be made without prior written permission of MIT. "Commercial use" means use of a name in a product or other for-profit manner. It does NOT prevent a commercial firm from referring to the MIT trademarks in order to convey information (although in doing so, recognition of their trademark status should be given).

======================================================================

The following copyright and permission notice applies to the OpenVision Kerberos Administration system located in "kadmin/create", "kadmin/dbutil", "kadmin/passwd", "kadmin/server", "lib/kadm5", and portions of "lib/rpc":

WARNING: Retrieving the OpenVision Kerberos Administration system source code, as described below, indicates your acceptance of the following terms. If you do not agree to the following terms, do not retrieve the OpenVision Kerberos administration system. You may freely use and distribute the Source Code and Object Code compiled from it, with or without modification, but this Source Code is provided to you "AS IS" EXCLUSIVE OF ANY WARRANTY, INCLUDING, WITHOUT LIMITATION, ANY WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE, OR ANY OTHER WARRANTY, WHETHER EXPRESS OR IMPLIED. IN NO EVENT WILL OPENVISION HAVE ANY LIABILITY FOR ANY LOST PROFITS, LOSS OF DATA OR COSTS OF PROCUREMENT OF SUBSTITUTE GOODS OR SERVICES, OR FOR ANY SPECIAL, INDIRECT, OR CONSEQUENTIAL DAMAGES ARISING OUT OF THIS AGREEMENT, INCLUDING, WITHOUT LIMITATION, THOSE RESULTING FROM THE USE OF THE SOURCE CODE, OR THE FAILURE OF THE SOURCE CODE TO PERFORM, OR FOR ANY OTHER REASON.

OpenVision retains all copyrights in the donated Source Code.

OpenVision also retains copyright to derivative works of the Source Code, whether created by OpenVision or by a third party. The OpenVision copyright notice must be preserved if derivative works are made based on the donated Source Code.
OpenVision Technologies, Inc. has donated this Kerberos Administration system to MIT for inclusion in the standard Kerberos 5 distribution. This donation underscores our commitment to continuing Kerberos technology development and our gratitude for the valuable work which has been performed by MIT and the Kerberos community.

======================================================================
Portions contributed by Matt Crawford "crawdad@fnal.gov" were work performed at Fermi National Accelerator Laboratory, which is operated by Universities Research Association, Inc., under contract DE-AC02-76CHO3000 with the U.S. Department of Energy.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.
"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.
4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the
appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

Copyright [yyyy] [name of copyright owner]

See the License for the specific language governing permissions and limitations under the License.

**LAPACK**

Version: 3.4.0

Updated November 11, 2011
LAPACK is written in Fortran77 and provides routines for solving systems of simultaneous linear equations, least-squares solutions of linear systems of equations, eigenvalue problems, and singular value problems. The associated matrix factorizations (LU, Cholesky, QR, SVD, Schur, generalized Schur) are also provided, as are related computations such as reordering of the Schur factorizations and estimating condition numbers. Dense and banded matrices are handled, but not general sparse matrices. In all areas, similar functionality is provided for real and complex matrices, in both single and double precision. Vertica statically links this to other code (compiled code co-mingled in the same binary files).

**BSD 3-clause "New" or "Revised" License**

**libgfortran**

Open source component version 4.8.2

**Description**

The libgfortran contains a Fortran shared library, needed to run Fortran dynamically-linked programs, required for the Vertica LAPACK library addition.

[https://github.com/gcc-mirror/gcc/tree/master/libgfortran](https://github.com/gcc-mirror/gcc/tree/master/libgfortran)

**License**

The GNU General Public License (GPL) with Special Library Exception
The author has provided an exception to the GPL allowing the library to be linked with other programs provided that some specific conditions are met. Refer to the license text.

Preamble

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change free software— to make sure the software is free for all its users. This General Public License applies to most of the Free Software Foundation’s software and to any other program whose authors commit to using it. (Some other Free Software Foundation software is covered by the GNU Library General Public License instead.) You can apply it to your programs, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs; and that you know you can do these things.

To protect your rights, we need to make restrictions that forbid anyone to deny you these rights or to ask you to surrender the rights. These restrictions translate to certain responsibilities for you if you distribute copies of the software, or if you modify it.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must give the recipients all the rights that you have. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

We protect your rights with two steps: (1) copyright the software, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the software.

Also, for each author's protection and ours, we want to make certain that everyone understands that there is no warranty for this free software. If the software is modified by someone else and passed on, we want its recipients to know that what they have is not the original, so that any problems introduced by others will not reflect on the original authors' reputations.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that redistributors of a free program will individually obtain patent licenses, in effect making the program proprietary. To prevent this, we have made it clear that any patent must be licensed for everyone's free use or not licensed at all.

The precise terms and conditions for copying, distribution and modification follow.

TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION
0. This License applies to any program or other work which contains a notice placed by the copyright holder saying it may be distributed under the terms of this General Public License. The "Program", below, refers to any such program or work, and a "work based on the Program" means either the Program or any derivative work under copyright law: that is to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another language. (Hereinafter, translation is included without limitation in the term "modification".) Each licensee is addressed as "you".

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running the Program is not restricted, and the output from the Program is covered only if its contents constitute a work based on the Program (independent of having been made by running the Program). Whether that is true depends on what the Program does.

1. You may copy and distribute verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and give any other recipients of the Program a copy of this License along with the Program.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Program or any portion of it, thus forming a work based on the Program, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

a) You must cause the modified files to carry prominent notices stating that you changed the files and the date of any change.

b) You must cause any work that you distribute or publish, that in whole or in part contains or is derived from the Program or any part thereof, to be licensed as a whole at no charge to all third parties under the terms of this License.

c) If the modified program normally reads commands interactively when run, you must cause it, when started running for such interactive use in the most ordinary way, to print or display an announcement including an appropriate copyright notice and a notice that there is no warranty (or else, saying that you provide a warranty) and that users may redistribute the program under these conditions, and telling the user how to view a copy of this License. (Exception: if the Program itself is interactive but does not normally print such an announcement, your work based on the Program is not required to print an announcement.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Program, and can be reasonably considered independent
and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Program, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Program.

In addition, mere aggregation of another work not based on the Program with the Program (or with a work based on the Program) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may copy and distribute the Program (or a work based on it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you also do one of the following:

a) Accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

b) Accompany it with a written offer, valid for at least three years, to give any third party, for a charge no more than your cost of physically performing source distribution, a complete machine-readable copy of the corresponding source code, to be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

c) Accompany it with the information you received as to the offer to distribute corresponding source code. (This alternative is allowed only for noncommercial distribution and only if you received the program in object code or executable form with such an offer, in accord with Subsection b above.)

The source code for a work means the preferred form of the work for making modifications to it. For an executable work, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the executable. However, as a special exception, the source code distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

If distribution of executable or object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same
place counts as distribution of the source code, even though third parties are not compelled to copy the source along with the object code.

4. You may not copy, modify, sublicense, or distribute the Program except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense or distribute the Program is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

5. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Program or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Program (or any work based on the Program), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Program or works based on it.

6. Each time you redistribute the Program (or any work based on the Program), the recipient automatically receives a license from the original licensor to copy, distribute or modify the Program subject to these terms and conditions. You may not impose any further restrictions on the recipients’ exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties to this License.

7. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Program at all. For example, if a patent license would not permit royalty-free redistribution of the Program by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Program.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system, which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.
This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

8. If the distribution and/or use of the Program is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Program under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

9. The Free Software Foundation may publish revised and/or new versions of the General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of this License, you may choose any version ever published by the Free Software Foundation.

10. If you wish to incorporate parts of the Program into other free programs whose distribution conditions are different, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

NO WARRANTY

11. BECAUSE THE PROGRAM IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

12. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR
A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

libio

Version 1.0

Copyright (c) 2013 Joos Kiener <Joos.Kiener@gmail.com>

Description

IO: Classe(s) for improving IO in Java. Currently there is only 1 class in this library.

OptimizedRandomAccessFile: java.io.RandomAccessFile has a readLine() method with terrible performance. It reads files byte per byte and that is very slow.

OptimizedRandomAccessFile wraps java.io.RandomAccessFile and exposes all methods while having a readLine() method that performs similar to java.io.BufferedReader and hence about 100 times faster than that of java.io.RandomAccessFile while preserving correct random access.

This software consists of voluntary contributions made by many individuals (AUTHORS.txt, http://jqueryui.com/about) For exact contribution history, see the revision history and logs, available at http://jquery-ui.googlecode.com/svn/

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the
Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided
that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]"
replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

GNU GENERAL PUBLIC LICENSE Version 3, 29 June 2007

TERMS AND CONDITIONS
0. Definitions.

"This License" refers to version 3 of the GNU General Public License. "Copyright" also means copyright-like laws that apply to other kinds of works, such as semiconductor masks.

"The Program" refers to any copyrightable work licensed under this License. Each licensee is addressed as "you".

"Licensees" and "recipients" may be individuals or organizations. To "modify" a work means to copy from or adapt all or part of the work in a fashion requiring copyright permission, other than the making of an exact copy. The resulting work is called a "modified version" of the earlier work or a work "based on" the earlier work.

A "covered work" means either the unmodified Program or a work based on the Program.

To "propagate" a work means to do anything with it that, without permission, would make you directly or secondarily liable for infringement under applicable copyright law, except executing it on a computer or modifying a private copy. Propagation includes copying, distribution (with or without modification), making available to the public, and in some countries other activities as well.

To "convey" a work means any kind of propagation that enables other parties to make or receive copies. Mere interaction with a user through a computer network, with no transfer of a copy, is not conveying.

An interactive user interface displays "Appropriate Legal Notices" to the extent that it includes a convenient and prominently visible feature that (1) displays an appropriate copyright notice, and (2) tells the user that there is no warranty for the work (except to the extent that warranties are provided), that licensees may convey the work under this License, and how to view a copy of this License. If the interface presents a list of user commands or options, such as a menu, a prominent item in the list meets this criterion.

The "source code" for a work means the preferred form of the work for making modifications to it. "Object code" means any non-source form of a work.

A "Standard Interface" means an interface that either is an official standard defined by a recognized standards body, or, in the case of interfaces specified for a particular programming language, one that is widely used among developers working in that language.

The "System Libraries" of an executable work include anything, other than the work as a whole, that (a) is included in the normal form of packaging a Major Component, but which is not part of that Major Component, and (b) serves only to enable use of the work with that Major Component, or to implement a Standard Interface for which an implementation
is available to the public in source code form. A "Major Component", in this context, means a major essential component (kernel, window system, and so on) of the specific operating system (if any) on which the executable work runs, or a compiler used to produce the work, or an object code interpreter used to run it.

The "Corresponding Source" for a work in object code form means all the source code needed to generate, install, and (for an executable work) run the object code and to modify the work, including scripts to control those activities. However, it does not include the work's System Libraries, or general-purpose tools or generally available free programs which are used unmodified in performing those activities but which are not part of the work. For example, Corresponding Source includes interface definition files associated with source files for he work, and the source code for shared libraries and dynamically linked subprograms that the work is specifically designed to require, such as by intimate data communication or control flow between those subprograms and other parts of the work.

The Corresponding Source need not include anything that users can regenerate automatically from other parts of the Corresponding Source. The Corresponding Source for a work in source code form is that same work.

2. Basic Permissions.

All rights granted under this License are granted for the term of copyright on the Program, and are irrevocable provided the stated conditions are met. This License explicitly affirms your unlimited permission to run the unmodified Program. The output from running a covered work is covered by this License only if the output, given its content, constitutes a covered work. This License acknowledges your rights of fair use or other equivalent, as provided by copyright law.

You may make, run and propagate covered works that you do not convey, without conditions so long as your license otherwise remains in force. You may convey covered works to others for the sole purpose of having them make modifications exclusively for you, or provide you with facilities for running those works, provided that you comply with the terms of this License in conveying all material for which you do not control copyright. Those thus making or running the covered works for you must do so exclusively on your behalf, under your direction and control, on terms that prohibit them from making any copies of your copyrighted material outside their relationship with you.

Conveying under any other circumstances is permitted solely under the conditions stated below. Sublicensing is not allowed; section 10 makes it unnecessary.

3. Protecting Users' Legal Rights From Anti-Circumvention Law.

No covered work shall be deemed part of an effective technological measure under any applicable law fulfilling obligations under article 11 of the WIPO copyright treaty adopted
on 20 December 1996, or similar laws prohibiting or restricting circumvention of such measures. When you convey a covered work, you waive any legal power to forbid circumvention of technological measures to the extent such circumvention is effected by exercising rights under this License with respect to the covered work, and you disclaim any intention to limit operation or modification of the work as a means of enforcing, against the work's users, your or third parties' legal rights to forbid circumvention of technological measures.

You may convey verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice; keep intact all notices stating that this License and any non-permissive terms added in accord with section 7 apply to the code; keep intact all notices of the absence of any warranty; and give all recipients a copy of this License along with the Program.

You may charge any price or no price for each copy that you convey, and you may offer support or warranty protection for a fee.

5. Conveying Modified Source Versions.

You may convey a work based on the Program, or the modifications to produce it from the Program, in the form of source code under the terms of section 4, provided that you also meet all of these conditions:

a) The work must carry prominent notices stating that you modified it, and giving a relevant date.

b) The work must carry prominent notices stating that it is released under this License and any conditions added under section 7. This requirement modifies the requirement in section 4 to "keep intact all notices"

c) You must license the entire work, as a whole, under this License to anyone who comes into possession of a copy. This License will therefore apply, along with any applicable section 7 additional terms, to the whole of the work, and all its parts, regardless of how they are packaged. This License gives no permission to license the work in any other way, but it does not invalidate such permission if you have separately received it.

d) If the work has interactive user interfaces, each must display Appropriate Legal Notices; however, if the Program has interactive interfaces that do not display Appropriate Legal Notices, your work need not make them do so.

A compilation of a covered work with other separate and independent works, which are not by their nature extensions of the covered work, and which are not combined with it such as
to form a larger program, in or on a volume of a storage or distribution medium, is called an "aggregate" if the compilation and its resulting copyright are not used to limit the access or legal rights of the compilation's users beyond what the individual works permit. Inclusion of a covered work in an aggregate does not cause this License to apply to the other parts of the aggregate.

6. Conveying Non-Source Forms.

You may convey a covered work in object code form under the terms of sections 4 and 5, provided that you also convey the machine-readable Corresponding Source under the terms of this License, in one of these ways:

a) Convey the object code in, or embodied in, a physical product (including a physical distribution medium), accompanied by the Corresponding Source fixed on a durable physical medium customarily used for software interchange.

b) Convey the object code in, or embodied in, a physical product (including a physical distribution medium), accompanied by a written offer, valid for at least three years and valid for as long as you offer spare parts or customer support for that product model, to give anyone who possesses the object code either (1) a copy of the Corresponding Source for all the software in the product that is covered by this License, on a durable physical medium customarily used for software interchange, for a price no more than your reasonable cost of physically performing this conveying of source, or (2) access to copy the Corresponding Source from a network server at no charge.

c) Convey individual copies of the object code with a copy of the written offer to provide the Corresponding Source. This alternative is allowed only occasionally and noncommercially, and only if you received the object code with such an offer, in accord with subsection 6b.

d) Convey the object code by offering access from a designated place (gratis or for a charge), and offer equivalent access to the Corresponding Source in the same way through the same place at no further charge. You need not require recipients to copy the Corresponding Source along with the object code. If the place to copy the object code is a network server, the Corresponding Source may be on a different server (operated by you or a third party) that supports equivalent copying facilities, provided you maintain clear directions next to the object code saying where to find the Corresponding Source. Regardless of what server hosts the Corresponding Source, you remain obligated to ensure that it is available for as long as needed to satisfy these requirements.

e) Convey the object code using peer-to-peer transmission, provided you inform other peers where the object code and Corresponding Source of the work are being offered to the general public at nocharge under subsection 6d. A separable portion of the object code,
whose source code is excluded from the Corresponding Source as a System Library, need not be included in conveying the object code work.

A "User Product" is either (1) a "consumer product", which means any tangible personal property which is normally used for personal, family, or household purposes, or (2) anything designed or sold for incorporation into a dwelling. In determining whether a product is a consumer product, doubtful cases shall be resolved in favor of coverage. For a particular product received by a particular user, "normally used" refers to a typical or common use of that class of product, regardless of the status of the particular user or of the way in which the particular user actually uses, or expects or is expected to use, the product. A product is a consumer product regardless of whether the product has substantial commercial, industrial or non-consumer uses, unless such uses represent the only significant mode of use of the product.

"Installation Information" for a User Product means any methods, procedures, authorization keys, or other information required to install and execute modified versions of a covered work in that User Product from a modified version of its Corresponding Source. The information must suffice to ensure that the continued functioning of the modified object code is in no case prevented or interfered with solely because modification has been made.

If you convey an object code work under this section in, or with, or specifically for use in, a User Product, and the conveying occurs as part of a transaction in which the right of possession and use of the User Product is transferred to the recipient in perpetuity or for a fixed term (regardless of how the transaction is characterized), the Corresponding Source conveyed under this section must be accompanied by the Installation Information. But this requirement does not apply if neither you nor any third party retains the ability to install modified object code on the User Product (for example, the work has been installed in ROM). The requirement to provide Installation Information does not include a requirement to continue to provide support service, warranty, or updates for a work that has been modified or installed by the recipient, or for the User Product in which it has been modified or installed. Access to a network may be denied when the modification itself materially and adversely affects the operation of the network or violates the rules and protocols for communication across the network.

Corresponding Source conveyed, and Installation Information provided, in accord with this section must be in a format that is publicly documented (and with an implementation available to the public in source code form), and must require no special password or key for unpacking, reading or copying.

7. Additional Terms.

"Additional permissions" are terms that supplement the terms of this License by making exceptions from one or more of its conditions. Additional permissions that are applicable to
the entire Program shall be treated as though they were included in this License, to the extent that they are valid under applicable law. If additional permissions apply only to part of the Program, that part may be used separately under those permissions, but the entire Program remains governed by this License without regard to the additional permissions.

When you convey a copy of a covered work, you may at your option remove any additional permissions from that copy, or from any part of it. (Additional permissions may be written to require their own removal in certain cases when you modify the work.) You may place additional permissions on material, added by you to a covered work, for which you have or can give appropriate copyright permission. Notwithstanding any other provision of this License, for material you add to a covered work, you may (if authorized by the copyright holders of that material) supplement the terms of this License with terms.

a) Disclaiming warranty or limiting liability differently from the terms of sections 15 and 16 of this License; or

b) Requiring preservation of specified reasonable legal notices or author attributions in that material or in the Appropriate Legal Notices displayed by works containing it; or

c) Prohibiting misrepresentation of the origin of that material, or requiring that modified versions of such material be marked in reasonable ways as different from the original version; or

d) Limiting the use for publicity purposes of names of licensors or authors of the material; or

e) Declining to grant rights under trademark law for use of some trade names, trademarks, or service marks; or

f) Requiring indemnification of licensors and authors of that material by anyone who conveys the material (or modified versions of it) with contractual assumptions of liability to the recipient, for any liability that these contractual assumptions directly impose on those licensors and authors.

All other non-permissive additional terms are considered "further restrictions" within the meaning of section 10. If the Program as you received it, or any part of it, contains a notice stating that it is governed by this License along with a term that is a further restriction, you may remove that term. If a license document contains a further restriction but permits relicensing or conveying under this License, you may add to a covered work material governed by the terms of that license document, provided that the further restriction does not survive such relicensing or conveying.

If you add terms to a covered work in accord with this section, you must place, in the relevant source files, a statement of the additional terms that apply to those files, or a notice indicating where to find the applicable terms.
Additional terms, permissive or non-permissive, may be stated in the form of a separately written license, or stated as exceptions; the above requirements apply either way.

8. Termination.

You may not propagate or modify a covered work except as expressly provided under this License. Any attempt otherwise to propagate or modify it is void, and will automatically terminate your rights under this License (including any patent licenses granted under the third paragraph of section 11).

However, if you cease all violation of this License, then your license from a particular copyright holder is reinstated (a) provisionally, unless and until the copyright holder explicitly and finally terminates your license, and (b) permanently, if the copyright holder fails to notify you of the violation by some reasonable means prior to 60 days after the cessation.

Moreover, your license from a particular copyright holder is reinstated permanently if the copyright holder notifies you of the violation by some reasonable means, this is the first time you have received notice of violation of this License (for any work) from that copyright holder, and you cure the violation prior to 30 days after your receipt of the notice.

Termination of your rights under this section does not terminate the licenses of parties who have received copies or rights from you under this License. If your rights have been terminated and not permanently reinstated, you do not qualify to receive new licenses for the same material under section 10.

