

# Westwing Home & Living

Westwing styles its business with big data. Vertica enables faster, more sophisticated market insight.

### Overview

Of the many ways the Internet has transformed retail shopping, the most dramatic may be the emergence of online shopping clubs: sites that offer consumers opportunities to purchase beautiful products at deeply discounted prices. Today, Westwing Home and Living, which realized €183M in revenue in 2014 by its third full business year after launch, is a leading example of this niche. Founded by Delia Fischer, former editor at Elle and Elle Décor, Westwing is a “shoppable magazine” of chic and stylish home accessories and furniture. It rotates its virtual inventory daily, to keep its site fresh and inspire its members with an ever-changing shopping environment. Vertica enables Westwing to connect with consumers, understand them better, and entice them to visit and interact with its online store.

### Challenge

The heart of Westwing’s online presence is its online club, where registered members can

**“We especially like Vertica’s speed and performance.”**

#### THOMAS RUETZEL

Global Head of Business Intelligence  
Westwing

read about trends in home décor and browse a vibrant portfolio of home furnishings. Westwing combines this enticing online environment with a flash sale model: Westwing products are only available for a limited time. Members receive emails with news about the company’s sales. The emails remind members to return to the site—or they might miss the chance to purchase that day’s featured items. The more detailed and nuanced Westwing’s understanding of individual members, the better equipped the company is to deliver a shopping experience tailored to that member’s needs and interests. Westwing must also pay close attention to the effectiveness of its email and sales campaigns so that it can continually improve that effectiveness. “It’s crucial that we understand fast and early how our campaigns and products are received by our members,” explains Thomas Ruetzel, Global Head of Business Intelligence at Westwing. To achieve these objectives, Westwing has two related obstacles to overcome. It collects enormous amounts of data with nearly 800,000 active buyers worldwide. Each time a member opens an email or visits the Westwing site, the interaction generates dozens or hundreds of data points. The second obstacle is time. Westwing can’t afford to wait for days to see the results of its data queries. It needs to understand very quickly how members respond to emails or changes to the company’s portfolio

### At a Glance

## Solution

By supporting fast queries, Vertica allows Westwing to gain insight into member responses to its email campaigns and website in near real time. "Being a fast-paced e-commerce company, we require very fast analytics," Ruetzel says, "and this is one of Vertica's key strengths." Westwing also found Vertica very easy to scale—another important consideration. "We are growing very fast, and so is our data volume and our need for data analytics resources," notes Ruetzel. "With Vertica, when we need more capacity, we just set up a server and add it to a cluster, and that's it. We're done." The company is pleased with Vertica's intuitive user interface and the ANSI compliant solution which ensured Westwing's analysts and other users were able to adapt to the new solution quickly.

## Results

Cultivating a deep and nuanced understanding of shopping club members' needs and preferences is fundamental to Westwing's overarching strategic focus. This core capability enables the company to fine-tune its customer interactions and product portfolio, making it critical to the company's ability to deliver an exciting experience to members

and capitalize on technology trends including the use of smartphones. By nurturing this core competency, Westwing has achieved annual revenue growth of 66% in 2014. With Vertica enabling accelerated data queries, Westwing continues to drive improvements within its analytics environment—an achievement which will support even more impressive growth in the future.

## About Westwing

Westwing is a leading international eCommerce company for Home & Living. Headquartered in Munich (Germany), Westwing is active in 15 markets across three continents and employs more than 1,600 people worldwide.