You are not required to accept this License in order to receive or run a copy of the Program. Ancillary propagation of a covered work occurring solely as a consequence of using peer-to-peer transmission to receive a copy likewise does not require acceptance. However, nothing other than this License grants you permission to propagate or modify any covered work. These actions infringe copyright if you do not accept this License. Therefore, by modifying or propagating a covered work, you indicate your acceptance of this License to do so.

10. Automatic Licensing of Downstream Recipients.

Each time you convey a covered work, the recipient automatically receives a license from the original licensors, to run, modify and propagate that work, subject to this License. You are not responsible for enforcing compliance by third parties with this License.

An "entity transaction" is a transaction transferring control of an organization, or substantially all assets of one, or subdividing an organization, or merging organizations. If propagation of a covered work results from an entity transaction, each party to that
transaction who receives a copy of the work also receives whatever licenses to the work the party's predecessor in interest had or could give under the previous paragraph, plus a right to possession of the Corresponding Source of the work from the predecessor in interest, if the predecessor has it or can get it with reasonable efforts.

You may not impose any further restrictions on the exercise of the rights granted or affirmed under this License. For example, you may not impose a license fee, royalty, or other charge for exercise of rights granted under this License, and you may not initiate litigation (including a cross-claim or counterclaim in a lawsuit) alleging that any patent claim is infringed by making, using, selling, offering for sale, or importing the Program or any portion of it.

11. Patents.

A "contributor" is a copyright holder who authorizes use under this License of the Program or a work on which the Program is based. The work thus licensed is called the contributor's "contributor version".

A contributor's "essential patent claims" are all patent claims owned or controlled by the contributor, whether already acquired or hereafter acquired, that would be infringed by some manner, permitted by this License, of making, using, or selling its contributor version, but do not include claims that would be infringed only as a consequence of further modification of the contributor version. For purposes of this definition, "control" includes the right to grant patent sublicenses in a manner consistent with the requirements of this License.

Each contributor grants you a non-exclusive, worldwide, royalty-free patent license under the contributor's essential patent claims, to make, use, sell, offer for sale, import and otherwise run, modify and propagate the contents of its contributor version.

In the following three paragraphs, a "patent license" is any express agreement or commitment, however denominated, not to enforce a patent (such as an express permission to practice a patent or covenant not to sue for patent infringement). To "grant" such a patent license to a party means to make such an agreement or commitment not to enforce a patent against the party.

If you convey a covered work, knowingly relying on a patent license, and the Corresponding Source of the work is not available for anyone to copy, free of charge and under the terms of this License, through a publicly available network server or other readily accessible means, then you must either (1) cause the Corresponding Source to be so available, or (2) arrange to deprive yourself of the benefit of the patent license for this particular work, or (3) arrange, in a manner consistent with the requirements of this License, to extend the patent license to downstream recipients. "Knowingly relying" means you have actual knowledge that, but for the patent license, your conveying the covered work in a country,
or your recipient's use of the covered work in a country, would infringe one or more
identifiable patents in that country that you have reason to believe are valid.

If, pursuant to or in connection with a single transaction or arrangement, you convey, or
propagate by procuring conveyance of, a covered work, and grant a patent license to some
of the parties receiving the covered work authorizing them to use, propagate, modify or
convey a specific copy of the covered work, then the patent license you grant is
automatically extended to all recipients of the covered work and works based on it.

A patent license is "discriminatory" if it does not include within the scope of its coverage,
prohibits the exercise of, or is conditioned on the non-exercise of one or more of the rights
that are specifically granted under this License. You may not convey a covered work if you
are a party to an arrangement with a third party that is in the business of distributing
software, under which you make payment to the third party based on the extent of your
activity of conveying the work, and under which the third party grants, to any of the parties
who would receive the covered work from you, a discriminatory patent license (a) in
connection with copies of the covered work conveyed by you (or copies made from those
copies), or (b) primarily for and in connection with specific products or compilations that
contain the covered work, unless you entered into that arrangement, or that patent license
was granted, prior to 28 March 2007.

Nothing in this License shall be construed as excluding or limiting any implied license or
other defenses to infringement that may otherwise be available to you under applicable
patent law.

If conditions are imposed on you (whether by court order, agreement or otherwise) that
contradict the conditions of this License, they do not excuse you from the conditions of this
License. If you cannot convey a covered work so as to satisfy simultaneously your
obligations under this License and any other pertinent obligations, then as a consequence
you may not convey it at all. For example, if you agree to terms that obligate you to collect
a royalty for further conveying from those to whom you convey the Program, the only way
you could satisfy both those terms and this License would be to refrain entirely from
conveying the Program.

13. Use with the GNU Affero General Public License.

Notwithstanding any other provision of this License, you have permission to link or combine
any covered work with a work licensed under version 3 of the GNU Affero General Public
License into a single combined work, and to convey the resulting work. The terms of this
License will continue to apply to the part which is the covered work, but the special
requirements of the GNU Affero General Public License, section 13, concerning interaction
through a network will apply to the combination as such.
14. Revised Versions of this License.

The Free Software Foundation may publish revised and/or new versions of the GNU General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies that a certain numbered version of the GNU General Public License "or any later version" applies to it, you have the option of following the terms and conditions either of that numbered version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of the GNU General Public License, you may choose any version ever published by the Free Software Foundation. If the Program specifies that a proxy can decide which future versions of the GNU General Public License can be used, that proxy's public statement of acceptance of a version permanently authorizes you to choose that version for the Program. Later license versions may give you additional or different permissions. However, no additional obligations are imposed on any author or copyright holder as a result of your choosing to follow a later version.

15. Disclaimer of Warranty.

THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

16. Limitation of Liability.

IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MODIFIES AND/OR CONVEYS THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

17. Interpretation of Sections 15 and 16.

If the disclaimer of warranty and limitation of liability provided above cannot be given local legal effect according to their terms, reviewing courts shall apply local law that most closely
approximates an absolute waiver of all civil liability in connection with the Program, unless a warranty or assumption of liability accompanies a copy of the Program in return for a fee.

Libopencsv-Java

Copyright © 1999-2012 The Apache Software Foundation. All Rights Reserved.

Version 2.3

https://packages.debian.org/sid/libopencsv-java

Description

opencsv - Library for reading and writing CSV in Java

Opencsv is a very simple csv (comma-separated values) parser library for Java. It supports all the basic csv-type things you're likely to want to do:

- Arbitrary numbers of values per line
- Ignoring commas in quoted elements
- Handling quoted entries with embedded carriage returns (ie entries that span multiple lines)
- Configurable separator and quote characters (or use sensible defaults)
Read all the entries at once, or use an Iterator style model
Creating csv files from String[] (ie. automatic escaping of embeddedquote chars)

License

Apache License
Version 2.0, January 2004
http://www.apache.org/licenses/

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted"
means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents
of the NOTICE file are for informational purposes only and
do not modify the License. You may add Your own attribution
notices within Derivative Works that You distribute, alongside
or as an addendum to the NOTICE text from the Work, provided
that such additional attribution notices cannot be construed
as modifying the License.

You may add Your own copyright statement to Your modifications and
may provide additional or different license terms and conditions
for use, reproduction, or distribution of Your modifications, or
for any such Derivative Works as a whole, provided Your use,
reproduction, and distribution of the Work otherwise complies with
the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,
any Contribution intentionally submitted for inclusion in the Work
by You to the Licensor shall be under the terms and conditions of
this License, without any additional terms or conditions.
Notwithstanding the above, nothing herein shall supersede or modify
the terms of any separate license agreement You may have executed
with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade
names, trademarks, service marks, or product names of the Licensor,
except as required for reasonable and customary use in describing the
origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or
agreed to in writing, Licensor provides the Work (and each
Contributor provides its Contributions) on an "AS IS" BASIS,
WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
implied, including, without limitation, any warranties or conditions
of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
PARTICULAR PURPOSE. You are solely responsible for determining the
appropriateness of using or redistributing the Work and assume any
risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory,
whether in tort (including negligence), contract, or otherwise,
unless required by applicable law (such as deliberate and grossly
negligent acts) or agreed to in writing, shall any Contributor be
liable to You for damages, including any direct, indirect, special,
incidental, or consequential damages of any character arising as a
result of this License or out of the use or inability to use the
Work (including but not limited to damages for loss of goodwill,
work stoppage, computer failure or malfunction, or any and all
other commercial damages or losses), even if such Contributor
has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing
the Work or Derivative Works thereof, You may choose to offer,
and charge a fee for, acceptance of support, warranty, indemnity,
or other liability obligations and/or rights consistent with this
License. However, in accepting such obligations, You may act only
on Your own behalf and on Your sole responsibility, not on behalf
of any other Contributor, and only if You agree to indemnify,
defend, and hold each Contributor harmless for any liability
incurred by, or claims asserted against, such Contributor by reason
of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS
APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

**libsnappy1**

Version 1.1.2

Copyright (c) 2015

[https://packages.debian.org/search?keywords=libsnappy1](https://packages.debian.org/search?keywords=libsnappy1)

**Description**

Snappy (libsnappy1) is a compression/decompression library. It does not aim for maximum compression, or compatibility with any other compression library; instead, it aims for very high speeds and reasonable compression. For instance, compared to the fastest mode of zlib, Snappy is an order of magnitude faster for most inputs, but the resulting compressed files are anywhere from 20% to 100% bigger. On a single core of a Core i7 processor in 64-bit mode, Snappy compresses at about 250 MB/sec or more and decompresses at about 500 MB/sec or more.

Snappy is widely used inside Google, in everything from BigTable and MapReduce to our internal RPC systems. (Snappy has previously been referred to as “Zippy” in some presentations and the likes.)

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licenser" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.
"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.
4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the
appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to
communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the license. You may add Your own attribution
notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction,
and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by
the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all
other entities that control, are controlled by, or are under common
control with that entity. For the purposes of this definition,
"control" means (i) the power, direct or indirect, to cause the
direction or management of such entity, whether by contract or
otherwise, or (ii) ownership of fifty percent (50%) or more of the
outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity
exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses
granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions
of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of Your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.
"Contribution" shall mean any work of authorship, including
the original version of the Work and any modifications or additions
to that Work or Derivative Works thereof, that is intentionally
submitted to Licensor for inclusion in the Work by the copyright owner
or by an individual or Legal Entity authorized to submit on behalf of
the copyright owner. For the purposes of this definition, "submitted"
means any form of electronic, verbal, or written communication sent
to the Licensor or its representatives, including but not limited to
communication on electronic mailing lists, source code control systems,
and issue tracking systems that are managed by, or on behalf of, the
Licensor for the purpose of discussing and improving the Work, but
excluding communication that is conspicuously marked or otherwise
designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity
on behalf of whom a Contribution has been received by Licensor and
subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of
this License, each Contributor hereby grants to You a perpetual,
worldwide, non-exclusive, no-charge, royalty-free, irrevocable
copyright license to reproduce, prepare Derivative Works of,
publicly display, publicly perform, sublicense, and distribute the
Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of
this License, each Contributor hereby grants to You a perpetual,
worldwide, non-exclusive, no-charge, royalty-free, irrevocable
(except as stated in this section) patent license to make, have made,
use, offer to sell, sell, import, and otherwise transfer the Work,
where such license applies only to those patent claims licensable
by such Contributor that are necessarily infringed by their
Contribution(s) alone or by combination of their Contribution(s)
with the Work to which such Contribution(s) was submitted. If You
institute patent litigation against any entity (including a
cross-claim or counterclaim in a lawsuit) alleging that the Work
or a Contribution incorporated within the Work constitutes direct
or contributory patent infringement, then any patent licenses
granted to You under this License for that Work shall terminate
as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the
Work or Derivative Works thereof in any medium, with or without
modifications, and in Source or Object form, provided that You
meet the following conditions:

(a) You must give any other recipients of the Work or
   Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices
   stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works
   that You distribute, all copyright, patent, trademark, and
   attribution notices from the Source form of the Work,
   excluding those notices that do not pertain to any part of
   the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its
distribution, then any Derivative Works that You distribute must
include a readable copy of the attribution notices contained
within such NOTICE file, excluding those notices that do not
pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify,
defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition,
"control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their
Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.
7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties of or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

Lz4

LZ4 is a lossless compression algorithm.

https://github.com/lz4/lz4

licenses

This repository uses 2 different licenses:

- all files in the `lib` directory use a BSD 2-Clause license
- all other files use a GPLv2 license, unless explicitly stated otherwise

Relevant license is reminded at the top of each source file, and with presence of COPYING or LICENSE file in associated directories.
This model is selected to emphasize that files in the `lib` directory are designed to be included into 3rd party applications, while all other files, in `programs`, `tests` or `examples`, receive more limited attention and support for such scenario.

**BSD 2-clause "Simplified" License**

All rights reserved.

See [http://spdx.org/licenses/BSD-2-Clause](http://spdx.org/licenses/BSD-2-Clause)

Redistribution and use in source and binary forms, with or without modification, are permitted provided that the following conditions are met:

- Redistributions of source code must retain the above copyright notice, this list of conditions and the following disclaimer.
- Redistributions in binary form must reproduce the above copyright notice, this list of conditions and the following disclaimer in the documentation and/or other materials provided with the distribution.

**The GNU General Public License (GPL)**

**Version 2, June 1991**

Copyright (C) 1989, 1991 Free Software Foundation, Inc. 59 Temple Place, Suite 330, Boston, MA 02111-1307 USA

Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

Preamble
The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change free software--to make sure the software is free for all its users. This General Public License applies to most of the Free Software Foundation's software and to any other program whose authors commit to using it. (Some other Free Software Foundation software is covered by the GNU Library General Public License instead.) You can apply it to your programs, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs; and that you know you can do these things.

To protect your rights, we need to make restrictions that forbid anyone to deny you these rights or to ask you to surrender the rights. These restrictions translate to certain responsibilities for you if you distribute copies of the software, or if you modify it.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must give the recipients all the rights that you have. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

We protect your rights with two steps: (1) copyright the software, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the software.

Also, for each author's protection and ours, we want to make certain that everyone understands that there is no warranty for this free software. If the software is modified by someone else and passed on, we want its recipients to know that what they have is not the original, so that any problems introduced by others will not reflect on the original authors' reputations.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that redistributors of a free program will individually obtain patent licenses, in effect making the program proprietary. To prevent this, we have made it clear that any patent must be licensed for everyone's free use or not licensed at all.

The precise terms and conditions for copying, distribution and modification follow.

TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License applies to any program or other work which contains a notice placed by the copyright holder saying it may be distributed under the terms of this General Public License. The "Program", below, refers to any such program or work, and a "work based on the Program" means either the Program or any derivative work under copyright law: that is
to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another language. (Hereinafter, translation is included without limitation in the term "modification"). Each licensee is addressed as "you".

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running the Program is not restricted, and the output from the Program is covered only if its contents constitute a work based on the Program (independent of having been made by running the Program). Whether that is true depends on what the Program does.

1. You may copy and distribute verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and give any other recipients of the Program a copy of this License along with the Program.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Program or any portion of it, thus forming a work based on the Program, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

a) You must cause the modified files to carry prominent notices stating that you changed the files and the date of any change.

b) You must cause any work that you distribute or publish, that in whole or in part contains or is derived from the Program or any part thereof, to be licensed as a whole at no charge to all third parties under the terms of this License.

c) If the modified program normally reads commands interactively when run, you must cause it, when started running for such interactive use in the most ordinary way, to print or display an announcement including an appropriate copyright notice and a notice that there is no warranty (or else, saying that you provide a warranty) and that users may redistribute the program under these conditions, and telling the user how to view a copy of this License. (Exception: if the Program itself is interactive but does not normally print such an announcement, your work based on the Program is not required to print an announcement.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Program, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Program, the distribution of the
whole must be on the terms of this License, whose permissions for other licensees extend to
the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written
entirely by you; rather, the intent is to exercise the right to control the distribution of
derivative or collective works based on the Program.

In addition, mere aggregation of another work not based on the Program with the Program
(or with a work based on the Program) on a volume of a storage or distribution medium
does not bring the other work under the scope of this License.

3. You may copy and distribute the Program (or a work based on it, under Section 2) in
object code or executable form under the terms of Sections 1 and 2 above provided that
you also do one of the following:

a) Accompany it with the complete corresponding machine-readable source code, which
must be distributed under the terms of Sections 1 and 2 above on a medium customarily
used for software interchange; or,

b) Accompany it with a written offer, valid for at least three years, to give any third party,
for a charge no more than your cost of physically performing source distribution, a
complete machine-readable copy of the corresponding source code, to be distributed under
the terms of Sections 1 and 2 above on a medium customarily used for software
interchange; or,

c) Accompany it with the information you received as to the offer to distribute
corresponding source code. (This alternative is allowed only for noncommercial distribution
and only if you received the program in object code or executable form with such an offer,
in accord with Subsection b above.)

The source code for a work means the preferred form of the work for making modifications
to it. For an executable work, complete source code means all the source code for all
modules it contains, plus any associated interface definition files, plus the scripts used to
control compilation and installation of the executable. However, as a special exception, the
source code distributed need not include anything that is normally distributed (in either
source or binary form) with the major components (compiler, kernel, and so on) of the
operating system on which the executable runs, unless that component itself accompanies
the executable.

If distribution of executable or object code is made by offering access to copy from a
designated place, then offering equivalent access to copy the source code from the same
place counts as distribution of the source code, even though third parties are not
compelled to copy the source along with the object code.
4. You may not copy, modify, sublicense, or distribute the Program except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense or distribute the Program is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

5. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Program or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Program (or any work based on the Program), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Program or works based on it.

6. Each time you redistribute the Program (or any work based on the Program), the recipient automatically receives a license from the original licensor to copy, distribute or modify the Program subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties to this License.

7. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Program at all. For example, if a patent license would not permit royalty-free redistribution of the Program by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Program.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system, which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.
8. If the distribution and/or use of the Program is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Program under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

9. The Free Software Foundation may publish revised and/or new versions of the General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of this License, you may choose any version ever published by the Free Software Foundation.

10. If you wish to incorporate parts of the Program into other free programs whose distribution conditions are different, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

NO WARRANTY

11. BECAUSE THE PROGRAM IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

12. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.
Math-Atlas

Open source component version: 3.11.30

Vertica LAPACK library addition. ATLAS (Automatically Tuned Linear Algebra Software) provides optimized Linear Algebra kernels for arbitrary cache-based architectures. ATLAS provides ANSI C and Fortran77 interfaces for the entire BLAS API, and a small portion of the LAPACK AP.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.
"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not
pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify,
defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

**License**

Copyright © 1985-2020 by the Massachusetts Institute of Technology.

Export of software employing encryption from the United States of America may require a specific license from the United States Government. It is the responsibility of any person or organization contemplating export to obtain such a license before exporting.

WITHIN THAT CONSTRAINT, permission to use, copy, modify, and distribute this software and its documentation for any purpose and without fee is hereby granted, provided that the above copyright notice appear in all copies and that both that copyright notice and this permission notice appear in supporting documentation, and that the name of M.I.T. not be used in advertising or publicity pertaining to distribution of the software without specific, written prior permission. Furthermore if you modify this software you must label your software as modified software and not distribute it in such a fashion that it might be confused with the original MIT software. M.I.T. makes no representations about the suitability of this software for any purpose. It is provided “as is” without express or implied warranty.

Individual source code files are copyright MIT, Cygnus Support, Novell, OpenVision Technologies, Oracle, Red Hat, Sun Microsystems, FundsXpress, and others.
Project Athena, Athena, Athena MUSE, Discuss, Hesiod, Kerberos, Moira, and Zephyr are trademarks of the Massachusetts Institute of Technology (MIT). No commercial use of these trademarks may be made without prior written permission of MIT.

“Commercial use” means use of a name in a product or other for-profit manner. It does NOT prevent a commercial firm from referring to the MIT trademarks in order to convey information (although in doing so, recognition of their trademark status should be given).

 Msgpack

Msgpack is used in Vertica Side Process.
1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the
licensor for the purpose of discussing and improving the Work, but
excluding communication that is conspicuously marked or otherwise
designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean licensor and any individual or legal entity
on behalf of whom a contribution has been received by licensor and
subsequently incorporated within the work.

2. Grant of copyright license. Subject to the terms and conditions of
this license, each contributor hereby grants to you a perpetual,
worldwide, non-exclusive, no-charge, royalty-free, irrevocable
copyright license to reproduce, prepare derivative works of,
publicly display, publicly perform, sublicense, and distribute the
work and such derivative works in source or object form.

3. Grant of patent license. Subject to the terms and conditions of
this license, each contributor hereby grants to you a perpetual,
worldwide, non-exclusive, no-charge, royalty-free, irrevocable
(except as stated in this section) patent license to make, have made,
use, offer to sell, sell, import, and otherwise transfer the work,
where such license applies only to those patent claims licensable
by such contributor that are necessarily infringed by their
contribution(s) alone or by combination of their contribution(s)
with the work to which such contribution(s) was submitted. If you
institute patent litigation against any entity (including a
cross-claim or counterclaim in a lawsuit) alleging that the work
or a contribution incorporated within the work constitutes direct
or contributory patent infringement, then any patent licenses
granted to you under this license for that work shall terminate
as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the
work or derivative works thereof in any medium, with or without
modifications, and in source or object form, provided that you
meet the following conditions:

(a) you must give any other recipients of the work or
derivative works a copy of this license; and

(b) you must cause any modified files to carry prominent notices
stating that you changed the files; and

(c) you must retain, in the source form of any derivative works
that you distribute, all copyright, patent, trademark, and
attribute notices from the source form of the work,
excluding those notices that do not pertain to any part of
the derivative works; and

(d) if the work includes a "notice" text file as part of its
distribution, then any derivative works that you distribute must
include a readable copy of the attribution notices contained
within such notice file, excluding those notices that do not
pertain to any part of the derivative works, in at least one
of the following places: within a notice text file distributed
as part of the derivative works; within the source form or
documentation, if provided along with the derivative works; or,
within a display generated by the derivative works, if and
wherever such third-party notices normally appear. the contents
of the notice file are for informational purposes only and
do not modify the license. you may add your own attribution
notices within derivative works that you distribute, alongside
or as an addendum to the notice text from the work, provided
that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

    TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

   "License" shall mean the terms and conditions for use, reproduction,
   and distribution as defined by Sections 1 through 9 of this document.

   "Licenser" shall mean the copyright owner or entity authorized by
   the copyright owner that is granting the License.

   "Legal Entity" shall mean the union of the acting entity and all
   other entities that control, are controlled by, or are under common
   control with that entity. For the purposes of this definition,
   "control" means (i) the power, direct or indirect, to cause the
   direction or management of such entity, whether by contract or
   otherwise, or (ii) ownership of fifty percent (50%) or more of the
   outstanding shares, or (iii) beneficial ownership of such entity.

   "You" (or "Your") shall mean an individual or Legal Entity
   exercising permissions granted by this License.

   "Source" form shall mean the preferred form for making modifications,
   including but not limited to software source code, documentation
source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the
Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.
8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

OpenJDK

Version 7u181

Copyright (c) 2013-2018 Azul Systems

https://www.azul.com/downloads/zulu/
OpenJDK Trademark Notice

Version 1.21, 2017/12/19

OpenJDK (the "Name") is a trademark of Oracle America, Inc. ("Oracle") (the "Trademark Owner").

Trademark Owner publishes source code (the "Original Software") at several World Wide Web locations (each a "Website"). These locations include:

http://download.java.net/openjdk/jdk6
http://download.java.net/openjdk/jdk7
http://download.java.net/openjdk/jdk8
http://hg.openjdk.java.net/jdk6
http://hg.openjdk.java.net/jdk7
http://hg.openjdk.java.net/jdk7u
http://hg.openjdk.java.net/jdk8
http://hg.openjdk.java.net/jdk8u
http://hg.openjdk.java.net/jdk9
http://hg.openjdk.java.net/jdk10
http://hg.openjdk.java.net/jdk
http://hg.openjdk.java.net/jdk-updates

as well as any successor locations designated by Trademark Owner in future revisions of this Notice.

Each Website provides Original Software in two parts: A Java virtual machine (the "Virtual Machine") and an API library and tools (the "Library and Tools").

Trademark Owner permits any person obtaining a copy of this software (the "Software") that is based on Original Software to use the Name in the package names and version strings of the Software subject to the following conditions:

(1) The Software is a substantially complete implementation of the OpenJDK development kit or runtime environment source code retrieved from a single Website, and the vast majority of the Software code is identical to that upstream Original Software, except that:

(a) Changes required to port Original Software to new operating systems or hardware architectures are permitted, so long as that work takes place in the context of an approved Project hosted in the OpenJDK Community; and

(b) A Virtual Machine from one Website may be combined with the Library and Tools of another Website, so long as the vast majority of the code in each is identical to the corresponding upstream Virtual Machine or Library and Tools component.

(2) No permission is hereby granted to use the Name in any other manner, unless such use constitutes "fair use", for example "based on the OpenJDK source code" or "DistroXYZ's packaging of
the OpenJDK 6 code”.

(3) Trademark Owner makes no warranties of any kind respecting the Name, and all representations and warranties, including any implied warranty of merchantability, fitness for a particular purpose or non-infringement are hereby disclaimed.

(4) Finally, this notice and the following legend are included in all copies of the Software or portions of it:

Java and OpenJDK are trademarks or registered trademarks of Oracle and/or its affiliates.

Trademark Owner intends to revise this Notice as necessary in order to meet the needs of the OpenJDK Community. Revisions to this notice will be announced on the public mailing list announce at openjdk.java.net, to which you may subscribe by visiting http://mail.openjdk.java.net. Please send questions or comments about this Notice to the discuss list at the same location.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.
"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct
or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided License does not include the notice that this License permits modification, and You also must add a notable notice of any additional terms and conditions.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution knowingly submitted to become part of the Work by You shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

Copyright [yyyy] [name of copyright owner]

This product includes cryptographic software written by Eric Young
(eay@cryptsoft.com). This product includes software written by Tim
Hudson (tjh@cryptsoft.com).

/*
Original SSLeay License

Copyright (C) 1995-1998 Eric Young (eay@cryptsoft.com)
All rights reserved.

This package is an SSL implementation written
by Eric Young (eay@cryptsoft.com).
The implementation was written so as to conform with Netscapes SSL.

This library is free for commercial and non-commercial use as long as
the following conditions are aheared to. The following conditions
apply to all code found in this distribution, be it the RC4, RSA,
lhash, DES, etc., code; not just the SSL code. The SSL documentation
included with this distribution is covered by the same copyright terms
except that the holder is Tim Hudson (tjh@cryptsoft.com).

Copyright remains Eric Young's, and as such any Copyright notices in
the code are not to be removed.
If this package is used in a product, Eric Young should be given attribution
as the author of the parts of the library used.
This can be in the form of a textual message at program startup or
in documentation (online or textual) provided with the package.

Redistribution and use in source and binary forms, with or without modification, are permitted provided that the following conditions are met:

1. Redistributions of source code must retain the copyright notice, this list of conditions and the following disclaimer.
2. Redistributions in binary form must reproduce the above copyright notice, this list of conditions and the following disclaimer in the documentation and/or other materials provided with the distribution.
3. All advertising materials mentioning features or use of this software must display the following acknowledgement:

   "This product includes cryptographic software written by Eric Young (eay@cryptsoft.com)"

   The word 'cryptographic' can be left out if the routines from the library being used are not cryptographic related :-).
4. If you include any Windows specific code (or a derivative thereof) from the apps directory (application code) you must include an acknowledgement:

   "This product includes software written by Tim Hudson (tjh@cryptsoft.com)"

THIS SOFTWARE IS PROVIDED BY ERIC YOUNG "AS IS" AND ANY EXPRESS OR IMPLIED WARRANTIES, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE ARE DISCLAIMED. IN NO EVENT SHALL THE AUTHOR OR CONTRIBUTORS BE LIABLE FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING, BUT NOT LIMITED TO, PROCUREMENT OF SUBSTITUTE GOODS OR SERVICES; LOSS OF USE, DATA, OR PROFITS; OR BUSINESS INTERRUPTION) HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE USE OF THIS SOFTWARE, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGE.

The licence and distribution terms for any publically available version or derivative of this code cannot be changed. i.e. this code cannot simply be copied and put under another distribution licence [including the GNU Public Licence.]
License

Apache License
Version 2.0, January 2004
http://www.apache.org/licenses/

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes
of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and
(d) If the Work includes a "NOTICE" text file as part of its
distribution, then any Derivative Works that You distribute must
include a readable copy of the attribution notices contained
within such NOTICE file, excluding those notices that do not
pertain to any part of the Derivative Works, in at least one
of the following places: within a NOTICE text file distributed
as part of the Derivative Works; within the Source form or
documentation, if provided along with the Derivative Works; or,
within a display generated by the Derivative Works, if and
wherever such third-party notices normally appear. The contents
of the NOTICE file are for informational purposes only and
do not modify the License. You may add Your own attribution
notices within Derivative Works that You distribute, alongside
or as an addendum to the NOTICE text from the Work, provided
that such additional attribution notices cannot be construed
as modifying the License.

You may add Your own copyright statement to Your modifications and
may provide additional or different license terms and conditions
for use, reproduction, or distribution of Your modifications, or
for any such Derivative Works as a whole, provided Your use,
reproduction, and distribution of the Work otherwise complies with
the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,
any Contribution intentionally submitted for inclusion in the Work
by You to the Licensor shall be under the terms and conditions of
this License, without any additional terms or conditions.
Notwithstanding the above, nothing herein shall supersede or modify
the terms of any separate license agreement You may have executed
with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade
names, trademarks, service marks, or product names of the Licensor,
except as required for reasonable and customary use in describing the
origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or
agreed to in writing, Licensor provides the Work (and each
Contributor provides its Contributions) on an "AS IS" BASIS,
WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
implied, including, without limitation, any warranties or conditions
of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
PARTICULAR PURPOSE. You are solely responsible for determining the
appropriateness of using or redistributing the Work and assume any
risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory,
whether in tort (including negligence), contract, or otherwise,
unless required by applicable law (such as deliberate and grossly
negligent acts) or agreed to in writing, shall any Contributor be
liable to You for damages, including any direct, indirect, special,
incidental, or consequential damages of any character arising as a
result of this License or out of the use or inability to use the
Work (including but not limited to damages for loss of goodwill,
work stoppage, computer failure or malfunction, or any and all
other commercial damages or losses), even if such Contributor
has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing
the Work or Derivative Works thereof, You may choose to offer,
and charge a fee for, acceptance of support, warranty, indemnity,
or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.
"Licensort shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributors" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.
3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the license. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

   You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify
the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain
separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its
distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this
License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

Copyright [yyyy] [name of copyright owner]

License

THE ACCOMPANYING PROGRAM IS PROVIDED UNDER THE TERMS OF THIS ECLIPSE PUBLIC LICENSE ("AGREEMENT"). ANY USE, REPRODUCTION OR DISTRIBUTION OF THE PROGRAM CONSTITUTES RECIPIENT'S ACCEPTANCE OF THIS AGREEMENT.

1. DEFINITIONS

"Contribution" means:

a) in the case of the initial Contributor, the initial code and documentation distributed under this Agreement, and
b) in the case of each subsequent Contributor:

i) changes to the Program, and

ii) additions to the Program;

where such changes and/or additions to the Program originate from and are distributed by that particular Contributor. A Contribution 'originates' from a Contributor if it was added to the Program by such Contributor itself or anyone acting on such Contributor's behalf. Contributions do not include additions to the Program which: (i) are separate modules of software distributed in conjunction with the Program under their own license agreement, and (ii) are not derivative works of the Program.

"Contributor" means any person or entity that distributes the Program.

"Licensed Patents" mean patent claims licensable by a Contributor which are necessarily infringed by the use or sale of its Contribution alone or when combined with the Program.

"Program" means the Contributions distributed in accordance with this Agreement.

"Recipient" means anyone who receives the Program under this Agreement, including all Contributors.

2. GRANT OF RIGHTS

a) Subject to the terms of this Agreement, each Contributor hereby grants Recipient a non-exclusive, worldwide, royalty-free copyright license to reproduce, prepare derivative works of, publicly display, publicly perform, distribute and sublicense the Contribution of such Contributor, if any, and such derivative works, in source code and object code form.

b) Subject to the terms of this Agreement, each Contributor hereby grants Recipient a non-exclusive, worldwide, royalty-free patent license under Licensed Patents to make, use, sell, offer to sell, import and otherwise transfer the Contribution of such Contributor, if any, in source code and object code form. This patent license shall apply to the combination of the Contribution and the Program if, at the time the Contribution is added by the Contributor, such addition of the Contribution causes such combination to be covered by the Licensed Patents. The patent license shall not apply to any other combinations which include the Contribution. No hardware per se is licensed hereunder.

c) Recipient understands that although each Contributor grants the licenses to its Contributions set forth herein, no assurances are provided by any Contributor that the Program does not infringe the patent or other intellectual property rights of any other entity. Each Contributor disclaims any liability to Recipient for claims brought by any other entity based on infringement of intellectual property rights or otherwise. As a condition to exercising the rights and licenses granted hereunder, each Recipient hereby assumes sole responsibility to secure any other intellectual property rights needed, if any. For example,
a third party patent license is required to allow Recipient to distribute the Program, it is Recipient's responsibility to acquire that license before distributing the Program.

d) Each Contributor represents that to its knowledge it has sufficient copyright rights in its Contribution, if any, to grant the copyright license set forth in this Agreement.

3. REQUIREMENTS

A Contributor may choose to distribute the Program in object code form under its own license agreement, provided that:

a) it complies with the terms and conditions of this Agreement; and

b) its license agreement:

i) effectively disclaims on behalf of all Contributors all warranties and conditions, express and implied, including warranties or conditions of title and non-infringement, and implied warranties or conditions of merchantability and fitness for a particular purpose;

ii) effectively excludes on behalf of all Contributors all liability for damages, including direct, indirect, special, incidental and consequential damages, such as lost profits;

iii) states that any provisions which differ from this Agreement are offered by that Contributor alone and not by any other party; and

iv) states that source code for the Program is available from such Contributor, and informs licensees how to obtain it in a reasonable manner on or through a medium customarily used for software exchange.

When the Program is made available in source code form:

a) it must be made available under this Agreement; and

b) a copy of this Agreement must be included with each copy of the Program.

Contributors may not remove or alter any copyright notices contained within the Program.

Each Contributor must identify itself as the originator of its Contribution, if any, in a manner that reasonably allows subsequent Recipients to identify the originator of the Contribution.

4. COMMERCIAL DISTRIBUTION

Commercial distributors of software may accept certain responsibilities with respect to end users, business partners and the like. While this license is intended to facilitate the commercial use of the Program, the Contributor who includes the Program in a commercial product offering should do so in a manner which does not create potential liability for other Contributors. Therefore, if a Contributor includes the Program in a commercial product
offering, such Contributor ("Commercial Contributor") hereby agrees to defend and indemnify every other Contributor ("Indemnified Contributor") against any losses, damages and costs (collectively "Losses") arising from claims, lawsuits and other legal actions brought by a third party against the Indemnified Contributor to the extent caused by the acts or omissions of such Commercial Contributor in connection with its distribution of the Program in a commercial product offering. The obligations in this section do not apply to any claims or Losses relating to any actual or alleged intellectual property infringement. In order to qualify, an Indemnified Contributor must: a) promptly notify the Commercial Contributor in writing of such claim, and b) allow the Commercial Contributor to control, and cooperate with the Commercial Contributor in, the defense and any related settlement negotiations. The Indemnified Contributor may participate in any such claim at its own expense.

For example, a Contributor might include the Program in a commercial product offering, Product X. That Contributor is then a Commercial Contributor. If that Commercial Contributor then makes performance claims, or offers warranties related to Product X, those performance claims and warranties are such Commercial Contributor's responsibility alone. Under this section, the Commercial Contributor would have to defend claims against the other Contributors related to those performance claims and warranties, and if a court requires any other Contributor to pay any damages as a result, the Commercial Contributor must pay those damages.

5. NO WARRANTY

EXCEPT AS EXPRESSLY SET FORTH IN THIS AGREEMENT, THE PROGRAM IS PROVIDED ON AN "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, EITHER EXPRESS OR IMPLIED INCLUDING, WITHOUT LIMITATION, ANY WARRANTIES OR CONDITIONS OF TITLE, NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. Each Recipient is solely responsible for determining the appropriateness of using and distributing the Program and assumes all risks associated with its exercise of rights under this Agreement, including but not limited to the risks and costs of program errors, compliance with applicable laws, damage to or loss of data, programs or equipment, and unavailability or interruption of operations.

6. DISCLAIMER OF LIABILITY

EXCEPT AS EXPRESSLY SET FORTH IN THIS AGREEMENT, NEITHER RECIPIENT NOR ANY CONTRIBUTORS SHALL HAVE ANY LIABILITY FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING WITHOUT LIMITATION LOST PROFITS), HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE USE OR DISTRIBUTION OF THE PROGRAM OR THE EXERCISE OF
ANY RIGHTS GRANTED HEREUNDER, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

7. GENERAL

If any provision of this Agreement is invalid or unenforceable under applicable law, it shall not affect the validity or enforceability of the remainder of the terms of this Agreement, and without further action by the parties hereto, such provision shall be reformed to the minimum extent necessary to make such provision valid and enforceable.

If Recipient institutes patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Program itself (excluding combinations of the Program with other software or hardware) infringes such Recipient's patent(s), then such Recipient's rights granted under Section 2(b) shall terminate as of the date such litigation is filed.

All Recipient's rights under this Agreement shall terminate if it fails to comply with any of the material terms or conditions of this Agreement and does not cure such failure in a reasonable period of time after becoming aware of such noncompliance. If all Recipient's rights under this Agreement terminate, Recipient agrees to cease use and distribution of the Program as soon as reasonably practicable. However, Recipient's obligations under this Agreement and any licenses granted by Recipient relating to the Program shall continue and survive.

Everyone is permitted to copy and distribute copies of this Agreement, but in order to avoid inconsistency the Agreement is copyrighted and may only be modified in the following manner. The Agreement Steward reserves the right to publish new versions (including revisions) of this Agreement from time to time. No one other than the Agreement Steward has the right to modify this Agreement. The Eclipse Foundation is the initial Agreement Steward. The Eclipse Foundation may assign the responsibility to serve as the Agreement Steward to a suitable separate entity. Each new version of the Agreement will be given a distinguishing version number. The Program (including Contributions) may always be distributed subject to the version of the Agreement under which it was received. In addition, after a new version of the Agreement is published, Contributor may elect to distribute the Program (including its Contributions) under the new version. Except as expressly stated in Sections 2(a) and 2(b) above, Recipient receives no rights or licenses to the intellectual property of any Contributor under this Agreement, whether expressly, by implication, estoppel or otherwise. All rights in the Program not expressly granted under this Agreement are reserved.

This Agreement is governed by the laws of the State of New York and the intellectual property laws of the United States of America. No party to this Agreement will bring a legal action under this Agreement more than one year after the cause of action arose. Each party waives its rights to a jury trial in any resulting litigation.
License

THE ACCOMPANYING PROGRAM IS PROVIDED UNDER THE TERMS OF THIS ECLIPSE PUBLIC LICENSE ("AGREEMENT"). ANY USE, REPRODUCTION OR DISTRIBUTION OF THE PROGRAM CONSTUTES RECIPIENT'S ACCEPTANCE OF THIS AGREEMENT.

1. DEFINITIONS

"Contribution" means:

a) in the case of the initial Contributor, the initial code and documentation distributed under this Agreement, and

b) in the case of each subsequent Contributor:

i) changes to the Program, and

ii) additions to the Program;

where such changes and/or additions to the Program originate from and are distributed by that particular Contributor. A Contribution 'originates' from a Contributor if it was added to the Program by such Contributor itself or anyone acting on such Contributor's behalf. Contributions do not include additions to the Program which: (i) are separate modules of software distributed in conjunction with the Program under their own license agreement, and (ii) are not derivative works of the Program.

"Contributor" means any person or entity that distributes the Program.

"Licensed Patents" mean patent claims licensable by a Contributor which are necessarily infringed by the use or sale of its Contribution alone or when combined with the Program.

"Program" means the Contributions distributed in accordance with this Agreement.

"Recipient" means anyone who receives the Program under this Agreement, including all Contributors.

2. GRANT OF RIGHTS
a) Subject to the terms of this Agreement, each Contributor hereby grants Recipient a non-exclusive, worldwide, royalty-free copyright license to reproduce, prepare derivative works of, publicly display, publicly perform, distribute and sublicense the Contribution of such Contributor, if any, and such derivative works, in source code and object code form.

b) Subject to the terms of this Agreement, each Contributor hereby grants Recipient a non-exclusive, worldwide, royalty-free patent license under Licensed Patents to make, use, sell, offer to sell, import and otherwise transfer the Contribution of such Contributor, if any, in source code and object code form. This patent license shall apply to the combination of the Contribution and the Program if, at the time the Contribution is added by the Contributor, such addition of the Contribution causes such combination to be covered by the Licensed Patents. The patent license shall not apply to any other combinations which include the Contribution. No hardware per se is licensed hereunder.

c) Recipient understands that although each Contributor grants the licenses to its Contributions set forth herein, no assurances are provided by any Contributor that the Program does not infringe the patent or other intellectual property rights of any other entity. Each Contributor disclaims any liability to Recipient for claims brought by any other entity based on infringement of intellectual property rights or otherwise. As a condition to exercising the rights and licenses granted hereunder, each Recipient hereby assumes sole responsibility to secure any other intellectual property rights needed, if any. For example, if a third party patent license is required to allow Recipient to distribute the Program, it is Recipient's responsibility to acquire that license before distributing the Program.

d) Each Contributor represents that to its knowledge it has sufficient copyright rights in its Contribution, if any, to grant the copyright license set forth in this Agreement.

3. REQUIREMENTS

A Contributor may choose to distribute the Program in object code form under its own license agreement, provided that:

a) it complies with the terms and conditions of this Agreement; and

b) its license agreement:

i) effectively disclaims on behalf of all Contributors all warranties and conditions, express and implied, including warranties or conditions of title and non-infringement, and implied warranties or conditions of merchantability and fitness for a particular purpose;

ii) effectively excludes on behalf of all Contributors all liability for damages, including direct, indirect, special, incidental and consequential damages, such as lost profits;

iii) states that any provisions which differ from this Agreement are offered by that Contributor alone and not by any other party; and
iv) states that source code for the Program is available from such Contributor, and informs licensees how to obtain it in a reasonable manner on or through a medium customarily used for software exchange.

When the Program is made available in source code form:

a) it must be made available under this Agreement; and

b) a copy of this Agreement must be included with each copy of the Program.

Contributors may not remove or alter any copyright notices contained within the Program.

Each Contributor must identify itself as the originator of its Contribution, if any, in a manner that reasonably allows subsequent Recipients to identify the originator of the Contribution.

4. COMMERCIAL DISTRIBUTION

Commercial distributors of software may accept certain responsibilities with respect to end users, business partners and the like. While this license is intended to facilitate the commercial use of the Program, the Contributor who includes the Program in a commercial product offering should do so in a manner which does not create potential liability for other Contributors. Therefore, if a Contributor includes the Program in a commercial product offering, such Contributor ("Commercial Contributor") hereby agrees to defend and indemnify every other Contributor ("Indemnified Contributor") against any losses, damages and costs (collectively "Losses") arising from claims, lawsuits and other legal actions brought by a third party against the Indemnified Contributor to the extent caused by the acts or omissions of such Commercial Contributor in connection with its distribution of the Program in a commercial product offering. The obligations in this section do not apply to any claims or Losses relating to any actual or alleged intellectual property infringement. In order to qualify, an Indemnified Contributor must: a) promptly notify the Commercial Contributor in writing of such claim, and b) allow the Commercial Contributor to control, and cooperate with the Commercial Contributor in, the defense and any related settlement negotiations. The Indemnified Contributor may participate in any such claim at its own expense.

For example, a Contributor might include the Program in a commercial product offering, Product X. That Contributor is then a Commercial Contributor. If that Commercial Contributor then makes performance claims, or offers warranties related to Product X, those performance claims and warranties are such Commercial Contributor's responsibility alone. Under this section, the Commercial Contributor would have to defend claims against the other Contributors related to those performance claims and warranties, and if a court requires any other Contributor to pay any damages as a result, the Commercial Contributor must pay those damages.

5. NO WARRANTY
EXCEPT AS EXPRESSLY SET FORTH IN THIS AGREEMENT, THE PROGRAM IS PROVIDED ON AN "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, EITHER EXPRESS OR IMPLIED INCLUDING, WITHOUT LIMITATION, ANY WARRANTIES OR CONDITIONS OF TITLE, NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. Each Recipient is solely responsible for determining the appropriateness of using and distributing the Program and assumes all risks associated with its exercise of rights under this Agreement, including but not limited to the risks and costs of program errors, compliance with applicable laws, damage to or loss of data, programs or equipment, and unavailability or interruption of operations.

6. DISCLAIMER OF LIABILITY

EXCEPT AS EXPRESSLY SET FORTH IN THIS AGREEMENT, NEITHER RECIPENT NOR ANY CONTRIBUTORS SHALL HAVE ANY LIABILITY FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING WITHOUT LIMITATION LOST PROFITS), HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE USE OR DISTRIBUTION OF THE PROGRAM OR THE EXERCISE OF ANY RIGHTS GRANTED HEREUNDER, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

7. GENERAL

If any provision of this Agreement is invalid or unenforceable under applicable law, it shall not affect the validity or enforceability of the remainder of the terms of this Agreement, and without further action by the parties hereto, such provision shall be reformed to the minimum extent necessary to make such provision valid and enforceable.

If Recipient institutes patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Program itself (excluding combinations of the Program with other software or hardware) infringes such Recipient's patent(s), then such Recipient's rights granted under Section 2(b) shall terminate as of the date such litigation is filed.

All Recipient's rights under this Agreement shall terminate if it fails to comply with any of the material terms or conditions of this Agreement and does not cure such failure in a reasonable period of time after becoming aware of such noncompliance. If all Recipient's rights under this Agreement terminate, Recipient agrees to cease use and distribution of the Program as soon as reasonably practicable. However, Recipient's obligations under this Agreement and any licenses granted by Recipient relating to the Program shall continue and survive.

Everyone is permitted to copy and distribute copies of this Agreement, but in order to avoid inconsistency the Agreement is copyrighted and may only be modified in the following
manner. The Agreement Steward reserves the right to publish new versions (including revisions) of this Agreement from time to time. No one other than the Agreement Steward has the right to modify this Agreement. The Eclipse Foundation is the initial Agreement Steward. The Eclipse Foundation may assign the responsibility to serve as the Agreement Steward to a suitable separate entity. Each new version of the Agreement will be given a distinguishing version number. The Program (including Contributions) may always be distributed subject to the version of the Agreement under which it was received. In addition, after a new version of the Agreement is published, Contributor may elect to distribute the Program (including its Contributions) under the new version. Except as expressly stated in Sections 2(a) and 2(b) above, Recipient receives no rights or licenses to the intellectual property of any Contributor under this Agreement, whether expressly, by implication, estoppel or otherwise. All rights in the Program not expressly granted under this Agreement are reserved.

This Agreement is governed by the laws of the State of New York and the intellectual property laws of the United States of America. No party to this Agreement will bring a legal action under this Agreement more than one year after the cause of action arose. Each party waives its rights to a jury trial in any resulting litigation.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.
"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work
or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the license. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS,
WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

Apache License
Version 2.0, January 2004
http://www.apache.org/licenses/

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain
separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its
distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided You do not modify the Work itself. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties of MERCHANTABILITY, NON-INFRINGEMENT, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this
License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

License

THE ACCOMPANYING PROGRAM IS PROVIDED UNDER THE TERMS OF THIS ECLIPSE PUBLIC LICENSE ("AGREEMENT"). ANY USE, REPRODUCTION OR DISTRIBUTION OF THE PROGRAM CONSTITUTES RECIPIENT'S ACCEPTANCE OF THIS AGREEMENT.

1. DEFINITIONS

"Contribution" means:

a) in the case of the initial Contributor, the initial code and documentation distributed under this Agreement, and
b) in the case of each subsequent Contributor:

i) changes to the Program, and

ii) additions to the Program;

where such changes and/or additions to the Program originate from and are distributed by that particular Contributor. A Contribution 'originates' from a Contributor if it was added to the Program by such Contributor itself or anyone acting on such Contributor's behalf. Contributions do not include additions to the Program which: (i) are separate modules of software distributed in conjunction with the Program under their own license agreement, and (ii) are not derivative works of the Program.

"Contributor" means any person or entity that distributes the Program.

"Licensed Patents" mean patent claims licensable by a Contributor which are necessarily infringed by the use or sale of its Contribution alone or when combined with the Program.

"Program" means the Contributions distributed in accordance with this Agreement.

"Recipient" means anyone who receives the Program under this Agreement, including all Contributors.

2. GRANT OF RIGHTS

a) Subject to the terms of this Agreement, each Contributor hereby grants Recipient a non-exclusive, worldwide, royalty-free copyright license to reproduce, prepare derivative works of, publicly display, publicly perform, distribute and sublicense the Contribution of such Contributor, if any, and such derivative works, in source code and object code form.

b) Subject to the terms of this Agreement, each Contributor hereby grants Recipient a non-exclusive, worldwide, royalty-free patent license under Licensed Patents to make, use, sell, offer to sell, import and otherwise transfer the Contribution of such Contributor, if any, in source code and object code form. This patent license shall apply to the combination of the Contribution and the Program if, at the time the Contribution is added by the Contributor, such addition of the Contribution causes such combination to be covered by the Licensed Patents. The patent license shall not apply to any other combinations which include the Contribution. No hardware per se is licensed hereunder.

c) Recipient understands that although each Contributor grants the licenses to its Contributions set forth herein, no assurances are provided by any Contributor that the Program does not infringe the patent or other intellectual property rights of any other entity. Each Contributor disclaims any liability to Recipient for claims brought by any other entity based on infringement of intellectual property rights or otherwise. As a condition to exercising the rights and licenses granted hereunder, each Recipient hereby assumes sole responsibility to secure any other intellectual property rights needed, if any. For example, if
a third party patent license is required to allow Recipient to distribute the Program, it is Recipient's responsibility to acquire that license before distributing the Program.

d) Each Contributor represents that to its knowledge it has sufficient copyright rights in its Contribution, if any, to grant the copyright license set forth in this Agreement.

3. REQUIREMENTS

A Contributor may choose to distribute the Program in object code form under its own license agreement, provided that:

a) it complies with the terms and conditions of this Agreement; and

b) its license agreement:

i) effectively disclaims on behalf of all Contributors all warranties and conditions, express and implied, including warranties or conditions of title and non-infringement, and implied warranties or conditions of merchantability and fitness for a particular purpose;

ii) effectively excludes on behalf of all Contributors all liability for damages, including direct, indirect, special, incidental and consequential damages, such as lost profits;

iii) states that any provisions which differ from this Agreement are offered by that Contributor alone and not by any other party; and

iv) states that source code for the Program is available from such Contributor, and informs licensees how to obtain it in a reasonable manner on or through a medium customarily used for software exchange.

When the Program is made available in source code form:

a) it must be made available under this Agreement; and

b) a copy of this Agreement must be included with each copy of the Program.

Contributors may not remove or alter any copyright notices contained within the Program.

Each Contributor must identify itself as the originator of its Contribution, if any, in a manner that reasonably allows subsequent Recipients to identify the originator of the Contribution.

4. COMMERCIAL DISTRIBUTION

Commercial distributors of software may accept certain responsibilities with respect to end users, business partners and the like. While this license is intended to facilitate the commercial use of the Program, the Contributor who includes the Program in a commercial product offering should do so in a manner which does not create potential liability for other Contributors. Therefore, if a Contributor includes the Program in a commercial product
offering, such Contributor ("Commercial Contributor") hereby agrees to defend and indemnify every other Contributor ("Indemnified Contributor") against any losses, damages and costs (collectively "Losses") arising from claims, lawsuits and other legal actions brought by a third party against the Indemnified Contributor to the extent caused by the acts or omissions of such Commercial Contributor in connection with its distribution of the Program in a commercial product offering. The obligations in this section do not apply to any claims or Losses relating to any actual or alleged intellectual property infringement. In order to qualify, an Indemnified Contributor must: a) promptly notify the Commercial Contributor in writing of such claim, and b) allow the Commercial Contributor to control, and cooperate with the Commercial Contributor in, the defense and any related settlement negotiations. The Indemnified Contributor may participate in any such claim at its own expense.

For example, a Contributor might include the Program in a commercial product offering, Product X. That Contributor is then a Commercial Contributor. If that Commercial Contributor then makes performance claims, or offers warranties related to Product X, those performance claims and warranties are such Commercial Contributor's responsibility alone. Under this section, the Commercial Contributor would have to defend claims against the other Contributors related to those performance claims and warranties, and if a court requires any other Contributor to pay any damages as a result, the Commercial Contributor must pay those damages.

5. NO WARRANTY

EXCEPT AS EXPRESSLY SET FORTH IN THIS AGREEMENT, THE PROGRAM IS PROVIDED ON AN "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, EITHER EXPRESS OR IMPLIED INCLUDING, WITHOUT LIMITATION, ANY WARRANTIES OR CONDITIONS OF TITLE, NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. Each Recipient is solely responsible for determining the appropriateness of using and distributing the Program and assumes all risks associated with its exercise of rights under this Agreement , including but not limited to the risks and costs of program errors, compliance with applicable laws, damage to or loss of data, programs or equipment, and unavailability or interruption of operations.

6. DISCLAIMER OF LIABILITY

EXCEPT AS EXPRESSLY SET FORTH IN THIS AGREEMENT, NEITHER RECIPIENT NOR ANY CONTRIBUTORS SHALL HAVE ANY LIABILITY FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING WITHOUT LIMITATION LOST PROFITS), HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE USE OR DISTRIBUTION OF THE PROGRAM OR THE EXERCISE OF
ANY RIGHTS GRANTED HEREUNDER, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

7. GENERAL

If any provision of this Agreement is invalid or unenforceable under applicable law, it shall not affect the validity or enforceability of the remainder of the terms of this Agreement, and without further action by the parties hereto, such provision shall be reformed to the minimum extent necessary to make such provision valid and enforceable.

If Recipient institutes patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Program itself (excluding combinations of the Program with other software or hardware) infringes such Recipient's patent(s), then such Recipient's rights granted under Section 2(b) shall terminate as of the date such litigation is filed.

All Recipient's rights under this Agreement shall terminate if it fails to comply with any of the material terms or conditions of this Agreement and does not cure such failure in a reasonable period of time after becoming aware of such noncompliance. If all Recipient's rights under this Agreement terminate, Recipient agrees to cease use and distribution of the Program as soon as reasonably practicable. However, Recipient's obligations under this Agreement and any licenses granted by Recipient relating to the Program shall continue and survive.

Everyone is permitted to copy and distribute copies of this Agreement, but in order to avoid inconsistency the Agreement is copyrighted and may only be modified in the following manner. The Agreement Steward reserves the right to publish new versions (including revisions) of this Agreement from time to time. No one other than the Agreement Steward has the right to modify this Agreement. The Eclipse Foundation is the initial Agreement Steward. The Eclipse Foundation may assign the responsibility to serve as the Agreement Steward to a suitable separate entity. Each new version of the Agreement will be given a distinguishing version number. The Program (including Contributions) may always be distributed subject to the version of the Agreement under which it was received. In addition, after a new version of the Agreement is published, Contributor may elect to distribute the Program (including its Contributions) under the new version. Except as expressly stated in Sections 2(a) and 2(b) above, Recipient receives no rights or licenses to the intellectual property of any Contributor under this Agreement, whether expressly, by implication, estoppel or otherwise. All rights in the Program not expressly granted under this Agreement are reserved.

This Agreement is governed by the laws of the State of New York and the intellectual property laws of the United States of America. No party to this Agreement will bring a legal action under this Agreement more than one year after the cause of action arose. Each party waives its rights to a jury trial in any resulting litigation.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the
Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided

Vertica Documenta
Third-Party Software Acknowledgements
that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contribution provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of Your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]"
replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

Perl Artistic License

Copyright © August 15, 1997

https://www.perlfoundation.org/artistic-license-20.html

License

Preamble

The intent of this document is to state the conditions under which a Package may be copied, such that the Copyright Holder maintains some semblance of artistic control over the development of the package, while giving the users of the package the right to use and distribute the Package in a more-or-less customary fashion, plus the right to make reasonable modifications.

Definitions

"Package" refers to the collection of files distributed by the Copyright Holder, and derivatives of that collection of files created through textual modification.

"Standard Version" refers to such a Package if it has not been modified, or has been modified in accordance with the wishes of the Copyright Holder as specified below.

"Copyright Holder" is whoever is named in the copyright or copyrights for the package.

"You" is you, if you're thinking about copying or distributing this Package.

"Reasonable copying fee" is whatever you can justify on the basis of media cost, duplication charges, time of people involved, and so on. (You will not be required to justify it to the Copyright Holder, but only to the computing community at large as a market that must bear the fee.)

"Freely Available" means that no fee is charged for the item itself, though there may be fees involved in handling the item. It also means that recipients of the item may redistribute it under the same conditions they received it.

1. You may make and give away verbatim copies of the source form of the Standard Version of this Package without restriction, provided that you duplicate all of the original copyright notices and associated disclaimers.

2. You may apply bug fixes, portability fixes and other modifications derived from the Public Domain or from the Copyright Holder. A Package modified in such a way shall still be considered the Standard Version.
3. You may otherwise modify your copy of this Package in any way, provided that you
erect a prominent notice in each changed file stating how and when you changed
that file, and provided that you do at least ONE of the following:
4. place your modifications in the Public Domain or otherwise make them Freely
Available, such as by posting said modifications to Usenet or an equivalent medium,
or placing the modifications on a major archive site such as uunet.uu.net, or by
allowing the Copyright Holder to include your modifications in the Standard Version
of the Package.

1. use the modified Package only within your corporation or organization.
2. rename any nonstandard executables so the names do not conflict with
standard executables, which must also be provided, and provide a separate
manual page for each nonstandard executable that clearly documents how it
differs from the Standard Version.
3. make other distribution arrangements with the Copyright Holder.
5. You may distribute the programs of this Package in object code or executable form,
provided that you do at least ONE of the following:

1. distribute a Standard Version of the executables and library files, together with
instructions (in the manual page or equivalent) on where to get the Standard
Version.
2. accompany the distribution with the machine-readable source of the Package
with your modifications.
3. give nonstandard executables nonstandard names, and clearly document the
differences in manual pages (or equivalent), together with instructions on
where to get the Standard Version.
4. make other distribution arrangements with the Copyright Holder.
6. You may charge a reasonable copying fee for any distribution of this Package. You
may charge any fee you choose for support of this Package. You may not charge a fee
for this Package itself. However, you may distribute this Package in aggregate with
other (possibly commercial) programs as part of a larger (possibly commercial)
software distribution provided that you do not advertise this Package as a product of
your own. You may embed this Package's interpreter within an executable of yours
(by linking); this shall be construed as a mere form of aggregation, provided that the
complete Standard Version of the interpreter is so embedded.
7. The scripts and library files supplied as input to or produced as output from the
programs of this Package do not automatically fall under the copyright of this
Package, but belong to whomever generated them, and may be sold commercially,
and may be aggregated with this Package. If such scripts or library files are
aggregated with this Package via the so-called "undump" or "unexec" methods of
producing a binary executable image, then distribution of such an image shall neither
be construed as a distribution of this Package nor shall it fall under the restrictions of
Paragraphs 3 and 4, provided that you do not represent such an executable image as a Standard Version of this Package.

8. C subroutines (or comparably compiled subroutines in other languages) supplied by you and linked into this Package in order to emulate subroutines and variables of the language defined by this Package shall not be considered part of this Package, but are the equivalent of input as in Paragraph 6, provided these subroutines do not change the language in any way that would cause it to fail the regression tests for the language.

9. Aggregation of this Package with a commercial distribution is always permitted provided that the use of this Package is embedded; that is, when no overt attempt is made to make this Package's interfaces visible to the end user of the commercial distribution. Such use shall not be construed as a distribution of this Package.

10. The name of the Copyright Holder may not be used to endorse or promote products derived from this software without specific prior written permission.

THIS PACKAGE IS PROVIDED "AS IS" AND WITHOUT ANY EXPRESS OR IMPLIED WARRANTIES, INCLUDING, WITHOUT LIMITATION, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.

protobuf

Copyright 2008 Google Inc. All rights reserved.

Version 2.4.1, 2.6.0

https://github.com/protocolbuffers/protobuf

Description

Protocol Buffers - Google's data interchange format.

Protocol Buffers are a way of encoding structured data in an efficient yet extensible format. Google uses Protocol Buffers for almost all of its internal RPC protocols and file formats. Protocol buffers are a flexible, efficient, automated mechanism for serializing structured data—think XML, but smaller, faster, and simpler. You define how you want your data to be structured once, then you can use special generated source code to easily write and read your structured data to and from a variety of data streams and using a variety of languages. You can even update your data structure without breaking deployed programs that are compiled against the "old" format.

Python

Copyright © 2001- 2012 Python Software Foundation; All Rights Reserved

This is the official license for the Python 2.7.* release.

Description

Interactive high-level object-oriented language (default version).

Python, the high-level, interactive object oriented language, includes an extensive class library with lots of goodies for network programming, system administration, sounds and graphics.

This package is a dependency package, which depends on Debian's default Python version (currently v2.7).

History of the Software

Python was created in the early 1990s by Guido van Rossum at Stichting Mathematisch Centrum (CWI, see http://www.cwi.nl/) in the Netherlands as a successor of a language called ABC. Guido remains Python’s principal author, although it includes many contributions from others.
In 1995, Guido continued his work on Python at the Corporation for National Research Initiatives (CNRI, see http://www.cnri.reston.va.us/) in Reston, Virginia where he released several versions of the software.

In May 2000, Guido and the Python core development team moved to BeOpen.com to form the BeOpen PythonLabs team. In October of the same year, the PythonLabs team moved to Digital Creations (now Zope Corporation; see http://www.zope.com/). In 2001, the Python Software Foundation (PSF, see http://www.python.org/psf/) was formed, a non-profit organization created specifically to own Python-related Intellectual Property. Zope Corporation is a sponsoring member of the PSF.

All Python releases are Open Source (see http://www.opensource.org/ for the Open Source Definition). Historically, most, but not all, Python releases have also been GPL-compatible; the table below summarizes the various releases.

</table>

Note:
1. GPL-compatible doesn’t mean that we’re distributing Python under the GPL. All Python licenses, unlike the GPL, let you distribute a modified version without making your changes open source. The GPL-compatible licenses make it possible to combine Python with other software that is released under the GPL; the others don’t.

2. According to Richard Stallman, 1.6.1 is not GPL-compatible, because its
license has a choice of law clause. According to CNRI, however, Stallman's lawyer has told CNRI's lawyer that 1.6.1 is "not incompatible" with the GPL.

Thanks to the many outside volunteers who have worked under Guido’s direction to make these releases possible.

Terms and Conditions for Accessing or Otherwise Using Python

PYTHON SOFTWARE FOUNDATION LICENSE VERSION 2

1. This LICENSE AGREEMENT is between the Python Software Foundation ("PSF"), and the Individual or Organization ("Licensee") accessing and otherwise using this software ("Python") in source or binary form and its associated documentation.

2. Subject to the terms and conditions of this License Agreement, PSF hereby grants Licensee a nonexclusive, royalty-free, world-wide license to reproduce, analyze, test, perform and/or display publicly, prepare derivative works, distribute, and otherwise use Python alone or in any derivative version, provided, however, that PSF's License Agreement and PSF's notice of copyright, i.e., "Copyright (c) 2001, 2002, 2003, 2004, 2005, 2006 Python Software Foundation; All Rights Reserved" are retained in Python alone or in any derivative version prepared by Licensee.

3. In the event Licensee prepares a derivative work that is based on or incorporates Python or any part thereof, and wants to make the derivative work available to others as provided herein, then Licensee hereby agrees to include in any such work a brief summary of the changes made to Python.

4. PSF is making Python available to Licensee on an "AS IS" basis. PSF MAKES NO REPRESENTATIONS OR WARRANTIES, EXPRESS OR IMPLIED. BY WAY OF EXAMPLE, BUT NOT LIMITATION, PSF MAKES NO AND DISCLAIMS ANY REPRESENTATION OR WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OR THAT THE USE OF PYTHON WILL NOT INFRINGE ANY THIRD PARTY RIGHTS.

5. PSF SHALL NOT BE LIABLE TO LICENSEE OR ANY OTHER USERS OF PYTHON FOR ANY INCIDENTAL, SPECIAL, OR CONSEQUENTIAL DAMAGES OR LOSS AS A RESULT OF MODIFYING, DISTRIBUTING, OR OTHERWISE USING PYTHON, OR ANY DERIVATIVE THEREOF, EVEN IF ADVISED OF THE POSSIBILITY THEREOF.

6. This License Agreement will automatically terminate upon a material breach of its terms and conditions.

7. Nothing in this License Agreement shall be deemed to create any relationship of agency, partnership, or joint venture between PSF and Licensee. This License Agreement does not grant permission to use PSF trademarks or trade name in a
trademark sense to endorse or promote products or services of Licensee, or any third party.
8. By copying, installing or otherwise using Python, Licensee agrees to be bound by the
terms and conditions of this License Agreement.

BEOPEN.COM LICENSE AGREEMENT
FOR PYTHON 2.0

BEOPEN PYTHON OPEN SOURCE LICENSE AGREEMENT VERSION 1

1. This LICENSE AGREEMENT is between BeOpen.com (“BeOpen”), having an office at
160 Saratoga Avenue, Santa Clara, CA 95051, and the Individual or Organization
(“Licensee”) accessing and otherwise using this software in source or binary form and
its associated documentation (“the Software”).
2. Subject to the terms and conditions of this BeOpen Python License Agreement,
BeOpen hereby grants Licensee a non-exclusive, royalty-free, world-wide license to
reproduce, analyze, test, perform and/or display publicly, prepare derivative works,
distribute, and otherwise use the Software alone or in any derivative version,
provided, however, that the BeOpen Python License is retained in the Software, alone
or in any derivative version prepared by Licensee.
3. BeOpen is making the Software available to Licensee on an “AS IS” basis. BEOPEN
MAKES NO REPRESENTATIONS OR WARRANTIES, EXPRESS OR IMPLIED. BY WAY OF
EXAMPLE, BUT NOT LIMITATION, BEOPEN MAKES NO AND DISCLAIMS ANY
REPRESENTATION OR WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY
PARTICULAR PURPOSE OR THAT THE USE OF THE SOFTWARE WILL NOT INFRINGE ANY
THIRD PARTY RIGHTS.
4. BEOPEN SHALL NOT BE LIABLE TO LICENSEE OR ANY OTHER USERS OF THE SOFTWARE
FOR ANY INCIDENTAL, SPECIAL, OR CONSEQUENTIAL DAMAGES OR LOSS AS A RESULT
OF USING, MODIFYING OR DISTRIBUTING THE SOFTWARE, OR ANY DERIVATIVE
THEREOF, EVEN IF ADVISED OF THE POSSIBILITY THEREOF.
5. This License Agreement will automatically terminate upon a material breach of its
terms and conditions.
6. This License Agreement shall be governed by and interpreted in all respects by the
law of the State of California, excluding conflict of law provisions. Nothing in this
License Agreement shall be deemed to create any relationship of agency, partnership,
or joint venture between BeOpen and Licensee. This License Agreement does not
grant permission to use BeOpen trademarks or trade names in a trademark sense to
endorse or promote products or services of Licensee, or any third party. As an
exception, the “BeOpen Python” logos available at
http://www.pythonlabs.com/logos.html may be used according to the permissions granted on that web page.
7. By copying, installing or otherwise using the software, Licensee agrees to be bound by the terms and conditions of this License Agreement.

**CNRI LICENSE AGREEMENT FOR PYTHON 1.6.1**

1. This LICENSE AGREEMENT is between the Corporation for National Research Initiatives, having an office at 1895 Preston White Drive, Reston, VA 20191 (“CNRI”), and the Individual or Organization (“Licensee”) accessing and otherwise using Python 1.6.1 software in source or binary form and its associated documentation.
2. Subject to the terms and conditions of this License Agreement, CNRI hereby grants Licensee a nonexclusive, royalty-free, world-wide license to reproduce, analyze, test, perform and/or display publicly, prepare derivative works, distribute, and otherwise use Python 1.6.1 alone or in any derivative version, provided, however, that CNRI’s License Agreement and CNRI’s notice of copyright, i.e., “Copyright © 1995-2001 Corporation for National Research Initiatives; All Rights Reserved” are retained in Python 1.6.1 alone or in any derivative version prepared by Licensee. Alternately, in lieu of CNRI’s License Agreement, Licensee may substitute the following text (omitting the quotes): “Python 1.6.1 is made available subject to the terms and conditions in CNRI’s License Agreement. This Agreement together with Python 1.6.1 may be located on the Internet using the following unique, persistent identifier (known as a handle): 1895.22/1013. This Agreement may also be obtained from a proxy server on the Internet using the following URL: http://hdl.handle.net/1895.22/1013.”
3. In the event Licensee prepares a derivative work that is based on or incorporates Python 1.6.1 or any part thereof, and wants to make the derivative work available to others as provided herein, then Licensee hereby agrees to include in any such work a brief summary of the changes made to Python 1.6.1.
4. CNRI is making Python 1.6.1 available to Licensee on an “AS IS” basis. CNRI MAKES NO REPRESENTATIONS OR WARRANTIES, EXPRESS OR IMPLIED. BY WAY OF EXAMPLE, BUT NOT LIMITATION, CNRI MAKES NO AND DISCLAIMS ANY REPRESENTATION OR WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OR THAT THE USE OF PYTHON 1.6.1 WILL NOT INFRINGE ANY THIRD PARTY RIGHTS.
5. CNRI SHALL NOT BE LIABLE TO LICENSEE OR ANY OTHER USERS OF PYTHON 1.6.1 FOR ANY INCIDENTAL, SPECIAL, OR CONSEQUENTIAL DAMAGES OR LOSS AS A RESULT OF MODIFYING, DISTRIBUTING, OR OTHERWISE USING PYTHON 1.6.1, OR ANY DERIVATIVE THEREOF, EVEN IF ADVISED OF THE POSSIBILITY THEREOF.
6. This License Agreement will automatically terminate upon a material breach of its terms and conditions.

7. This License Agreement shall be governed by the federal intellectual property law of the United States, including without limitation the federal copyright law, and, to the extent such U.S. federal law does not apply, by the law of the Commonwealth of Virginia, excluding Virginia’s conflict of law provisions. Notwithstanding the foregoing, with regard to derivative works based on Python 1.6.1 that incorporate non-separable material that was previously distributed under the GNU General Public License (GPL), the law of the Commonwealth of Virginia shall govern this License Agreement only as to issues arising under or with respect to Paragraphs 4, 5, and 7 of this License Agreement. Nothing in this License Agreement shall be deemed to create any relationship of agency, partnership, or joint venture between CNRI and Licensee. This License Agreement does not grant permission to use CNRI trademarks or trade name in a trademark sense to endorse or promote products or services of Licensee, or any third party.

8. By clicking on the “ACCEPT” button where indicated, or by copying, installing or otherwise using Python 1.6.1, Licensee agrees to be bound by the terms and conditions of this License Agreement.

Permission to use, copy, modify, and distribute this software and its documentation for any purpose and without fee is hereby granted, provided that the above copyright notice appear in all copies and that both that copyright notice and this permission notice appear in supporting documentation, and that the name of Stichting Mathematisch Centrum or CWI not be used in advertising or publicity pertaining to distribution of the software without specific, written prior permission.

STICHTING MATHEMATISCH CENTRUM DISCLAIMS ALL WARRANTIES WITH REGARD TO THIS SOFTWARE, INCLUDING ALL IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS, IN NO EVENT SHALL STICHTING MATHEMATISCH CENTRUM BE LIABLE FOR ANY SPECIAL, INDIRECT OR CONSEQUENTIAL DAMAGES OR ANY DAMAGES WHATSOEVER RESULTING FROM LOSS OF USE, DATA OR PROFITS, WHETHER IN AN ACTION OF CONTRACT,
NEGLIGENCE OR OTHER TORTIOUS ACTION, ARISING OUT OF OR IN CONNECTION WITH THE USE OR PERFORMANCE OF THIS SOFTWARE.

Python3

A. HISTORY OF THE SOFTWARE

Python was created in the early 1990s by Guido van Rossum at Stichting Mathematisch Centrum (CWI, see http://www.cwi.nl) in the Netherlands as a successor of a language called ABC. Guido remains Python's principal author, although it includes many contributions from others.

In 1995, Guido continued his work on Python at the Corporation for National Research Initiatives (CNRI, see http://www.cnri.reston.va.us) in Reston, Virginia where he released several versions of the software.

In May 2000, Guido and the Python core development team moved to BeOpen.com to form the BeOpen PythonLabs team. In October of the same year, the PythonLabs team moved to Digital Creations (now Zope Corporation, see http://www.zope.com). In 2001, the Python Software Foundation (PSF, see http://www.python.org/psf/) was formed, a non-profit organization created specifically to own Python-related Intellectual Property. Zope Corporation is a sponsoring member of the PSF.

All Python releases are Open Source (see http://www.opensource.org for the Open Source Definition). Historically, most, but not all, Python releases have also been GPL-compatible; the table below summarizes the various releases.

2.1.3 2.1.2 2002 PSF yes
2.2 and above 2.1.1 2001-now PSF yes

Footnotes:

(1) GPL-compatible doesn't mean that we're distributing Python under the GPL. All Python licenses, unlike the GPL, let you distribute a modified version without making your changes open source. The GPL-compatible licenses make it possible to combine Python with other software that is released under the GPL; the others don't.

(2) According to Richard Stallman, 1.6.1 is not GPL-compatible, because its license has a choice of law clause. According to CNRI, however, Stallman's lawyer has told CNRI's lawyer that 1.6.1 is "not incompatible" with the GPL.

Thanks to the many outside volunteers who have worked under Guido's direction to make these releases possible.

B. TERMS AND CONDITIONS FOR ACCESSING OR OTHERWISE USING PYTHON

===============================================================

PYTHON SOFTWARE FOUNDATION LICENSE VERSION 2

==================================================================

1. This LICENSE AGREEMENT is between the Python Software Foundation ("PSF"), and the Individual or Organization ("Licensee") accessing and otherwise using this software ("Python") in source or binary form and its associated documentation.

3. In the event Licensee prepares a derivative work that is based on or incorporates Python or any part thereof, and wants to make the derivative work available to others as provided herein, then Licensee hereby agrees to include in any such work a brief summary of the changes made to Python.

4. PSF is making Python available to Licensee on an "AS IS" basis. PSF MAKES NO REPRESENTATIONS OR WARRANTIES, EXPRESS OR IMPLIED. BY WAY OF EXAMPLE, BUT NOT LIMITATION, PSF MAKES NO AND DISCLAIMS ANY REPRESENTATION OR WARRANTY OF
MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OR THAT THE USE OF PYTHON WILL NOT INFRINGE ANY THIRD PARTY RIGHTS.

5. PSF SHALL NOT BE LIABLE TO LICENSEE OR ANY OTHER USERS OF PYTHON FOR ANY INCIDENTAL, SPECIAL, OR CONSEQUENTIAL DAMAGES OR LOSS AS A RESULT OF MODIFYING, DISTRIBUTING, OR OTHERWISE USING PYTHON, OR ANY DERIVATIVE THEREOF, EVEN IF ADVISED OF THE POSSIBILITY THEREOF.

6. This License Agreement will automatically terminate upon a material breach of its terms and conditions.

7. Nothing in this License Agreement shall be deemed to create any relationship of agency, partnership, or joint venture between PSF and Licensee. This License Agreement does not grant permission to use PSF trademarks or trade name in a trademark sense to endorse or promote products or services of Licensee, or any third party.

8. By copying, installing or otherwise using Python, Licensee agrees to be bound by the terms and conditions of this License Agreement.

BEOPEN.COM LICENSE AGREEMENT FOR PYTHON 2.0

---------------------------------------------------------------------

BEOPEN PYTHON OPEN SOURCE LICENSE AGREEMENT VERSION 1

1. This LICENSE AGREEMENT is between BeOpen.com ("BeOpen"), having an office at 160 Saratoga Avenue, Santa Clara, CA 95051, and the Individual or Organization ("Licensee") accessing and otherwise using this software in source or binary form and its associated documentation ("the Software").

2. Subject to the terms and conditions of this BeOpen Python License Agreement, BeOpen hereby grants Licensee a non-exclusive, royalty-free, world-wide license to reproduce, analyze, test, perform and/or display publicly, prepare derivative works, distribute, and otherwise use the Software alone or in any derivative version, provided, however, that the BeOpen Python License is retained in the Software, alone or in any derivative version prepared by Licensee.

3. BeOpen is making the Software available to Licensee on an "AS IS" basis. BEOPEN MAKES NO REPRESENTATIONS OR WARRANTIES, EXPRESS OR IMPLIED. BY WAY OF EXAMPLE, BUT NOT LIMITATION, BEOPEN MAKES NO AND DISCLAIMS ANY REPRESENTATION OR WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OR THAT THE USE OF THE SOFTWARE WILL NOT INFRINGE ANY THIRD PARTY RIGHTS.

4. BEOPEN SHALL NOT BE LIABLE TO LICENSEE OR ANY OTHER USERS OF THE SOFTWARE FOR ANY INCIDENTAL, SPECIAL, OR CONSEQUENTIAL DAMAGES OR LOSS AS A RESULT OF
USING, MODIFYING OR DISTRIBUTING THE SOFTWARE, OR ANY DERIVATIVE THEREOF, EVEN IF ADVISED OF THE POSSIBILITY THEREOF.

5. This License Agreement will automatically terminate upon a material breach of its terms and conditions.

6. This License Agreement shall be governed by and interpreted in all respects by the law of the State of California, excluding conflict of law provisions. Nothing in this License Agreement shall be deemed to create any relationship of agency, partnership, or joint venture between BeOpen and Licensee. This License Agreement does not grant permission to use BeOpen trademarks or trade names in a trademark sense to endorse or promote products or services of Licensee, or any third party. As an exception, the "BeOpen Python" logos available at http://www.pythonlabs.com/logos.html may be used according to the permissions granted on that web page.

7. By copying, installing or otherwise using the software, Licensee agrees to be bound by the terms and conditions of this License Agreement.

CNRI LICENSE AGREEMENT FOR PYTHON 1.6.1

---------------------------------------------

1. This LICENSE AGREEMENT is between the Corporation for National Research Initiatives, having an office at 1895 Preston White Drive, Reston, VA 20191 ("CNRI"), and the Individual or Organization ("Licensee") accessing and otherwise using Python 1.6.1 software in source or binary form and its associated documentation.

2. Subject to the terms and conditions of this License Agreement, CNRI hereby grants Licensee a nonexclusive, royalty-free, world-wide license to reproduce, analyze, test, perform and/or display publicly, prepare derivative works, distribute, and otherwise use Python 1.6.1 alone or in any derivative version, provided, however, that CNRI's License Agreement and CNRI's notice of copyright, i.e., "Copyright (c) 1995-2001 Corporation for National Research Initiatives; All Rights Reserved" are retained in Python 1.6.1 alone or in any derivative version prepared by Licensee. Alternately, in lieu of CNRI's License Agreement, Licensee may substitute the following text (omitting the quotes): "Python 1.6.1 is made available subject to the terms and conditions in CNRI's License Agreement. This Agreement together with Python 1.6.1 may be located on the Internet using the following unique, persistent identifier (known as a handle): 1895.22/1013. This Agreement may also be obtained from a proxy server on the Internet using the following URL: http://hdl.handle.net/1895.22/1013".

3. In the event Licensee prepares a derivative work that is based on or incorporates Python 1.6.1 or any part thereof, and wants to make the derivative work available to others as
provided herein, then Licensee hereby agrees to include in any such work a brief summary of the changes made to Python 1.6.1.

4. CNRI is making Python 1.6.1 available to Licensee on an "AS IS" basis. CNRI MAKES NO REPRESENTATIONS OR WARRANTIES, EXPRESS OR IMPLIED. BY WAY OF EXAMPLE, BUT NOT LIMITATION, CNRI MAKES NO AND DISCLAIMS ANY REPRESENTATION OR WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OR THAT THE USE OF PYTHON 1.6.1 WILL NOT INFRINGE ANY THIRD PARTY RIGHTS.

5. CNRI SHALL NOT BE LIABLE TO LICENSEE OR ANY OTHER USERS OF PYTHON 1.6.1 FOR ANY INCIDENTAL, SPECIAL, OR CONSEQUENTIAL DAMAGES OR LOSS AS A RESULT OF MODIFYING, DISTRIBUTING, OR OTHERWISE USING PYTHON 1.6.1, OR ANY DERIVATIVE THEREOF, EVEN IF ADVISED OF THE POSSIBILITY THEREOF.

6. This License Agreement will automatically terminate upon a material breach of its terms and conditions.

7. This License Agreement shall be governed by the federal intellectual property law of the United States, including without limitation the federal copyright law, and, to the extent such U.S. federal law does not apply, by the law of the Commonwealth of Virginia, excluding Virginia's conflict of law provisions. Notwithstanding the foregoing, with regard to derivative works based on Python 1.6.1 that incorporate non-separable material that was previously distributed under the GNU General Public License (GPL), the law of the Commonwealth of Virginia shall govern this License Agreement only as to issues arising under or with respect to Paragraphs 4, 5, and 7 of this License Agreement. Nothing in this License Agreement shall be deemed to create any relationship of agency, partnership, or joint venture between CNRI and Licensee. This License Agreement does not grant permission to use CNRI trademarks or trade name in a trademark sense to endorse or promote products or services of Licensee, or any third party.

8. By clicking on the "ACCEPT" button where indicated, or by copying, installing or otherwise using Python 1.6.1, Licensee agrees to be bound by the terms and conditions of this License Agreement.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of,
the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must
include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only
on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.
"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable
(except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.
6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

Copyright [yyyy] [name of copyright owner]

GNU GENERAL PUBLIC LICENSE Version 3, 29 June 2007
TERMS AND CONDITIONS

0. Definitions.

"This License" refers to version 3 of the GNU General Public License. "Copyright" also means copyright-like laws that apply to other kinds of works, such as semiconductor masks.

"The Program" refers to any copyrightable work licensed under this License. Each licensee is addressed as "you".

"Licensees" and "recipients" may be individuals or organizations. To "modify" a work means to copy from or adapt all or part of the work in a fashion requiring copyright permission, other than the making of an exact copy. The resulting work is called a "modified version" of the earlier work or a work "based on" the earlier work.

A "covered work" means either the unmodified Program or a work based on the Program.

To "propagate" a work means to do anything with it that, without permission, would make you directly or secondarily liable for infringement under applicable copyright law, except executing it on a computer or modifying a private copy. Propagation includes copying, distribution (with or without modification), making available to the public, and in some countries other activities as well.

To "convey" a work means any kind of propagation that enables other parties to make or receive copies. Mere interaction with a user through a computer network, with no transfer of a copy, is not conveying.

An interactive user interface displays "Appropriate Legal Notices" to the extent that it includes a convenient and prominently visible feature that (1) displays an appropriate copyright notice, and (2) tells the user that there is no warranty for the work (except to the extent that warranties are provided), that licensees may convey the work under this License, and how to view a copy of this License. If the interface presents a list of user commands or options, such as a menu, a prominent item in the list meets this criterion.

The "source code" for a work means the preferred form of the work for making modifications to it. "Object code" means any non-source form of a work.

A "Standard Interface" means an interface that either is an official standard defined by a recognized standards body, or, in the case of interfaces specified for a particular programming language, one that is widely used among developers working in that language.

The "System Libraries" of an executable work include anything, other than the work as a whole, that (a) is included in the normal form of packaging a Major Component, but which
is not part of that Major Component, and (b) serves only to enable use of the work with
that Major Component, or to implement a Standard Interface for which an implementation
is available to the public in source code form. A "Major Component", in this context, means
a major essential component (kernel, window system, and so on) of the specific operating
system (if any) on which the executable work runs, or a compiler used to produce the work,
or an object code interpreter used to run it.

The "Corresponding Source" for a work in object code form means all the source code
needed to generate, install, and (for an executable work) run the object code and to modify
the work, including scripts to control those activities. However, it does not include the
work's System Libraries, or general-purpose tools or generally available free programs
which are used unmodified in performing those activities but which are not part of the
work. For example, Corresponding Source includes interface definition files associated with
source files for the work, and the source code for shared libraries and dynamically linked
subprograms that the work is specifically designed to require, such as by intimate data
communication or control flow between those subprograms and other parts of the work.

The Corresponding Source need not include anything that users can regenerate
automatically from other parts of the Corresponding Source. The Corresponding Source for
a work in source code form is that same work.

2. Basic Permissions.

All rights granted under this License are granted for the term of copyright on the Program,
and are irrevocable provided the stated conditions are met. This License explicitly affirms
your unlimited permission to run the unmodified Program. The output from running a
covered work is covered by this License only if the output, given its content, constitutes a
covered work. This License acknowledges your rights of fair use or other equivalent, as
provided by copyright law.

You may make, run and propagate covered works that you do not convey, without
conditions so long as your license otherwise remains in force. You may convey covered
works to others for the sole purpose of having them make modifications exclusively for you,
or provide you with facilities for running those works, provided that you comply with the
terms of this License in conveying all material for which you do not control copyright. Those
thus making or running the covered works for you must do so exclusively on your behalf,
under your direction and control, on terms that prohibit them from making any copies of
your copyrighted material outside their relationship with you.

Conveying under any other circumstances is permitted solely under the conditions stated
below. Sublicensing is not allowed; section 10 makes it unnecessary.

3. Protecting Users' Legal Rights From Anti-Circumvention Law.
No covered work shall be deemed part of an effective technological measure under any applicable law fulfilling obligations under article 11 of the WIPO copyright treaty adopted on 20 December 1996, or similar laws prohibiting or restricting circumvention of such measures. When you convey a covered work, you waive any legal power to forbid circumvention of technological measures to the extent such circumvention is effected by exercising rights under this License with respect to the covered work, and you disclaim any intention to limit operation or modification of the work as a means of enforcing, against the work's users, your or third parties' legal rights to forbid circumvention of technological measures.

You may convey verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice; keep intact all notices stating that this License and any non-permissive terms added in accord with section 7 apply to the code; keep intact all notices of the absence of any warranty; and give all recipients a copy of this License along with the Program.

You may charge any price or no price for each copy that you convey, and you may offer support or warranty protection for a fee.

5. Conveying Modified Source Versions.

You may convey a work based on the Program, or the modifications to produce it from the Program, in the form of source code under the terms of section 4, provided that you also meet all of these conditions:

a) The work must carry prominent notices stating that you modified it, and giving a relevant date.

b) The work must carry prominent notices stating that it is released under this License and any conditions added under section 7. This requirement modifies the requirement in section 4 to "keep intact all notices"

c) You must license the entire work, as a whole, under this License to anyone who comes into possession of a copy. This License will therefore apply, along with any applicable section 7 additional terms, to the whole of the work, and all its parts, regardless of how they are packaged. This License gives no permission to license the work in any other way, but it does not invalidate such permission if you have separately received it.

d) If the work has interactive user interfaces, each must display Appropriate Legal Notices; however, if the Program has interactive interfaces that do not display Appropriate Legal Notices, your work need not make them do so.
A compilation of a covered work with other separate and independent works, which are not by their nature extensions of the covered work, and which are not combined with it such as to form a larger program, in or on a volume of a storage or distribution medium, is called an "aggregate" if the compilation and its resulting copyright are not used to limit the access or legal rights of the compilation's users beyond what the individual works permit. Inclusion of a covered work in an aggregate does not cause this License to apply to the other parts of the aggregate.

6. Conveying Non-Source Forms.

You may convey a covered work in object code form under the terms of sections 4 and 5, provided that you also convey the machine-readable Corresponding Source under the terms of this License, in one of these ways:

a) Convey the object code in, or embodied in, a physical product (including a physical distribution medium), accompanied by the Corresponding Source fixed on a durable physical medium customarily used for software interchange.

b) Convey the object code in, or embodied in, a physical product (including a physical distribution medium), accompanied by a written offer, valid for at least three years and valid for as long as you offer spare parts or customer support for that product model, to give anyone who possesses the object code either (1) a copy of the Corresponding Source for all the software in the product that is covered by this License, on a durable physical medium customarily used for software interchange, for a price no more than your reasonable cost of physically performing this conveying of source, or (2) access to copy the Corresponding Source from a network server at no charge.

c) Convey individual copies of the object code with a copy of the written offer to provide the Corresponding Source. This alternative is allowed only occasionally and noncommercially, and only if you received the object code with such an offer, in accord with subsection 6b.

d) Convey the object code by offering access from a designated place (gratis or for a charge), and offer equivalent access to the Corresponding Source in the same way through the same place at no further charge. You need not require recipients to copy the Corresponding Source along with the object code. If the place to copy the object code is a network server, the Corresponding Source may be on a different server (operated by you or a third party) that supports equivalent copying facilities, provided you maintain clear directions next to the object code saying where to find the Corresponding Source. Regardless of what server hosts the Corresponding Source, you remain obligated to ensure that it is available for as long as needed to satisfy these requirements.

e) Convey the object code using peer-to-peer transmission, provided you inform other peers where the object code and Corresponding Source of the work are being offered to
the general public at no charge under subsection 6d. A separable portion of the object code, whose source code is excluded from the Corresponding Source as a System Library, need not be included in conveying the object code work.

A "User Product" is either (1) a "consumer product", which means any tangible personal property which is normally used for personal, family, or household purposes, or (2) anything designed or sold for incorporation into a dwelling. In determining whether a product is a consumer product, doubtful cases shall be resolved in favor of coverage. For a particular product received by a particular user, "normally used" refers to a typical or common use of that class of product, regardless of the status of the particular user or of the way in which the particular user actually uses, or expects or is expected to use, the product. A product is a consumer product regardless of whether the product has substantial commercial, industrial or non-consumer uses, unless such uses represent the only significant mode of use of the product.

"Installation Information" for a User Product means any methods, procedures, authorization keys, or other information required to install and execute modified versions of a covered work in that User Product from a modified version of its Corresponding Source. The information must suffice to ensure that the continued functioning of the modified object code is in no case prevented or interfered with solely because modification has been made.

If you convey an object code work under this section in, or with, or specifically for use in, a User Product, and the conveying occurs as part of a transaction in which the right of possession and use of the User Product is transferred to the recipient in perpetuity or for a fixed term (regardless of how the transaction is characterized), the Corresponding Source conveyed under this section must be accompanied by the Installation Information. But this requirement does not apply if neither you nor any third party retains the ability to install modified object code on the User Product (for example, the work has been installed in ROM). The requirement to provide Installation Information does not include a requirement to continue to provide support service, warranty, or updates for a work that has been modified or installed by the recipient, or for the User Product in which it has been modified or installed. Access to a network may be denied when the modification itself materially and adversely affects the operation of the network or violates the rules and protocols for communication across the network.

Corresponding Source conveyed, and Installation Information provided, in accord with this section must be in a format that is publicly documented (and with an implementation available to the public in source code form), and must require no special password or key for unpacking, reading or copying.

7. Additional Terms.
"Additional permissions" are terms that supplement the terms of this License by making exceptions from one or more of its conditions. Additional permissions that are applicable to the entire Program shall be treated as though they were included in this License, to the extent that they are valid under applicable law. If additional permissions apply only to part of the Program, that part may be used separately under those permissions, but the entire Program remains governed by this License without regard to the additional permissions.

When you convey a copy of a covered work, you may at your option remove any additional permissions from that copy, or from any part of it. (Additional permissions may be written to require their own removal in certain cases when you modify the work.) You may place additional permissions on material, added by you to a covered work, for which you have or can give appropriate copyright permission. Notwithstanding any other provision of this License, for material you add to a covered work, you may (if authorized by the copyright holders of that material) supplement the terms of this License with terms.

a) Disclaiming warranty or limiting liability differently from the terms of sections 15 and 16 of this License; or

b) Requiring preservation of specified reasonable legal notices or author attributions in that material or in the Appropriate Legal Notices displayed by works containing it; or

c) Prohibiting misrepresentation of the origin of that material, or requiring that modified versions of such material be marked in reasonable ways as different from the original version; or

d) Limiting the use for publicity purposes of names of licensors or authors of the material; or

e) Declining to grant rights under trademark law for use of some trade names, trademarks, or service marks; or

f) Requiring indemnification of licensors and authors of that material by anyone who conveys the material (or modified versions of it) with contractual assumptions of liability to the recipient, for any liability that these contractual assumptions directly impose on those licensors and authors.

All other non-permissive additional terms are considered "further restrictions" within the meaning of section 10. If the Program as you received it, or any part of it, contains a notice stating that it is governed by this License along with a term that is a further restriction, you may remove that term. If a license document contains a further restriction but permits relicensing or conveying under this License, you may add to a covered work material governed by the terms of that license document, provided that the further restriction does not survive such relicensing or conveying.
If you add terms to a covered work in accord with this section, you must place, in the relevant source files, a statement of the additional terms that apply to those files, or a notice indicating where to find the applicable terms.

Additional terms, permissive or non-permissive, may be stated in the form of a separately written license, or stated as exceptions; the above requirements apply either way.

8. Termination.

You may not propagate or modify a covered work except as expressly provided under this License. Any attempt otherwise to propagate or modify it is void, and will automatically terminate your rights under this License (including any patent licenses granted under the third paragraph of section 11).

However, if you cease all violation of this License, then your license from a particular copyright holder is reinstated (a) provisionally, unless and until the copyright holder explicitly and finally terminates your license, and (b) permanently, if the copyright holder fails to notify you of the violation by some reasonable means prior to 60 days after the cessation.

Moreover, your license from a particular copyright holder is reinstated permanently if the copyright holder notifies you of the violation by some reasonable means, this is the first time you have received notice of violation of this License (for any work) from that copyright holder, and you cure the violation prior to 30 days after your receipt of the notice.

Termination of your rights under this section does not terminate the licenses of parties who have received copies or rights from you under this License. If your rights have been terminated and not permanently reinstated, you do not qualify to receive new licenses for the same material under section 10.

You are not required to accept this License in order to receive or run a copy of the Program. Ancillary propagation of a covered work occurring solely as a consequence of using peer-to-peer transmission to receive a copy likewise does not require acceptance. However, nothing other than this License grants you permission to propagate or modify any covered work. These actions infringe copyright if you do not accept this License. Therefore, by modifying or propagating a covered work, you indicate your acceptance of this License to do so.

10. Automatic Licensing of Downstream Recipients.

Each time you convey a covered work, the recipient automatically receives a license from the original licensors, to run, modify and propagate that work, subject to this License. You are not responsible for enforcing compliance by third parties with this License.
An "entity transaction" is a transaction transferring control of an organization, or substantially all assets of one, or subdividing an organization, or merging organizations. If propagation of a covered work results from an entity transaction, each party to that transaction who receives a copy of the work also receives whatever licenses to the work the party's predecessor in interest had or could give under the previous paragraph, plus a right to possession of the Corresponding Source of the work from the predecessor in interest, if the predecessor has it or can get it with reasonable efforts.

You may not impose any further restrictions on the exercise of the rights granted or affirmed under this License. For example, you may not impose a license fee, royalty, or other charge for exercise of rights granted under this License, and you may not initiate litigation (including a cross-claim or counterclaim in a lawsuit) alleging that any patent claim is infringed by making, using, selling, offering for sale, or importing the Program or any portion of it.

11. Patents.

A "contributor" is a copyright holder who authorizes use under this License of the Program or a work on which the Program is based. The work thus licensed is called the contributor's "contributor version".

A contributor's "essential patent claims" are all patent claims owned or controlled by the contributor, whether already acquired or hereafter acquired, that would be infringed by some manner, permitted by this License, of making, using, or selling its contributor version, but do not include claims that would be infringed only as a consequence of further modification of the contributor version. For purposes of this definition, "control" includes the right to grant patent sublicenses in a manner consistent with the requirements of this License.

Each contributor grants you a non-exclusive, worldwide, royalty-free patent license under the contributor's essential patent claims, to make, use, sell, offer for sale, import and otherwise run, modify and propagate the contents of its contributor version.

In the following three paragraphs, a "patent license" is any express agreement or commitment, however denominated, not to enforce a patent (such as an express permission to practice a patent or covenant not to sue for patent infringement). To "grant" such a patent license to a party means to make such an agreement or commitment not to enforce a patent against the party.

If you convey a covered work, knowingly relying on a patent license, and the Corresponding Source of the work is not available for anyone to copy, free of charge and under the terms of this License, through a publicly available network server or other readily accessible means, then you must either (1) cause the Corresponding Source to be so available, or (2) arrange to deprive yourself of the benefit of the patent license for this particular work, or
(3) arrange, in a manner consistent with the requirements of this License, to extend the patent license to downstream recipients. "Knowingly relying" means you have actual knowledge that, but for the patent license, your conveying the covered work in a country, or your recipient's use of the covered work in a country, would infringe one or more identifiable patents in that country that you have reason to believe are valid.

If, pursuant to or in connection with a single transaction or arrangement, you convey, or propagate by procuring conveyance of, a covered work, and grant a patent license to some of the parties receiving the covered work authorizing them to use, propagate, modify or convey a specific copy of the covered work, then the patent license you grant is automatically extended to all recipients of the covered work and works based on it.

A patent license is "discriminatory" if it does not include within the scope of its coverage, prohibits the exercise of, or is conditioned on the non-exercise of one or more of the rights that are specifically granted under this License. You may not convey a covered work if you are a party to an arrangement with a third party that is in the business of distributing software, under which you make payment to the third party based on the extent of your activity of conveying the work, and under which the third party grants, to any of the parties who would receive the covered work from you, a discriminatory patent license (a) in connection with copies of the covered work conveyed by you (or copies made from those copies), or (b) primarily for and in connection with specific products or compilations that contain the covered work, unless you entered into that arrangement, or that patent license was granted, prior to 28 March 2007.

Nothing in this License shall be construed as excluding or limiting any implied license or other defenses to infringement that may otherwise be available to you under applicable patent law.

If conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot convey a covered work so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not convey it at all. For example, if you agree to terms that obligate you to collect a royalty for further conveying from those to whom you convey the Program, the only way you could satisfy both those terms and this License would be to refrain entirely from conveying the Program.

13. Use with the GNU Affero General Public License.

Notwithstanding any other provision of this License, you have permission to link or combine any covered work with a work licensed under version 3 of the GNU Affero General Public License into a single combined work, and to convey the resulting work. The terms of this
License will continue to apply to the part which is the covered work, but the special requirements of the GNU Afferro General Public License, section 13, concerning interaction through a network will apply to the combination as such.

14. Revised Versions of this License.

The Free Software Foundation may publish revised and/or new versions of the GNU General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies that a certain numbered version of the GNU General Public License "or any later version" applies to it, you have the option of following the terms and conditions either of that numbered version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of the GNU General Public License, you may choose any version ever published by the Free Software Foundation. If the Program specifies that a proxy can decide which future versions of the GNU General Public License can be used, that proxy's public statement of acceptance of a version permanently authorizes you to choose that version for the Program. Later license versions may give you additional or different permissions. However, no additional obligations are imposed on any author or copyright holder as a result of your choosing to follow a later version.

15. Disclaimer of Warranty.

THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

16. Limitation of Liability.

IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MODIFIES AND/OR CONVEYS THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

17. Interpretation of Sections 15 and 16.
If the disclaimer of warranty and limitation of liability provided above cannot be given local legal effect according to their terms, reviewing courts shall apply local law that most closely approximates an absolute waiver of all civil liability in connection with the Program, unless a warranty or assumption of liability accompanies a copy of the Program in return for a fee.

GNU GENERAL PUBLIC LICENSE Version 3, 29 June 2007

TERMS AND CONDITIONS

0. Definitions.

"This License" refers to version 3 of the GNU General Public License. "Copyright" also means copyright-like laws that apply to other kinds of works, such as semiconductor masks.

"The Program" refers to any copyrightable work licensed under this License. Each licensee is addressed as "you".

"Licensees" and "recipients" may be individuals or organizations. To "modify" a work means to copy from or adapt all or part of the work in a fashion requiring copyright permission, other than the making of an exact copy. The resulting work is called a "modified version" of the earlier work or a work "based on" the earlier work.

A "covered work" means either the unmodified Program or a work based on the Program.

To "propagate" a work means to do anything with it that, without permission, would make you directly or secondarily liable for infringement under applicable copyright law, except
executing it on a computer or modifying a private copy. Propagation includes copying, distribution (with or without modification), making available to the public, and in some countries other activities as well.

To "convey" a work means any kind of propagation that enables other parties to make or receive copies. Mere interaction with a user through a computer network, with no transfer of a copy, is not conveying.

An interactive user interface displays "Appropriate Legal Notices" to the extent that it includes a convenient and prominently visible feature that (1) displays an appropriate copyright notice, and (2) tells the user that there is no warranty for the work (except to the extent that warranties are provided), that licensees may convey the work under this License, and how to view a copy of this License. If the interface presents a list of user commands or options, such as a menu, a prominent item in the list meets this criterion.

The "source code" for a work means the preferred form of the work for making modifications to it. "Object code" means any non-source form of a work.

A "Standard Interface" means an interface that either is an official standard defined by a recognized standards body, or, in the case of interfaces specified for a particular programming language, one that is widely used among developers working in that language.

The "System Libraries" of an executable work include anything, other than the work as a whole, that (a) is included in the normal form of packaging a Major Component, but which is not part of that Major Component, and (b) serves only to enable use of the work with that Major Component, or to implement a Standard Interface for which an implementation is available to the public in source code form. A "Major Component", in this context, means a major essential component (kernel, window system, and so on) of the specific operating system (if any) on which the executable work runs, or a compiler used to produce the work, or an object code interpreter used to run it.

The "Corresponding Source" for a work in object code form means all the source code needed to generate, install, and (for an executable work) run the object code and to modify the work, including scripts to control those activities. However, it does not include the work's System Libraries, or general-purpose tools or generally available free programs which are used unmodified in performing those activities but which are not part of the work. For example, Corresponding Source includes interface definition files associated with source files for he work, and the source code for shared libraries and dynamically linked subprograms that the work is specifically designed to require, such as by intimate data communication or control flow between those subprograms and other parts of the work.
The Corresponding Source need not include anything that users can regenerate automatically from other parts of the Corresponding Source. The Corresponding Source for a work in source code form is that same work.

2. Basic Permissions.

All rights granted under this License are granted for the term of copyright on the Program, and are irrevocable provided the stated conditions are met. This License explicitly affirms your unlimited permission to run the unmodified Program. The output from running a covered work is covered by this License only if the output, given its content, constitutes a covered work. This License acknowledges your rights of fair use or other equivalent, as provided by copyright law.

You may make, run and propagate covered works that you do not convey, without conditions so long as your license otherwise remains in force. You may convey covered works to others for the sole purpose of having them make modifications exclusively for you, or provide you with facilities for running those works, provided that you comply with the terms of this License in conveying all material for which you do not control copyright. Those thus making or running the covered works for you must do so exclusively on your behalf, under your direction and control, on terms that prohibit them from making any copies of your copyrighted material outside their relationship with you.

Conveying under any other circumstances is permitted solely under the conditions stated below. Sublicensing is not allowed; section 10 makes it unnecessary.

3. Protecting Users' Legal Rights From Anti-Circumvention Law.

No covered work shall be deemed part of an effective technological measure under any applicable law fulfilling obligations under article 11 of the WIPO copyright treaty adopted on 20 December 1996, or similar laws prohibiting or restricting circumvention of such measures. When you convey a covered work, you waive any legal power to forbid circumvention of technological measures to the extent such circumvention is effected by exercising rights under this License with respect to the covered work, and you disclaim any intention to limit operation or modification of the work as a means of enforcing, against the work's users, your or third parties' legal rights to forbid circumvention of technological measures.

You may convey verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice; keep intact all notices stating that this License and any non-permissive terms added in accord with section 7 apply to the code; keep intact all notices of
the absence of any warranty; and give all recipients a copy of this License along with the Program.

You may charge any price or no price for each copy that you convey, and you may offer support or warranty protection for a fee.

5. Conveying Modified Source Versions.

You may convey a work based on the Program, or the modifications to produce it from the Program, in the form of source code under the terms of section 4, provided that you also meet all of these conditions:

a) The work must carry prominent notices stating that you modified it, and giving a relevant date.

b) The work must carry prominent notices stating that it is released under this License and any conditions added under section 7. This requirement modifies the requirement in section 4 to "keep intact all notices"

c) You must license the entire work, as a whole, under this License to anyone who comes into possession of a copy. This License will therefore apply, along with any applicable section 7 additional terms, to the whole of the work, and all its parts, regardless of how they are packaged. This License gives no permission to license the work in any other way, but it does not invalidate such permission if you have separately received it.

d) If the work has interactive user interfaces, each must display Appropriate Legal Notices; however, if the Program has interactive interfaces that do not display Appropriate Legal Notices, your work need not make them do so.

A compilation of a covered work with other separate and independent works, which are not by their nature extensions of the covered work, and which are not combined with it such as to form a larger program, in or on a volume of a storage or distribution medium, is called an "aggregate" if the compilation and its resulting copyright are not used to limit the access or legal rights of the compilation's users beyond what the individual works permit. Inclusion of a covered work in an aggregate does not cause this License to apply to the other parts of the aggregate.

6. Conveying Non-Source Forms.

You may convey a covered work in object code form under the terms of sections 4 and 5, provided that you also convey the machine-readable Corresponding Source under the terms of this License, in one of these ways:

a) Convey the object code in, or embodied in, a physical product (including a physical distribution medium), accompanied by the Corresponding Source fixed on a durable physical medium customarily used for software interchange.
b) Convey the object code in, or embodied in, a physical product (including a physical distribution medium), accompanied by a written offer, valid for at least three years and valid for as long as you offer spare parts or customer support for that product model, to give anyone who possesses the object code either (1) a copy of the Corresponding Source for all the software in the product that is covered by this License, on a durable physical medium customarily used for software interchange, for a price no more than your reasonable cost of physically performing this conveying of source, or (2) access to copy the Corresponding Source from a network server at no charge.

c) Convey individual copies of the object code with a copy of the written offer to provide the Corresponding Source. This alternative is allowed only occasionally and noncommercially, and only if you received the object code with such an offer, in accord with subsection 6b.

d) Convey the object code by offering access from a designated place (gratis or for a charge), and offer equivalent access to the Corresponding Source in the same way through the same place at no further charge. You need not require recipients to copy the Corresponding Source along with the object code. If the place to copy the object code is a network server, the Corresponding Source may be on a different server (operated by you or a third party) that supports equivalent copying facilities, provided you maintain clear directions next to the object code saying where to find the Corresponding Source.

Regardless of what server hosts the Corresponding Source, you remain obligated to ensure that it is available for as long as needed to satisfy these requirements.

e) Convey the object code using peer-to-peer transmission, provided you inform other peers where the object code and Corresponding Source of the work are being offered to the general public at no charge under subsection 6d.A separable portion of the object code, whose source code is excluded from the Corresponding Source as a System Library, need not be included in conveying the object code work.

A "User Product" is either (1) a "consumer product", which means any tangible personal property which is normally used for personal, family, or household purposes, or (2) anything designed or sold for incorporation into a dwelling. In determining whether a product is a consumer product, doubtful cases shall be resolved in favor of coverage. For a particular product received by a particular user, "normally used" refers to a typical or common use of that class of product, regardless of the status of the particular user or of the way in which the particular user actually uses, or expects or is expected to use, the product. A product is a consumer product regardless of whether the product has substantial commercial, industrial or non-consumer uses, unless such uses represent the only significant mode of use of the product.

"Installation Information" for a User Product means any methods, procedures, authorization keys, or other information required to install and execute modified versions
of a covered work in that User Product from a modified version of its Corresponding Source. The information must suffice to ensure that the continued functioning of the modified object code is in no case prevented or interfered with solely because modification has been made.

If you convey an object code work under this section in, or with, or specifically for use in, a User Product, and the conveying occurs as part of a transaction in which the right of possession and use of the User Product is transferred to the recipient in perpetuity or for a fixed term (regardless of how the transaction is characterized), the Corresponding Source conveyed under this section must be accompanied by the Installation Information. But this requirement does not apply if neither you nor any third party retains the ability to install modified object code on the User Product (for example, the work has been installed in ROM). The requirement to provide Installation Information does not include a requirement to continue to provide support service, warranty, or updates for a work that has been modified or installed by the recipient, or for the User Product in which it has been modified or installed. Access to a network may be denied when the modification itself materially and adversely affects the operation of the network or violates the rules and protocols for communication across the network.

Corresponding Source conveyed, and Installation Information provided, in accord with this section must be in a format that is publicly documented (and with an implementation available to the public in source code form), and must require no special password or key for unpacking, reading or copying.

7. Additional Terms.

"Additional permissions" are terms that supplement the terms of this License by making exceptions from one or more of its conditions. Additional permissions that are applicable to the entire Program shall be treated as though they were included in this License, to the extent that they are valid under applicable law. If additional permissions apply only to part of the Program, that part may be used separately under those permissions, but the entire Program remains governed by this License without regard to the additional permissions.

When you convey a copy of a covered work, you may at your option remove any additional permissions from that copy, or from any part of it. (Additional permissions may be written to require their own removal in certain cases when you modify the work.) You may place additional permissions on material, added by you to a covered work, for which you have or can give appropriate copyright permission. Notwithstanding any other provision of this License, for material you add to a covered work, you may (if authorized by the copyright holders of that material) supplement the terms of this License with terms.

a) Disclaiming warranty or limiting liability differently from the terms of sections 15 and 16 of this License; or
b) Requiring preservation of specified reasonable legal notices or author attributions in that
material or in the Appropriate Legal Notices displayed by works containing it; or

c) Prohibiting misrepresentation of the origin of that material, or requiring that modified
versions of such material be marked in reasonable ways as different from the original
version; or

d) Limiting the use for publicity purposes of names of licensors or authors of the material; or

e) Declining to grant rights under trademark law for use of some trade names, trademarks,
or service marks; or

f) Requiring indemnification of licensors and authors of that material by anyone who
conveys the material (or modified versions of it) with contractual assumptions of liability to
the recipient, for any liability that these contractual assumptions directly impose on those
licensors and authors.

All other non-permissive additional terms are considered "further restrictions" within the
meaning of section 10. If the Program as you received it, or any part of it, contains a notice
stating that it is governed by this License along with a term that is a further restriction, you
may remove that term. If a license document contains a further restriction but permits
relicensing or conveying under this License, you may add to a covered work material
governed by the terms of that license document, provided that the further restriction does
not survive such relicensing or conveying.

If you add terms to a covered work in accord with this section, you must place, in the
relevant source files, a statement of the additional terms that apply to those files, or a
notice indicating where to find the applicable terms.

Additional terms, permissive or non-permissive, may be stated in the form of a separately
written license, or stated as exceptions; the above requirements apply either way.

8. Termination.

You may not propagate or modify a covered work except as expressly provided under this
License. Any attempt otherwise to propagate or modify it is void, and will automatically
terminate your rights under this License (including any patent licenses granted under the
third paragraph of section 11).

However, if you cease all violation of this License, then your license from a particular
copyright holder is reinstated (a) provisionally, unless and until the copyright holder
explicitly and finally terminates your license, and (b) permanently, if the copyright holder
fails to notify you of the violation by some reasonable means prior to 60 days after the
cessation.
Moreover, your license from a particular copyright holder is reinstated permanently if the copyright holder notifies you of the violation by some reasonable means, this is the first time you have received notice of violation of this License (for any work) from that copyright holder, and you cure the violation prior to 30 days after your receipt of the notice.

Termination of your rights under this section does not terminate the licenses of parties who have received copies or rights from you under this License. If your rights have been terminated and not permanently reinstated, you do not qualify to receive new licenses for the same material under section 10.

You are not required to accept this License in order to receive or run a copy of the Program. Ancillary propagation of a covered work occurring solely as a consequence of using peer-to-peer transmission to receive a copy likewise does not require acceptance. However, nothing other than this License grants you permission to propagate or modify any covered work. These actions infringe copyright if you do not accept this License. Therefore, by modifying or propagating a covered work, you indicate your acceptance of this License to do so.

10. Automatic Licensing of Downstream Recipients.

Each time you convey a covered work, the recipient automatically receives a license from the original licensors, to run, modify and propagate that work, subject to this License. You are not responsible for enforcing compliance by third parties with this License.

An "entity transaction" is a transaction transferring control of an organization, or substantially all assets of one, or subdividing an organization, or merging organizations. If propagation of a covered work results from an entity transaction, each party to that transaction who receives a copy of the work also receives whatever licenses to the work the party's predecessor in interest had or could give under the previous paragraph, plus a right to possession of the Corresponding Source of the work from the predecessor in interest, if the predecessor has it or can get it with reasonable efforts.

You may not impose any further restrictions on the exercise of the rights granted or affirmed under this License. For example, you may not impose a license fee, royalty, or other charge for exercise of rights granted under this License, and you may not initiate litigation (including a cross-claim or counterclaim in a lawsuit) alleging that any patent claim is infringed by making, using, selling, offering for sale, or importing the Program or any portion of it.

11. Patents.
A "contributor" is a copyright holder who authorizes use under this License of the Program or a work on which the Program is based. The work thus licensed is called the contributor's "contributor version".

A contributor's "essential patent claims" are all patent claims owned or controlled by the contributor, whether already acquired or hereafter acquired, that would be infringed by some manner, permitted by this License, of making, using, or selling its contributor version, but do not include claims that would be infringed only as a consequence of further modification of the contributor version. For purposes of this definition, "control" includes the right to grant patent sublicenses in a manner consistent with the requirements of this License.

Each contributor grants you a non-exclusive, worldwide, royalty-free patent license under the contributor's essential patent claims, to make, use, sell, offer for sale, import and otherwise run, modify and propagate the contents of its contributor version.

In the following three paragraphs, a "patent license" is any express agreement or commitment, however denominated, not to enforce a patent (such as an express permission to practice a patent or covenant not to sue for patent infringement). To "grant" such a patent license to a party means to make such an agreement or commitment not to enforce a patent against the party.

If you convey a covered work, knowingly relying on a patent license, and the Corresponding Source of the work is not available for anyone to copy, free of charge and under the terms of this License, through a publicly available network server or other readily accessible means, then you must either (1) cause the Corresponding Source to be so available, or (2) arrange to deprive yourself of the benefit of the patent license for this particular work, or (3) arrange, in a manner consistent with the requirements of this License, to extend the patent license to downstream recipients. "Knowingly relying" means you have actual knowledge that, but for the patent license, your conveying the covered work in a country, or your recipient's use of the covered work in a country, would infringe one or more identifiable patents in that country that you have reason to believe are valid.

If, pursuant to or in connection with a single transaction or arrangement, you convey, or propagate by procuring conveyance of, a covered work, and grant a patent license to some of the parties receiving the covered work authorizing them to use, propagate, modify or convey a specific copy of the covered work, then the patent license you grant is automatically extended to all recipients of the covered work and works based on it.

A patent license is "discriminatory" if it does not include within the scope of its coverage, prohibits the exercise of, or is conditioned on the non-exercise of one or more of the rights that are specifically granted under this License. You may not convey a covered work if you are a party to an arrangement with a third party that is in the business of distributing software, under which you make payment to the third party based on the extent of your
activity of conveying the work, and under which the third party grants, to any of the parties
who would receive the covered work from you, a discriminatory patent license (a) in
connection with copies of the covered work conveyed by you (or copies made from those
copies), or (b) primarily for and in connection with specific products or compilations that
contain the covered work, unless you entered into that arrangement, or that patent license
was granted, prior to 28 March 2007.

Nothing in this License shall be construed as excluding or limiting any implied license or
other defenses to infringement that may otherwise be available to you under applicable
patent law.

If conditions are imposed on you (whether by court order, agreement or otherwise) that
contradict the conditions of this License, they do not excuse you from the conditions of this
License. If you cannot convey a covered work so as to satisfy simultaneously your
obligations under this License and any other pertinent obligations, then as a consequence
you may not convey it at all. For example, if you agree to terms that obligate you to collect
a royalty for further conveying from those to whom you convey the Program, the only way
you could satisfy both those terms and this License would be to refrain entirely from
conveying the Program.

13. Use with the GNU Affero General Public License.

Notwithstanding any other provision of this License, you have permission to link or combine
any covered work with a work licensed under version 3 of the GNU Affero General Public
License into a single combined work, and to convey the resulting work. The terms of this
License will continue to apply to the part which is the covered work, but the special
requirements of the GNU Affero General Public License, section 13, concerning interaction
through a network will apply to the combination as such.

14. Revised Versions of this License.

The Free Software Foundation may publish revised and/or new versions of the GNU General
Public License from time to time. Such new versions will be similar in spirit to the present
version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies that a certain
numbered version of the GNU General Public License "or any later version" applies to it,
you have the option of following the terms and conditions either of that numbered version
or of any later version published by the Free Software Foundation. If the Program does not
specify a version number of the GNU General Public License, you may choose any version
ever published by the Free Software Foundation. If the Program specifies that a proxy can
decide which future versions of the GNU General Public License can be used, that proxy's
public statement of acceptance of a version permanently authorizes you to choose that
version for the Program. Later license versions may give you additional or different permissions. However, no additional obligations are imposed on any author or copyright holder as a result of your choosing to follow a later version.

15. Disclaimer of Warranty.

THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

16. Limitation of Liability.

IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MODIFIES AND/OR CONVEYS THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

17. Interpretation of Sections 15 and 16.

If the disclaimer of warranty and limitation of liability provided above cannot be given local legal effect according to their terms, reviewing courts shall apply local law that most closely approximates an absolute waiver of all civil liability in connection with the Program, unless a warranty or assumption of liability accompanies a copy of the Program in return for a fee.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the
Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided
that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of Your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]"
replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

The GNU General Public License (GPL)

Version 2, June 1991

Copyright (C) 1989, 1991 Free Software Foundation, Inc. 59 Temple Place, Suite 330, Boston, MA 02111-1307 USA

Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

Preamble

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change free software--to make sure the software is free for all its
users. This General Public License applies to most of the Free Software Foundation's software and to any other program whose authors commit to using it. (Some other Free Software Foundation software is covered by the GNU Library General Public License instead.) You can apply it to your programs, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs; and that you know you can do these things.

To protect your rights, we need to make restrictions that forbid anyone to deny you these rights or to ask you to surrender the rights. These restrictions translate to certain responsibilities for you if you distribute copies of the software, or if you modify it.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must give the recipients all the rights that you have. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

We protect your rights with two steps: (1) copyright the software, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the software.

Also, for each author's protection and ours, we want to make certain that everyone understands that there is no warranty for this free software. If the software is modified by someone else and passed on, we want its recipients to know that what they have is not the original, so that any problems introduced by others will not reflect on the original authors' reputations.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that redistributors of a free program will individually obtain patent licenses, in effect making the program proprietary. To prevent this, we have made it clear that any patent must be licensed for everyone's free use or not licensed at all.

The precise terms and conditions for copying, distribution and modification follow.

**TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION**

0. This License applies to any program or other work which contains a notice placed by the copyright holder saying it may be distributed under the terms of this General Public License. The "Program", below, refers to any such program or work, and a "work based on the Program" means either either the Program or any derivative work under copyright law: that is to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another language. (Hereinafter, translation is included without limitation in the term "modification".) Each licensee is addressed as "you".

...
Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running the Program is not restricted, and the output from the Program is covered only if its contents constitute a work based on the Program (independent of having been made by running the Program). Whether that is true depends on what the Program does.

1. You may copy and distribute verbatim copies of the Program’s source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and give any other recipients of the Program a copy of this License along with the Program.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Program or any portion of it, thus forming a work based on the Program, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

a) You must cause the modified files to carry prominent notices stating that you changed the files and the date of any change.

b) You must cause any work that you distribute or publish, that in whole or in part contains or is derived from the Program or any part thereof, to be licensed as a whole at no charge to all third parties under the terms of this License.

c) If the modified program normally reads commands interactively when run, you must cause it, when started running for such interactive use in the most ordinary way, to print or display an announcement including an appropriate copyright notice and a notice that there is no warranty (or else, saying that you provide a warranty) and that users may redistribute the program under these conditions, and telling the user how to view a copy of this License. (Exception: if the Program itself is interactive but does not normally print such an announcement, your work based on the Program is not required to print an announcement.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Program, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Program, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.
Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Program.

In addition, mere aggregation of another work not based on the Program with the Program (or with a work based on the Program) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may copy and distribute the Program (or a work based on it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you also do one of the following:

a) Accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

b) Accompany it with a written offer, valid for at least three years, to give any third party, for a charge no more than your cost of physically performing source distribution, a complete machine-readable copy of the corresponding source code, to be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

c) Accompany it with the information you received as to the offer to distribute corresponding source code. (This alternative is allowed only for noncommercial distribution and only if you received the program in object code or executable form with such an offer, in accord with Subsection b above.)

The source code for a work means the preferred form of the work for making modifications to it. For an executable work, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the executable. However, as a special exception, the source code distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

If distribution of executable or object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place counts as distribution of the source code, even though third parties are not compelled to copy the source along with the object code.

4. You may not copy, modify, sublicense, or distribute the Program except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense or distribute the Program is void, and will automatically terminate your rights under this
License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

5. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Program or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Program (or any work based on the Program), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Program or works based on it.

6. Each time you redistribute the Program (or any work based on the Program), the recipient automatically receives a license from the original licensor to copy, distribute or modify the Program subject to these terms and conditions. You may not impose any further restrictions on the recipients’ exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties to this License.

7. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Program at all. For example, if a patent license would not permit royalty-free redistribution of the Program by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Program.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system, which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

8. If the distribution and/or use of the Program is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Program under this License may add an explicit geographical distribution limitation excluding those
countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

9. The Free Software Foundation may publish revised and/or new versions of the General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of this License, you may choose any version ever published by the Free Software Foundation.

10. If you wish to incorporate parts of the Program into other free programs whose distribution conditions are different, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

NO WARRANTY

11. BECAUSE THE PROGRAM IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

12. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

FLOSS License Exception

(Adapted from http://www.mysql.com/company/legal/licensing/foss-exception.html)

I want specified Free/Libre and Open Source Software ("FLOSS") applications to be able to use specified GPL-licensed RRDtool libraries (the "Program") despite the fact that not all FLOSS licenses are compatible with version 2 of the GNU General Public License (the "GPL").

As a special exception to the terms and conditions of version 2.0 of the GPL:
You are free to distribute a Derivative Work that is formed entirely from the Program and one or more works (each, a "FLOSS Work") licensed under one or more of the licenses listed below, as long as:

1. You obey the GPL in all respects for the Program and the Derivative Work, except for identifiable sections of the Derivative Work which are not derived from the Program, and which can reasonably be considered independent and separate works in themselves.
2. All identifiable sections of the Derivative Work which are not derived from the Program, and which can reasonably be considered independent and separate works in themselves
   - are distributed subject to one of the FLOSS licenses listed below, and
   - the object code or executable form of those sections are accompanied by the complete corresponding machine-readable source code for those sections on the same medium and under the same FLOSS license as the corresponding object code or executable forms of those sections.
3. Any works which are aggregated with the Program or with a Derivative Work on a volume of a storage or distribution medium in accordance with the GPL, can reasonably be considered independent and separate works in themselves which are not derivatives of either the Program, a Derivative Work or a FLOSS Work.

If the above conditions are not met, then the Program may only be copied, modified, distributed or used under the terms and conditions of the GPL.

FLOSS License List

License name Version(s)/Copyright Date

Academic Free License 2.0

Apache License
Version 2.0, January 2004
1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.
2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use,
reproduction, and distribution of the Work otherwise complies with
the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,
any Contribution intentionally submitted for inclusion in the Work
by You to the Licensor shall be under the terms and conditions of
this License, without any additional terms or conditions.
Notwithstanding the above, nothing herein shall supersede or modify
the terms of any separate license agreement you may have executed
with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade
names, trademarks, service marks, or product names of the Licensor,
except as required for reasonable and customary use in describing
the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or
agreed to in writing, Licensor provides the Work (and each
Contributor provides its Contributions) on an "AS IS" BASIS,
WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
implied, including, without limitation, any warranties or conditions
of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
PARTICULAR PURPOSE. You are solely responsible for determining the
appropriateness of using or redistributing the Work and assume any
risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory,
whether in tort (including negligence), contract, or otherwise,
unless required by applicable law (such as deliberate and grossly
negligent acts) or agreed to in writing, shall any Contributor be
liable to You for damages, including any direct, indirect, special,
incidental, or consequential damages of any character arising as a
result of this License or out of the use or inability to use the
Work (including but not limited to damages for loss of goodwill,
work stoppage, computer failure or malfunction, or any and all
other commercial damages or losses), even if such Contributor
has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing
the Work or Derivative Works thereof, You may choose to offer,
and charge a fee for, acceptance of support, warranty, indemnity,
or other liability obligations and/or rights consistent with this
License. However, in accepting such obligations, You may act only
on Your own behalf and on Your sole responsibility, not on behalf
of any other Contributor, and only if You agree to indemnify,
defend, and hold each Contributor harmless for any liability
incurred by, or claims asserted against, such Contributor by reason
of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following
boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include
the brackets!) The text should be enclosed in the appropriate
column syntax for the file format. We also recommend that a
file or class name and description of purpose be included on the
same "printed page" as the copyright notice for easier
identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity
exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses
granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions
of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted"
means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents
of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS
APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction,
and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by
the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all
other entities that control, are controlled by, or are under common
control with that entity. For the purposes of this definition,
"control" means (i) the power, direct or indirect, to cause the
direction or management of such entity, whether by contract or
otherwise, or (ii) ownership of fifty percent (50%) or more of the
outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity
exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses
granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions
of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of,
the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must
include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties of or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only
on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.
"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable
(except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.
6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contribution) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "["] replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work.
(an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and
(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contribution.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all
other commercial damages or losses), even if such Contributor
has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing
the Work or Derivative Works thereof, You may choose to offer,
and charge a fee for, acceptance of support, warranty, indemnity,
or other liability obligations and/or rights consistent with this
License. However, in accepting such obligations, You may act only
on Your own behalf and on Your sole responsibility, not on behalf
of any other Contributor, and only if You agree to indemnify,
defend, and hold each Contributor harmless for any liability
incurred by, or claims asserted against, such Contributor by reason
of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

Spring Framework Spring Aspects

Spring Framework Spring Aspects 4.0.9

https://mvnrepository.com/artifact/org.springframework/spring-aspects/4.0.9.RELEASE

License

Apache License
Version 2.0, January 2004
http://www.apache.org/licenses/

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.
"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of,
publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work
by You to the Licensor shall be under the terms and conditions of
this License, without any additional terms or conditions.
Notwithstanding the above, nothing herein shall supersede or modify
the terms of any separate license agreement you may have executed
with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade
names, trademarks, service marks, or product names of the Licensor,
except as required for reasonable and customary use in describing the
origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or
agreed to in writing, Licensor provides the Work (and each
Contributor provides its Contributions) on an "AS IS" BASIS,
WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
implied, including, without limitation, any warranties or conditions
of TITLE, NONINFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
PARTICULAR PURPOSE. You are solely responsible for determining the
appropriateness of using or redistributing the Work and assume any
risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory,
whether in tort (including negligence), contract, or otherwise,
unless required by applicable law (such as deliberate and grossly
negligent acts) or agreed to in writing, shall any Contributor be
liable to You for damages, including any direct, indirect, special,
incidental, or consequential damages of any character arising as a
result of this License or out of the use or inability to use the
Work (including but not limited to damages for loss of goodwill,
work stoppage, computer failure or malfunction, or any and all
other commercial damages or losses), even if such Contributor
has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing
the Work orDerivative Works thereof, You may choose to offer,
and charge a fee for, acceptance of support, warranty, indemnity,
or other liability obligations and/or rights consistent with this
License. However, in accepting such obligations, You may act only
on Your own behalf and on Your sole responsibility, not on behalf
of any other Contributor, and only if You agree to indemnify,
defend, and hold each Contributor harmless for any liability
incurred by, or claims asserted against, such Contributor by reason
of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but
not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:
(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly
negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the
Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided
that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of Your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]"
replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

Copyright [yyyy] [name of copyright owner]

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.
"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.
4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the
appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

SNMP

Various copyrights apply to this package, listed in various separate parts below. Please make sure that you read all the parts. Up until 2001, the project was based at UC Davis,
the first part covers all code written during this time. From 2001 onwards, the project has been based at SourceForge, and Networks Associates Technology, Inc hold the copyright on behalf of the wider Net-SNMP community, covering all derivative work done since then. An additional copyright section has been added as Part 3 below also under a BSD license for the work contributed by Cambridge Broadband Ltd. to the project since 2001. An additional copyright section has been added as Part 4 below also under a BSD license for the work contributed by Sun Microsystems, Inc. to the project since 2003.

Code has been contributed to this project by many people over the years it has been in development, and a full list of contributors can be found in the README file under the THANKS section.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.
"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not
pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties of or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify,
defend, and hold each Contributor harmless for any liability
incurred by, or claims asserted against, such Contributor by reason
of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following
boilerplate notice, with the fields enclosed by brackets "[]"
replaced with your own identifying information. (Don't include
the brackets!) The text should be enclosed in the appropriate
comment syntax for the file format. We also recommend that a
file or class name and description of purpose be included on the
same "printed page" as the copyright notice for easier
identification within third-party archives.

Apache License
Version 2.0, January 2004
http://www.apache.org/licenses/

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.
"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and
(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties of or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a
result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION
1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensors" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensors and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual,
worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.
5. Submission of Contributions. Unless You explicitly state otherwise, any contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations or/and rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

History of the Software

Python was created in the early 1990s by Guido van Rossum at Stichting Mathematisch Centrum (CWI, see http://www.cwi.nl/) in the Netherlands as a successor of a language called ABC. Guido remains Python’s principal author, although it includes many contributions from others.

In 1995, Guido continued his work on Python at the Corporation for National Research Initiatives (CNRI, see http://www.cnri.reston.va.us/) in Reston, Virginia where he released several versions of the software.

In May 2000, Guido and the Python core development team moved to BeOpen.com to form the BeOpen PythonLabs team. In October of the same year, the PythonLabs team moved to Digital Creations (now Zope Corporation; see http://www.zope.com/). In 2001, the Python Software Foundation (PSF, see http://www.python.org/psf/) was formed, a non-profit organization created specifically to own Python-related Intellectual Property. Zope Corporation is a sponsoring member of the PSF.

All Python releases are Open Source (see http://www.opensource.org/ for the Open Source Definition). Historically, most, but not all, Python releases have also been GPL-compatible; the table below summarizes the various releases.

<table>

</table>

**Note:**
1. GPL-compatible doesn’t mean that we’re distributing Python under the GPL. All Python licenses, unlike the GPL, let you distribute a modified version without making your changes open source. The GPL-compatible licenses make it possible to combine Python with other software that is released under the GPL; the others don’t.

2. According to Richard Stallman, 1.6.1 is not GPL-compatible, because its license has a choice of law clause. According to CNRI, however, Stallman's lawyer has told CNRI's lawyer that 1.6.1 is "not incompatible" with the GPL.

Thanks to the many outside volunteers who have worked under Guido’s direction to make these releases possible.

### Terms and Conditions for Accessing or Otherwise Using Python

**PYTHON SOFTWARE FOUNDATION LICENSE VERSION 2**

1. This LICENSE AGREEMENT is between the Python Software Foundation ("PSF"), and the Individual or Organization ("Licensee") accessing and otherwise using this software ("Python") in source or binary form and its associated documentation.

2. Subject to the terms and conditions of this License Agreement, PSFhereby grants Licensee a nonexclusive, royalty-free, world-wide license to reproduce, analyze, test, perform and/or display publicly, prepare derivative works, distribute, and otherwise use Python alone or in any derivative version, provided, however, that PSF's License Agreement and PSF's notice of copyright, i.e., "Copyright (c) 2001, 2002, 2003, 2004, 2005, 2006 Python Software Foundation; All Rights Reserved" are retained in Python alone or in any derivative version prepared by Licensee.

3. In the event Licensee prepares a derivative work that is based on or incorporates Python or any part thereof, and wants to make the derivative work available to others as provided herein, then Licensee hereby agrees to include in any such work a brief summary of the changes made to Python.

4. PSF is making Python available to Licensee on an "AS IS" basis. PSF MAKES NO REPRESENTATIONS OR WARRANTIES, EXPRESS OR IMPLIED. BY WAY OF EXAMPLE, BUT NOT LIMITATION, PSF MAKES NO AND DISCLAIMS ANY REPRESENTATION OR
WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OR THAT THE USE OF PYTHON WILL NOT INFRINGE ANY THIRD PARTY RIGHTS.

5. PSF SHALL NOT BE LIABLE TO LICENSEE OR ANY OTHER USERS OF PYTHON FOR ANY INCIDENTAL, SPECIAL, OR CONSEQUENTIAL DAMAGES OR LOSS AS A RESULT OF MODIFYING, DISTRIBUTING, OR OTHERWISE USING PYTHON, OR ANY DERIVATIVE THEREOF, EVEN IF ADVISED OF THE POSSIBILITY THEREOF.

6. This License Agreement will automatically terminate upon a material breach of its terms and conditions.

7. Nothing in this License Agreement shall be deemed to create any relationship of agency, partnership, or joint venture between PSF and Licensee. This License Agreement does not grant permission to use PSF trademarks or trade name in a trademark sense to endorse or promote products or services of Licensee, or any third party.

8. By copying, installing or otherwise using Python, Licensee agrees to be bound by the terms and conditions of this License Agreement.

BEOPEN.COM LICENSE AGREEMENT FOR PYTHON 2.0

BEOPEN PYTHON OPEN SOURCE LICENSE AGREEMENT VERSION 1

1. This LICENSE AGREEMENT is between BeOpen.com (“BeOpen”), having an office at 160 Saratoga Avenue, Santa Clara, CA 95051, and the Individual or Organization (“Licensee”) accessing and otherwise using this software in source or binary form and its associated documentation (“the Software”).

2. Subject to the terms and conditions of this BeOpen Python License Agreement, BeOpen hereby grants Licensee a non-exclusive, royalty-free, world-wide license to reproduce, analyze, test, perform and/or display publicly, prepare derivative works, distribute, and otherwise use the Software alone or in any derivative version, provided, however, that the BeOpen Python License is retained in the Software, alone or in any derivative version prepared by Licensee.

3. BeOpen is making the Software available to Licensee on an “AS IS” basis. BEOPEN MAKES NO REPRESENTATIONS OR WARRANTIES, EXPRESS OR IMPLIED. BY WAY OF EXAMPLE, BUT NOT LIMITATION, BEOPEN MAKES NO AND DISCLAIMS ANY REPRESENTATION OR WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OR THAT THE USE OF THE SOFTWARE WILL NOT INFRINGE ANY THIRD PARTY RIGHTS.

4. BEOPEN SHALL NOT BE LIABLE TO LICENSEE OR ANY OTHER USERS OF THE SOFTWARE FOR ANY INCIDENTAL, SPECIAL, OR CONSEQUENTIAL DAMAGES OR LOSS AS A RESULT
OF USING, MODIFYING OR DISTRIBUTING THE SOFTWARE, OR ANY DERIVATIVE THEREOF, EVEN IF ADVISED OF THE POSSIBILITY THEREOF.

5. This License Agreement will automatically terminate upon a material breach of its terms and conditions.

6. This License Agreement shall be governed by and interpreted in all respects by the law of the State of California, excluding conflict of law provisions. Nothing in this License Agreement shall be deemed to create any relationship of agency, partnership, or joint venture between BeOpen and Licensee. This License Agreement does not grant permission to use BeOpen trademarks or trade names in a trademark sense to endorse or promote products or services of Licensee, or any third party. As an exception, the “BeOpen Python” logos available at http://www.pythonlabs.com/logos.html may be used according to the permissions granted on that web page.

7. By copying, installing or otherwise using the software, Licensee agrees to be bound by the terms and conditions of this License Agreement.

**CNRI LICENSE AGREEMENT FOR PYTHON 1.6.1**

1. This LICENSE AGREEMENT is between the Corporation for National Research Initiatives, having an office at 1895 Preston White Drive, Reston, VA 20191 (“CNRI”), and the Individual or Organization (“Licensee”) accessing and otherwise using Python 1.6.1 software in source or binary form and its associated documentation.

2. Subject to the terms and conditions of this License Agreement, CNRI hereby grants Licensee a nonexclusive, royalty-free, world-wide license to reproduce, analyze, test, perform and/or display publicly, prepare derivative works, distribute, and otherwise use Python 1.6.1 alone or in any derivative version, provided, however, that CNRI’s License Agreement and CNRI’s notice of copyright, i.e., “Copyright © 1995-2001 Corporation for National Research Initiatives; All Rights Reserved” are retained in Python 1.6.1 alone or in any derivative version prepared by Licensee. Alternately, in lieu of CNRI’s License Agreement, Licensee may substitute the following text (omitting the quotes): “Python 1.6.1 is made available subject to the terms and conditions in CNRI’s License Agreement. This Agreement together with Python 1.6.1 may be located on the Internet using the following unique, persistent identifier (known as a handle): 1895.22/1013. This Agreement may also be obtained from a proxy server on the Internet using the following URL: http://hdl.handle.net/1895.22/1013.”

3. In the event Licensee prepares a derivative work that is based on or incorporates Python 1.6.1 or any part thereof, and wants to make the derivative work available to
others as provided herein, then Licensee hereby agrees to include in any such work a brief summary of the changes made to Python 1.6.1.

4. CNRI is making Python 1.6.1 available to Licensee on an “AS IS” basis. CNRI MAKES NO REPRESENTATIONS OR WARRANTIES, EXPRESS OR IMPLIED. BY WAY OF EXAMPLE, BUT NOT LIMITATION, CNRI MAKES NO AND DISCLAIMS ANY REPRESENTATION OR WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OR THAT THE USE OF PYTHON 1.6.1 WILL NOT INFRINGE ANY THIRD PARTY RIGHTS.

5. CNRI SHALL NOT BE LIABLE TO LICENSEE OR ANY OTHER USERS OF PYTHON 1.6.1 FOR ANY INCIDENTAL, SPECIAL, OR CONSEQUENTIAL DAMAGES OR LOSS AS A RESULT OF MODIFYING, DISTRIBUTING, OR OTHERWISE USING PYTHON 1.6.1, OR ANY DERIVATIVE THEREOF, EVEN IF ADVISED OF THE POSSIBILITY THEREOF.

6. This License Agreement will automatically terminate upon a material breach of its terms and conditions.

7. This License Agreement shall be governed by the federal intellectual property law of the United States, including without limitation the federal copyright law, and, to the extent such U.S. federal law does not apply, by the law of the Commonwealth of Virginia, excluding Virginia’s conflict of law provisions. Notwithstanding the foregoing, with regard to derivative works based on Python 1.6.1 that incorporate non-separable material that was previously distributed under the GNU General Public License (GPL), the law of the Commonwealth of Virginia shall govern this License Agreement only as to issues arising under or with respect to Paragraphs 4, 5, and 7 of this License Agreement. Nothing in this License Agreement shall be deemed to create any relationship of agency, partnership, or joint venture between CNRI and Licensee. This License Agreement does not grant permission to use CNRI trademarks or trade name in a trademark sense to endorse or promote products or services of Licensee, or any third party.

8. By clicking on the “ACCEPT” button where indicated, or by copying, installing or otherwise using Python 1.6.1, Licensee agrees to be bound by the terms and conditions of this License Agreement.

ACCEPT

**WiX**

Copyright 2006-1015 Microsoft

Version 3.9

Microsoft Reciprocal License (Ms-RL)

**Description**

**WiX Toolset License**

The WiX toolset is released under the Microsoft Reciprocal License (MS-RL). A reciprocal license is used to ensure that others who build on the effort of the WiX community give back to the WiX community. Specifically the license changes and improvements to the WiX toolset must be published using the same license.

Sometimes the reciprocal license is incorrectly interpreted to also apply to bundles, packages, custom actions built using the WiX toolset. The Outercurve Foundation has provided this statement to clarify:

The WiX toolset (WiX) is licensed under the Microsoft Reciprocal License (MS-RL). The MS-RL governs the distribution of the software licensed under it, as well as derivative works, and incorporates the definition of a derivative work provided in U.S. copyright law. OuterCurve Foundation does not view the installer packages generated by WiX as falling within the definition of a derivative work, merely because they are produced using WiX. Thus, the installer packages generated by WiX will normally fall outside the scope of the
MS-RL, and any of your source code, binaries, libraries, routines or other software components that are incorporated in installer packages generated by WiX can be governed by other licensing terms.

https://github.com/wix

Microsoft Reciprocal License (MS-RL)

This license governs use of the accompanying software. If you use the software, you accept this license. If you do not accept the license, do not use the software.

Definitions

The terms "reproduce," "reproduction," "derivative works," and "distribution" have the same meaning here as under U.S. copyright law.

A "contribution" is the original software, or any additions or changes to the software.

A "contributor" is any person that distributes its contribution under this license.

"Licensed patents" are a contributor's patent claims that read directly on its contribution.

Grant of Rights

(A) Copyright Grant- Subject to the terms of this license, including the license conditions and limitations in section 3, each contributor grants you a non-exclusive, worldwide, royalty-free copyright license to reproduce its contribution, prepare derivative works of its contribution, and distribute its contribution or any derivative works that you create.

(B) Patent Grant- Subject to the terms of this license, including the license conditions and limitations in section 3, each contributor grants you a non-exclusive, worldwide, royalty-free license under its licensed patents to make, have made, use, sell, offer for sale, import, and/or otherwise dispose of its contribution in the software or derivative works of the contribution in the software.

Conditions and Limitations

(A) Reciprocal Grants- For any file you distribute that contains code from the software (in source code or binary format), you must provide recipients the source code to that file along with a copy of this license, which license will govern that file. You may license other files that are entirely your own work and do not contain code from the software under any terms you choose.

(B) No Trademark License- This license does not grant you rights to use any contributors' name, logo, or trademarks.
(C) If you bring a patent claim against any contributor over patents that you claim are infringed by the software, your patent license from such contributor to the software ends automatically.

(D) If you distribute any portion of the software, you must retain all copyright, patent, trademark, and attribution notices that are present in the software.

(E) If you distribute any portion of the software in source code form, you may do so only under this license by including a complete copy of this license with your distribution. If you distribute any portion of the software in compiled or object code form, you may only do so under a license that complies with this license.

(F) The software is licensed "as-is." You bear the risk of using it. The contributors give no express warranties, guarantees or conditions. You may have additional consumer rights under your local laws which this license cannot change. To the extent permitted under your local laws, the contributors exclude the implied warranties of merchantability, fitness for a particular purpose and non-infringement

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.
"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You
meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory,
whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "["]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the
Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided
that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.
